Among the best pictures may be mentioned 'Drovers crossing Newbigging Muir in a Snowdrift, East Cumberland' (R.A.

1860); 'Drovers collecting their Flocks under the Fells, East Cumberland' (R.A. 1861; for the earl of Ellesmere); 'Catching Wild Goats on Moel Siabod, North Wales' (Brit. Inst. 1863); 'The Shepherd's Sabbath' (R.A. 1866). He was elected R.A. in 1867, presenting 'Milking Time in the Meadows' for the diploma gallery in 1869. In 1873 and 1874 he exhibited two pictures of bulls, 'The Monarch of the Meadows' (sold in 1873 to Mr. J. D. Allcroft for 2500*l.*) and 'Separated, but not Divorced.' His largest picture, 'Pushing off for Tilbury Fort, on the Thames,' painted when he was eighty, was exhibited at the Academy in 1884.

In 1848 he purchased land at Harbledown near Canterbury, calling the house which he had built 'Vernon Holme,' after his early patron. He still kept on his London house and studio, but 'Vernon Holme' remained his retreat until his death, in his ninety-ninth year, on 7 Feb. 1902. He published his autobiography under the title 'My Life' (2 vols. 1890). His activity continued to the last, and he was engaged on pictures intended for the Royal Academy of 1902 within a few weeks of his death. In 1901 he was made C.V.O. by King Edward VII.

Soon after the death of his mother in 1865 he had bought her house in St. Peter's Street, Canterbury, and an adjacent block, converting it into a school of art and picture gallery, with the purpose of giving free tuition to poor boys. In 1882 he presented the gallery (to be known as the 'Sidney Cooper Gallery of Art') to the town of Canterbury, making the condition that only a nominal fee should be charged for tuition to the artisan classes. On the acceptance of the gift, the corporation decided to convert the gallery into a regular school of art, and affiliate it with South Kensington.

The following public galleries possess one or more of his pictures: National Gallery (two pictures from the Vernon collection, 'Milking Time,' exhibited R.A. 1834, and 'Cattle, Morning,' R.A. 1847, now on loan to the Albert Museum, Exeter, and to the Laing Art Gallery, Newcastle, respectively); National Gallery of British Art (the Tate Gallery) (three pictures, one done in collaboration with Frederick Lee, R.A.); Victoria and Albert Museum (three pictures, one in collaboration with Frederick Lee); Wallace collection; Royal Academy, Diploma Gallery; Cambridge, Fitzwilliam Museum; Birmingham Art Gallery;

Sheffield, Mappin Art Gallery; Manchester Art Gallery; Glasgow Art Gallery; Canterbury, Royal Museum (Beane Institute); Canterbury, Sidney Cooper School of Art; public galleries at Melbourne, Sydney, and Adelaide. Two pictures are in the royal collection, the 'Pasture, Osborne' (done at Queen Victoria's invitation in 1848), and 'Carisbrook Castle' (painted in 1837, and presented by the artist to the Queen in 1887).

The following are some of his pictures that have been engraved: 'Milking Time' (R.A. 1834; Vernon Coll., Nat. Gall.; engraved by J. Godfrey); 'Cattle, Morning' (R.A. 1847; Vernon Coll., Nat. Gall.; engraved by J. Cousen); 'The Pasture, Osborne' (1848, Royal Collection; engraved by C. Cousen); 'Goatherd of Snowdon' (mezzotint by J. Harris, 1850); 'Kentish Farmyard' (mezzotint by R. B. Parkes, 1864); 'The Sheep Farm' (mixed mezzotint by C. C. Hollyer, 1872); 'Summer Evening' (mixed mezzotint by H. Sedcole, 1903); 'Landscape and Cattle' (1855, reproduced in 'Pictures in the Collection of J. Pierpont Morgan,' 1907).

He married (1) on 1 Oct. 1829, Charlotte Pearson (*d.* 1842), the daughter of an English resident in Brussels, having issue three daughters and one son, Thomas George (1835-1901), who followed his father as an animal painter, and exhibited at the British Institution and Royal Academy 1861-96; (2) in 1863, Mary, daughter of W. Cameron of Canterbury, and had issue Neville Louis (*b.* 1864).

The following oil portraits are known: (1) by himself, 1832; (2) by Walter Scott, 1841; (3) by W. W. Oulless, R.A., 1889 (all three in the collection of Mr. Neville Cooper); (4) another by Walter Scott, 1841 (exhibited R.A. 1842), was formerly in the possession of his daughter Lucy (Mrs. Coxon), and now belongs to his granddaughter, Mrs. Alfred Earle. Thomas George Cooper exhibited an etched portrait of his father at the Royal Academy in 1884.

[My Life, by T. Sidney Cooper, 2 vols., 1890; Graves, Royal Acad. Exhibitors, and Exhibitors at the British Institution; Lists of the Printsellers' Association; The Times, 8 Feb. 1902; information supplied by Mr. Neville Cooper.] A. M. H.

COOPER, THOMPSON (1837-1904), biographer and journalist, born at Cambridge on 8 Jan. 1837, was eldest son of Charles Henry Cooper [q. v.] the Cambridge antiquary, by his wife Jane, youngest daughter of John Thompson of Prickwillow, Cambridgeshire.

A younger brother, John William Cooper (1845-1906), graduated from Trinity Hall, Cambridge, LL.B. in 1866, LL.M. in 1869, and LL.D. in 1880; was called to the bar from Lincoln's Inn in 1868, but resided in Cambridge almost all his life, taking a prominent part in municipal affairs, becoming revising barrister for the county, and acting as local correspondent for 'The Times'; he died at Cambridge on 10 Nov. 1906. He added a fifth volume (posthumously published, 1908) to his father's 'Annals of Cambridge,' and revised the four previous volumes of the work.

Thompson Cooper, educated at a private school kept at Cambridge by the Rev. John Orman, was articled to his father, who became a solicitor in 1840, and was admitted in due time to the profession. But the law was only nominally his vocation, and he took no part in his father's considerable business. His real inheritance was a love of biographical and antiquarian research. He was elected a fellow of the Society of Antiquaries at the early age of 23, and never ceased, while he lived, to investigate antiquarian bye-ways of literature.

Biography was his principal interest. Cooper collected, while still a boy, materials for a work that should rival the 'Athenæ Oxonienses' of Anthony à Wood. His father joined in the project, with the result that in 1858 appeared the first volume of 'Athenæ Cantabrigienses,' containing memoirs of the authors and other eminent men, being alumni of Cambridge, who died between 1500 and 1585. A second volume, published in 1861, carried the work forward to 1609. A part of the third volume was printed, but not published, when the father died in 1866; and, though the university offered to defray the cost of printing the manuscript, neither Thompson Cooper nor his younger brother, John William Cooper, [see above] had leisure to complete the undertaking.

From 1861 onwards Cooper was a working journalist, his first engagement being that of a sub-editor of the 'Daily Telegraph.' In 1862 he became a parliamentary reporter of that paper. He had learned shorthand, the Mason-Gurney system, and, besides putting it to practical purposes, published a manual of the system, 'Parliamentary Shorthand,' as early as 1858. Later, he became a recognised authority on the history of the art. A long connection with 'The Times' began in 1866, and ended only

with his death. He was a parliamentary reporter from 1866 to 1886, when he was appointed to write the daily summary of the debates in the House of Commons; an arduous post, requiring accuracy, conciseness, and familiarity with parliamentary and public affairs. In 1898 he became summary-writer in the House of Lords, and performed the less exacting duties of that office until the short illness that preceded his death.

Cooper's work for 'The Times' left him leisure which he filled industriously. In the compilation of this Dictionary, almost from its inception in 1884 to the publication of the first supplement in 1901, he took a useful and important part. From 1884 to 1891 he prepared from his vast collection of biographical data the successive preliminary lists of names (Baalun-Meyrig) which were distributed at half yearly intervals among the contributors. As a writer of memoirs his work continued longer. No less than 1422 articles from his pen were published in the 63 original volumes (1885-1901). His chief subjects were Roman catholic divines and writers. But he was also responsible for many Cambridge graduates of early date and modern journalists and shorthand writers. His literary and historical insight was not profound, but he had a rare faculty for gathering from obscure sources biographical facts, and his eagerness to acquire new knowledge never lost a youthful zest.

In 1869 Cooper projected a new periodical, the 'Register and Magazine of Biography,' but it ceased with the completion of one volume. His most important independent work was his 'Biographical Dictionary,' mainly of Englishmen, which first appeared in 1873, and to which a supplement was added ten years later. This incorporates the materials of the unpublished third volume of 'Athenæ Cantabrigienses,' and contains much that, at the time of its publication, was not elsewhere accessible. He also wrote biographies published under the title of 'The Hundred Greatest Men,' and the letterpress to a series of photographic reproductions of portraits called 'Men of Mark' (1876-1883). He was responsible for four editions of 'Men of the Time,' 1872, 1875, 1879, and 1884. He was a frequent contributor to 'Notes and Queries' for fifty years, his first contribution appearing on 29 Jan. 1853, and his last on 21 April 1903.

He died at his house in Brixton on 5 March 1904, and was buried, with the rites of the Roman catholic church, in Norwood cemetery. He had become a Roman

catholic in early life. He married at a youthful age, his wife being a widow with children. He had no issue.

[The Times, 6 March 1904; the Journalist, March 1903; private information.]

A. A. B.

COPELAND, RALPH (1837-1905), astronomer, born on 3 Sept. 1837 at Moorside Farm near Woodplumpton, Lancashire, was son of Robert Copeland, yeoman, by his wife Elizabeth Milner. After education at the grammar school of Kirkham, he went to Australia in 1853, and divided five years in the colony of Victoria between work on a sheep run and at the gold diggings.

Being much interested in astronomy, he on his voyage home in 1858 observed the great comet (Donati) of that year. Entering the works of Beyer, Peacock & Co., locomotive engineers, of Manchester, as a volunteer apprentice, he continued his astronomical studies, and with some fellow-apprentices fitted up a small observatory for a 5-inch refractor by Cooke at West Gorton near Manchester. Copeland's first recorded observation was of a non-instantaneous occultation of κ Cancri by the moon on 26 April 1863, which the well-known observer the Rev. W. R. Dawes communicated to the Royal Astronomical Society. Resolved to devote himself exclusively to astronomy, Copeland in 1865 matriculated at the University of Göttingen, and attended the lectures of Klinkerfues, who was in charge of the observatory, and of other professors. With Börgen, a fellow-student, Copeland undertook the observation with the meridian circle of the Göttingen observatory of the position of all the stars down to the ninth magnitude, in the zone two degrees wide immediately south of the celestial equator. The intention was to contribute the result of the observation to a larger scheme then being organised by the Astronomische Gesellschaft, but the work when completed was declined by the Gesellschaft, because the computation did not conform to their plan. Copeland and Börgen's catalogue was published independently in 1869 as the 'First Göttingen Catalogue of Stars.'

In 1869 Copeland took the degree of Ph.D. with a dissertation on the orbital motion of α Centauri. On 15 June of the same year he and Börgen sailed as members of a German Arctic expedition for the exploration of the east coast of Greenland, their special object being to measure an arc of the meridian in this neighbourhood. They wintered in latitude $74^{\circ} 32'$. Cope-

land's training in mechanical engineering and his skill with a rifle rendered him a useful member of the expedition. By the beginning of May in the next year a base 709 metres long was measured close to the ship, the *Germania*, and later the geodetic operations were continued to latitude $75^{\circ} 11.5' N$. The results were published in 'Die Zweite Deutsche Nordpolarfahrt' (vol. ii. Leipzig, 1872).

In Jan. 1871 Copeland became assistant astronomer at Lord Rosse's observatory at Birr Castle, Parsonstown. There he was for the next two years chiefly occupied with the observations on the moon's radiant heat (see LORD ROSSE's paper in *Phil. Trans.* 1873). In 1874 he was elected a fellow of the Royal Astronomical Society, and in the same year was appointed assistant in the Dublin University observatory at Dunsink, but was allowed to accompany Lord Lindsay to Mauritius to observe the transit of Venus in December of that year. The journey was made on the yacht *Venus*, and during a call at the uninhabited island of Trinidad in the South Atlantic Copeland was fortunate enough to discover a great tree fern (*Cyathea Copelandi*), groves of which are found only in the loftiest and nearly inaccessible parts of the island. The observation of the transit was only partially successful, but Copeland was thenceforth associated with Lord Lindsay (now the earl of Crawford and Balcarres), and left Dunsink in 1876 to take charge of his observatory at Dun Echt, Aberdeen, in succession to (Sir) David Gill. At first Copeland was much occupied in preparing for publication the 'Dun Echt Observatory Publications,' vol. iii., containing computations relating to the observations made at Mauritius. At the end of 1876 the temporary star known as Nova Cygni was discovered. Observing this star on 2 Sept. 1877, Copeland made the noteworthy discovery that its spectrum had become reduced to a bright line. In pursuit of Lord Crawford's plan of rendering Dun Echt a centre for the dissemination of astronomical information, it was Copeland's business to announce to the astronomical public all cometary discoveries in circulars giving the orbits and ephemerides, these being in many cases computed by him from his own observations. For ten years he observed every comet as it appeared, both for position and spectroscopically, and made noteworthy observations of the spectra of nebulae and stars, which he recorded in the 'Monthly Notices.' In 1882 he went to Jamaica and successfully observed the

transit of Venus, continuing his journey westward through Lord Crawford's liberality in order to test the suitability of the slopes of the Andes for observation.

Subsequently Copeland prepared the catalogue (1890) of Lord Crawford's valuable library of astronomical literature, which he had helped to arrange, began a spectroscopic study of nebulae which was not completed, and in 1887 journeyed to Russia to observe the total solar eclipse of that year, when his purpose was frustrated by bad weather.

Meanwhile he edited with his friend, Dr. Dreyer of Armagh, 'Copernicus, a Journal of Astronomy,' an organ of the Dun Echt observatory, of which three volumes appeared in Dublin (1881-4). They contain much of Copeland's writing, including his 'Account of some Recent Astronomical Experiments at High Elevations in the Andes,' with other incidents of his expedition to America in 1882 (vol. iii.).

In 1889 Lord Crawford presented the instrumental equipment of his observatory at Dun Echt, together with his astronomical library, to the Edinburgh observatory, on condition that it should be maintained as a Royal Observatory. On the acceptance of the offer by the nation Copeland was made Astronomer Royal for Scotland, on 29 Jan. 1889, in succession to Charles Piazzi Smyth [q. v. Suppl. I]. To this office was attached the professorship of astronomy in Edinburgh University. Copeland's first task in his new capacity was to remove the observatory from Calton Hill and to rebuild it on Blackford Hill. This work was not completed until 1895, and in the interval he began a new reduction of the meridian observations of one of his predecessors, Henderson (published posthumously). Next year he journeyed to Vadsö in a fruitless effort to observe the total solar eclipse of that year; but in India in 1898 (as a member of the official expedition), and at Santa Pola, on the south-east coast of Spain, in May 1900, he successfully observed eclipses of the sun. At Blackford Hill, Copeland continued by the issue of 'Edinburgh Circulars' the announcements of astronomical events, which he had begun at Dun Echt; his last circular (No. 54) referred to the appearance of the Nova in Perseus at the beginning of 1900, the spectroscopic observation of which was his last astronomical work. In 1901 he had an attack of influenza, and from this time his health gradually failed. He ceased his professorial lectures in 1902, and died at Edinburgh on 27 Oct. 1905.

Copeland married twice: (1) in 1859 Susannah Milner, his first cousin (*d.* 1866), by whom he had issue one son and one daughter; and (2) in Dec. 1871 Theodora, daughter of the orientalist, Professor Benfey of Göttingen, by whom he had three daughters and a son.

[Notice by Dr. J. L. E. Dreyer in the Monthly Notices of the Royal Astronomical Society for February 1906; Macpherson's Astronomers of To-day, 1905 (with portrait).]

H. P. H.

COPINGER, WALTER ARTHUR (1847-1910), professor of law, antiquary and bibliographer, born on 14 April 1847 at Clapham, was second son of Charles Louis George Emanuel Copinger and his wife Mary, relict of George James, and daughter of Thomas Pearson of Shepperton, Surrey. Educated at the private school of John Andrews at Wellesley House, Brighton, he passed to University College, Durham, but left Durham without completing his course to enter the office of a relative who was a solicitor in London. He did not remain there long. In 1866 he was admitted a student of the Middle Temple, and after spending a short time in the chambers of T. Bourdillon, a well-known conveyancing counsel, he was called to the bar on 26 Jan. 1869. He had mastered the principal treatises of law, and especially the law of real property. After his call he turned his attention to the law of copyright, and in 1870 he published a work on the 'Law of Copyright in Works of Literature and Art' (4th edit. 1904).

Meanwhile in 1870 Copinger settled in Manchester, and commenced practice as an equity draughtsman and conveyancer, and in the chancery court of the county palatine of Lancaster. His work as a conveyancer increased so rapidly that he soon ceased to take court work and became the leading conveyancer out of London. At the same time he was widely consulted on questions of copyright. He owed his success to his complete grasp of the intricacies of the law, especially that relating to real property, to his mental acuteness, his memory, his power of concentration, and his easy style of draughtsmanship. Pupils found his chambers an admirable school of training, for he had the power of making law live.

Amid his heavy professional work Copinger continued to write on legal subjects, more particularly on conveyancing. In 1872 appeared an exhaustive 'Index to Precedents in Conveyancing'; and in 1875 'Title Deeds, their Custody and Pro-

duction of other Documentary Evidence at Law and Equity.' His 'Law of Rents with special Reference to the Sale of Land in Consideration of a Rent Charge,' which was written many years before, was published in 1886, in collaboration with Professor Munro. In 1876 he published 'An Essay on the Abolition of Capital Punishment,' which, to his amusement, was so enthusiastically received by the abolitionists that his intention to publish another pamphlet demolishing all the arguments in the first was abandoned.

In 1888 Copinger was appointed lecturer in law in the Owens College, Manchester, and in 1892, upon the resignation of Professor Munro, he became professor of law, and finally dean of the faculty of law in the Victoria University. He received the Lambeth degree of doctor of laws from Archbishop Benson in 1889, and that of M.A. from the Victoria University in 1905. He was president of the Manchester Law Society's Library, and of the East Anglians of Manchester and district.

Copinger pursued versatile interests with untiring industry. Besides being an expert in old property law, he was also a keen bibliographer and antiquary, and took a deep interest in theology. Unfortunately all his bibliographical and historical work lacks the essential quality of minute accuracy. Largely owing to his efforts, supported by Richard Copley Christie [*q. v.* Suppl. I], the Bibliographical Society was founded in London in 1892; he was the society's first president, and held the office for four years, doing much to establish the society on a firm basis. Between 1895 and 1898 he published his most important bibliographical work, the 'Supplement to Hain's Repertorium bibliographicum,' comprising 7000 corrections of and additions to the collations of fifteenth-century works described or mentioned by Hain, and a list of nearly 6000 works not referred to by Hain. This work extends to upwards of 1630 closely printed double-column pages, and is of great value for reference, but it must be used with caution. He contributed several papers to the 'Transactions of the Bibliographical Society,' including an exhaustive monograph on the fifteenth-century printed editions of Virgil. In 1892 he published a fine folio volume on 'Incunabula Biblica,' being a bibliographical account of 124 editions of the Latin Bible printed between 1450 and 1500. At his Manchester residence, The Priory, Greenheys, he set up a small press, at which he printed for private circulation

four volumes: 1. 'Catalogue of the Copinger Collection of Editions of the Latin Bible,' 1893. 2. 'Corrections and Additions to the Catalogue of Incunabula in the Mazarin Library,' 1893. 3. Reprint of Leland's 'New Year's Gift to Henry VIII,' 1895. 4. 'On the Authorship of the First Hundred numbers of the "Edinburgh Review,"' 1895. Nos. 3 and 4 bear the serial title 'Bibliographiana.'

Copinger was quite as keenly interested in genealogy, heraldry, and manorial history. In 1882 he published his 'History of the Copingers or Coppingers' (new enlarged edit. 1884), in which he traces the descent of his family from the Danes in the tenth century, when they appear to have settled in Suffolk and in the south of Ireland. The energies of his last years were devoted almost exclusively to the history of Suffolk. In 1902 he issued the 'History of the Parish of Buxhall,' of which he was lord of the manor. Between 1904 and 1907 the 'History of Suffolk as described by Existing Records' (in 5 vols.) made its appearance together with the 'Manors of Suffolk: Notes on their History and Devolution' (7 vols. 1905-11). He also found time to compile the 'History of the Smith-Carrington Family' (2 vols. 1907), and to write 'Heraldry Simplified,' which appeared in the year of his death.

In religion Copinger was an Irvingite, and for a number of years was the angel of the Catholic Apostolic church in Manchester. His interest in theology was wide and deep. The work which he valued most among his writings was a huge treatise from his pen on 'Predestination, Election, and Grace' (1889). His other theological writings were: 'Testimony of Antiquity . . . being a Reprint of the Homily by Elfric,' edited by himself, 1877; 'Thoughts on Holiness, Doctrinal and Practical,' 1883; 'Contributions to Hymnody,' 1886; 'The Bible and its Transmission,' 1897; A new translation of 'Imitatio Christi,' 1900; and Law's 'Serious Call adapted to the Requirements of the Present Day,' 1905.

Copinger mainly found all the relaxation which he allowed himself in a change of work; but music always attracted him. He played several instruments, including the pianoforte and violin, and found time to compose a number of musical pieces, amongst which is a collection of seventy-five original hymn tunes.

Copinger was an ardent book-collector, and accumulated a considerable library. It was rich in early printed books, Bibles,

manuscripts, and printed editions of the 'Imitatio Christi,' hymn books, Elzevirs, and general works of reference. Genial and affable with every one, he was always ready to place not only the rich stores of his knowledge but the resources of his library at the disposal of any student.

He died at his residence in Manchester on 13 March 1910 from pneumonia following an attack of influenza. He was buried at Birch, Rusholme, Manchester. On 3 Sept. 1873 Copinger married Caroline Agnes, eldest daughter of Thomas Inglis Stewart, vicar of Landscope, Devon. She predeceased him, leaving two sons and three daughters.

[Manchester Faces and Places, viii. 8-12 (portrait); Manchester Univ. Mag., vii. 182-4; Copinger's History of the Copingers, 1884; Manchester Guardian, 14 March 1910; Athenæum, 26 March 1910; Dr. Copinger's own and other notes communicated by Mr. C. W. Sutton; private information and personal knowledge.] H. G.

COPPIN, GEORGE SELTH (1819-1906), actor and Australian politician, born at Steyning, Sussex, on 8 April 1819, was only child of George Selth Coppin (1794-1854) and his wife, Mrs. Elizabeth Jane Jackson. His father, of a Norwich family, gave up medical practice for the stage and became a theatrical manager.

As a child the son showed proficiency on the violin, became a musical prodigy at the age of four, and played juvenile characters on the stage a year or two later. At seventeen he took to his profession seriously, and in November 1837 he was a minor member of the Sheffield stock company, playing at that period Osric to the Hamlet of the young starring tragedian Gustavus Vaughan Brooke[q.v.]. Developing into a capable low comedian, he was engaged at the Queen's Theatre, Manchester, early in 1841, and on 7 August in that year (when he was described as 'from the Strand Theatre') began an engagement at the Abbey Street Theatre, Dublin. For a time he sang comic songs nightly between the pieces, accompanying himself on the violin. Here he met a fascinating American actress, Mrs. Watkins Burroughs, the wife of a provincial actor-manager, with whom he eloped to Australia, landing at Sydney on 10 March 1843. There Coppin acted on sharing terms at the Victoria Theatre, and frequently made 50*l.* a night. But the money thus amassed was lost in commercial enterprises, and he left Sydney in debt. On 5 January 1845 Coppin began a

starring engagement at Hobart Town, and on 3 March commenced theatrical management at Launceston, where he had a prosperous season. Three months later he took his company to Melbourne, where he rented the Queen's Theatre, making his first appearance there on 21 June, when he played Glavis in 'The Lady of Lyons' and Crack in 'The Turnpike Gate.' Subsequently Coppin removed to Adelaide, where he built a theatre in five weeks, and opened it on 2 Nov. 1846. Here within three or four years he made a fortune, only to lose it in copper mining. After passing through the insolvency court in 1851, he returned to Melbourne and spent a fortnight at the gold diggings without benefit. After a short starring engagement in Melbourne, he in 1852 commenced management at the Great Malop Street theatre, Geelong, where he rapidly made another fortune. Returning to Adelaide he paid his creditors in full, and sailing for England in January 1854 made his first appearance at the Haymarket, in London, on 26 June. Subsequently he fulfilled engagements at Birmingham, Manchester, Edinburgh, and Dublin. While at Birmingham in August he induced G. V. Brooke to sign articles to star under his management for 200 nights in Australia and New Zealand.

Returning to Melbourne, Coppin reappeared at the Queen's Theatre on 18 Dec., and next month began a successful engagement at the Victoria Theatre, Sydney. In June 1855 he opened the new Olympic theatre, Melbourne, familiarly known as 'The Iron Pot,' under his own management, on 30 July, playing Colonel Damas in 'The Lady of Lyons' and Mr. Trotter Southdown in 'To Oblige Benson.' Meanwhile Brooke's tour proved highly prosperous. Thereupon Coppin joined Brooke in purchasing the new Theatre Royal, Melbourne, for 23,000*l.*, opening that house on 9 June 1856. About the same period they also acquired the freehold of the Cremorne Gardens, upon which they spent much. At the Theatre Royal they organised the first grand opera season in the Australian colonies. The partnership was dissolved in Feb. 1859, Brooke continuing the management. Coppin then built the Pantheon Theatre; but owing to Brooke's difficulties, he resumed control of the Theatre Royal on 20 Dec. 1860. On 15 Sept. 1862 he completed a new theatre, the Haymarket. A second bankruptcy followed, but he brought out Mr. and Mrs. Charles Kean to Melbourne in Oct. 1863, and then took them to Sydney, with the result that he paid his creditors in

full. After touring with the Keans in America (1864-5), he reappeared at the Haymarket, Melbourne (Jan. 1866), in a variety of characters, including Daniel White in Craven's 'Milky White.'

In 1871 he went into partnership with Messrs. Harwood, Stewart, and Hennings in the management of the Melbourne Theatre Royal, but suffered a considerable loss through the burning of the uninsured building on 19 March 1872. At once taking a ninety-nine years' lease of the site, he rebuilt the theatre, subsequently transferring the property to the Theatre Royal Proprietary Association, Limited, of which he remained managing director till his death. At this house in Nov. and Dec. 1881 he gave farewell performances for twelve nights. His last appearance was on 9 Dec., as Bob Acres and Crack.

Meanwhile Coppin engaged in politics. In 1858 he was elected to the legislative council of Victoria for the south-western province, but resigned his seat on leaving the colony in 1864 for an American tour. During this period he helped to pass the Transfer of Real Property Act, and to secure the adoption of the English principle of the Post Office Savings Bank. He advocated the federation of the colonies and intercolonial free trade, and opposed the payment of members. Subsequently, from 1874 to 1889 he was member of the legislative assembly for East Melbourne. He was then returned to the Upper House, unopposed, for Melbourne province. He was twice elected chairman of the Richmond municipality, and for two years was chairman of magistrates in that district.

A man of immense energies and extraordinarily diverse interests, Coppin left the impress of his talents upon the colony of Victoria. As early as 1870 he advocated acclimatisation, and was the first to import camels and English thrushes into Australia. About 1861, in association with (Sir) Charles Gavan Duffy [q. v. Suppl. II], he founded the beautiful watering place, Sorrento on the Sea, forty miles S.E. of Melbourne, where Mount Coppin is called after him, and where till his death he had a charming seat. In 1868 he built a magnificent residence, Pine Grove, Richmond Hill, Melbourne (cf. J. B. Howe, *A Cosmopolitan Actor*, p. 191).

Coppin died at Melbourne on 12 March 1906. He was twice married: (1) in 1855, to Harriet Bray (d. 1859) of Birmingham, a sister of Mrs. G. V. Brooke; and (2) in 1861 to Lucy Hilsden. He left issue, by

his first wife, two daughters, and by his second wife, two sons and five daughters.

Howe, A Cosmopolitan Actor; Illustrated Australian News, 10 Sept. 1872; Melbourne Punch, 16 May 1861; Melbourne Age, 2 Nov. 1889; W. J. Lawrence's Life of G. V. Brooke, 1890; Heaton, Australian Dict. of Dates (1879), where Coppin's early career is confused with that of his father; private information.]

COPPINGER, RICHARD WILLIAM (1847-1910), naval surgeon and naturalist, born on 11 Oct. 1847 in Dublin, was youngest of the six sons of Joseph William Coppinger, a solicitor of Farmley, Dundrum, co. Dublin, by his wife Agnes Mary, only daughter of William Lalor Cooke, landed proprietor of Fortwilliam, co. Tipperary. The father's family was long settled at Ballyvolane and Barryscourt, co. Cork, and was said to descend from the first Danish settlers in Cork city. Coppinger received his medical education in Dublin, graduating M.D. at the Queen's University in 1870. Entering the medical department of the navy, he was appointed surgeon to H.M.S. Alert, which, with H.M.S. Discovery, left Portsmouth on 29 May 1875 under the command of captain (afterwards Sir) George S. Nares on a voyage of exploration towards the North Pole. The Alert reached a higher latitude than had ever been touched before, and Coppinger distinguished himself as the naturalist in charge of one of the sledging parties. On the return of the Alert to England in October 1876 he was specially promoted staff-surgeon and awarded the Arctic medal. Coppinger again served as naturalist in the Alert on her four years' exploring cruise in Patagonian, Polynesian and Mascarene waters from 1878 to 1882.

In 1889 he was appointed instructor in hygiene at the Haslar naval hospital at Gosport, where he was a most successful teacher, his knowledge of bacteriology being in advance of the time. On 13 March 1901 he was appointed inspector-general of hospitals and fleets, and was for three years in charge at Haslar. On 15 May 1904 he was placed on half-pay, and being disappointed in not being made director-general of the medical department of the navy, he retired in 1906.

He died at his residence, Wallington House, Fareham, on 2 April 1910, and was buried at Fareham cemetery. He

married, on 8 Jan. 1884, Matilda Mary, daughter of Thomas Harvey Browne, landed proprietor of Sydney, N.S.W., and had issue three sons and one daughter.

Coppinger was author of 'The Cruise of the Alert, 1878-82' (1883). He also wrote 'Some Experiments on the Conductive Properties of Ice made in Discovery Bay, 1875-6' (*Proc. Roy. Soc.* 1878, xxvi.); and 'Account of the Zoological Collections made in the Years 1878-1881, during the Survey of H.M.S. Alert in the Straits of Magellan and the Coast of Patagonia' (*Proc. Zool. Soc.*, 1881). He contributed to the parliamentary paper containing the report of the committee (1877) on 'Scurvy in the Arctic Expedition, 1875-6,' and to the 'Report on the Zoological Collections of H.M.S. Alert made in 1881-2' (British Museum, Nat. Hist., 1884).

[*Brit. Med. Journ.*, 1910, i. 1090; private information.] H. D. R.

CORBET, MATTHEW RIDLEY (1850-1902), painter, born on 20 May 1850 at South Willingham, Lincolnshire, was son of the Rev. Andrew Corbet by his wife Marianne Ridley. He was educated at Cheltenham College, and coming to London entered the Royal Academy schools. His first exhibits at the Royal Academy were portraits, among them those of Lady Slade (1875), Mrs. Heneage Wynne-Finch (1877), and Lady Clay (1879). Though he continued to paint occasional portraits, such as those of Lord Northbourne (1886), Mrs. Stuart (afterwards Lady) Rendel (1891), the Hon. Walter James (1892), Lady Morpeth (1895), and Lady Cecilia Roberts (1897), he was concerned from 1883 onwards almost entirely with landscape. Between 1875 and 1902 he exhibited thirty-eight works in all at the Royal Academy, of which he was elected an associate in 1902. After 1880 he also sent several of his important works to the Grosvenor Gallery, and later to the New Gallery. His 'Sunrise' gained a bronze medal at the Paris Exhibition of 1889; and his 'Morning Glory' (1894) and 'Val d'Arno—Evening' (1901), bought under the terms of the Chantrey bequest, are now in the Tate Gallery.

As a pupil and devoted follower of Giovanni Costa, Corbet was steeped in the beauty of Italian landscape, and though he found the subject of his 'Morning Glory' near the Severn, he was, as a rule, at his best when painting under Italian skies. The title that he chose from Keats for one of his exhibits in 1890—'A land of fragrance, quietness, and trees and flowers'—suggests

the spirit of the Italian scenes which inspired his brush. In his work there was always a fine sensitiveness to the poetic beauties of nature, and a restful harmony of colour. His sense of beauty was too refined and cultivated to win the masses, and his distinguished talent was just beginning to win appreciation at the time of his death. Among his more important works, besides those already mentioned, are 'Passing Storm' (1896), 'Autumn Rains' (1896), and 'Florence in Spring' (1898).

Corbet died on 25 June 1902 at his residence, 54 Circus Road, St. John's Wood, from an attack of pneumonia, and after cremation his ashes were laid behind a tablet in the wall of South Willingham church. On 17 March 1891 he married Mrs. Arthur Murch (born Edith Edenborough), herself a landscape painter, whose vision and methods were in close sympathy with his own. A bust portrait of Corbet, sculptured by E. Onslow Ford, R.A., and medallion portrait by Alfred Gilbert, R.A., are now in the possession of his widow.

[The Times, 27 June 1902; Mag. of Art, xxvi. 236, 1902; Graves's Academy Exhibitors; private information.] M. H.

CORBETT, JOHN (1817-1901), promoter of the salt industry in Worcestershire and benefactor, born at Brierley Hill, Staffordshire, on 12 June 1817, was eldest son in a family of five sons and one daughter of Joseph Corbett by his wife Hannah. The father, originally a Shropshire farmer, migrated to Staffordshire to become a carrier of merchandise by canal boats. John, after attending as a child Mr. Gurney's school at Brierley Hill, helped on his father's boats from the age of ten to that of three and twenty. He devoted his leisure to an unaided study of mechanical problems; and in 1840, at the mature age of twenty-three, was apprenticed for five years to W. Lester, chief engineer of Messrs. Hunt & Brown of the Leys ironworks, Stourbridge. In 1846 he reluctantly abandoned the career of an engineer to become his father's partner, and under the name of Corbett & Son a prosperous business was carried on, a large fleet of boats being maintained between the Staffordshire district and London, Liverpool, Manchester, and other commercial centres. In 1852 the business was sold, the advent of railways threatening to decrease canal traffic, and Corbett then bought the Stoke Prior salt works near Droitwich.

Corbett's new venture was unpromising. Salt had been discovered at Stoke Prior by a Cheshire 'brine-smeller' in 1828. Vast

sums had since been expended in the sinking of brine pits and the erection of salt-works. But the great depth of the brine springs and the weakening of the brine within the pits by an inflow from neighbouring fresh-water springs made production costly. Six private owners in turn became bankrupt, and then the property was divided between two rival joint-stock companies with no better result. Corbett acquired in 1852 the premises of both the companies, which stood respectively on opposite banks of the Worcester and Birmingham canal. Within a few years the enterprise was completely transformed. New brine pits lined with cast-iron cylinders to prevent the inflow of fresh water were sunk to a depth of 1000 feet, and by the introduction of a patent process whereby a system of pipes doubled the intensity of both the fire-heat and steam, a whiter, more finely grained salt was produced than was obtainable elsewhere, the size of the grain or crystal depending on the temperature at which the brine was evaporated. Other changes were the acquisition of fifty canal boats, the cutting of tributaries from the canal to the lofts in which the salt was stored, the building of a railway—the property of Corbett—which traversed the works, carrying coal to and salt from such places as could not be reached by water, and the establishment of a wagon factory, a foundry, fitting shops, sawmills, and a brickyard. As many as seven depôts were established in London. Corbett himself supervised all details. Within twenty-five years he converted an annual output of 26,000 tons of salt into one of 200,000 tons, and built up the most perfect system of salt-manufacture in the world. For his workpeople he built model houses, gardens, schools, a club-house, lecture-room, and dispensary. In 1859 he abolished female labour on the works, a step now commemorated by a window placed by public subscription in Stoke Prior church. He sold the works in 1889 to the Salt Union.

Corbett was interested in politics on the liberal side. In 1868 he contested unsuccessfully Droitwich against the conservative candidate, Sir John Pakington [q. v.]; but Droitwich reversed its decision in 1874, when Corbett defeated Pakington and was elected. He kept the seat in 1880; in 1885, when the old borough was merged in the mid-Worcestershire division, he was returned unopposed for that constituency. In the house, though never prominent in debate, he showed interest in questions of local taxation, advocated alterations in the laws of land tenure, and was an early

advocate of woman suffrage. Opposed to home rule, he joined the ranks of the liberal unionists in 1886 and was returned by a large majority in that interest in July 1886. He retired at the dissolution of 1892.

Corbett acquired from Lord Somers a large estate at Impney near Droitwich and from Athelston Corbet (no relation) a second estate near Towyn in Wales. On the Impney property he erected a residence in the style of a French château of the time of Francis I. A generous supporter of philanthropic institutions in the Midlands, Corbett presented Corbett Hospital to Stourbridge and Salters' Hall, a building capable of holding 1500 people, to Droitwich. He also contributed generously to the funds of Birmingham University, of which he was a governor, and of the Bromsgrove Cottage Hospital; he helped in the development of Droitwich as a health-resort by the erection of St. Andrew's Brine Baths (1889), and by the restoration of the old Raven Hotel and the building of the Worcester Hotel; he presented a church clock to Brierley Hill and placed memorial windows in the church there to his father and mother. To the development of Towyn he contributed by the erection of a fine esplanade and a massive sea-wall.

Corbett, who was an associate of the Institute of Civil Engineers, died at Impney on 22 April 1901.

Corbett married in April 1856 Anna Eliza, daughter of John O'Meara of county Tipperary, and had issue two sons and four daughters.

A bust was executed by E. Onslow Ford, R.A., and a presentation portrait by H. T. Wells, R.A., was exhibited at the Royal Academy in 1895.

E. F.

CORBOLD, EDWARD HENRY (1815-1905), water-colour painter, born in London on 5 Dec. 1815, was son of Henry Corbould [q. v.], historical painter and draughtsman, and grandson of Richard Corbould [q. v.], portrait, landscape, and historical painter, and designer of book illustrations. He was a pupil of Henry Sass, and a student of the Royal Academy. In 1834, 1835, and 1836 he won gold

medals of the Society of Arts, in 1834 with a water-colour of the 'Fall of Phaethon,' and in the last two years with models of 'St. George and the Dragon' (collection of Dr. Victor Corbould) and a 'Chariot Race, from Homer' (now in the possession of Mrs. G. H. Heywood). His first exhibits in the Royal Academy in 1835 included a model ('Cyllarus and Hylonome'), but he did not pursue the art of sculpture for long. It is interesting, however, to note that in 1889, when the London corporation invited various artists to submit designs for four pieces of sculpture for Blackfriars bridge (a project never carried out), he produced four drawings of colossal groups, which are still in the possession of Dr. Victor Corbould. The main work of his life was in water-colour, in which he produced a large number of subjects illustrating literature (chiefly Chaucer, Spenser, and Shakespeare), history, and daily life. He continued to the end even in his larger subjects to paint in the careful stippled manner that is more adapted to miniature portrait and illustration; and only a small proportion of his pictures are in oil (e.g., 'The Canterbury Pilgrims,' R.A. 1874, in the possession of Dr. Victor Corbould). He started exhibiting at the New Water Colour Society (later the Royal Institute of Painters in Water Colours) in 1837, becoming a member of that body in the same year. One of the most important of his early exhibits at this society, 'The Canterbury Pilgrims assembled at the old Tabard Inn' (1840), is now at Norbury Park, Dorking. In 1842 his water-colour of 'The Woman taken in Adultery' was purchased by the Prince Consort, and nine years later he was appointed 'instructor of historical painting to the royal family.' He continued for twenty-one years teaching various members of the royal family, and many of his best works were acquired by Queen Victoria, Prince Albert, and his royal pupils, e.g. an illustration of Tennyson's 'Morte d'Arthur' (now in Kensington Palace), presented by Queen Victoria to Princess Louise, and 'Henry VI welcomed to London after his Coronation in Paris,' and 'The Iconoclasts of Basle,' acquired by the Empress Frederick and still in the imperial collection, Berlin. Apart from the royal collections, one of the largest collections of his works was that of George Strutt of Belper. Corbould exhibited in all about 250 drawings at the Royal Institute, only retiring from active membership in 1898. He also produced a large number of designs (chiefly subjects of fancy and romance) for

book illustration, *e.g.* in the Abbotsford edition of the 'Waverley Novels' (Cadell, 1841-6), and in Black's edition of the same (1852-3), Spenser's 'Faerie Queen' and Chaucer's 'Canterbury Tales' (Routledge, 1853), Tupper's 'Proverbial Philosophy' (1854), Willmott's 'Poets of the Nineteenth Century' (1857), 'Merrie Days of England' (1858-9), and in periodicals such as 'London Society,' the 'Churchman's Family Magazine,' 'Cassell's Magazine,' and the 'Illustrated London News.' He died at Kensington on 18 Jan. 1905.

He was thrice married: (1) on 23 Sept. 1839 to Fanny Jemima (*d.* 1850), daughter of the engraver Charles Heath [*q. v.*], by whom he had three daughters, one of whom, Isabel Fanny (Mrs. G. H. Heywood), has two daughters who are artists, Mrs. Evelyn Corbould-Ellis and Mrs. Weatherley; (2) on 7 Aug. 1851 to Anne Middleton Wilson (*d.* 1866), by whom he had two sons, Ridley Edward Arthur Lamothe (1854-1887) and Victor Albert Louis Edward (*b.* 1866); (3) on 15 Jan. 1868 to Anne Melis Sanders, by whom he had one son and one daughter.

The only painting preserved in a public gallery is a water-colour of 'Lady Godiva' in the National Gallery of New South Wales. The following are among the more important prints after his paintings: 'The Canterbury Pilgrims assembled at the old Tabard Inn' (mezzotint by C. E. Wagstaff, 1843); 'Henry VI welcomed to London after his Coronation' (engraved by E. Webb, 1847; the original now in Berlin); 'My Chickens for Sale' (1847), 'Maid of the Mill' (1849), and 'Valentine's Eve' (1850) (mezzotints by Samuel Bellin); 'Happy as a Queen' (1852), and 'The Wood Nymph' (mezzotints by W. H. Eggleton, 1855); 'The Fairy Well' (mezzotint by J. E. Coombs, 1855); 'Lady Godiva' (mezzotint by J. J. Chant, 1860); 'The Queen of the Tournament' (mezzotint by T. W. Huffam); 'The Plague of London' (one of the Westminster Hall Cartoons, lithograph by Frank Howard); portrait of the Prince Consort (lithograph by R. J. Lane, 1862).

A miniature portrait of Corbould by his grand-daughter, Mrs. Weatherley, is in the possession of Dr. Victor Corbould.

[The Biograph and Review, vol. iii. no. 16 (April 1880); M. H. Spielmann in the Daily Graphic, 19 Jan. 1905; Daily Chronicle, 21 Jan. 1905; A. Graves, Dictionary of Artists (1895) and Royal Academy Exhibitors; Lists of the Printsellers' Association; Gleeson White, English Illustration: The Sixties,

A. M. H.

CORFIELD, WILLIAM HENRY (1843-1903), professor of hygiene and public health, born on 14 Dec. 1843 at Shrewsbury, was eldest son of Thomas Corfield, a chemist of that town, by his wife Jane Brown, of a Gloucestershire family. Educated at Cheltenham grammar school, he gained a demyship in natural science at Magdalen College, Oxford, matriculating on 12 Oct. 1861, and gaining a first class in mathematical moderations in 1863. He was then selected by Prof. C. G. B. Daubeny [*q. v.*] to accompany him to Auvergne, where he investigated the volcanic appearances in the Montbrison district. Returning to Oxford, he gained a first class in the final school of mathematics and physics in Michaelmas term 1864, and graduated B.A. From 1865 to 1875 he held, after open competition, the Sheppard medical fellowship at Pembroke College. In Michaelmas term 1865 he won a first class in the natural science school, in which he acted as examiner during 1873-4. He entered University College, London, as a medical student in 1865, in 1866 won the Burdett-Coutts scholarship at Oxford for geology, and next year was elected Radcliffe travelling fellow.

Influenced by Sir Henry W. Acland [*q. v.* Suppl. I] and by George Rolleston [*q. v.*], Corfield had by this time directed his attention more particularly to hygiene and sanitary science. A portion of his foreign travel was spent in Paris, where he attended Bouchardat's lectures and studied hygiene under Berthelot at the Collège de France. He proceeded afterwards to Lyons, worked at clinical medicine and surgery, and made a special study of the remains of the remarkable aqueducts of ancient Lugdunum. He also visited some of the medical schools in Italy and Sicily. He graduated M.B. at Oxford in 1868, and M.D. in 1872. In 1869 he was admitted M.R.C.P. London, and in 1875 he was elected F.R.C.P. He became a fellow of the Institute of Chemistry in 1877.

Meanwhile in 1869 Corfield was appointed professor of hygiene and public health at University College, London, and in 1875 he opened the first laboratory in London for the practical teaching of hygiene. In 1876 Corfield actively helped to found a museum of practical hygiene in memory of E. A. Parkes [*q. v.*], which was placed first at University College, afterwards at Margaret Street, Cavendish Square, and since 1909 at Buckingham Palace Road, Westminster, being now maintained by the Royal Sani-

tary Institute. Medical officer of health for Islington (1871-2), and for St. George's, Hanover Square (1872-1900), Corfield was at one time president of the Society of Medical Officers of Health.

A member of the committee appointed in 1869 by the British Association to inquire into the treatment and utilisation of sewage, Corfield worked as reporter to the committee until 1875, and he became an ardent advocate of land filtration and sewage farms. He delivered at the Royal Society of Arts in 1879 the Cantor lectures on 'Dwelling houses, their sanitary construction and arrangements'; in 1893 the Harveian lecture before the Harveian Society of London, on 'Disease and defective house sanitation,' and in 1902 the Milroy lectures at the Royal College of Physicians of London, 'On the aetiology of typhoid fever and its prevention' (1902).

Corfield shares with Rogers Field the honour of being a pioneer in house sanitation and of being the first to enunciate the true principles of a healthy home. Public attention was called to the topic in 1871 by the attack of enteric contracted by the Prince of Wales (afterwards King Edward VII) at Londesborough Lodge, Scarborough. Corfield was called upon to make a careful inspection of Lord Londesborough's house. In a letter to 'The Times' on 22 Jan. 1872 he pointed out that the disease had not been conveyed by sewer air as had been suggested. For the next thirty years Corfield enjoyed a large consulting practice throughout England in connection with the sanitation of public and private buildings. In 1899 he was the first holder of the newly established office of consulting sanitary adviser to the office of works.

Corfield acted conjointly with Dr. John Netten Radcliffe [q. v.] as secretary of the Epidemiological Society (1870-2), and was president (1902-3). President of the public health section of the British Medical Association held at Bristol in 1894, and of a section of the sanitary congress of the Sanitary Institute held at Newcastle-on-Tyne in 1896, Corfield originated the successful International Congress of Hygiene held in London in 1891. He represented the office of works at the International Congress of Hygiene and Demography, of which he was honorary president, at Paris in 1900; and presided at the conference held by the Sanitary Institute at Paris in August 1900 under the auspices of the Société Française d'Hygiène.

Corfield died at Marstrand in Sweden,

on a visit for his health, on 26 Aug. 1903. He married in 1876 Emily Madelina, youngest daughter of John Pike, F.S.A., and left a family of six children, two of whom are carrying on his work, one, Dr. Walter Francis Corfield, as medical officer of health for Colchester, the other, Frederick John Arthur Corfield, as a sanitary adviser.

Corfield belongs to the second generation of sanitary reformers in England. Entering professional life after a first-rate general education, he took up the subject of public health where it had been left by Chadwick, Simon, Buchanan, Netten Radcliffe, Thorne-Thorne and others, and carried it forward until it became a highly specialised science.

Corfield, who had wide interests outside his profession, was a collector of rare books and a connoisseur in binding. His library was especially rich in works on fishing, for he was an ardent angler. He was also a lover of prints, and made a fine collection of Bewick's woodcuts. For more than twenty years he was chairman of the committee of the Sunday Society, which has for its object the opening of museums, picture galleries, and public libraries on Sunday.

Corfield's chief works are: 1. 'A Digest of Facts relating to the Treatment and Utilisation of Sewage,' 1870; 3rd edit. 1887. 2. 'Water and Water Supply,' Part 1; and 'Sewerage and Sewerage Utilisation,' Part 2, New York, 1875. 3. 'Dwelling Houses: their Sanitary Construction and Arrangements,' 1880; 4th edit. 1898; translated into French from 2nd edit. by P. Jarret, Paris, 1889. 4. 'Laws of Health,' 1880; 9th edit. 1896. 5. 'Disease and Defective House Sanitation,' 1896; translated into French, Italian and Hungarian. 6. 'Public Health Laboratory Work,' 1884 (jointly with W. W. Cheyne and C. E. Cassal).

[Lancet, 1903, ii. 778 (with portrait); Brit. Med. Journal, 1903, ii. 627 (with portrait); Journal of the Sanitary Institute, 1903, vol. xxiv. part iii. p. 530 (with portrait); the Medico-Chirurgical Trans., 1904, lxxxvii. p. cxxxi; Trans. Epidemiological Society of London, New Series, xxii. 160; information from Mr. F. J. A. Corfield.] D'A. P.

CORNISH, CHARLES JOHN (1858-1906), naturalist, born on 28 Sept. 1858 at Salcombe House, near Sidmouth, the residence of his grandfather, Charles John Cornish, J.P., D.L., was eldest son of Charles John Cornish, then curate of Sidbury, Devonshire, by his first wife, Anne Charlotte Western (d. 1887). He was brought up at Debenham, Suffolk, where his

father became vicar in 1859. In 1872 he entered Charterhouse as a gownboy, and left in 1876. After engaging in private tuition, he entered Hertford College, Oxford, as a commoner in 1881, was elected Brunell exhibitioner in 1882 and Lusby scholar in 1883. In the same year he obtained his 'blue' in association football, a second class in classical moderations in 1883, and a second class in literæ humaniores in 1885. He was then appointed assistant classical master at St. Paul's School, and held the post until his death. He was the founder in 1896 of the school field club. Soon after coming to London he wrote occasional articles on natural history and country life, and in 1890 became a regular contributor to the 'Spectator,' and, later, to 'Country Life.' Many of his articles re-appeared in book form. Cornish's country tastes and love of shooting and fishing were fostered by his father, in whose family they were traditional. His artistic and literary gifts he inherited from his mother. His powers of observation were unusually keen and rapid, his memory remarkably good, and he had powers of vivid expression. His literary energy, which continued through twenty years, stimulated public interest in natural history and country life, and helped to give these subjects an assured place in English journalism. He died at Worthing on 30 Jan. 1906, from an illness originating in an accident incurred many years before when shooting. After cremation his ashes were interred at Salcombe Regis, near Sidmouth, and a mural tablet to his memory was placed in the parish church. He married in 1893 Edith, eldest daughter of Sir John I. Thornycroft, C.E., F.R.S., by whom he had one daughter.

Cornish was author of the following books: 1. 'The New Forest,' 1894. 2. 'The Isle of Wight,' 1895. 3. 'Life at the Zoo,' 1895 (the work which made him generally known). 4. 'Wild England of To-day, and the Wild Life in it,' 1895. 5. 'Animals at Work and Play,' 1896. 6. 'Nights with an Old Gunner,' 1897. 7. 'Animals of To-day,' 1898. 8. 'The Naturalist on the Thames,' 1902. 9. 'Sir William Henry Flower, a Personal Memoir,' 1904. He co-operated with others in 'Living Animals of the World' (2 vols. 1901-2). 'Animal Artisans and other Studies of Birds and Beasts,' with a prefatory memoir by his widow, was published in 1907.

[Memoir by his widow, 1907; The Times, 31 Jan. and 5 Feb. 1906; personal knowledge.]
V. C.

CORNWELL, JAMES (1812-1902), writer of school books, born in East London on 4 August 1812, was one of nine children of James Cornwell, silk manufacturer, and his wife Mary Blake. Up to the age of fifteen he was mainly self-taught. He then studied at the model school of the Borough Road Training College of the British and Foreign School Society, and by August 1829 was a full-fledged student. In the early part of 1830 he was sent as a teacher on supply to the society's schools at Brighton and Chelmsford, and in October to Lindfield in Sussex. He returned to the college in January 1833 for a short period of training.

In April 1835 the society appointed him organiser of country schools, his duty being to 'organise new schools' and assist newly appointed masters in obtaining 'good discipline by moral means.' In October 1839 he was appointed normal school teacher and inspector, and from 1835 worked both in the training college and as an inspector outside. In 1846, when the training department of the institution in the Borough Road became recognised by the privy council as a grant-earning normal college, Cornwell was appointed by the British and Foreign School Society its head teacher or principal. Under his care the institution greatly developed and took a high position among the normal colleges of the country. His lectures were clear, pertinent, and accurate, and he showed much ability in practical teaching. In principles and methods of school management he anticipated many later results of educational science and experience.

In 1841 Cornwell began to publish school-books which in simplicity of style and practical usefulness were far in advance of the text-books of their day and deservedly enjoyed a universal vogue. He shares with J. T. Crossley, (Sir) Joshua Girling Fitch [q. v. Suppl. II], and Henry Dunn the merit of having devised the modern school-book. In collaboration with Dr. Allen he issued 'A New English Grammar' (1841, 12mo), 'An English School Grammar' (18mo), and 'Grammar for Beginners' (1855, 12mo; 90th edit, 1904). His popular 'School Geography,' first published in 1847, passed through ninety editions. Memorial editions of the 'Grammar for Beginners' and of the 'Geography' were published in 1904.

After his resignation of the principalship at Borough Road in 1885, Cornwell devoted his leisure to writing new educational works

or revising former ones. He was fond of music and of the study of nature. For sixteen years he resided at a house he built for himself, Loughborough Park Villa, Brixton, and then removed to Purbrook, Crescent Wood Road, Sydenham, where he died on 12 Dec. 1902. He was buried in Norwood cemetery.

Cornwell received the degree of Ph.D. from a German university in 1847, and in 1860 he became a fellow of the Royal Geographical Society. A portrait, painted by J. R. Dicksee, was presented by the artist to the Borough Road Training College in Nov. 1903, and is now at the College, Isleworth (cf. reproduction in the *Educational Record*, Feb. 1904).

Cornwell married on 19 Nov. 1840 Mary Ann Wilson of Besthorpe, Nottinghamshire. There was one daughter of the marriage.

Other works not mentioned above are: 1. 'The Young Composer, or Progressive Exercises in Composition,' 1844, 12mo; 17th edit. 1855. 2. 'Complete Guide to English Composition,' founded on the above; 49th edit. 1904. 3. 'Geography for Beginners,' 1858, 12mo; 70th edit. 1904. In collaboration with Sir Joshua Fitch he published 'The Science of Arithmetic' (1855, 12mo; new edit. 1878) and 'Arithmetic for Beginners' (1858, 12mo; another edit. 1872).

CORRY, MONTAGU WILLIAM LOWRY, first **BARON ROWTON** (1838-1903), politician and philanthropist, born in London on 8 Oct. 1838, was second son of the four children—two sons and two daughters—of Henry Thomas Lowry Corry [q. v.], a prominent member of the conservative party, by his wife Lady Harriet Ashley (d. 1868), second daughter of Cropley Ashley Cooper, sixth earl of Shaftesbury.

Educated at Harrow and Trinity College, Cambridge, where he graduated in 1860, Corry was called to the bar at Lincoln's Inn in 1863 and joined the Oxford circuit. He made some progress in his profession, but his personal charm and social accomplishments rendered him popular in society and social diversions occupied much of his time. He was an occasional contributor to (Sir) Algernon Borthwick's society journal called the 'Owl,' and was especially well known in fashionable conservative circles. In 1865, while a guest of the duke of Cleveland at Raby Castle, he met for the first time Disraeli, who was impressed by Corry's ingenuity and resource in saving the fortunes of what threatened to be a

dull party. When Disraeli became chancellor of the exchequer in June 1866 Corry wrote reminding the statesman of their meeting, and asking his help to some political post. Disraeli replied by inviting Corry to become his private secretary. He served Disraeli in that capacity until the statesman's death. Disraeli succeeded Lord Derby as prime minister in February 1868. On his chief's retirement from office in the following December, Corry refused other offers of employment, and remained with him without salary. During Disraeli's second administration, from 1874 to 1880, Corry played a prominent part in public life as the inseparable companion of his chief, who became Lord Beaconsfield in 1876. Corry attended him at the Congress of Berlin in 1878, when he acted as secretary of the special embassy and was made on his return C.B. Although other private secretaries of Lord Beaconsfield fully shared his responsibilities, Corry enjoyed a far closer intimacy with the prime minister than they. He sought no political reputation for himself. On his fall from power in 1880 Lord Beaconsfield acknowledged Corry's personal devotion by recommending him for a peerage. On 6 May 1880 he was created Baron Rowton. Corry took his title from Rowton Castle in Shropshire, the property of his aunt, Lady Charlotte Ashley, who had become possessed of it on the death of her husband, Henry Lyster, on 12 Dec. 1863. Lady Charlotte, who was childless, had already designated her nephew her heir. Lord Rowton succeeded to the estate on his aunt's death on 11 Dec. 1889. Lord Beaconsfield gave a final proof of his confidence in his secretary, who was recalled from a holiday in Algiers to his deathbed in April 1881, by leaving by will to Corry's unfettered discretion the sole responsibility for the use, treatment, and publication of his correspondence and papers. Corry examined the papers, but in private he always deprecated the writing of a life of the statesman. At any rate he felt himself unequal to the task. Although reports to the contrary were occasionally circulated, he made no attempt to grapple with it. After Rowton's death, when his responsibilities passed to Lord Beaconsfield's trustee, Lord Rothschild, the material at Lord Rowton's disposal was placed in the hands of Mr. W. F. Monypenny, and a biography of Lord Beaconsfield was prepared (vol. i. 1910, vol. ii. 1912).

Rowton after Lord Beaconsfield's death remained a prominent figure in London

society and in conservative political circles, although he held no official position. Queen Victoria, whose acquaintance he made in Lord Beaconsfield's service, long consulted him confidentially on public affairs, and he was her frequent guest.

Rowton, who combined vivacity and exceptional sociability with tact, formed friendships among all classes. A serious philanthropic endeavour occupied much of his attention in his last years. In November 1889 he accepted the invitation of Sir Edward Cecil Guinness, afterwards Lord Iveagh, to become a trustee of the Guinness Trust Fund of 250,000*l.* for the provision of artisans' dwellings, 200,000*l.* to be allotted to London and 50,000*l.* to Dublin. While examining as a Guinness trustee the conditions of life in the poor districts of London, Rowton, impressed by the unhealthy and squalid character of the common lodging-houses, resolved to provide a new form of poor man's hotel, where lodging, catering, and the advantages of a club should be offered at the lowest price. The scheme lay outside the scope of the Guinness Trust, which Rowton actively administered. After consultation with his cousin, Mr. Cecil Ashley, and Sir Richard Farrant, directors of the Artisans' Dwellings Company, who warned Rowton that the hotel scheme could not prove a safe investment, he himself undertook to devote 30,000*l.* of his own money to the experiment. A site was secured in Bond Street, Vauxhall, and building was begun. Lord Rowton made himself responsible for every detail. The Vauxhall house, accommodating 447 persons, was opened on 31 Dec. 1892, and in the face of many difficulties and discouragements was organised on a satisfactory basis. The success of this first 'Rowton House' justified the extension of the enterprise, and in March 1894 a company, Rowton Houses, Limited, was incorporated with a subscribed capital of 75,000*l.*, of which 30,000*l.* in shares was allotted to Lord Rowton in return for the money he had advanced. Lord Rowton became chairman, with Sir Richard Farrant, Mr. Cecil Ashley, and Mr. Walter Long, M.P., as directors. The capital was subsequently raised to 450,000*l.* Rowton Houses were erected in King's Cross (1896), Newington Butts (1897), Hammersmith (1899), Whitechapel (1902), and Arlington Road, Camden Town (1905). The last contained 1087 beds. The total number in the six Rowton Houses exceeded 5000. The catering produced little profit, but the income derived from lodging accommodation

provided a dividend. Rowton approached the problem without thought of gain, but the realisation of a profit is a tribute to his sagacity and no disparagement of his benevolent intention. Since his death the company's prosperity has been uninterrupted and Rowton Houses have been imitated in the great towns of Great Britain and in Europe and America.

Rowton was made K.C.V.O. in 1897, and was sworn of the privy council in 1900. He suffered frequent attacks of illness, and died of pneumonia at his residence in Berkeley Square, London, on 9 Nov. 1903. He was buried at Kensal Green. He was unmarried, and the peerage became extinct at his death. He left his property to Lieut.-colonel Noel Corry, grenadier guards, son of his elder brother, Armar Corry, at one time in the foreign office, who died in 1893.

Cartoon portraits by 'Spy' appeared in 'Vanity Fair' in 1877 and in 1880 (with Lord Beaconsfield).

R. L.

CORY, JOHN (1828-1910), philanthropist, coal-owner, and ship-owner, born on 28 March 1828, at Bideford, Devonshire, was eldest of five sons of Richard Cory (1799-1882) by Sarah (*d.* 5 Oct. 1868), daughter of John Woollacott, both of Bideford. The family traces descent through Walter Cory (*d.* 1530) of Cory in West Putford, Devonshire, to Sir Walter de Cory, who in the reign of King John married the eventual co-heiress of the Levingtons in Cumberland (BURKE's *Peerage*, 1910, s.v. Cory). After trading for years with Cardiff in coasters, Richard Cory settled in the town about 1831, opening a ship-chandler's store, to which he soon added a ship-broking business. About 1835 he began exporting coal, first as agent and later on his own account. In 1844 his two eldest sons, John and Richard (*b.* 1830), joined him in the business, thence carried on under the name of Richard Cory & Sons, and from 1859, when the father retired, as Cory Brothers. The firm's shipping and coal-exporting business steadily increased, and the universal demand for South Wales steam coal for navigation led John Cory to conceive the idea of establishing foreign depôts in all parts, one of the earliest being established at Port Said on the opening of the Suez Canal in 1869. At the time of

his death the firm had in all about eighty such depôts on the shipping routes to India, China, South Africa, and South America. About 1868 the firm had acquired its first colliery, that of Pentre, Rhondda, to which others in the same valley, and in the Ogmore and Neath valleys, were from time to time added. Large colliery interests were also acquired elsewhere. In 1883 Cory became associated with other Rhondda coal-owners in the promotion of the Barry dock and railway, in which he afterwards held a large interest, and became vice-chairman of its company. In 1888 Cory's firm was converted into a limited company, but its entire control remained in the hands of members of the family, his three sons becoming directors, and Cory himself chairman of the board.

When in 1836 teetotalism was first advocated in Cardiff, Cory's father is reputed to have been the first to sign the pledge, and he soon became the recognised leader of the movement in the town, his co-workers being nicknamed 'Coryites' (JENKINS and JAMES, *Nonconformity in Cardiff*, p. 212). Though a churchman, and for a time a churchwarden, he was led by his zeal for total abstinence to associate himself with one of the minor methodist bodies (*ibid.* p. 192), while his second son, Richard, became a baptist, and the eldest, John, a Wesleyan methodist, all three being noted for their interest in temperance and evangelical work (*ibid.* pp. 110, 150).

John Cory was one of the earliest supporters of 'General' Booth, and besides many other generous contributions to the Salvation Army, he gave it Maendy Hall at Ton Pentre, with thirty acres of land, as a home of rest. Among the many other institutions to which he gave liberally were the Band of Hope Union and Dr. Barnardo's Homes. In many seaports he established soldiers' and sailors' rests (e.g. at Cardiff, Barry, Milford Haven), one of the best known, built for the British and Foreign Sailors' Society (of which he was president), being the John Cory Hall in Poplar. In Cardiff he gave the police institute at a cost of 3000*l.* (besides contributing annually to its maintenance), the original Y.M.C.A. building, 6500*l.* to the University College, and gifts to Aberdare Hall (women students' hostel), 2000*l.* to the Seamen's Hospital, and large sums to the infirmary. For many years before his death his benefactions amounted to nearly 50,000*l.* a year. He was a member of the Cardiff school board for twenty-three years, and gave annually a large number of prizes

for proficiency in Bible knowledge. In politics he was a liberal.

After living for some years at Vaendre Hall, near Cardiff, he acquired the manor of Dyffryn, St. Nicholas, near Cowbridge, and in 1907 began laying out part of the estate, near Peterston, as a garden village under the name of Glyn-Cory. He also converted the inn at St. Nicholas into a temperance house with reading-rooms and mission hall. He died at Dyffryn on 27 Jan. 1910, and was buried at St. Nicholas, a memorial service, presided over by the bishop of Llandaff, being simultaneously held at Park Hall, Cardiff. By his will he left (including his reversionary bequests) about a quarter of a million sterling for charitable purposes, of which 20,000*l.* was given to the Salvation Army, one half of it to be applied to its foreign work, the other half to its home and rescue work. He also gave 5000*l.* each to the Cardiff Infirmary, the Bible Society, Spezzia Mission, and Müller's Orphanage.

In June 1906 a statue in bronze of Cory, by (Sir) W. Goscombe John, was placed in Cathays Park, Cardiff.

On 19 Sept. 1854, at St. Paul's Church, Newport, he married Anna Maria, daughter of John Beynon, colliery proprietor, of Newport, Monmouthshire. She died in August 1909, leaving by him one daughter and three sons, of whom the second, Clifford John Cory, of Llantarnam Abbey, Monmouthshire, has been liberal M.P. for the St. Ives division of Cornwall since 1906, and was made a baronet in 1907.

[South Wales Daily News, 28 Jan. 1910; The Times, 28 and 31 Jan., 2 and 4 Feb., 24 and 25 March, and 4 April 1910; for his work for sailors see the Chart and Compass (the official organ of the Brit. and For. Sailors' Society), especially the issues for Aug. 1906, p. 234, and for March and May 1910, pp. 39 and 84.] D. LL. T.

COUCH, SIR RICHARD (1817-1905), judge, only son of Richard Couch of Bermondsey, was born on 17 May 1817. After being educated privately, he entered as a student of the Middle Temple on 10 Jan. 1838, and was called to the bar on 15 Jan. 1841. In 1844 he assisted in editing Blackstone's 'Commentaries' (21st edit.). For some years he practised on what was then the Norfolk circuit, and he was recorder of Bedford from 1858 to 1862. In the last year he became a puisne judge of the high court of Bombay upon its re-establishment under the charter of 1862. Upon the retirement of Sir Matthew Sausse in 1866 he succeeded

to the chief justiceship of the court and was knighted. In 1870 he succeeded Sir Barnes Peacock [q. v.] as chief justice of the high court of Calcutta. In 1875 Couch was appointed president of the commission of inquiry into the charge brought against the Gaekwar of Baroda of conspiring to poison Colonel (afterwards Sir) Robert Phayre [q. v. Suppl. I]. The Gaekwar was defended by Serjeant Ballantine [q. v. Suppl. I]. Couch and the other English commissioners found the Gaekwar guilty of instigating the crime, but the native commissioners gave in effect a verdict of 'not proven.' In the same year Couch resigned the chief justiceship. Returning to England, he was made a member of the privy council, and in January 1881 he was appointed to the judicial committee as one of the two members enjoying judicial experience in India or the colonies (Act 3 & 4 Will. IV c. 41). In that capacity Couch did valuable work for twenty years. He was not a brilliant judge, but his judgements were invariably clear and his grasp of principles enabled him to deal efficiently even with appeals from South Africa and other parts of the empire where the prevailing system of law is not English. He was elected a bencher of his inn in March 1881. He died at his residence, 25 Linden Gardens, London, W., on 29 Nov. 1905, and was buried at Paddington cemetery.

Couch married on 1 Feb. 1845 Anne (d. 1898), eldest daughter of Richard Thomas Beck of Combs, Suffolk, and had one son, Richard Edward, also a barrister of the Middle Temple, who predeceased him.

[The Times, 30 Nov. 1905; Men and Women of the Time, 1899; Who's Who, 1904; Foster, Men at the Bar; Law Journal, 2 Dec. 1905.] C. E. A. B.

COUPER, SIR GEORGE EBENEZER WILSON, second baronet (1824–1908), Anglo-Indian administrator, born at Halifax, Nova Scotia, on 29 April 1824, was eldest of six children of Sir George Couper, first baronet (1788–1861), then military secretary to Sir James Kempt [q. v.], the governor there, by his wife Elizabeth, daughter of Sir John Wilson [q. v.], judge of common pleas. The father was subsequently comptroller of the household and equerry to the duchess of Kent. The second son, Major-general George Kempt Couper (1827–1901), served in the Indian staff corps, and the fifth son, Henry Edward, captain 70th regiment (1835–1876), saw service in the mutiny.

After education at Sherborne and at Coombe, Surrey, Couper entered, in 1839,

the Royal Military College, Sandhurst. Passing out with distinction in 1842, he was gazetted to the 15th regiment as ensign. But receiving nomination to a 'writership' in India, he went to the East India College, Haileybury, early in 1844, and joined the Bengal civil service at the close of 1846. After being stationed at Dinajpur, Eastern Bengal, he was included in the first commission sent to the Punjab upon its annexation in 1849. When only twenty-five he was assistant commissioner at Jehlam, with the powers of a collector.

Dalhousie, the 'oldest and dearest friend' of Couper's father, took a keen interest in him, and the governor-general's 'Private Letters' to the elder Couper (1910) make frequent reference to the young man's progress. In 1853 Couper went to headquarters as under-secretary to the government of India, first in the home and finance, and then in the foreign departments. On the annexation of Oudh in February 1856 he was appointed secretary at Lucknow to the chief commissioner, Sir James Outram [q. v.], whose place was taken in March 1857 by Sir Henry Lawrence [q. v.]. Through the mutiny he was with Lawrence in all encounters with the rebels up to and including the battle of Chinhut on 30 June, when his horse was wounded. He was A.D.C. as well as chief secretary to Lawrence until his death at the residency on 4 July, then to Sir John Inglis [q. v.], and finally, after the relief, to Outram. During the siege of Lucknow Couper showed tireless energy, courage, and sagacity, which were liberally acknowledged in the despatches of his chiefs (cf. KAYE'S *History*; HUTCHINSON'S *Narrative of Events in Oudh*; DR. GEORGE SMITH'S *Physician and Friend*). He was the author, save for the mentions of himself, of Inglis's celebrated despatch of 26 Sept. 1857, which he reprinted with selections from his own speeches on the mutiny, for private circulation, with characteristic omission of Inglis's references to himself (1896). He also wrote the letterpress to Captain Mechem's 'Illustrations of the Siege of Lucknow' (1858). He received the medal with two clasps, and was made C.B. (civil division) in May 1860.

The governor-general, Canning, declined Outram's emphatic recommendation of Couper as his successor in the chief commissionership of Oudh (6 Jan. 1858) on the ground that Couper had been only twelve years in the service. After furlough home he went to Allahabad, in 1859, as chief secretary of the north-west provinces

government. Sir Evelyn Wood, then a young officer, who visited Allahabad at the time, regarded him as the cleverest man in India (*From Midshipman to Field-Marshal*). He succeeded to the baronetcy in February 1861, and went back to Oudh as judicial commissioner in 1863. From April 1871 he acted as chief commissioner of the province, and was confirmed in the appointment in December 1873. In that office he carefully revised the land assessments, which had been hurriedly settled, and created a separate establishment to administer encumbered taluqdari estates.

On the retirement of Sir John Strachey [q. v. Suppl. II] in July 1876, Couper was made acting lieutenant-governor of the north-western provinces, while retaining his control of Oudh. The long-pending reform of partial amalgamation of Oudh with the larger province under a single head was thereby accomplished. On 17 Jan. 1877 Couper became the first 'lieutenant-governor of the north-western province and chief commissioner of Oudh.' The change was unwelcome to the taluqdars; but Couper's tact rendered the new union thoroughly successful.

Couper handled a widespread famine in 1877-8 with strict business-like efficiency. By careful conservation of provincial resources, which was occasionally censured as parsimony, he was able to initiate a policy of canal and light railway construction, and to leave accumulated balances of about a million sterling for its development by his successor, Sir Alfred Comyn Lyall [q. v. Suppl. II]. Owing to the decision of the government of India not to allow the railways to be 'provincial' undertakings, the united provinces of Agra and Oudh, as they have been named since 1901, did not reap full financial benefit from Couper's economy. But his programme of construction was closely followed. Material progress was the keynote of his policy; he developed the agricultural department, so that it became a model for other provinces; and he heartily encouraged Indian industrial enterprises, such as the 'Couper' paper mills at Lucknow. He was created K.C.S.I. and a councillor of the empire in January 1877, and C.I.E. a year later. On his retirement in April 1882 he declined, with characteristic modesty, the proposal of the Husainabad Endowment Trustees, Lucknow, to erect a statue in his memory, and as an alternative they built a clock tower.

After residing at Cheltenham for a few years Sir George settled at Camberley,

where he died on 5 March 1908, being buried in St. Michael's churchyard there.

Couper married on 29 April 1852 Caroline Penelope, granddaughter of Sir Henry Every, ninth baronet, of Eggington Hall, Burton-on-Trent; she died on 28 Nov. 1910, and was buried beside her husband. By her Couper had a family of five sons and four daughters; one of the latter, who died young, was born in the Lucknow residency during the siege. The eldest son, Sir Ramsay George Henry, succeeded as third baronet.

[Kaye, Hist. of Sepoy War and other mutiny literature; minute of governor-general on services of civil officers during mutiny, 2 July 1859; Pioneer (Allahabad), 17 April 1882, 13 March 1908; The Times, 7 March 1908; Burke's Peerage; India Office List; private papers kindly lent by Sir George Couper's eldest daughter, Lady Benson, who is preparing a brief biography of her father.]

F. H. B.

COUSIN, Mrs. ANNE ROSS (1824-1906), hymn-writer, only child of David Ross Cundell, M.D., an assistant surgeon of the 33rd regiment at Waterloo, was born in Hull on 27 April 1824, her family removing soon after to Leith. Educated privately, she became an expert pianist under John Muir Wood. In 1847 she married William Cousin, minister of Chelsea presbyterian church, who was subsequently called to the Free church at Irvine, Ayrshire, and thence in 1859 to Melrose. He retired to Edinburgh in 1878 and died there in 1883. Mrs. Cousin survived him for twenty-three years, dying in Edinburgh on 6 Dec. 1906. In 1910 a stained-glass window to her memory was placed in St. Aidan's United Free church, Melrose. She had four sons and two daughters. A son, John W. Cousin, who died in December 1910, compiled 'A Biographical Dictionary of English Literature,' published in Dent's 'Everyman's Library.'

Mrs. Cousin is best known by her hymn 'The sands of time are sinking,' written at Irvine in 1854. 'I wrote it,' she said, 'as I sat at work one Saturday evening, and though I threw it off at that time, it was the result of long familiarity with the writings of Samuel Rutherford, especially his Letters.' The original was in nineteen stanzas, and appeared first in 'The Christian Treasury' in 1857, under the heading 'Last Words of Samuel Rutherford.' It did not become generally known until the Rev. Dr. J. Hood Wilson, of the Barclay church, Edinburgh, introduced a shortened version of five verses (only the fourth and

fifth of which correspond with the now popular version) into a hymn book, 'Service of Praise,' prepared for his congregation in 1865. The refrain of the hymn gave the leading title to Mrs. Cousin's 'Immanuel's Land and other Pieces' (1876; second edition, revised, 1896). Next in popularity among her hymns are 'O Christ, what burdens bowed Thy head,' which Mr. Sankey eulogised as a 'Gospel hymn' that had been 'very much blessed,' and 'King Eternal! King Immortal,' which has been frequently set to music and sung at great choral festivals.

[Information from her daughter, Miss Anne P. Cousin; Julian's Dict. of Hymnology; Life of Dr. J. Hood Wilson; Duncan Campbell's Hymns and Hymn Makers; Musical Times, Jan. 1907, specially as to the tune of 'The sands of time.'] J. C. H.

COWELL, EDWARD BYLES (1826-1903), scholar and man of letters, born at Ipswich on 23 Jan. 1826, was eldest son (in a family of three sons and one daughter) of Charles Cowell, who had inherited a successful business of merchant and maltster, and as a cultured liberal was active in local affairs. His mother was Marianne, elder daughter of Nathaniel Byles Byles of the Hill House, Ipswich, also a successful merchant of that town. Cowell developed early an appetite for study. From his eighth year he attended the Ipswich grammar school. In 1841 he compiled a few numbers of 'The Ipswich Radical Magazine and Review,' in which he showed sympathy with his father's politics, combined with a singularly wide reading in classical literature. To Oriental literature he was first drawn by finding (1841) in the public library of Ipswich a copy of Sir William Jones's works, including the 'Persian Grammar' and the translation of Kālidāsa's 'Śakuntalā.' In the same year Macaulay's essay on Warren Hastings made him aware of Wilson's 'Sanskrit Grammar,' a copy of which he promptly acquired. Meanwhile he took his first steps in Persian, at first by himself, but soon with the aid of a retired Bombay officer, Major Hockley, who probably also initiated him into Arabic. As early as 1842, while still at school, he contributed to the 'Asiatic Journal' a number of verse renderings from the Persian.

On his father's death in 1842 Cowell was taken from school to be trained for the management of the business. But during the next eight years, while engaged in commerce, he read in his spare hours with extraordinary zeal and variety. Of his

scholarship and width of knowledge he soon gave proof in a series of contributions to the 'Westminster Review,' writing on Oriental and Spanish literature. At the same time he formed the acquaintance of many who shared his interests, among them the Arabic and Persian scholar, William Hook Morley [q. v. Suppl. I], and Duncan Forbes [q. v.], the Persian scholar, and he also called upon Carlyle in London. In 1846 he sought an introduction to 'the great professor,' Horace Hayman Wilson [q. v.], and four years later he read in the East India library and obtained a loan of a Prākṛit MS. (Vararuci's 'Prākṛta-Prakāśa'), his edition of which was destined (1854) to establish his reputation as a Sanskrit scholar. Through John Charlesworth, rector of Flowton near Ipswich, whose daughter he married in 1845, he came to know Edward FitzGerald [q. v.], the most interesting of his many friends and correspondents. Their correspondence at first related chiefly to classical literature.

In 1850, the next brother being now of an age to carry on the Ipswich business, Cowell matriculated at Magdalen Hall, Oxford, going with his wife into lodgings. 'I went there [to Oxford], he wrote later, 'a solitary student, mainly self-taught; and I learned there the method of study.' During the six years of his university life he greatly widened his social circle, receiving visits not only from FitzGerald, who now read Persian with him, but from Tennyson and Thackeray, to whom FitzGerald introduced him. He saw much of Jowett, Morfill, Max Müller, and Theodor Aufrecht, and was greatly aided by the lectures and tuition of the Sanskrit professor, H. H. Wilson. In 1854 he took a first class in *literæ humaniores* and an honorary fourth in mathematics. While missing the scholarship in Hebrew, he was awarded a special prize of books. The next two years were spent in coaching, chiefly in Aristotle's 'Ethics.' He also catalogued Persian and other Oriental MSS. for the Bodleian Library.

As an undergraduate he had made a reputation by his Oriental publications. A translation of Kālidāsa's 'Vikramorvaśi,' though finished earlier, was published in 1851. His admirable edition of Vararuci's 'Prākṛta-Prakāśa' followed in 1854. On taking his degree he wrote on the Persian poets for 'Fraser's Magazine,' besides contributing to 'Oxford Essays' (1855) an essay on 'Persian Literature.'

In June 1856 Cowell was appointed

professor of English history in the re-formed Presidency College, Calcutta. His post involved him in arduous work. He soon instituted an M.A. course in the Calcutta University, and extended the themes of his lectures to political economy and philosophy. In 1857 Cowell became secretary of a Vernacular Literature Society, founded with the object of providing the natives with translations of good English literature. At the same time he was more and more attracted to missionary work. He held Bible readings in his house on Sundays, and latterly a number of conversions resulted, not without some risk of offence to his Hindu connections. One of his chief Calcutta friends was William Kay [q. v.], principal of Bishop's College. Meanwhile he pursued Oriental studies untiringly. Persian continued to fascinate him. Of two copies which he procured of the MS. of Omar Khayyam belonging to the Asiatic Society at Calcutta, he sent one to FitzGerald. His own important article on Omar Khayyam appeared in the 'Calcutta Review' in March 1858. Having passed the government examinations in Hindustani and Bengali, he undertook in 1858 an additional office at Calcutta, that of principal of the Sanskrit College, a foundation of Warren Hastings. Cowell's predecessor was a native. His relations with the pundits of the college were soon intimate and affectionate. By their aid he acquired a profound familiarity with the scholastic Sanskrit literature in rhetoric and philosophy, while he stimulated the pundits' scholarly activity, and often gratified them with a prepared speech in Bengali and a Sanskrit 'Śloka.' Many native editions of works on rhetoric and poetry which were published in the 'Bibliotheca Indica,' a series issued by the Asiatic Society of Bengal, of which he became early in 1858 a joint philological secretary, express their indebtedness to Cowell. Cowell's own Sanskrit publications during this period also appeared chiefly in the 'Bibliotheca Indica.' With Dr. Roer he continued the edition of the 'Black Yajur Veda' (1858-64, vols. i. and ii.), which he afterwards carried on alone—it was ultimately finished by its fifth editor in 1899; and singly he edited two Upaniṣads, the 'Kauṣītaki' (1861) and the 'Maitrī' (1863; translation added 1870). The most important of his works at this time was his edition and translation of the 'Kusumāñjali' with the commentary of Haridāsa (Calcutta, 1864). The book, which in respect of difficulty might be compared

with the 'Metaphysics' of Aristotle, supplies the Hindu proof of the existence of God. Cowell read it with Maheśa Candra, whose name he associated with his own on the title-page, and the edition was dedicated to Max Müller. He made a close study of the 'Siddhānta-Muktāvalī,' a philosophical work, which he used as a college manual and examination text-book, and of the 'Sarvadarśanasamgraha,' of which he translated one chapter, relating to the Cārvāka system (*Journal of the Asiatic Society of Bengal*, 1862). He contemplated full translations of both books.

One of his last official duties in India was to visit the Tols (native quasi-colleges) at Nuddea, which were homes of pundit research and had last been inspected by Wilson in 1820. His report, published in the 'Proceedings of the Asiatic Society of Bengal' for 1867, supplies interesting details concerning the methods of this pundit university.

By the spring of 1864 the state of Cowell's health demanded a furlough. With his Oriental scholarship immensely strengthened he revisited England. His original intention of returning to India was not carried out. In the summer of 1865 he became examiner in Oriental subjects to the Civil Service Commission; in the same year he refused a curatorship at the Bodleian and in 1866 a similar position at the British Museum. Occupying himself in varied literary work, he recommenced his general reading and his epistolary and personal intercourse with FitzGerald.

In 1867 the University of Cambridge bestowed on Cowell the newly founded professorship of Sanskrit. Theodor Aufrecht was another candidate, but Cowell was warmly supported by Max Müller and many eminent scholars and friends. He was elected on a general vote of the university by ninety-six votes to thirty-seven. He published his inaugural lecture on the Sanskrit language and literature in 1867. The remainder of his life was spent at Cambridge in complete content. In 1874 he became fellow of Corpus Christi College. He retained the professorship and the fellowship until his death in 1903. During those thirty-six years his time was unstintingly given to his duties. He announced each term a formidable list of lectures, generally delivered at his own house. In accordance with a life-long habit, his private literary work occupied him before breakfast. At first he lectured not only on

Sanskrit but also on comparative philology; but of that subject he was soon relieved. As a philological lecturer he became one of the founders of the Cambridge Philological Society, with which he was connected as auditor until the close of his life, and he contributed to the early numbers of the 'Journal of Philology' (1868 seq.). In 1884 a lecturer was appointed to take charge of the more elementary Sanskrit teaching. Nevertheless, the pupils who read with Cowell were of all grades of proficiency, ranging from undergraduates grappling with their first Sanskrit play to eminent scholars (both English and foreign) eager to elucidate the various Indian philosophies, the Vedic hymns, the 'Zendavesta,' or the Pali 'Jātaka.' Alone or with his pupils Cowell issued an imposing series of Sanskrit texts and translations, of which the most important are 'The Sarya-Darsana-Saṃgraha' (translated with A. E. Gough in Trübner's 'Oriental' series, 1882); 'Divyāvādāna' (edited with R. A. Neil, Cambridge, 1886); 'The Buddha Kārta of Āsvaghosha' ('Anecdota Oxoniensia.' Aryan ser. vii. 1893), with translation in 'Sacred Books of the East,' xlix. 1894; 'The Jātaka,' translated under Cowell's editorship (6 vols., Cambridge, 1895); 'The Harsacarita of Bāna' (translated with F. W. Thomas, Oriental Translation Fund, n.s., ii. 1897).

Outside Sanskrit, Cowell still prosecuted other interests. Persian he resumed as opportunity offered. Spanish he always kept up, reading 'Don Quixote,' at first with FitzGerald, and after his death with other friends in Cambridge. His Hebrew notes were utilised by Dr. Kay in 1869 for the second edition of a translation of the Psalter, and later he studied the 'Talmud.' About 1877 he took up archaeology and architecture, a new study which led him to render into English Michael Angelo's sonnets, two of which were published in the 'Life.' Welsh poetry and the science of botany had been passing fancies of Cowell's youth. During 1870-80 they were cultivated simultaneously in vacations spent in Wales, sometimes in company with the Cambridge professor of botany, C. C. Babington. The Welsh studies, which were inspired by Borrow's 'Wild Wales,' culminated in a masterly paper on the poet Dafydd ap Gwilym, read before the Cymmrodorion Society in 1878, and published in 'Y Cymmrodor' (July 1878). Cowell's MS. translation of this poet's work is in the University Library at Cambridge. Botany remained one of the chief delights

of his later life, and his scientific interests extended to geology. He collected a complete flora of Cambridgeshire, and gave expression to his botanical enthusiasm in some charming sonnets.

In 1892 Cowell was prevailed upon to accept the presidency of the Arian section of the International Congress of Orientalists held in London. His inaugural address (comparing Rabbinical and Brahmanical learning) and his charming Sanskrit 'Śloka' made a very favourable impression. In 1895 he was made an honorary member of the German Oriental Society. In 1898 he was awarded the gold medal of the Royal Asiatic Society, then bestowed for the first time. Among Cowell's other distinctions were the hon. LL.D. of Edinburgh University in 1875 and the hon. D.C.L. of Oxford in 1896. In 1902 he was chosen as one of the original members of the British Academy.

Cowell's last publication was a verse translation, revised after thirty years, of some episodes from an old Bengali poem 'Candi,' which he had read at Calcutta and subsequently with Bengali students at Cambridge (*Journal As. Soc. Bengal*, 1903). Although he continued to lecture, he had long been conscious of failing powers when he died at his residence, 10 Scroope Terrace, Cambridge, on 9 Feb. 1903. He was buried at Bramford beside his wife, who was fourteen years his senior and predeceased him on 29 Sept. 1899, after fifty-five years of married life. There was no issue of the marriage. His wife's sister, Maria Louisa Charlesworth, is already noticed in this Dictionary.

During his lifetime Cowell founded a scholarship in Sanskrit at the Sanskrit College in Calcutta (1878), and endowed a prize for classics at his old school in Ipswich; by his will he devised to Corpus Christi College the sum of 1500*l.* for a scholarship in classics or mathematics, besides leaving his library for distribution between that college, the University Library, the Fitzwilliam Museum, and Girton College.

Cowell's portrait by C. E. Brock, presented to him by his friends and pupils in 1896, is in the hall of Corpus Christi College. Another painting made by a native artist from a photograph is in the library of the Sanskrit College at Calcutta.

Cowell was remarkable for the versatility of his knowledge of language and literature and for the breadth of his scholarly interests. Primarily a modest, patient, and serious savant, he was at the same time an accomplished man of letters, who excelled

as an essayist, a familiar correspondent, and could write charming and thoughtful verse. An unusual tenacity and subtlety of intellect appears in his mastery of Sanskrit logic and metaphysics (Nyāya and Vedānta).

In addition to the works cited and many other contributions to periodicals and separate lectures, Cowell published: 'The Chārvāka System of Philosophy' ('Journ. Asiat. Soc. Bengal,' 1862); 'The Rig-Veda Sanhitā' ('Quarterly Rev.' July 1870); Introduction to Boyd's translation of the 'Nāgānanda' (1872); 'A Short Introduction to the Ordinary Prakrit of The Sanskrit Dramas' (1875); 'A Catalogue of Buddhist Sanskrit MSS. in the possession of the Royal Asiatic Society' (with Prof. J. Eggeling, 'Journ. Roy. Asiat. Soc.' 1876); 'The Aphorisms of Sāṅdilya, with the commentary of Swapneśwara' ('Bibliotheca Indica' 1878); 'The Tattva-muktāvali . . . edited and translated' ('Journ. Roy. Asiat. Soc.' 1882); 'The Cātaka: Two Short Bengali Poems translated . . .' (ib. 1891).

[Life and Letters of Edward Byles Cowell, by George Cowell, 1904 (with engraved portraits and bibliography), in spite of numerous mis-spellings, a valuable biography; Edward FitzGerald's Life and Letters; The Pilot, art. by Sir Frederick Pollock, 21 Feb. 1903; memoirs in Athenaeum, 14 Feb. 1903, by Cecil Bendall, reprinted in Journal Roy. Asiat. Soc. 1903, pp. 419-24; and in Proc. Brit. Acad. 1903-4, by T. W. Rhys Davids.]

F. W. T.

COWIE, WILLIAM GARDEN (1831-1902), bishop of Auckland, born in London on 8 Jan. 1831 was second son of Alexander Cowie of St. John's Wood, London, by his wife Elizabeth, daughter of Alexander Garden. Both parents came from Aberdeenshire. Admitted a pensioner of Trinity Hall, Cambridge, on 20 May 1852, and elected scholar in the following October, he was second in the first class of the law tripos in 1854 and graduated B.A. in 1855, M.A. in 1865, and D.D. in 1869. Ordained deacon in 1854 and priest in 1855, he served the curacies of St. Clement's, Cambridge (1854), and Moulton, Suffolk (1855-7). Appointed in 1857 chaplain to the forces in India, he was present at the capture of Lucknow (receiving medal and clasp) and at the battles of Aliganj, Rooyah, and Bareilly; he accompanied Sir Neville Chamberlain's column in the Afghan campaign of 1863-4 (medal and clasp), and in 1864 acted as domestic and examining chaplain to G. E. L. Cotton [q. v.], bishop of Calcutta. In 1865 he was chaplain in Kashmir, and warmly

supported the work of the Church Missionary Society at Srinagar. In 1867 he returned home and became rector of Stafford. In 1868 bishop G. A. Selwyn [q. v.], on his translation from the see of New Zealand to that of Lichfield, was empowered by the diocesan synod of Auckland to choose a successor for the diocese of Auckland (the title of New Zealand expiring). He nominated Cowie, who was, in 1869, consecrated bishop of Auckland in Westminster Abbey.

Cowie readily won the confidence of the settlers, diligently visiting all parts of his diocese. He fostered St. John's college, Auckland, for ordination candidates, of which he was visitor and governor, and in 1880 was made a fellow of the University of New Zealand. He found many of the Maoris alienated by the war, but conciliated these, encouraged the native ministry, and established native church boards in his northern archdeaconries. He came home for the Lambeth Conference of 1888, and in a small book, 'Our Last Year in New Zealand' (1888), he explained the conditions of his diocese and his mode of life. In 1895 he was made primate of New Zealand. He came home again for the Diamond Jubilee of Queen Victoria and the Lambeth Conference of 1897, receiving in that year the D.D. degree at Oxford. His strength failing, he resigned his see in 1902, and died shortly afterwards at Wellington, New Zealand, on 21 June.

He married in 1869 Eliza Jane, eldest daughter of William Webber of Moulton, Suffolk, and granddaughter of Sir Thomas Preston, Bart., of Beeston Hill, Norfolk. She died in New Zealand on 18 Aug. 1902.

Cowie published, in addition to the work mentioned, 'Notes on the Temples of Cashmir,' and 'A Visit to Norfolk Island.'

[The Times, 27 June 1902; Guardian, 1 Oct. 1902; E. Stock, History of the Church Missionary Society, 1899, ii. 575; Two Hundred Years of the S.P.G., p. 442; Jacob, Colonial Church Histories: New Zealand, pp. 340-1; Lowndes, Bishops of the Day; private information.]

A. R. B.

COWPER, FRANCIS THOMAS DE GREY, seventh EARL COWPER (1834-1905), lord-lieutenant of Ireland, born in Berkeley Square, London, on 11 June 1834, was eldest son of George Augustus Frederick, sixth Earl Cowper, lord-lieutenant of Kent, and of Anne Florence, elder daughter and co-heiress of Thomas Philip, second Earl de Grey and fifth Baron Lucas. Lord Cowper's mother succeeded her father as Baroness Lucas on his death

in 1859. Many of his family attained distinction. His father's mother was sister of William, second Viscount Melbourne, and married Viscount Palmerston as her second husband. His uncle was William Francis Cowper (afterwards Cowper-Temple, Baron Mount-Temple) [q. v. Suppl. I]. His younger brother, Henry Frederick (1836-1887), well known for his humour and sagacity, was M.P. for Hertfordshire (1865-85). Three of his sisters married respectively Auberon Edward William Molyneux Herbert [q. v. Suppl. II]; Julian Henry Charles Fane [q. v.]; and Admiral Lord Walter Kerr.

From a preparatory school at Bembridge, Viscount Fordwich (as Lord Cowper was then called) was sent to Harrow in Sept. 1847. But the strenuous and somewhat inflexible life of a public school was not altogether suited to a boy who neither was very strong nor cared for games, and was, moreover, of a sensitive temperament; and accordingly after one and a half years he was removed by his parents and placed in a private school kept by the rector of Silsoe just outside Wrest Park, which belonged to his maternal grandfather. There he read to his heart's content, and passed on to a happy university career at Christ Church, Oxford, in 1851. He did not row or play cricket at Oxford, but was addicted to riding and shooting, and such study as 'the House' encouraged any young nobleman at that date to pursue. Early in 1855 he paid a visit to Rome with Lord Mount Edgecumbe; and, profiting by the solid historical reading which he managed to combine with social distractions there, he went in for honours on his return to the university, and obtained with ease a first class in law and history in December 1855.

He was destined for a parliamentary career; but the death of his father in 1856 deprived him of the chance of entering the House of Commons, and diverted his attention for a number of years to the less showy but useful routine of county work. In this he rendered admirable service, whether as colonel of his volunteer regiment (in which movement he was, along with Lord Elcho, afterwards Earl Wemyss, one of the original pioneers), as chairman of quarter sessions, or as lord-lieutenant of Bedfordshire—duties which he varied with sport in England and Scotland and the making of many friends. His numerous possessions also gave him wide territorial interests; for while he had inherited from his father the fine domain of Panshanger

in Hertfordshire, and many titles, in 1869 he succeeded, on the death of his grandmother, Lady Palmerston, to the adjoining park and property of Brocket and a large estate in Nottinghamshire. At a later date, in 1880, the death of his own mother brought him the barony of Lucas, the Craven property in North Lancashire, a fine house in St. James's Square, and the splendid 'chateau' of Wrest in Bedfordshire. In the comparative leisure of this part of his life he also developed the taste for reading which was his main recreation, and along with it a memory which came to be the admiration of his contemporaries. In October 1870 he married Katrine Cecilia, eldest daughter of William Compton, fourth marquiss of Northampton, and of Eliza, third daughter of Admiral the Hon. Sir George Elliot, and entered upon a period of domestic and social happiness. Few men possessed greater social gifts or practised them with more unselfish enjoyment.

A liberal in politics, he was made K.G. by Lord Palmerston (5 Aug. 1865). In 1871 he accepted on the recommendation of Gladstone the household office of captain of the gentlemen-at-arms, coupled with the duty of answering for the board of trade in the House of Lords. These incongruous and rather unsatisfying responsibilities he fulfilled till the end of the session in 1873. In May 1880, on Gladstone's return to power, a larger horizon opened when he accepted the prime minister's offer of the lord-lieutenancy of Ireland, with William Edward Forster [q. v.] as his chief secretary in the cabinet. Already the outlook in Ireland was clouded, and, when it was decided not to renew the Peace Preservation Act, which expired on 1 June, it speedily became worse, Parnell utilising the Land League for an agitation that speedily took effect in boycotting, in political terrorism, and presently in agrarian crime. Lord Cowper, who viewed the situation throughout with an insight and courage that were to be painfully justified by the results, was strongly in favour of an autumn session and a renewal of the Coercion Act, and Forster went over to England to press upon the cabinet the calling of parliament and the grant of extra powers. These appeals were refused by the government, and Lord Cowper, who felt more strongly on the matter than his chief secretary, and hardly thought that the latter had done full justice to his case, was only deterred from resigning by the gravity of the crisis and the persuasion of his political allies. At the

beginning of the next session (Feb. 1881) the need for legislation could no longer be evaded or denied, and in March the protection of property bill and the arms bill, after parliamentary scenes of great tumult, became law. In spite of the 'message of peace' offered by Gladstone in his land bill of the same session, the ensuing autumn showed no improvement in the condition of Ireland. Parnell and several of his colleagues were arrested and imprisoned, and the Land League was suppressed (Oct.). In the course of the winter the rift between the lord-lieutenant, who had the nominal responsibility without the power of control, and his chief secretary imperceptibly widened, although in the public interest a scrupulous silence was observed; and Lord Cowper, feeling that he could no longer remain in office with satisfaction to his conscience, insisted upon resignation, which on this occasion was accepted by Gladstone (April 1882). Lord Spencer [q. v. Suppl. II] was appointed to succeed him, with a seat in the cabinet, the absence of which had been the chief stumbling-block to his predecessor. Then came the Kilmainham treaty and the release of Parnell, to which Lord Cowper's signature was appended under protest and when he was really *functus officio*. To Parnell's release Forster was not privy, and the event brought about his resignation. Lord Cowper left Dublin on 4 May, and two days later Lord Frederick Cavendish [q. v.], the new chief secretary, and Mr. Burke, the permanent under-secretary, were murdered in Phoenix Park (6 May 1882). The need for a strong Coercion Act, which had been so often and ineffectually pressed by the retiring viceroy, was universally admitted; and the draft bill prepared by him was accepted by the government and passed at once into law. Thus Lord Cowper had the melancholy satisfaction of seeing conceded to his successor the powers which had been persistently denied to himself.

Returning to England, he resumed the happy domestic existence, the local obligations, and the more tranquil public duties, for which two years of Irish tumult had given him if possible a greater zest. In his county he devoted himself to his functions as lord-lieutenant of Bedfordshire, and later on became chairman of the Hertfordshire county council. He was a frequent and facile contributor to the magazines: notably the 'Nineteenth Century,' in which a number of his articles may be found between 1883 and 1887, and

to 'The Times,' which in 1885 and subsequent years printed many of his letters on public events. He spoke in the House of Lords on a great variety of subjects, but perhaps with less ease and distinction than he wrote. Among his literary contributions was the preface to the volume of Lord Melbourne's Letters edited by Mr. L. C. Sanders (1889). In 1885 he joined the Naval Volunteer Association, and spoke in the House of Lords and attended public meetings on the necessity of providing for the defence of our national harbours.

But it was when Gladstone announced his conversion to home rule and introduced the first home rule bill of 1886 that Lord Cowper's strong convictions, fortified by an exceptional experience, brought him again into the fighting line, and drew from him a series of letters and public speeches that lasted throughout the controversy, until it faded away in the defeat of the second home rule bill in 1893. He was chosen by virtue of his character quite as much as his previous official position to preside at the famous meeting at Her Majesty's Theatre in the Haymarket, London, on 14 April 1886, where he was supported on the one side by Lord Salisbury, W. H. Smith, and Mr. D. Plunket, and on the other by Lord Hartington (afterwards duke of Devonshire), George Joachim (afterwards Lord) Goschen, and the duke of Fife. In another respect his high character and personal charm enabled him to render conspicuous public service. In 1885 he presided over the Manchester Ship Canal commission. In 1886 he was asked by Lord Salisbury to undertake the chairmanship of the royal commission on the working of the Irish Land Acts of 1881 and 1885, which, after six months' hard work, reported in February 1887. He was also chairman in 1892 of the commission to create a teaching university for London.

In such capacities he continued to serve his country, although becoming, as time went on, an increasing martyr to gout, which caused him intervals of excruciating pain. Amid the ordered gardens and canals of Wrest, or in the more purely English surroundings of Panshanger, where the beauties of nature were rivalled by the masterpieces of art collected by his ancestors, he dispensed a hospitality free from ostentation, and surveyed the world with kindly but critical eye. When he passed away at Panshanger on 19 July 1905 there lingered in the minds of his contemporaries a picture of a vanishing type—the great English nobleman of high lineage and broad possessions, of chivalrous manners

and noble mien, who played, without effort and with instinctive humility, an eminent part in things great and small, and moulded himself to the responsibilities of an illustrious station and name. He lies buried in Hertingfordbury churchyard outside the gates of Panshanger. A beautiful recumbent effigy was erected in the church by his widow, who survived him till 23 March 1913. There are portraits of an earlier period painted (kitcat size) by G. F. Watts, R.A., at Panshanger; by Lord Leighton, P.R.A., at Wrest Park; and by Ellis Roberts (three-quarters length) at Panshanger.

Lord Cowper left no children, and his numerous estates were divided upon his death. Of his many titles the earldom of Cowper with the viscounty of Fordwich, the barony of Cowper, and the baronetcy became extinct. He had been declared on 15 Aug. 1871 to have inherited as heir general to Thomas Butler, earl of Ossory, whose attainder of 1715 was reversed in July 1871, the English barony of Butler and the Scottish barony of Dingwall. The barony of Butler went into abeyance between Lord Cowper's sisters and their heirs. The barony of Lucas, which he derived from his mother, passed together with the Scottish barony of Dingwall to his nephew and heir-general, Auberon Thomas Herbert, son of his second sister.

[Hansard's Debates; Morley's Life of Gladstone, 1903, vol. iii.; Herbert Paul's History of Modern England, 1905, vols. iv. and v.; personal recollections; The Times, 20 July 1905 and *passim*.] C. OF K.

COX, GEORGE (called *SIR* GEORGE) WILLIAM (1827–1902), historical writer, born at Benares on 10 Jan. 1827, was eldest son of the six children of Captain George Hamilton Cox (*d.* 1841), of the East India Company's service, and Eliza Kearton, daughter of John Horne, planter, of St. Vincent in the West Indies. A brother, Colonel Edmund Henry Cox of the royal marine artillery, fired the first shot against Sevastopol in the Crimean war. Sent to England in 1836, Cox attended a preparatory school at Bath and the grammar school, Ilminster. In August 1842 he was admitted to Rugby under A. C. Tait [*q. v.*]. In 1843 Cox won the senior school scholarship at Rugby, and in 1845 he was elected scholar of Trinity College, Oxford. Although he obtained only a second class in the final classical school in 1848, his scholarship was commended by the examiners. He both graduated B.A. and proceeded M.A. in 1859. The Oxford movement excited Cox's

sympathy, and in 1850 he was ordained by Dr. Wilberforce, bishop of Oxford. After serving a curacy at Salcombe Regis, he resigned owing to ill-health, and in 1851 accepted the post of English chaplain at Gibraltar. But Cox's high church views, which coloured his 'Life of Boniface' in 1853, met with the disapproval of his bishop, Dr. Tomlinson, and he gladly embraced the opportunity of accompanying John William Colenso [*q. v.*] on his first visit to South Africa as bishop of Natal (1853–4). On his return to England he became curate of St. Paul's, Exeter, in 1854 and for a year (1859–60) he was a master at Cheltenham.

Meanwhile Cox's religious principles completely changed, largely under the influence of historical study. An article in the 'Edinburgh Review' (January 1858) on Milman's 'History of Latin Christianity' illustrates the development of his views on broad church lines. He ardently supported Bishop Colenso in his stand for liberal criticism of the scriptures and in his struggle over his episcopal status in South Africa. He defended Colenso in a long correspondence with F. D. Maurice [*q. v.*], and warmly supported the bishop during his sojourn in England (1863–5). Cox's association with Colenso gave him abundant material for his life of the bishop, which he published in 1888. In the same year he issued a last vindication of Colenso, in 'The Church of England and the Teaching of Bishop Colenso,' maintaining Colenso's loyalty to the church.

Throughout his life Cox was largely occupied by literary or historical work of varied kinds. His earliest volume, 'Poems Legendary and Historical' (1850), was written in collaboration with his friend E. A. Freeman [*q. v.* Suppl. I]. From 1861 to 1885 he was literary adviser to Messrs. Longmans & Co., and for many years he was engaged in writing historical works of popular character. These included 'The Great Persian War' (1861), 'Latin and Teutonic Christendom' (1870), 'The Crusades' (1874), 'The Greeks and the Persians' (1876), 'The Athenian Empire' (1876), 'History of the Establishment of British Rule in India' (1881), 'Lives of Greek Statesmen' (2 vols. 1886), 'A Concise History of England' (1887). His most elaborate work was a well-written 'History of Greece' (2 vols. 1874), which, largely based on Grote, has long since been superseded. He showed to best advantage in the study of mythology, where he followed Max Müller with

some independence. His 'Tales from Greek Mythology' (1861), 'A Manual of Mythology' (1867), 'The Mythology of the Aryan Nations' (1870; new edit. 1882), and 'An Introduction to the Science of Comparative Mythology' (1881), all enjoyed a wide vogue, although they pressed to extravagant limits the solar and nebular theory of the origin of myths. He was a frequent contributor to the leading reviews, and joint editor with William Thomas Brande [q. v.] of the 'Dictionary of Science, Literature, and Art' (3 vols. 1865-7; new edit. 1875).

In 1877 Cox claimed to succeed to the baronetcy of Cox of Dunmanway, which had been granted to Sir Richard Cox [q. v.] in 1706. He believed himself to be the heir male of William the eighth son of the first baronet. On the death in 1873 of a distant cousin, Sir Francis Hawtrey Cox, the twelfth baronet, the title had been treated by the Ulster office of arms as extinct. Nevertheless it was then assumed by Cox's uncle, Colonel (Sir) Edmund Cox, on whose death in 1877 Cox adopted the titular prefix. His right to the dignity was disallowed after his death by a committee of the privy council on 9 Nov. 1911, when his son and heir, Mr. Edmund Charles Cox, petitioned for recognition as a baronet. The petition was opposed by one who asserted descent from the eldest son of the first baronet.

In 1880 Cox was appointed vicar of Bekesbourne by A. C. Tait, archbishop of Canterbury, and from 1881 to 1897 he was rector of the crown living of Scrayingham, Yorkshire. In 1886 he was chosen bishop of Natal by the adherents of Colenso, but was refused consecration by Archbishop Benson owing to his election being unacceptable to the high church party (A. C. BENSON, *Life of Edward White Benson*, 1899, p. 500). On 18 May 1896 he received a civil list pension of 120*l*. He died at Ivy House, Walmer, on 9 Feb. 1902. His ashes were buried after cremation at Long Cross, Chertsey. Cox married in 1850 Emily Maria, daughter of Lieutenant-colonel W. Stirling (*d.* 1898) of the East India Company's service. He had five sons and two daughters. His eldest surviving son, Edmund Charles Cox, at the time district superintendent of police at Poona, was the unsuccessful claimant to the baronetcy.

[The Times, 11 Feb. 1902; Sir Frederick Maurice, *Life of F. D. Maurice*, 1884, ii. 449; Dean Stephens, *Life of Edward A. Freeman*, 1895, i. 84, 128; Men of the Time, 1899;

CRAIG, ISA, poetical writer. [See KNOX, Mrs. ISA (1831-1903).]

CRAIG, WILLIAM JAMES (1843-1906), editor of Shakespeare, born on 6 Nov. 1843 at Camus juxta Bann, known also as Macosquin, co. Derry, was second son of George Craig (1800-1888), who was then curate of that place and from 1853 till his retirement in 1880 was rector of Aghanloo in the same county. Craig's mother was Mary Catherine Sandys (1803-1879), daughter of Charles Brett of Belfast and of Charleville, co. Down.

After attending Portora School, Enniskillen, Craig entered Trinity College, Dublin, as a pensioner on 1 July 1861, and graduated B.A. in 1865 as junior moderator with silver medal in history and English literature, proceeding M.A. in 1870. From his undergraduate days he devoted himself with enthusiasm to English study, and was a pedestrian of unusual endurance. After graduating, he acted as private tutor in history and literature at Trinity, and in 1874 he migrated to London to engage in private coaching for the army and civil service. In 1876 he was appointed professor of English language and literature at University College, Aberystwyth. A Shakespeare reading class, which he instituted there, did much to stimulate a knowledge of the dramatist's work, and he infected his pupils, who included Thomas Edward Ellis (afterwards M.P. for Merionethshire) and Sir Samuel Evans (afterwards president of the probate and divorce division of the high court), with something of his own eager literary zeal. He resigned his professorship in 1879 to resume coaching in London. Save during 1884, when he was tutor at Hatfield to Lord Hugh Cecil, youngest son of the marquis of Salisbury, he was continuously employed in private tuition in London till 1898.

From that year till his death Craig confined his energies to philological and literary research, frequently reading at the British Museum. He had already published in 1883, for the New Shakspeare Society, a minute collation of the first folio text of 'Cymbeline' with the later folios. There followed in 1894 a one-volume edition of Shakespeare's complete works with a brief glossary for the Clarendon Press at Oxford. This edition, known as 'The Oxford Shakespeare,' has

since been reprinted in many forms. While still engaged in teaching he had been collecting materials for a comprehensive glossary of Shakespeare, and after his retirement he added to his material a vast mass of illustrative quotations from Elizabethan authors. But he left his collections in too incomplete a condition to allow of publication. He succeeded, however, in completing, for Messrs. Methuen & Co., 'The Little Quarto Shakespeare' with introductions and footnotes (40 vols. 1901-1904), and from 1901 he acted as general editor in succession to his friend, Professor Edward Dowden, of the 'Arden Shakespeare,' also in 40 vols., an edition fully annotated by various scholars. To the 'Arden Shakespeare' Craig contributed the volume on 'King Lear' (1901), an admirably thorough piece of work, and he was preparing the volume on 'Coriolanus' at his death.

Craig, who was a popular member of the Savage Club, combined broad sympathies with his scholarly interests and his love of poetry. To the last he was a sturdy walker, and although an unmethodical worker spared himself no pains in his editorial efforts. He died, unmarried, in a nursing home in London, after an operation, on 12 Dec. 1906, and was buried in Reigate churchyard. Several hundred volumes from his library were presented by his sister, Mrs. Merrick Head, to the public library at Stratford-on-Avon, where they are kept together in a suitably inscribed bookcase. His portrait was painted in 1904 by Alfred Wolmark.

[The Times, 18 Dec. 1906, by present writer; Spectator, 5 Jan. 1907, by S. L. Gwynn. M.P.; Shakespeare Jahrbuch (Weimar), 1907; private information and personal knowledge.]

S. L.

CRAIGIE, MRS. PEARL MARY TERESA (1867-1906), novelist and dramatist, writing under the pseudonym of **JOHN OLIVER HOBBS**, born at Chelsea, near Boston, Massachusetts, on 3 Nov. 1867, was eldest child in a family of three sons and two daughters of Mr. John Morgan Richards, a merchant of New York. Her mother was Laura Hortense, fourth daughter of Seth Harris Arnold of Chelsea, Massachusetts. The father was summoned to London within a week of the child's birth to conduct a manufacturing chemist's business there. Mother and daughter joined him in February 1868. London remained Pearl's home for life, though she was proud of her American origin and often revisited America. In London her parents resided

successively at Kennington, Bloomsbury, and Bayswater. From 1872 she chiefly spent the summer with her parents in the Isle of Wight, at Ventnor, whither she constantly retired for purposes of work in later years.

Pearl was educated at the Misses Godwin's boarding school at Newbury, Berkshire (1876-7), and subsequently at private day schools in London. A lively child, fond of story-telling and story-writing, she read widely for herself. Her parents regularly attended the services at the City Temple of the congregational preacher Joseph Parker [q. v. Suppl. II], and Parker, who became a close family friend, first encouraged the girl to pursue literary composition. He accepted stories from her at the age of nine for his newspaper 'The Fountain.' During 1885 she studied music in Paris and became an accomplished pianist. In November 1886 she visited America, and on her return in February 1887 she married in London, when little more than nineteen, Mr. Reginald Walpole Craigie.

The unhappiness of her wedded life profoundly affected her career and temperament. A son, John Churchill Craigie, was born to her at Rock Cottage, Ventnor, on 15 Aug. 1890, but in the following spring she left her husband for good. Emotional suffering working on a mind of a mystical cast impelled her after due reflection to join the Roman catholic church. She was admitted in London on 5 July 1892, taking the additional Christian names of 'Mary Teresa.' She was regular in the observances of her new faith, in which she found spiritual solace, although it failed to silence all spiritual questionings. In July 1895 she was granted on her petition a divorce from Mr. Craigie with the exclusive custody of their child. The public trial occasioned her acute distress.

During her early married life Mrs. Craigie decided to adopt the literary profession. For a weekly periodical, 'Life,' she wrote the dramatic and art criticism as well as a series of articles 'The Note-book of a Diner-out, by Diogenes Pessimus,' which showed a cynical vein of humour. But as her domestic sorrows increased, she grew ambitious of accomplishing more serious work and began a varied preliminary course of study. With a private tutor she worked at mathematics, and then on her separation from her husband she entered University College, London, chiefly devoting herself to Greek, Latin, and English literature. Her teachers were impressed by her promise and eager interest.

In 1891 she published in Mr. Fisher Unwin's 'Pseudonym Library' her first book, 'Some Emotions and a Moral.' The epigrammatic style and lightly cynical flavour ensured a popular success. In England alone 6000 copies were sold within a year, and over 40,000 in her lifetime. In this volume Mrs. Craigie first adopted the pseudonym of John Oliver Hobbes, to which she adhered throughout her career. It was a combination of her father and son's name of John, of Cromwell's Christian name, and of the homely surname of the great philosopher whose severe dialectic she admired. In May 1892 there followed her second book of like texture, 'The Sinner's Comedy,' which was sketched, she wrote, 'under the strain of unspeakable grief and anxiety.' Thenceforth Mrs. Craigie wrote incessantly. 'A Study in Temptations' (1893), 'A Bundle of Life' (1894), and 'The Gods, Some Mortals, and Lord Wickenham' (1895), which ran serially through the 'Pall Mall Budget,' failed to win the popularity of her first volume, whilst 'The Herb Moon: a Fantasia' (1896) was a comparative failure. Yet collectively these novels established her position as a brilliant observer and critic of current social life.

At her father's house she gathered round her a large literary and musical circle, and was a welcome figure in fashionable London society. She frequented theatres and concert rooms and took an active part in philanthropic and literary movements, serving as president of the Society of Women Journalists in 1895-6. Despite weak health her energy seemed inexhaustible, but her occasional withdrawal for religious meditation to the Convent of the Assumption in Kensington Square apparently provided her with adequate rest.

Friends encouraged a wish to try her fortune in drama, and under the influence of the modern French theatre she assiduously sought the suffrages of English playgoers with varying results. Her 'Journeys end in Lovers meeting,' a 'one-act proverb,' was produced at Daly's Theatre (June 1895) with Miss Ellen Terry, Mr. Forbes Robertson, and William Terriss in the three parts; it was first printed in 'Tales about Temperaments' (1901). The theme of a comedy which she next planned for Sir Henry Irving failed to attract the actor, and she converted the draft into a novel, 'The School for Saints' (1897), which proved a more serious effort in psychology than she had yet essayed. But her zeal for drama was undiminished. To her gratification, 'The Ambassador,' a

comedy by her in four acts, was produced by (Sir) George Alexander at St. James's Theatre on 2 June 1898, and ran through the season. Witty dialogue atoned for the slenderness and some incoherence in the plot and characterisation. In the same year she finished a more serious dramatic effort, 'Osbern and Ursyne,' a tragedy in verse, which was first published in Lady Randolph Churchill's 'Anglo-Saxon Review.' In 1899 (Sir) George Alexander produced 'A Repentance,' a vague dramatic study of character which was based on an incident in the Carlist wars, and was ill received. Another rebuff attended the production of her comedy 'The Wisdom of the Wise,' which came out at St. James's Theatre on 22 Nov. 1900. Her next effort, 'The Bishop's Move,' in which Murray Carson collaborated, was produced with popular acceptance at the Garrick Theatre (1902), Mr. Arthur Bouchier and Miss Violet Vanbrugh assuming the chief rôles. But the success proved fleeting. A fanciful drama in four acts, 'The Flute of Pan,' after successful production by Miss Olga Nethersole at the Queen's Theatre, Manchester, on 21 April 1904, was unfavourably received at the first London performance at the Shaftesbury Theatre on 12 Nov. 1904. The play was quickly withdrawn and Mrs. Craigie converted it into a novel.

Meanwhile Mrs. Craigie was very busy in many other directions. She pursued her earlier path in fiction in 'The Serious Wooing' (1901) and 'Love and the Soul Hunters' (1902). In 'Robert Orange,' a novel which appeared in July 1902, she ingeniously elaborated the psychological study which she began in 'The School for Saints.' The hero, Robert Orange, was a deliberately idealised portrait of Disraeli, in whose career and character she developed an intense interest. The statesman also figured in the book under his own name in his historical guise. 'The Vineyard,' her penultimate novel, ran serially through the 'Pall Mall Magazine' and was issued independently in 1904. She was then at work on her final novel, 'The Dream and the Business' (issued in August 1906), in which she contrasted the Roman catholic with the nonconformist temper of mind.

Requests for sketches or essays at the same time were growing. Travelling constantly for pleasure, rest, or the local colour of her novels and plays, she repeatedly described such experiences in the press. Among her most intimate friends was Miss Mary Leiter of Washington, who married Lord Curzon in 1895. At the Delhi durbar in January 1903 she was the guest of Lord

and Lady Curzon, and she narrated the incidents of the pageantry in letters to the London 'Daily Graphic' and 'Collier's Weekly' of New York, which were collected as 'Imperial India' in 1903. To the 'Academy,' the ownership of which her father acquired in 1896, she contributed in a very different style during 1903 a series of thoughtful essays, 'Letters from a Silent Study' (republished in 1904). Her critical power was seen to best advantage in an admirable notice of George Eliot written in 1901 for the 10th edition of the 'Encyclopædia Britannica,' and in a critical essay on George Sand prepared for a series of English translations of French novels edited by Mr. Edmund Gosse (1902). At the end of 1905 she undertook a lecture tour in America, where her popularity ran high, but she overtaxed her strength and abandoned the tour in Feb. 1906.

In England, where she lately found her chief recreation in motor tours, she mainly divided her time between her father's residences, 56 Lancaster Gate, London, and Steephill Castle, Ventnor. Since 1900 she rented near Steephill Castle a small house, St. Lawrence Lodge, where she wrote much. On Sunday 12 Aug. 1906 she left Ventnor for her London home. The next morning she was found dead in bed of cardiac failure. Her will directed that her body should be cremated; but cremation was forbidden by the Roman church, and she was buried in St. Mary's cemetery, Kensal Green, after a requiem mass at the church of the Jesuit fathers in Farm Street. Her gross personalty was proved at 24,502*l.* 8*s.*, but the net personalty only amounted to 975*l.* 3*s.* 11*d.* (*The Times*, 26 Sept. 1906).

Mrs. Craigie wrote that she lived two lives in one. Her worldly delight in social pleasures and activities seemed to be combined with a mystical conviction of their hollowness and futility. In spite of marked business aptitudes and a capacity to make money, she spent more than she could afford, and failed to husband her resources. With her sincere devotion to the creed of her adoption, there went a deep despondency which colours much of her intimate correspondence and is in painful contrast with her vivacity in social intercourse. Her sensitiveness to criticism and her eagerness to defend her work at all hazards against public censure are hard to reconcile with her claim to be treated as an idealist. Such inconsistencies were doubtless due in part to uncertain health and the shock of her unhappy marriage, but mainly to intellectual instability and impulsive

emotion. Well acquainted with French and Italian, and widely read in philosophy and theology as well as in fiction and belles lettres, she was more ambitious of the reputation of a serious thinker than of a witty novelist. Her philosophic ideas are, however, too dim and elusive to be quite intelligible; her psychological insight, although fitfully luminous, lacked a steady glow, while her plots were too often without adequate coherence. But her command of epigram—humorous, caustic, and cynical—gives her work high value, and her style, which owes much to her literary heroes, Newman, Disraeli, George Meredith, and George Eliot, is notable for its vivid picturesqueness.

An oil painting by Miss L. Stacpoole in 1885, which is reproduced in the 'Life' (1911), belongs to her family. A portrait plaque in bronze was placed by her friends in University College, London, being unveiled by Lord Curzon of Kedleston on 2 July 1908. A replica was presented to Barnard College, New York. A John Oliver Hobbes scholarship for English literature was founded at University College at the same time. After her death her house at Ventnor was purchased by her father and renamed 'Craigie Lodge.'

[The Life of John Oliver Hobbes, told in her correspondence, with biogr. sketch by her father, John Morgan Richards, and introd. by Bishop Welldon (with portraits), 1911; *The Times*, 14 Aug. 1906; William Archer, *Real Conversations*, 1904; personal knowledge.]

S. L.

CRANBROOK, first EARL OF. [See GATHORNE-HARDY, GATHORNE (1814-1906).]

CRAVEN, HAWES (1837-1910), scene-painter, whose full name was Henry Hawes Craven Green, was born at Kirkgate, Leeds, on 3 July 1837. His father, James Green (*d.* 1881), at first a publican of Leeds and amateur pugilist, became known as a comedian and pantomimist. His mother, Elizabeth Craven, was an actress, who left the stage, and published several volumes of prose and verse. As a boy young Craven acted with his father on tour, but early evincing an artistic bent, attended the school of design at Marlborough House (1851-3), where he won numerous prizes. Apprenticed in 1853 to John Gray, scene-painter of the Britannia Theatre, Hoxton, he passed with him to the Olympic Theatre, and provided in his absence through illness the scenery for Wilkie Collins's drama 'The Lighthouse' (23 July 1857). His work won the approval of Clarkson Stan-

field [q. v.], who had painted the scenery, when the piece was originally produced by Charles Dickens and other amateurs. Subsequently Craven worked with William Roxby Beverley [q. v. Suppl. I] at Drury Lane and Covent Garden. From 1862 to 1864 he was principal scene-painter at the Theatre Royal, Dublin, where, according to Mr. Percy Fitzgerald, an eye-witness, his work possessed all 'the breadth and effect of rich water-colour drawings somewhat of the Prout school.' In the summer vacation of 1863 and again in 1864 he worked for Fechter at the Lyceum on some elaborate set scenes, after the new mode of mounting plays which Fechter inaugurated.

From Dublin Craven passed successively to the Olympic (under Horace Wigan), where he distinguished himself by his scenery for 'The Frozen Deep' (October 1864), and to the Adelphi (under Benjamin Webster). He soon increased his reputation by his work for 'Play' and 'School,' both produced at the Prince of Wales's Theatre (15 Feb. 1868, and Jan. 1869), and by 'The Enchanted Isle' in the Covent Garden pantomime of 'Robinson Crusoe' (December 1868).

In 1871 Craven joined H. L. Bateman [q. v.] at the Lyceum, but his opportunities were restricted, until Henry Irving became lessee and manager in 1878. Inexpensive as Irving's opening production of 'Hamlet' (30 December 1878) was, Craven's scenery was notable for its construction and deft mechanical arrangement. In succeeding years Craven, harmoniously co-operating with Irving, carried scenic realism and stage illusion to the full limit of legitimate artistic expression, and he turned to advantage the newly introduced electric lighting, which compelled a readjustment of old methods of distemper painting. Among his early triumphs at the Lyceum was his grandiose interior of the Temple of Artemis in 'The Cup' (3 Jan. 1881), from a design by Sir James Knowles. In 'Romeo and Juliet' (8 March 1882) he gave the effect of the clear blue Italian sky by using a new pigment of his own invention. For his scenes in Irving's production of 'Faust' (19 Dec. 1886) he visited Nuremberg and the Hartz mountains with admirable results. Sound work followed for 'Macbeth' (December 1888), 'King Henry VIII' (January 1892), 'King Lear' (10 Nov.), Tennyson's 'Becket' (February 1893), 'King Arthur' under Burne-Jones's direction (January 1895), and finally for 'Coriolanus' from the designs of Sir Lawrence Alma-Tadema (15 April 1902), when

Craven's long association with Irving closed.

Meanwhile London scene-painters had ceased to be salaried employés of the theatre, and Craven worked on contract for Irving, who employed other scenic artists along with him. But he rented the Lyceum scene-loft for his studio, and there he painted for many managers in addition. For the Savoy Theatre he worked on the 'Mikado' (14 March 1885) and 'Utopia, Limited' (7 Oct. 1893). For (Sir) Herbert Beerbohm Tree at Her Majesty's he provided scenes for 'King John' (29 Sept. 1899), 'Twelfth Night' (February 1901), and Mr. Stephen Phillips's 'Ulysses' (February 1902). In September 1902 he painted two scenes for the revival of 'As you Like It' at the Prince's Theatre, Manchester. His last work of note was done for Mr. Bouchier's revival of 'The Merchant of Venice' at the Garrick (October 1905). In the same year he was elected president of the Scenic Artists' Association.

Craven died at his residence, Fairlight, 246 Brockley Road, S.E., on 22 July 1910, and was buried at Brockley. By his marriage in 1866 with Maria Elizabeth Watson Lees (1838-1891), a première danseuse, he left three sons and three daughters. Mr. Alfred E. Craven, the second eldest surviving son, was for sixteen years his father's pupil-assistant and partner.

Craven was probably the greatest scene-painter of his century. The equal of Stanfield and Beverley in craftsmanship and imagination, he excelled both in the capacity to adapt his knowledge to the needs of the stage. As scenic innovator he ranks with Louthembourg. He was the first to demonstrate that tones thrown upon the scene by phantasmagoric lights are subtler in atmospheric effect than tones wholly expressed by paint on canvas. He painted his Lyceum scenery with a view to the particular kind of light it was to bear. He excelled in landscape, and, in Ellen Terry's words, 'could paint the flicker of golden sunshine for the stage better than anyone.'

CRAVEN, HENRY THORNTON, whose real name was **HENRY THORNTON**, (1818–1905), dramatist and actor, born in Great Poland Street, London, on 26 Feb. 1818, was son of Robert Thornton, a schoolmaster in Holborn. Starting life as a publisher's clerk in Paternoster Row, Henry subsequently acted as amanuensis to Bulwer Lytton, and began writing for 'Bentley's Miscellany.' Ambitious to become a dramatist, he took to the stage, making his first appearance at York in 1840 and his London début soon after at Fanny Kelly's theatre, Dean Street, Soho. In 1841 he was acting on the Sunderland circuit, and in 1842 his first play, 'Bertram the Avenger,' was produced at North Shields. Craven produced his second play, 'Miserrimus,' at Portsmouth late in 1843. In the spring of 1844 he joined the Keeleys at the Lyceum, and after both acting and writing for the stage of the smaller theatres he was in 1850 engaged at Drury Lane, where, on the occasion of Macready's farewell on 28 Feb. 1851, he played Malcolm to the tragedian's Macbeth. On 12 June following his operetta, 'The Village Nightingale' was produced at the Strand, with himself in one of the characters. Eliza (1827–1908), daughter of Sydney Nelson [q. v.], the composer, took the leading female rôle. In November 1851 the two were engaged by Lloyd of Edinburgh for the Theatre Royal stock company, Craven as principal stage director. In that city they were married on 12 May 1852 and simultaneously transferred their services to the Adelphi.

In October 1854 Mr. and Mrs. Craven landed at Sydney, where they fulfilled a successful engagement at the Victoria Theatre. In partnership with the actor W. H. Stephens, Craven then 'built the little Lyceum Theatre in the same city, which they opened in 1855. In April 1857 Mr. and Mrs. Craven appeared at the Theatre Royal, Melbourne, in several of Craven's own pieces. No marked success either as dramatist or actor attended his reappearance in London. His first notable success as a dramatist came when Robson produced and played in Craven's domestic drama, 'The Chimney Corner,' at the Olympic on 21 Feb. 1861. For Robson, Craven also designed the title-character in 'Milky White,' which was first produced at the Prince of Wales's, Liverpool, on 20 June

1864. Robson's sudden death altered Craven's plans (6 Aug. 1864), and he himself sustained the title-rôle when the piece was brought out at the Strand on 28 Sept. following. 'Milky White' enjoyed a run and a revival at the Strand and was subsequently popular in the provinces. In the dual rôle of actor and dramatist Craven scored again at the new Royalty on 17 Oct. 1866, when 'Meg's Diversion' was produced, with himself as Jasper, the play running 330 nights. In 1873 he made his last provincial tour. His last play, an historical drama, 'Too True,' was produced at the Duke's on 22 Jan. 1876, and in this he made his final appearance on the stage.

Craven was a capable writer of rural domestic drama, but his incident was illogically theatrical, and like most actor-playwrights he relied on puns and catch-phrases to raise a laugh. As an actor he imitated Robson. Many of his numerous plays were published by Duncombe, Lacy, and French. In 1876 he published a novel, 'The Old Tune.'

Craven died at his residence, Thorntonville, Clapham Park, on 13 April 1905, and his widow at Eastbourne on 20 March 1908. Both are buried in Norwood cemetery. Two of their four children survived them, a daughter and a son, Mr. Tom Sidney Craven (b. 1864), dramatist and actor.

CRAWFURD, OSWALD JOHN FREDERICK (1834–1909), author, born at Wilton Crescent, London, on 18 March 1834, was son of John Crawfurd [q. v.], diplomatist, by his wife Horatia Ann (d. 1855), daughter of James Perry, editor of the 'Morning Chronicle,' and god-daughter of Lord Nelson. Educated at Eton, he matriculated at Merton College, Oxford, in 1854, but left the university without a degree. Nominated on 12 Jan., and appointed, after examination, on 23 Jan. 1857, to a junior clerkship in the foreign office, he was sent in April 1866 as acting consul to Oporto. He became consul there on 13 Jan. 1867, and filled the post efficiently for the next twenty-four years. On 1 Jan. 1890 he was made C.M.G. While at Oporto he spent his leisure in

sport and literary work. In addition to several novels he published three sympathetic but sketchy studies of Portuguese life, which are of interest for their accounts of the Portuguese rustic and of country sports in Portugal: 'Travels in Portugal,' under the pseudonym John Latouche (1875; 3rd edit. 1878), 'Portugal Old and New' (1880; 2nd edit. 1882), and 'Round the Calendar in Portugal' (1890). Crawfurd's last two years (1890-1) in Portugal were of exceptional difficulty. An ultimatum from Lord Salisbury (Jan. 1890), the result of the occupation by Portuguese troops of British territory in East Africa, led to an outburst of anti-British feeling, more violent in Oporto than in other Portuguese towns. Crawfurd's house was stoned, but he carried on his duties till the trouble subsided, and then on 17 June 1891 resigned. Returning to England, he devoted himself entirely to literature. He died at Montreux on 31 Jan. 1909.

Crawfurd married (1) Margaret (*d.* 1899), younger daughter of Richard Ford [q. v.], author of the 'Handbook to Spain,' by whom he had one son who died in infancy; (2) in 1902, Lita Browne, daughter of Hermann von Flesch Brunningen. His second wife survived him.

Although literature was for Crawfurd merely a recreation, his literary activity was many-sided. A novelist, an essayist, a poet, and an anthologist, he was also a frequent contributor under his own name and under pseudonyms to 'The Times' and leading reviews; he edited for some years the 'New Quarterly Magazine' (1873) and 'Chapman's Magazine of Fiction' (1895, &c.), and had some experience of publishing, being an original director of 'Black and White,' founded in 1891, and, through his friendship with Frederic Chapman [q. v. Suppl. I], a director and then managing director of Chapman & Hall, Limited—a post for which he lacked qualification. Of his novels 'Sylvia Arden' (1877) was the best known. In others like 'The World we Live In' (1884), 'In Green Fields' (1906), and 'The Mystery of Myrtle Cottage' (1908), he discussed political and social questions. His plays, 'Two Masques' (1902) and 'The Sin of Prince Eladane' (1903), are marked by a studied choice of diction and some capacity for verse, but lack dramatic quality. Crawfurd also compiled 'Laws of Opposition Bridge' (1906).

[The Times, 2 Feb. 1909; Athenæum, 4 Feb. 1909; Allibone's Dict. of Eng. Lit.,

1891; Foreign Office List, 1900; Black and White, 5 Feb. 1909; Who's Who, 1908; private information.] S. E. F.

CREAGH, WILLIAM (1828-1901), major-general and administrator, born at Newry, co. Down, on 1 June 1828, was second son of the seven children of General Sir Michael Creagh, K.H. (1787-1860), and Elizabeth, only daughter of Charles Osborne, judge of the King's Bench, Ireland, and niece of Sir Thomas Osborne, eighth baronet, of Newtown Anner, co. Tipperary. He came of an old Roman catholic family, and his father, who entered the army at the age of fourteen, saw much service with the 86th regiment, and was at his death in 1860 colonel commandant of the 73rd regiment; he was the first to become a protestant. His eldest brother, General Charles Creagh-Osborne, C.B. (*d.* 1892), after service in India, was commandant of the staff college, Camberley, 1878-86; his youngest brother, Major James Henry Creagh (*d.* 1900), served in the 27th regiment during the mutiny, and retired owing to illness then contracted.

William Creagh attended for six years Mr. Flynn's private school in Dublin. After instruction at Sandhurst (Jan. 1842-Dec. 1844) he became a cadet in the East India Company's service, and joined his regiment, the 19th Bombay infantry, in June 1845. In 1847, being then stationed at Karachi, he was placed by Gen. Walter Scott, R.E., in charge of an extensive district in upper Sindh (subdued in 1843 by Sir Charles Napier). Short of ordering the death-sentence and imprisonment for life, his powers were practically unlimited and strangely varied. Recalled from administrative duties by the outbreak of war in the Punjab (April 1848), he served with his regiment through the campaign of 1848-9. For his services he received the Punjab medal, with two clasps for Mooltan and Gujarat; his regiment, now the 119th, bears the title of 'The Mooltan Regiment.'

Coming home early in 1856, he married next year. Learning on his wedding trip at Killarney of the mutiny, he returned to duty, but sailing round the Cape, did not reach India until Delhi had fallen. He took part, however, with his regiment, under Sir Hugh Rose in Central India, in the pursuit of Tantia Topi, Nana Sahib's right-hand man, and was present at Tantia's defeat near Jhansi on 1 April 1858, and, a year later, at his capture.

Gazetted captain on 3 Feb. 1860, he successfully administered, by commission from Sir Richmond Shakespeare, resident

at Indore, the native state of Dhar, during the minority of its Rajah (1861-2). Promoted major in 1865, lieutenant-colonel in 1871, and colonel in 1876, he was in command of his regiment when the second Afghan war broke out in 1878. From the first he had shown an aptitude for engineering and had made the earliest road up to the hill station of Matheran, near Bombay. His talent was now to stand him in good stead. From 16 Dec. 1878 to 26 Feb. 1879 he was employed with his men in making a military road from Jacobabad to Dhadar, a distance of 109 miles. On 27 Feb. the regiment thence began to ascend the Bolan Pass, making in its progress a further roadway, accessible to heavy guns and transport. At Dozan (half-way through the pass), which was reached in June, the workers were attacked by cholera, and more than fifty succumbed. During this outbreak Col. Creagh visited the hospital twice daily, and on one occasion a sepoy died holding his hand. On 31 July he was put in command of the Bombay troops in line of communication, with the rank of brigadier-general. By September the road was carried to Darwaza, a distance of 63 miles from Dhadar. Sir Richard Temple described the long road as 'a signal example of what may be accomplished by a small body of troops with their trained followers.'

Owing to urgent private business. Creagh retired from the service in December, with the rank of major-general. He was mentioned in despatches and received the Afghan medal. Returning to England early in 1880, he passed the remainder of his life at St. Leonards-on-Sea. A churchman and conservative, he took an active though unostentatious part in religious, philanthropic, and political affairs. He died at St. Leonards on 23 May 1901, and is buried in the Hastings borough cemetery. Two small oil paintings of him at the ages of twenty-eight and forty respectively belong to his widow.

General Creagh was twice married: (1) on 29 April 1857 to Haidée Sarah Rose, daughter of John Dopping, of Derrycassan, co. Longford, by whom he had five sons and two daughters; (2) on 10 November 1877 to Dora, younger daughter of Edwin Sturge of Gloucester, by whom he had one son and two daughters. The four sons who reached manhood all entered the army. The eldest, Ralph Charles Osborne, served with distinction in Burmah, in Manipur, at the relief of Chitral, in the Kurram Valley, and in

South Africa, and died at Netley on 27 Jan 1904.

[Historical Record of the 86th Regiment; The Afghan Campaigns of 1878-80, by Sydney H. Shadbolt, 1882, 2 vols.; private information.] H. C. M.

CREMER, SIR WILLIAM RANDAL (1838-1908), peace advocate, born on 18 March 1838 at Fareham, Wiltshire, was son of George Cremer, a coach-painter, by his wife Harriet Tutte, daughter of a local builder. Soon after his birth his father deserted his family, and the child was brought up in great poverty. At twelve years of age he went to work as a pitchboy in a shipyard. Three years afterwards he was apprenticed to a carpenter. Then he went to Brighton, where he came under the influence of Frederick William Robertson [q. v.], and in 1852 found his way to London, where he soon mixed in politics and trade unionism. A good speaker, he represented his fellow workmen on the committee in charge of the nine hours' movement of 1858, which involved the lock-out of 70,000 men in 1859-60. From this arose the Amalgamated Society of Carpenters and Joiners (4 June 1860), Cremer being one of the promoters. He was secretary to the workmen's committee, formed to maintain sympathy with the Northern states of America, after the outbreak of the civil war in 1861, and he organised the meeting in St. James's Hall addressed by John Bright, to protest against the British government having allowed the privateering Alabama to escape.

When the International Working-men's Association was formed in 1865, Cremer was the secretary of the British section, and next year he was a delegate to the conference at Geneva, when wide divergence was discovered between the English and some of the continental representatives. Cremer and his friends pleaded for a practical programme, the others for a revolutionary propaganda. Thereupon Cremer severed his connection with the association. But he was steadily extending his international friendships. He knew Mazzini, and was active in the receptions given in London to Garibaldi. At length in 1870 he formed a committee of working men to try to keep Great Britain neutral during the Franco-German War. This committee became in 1871 the Workmen's Peace Association, of which Cremer was secretary till his death, and on behalf of which he journeyed repeatedly to America and the continent, bearing peti-

tions and appeals for international arbitration. He thus became an international figure whose name was known everywhere, especially among workmen. In 1889 the Inter-parliamentary Union was formed, and Cremer became British secretary until his death. For his unwearied service in the cause of international arbitration he was awarded by the Swedish government in 1903 the Nobel prize of 8000*l.*, 7000*l.* of which he handed over in trust to the International Arbitration League. For his work in the cause of peace he was made commander of the Norwegian Order of St. Olaf in 1904, and was knighted in 1907. He had received the cross of the legion of honour in 1890.

In politics Cremer was a radical. He was a member of the Reform League from its commencement in 1864, and he always claimed that he proposed 'that it would be for the health of the reformers if they should take an airing in Hyde Park on 23 July 1866,' the suggestion which led to the demolition of the Hyde Park railings. In 1868 he addressed a meeting in Warwick, and accepted an invitation to stand as radical candidate. He was defeated with only 260 votes to his credit. He fought the same constituency in 1874, and found only 183 supporters. Twice he failed in his candidature for the London School Board, in 1870 and 1873; but in 1884 he was elected to the St. Pancras vestry. The reform bill of 1885 increased the representation of London, and Cremer contested the Haggerston division of Shoreditch with success. In the elections of 1886 and 1892 he retained his seat, but was defeated in 1895. He recovered it in spite of the South African war fever in 1900, and kept it till his death. In the controversies which arose inside trade unionism when the labour party came into existence, Cremer stoutly opposed the new independent labour movement and remained with the liberal party.

He died at 11 Lincoln's Inn Fields, London, on 22 July 1908, and was buried in Hampstead cemetery after cremation. He was twice married: (1) in 1860, to Charlotte, daughter of J. Wilson of Spalding; she died in August 1876; (2) to Lucy Coombes of Oxford, who died on 8 Aug. 1884. He had no children.

He intended to write his autobiography, but only left some notes behind him. His literary work is confined to the pages of the 'Arbitrator,' a monthly peace journal which he edited from its appearance in 1889. On 7 Dec. 1911 a bust executed by Mr. Paul

Montford for the International Arbitration Society was unveiled by Mr. J. W. Lowther, the Speaker, in the library of the House of Commons; the bust is intended ultimately for the Palace of Peace at the Hague.

[Howard Evans, *Sir Randal Cremer; his Life and Work*, 1911; Sidney Webb's *History of Trade Unionism*; Dr. Eugene Oswald, *Reminiscences of a Busy Life*, 1911; *The Times*, 23 July 1908.] J. R. M.

CRIPPS, WILFRED JOSEPH (1841-1903), writer on plate, was descended from an ancient Cirencester family, members of which took a prominent part in the affairs of the town from the time of Elizabeth, and gained their wealth from the great wool trade of the Cotswolds. His grandfather, Joseph Cripps, sat for Cirencester in parliament, with one short interruption, from 1806 until his death in 1841, when he was succeeded in the representation by his son, William Cripps. The latter, a barrister on the Oxford circuit, became a whip of the Peelite party and a junior lord of the treasury in August 1845, and married his cousin, Mary Anne, daughter of Benjamin Harrison, a descendant of 'Parson Harrison' who held the living of Cirencester for sixty-three years (1690-1753). Wilfred Joseph Cripps, the eldest surviving issue of this marriage, was born in London on 8 June 1841, and was educated at Kensington grammar school, King's College, London, and Trinity College, Oxford, where he graduated B.A. in 1863, proceeding M.A. in 1866. He took an active part in the volunteer movement, frequently attending the rifle competitions at Wimbledon. In May 1865 he was called to the bar in the Middle Temple, practising for a few years on the Oxford circuit.

About 1871 or 1872 he began his researches into old English plate, and three or four years later, on the introduction of William Lord Bathurst, Charles Octavius Swinnerton Morgan [q. v.] entrusted Cripps with his notes on the subject, with a view to completing the inquiry. Cripps published in 1878 his scholarly treatise, 'Old English Plate.' The foundations of the research had been laid by Sir A. W. Franks, Morgan, and others, but Cripps gave earlier researches a wider vogue. Nine editions of his manual, which greatly stimulated the demand for antique silver, appeared between 1878 and 1906, and each new edition embodied fresh discoveries. Cripps's labours covered a wide field. In April 1892 he read a paper on the old church plate of Northumberland and Durham before the Society of Antiquaries of New-

castle-on-Tyne (*Arch. Ael.* ser. 1. xvi. 249-267). In 1880 he published a volume on 'Old French Plate,' which stirred a keen interest in Europe and America (2nd edit. 1893). For the Science and Art Department at South Kensington he prepared in 1881 a handbook dealing with college and corporation plate.

Cripps's expert authority was universally recognised. In October 1880, associated with Sir Philip Cunliffe Owen, he examined by the request of the Russian government the magnificent imperial collection of plate in Russia, and in 1881 he was similarly employed in Sweden and Denmark and at Berlin. In 1880 he was a member of the English sub-commission connected with the Exhibition of Gold and Silver Work at Amsterdam (*Athenæum*, 28 Feb. 1880, p. 289). Through his efforts valuable replicas of famous objects of artistic workmanship were obtained for the national collections at South Kensington and elsewhere.

Cripps interested himself in the archaeology of his native town, and unearthed about the site of the forum of Roman Cirencester remains of the basilica and other principal buildings. His discoveries were communicated to the Society of Antiquaries in two papers, 'Roman basilica of Corinium at Cirencester' (*Proc. Soc. Ant.* new ser. xvii. 201-8), and 'Roman Altar and other Sculptured Stones found at Cirencester in April 1899' (*ib.* xviii. 177-184). He served many years in the royal North Gloucester militia, retiring with the rank of major; he completed in 1875 a history of the regiment which had been begun by Captain Sir J. Maxwell Steele-Graves. He was elected a fellow of the Society of Antiquaries in June 1880, and became local secretary for Gloucestershire, was made a C.B. in 1889, and in 1894 received the honorary freedom of the Goldsmiths' Company. Deputy-lieutenant of the county of Gloucester, and J.P. for the counties of Gloucester and Kent, he took a very active share in all local, especially educational, affairs. He keenly interested himself in the local welfare of the conservative cause.

Cripps died at his residence, Cripps Mead, Cirencester, on 26 Oct. 1903, and was buried at Cirencester cemetery. He was twice married: (1) on 31 May 1870 to Maria Harriet Arabella (*d.* 1881), second daughter of John Robert Daniel-Tyssen; (2) on 2 Dec. 1884 to Helena Augusta Wilhelmine, Countess Bismarck, daughter of Count Bismarck, of Schierstein, Prussia, a relative of the German chancellor. He had no issue.

Cripps also wrote, among many other papers and articles: 1. 'Notes on Ancient Plate of the Merchant Taylors' Company' (privately printed), 1877. 2. 'English and Foreign Silverwork' (*Journ. of Soc. of Arts*, 11 May 1883). 3. 'Report on the Plate at Welbeck Abbey,' 1883. 4. 'Church Plate and how to describe it' (*Trans. Bristol and Glouc. Arch. Society*, 27 Apr. 1893).

CROCKER, HENRY RADCLIFFE (1845-1909), dermatologist. [See RADCLIFFE-CROCKER, HENRY.]

CROFT, JOHN (1833-1905), surgeon, born on 4 Aug. 1833 at Pettinghoe near Newhaven, in Sussex, was son of Hugh Croft, who at the age of nineteen married his first wife Maria, aged sixteen. His grandfather, Gilmore Croft, a successful medical practitioner in the City of London, left Hugh Croft a competence, much of which was spent in farming. Hugh's first wife died in 1842, and marrying again he moved to Lower Clapton. John Croft was educated at the Hackney Church of England school, and through life held earnest religious views. He served a short apprenticeship with Thomas Evans of Burwash in Sussex, and entered St. Thomas's Hospital in 1850. Admitted M.R.C.S., and a licentiate of the Society of Apothecaries in 1854, he served as house surgeon at St. Thomas's Hospital. After spending five years (1855-60) as surgeon to the Dreadnought seamen's hospital ship, he returned to St. Thomas's to become demonstrator of anatomy and surgical registrar. He was successively resident assistant surgeon (Dec. 1863), assistant surgeon (1 Jan. 1871), and surgeon (1 July 1871), when the new buildings of the hospital were opened on the Albert Embankment. In the medical school he was in succession demonstrator of anatomy, lecturer on practical surgery, and lecturer on clinical surgery. He resigned his appointments in July 1891, when he was elected consulting surgeon. He was also surgeon to the Surrey dispensary; to the National Truss Society; to the Magdalen Hospital at Streatham, and to the National Provident Assurance Society. He was elected F.R.C.S. in 1859; was a member of the council (1882-90); vice-president in 1889, and a member of the court of examiners (1881-6).

Croft was one of the earlier hospital

surgeons in London to adopt the improved methods advocated by Lister. His name is chiefly associated with the introduction of 'Croft's splints,' which were plaster of Paris cases made with scrubbing flannel and shaped to the limb. They were employed in place of the ordinary splints and the 'gum and chalk' bandages which had previously been used in the treatment of fractures of the leg. Croft was a strong advocate for early excision of the joint in cases of hip disease.

He died on 21 Nov. 1905, and was buried in Kensal Green cemetery. He married in 1864 Annie, daughter of Alexander Douglas Douglas, but left no issue.

Croft contributed to the 'St. Thomas's Hospital Reports,' Holmes's 'System of Surgery,' the 'Transactions' of the Royal Medical and Chirurgical Society, the Clinical, and other medical societies.

[St. Thomas's Hosp. Reports, xxxiv. 505; private information; personal knowledge.]

D'A. P.

CROFTS, ERNEST (1847-1911), historical painter, born at Leeds, Yorkshire, on 15 Sept. 1847, was second son of John Crofts, J.P., a manufacturer. His mother, Ellen Wordsworth, was a descendant of the poet Wordsworth.

Ernest received his general education at Rugby and Berlin, and subsequently studied art at Düsseldorf under Horace Vernet's pupil, Professor Hüntten, and in London under Alfred Borron Clay [q. v.]. In 1874 he first exhibited at the Royal Academy, the subject of his picture being 'A Retreat: Episode in the Franco-German War.' From that time to the year before his death he was rarely absent from the annual exhibitions at Burlington House. He was elected A.R.A. in 1878, R.A. in 1896, and keeper and trustee of the Royal Academy, in succession to P. H. Calderon [q. v. Suppl. I], in 1898.

Crofts devoted himself almost exclusively to the military historical subject, and was particularly interested in the Napoleonic war and in the struggles between Cavalier and Roundhead. His draughtsmanship was as impeccable as his accuracy in the minutest details of costumes, accoutrements, and accessories. He had all the qualifications to make him a great pictorial illustrator. He had the gift to represent the stirring episodes of past history in dramatic intensity, but was rather deficient, especially towards the end of his career, in the sensuous appreciation of colour.

His most ambitious work as regards

scale is the panel in the ambulatory of the Royal Exchange, 'Queen Elizabeth opening the first Royal Exchange.' The Diploma Gallery at Burlington House owns his 'To the Rescue,' 'The Funeral of Charles I' is at the Bristol Art Gallery, and 'On the Evening of the Battle of Waterloo' (R.A. 1879) at the Walker Art Gallery, Liverpool. Among his other notable pictures are 'Marlborough after Ramillies' (1880), 'Charles I on the Way to Execution' (1883), 'Wallenstein' (1884), 'Gunpowder Plot: the Conspirators' last Stand at Holbeach House' (1892), 'Napoleon and the Old Guard at Waterloo' (R.A. 1895), 'Oliver Cromwell at the Storming of Basing House' (1900), 'The Capture of a French Battery at Waterloo,' 'King Edward VII distributing South African War Medals,' 'The Funeral of Queen Victoria' (1903), 'Prince Rupert and his Staff at Marston Moor' (1904). Crofts was elected F.S.A. on 1 March 1900.

He died at Burlington House on 19 March 1911, and was buried at Kensal Green. He married in 1872 Elizabeth Wüsthofen, of Düsseldorf, and had one daughter. His portrait is included in Sir Hubert von Herkomer's large group of the Royal Academy Council, at the National (Tate) Gallery of British Art. The works and sketches remaining in his possession were sold at Christie's after his death on 19 Dec. 1911.

[Windsor Mag., March 1909; Graves, Royal Acad. Exhibitors; private information.]

P. G. K.

CROKE, THOMAS WILLIAM (1824-1902), Roman catholic archbishop of Cashel, born on 19 May 1824 at Castlebar, in the parish of Ballyclough, co. Cork, was son of William Croke by his wife Isabella Plummer. His father, who died young, was a catholic, but his mother was a protestant till four years before her death. Seven members of Croke's family were priests. A great-uncle, Dr. McKenna, was bishop of Cloyne, and an uncle was vicar-general there. Two sisters were nuns; one brother, William, died while a young curate, and another, James, died a priest in America in 1889.

Thomas Croke was taken charge of in boyhood by his uncle, vicar-general of Cloyne, who sent him to the endowed school at Charleville, where he gained a reputation for athleticism rather than for learning. Encouraged to adopt the priestly vocation, he studied from 1839 to 1845, mainly at the Irish College in Paris, but spending one of these years at the college of Menin, in Belgium, where he acted as professor of

rhetoric. In 1845 he went to the Irish College at Rome, of which Dr. (afterwards Cardinal) Cullen was then rector. Here he carried off several distinctions, including two gold medals, in 1846. In 1847 he received the degree of doctor of divinity. In 1848, according to an uncombated statement of William O'Brien M.P. (*Recollections*, p. 49), he was again in Paris, and took part in the fighting at the barricades during the revolution. After ordination he returned to Ireland in 1849 to take for a short time the place of his brother William as curate of Charleville. He was subsequently professor of rhetoric at Carlow College, teacher of theology at the Irish College, Paris, curate in Ireland for a second time, and professor of ecclesiastical history at the Catholic University in Dublin when John Henry Newman was rector. From 1858 to 1868 he was president of St. Colman's College, Fermoy. In 1865 he was made chancellor of the diocese of Cloyne and parish priest of Doneraile. As a theologian he attended Dr. William Delany, the bishop of Cork, at the Vatican Council in 1870, where he met Archbishop, afterwards Cardinal, Manning, and formed a lifelong friendship with him.

From 1870 to 1875 Croke was catholic bishop of Auckland, New Zealand, and his administration of the diocese was a triumphant success, to which his business ability largely contributed. In 1875 he succeeded Patrick Leahy [q. v.] as archbishop of Cashel, largely through the influence of Cardinal Cullen and possibly that of Manning. His first public appearance as archbishop was at the O'Connell centenary in Dublin in 1875, when he preached the centennial sermon in the pro-cathedral. In his diocese he warmly encouraged athletic pastimes, and was a powerful advocate of temperance. Mainly through his influence the Gaelic Athletic Association became a great force in the rural life of Ireland. He was a stern and exacting administrator and an admirable manager of diocesan affairs. A strong nationalist, holding advanced views on the agrarian problem, Croke threw himself with ardour into the land agitation which broke out in 1878, soon after his arrival in Cashel. His unvarying support of the land agitation and of the Irish nationalist party powerfully aided the advance of the nationalist cause. Although Cardinal Cullen was wholly at variance with him in political and agrarian questions, their affectionate relations were undisturbed. Croke, however, dissented from some of the Land League's

procedure, and strongly objected to the no-rent manifesto of 1881. When, a little later, Pope Leo XIII requested him to take a less active part in the land war, he obeyed, but his sympathies underwent no change. He was in favour of Parnell's retirement after the divorce proceedings in November 1890.

Croke celebrated his silver jubilee as bishop in 1895 amid great rejoicings. He died at his palace in Cashel on 22 July 1902, and was buried in the grounds of his cathedral at Thurles.

Although a rigid disciplinarian, and ascetic in his personal tastes, Croke was on occasion a noted raconteur. His generosity and hospitality were unbounded, and Cardinal Manning, 'who loved him as a brother,' regarded him as a saint. Of commanding presence, he wielded an immense influence among the Irish people, and his high personal character, combined with his austerity and deep conviction, was of immense service to the nationalist cause. No other prelate in Ireland possessed the same weight in public affairs. He was the most notable figure of his day in the Irish catholic church. His only publications were a few pastorals, though he had written a few poems for the 'Nation' newspaper while a curate in Charleville.

[Men of the Time, 1899; William O'Brien's *Recollections*; T. P. O'Connor's *Parnell Movement*, p. 514; Barry O'Brien's *Parnell Movement*; *Irish Ecclesiastical Record*, 1902, pp. 301-311 (which suggested the publication of a full biography of Croke); Purcell's *Life of Cardinal Manning*, 1896; Morley's *Life of Gladstone*, 1903; D'Alton's *History of Ireland*, iii. 29, 379; *A Roll of Honour*, Dublin, 1905; *Freeman's Journal*, 23 July 1902.]

D. J. O'D.

CROMPTON, HENRY (1836-1904), positivist and advocate of trade unions, born at Liverpool on 27 Aug. 1836, was second of five sons of Sir Charles Crompton [q. v.], judge of the queen's bench, by Caroline Fletcher, his wife. The eldest son, Charles Crompton (1833-1890), Q.C., was M.P. for Staffordshire (Leek division), and the fourth son, Albert, was founder of the positivist church at Liverpool. Of his three sisters, the eldest, Mary, married the Rev. J. Llewelyn Davies, the second, Caroline Anna, married Prof. George Croom Robertson [q. v.], and the third, Emily, married Prof. E. S. Beesly. Educated at University College school, London, in a private school at Bonn, and at Trinity College, Cambridge, where he graduated B.A. as junior optime in 1858, Crompton afterwards studied medicine at

St. Mary's Hospital, Paddington. In 1858 he was appointed clerk of assize on the Chester and North Wales circuit, a post which he held for forty-three years, rendering the judges during that long period valuable aid in their criminal work by virtue of his experience and judgment. He was called to the bar at the Inner Temple on 6 June 1863. He died on 15 March 1904 at Churt near Farnham, and is buried there. He married on 8 Nov. 1870 Lucy Henrietta, daughter of John Romilly, first Lord Romilly [q. v.], and had two sons.

During a long illness (1858-9), Crompton read Comte's 'Philosophie Positive' and became an ardent positivist. He met Professor Beesly in 1864, and thenceforward took an active part in the positivist movement. In his later life he was chief assistant to Dr. Richard Congreve [q. v. Suppl. I] at the Church of Humanity, Chapel Street, becoming leader after Congreve's death in 1899. There he gave many addresses on religion, philosophy, history, and public affairs. Some were published as pamphlets. A paper on Rabelais (*Positivist Review*, June 1910) is a good example of the range and breadth of his thought.

Crompton sedulously applied his principles to public questions. He was always active to protest against international injustice and the oppression of weaker races. He served on the Jamaica committee, formed to prosecute Governor Eyre in 1867; worked for the admission of women to the lectures at University College; was untiring in efforts for the improvement and just administration of the criminal law; and gave a strenuous and useful support to the trade unions in their struggle to reform the labour laws. When bills affecting trade unions were before parliament, 'his technical knowledge and skill were invaluable and were ever placed unstintingly and disinterestedly at the service of labour' (THOMAS BURT, *Northumberland Miners' Monthly Circular* for March 1904). In recognition of his services he was made in 1868 a member of the Amalgamated Society of Carpenters and Joiners. In 1876, being at that time referee to the board of arbitration and conciliation for the Nottingham lace trade, he published 'Industrial Conciliation,' to which Mr. and Mrs. Webb refer as 'the classic work' on the subject (*Industrial Democracy*, p. 223, note). It was translated into French. Crompton's 'Letters on Social and Political Subjects,' reprinted from the 'Sheffield Independent,' were published in

book form in 1870, and after his death some papers by him were collected under the title 'Our Criminal Justice,' with an introduction by Sir Kenelm Digby (1905); the book gives an accurate account of the English system of criminal procedure. A volume of 'Selections of Prose and Poetry by Henry Crompton' was issued by his widow in 1910.

[Professor Beesly in *Positivist Review*, May 1904; private information; personal knowledge.] S. H. S.

CROSSMAN, SIR WILLIAM (1830-1901), major-general, royal engineers, born at Isleworth, Middlesex, on 30 June 1830, was eldest son of Robert Crossman of Cheswick House, Beal, and Holy Island, Northumberland, by his wife Sarah, daughter of E. Douglas of Kingston-on-Thames. After education at Berwick-on-Tweed grammar school and Mr. Jeffery's at Woolwich, he entered the Royal Military Academy at the head of his batch in January 1847. He received a commission in the royal engineers as second lieutenant on 19 Dec. 1848. After professional instruction at Chatham and duty at Woolwich, Crossman was employed on the organisation of the Great Exhibition of 1851, and next year was sent to Western Australia, to superintend the construction of public works by the convicts [see DU CANE, SIR EDMUND FREDERICK, Suppl. II]. He was a police magistrate for the colony and a visiting magistrate for the ticket-of-leave stations, being stationed principally at Albany in King George's Sound and at Perth, the capital of the colony. He was promoted first lieutenant on 17 Feb. 1854. His services were commended by the governor, but the exigencies of the Crimean war necessitated his recall in February 1856.

After employment at Aldershot and Chatham he joined the war office for special duty under the inspector-general of fortifications, and was engaged in surveys and designs for new defences of dockyards and naval bases, for which parliament had just sanctioned a loan. Several of the sea defences of Portsmouth and the Isle of Wight, of Hilsa lines and the detached forts of the Gosport advanced line, of the Verne Citadel at Portland, and Scraesdon and Tregantle Forts at Plymouth, were subsequently his work. Meanwhile he was promoted second captain on 12 Aug. 1858 and first captain on 5 Feb. 1864; was a member of the committee on the equipment of coast batteries (Jan. 1860); went to Canada (Dec. 1861) to aid in

preparing quarters for troops from England in view of the menace of war with the United States of America over the Trent affair; and afterwards acted as secretary to the royal commission, of which Sir J. W. Gordon [q. v.] was president, on the defences of Canada, visiting every post on the frontier.

Between 1866 and 1870 Crossman was engaged by the treasury to report on the legation and consular buildings in Japan and China and to arrange for new buildings where necessary. In the course of his mission he secured for the admiralty the site for a new dockyard at Shanghai; and he accompanied both the naval expedition to Nanking and Yung Chow in 1869 and the force of sailors and marines which was landed in Formosa and at Swatow in 1868 and 1869. Varied service occupied him after his return to England. Promoted regimental major on 5 July 1872 and lieutenant-colonel on 11 Dec. 1873, he became assistant director of works for fortifications at the war office on 1 April 1875, but on 6 Sept. following he joined a special commission appointed by the colonial office to inquire into the resources and finances of Griqualand West. In recognition of his services he was made C.M.G. (May 1877). From 1876 to 1881 he served as the first inspector of submarine mining defences and as member of the royal engineers committee for submarine experiments and stores, visiting all the defended harbours at home and also at Halifax (Nova Scotia), Bermuda, and Jamaica abroad. Under his auspices submarine mining became a valuable part of harbour defence. During 1879 and 1880 he was also president of an important committee on siege operations, which conducted many practical experiments with a view to remodelling siege operations to meet improved artillery. In 1881-2 he visited Esquimalt, Fiji, Hong-kong, Singapore, Penang and Labuan and the Australian colonies, making full reports on their defences and requirements. On his return (July 1882) he was commanding royal engineer of the southern military district with headquarters at Portsmouth, but was absent in 1883 on a commission of inquiry with Sir George Smyth Baden-Powell [q. v.] into the financial condition of Jamaica and other West India islands. He was made K.C.M.G. on rendering the final report (March 1884).

Crossman, who was promoted brevet colonel on 11 Dec. 1878 and regimental colonel on 6 May 1885, resigned his

command at Portsmouth in order to stand for parliament. He was returned in June 1885 as liberal M.P. for Portsmouth. Refusing to accept Gladstone's home rule policy, he joined the liberal unionists and retained the seat till 1892. He had retired from the army with the honorary rank of major-general (6 Jan. 1886), and in Jan. 1883 had succeeded to his father's estate in Northumberland. He was a J.P. for the county, alderman of the county council, and served as sheriff in 1894-5. He was for many years chairman of the River Tweed commission and president of the Berwick Naturalists' Club. He was also an associate member of the Institution of Civil Engineers. He died at the Hotel Belgravia, in London, on 19 April 1901.

Crossman was twice married: (1) at Albany, King George's Sound, Western Australia, on 3 March 1855 to Catherine Josephine (*d.* 1898), daughter of John Lawrence Morley of Albany; and (2) in London, on 29 June 1899, to Annie, eldest daughter of Lieut.-general R. Richards, Bombay staff corps, who survived him. By his first wife he had two sons and three daughters.

[War Office Records; Royal Engineers Records; Blue Books; W. Porter's *History of the Royal Engineers*, 2 vols. 1889; *The Times*, 22 April 1901; *Royal Engineers Journal* (notice by General Sir E. F. Du Cane), Oct. 1901.] R. H. V.

CROWE, EYRE (1824-1910), artist, eldest son of Eyre Evans Crowe [q. v.] by his first wife Margaret, daughter of Capt. Archer of Kiltimon, co. Wicklow, was born in London on 3 Oct. 1824. Sir Joseph Archer Crowe [q. v. Suppl. I] was his younger brother. His sister Amy Mary Anne (*d.* 1865) married in 1862, as his first wife, Col. (Sir) Edward Thackeray, V.C., a cousin of the novelist. During his childhood Eyre's father removed with his family to France, where they remained till 1844. In Paris Eyre and his brother Joseph learnt drawing as boys of M. Brasseur and in 1839 Eyre became a pupil of the great painter Paul Delaroche. In 1844 Crowe accompanied his master and his fellow pupils to Rome. With one of them, the distinguished French painter and sculptor Jean Léon Gérôme (1824-1904), Crowe enjoyed a lifelong friendship, and they corresponded with one another till Gérôme's death.

In 1844 Crowe's family resumed residence in London, where he joined them and spent most of his remaining life.

He continued his art education at the Royal Academy schools, and first exhibited at the Academy in 1846, sending the picture 'Master Prynne searching Archbishop Laud's pocket in the Tower.' Next year he engaged in the competition for the decoration of the Houses of Parliament, taking for his subject 'The Battle of Agincourt.'

Meanwhile his relations with Thackeray, whose acquaintance he made in Paris, grew closer. In 1845 he drew a caricature of the novelist in Turkish dress, and transferred to wood the sketches which Thackeray drew for 'Notes of a Journey from Cornhill to Grand Cairo' (1846). In April 1851 he became Thackeray's secretary and amanuensis and spent much time with him at the British Museum in preparing material for 'Esmond.' Crowe was Thackeray's companion in his lecturing tour to the United States (Nov. 1852 to April 1853), and he vividly described the experience in 'With Thackeray in America' (1893, illustrated), while he gave many glimpses of the intimacy in his 'Haunts and Homes of Thackeray' (1897, with illustrations).

After returning from America Crowe worked zealously at his art, mainly occupying himself with historical and genre themes, which caught the popular taste and were treated with precision and delicacy if without distinctive power. A few of his subjects were suggested by tours in France. He exhibited at the Academy from 1848 to 1904 with small interruption. His last exhibits there were 'Shelley at Marlow' and 'John Bright at the Reform Club, 1833.' His best work was done between 1860 and 1881; it included 'Brick Court, Middle Temple, April 1774,' depicting the morning after Goldsmith's death (1863); 'Mary Stuart, Feb. 8, 1586' (1868); 'Old Mortality' (1871); 'The Rehearsal' (1876); 'The Queen of the May' (1879); and 'Sir Roger de Coverley and the Spectator at Westminster Abbey' (1881). He was elected A.R.A. in 1875 and was after Frith's death in 1909 the Academy's oldest member. He also exhibited at the British Institution in 1850 and 1861. Several of Crowe's works are in public galleries. Mosaics of William Hogarth and Sir Christopher Wren, from his designs in oils, as well as a lunette, 'A Sculptor with a Nude Model and two Pupils,' and a chalk drawing, 'A Dead Stork on the Bank of a Stream' (1860) are in the Victoria and Albert Museum, South Kensington; 'The Founder of English Astronomy, Jeremiah Horrocks' (R.A. 1891), is in the Walker Art

Gallery, Liverpool; 'Nelson's Last Farewell to England' (R.A. 1888) was purchased for the Castle Museum, Norwich, in 1905; and an example of his work is at Bristol Art Gallery.

In later life he acted as an inspector and examiner under the science and art department, South Kensington. Outliving his contemporaries and spending his last years in much seclusion, he was long an habitu  of the Reform Club, which he joined in 1866. He died, unmarried, in London on 12 Dec. 1910, and was buried at Kensal Green cemetery. He owned a water-colour portrait of himself (10 in. by 7 in.) by Thackeray, which was sold at Sotheby's on 27 July 1911 for 31*l.* (*The Times*, 28 July 1911). A portrait in oils of Crowe as a young man by himself belongs to his half-sister in Paris.

[*The Times*, 13 and 14 Dec. 1910; Crowe's works cited; Melville's *Life of Thackeray*; Sir Joseph Crowe's *Reminiscences*, 1895; J. G. Wilson, *Thackeray in the United States*, 2 vols. 1904; Graves, *Royal Acad. Exhibitors*, 1905; Brit. Instit. Exhibitors, 1908; private information.]

CRUTTWELL, CHARLES THOMAS (1847-1911), historian of Roman literature, born in London on 30 July 1847, eldest son of Charles James Cruttwell, barrister-at-law, of the Inner Temple, by his wife Elizabeth Anne, daughter of Admiral Thomas Sanders. Educated under James Augustus Hessey [q.v.] at Merchant Taylors' School (1861-6), he proceeded with a foundation scholarship to St. John's College, Oxford, in 1866. There he greatly distinguished himself. Placed in the first class in classical moderations in 1868 and in *literae humaniores* in 1870, he obtained the Pusey and Ellerton Hebrew scholarship in 1869, won the Craven scholarship for classics in 1871, and the Kennicott Hebrew scholarship in 1872. He graduated B.A. in 1871, proceeding M.A. in 1874, and was classical moderator (1873-5). Meanwhile he was elected fellow of Merton College in 1870, and was tutor there 1874-7. Ordained deacon by the bishop of Oxford in 1875 and priest in 1876, he was curate of St. Giles's, Oxford, from 1875 till 1877.

In 1877 Cruttwell left Oxford for Bradfield College, where he was headmaster till 1880. In that year he passed to the headmastership of Malvern College. But despite his efficient scholarship he showed little aptitude for public school administration, and resigned in 1885 to become rector of Sutton, Surrey. A few months later he was appointed rector of Denton,

Norfolk, and in 1891 he accepted from Merton College the benefice of Kibworth-Beauchamp in succession to Dr. Knox, afterwards bishop of Manchester. While at Kibworth he was also rector of Smeeton-Westerby, Leicestershire (1891-4), rural dean of Gartree (1892-1902), examining chaplain to the bishop of Peterborough (1900), and proctor in convocation (1900). In 1901 he was nominated by Lord Salisbury to the crown benefice of Ewelme, near Wallingford, and in 1903 he was collated by the bishop of Peterborough to a residential canonry, which being of small value could be held with a benefice. Cruttwell was also select preacher to Oxford University in 1896-8, and again in 1903-5. In 1909 he joined the party of bishops and clergy who visited Germany in the cause of international peace. He died at Ewelme on 4 April 1911.

Deeply read in ancient and modern literature, Cruttwell published little. The best of his books, 'A History of Roman Literature' (London and Edinburgh, 1877), was a concise yet satisfying account of the development of Roman literature from the earliest times till the death of Marcus Aurelius. Other contributions to Latin literary history were 'Specimens of Roman Literature' (Glasgow, 1879, in collaboration with the Rev. Peake Banton), and 'A Literary History of Early Christianity' (2 vols. 1893). He also published 'The Saxon Church and Norman Conquest' (1909) and 'Six Lectures on the Oxford Movement' (1899).

Cruttwell married on 5 Aug. 1884 Anne Maude, eldest daughter of Sir John Robert Mowbray, first baronet [q. v. Suppl. I], by whom he had three sons and one daughter.

[Who's Who, 1911; Crockford's Clerical Directory, 1911; The Times, 5 April 1911; Lodge's Peerage, Baronetage and Knightage, 1911.] S. E. F.

CUBITT, WILLIAM GEORGE (1835-1903), colonel, Indian staff corps, born in Calcutta on 19 Oct. 1835, was son of Major William Cubitt of the Bengal native infantry, third son of George Cubitt of Catfield, Norfolk. His mother was Harriet Harcourt. His sister, Selena Fitzgerald, married in 1859 Julian (afterwards Lord) Pauncfote [q. v. Suppl. II]. Educated privately at Latham, Yorkshire, he entered the Indian army as ensign in the 13th regiment Bengal native infantry on 26 July 1853. He served against the Santhal rebels in 1855, and joined the Indian staff corps in 1861.

Promoted lieutenant on 23 Nov. 1856, he was at Lucknow with his regiment in 1857,

when the Indian Mutiny broke out and his regiment revolted. With the volunteer cavalry he was engaged at the action of Chinhut near Lucknow on 30 June 1857, and was awarded the Victoria Cross for having on the retreat from Chinhut saved, at great risk to himself, the lives of three men of the 32nd regiment (duke of Cornwall's light infantry). He was afterwards present throughout the defence of the residency at Lucknow. His gallant conduct was commended during the capture of the Tehri Koti on 25-26 September and in a successful attack on a barricaded gateway held by the enemy on 12 Nov. 1857, when he was wounded. He received the medal with clasp and was granted a year's extra service (*Lond. Gaz.* 17 Feb. 1858).

Cubitt, who was promoted captain on 26 July 1865, major on 26 July 1873, lieutenant-colonel on 27 July 1879, and colonel on 26 July 1883, served with the Duffa expedition on the north-west frontier in 1874-5, when he was mentioned in despatches; was with the Khyber line force in the Afghan war in 1880, when he received a medal; was present with the Akha expedition in 1883-4, when he was mentioned in despatches, and with the Burmese expedition in 1886-7, when he obtained the distinguished service order and was awarded the medal with clasp (*Lond. Gaz.* 2 Sept. 1887). At the time of his retirement in 1892 he was in command of the 43rd Gurkhas.

Accomplished in all outdoor games, especially racquets and cricket, Cubitt after retirement resided at Collingwood House, Camberley, Surrey, where he died on 25 Jan. 1903. He married at Fort church, Calcutta, on 19 May 1863, Charlotte Isabella, second daughter of James Hills of Nichindapur, Bengal, and sister of Lieutenant-general Sir James Hills-Johnes, V.C., G.C.B. She survived him with three sons and two daughters. The third son, Lewis, died of blood poisoning while assistant commissioner in Uganda on 31 July 1911. A painted portrait of Cubitt is in the Victoria Cross Gallery; a replica belongs to the widow.

[The Times, 27 Jan. and 7 Feb. 1903; Indian Mutiny, 1857-8, Selections from State Papers in the Military Department, edited by G. W. Forrest, 1902, ii. 257, 275; Hart's Army List.] H. M. V.

CULLINGWORTH, CHARLES JAMES (1841-1908), gynaecologist and obstetrician, son of Griffith Cullingworth, bookseller, by his wife Sarah Gledhill of Eddercliff, was born on 3 June 1841 at Leeds. Of Wesleyan stock, although he afterwards joined the Church of England, he was

educated at Wesley College, Sheffield. On leaving school he was employed in his father's business, but on the latter's death in 1860 entered the Leeds School of Medicine (1861), and there took many prizes in anatomy and physiology, surgery and medicine. Whilst studying he served four years as an apprentice to a general practitioner in Leeds. He became M.R.C.S. in 1865, and licentiate of the Society of Apothecaries in 1866. After eighteen months as assistant in a country practice at Bawtry, near Doncaster, he entered the Manchester Royal Infirmary in 1867 as resident physician's assistant, and later was appointed resident medical officer. In 1869 he commenced private practice in Manchester, and from 1872 to 1882 was police surgeon. In 1873 he began his special work, on being appointed honorary surgeon to the St. Mary's Hospital for Women and Children at Manchester. In 1881 he graduated M.D. at Durham University, and then gradually relinquished private practice and became a consultant only.

Meanwhile, appointed lecturer in medical jurisprudence at the Owens College in 1879, he made a pronounced success as a teacher. His lectures were invariably clear and comprehensive and were delivered with elocutionary power. In 1885 he was appointed to the chair of obstetrics and gynaecology in the Owens College. He was secretary to the board of studies in medicine at Victoria University, Manchester, from 1883, when the university obtained in its supplemental charter power to confer degrees in medicine.

Cullingworth worked hard for the Manchester Medical Society for nineteen years. He was honorary librarian (1872-8) and honorary secretary (1879-84). Actively interested in literature generally, he devoted much of his spare time to the library of the society and to the cataloguing of the books. At Manchester, too, he helped to found the 'Medical Chronicle,' a monthly magazine, still published, which provides abstracts of good work appearing in medical journals.

In 1888 he gave up his posts at Manchester to become obstetric physician at St. Thomas's Hospital, London. He remained on the active staff until 1904, staying on for three years beyond the usual age limit. He was then appointed consulting obstetric physician and made a governor of the hospital. On removing to London he was appointed visiting physician to the General Lying-in Hospital, York Road.

In 1879 Cullingworth became a member

of the Royal College of Physicians. In 1887 he was elected a fellow, and in 1902 he was the first obstetric physician to read the Bradshawe lecture, his subject being 'Intraperitoneal hæmorrhage incident to ectopic gestation.' For many years he was active in the proceedings of the Obstetrical Society of London and contributed his best papers on strictly obstetrical and gynaecological topics to its 'Transactions.' He was one of the founders, and always an active member of the committee which published the 'Journal of Obstetrics and Gynaecology of the British Empire,' and he contributed some papers to it. During the last two years of his life he was editor.

Cullingworth was prominent in the movement for securing the legal registration of midwives. In 1902 the midwives bill became law, and he was appointed to represent the Incorporated Midwives Institute on the Central Midwives Board which was instituted for the proper working of the Act. He received the honorary degrees of D.C.L. from Durham in 1893 and LL.D. from Aberdeen in 1904; he was a member of numerous gynaecological societies at home and abroad.

Never of a robust type, he suffered during his later years from angina pectoris, but continued his work till his death in London on 11 May 1908. He was buried in the Marylebone cemetery at Finchley. He married in April 1882 Emily Mary, daughter of Richard and Harriet Freeman of London, and left one daughter. An enlarged photographic portrait is in the board room at St. Thomas's Hospital.

Cullingworth was a great pioneer of gynaecology. He did his best professional work on the causation of pelvic peritonitis, which he was one of the first in England to maintain was secondary to other conditions, and not a primary disease. His most original and valuable book was on this subject: 'Clinical Illustrations of the Diseases of the Fallopian Tubes and of Tubal Gestation,' a series of excellent and lifelike drawings with descriptive text and histories of the cases (1895; 3rd edit. 1902). Cullingworth also published 'The Nurse's Companion, a Manual of General and Monthly Nursing,' 1876; 'A Manual of Nursing, Medical and Surgical' (1883; 3rd edit. 1889); 'A Short Manual for Monthly Nurses' (1884; 6th edit. 1907); and he wrote an important article on pelvic inflammation for Allbutt, Playfair and Eden's 'System of Gynaecology' and many papers for medical periodicals. A

paper read before the Obstetrical Society in 1892, entitled 'The value of abdominal section in certain cases of recurrent peritonitis, based on a personal experience of fifty cases,' gave rise to discussion in which all the leading gynaecologists in England joined, but Cullingworth's views are now generally accepted.

[Personal knowledge; information from Mrs. Cullingworth; *Brit. Med. Journal*, 23 May 1908; *Journal of Obstetrics and Gynaecology*, June and July 1908]. E. M. B.

CUNNINGHAM, JAMES McNABB (1829-1905), surgeon-general, born on 2 June 1829, was son of Major William Cunningham, of the 54th Bengal infantry, who entered the service in 1804 and retired on 18 May 1833. Cunningham, who modified the spelling of his surname, was born at the Cape of Good Hope, when his father was on leave from 1827 to 1829. He received his medical education at Edinburgh University, where he graduated M.D. in 1851, his thesis on the medical conditions of the aorta being commended. In 1892 he was made hon. LL.D. of Edinburgh.

Cunningham joined the Bengal medical service as an assistant surgeon on 20 Nov. 1851; was promoted surgeon on 12 March 1864; surgeon-major on 20 Nov. 1871, and surgeon-general on 29 March 1880, retiring on 31 March 1885. His first important charge in India was as superintendent of the central prison at Bareilly in 1861; he afterwards held a similar position at Meerut, and was appointed superintendent of the government press, north-west provinces, in 1863.

Cunningham was secretary of the sanitary commission appointed in 1866 under Sir John Strachey [q. v. Suppl. II], first president, to report and advise on the health of European troops and on the sanitary state of India generally. He was made professor of hygiene at the Calcutta medical college in 1866; in 1869, sanitary commissioner for the Bengal presidency, and from 1875 until his retirement for the whole Indian empire. In 1880 he became in addition head of the Bengal medical department, with the rank of surgeon-general.

Cunningham's administrative faculties rather than scientific knowledge enabled him to carry through a great sanitary work. He wrote and spoke well, although his habit of mind tended to scientific agnosticism, and he doubted the value of bacteriological research. In the reorganisation of medical administration in India in 1880 Cunningham played a chief part. With Surgeon-general (afterwards Sir Thomas) Crawford, principal

medical officer of the British forces in India, he drew up a report, known as the Crawford-Cunningham commission, for the complete amalgamation of the army medical department and the Indian medical service, which, issued in August 1881, was rejected by the war office. Cunningham left India on 4 April 1885, and on 16 June 1885 he was made C.S.I. He was appointed honorary surgeon to Queen Victoria on 15 Aug. 1888, and from 1891 to 1896 was on the army sanitary committee, representing India in 1894 at the international sanitary conference at Paris.

He died in London on 26 June 1905. He was twice married: (1) on 2 March 1854, to Mary, only daughter of James McRae, and (2) to Georgina Euphemia, daughter of Robert Reid Macredie, on 11 April 1889. He left two sons and a daughter by the first marriage.

Cunningham was author of, besides official sanitary reports: 1. 'A Sanitary Primer for Indian Schools,' Calcutta, 1879. 2. 'Cholera; What the State can do to prevent it,' Calcutta, 1884, translated into German with a preface by Dr. Max von Pettenkofer, Brunswick, 1885.

[*Brit. Med. Journal*, 1905, ii. 164; information kindly given by Surgeon-General Branfoot, C.I.E., I.M.S., and Lieut.-Col. D. G. Crawford, I.M.S.] D'A. P.

CUNNINGHAM, DANIEL JOHN (1850-1909), professor of anatomy at Dublin and Edinburgh, born at the Manse of Crieff, in Strathearn, on 15 April 1850, was younger son of John Cunningham (1819-1893) [q. v. Suppl. I]. His mother was Susan Porteous, daughter of William Murray of Crieff, by his wife Susan Porteous, a relative of Captain John Porteous [q. v.]. After education at Crieff Academy, Cunningham spent some three years in a large mercantile house in Glasgow. But his inclination was for medical study, and in 1870 he entered the University of Edinburgh as a medical student. From the first he took a high place amongst his contemporaries, and he graduated in 1874 with the highest honours. For a few months he engaged in practice in Glasgow; but he returned in 1876 to become demonstrator of anatomy in the University of Edinburgh, and for a time held, with this post, the chair of physiology in the Edinburgh Veterinary College. In 1882 he became professor of anatomy in the school of the Royal College of Surgeons of Ireland, and next year was appointed professor of anatomy in Trinity College, Dublin. Here, for twenty years, he was the most popular

teacher in the university. In 1903 he succeeded Sir William Turner as professor of anatomy in the University of Edinburgh where he laboured with enthusiasm and success until his premature death on 23 June 1909. He married in 1878 Elizabeth Cumming, eldest daughter of Andrew Browne, minister of the parish of Beith in Ayrshire, and had by her three sons and two daughters.

As a lecturer Cunningham had the faculty of illuminating all scientific subjects by illustrations drawn from every field of science. His enthusiasm and perseverance were contagious, and roused the latent powers of both colleagues and pupils. He published much original research in human and comparative anatomy, as well as in the wider field of anthropology. In addition to numerous papers in the 'Journal of Anatomy and Physiology,' of which he was the acting editor, and in other scientific publications, he issued 'Report on the Marsupialia brought home by H.M.S. Challenger' (1878), and 'The Dissector's Guide' for students (1879), which subsequently developed into his 'Manual of Practical Anatomy' (2 vols. 1893-4; 4th edit. revised, 1910). A 'Cunningham Fund,' founded in memory of Timothy Cunningham [q. v.], for the publication of work of special merit connected with the Royal Irish Academy, issued two papers by Cunningham: 'On the Lumbar Curve in Man and the Apes' (1886), and 'On the Surface Anatomy of the Cerebral Hemispheres' (1892). To the 'Transactions' of the same academy he contributed a 'Mémorial on Cornelius Magrath, the Irish Giant; a Research into the Connection which exists between Giantism and Acromegaly' (1891); and to the 'Transactions of the Royal Dublin Society' a 'Mémorial on the Microcephalic Idiot' (1895). He delivered before the Anthropological Institute in 1902 the third Huxley memorial lecture, on 'Right-Handedness and Left-Brainedness,' for which he was awarded a memorial medal. In conjunction with Edward Hallaran Bennett [q. v. Suppl. II] he wrote 'The Sectional Anatomy of Congenital Cæcal Hernia' (1888). Of the 'Text-book of Anatomy,' published in 1902 (3rd edit. 1909) by the pupils of Sir William Turner, he acted as editor and joint-author.

As a man of affairs, he exercised great influence in the councils of the universities and of the learned societies with which he was connected, and he played a chief part in the establishment of post-graduate instruction at Edinburgh. He was a

member of the commission to inquire into the management of the sick and wounded in the South African war, of the war office committee on the standard of candidates and recruits for the army, and of the vice-regal commission on the inland fisheries of Ireland. He was largely responsible for inaugurating the medical department of the territorial army in Scotland. He received many honorary degrees—M.D. and D.Sc. Dublin, LL.D. St. Andrews and Glasgow, and D.C.L. Oxford in 1892, on the celebration of the tercentenary of Trinity College, Dublin. He was elected F.R.S. on 4 June 1891, and was president of the Royal Zoological Society of Ireland, and vice-president of the Royal Dublin Society. A memorial bronze bas-relief has been placed, in duplicate, on the walls of the anatomical departments of the University of Edinburgh and of the University of Dublin.

[Lancet, 1 July 1909; Brit. Med. Jour., 1 July 1909; Edin. Med. Jour., July 1909; Dublin Med. Jour., July 1909.] G. A. G.

CURRIE, SIR DONALD (1825-1909), founder of the Castle Steamship Company, born at Greenock on 17 Sept. 1825, was third son of ten children of James Currie (1797-1851) and Elizabeth (1798-1839), daughter of Donald Martin, all of Greenock. His parents removed to Belfast in 1826, and Currie was sent at seven to the Belfast Academy, and subsequently to the Royal Belfast Academical Institution; at both schools he distinguished himself.

As a boy he interested himself in the sea and shipping, and at fourteen entered the shipping office of a relative in Greenock. After four years there, he joined in 1844 the Cunard Steamship Company, Liverpool, owners of the only regular line of steamers sailing between Europe and America, which numbered no more than three—the *Caledonia*, the *Arcadia*, and the *Britannia*, all of small tonnage. Currie became head of the company's cargo department. In 1849, in order to take advantage of the abolition of the navigation laws, the company sent him to establish branch houses at Havre and Paris, and in a short time they had a steamer running between Havre and America via Liverpool. He also established branch offices at Bremen and Antwerp, returning to Liverpool in 1854.

In 1862, determining to start for himself, he established the 'Castle' shipping company, which consisted at first of sailing ships plying between Liverpool and Calcutta, owned by a circle of personal friends. Currie first introduced the plan of despatching sailing ships on fixed dates,

In 1865 he made London the port of departure of his vessels and took up his residence there. The line grew steadily in strength and importance, and he resolved on a line of steamers from England to Cape Town, the first of which, the *Ice-land*, a vessel of 946 tons, started on her outward trip on 23 Jan. 1872. At the time the Union Steamship Company, founded in 1853, carried on the principal trade between England and South Africa and had the contract for the mail service. In 1876 the Cape parliament resolved to divide this service equally between the old company and the new. Ultimately in 1900 the two were amalgamated under the name of the Union-Castle Mail Steamship Company, Limited, the joint concern being managed by Messrs. Donald Currie & Co. Before Sir Donald's death the fleet of the united company consisted of forty-seven steamers, with a gross tonnage of 295,411 tons. The enormous improvement of communication between England and South Africa was largely due to Sir Donald and his ships.

Currie soon became recognised as one of the highest authorities on shipping. In 1875 he was elected chairman of a committee of shipowners to consider proposed changes in laws affecting the mercantile marine, and he was responsible for important amendments of the Merchant Shipping Act of 1876.

His knowledge of South African affairs often proved of advantage to the British government. In 1875 Lord Carnarvon, the colonial secretary, entrusted him with the conduct of negotiations with President Brand of the Orange Free State and President Burgers of the Transvaal Republic regarding the occupation of the Kimberley diamond fields. Currie defined the boundaries, and arranged the terms of agreement. Currie supplied the home government with the first news of the disaster of Isandhlwana during the Zulu war in January 1879. There was at that time no telegraphic connection between England and South Africa; the despatch announcing the calamity was sent from Cape Town by a Castle liner to St. Vincent, and thence telegraphed to Currie in London. Within forty-eight hours one of the Castle liners started for South Africa with reinforcements. In 1883, on Currie's representations, the British flag was hoisted at St. Lucia Bay in Zululand, which the Germans would have captured a few days later.

In 1877 Paul Kruger and two others came to England as a deputation from the Transvaal Boers to the British government,

begging for self-government. They sought Currie's aid. He introduced them to Lord Carnarvon, supporting their appeal; but his advice was not taken. When the South African war broke out in 1899, Currie's services were of great value in the conveyance of troops. His ships carried altogether 172,835 men to and from South Africa, together with thousands of tons of stores, and this without an accident. At the critical juncture in Dec. 1899, when Lord Roberts and Lord Kitchener were ordered to the seat of war, he arranged that the Castle liner which conveyed Lord Roberts from England should be so timed as to meet Lord Kitchener at Gibraltar on his arrival there from Egypt, so that the two generals might travel together to Cape Town.

In 1880 Currie had entered parliament in the liberal interest as one of the members for Perthshire. This seat he held until 1885, when, on the division of the constituency, he was elected for West Perthshire. In 1886 he broke on the home rule question with Gladstone, whom he had hitherto followed. He represented West Perthshire as a liberal unionist from 1886 until his retirement from parliament in 1900. He remained on intimate social terms with Gladstone, who was on several occasions between 1883 and 1895 his guest with other distinguished persons on one or other of his ships for summer cruises (cf. MORLEY's *Gladstone*, iii. 115, 517).

In 1880 Currie purchased the Garth estate in Perthshire. In 1884 he added to this great property the adjoining Glen Lyon estate, and in 1903 that of Chesthill. He also purchased from Lord Macdonald the island of Scalpay, beside Skye, and the adjacent islands of Longa, Guillon, and Paba. To his tenantry on all these properties Currie proved a generous landlord. New breeds of cattle and sheep were introduced, and large sums expended on the erection and improvement of churches, schools, and cottages. He delighted in sport in his deer-forests, on his grouse moors, and salmon rivers.

In his later years Currie was munificent in public gifts. In 1904 he gave to University College Hospital, London, 80,000*l.* for a school of final medical studies, and 20,000*l.* for a nurses' home and a maternity students' house. To the University of Edinburgh he gave 25,000*l.* for 'The Donald Currie Lectureship Endowment Fund,' and 6000*l.* for the enlargement of the Students' Union. He also bestowed numerous benefactions on the United Free church of Scotland (he had 'come out' with his

minister at the disruption of 1843) and the presbyterian church of England. He restored at a large cost the choir of Dunkeld cathedral. To Belfast, where he spent his boyhood, he was especially generous. To the 'Better Equipment Fund' of Queen's College there he gave 20,000*l.*, a gift which 'The Donald Currie Laboratories' there commemorate. He contributed a fourth of the cost of an athletic field for the Belfast students. In the Belfast Royal Academy, his first school, he founded scholarships at a cost of 2000*l.*, and scholarships in the Royal Belfast Academical Institution at an expense of 1000*l.* He helped, too, to pay off the debt of Fishervick presbyterian church, Belfast, of which his father had been a member.

Sir Donald's tall, manly figure was singularly striking, especially in old age. A man of shrewdness and sagacity, of large and broad ideas, energetic, tenacious of purpose, and pious, he was a staunch friend and a genial companion. He died on 13 April 1909 at the Manor House, Sidmouth, Devonshire, and was buried in the churchyard of Fortingal, beside his Highland home. A sculptured Iona cross of granite, ten feet in height, was placed above the grave in 1910.

Currie was married in 1851 to Margaret, daughter of John Miller of Liverpool and Ardenraig, Bute, who survived him. He left three daughters, who are erecting at a cost of 25,000*l.* a university hall to their father's memory in the University of Cape Town, of which the foundation stone was laid by the duke of Connaught in 1910.

Currie was awarded many honours. In 1880 he received the Fothergill gold medal of the Royal Society of Arts in recognition of 'the improvements which he had introduced into his passenger steamers.' In 1877 he was created C.M.G., in 1881 K.C.M.G., and in 1897 G.C.M.G. In 1906 he was made LL.D. at Edinburgh, and received the freedom of the city of Belfast.

A lifelike portrait was painted in 1908 by Walter W. Oulless, R.A., and hangs in the dining-room at Garth. Two others by the same artist hang respectively in the library of the medical school of University College, London, and in his town house, 4 Hyde Park Place, London. A cartoon portrait by 'Ape' appeared in 'Vanity Fair' in 1884.

Currie had a fine taste in pictures. In his London residence he formed one of the best collections of Turner's works, containing eighteen oil paintings, seventy-two water-colours, and three pen-and-ink sketches.

[Personal knowledge; private information; obituary notices in *The Times*, *Scotsman*, *Belfast News Letter*, and *African World*.]

T. H.

CURRIE, MARY MONTGOMERIE, LADY CURRIE (1843-1905), author under the pseudonym of VIOLET FANE, born at Beauport, Littlehampton, Sussex, on 24 Feb. 1843, was eldest daughter of Charles James Saville Montgomerie Lamb by his wife Anna Charlotte, daughter of Arthur Hopwood Grey of Bersted, Sussex. Her grandfather, Sir Charles Montolieu Lamb, second baronet, of Beauport, Sussex, married Mary, daughter and heiress of Archibald Montgomerie, eleventh earl of Eglinton [q. v.]; her great-grandfather was Sir James Bland Burges, afterwards Lamb [q. v.]. Her ancestors both English and French numbered among them many literary amateurs. Brought up at Beauport, she early showed a love of nature and of poetry, and from a youthful age tried her hand, in spite of her family's stern discouragement, at verse-making and story-writing. She etched illustrations for a reprint of Tennyson's 'Mariana' (Worthing, 1863). She married on 27 Feb. 1864 Henry Sydenham Singleton of Mell, co. Louth, and Hazely Heath, Hampshire, an Irish landowner.

Her first publication was a volume of verse entitled 'From Dawn to Noon' (1872), written under the pseudonym of 'Violet Fane,' which she chose at random, and retained in permanence in order to conceal her identity from her family. (It is the name of a character in Disraeli's 'Vivian Grey'.) In 1875 appeared 'Denzil Place: a Story in Verse,' an interesting love-tale, never rising to high passion, but showing much feeling. 'The Queen of the Fairies and other Poems' appeared in 1876, and in 1877 'Anthony Babington,' a drama in prose and verse. In 1880 she issued her 'Collected Verses.'

Meanwhile, Mrs. Singleton became well known in London society. Possessed of great personal beauty and charm of manner, she was an original and witty talker. Mr. W. H. Mallock dedicated to her his 'New Republic' (1877) in which she figures prominently as Mrs. Sinclair, 'who has published a volume of poems, and is a sort of fashionable London Sappho.'

Mrs. Singleton also wrote prose, beginning with the witty social sketches entitled 'Edwin and Angelina Papers' (1878). Three novels, 'Sophy, or the Adventures of a Savage' (1881); 'Thro' Love and War' (1886); and 'The Story of Helen

Davenant' (1889), were followed by further poems, 'Autumn Songs' (1889). In 1892 her poems were again collected, now in two handsome volumes.

Mr. Singleton, by whom she had two sons and two daughters, died on 10 March 1893. On 24 Jan. 1894 Mrs. Singleton married secondly Sir Philip Henry Wodehouse Currie, G.C.B., afterwards Baron Currie of Hawley [q. v. Suppl. II]. She accompanied him to Constantinople, where he was ambassador. While there she produced two volumes of poems, 'Under Cross and Crescent' (1896) and 'Betwixt two Seas: . . . Ballads written at Constantinople and Therapia' (1900). In 1898 her husband was transferred to Rome, and there she lived until his retirement in 1903. Settling at Hawley, Hampshire, Lady Currie took keen interest in gardening. She died of heart failure on 13 Oct. 1905, at the Grand Hotel, Harrogate, and was buried at Mattingley Church, Hampshire.

Her poems, generally in a minor key and slightly sentimental, show command of metrical technique and a gift of melody. Some of them were set to music, notably 'For Ever and for Ever,' by Sir Paolo Tosti. Her novels, while they take original views of life and show careful delineation of character, are somewhat dull and over-long. Her best prose is to be found in her light essays, contributed to periodicals and afterwards republished in volume form (cf. 'Edwin and Angelina Papers,' 1878; 'Two Moods of a Man,' 1901; and 'Collected Essays,' 1902). A prose work of a different character was 'Memoirs of Marguerite of Valois, Queen of Navarre' (1892). First editions of her early poetical volumes are valued by collectors.

A portrait engraved by Stodart forms the frontispiece of 'Poems' (2 vols. 1892).

E. L.

CURRIE, PHILIP HENRY WODEHOUSE, first **BARON CURRIE OF HAWLEY** (1834-1906), diplomatist, born in London on 13 Oct. 1834, was fourth son of Raikes Currie (1805-1881) of Bush Hill, Middlesex, and Minley Manor, Hampshire, M.P. for Northampton 1837-57, by his wife Laura Sophia (d. 1869), eldest daughter of John, second Baron Wodehouse. After education at Eton, he entered the foreign office at the age of twenty, and served in that department for forty years, passing through the various grades of the political staff until his

selection to be assistant under-secretary of state for foreign affairs in 1882 and permanent under-secretary of state in 1889. He was *précis* writer to the earl of Clarendon during his tenure of office as foreign secretary in 1857-8, and was temporarily attached to the British legation at St. Petersburg in 1856 and 1857 during Lord Wodehouse's special mission to that capital on the conclusion of the Crimean war. He assisted Julian Fane [q. v.] in his duties as protocolist to the conferences on the affairs of Luxemburg in May 1867. When Lord Salisbury was sent to Constantinople in 1876 to act as British plenipotentiary in the conferences held there on the Eastern question, Currie was appointed secretary to the special mission, and Lord Salisbury formed on that occasion a high estimate of his ability. On Lord Salisbury's accession to the office of foreign secretary in April 1878 he appointed Currie to be his private secretary, and when Lord Beaconsfield and Lord Salisbury went as the British plenipotentiaries to the congress of Berlin in June following, Currie and Montagu Corry (afterwards Lord Rowton) accompanied them as joint-secretaries to the special mission. He received the C.B. in recognition of his services at the close of the congress, and on his return to England in addition to his work as private secretary was entrusted by Lord Salisbury with the correspondence respecting Cyprus, which had been leased from the sultan under the convention of 4 June 1878.

On Lord Salisbury's resignation in 1880 Currie resumed his work as a senior clerk in charge of the Eastern department. He was attached as secretary to the marquis of Northampton's special mission to invest King Alfonso XII of Spain with the garter in 1881, and in October 1882 was appointed assistant under-secretary of state by earl Granville, who succeeded Lord Salisbury as foreign secretary. In June to August 1884 Currie acted as joint protocolist to the conferences held in London on the finances of Egypt. In 1885 he received the K.C.B., and in December 1888 he was promoted permanent under-secretary of state in succession to Lord Pauncefote, who had become British envoy at Washington.

After five years' service as permanent under-secretary, during which he was made G.C.B. in 1892, he was appointed by Lord Rosebery in December 1893 British ambassador at Constantinople, being sworn as usual a privy councillor. This post he held for four and a half years.

The period of his service was one of exceptional difficulty. The continued misrule and oppression of the Christian subjects of the Porte in Asia Minor drove the Armenians into an active and widespread conspiracy of revolt, which was repressed by the authorities and the Mussulman population with savage severity. In May 1895 the representatives of the great European powers made a collective demand for reforms in the administration. This was met by the Porte with the usual dilatory pleas, and by the eventual announcement of inadequate concessions in September and October following. Riots broke out in the latter month at Constantinople, in which a considerable number of Armenians lost their lives, and terrible massacres shortly afterwards took place at Trebizond and in other places in Asia Minor. Collective demands were again made by the representatives of the great powers in November for investigation of the circumstances and punishment of those responsible, but were again met by evasive answers; there was, however, some amendment of the situation, and a formidable rising in the district of Zeitoun north of Aleppo was pacified by the mediation of the powers in 1896. But on 1 August of that year a sanguinary massacre of Armenians was perpetrated in Constantinople itself by a Mahomedan mob which had received arms from the Turkish authorities. Fresh remonstrances were made by the embassies and met by fresh excuses on the part of the Turkish government. More effective precautions were however taken against further outbreaks, and the troubles gradually subsided.

Throughout this period the British ambassador, under the instructions first of Lord Kimberley and later of Lord Salisbury, who became foreign secretary in 1895, was taking a leading part in the efforts of the European representatives to secure protection and redress for the sufferers. British policy was greatly hampered by a frank declaration from the Russian government that the tsar had an invincible repugnance to the employment of coercive measures against the sultan, but there was a moment after the massacres at Constantinople, when it seemed possible that the British government might decide on intervention even at the risk of ulterior complications. The objections to this course were considered to be too serious to permit of its adoption, and subsequently a sporadic recrudescence of disorders made it clear that the sultan's authority and goodwill were in fact the only means, however imperfect and untrust-

worthy, of keeping Mahomedan fanaticism in check. The relations of the British ambassador with the Turkish sovereign could hardly in such circumstances be altogether cordial, and a certain impulsiveness of energy and directness of speech which were among Currie's characteristics were not qualities likely to win favour with an Oriental autocrat. It was no secret that the sultan would have been glad that he should be replaced, and that Lord Salisbury turned a deaf ear to intimations to that effect. A personal episode of a somewhat unusual character, which occurred in the autumn of 1895, added to the difficulties of the ambassador's position. Said Pasha, a former grand vizier, having refused the request of the sultan to resume that office, was imprisoned in the grounds of Yildiz Kiosk, but succeeded in making his escape, and took refuge late at night in the British embassy, which he positively declined to leave, until after five days of negotiation the sultan had given full assurances to the ambassador that the recalcitrant ex-minister should not be molested in any way. In 1897 the troubles in Asia Minor were succeeded by the revolt of Crete, the despatch to the island of a Greek force, the consequent outbreak of war between Turkey and Greece, resulting in the disastrous defeat of the Greek army, the intervention of the powers to secure favourable terms of peace for the Hellenic kingdom, and the autonomy of Crete under Turkish suzerainty. In all these matters the British embassy necessarily took an active part, and Currie who, though physically strong, was not possessed of a very robust constitution, found his health giving way under the strain, and was glad to succeed Sir Clare Ford at the embassy at Rome in July 1898.

His period of service in Italy was marked by the assassination of King Humbert and the accession of King Victor Emmanuel III on 30 July 1900. No very critical diplomatic work devolved on him, the principal questions for discussion between the two countries being connected with Italian claims and interests in Africa, which were not unsympathetically regarded by Great Britain. He was one of the British delegates at the international conference held at Rome in the winter of 1898 to consider the means of dealing with anarchism, a matter in which this country was unable entirely to associate itself with the methods agreed upon by other powers. In January 1899 he was raised to the peerage as Baron Currie of Hawley, and retired on pension on 17 Jan. 1903. He passed the rest of his

life in England until his death at his country place, Hawley, on 12 May 1906.

Currie was an admirable official, rapid in his work, clear in judgment, and wanting in neither courage nor decision. As a diplomatist he was somewhat lacking in power to appreciate and make allowance for the susceptibilities of those with whom he had to deal. In social life he was a warm friend, kindly, hospitable, and good-naturedly sarcastic, not universally popular but greatly liked by the majority of those with whom he was closely associated.

He married on 24 Jan. 1894 [see CURRIE, MARY MONTGOMERIE, Suppl. II], but had no children.

[The Times, 14 May 1906; Foreign Office List 1907, p. 397; correspondence laid before Parliament.] S.

CURZON-HOWE, SIR ASSHETON GORE (1850-1911), admiral, born at Gop-sall, Leicestershire, on 10 August 1850, was ninth son of Richard William Penn Howe, first Earl Howe of the present creation, being second son of his second wife, Anne (*d.* 1877), second daughter of Admiral Sir John Gore. He was a great-grandson of Richard, first Earl Howe [q. v.], the great admiral, whose daughter and heir, Sophia Charlotte, Baroness Howe, married Penn, eldest son of Assheton Curzon, first Viscount Curzon. Curzon-Howe entered the navy on board the *Britannia* in Dec. 1863, and from 1868 to 1871 served in the frigate *Galatea*, Captain the duke of Edinburgh, which went round the world during that commission. He was promoted to sub-lieutenant on 18 March 1870, and served in that rank on board the *Bellerophon* in the Channel squadron. His commission as lieutenant was dated 18 Sept. 1872, and in Nov. 1873 he was appointed to the sloop *Eclipse* on the North American station. A year later he was transferred to the *Bellerophon*, flagship on the same station, and in Feb. 1876 was appointed to the *Sultan* in the Mediterranean, commanded by the duke of Edinburgh, whom two years later he followed into the *Black Prince*. In July 1879, when the *Bacchante* was commissioned by Captain Lord Charles Scott for a cruise round the world, and to give Albert Edward, duke of Clarence, and Prince George of Wales, afterwards King George V, their sea training as cadets, Curzon-Howe was chosen to be her first lieutenant, and was directly responsible for the seamanship instruction of the princes. On the return of the ship to England he was promoted to commander on 31 August 1882.

In Jan. 1883 he became executive officer of the *sultan* in the Channel squadron, and two years later was appointed in the same capacity to the *Raleigh*, flagship on the Cape station. In July 1886 he was given the command of the royal yacht *Osborne*, from which on 6 Jan. 1888 he was promoted to captain. Shortly afterwards Curzon-Howe commissioned the *Boadicea* for the East Indies station, where, in Aug. 1888, she relieved the *Bacchante* as flagship of Sir Edmund Fremantle. As flag-captain and chief of the staff he took part in the *Vitu* expedition of Oct. 1890, for which he received the C.B. and the medal. From August 1891 he served for a year at the admiralty as assistant-director of naval intelligence, and then went to the North American station in command of the *Cleopatra*, and as commodore during the Newfoundland fishing season. In this ship he was present at Bluefields, Nicaragua, during the disturbances of 1894, and by his prompt action in landing a party of seamen and marines averted a civil war. In Jan. 1896 he was awarded the C.M.G. for his services in Newfoundland, and in the same month became flag-captain to Rear-Admiral A. T. Dale in the *Revenge*, flagship of the flying squadron which was put in commission shortly after the publication of the German emperor's telegram to President Kruger. In April 1897 he was appointed to command the cadets' training-ship *Britannia* at Dartmouth, and afterwards, from Feb. 1900, he commanded the battleship *Ocean* on the China station. In July 1899 Curzon-Howe was appointed an aide-de-camp to Queen Victoria, and held this post until promoted to flag rank on 23 July 1901.

In June 1902 he hoisted his flag in the *Magnificent* as second in command in the Channel, and from that time his employment was practically continuous. In June 1903 he became second in command on the China station with his flag in the *Albion*. On 30 June 1905 he was awarded the K.C.B., and on 12 Sept. he was promoted to vice-admiral. In Dec. following he returned to the Channel fleet, now greatly enlarged, as second in command, with his flag on board the *Cesar*. In Feb. 1907 he was appointed commander in chief of the Atlantic fleet, whence in Nov. 1908 he was transferred in the same capacity, but with acting rank as admiral, to the Mediterranean, his flagship during both commands being the *Exmouth*. The disastrous earthquake at Messina in Dec. 1908 called the com-

mander-in-chief with part of his squadron to the spot to aid in the relief work, and the crisis which accompanied the revolution in Turkey made the Mediterranean for the time the centre of interest. On 2 Jan. 1909 he was advanced to the rank of admiral, and in July of that year received the G.C.V.O. Sir Assheton was relieved in April 1910, and immediately hoisted his flag at the main of the Victory as commander-in-chief at Portsmouth. He died suddenly at Admiralty House there on 1 March 1911. He was buried with naval honours at Highcliff, near Christchurch. A memorial tablet was placed in Portsmouth dockyard church. 'Holding strong opinions on some points, he constantly stood aloof from all controversies of public character. Few flag-officers who have held such important appointments have ever been so little in the public eye as he.'

Curzon-Howe married on 25 Feb. 1892 Alice Ann, eldest daughter of General Sir John Cowell, P.C., K.C.B., and had issue two sons (the elder is in the navy) and three daughters. His eldest daughter, Victoria Alexandrina, to whom Queen Victoria stood sponsor, died at Malta on 3 Feb. 1910.

[The Times, 2 March 1911.] L. G. C. L.

CUST, ROBERT NEEDHAM (1821–1909), orientalist, born at Cockayne Hatley, Bedfordshire, on 24 Feb. 1821, was second son of Henry Cockayne Cust (1780–1861), canon of Windsor, by his wife Lady Anna Maria Elizabeth, eldest daughter of Francis Needham, first earl of Kilmorey. His father was second son of Sir Brownlow Cust, first baron Brownlow (1744–1807). Educated at Eton, Robert was intended for the bar, but accepting a nomination for the Indian civil service, he passed to Haileybury College, where he greatly distinguished himself in Sanskrit, Persian, Arabic and Hindistāni. At Calcutta in 1843 he completed his studies in the college of Fort William, receiving medals and a degree of honour besides qualifying in Bengālī.

His first appointment in the public service was as assistant to the magistrate of Ambala, then the headquarters of the political administration of Northern India. He next became personal assistant to Major George Broadfoot [q. v.], newly appointed agent to the governor-general for the then north-western frontier. While he was marching with his chief through the domains of the Cis Satlaj protected chiefs, news of the

Sikh invasion took them to the front and he engaged in the great battles on the Satlaj in 1845—at Mudki, Ferozeshah, and Sobraon. At Ferozeshah (21–22 Dec. 1845) Major Broadfoot was killed in action, and Cust, albeit a junior officer, carried on for a time the duties of governor-general's agent. His services were mentioned in the governor-general's despatch, and he was appointed by Lord Hardinge to the charge of a district in the newly formed province of the Punjab, that of Hoshiarpur. He had little experience to guide him; but under the inspiration of his new chief, John (afterwards Lord) Lawrence [q. v.], he organised the district on a 'non-regulation' system of firmness and kindness; living alone amongst the people, without soldiers or policemen—the court held under the green mango trees in the presence of hundreds. Here Cust developed an intense love for India and its people. 'The experience of half a century,' he remarked later, 'has given the stamp of approval to our strong but benevolent, rigorous but sympathetic system.'

From Hoshiarpur he was moved to his old district of Ambala, and took its administration vigorously in hand. Cust, if lacking in magnetic power, showed himself a masterly organiser and administrator, and an indefatigable and methodical worker. After the second Sikh war, which ended decisively in March 1849 with the annexation of the Punjab, the government commissioned Cust to report on the country and its capabilities. He visited every district in the newly acquired territory, and after nearly two years' immense labour he presented his report in 1851. Cust then proceeded to England on a brief furlough. Returning to India, he was appointed magistrate of Benares, and afterwards to the more important charge of Banda in Bundelkand, and in three years he put the district, which was in a most unsatisfactory condition, into perfect order. In recognition of his services he was offered the more important post of magistrate and collector of Delhi, but fortunately for himself declined it. The officer who accepted the post was a victim of the Delhi massacre.

Cust was in England at the outbreak of the mutiny of 1857, being called to the bar at Lincoln's Inn on 13 Aug. 1857. Returning to India in February 1858, he was immediately appointed at the special request of Sir John Lawrence to be commissioner of the Lahore division of the Punjab, and when that division was found too large and was

subdivided, he chose the moiety forming the division of Amritsar. For a time he acted as financial commissioner of the province, and in 1861 as judicial commissioner. The death of his first wife on 17 Jan. 1864 brought him back to England, but he returned to India in October to join the legislative council, and to act temporarily as home secretary to the supreme government (1864-5). From another visit to England he was recalled to fill the important post of member of the board of revenue in the North-west Provinces, but the death at Allahabad after childbirth in August 1867 of his second wife determined Cust to retire altogether from the Indian service just nine months before completing his service for a full pension.

In England Cust gradually recovered his energies. He studied Hebrew and completed the draft of a code of revenue law for Northern India. For a time he helped in the preparation of the Oxford 'Dictionary of the English Language' edited by Sir James Murray. Although he had rowed at Eton, he cared nothing for sports or games, and henceforth found recreation in foreign travel, while devoting himself at home to Oriental and religious studies, which he pursued with characteristic industry and method. Without being a profound scholar he had some acquaintance with Hebrew, Arabic, Persian, Sanskrit, Hindi, Ūrdū or Hindūstāni, Panjābi, Bengālī, as well as with the chief European languages. Between 1870 and 1909 he published more than sixty volumes chiefly on Oriental philology or phases of religious belief. His 'Modern Languages of the East Indies' (1878) was followed by a scholarly description of the 'Modern Languages of Africa' (1883), which was translated into Italian (1885), 'Oceania' (1887), 'The Caucasian Group' (1887), 'The Turki Branch of the Ural-Altaic Family' (1889). 'Linguistic and Oriental Essays,' in seven series, were issued between 1880 and 1904. Less laborious works included, apart from translations into French, Italian and Greek, 'Poems of Many Years and Places' (2 ser. 1887, 1897), 'Clouds on the Horizon or Forms of Religious Error' (1890); 'Common Features which appear in all Religions of the World' (1895); 'Five Essays on Religious Conceptions' (1897), and 'Life Memoir' (1899). Cust was prominent in the proceedings of many literary societies. With the Royal Asiatic Society, which he formed in 1851, his association was especially long and active; he was appointed member of council and honorary librarian in 1872, and from 1878

to 1899 was honorary secretary; he was also a vice-president, and read many papers at its meetings. Making annual tours abroad through Europe, West Africa, and Western Asia, and coming to know numerous foreign scholars, Cust represented the Asiatic Society at the Oriental Congresses of London, St. Petersburg, Florence, Berlin, Leyden, Vienna, and Stockholm. He was interested in missionary enterprise and philanthropic work, and served on the committees of the Church Missionary Society and the Society for the Propagation of the Gospel. He was made honorary LL.D. of Edinburgh in 1885.

Cust, who had attended the coronation of William IV in 1831, and that of Queen Victoria in 1838, was also present at that of Edward VII in 1902. In 1904 his sight failed, but he pursued his studies with assistance until 1908, when his strength gave way. He died on 28 Oct. 1909 at his residence, Campden Hill Road, Kensington, and was buried at Putney Vale.

Cust was thrice married: (1) on 10 May 1856 to Maria Adelaide, second daughter of Henry Lewis Hobart, dean of Windsor; she died on 17 Jan. 1864, leaving two sons and three daughters; (2) on 28 Dec. 1865 to Emma, eldest daughter of E. Carlyon, rector of Debden, Hampshire; she died on 10 Aug. 1867; (3) on 11 Nov. 1868 to Elizabeth Dewar, only daughter of J. Mathews; by her he had a daughter, Anna Maria Elizabeth. His son, Robert Henry Hobart Cust, is a well-known writer on art, and his daughters showed literary aptitude.

A portrait was painted by Miss Carpenter in 1840, of which three copies were made: one is at the Provost's Lodge, Eton; a second belongs to Sir Reginald Cust, and a third to Cust's son, Mr. Robert Cust. He also appears as a child in a large group by Samuel William Reynolds, now in the possession of Mr. Henry Cust. A native painting, executed in Calcutta (c. 1843), also belongs to Mr. Robert Cust.

[Cust's Life Memoir, 1899; The Times, 29 Oct. 1909; Royal Asiatic Society's Journal, 1910. i. 255; private information.] T. H. T.

CUSTANCE, HENRY (1842-1908), jockey, born at Peterborough on 27 Feb. 1842, was son of Samuel Custance, a post-boy, by his wife Elizabeth Carpenter. Devoted to horses and to riding from childhood, he rode at thirteen in a pony race at Ramsey, in Huntingdonshire, and afterwards won a contest for a saddle when he weighed four stone. Vainly seeking employment at Newmarket, he spent three years at Epsom, where he had 'a jolly, though

rough, time' in the employment of Mr. Edward Smith of South Hatch, who was associated with 'Bell's Life,' and raced his horses in the name of Mellish.

Custance's first important victory was gained on Rocket in 1858 in the Cesarewitch, which he won again in 1861 on Audrey. The following year he attached himself to the Russley stable, then under the management of Matthew Dawson, and that season rode over forty winners. In 1860 he rode Thormanby to victory in the Derby. This was the first of three successes he scored in that race, the others being on Lord Lyon in 1866 and on George Frederick in 1874. In the Derby of 1861 he rode Dundee, who, breaking down during the race, was second to Kettledrum. He had a mount in the Derby for twenty consecutive years. Custance won the One Thousand Guineas on Achievement in 1867, and his solitary success in the St. Leger was gained on Lord Lyon in 1866. His last winning mount was on Lollypop in the All-Aged Stakes at the Newmarket Houghton meeting in 1879. As a jockey he was bold and resolute, had good hands, and was a fine judge of pace. After his retirement from the saddle he long remained a familiar figure on the race-course. He held for many years a licence as deputy starter to the Jockey Club, and was also official starter to the Belgian Jockey Club. Living at Oakham, he regularly hunted with the Quorn and Cottesmore packs. He was always a cheerful and amusing companion, and published 'Riding Recollections and Turf Stories' in 1894, with a dedication to the duke of Hamilton, a good patron during his riding career. He died of a paralytic seizure at 53 New Walk, Leicester, on 19 April 1908. His will was proved for 8081*l*.

[*Sporting Life* and *The Times*, 20 April 1908; *Ruff's Guide to the Turf*; Custance's *Riding Recollections*, 1894.] E. M.

CUTTS, EDWARD LEWES (1824-1901), antiquary, born on 2 March 1824, at Sheffield, was son of John Priston Cutts, optician, by Mary, daughter of Robert Waterhouse. He was educated at Sheffield Collegiate School and graduated B.A. at Queens' College, Cambridge, in 1848. Being ordained in the same year, he was curate successively of Ide Hill, Kent, until 1850, of Coggeshall, Essex, until 1857, and of Kelvedon until 1859, and was perpetual curate of Billericay until 1865. He had already acted also as local organising secretary of the Additional Curates Society, and on leaving Billericay became general

secretary of the society in London, resigning in 1871, on presentation to the vicarage of Holy Trinity, Haverstock Hill.

In 1876 Cutts was selected by the Archbishops of Canterbury and York to visit the East and inquire into the position of the Syrian and Chaldean churches; his report resulted in the formation of the Archbishop's Mission to the Assyrian Christians. He described his travels in 'Christians under the Crescent in Asia' (1887). Although accepting the ecclesiastical views of the high church party, he was sympathetic with every school of thought within the church. He received the degree of D.D. from the University of the South, U.S.A.

Cutts long devoted himself to archæology and the study of ecclesiastical history. In 1849 he published 'A Manual for the Study of the Sepulchral Slabs and Crosses of the Middle Ages.' This was followed in 1853 by 'Colchester Castle not a Roman Temple,' and in 1872 by 'Scenes and Characters of the Middle Ages,' a series of articles contributed originally to the 'Art Journal'; in 1888 by 'Colchester,' in Freeman and Hunt's series of 'Historic Towns'; in 1893 by 'History of Early Christian Art'; and in 1898 by 'Parish Priests and their People in the Middle Ages in England.' Among his works on Church history are 'Turning Points of English Church History' (1874); 'Turning Points of General Church History' (1877); 'A Dictionary of the Church of England' (1887); 'A Handy Book of the Church of England' (1892); and 'Augustine of Canterbury' (1895) in Methuen's 'English Leaders of Religion.' The most notable of his religious works are 'A Devotional History of Our Lord' (1882) and 'Some Chief Truths of Religion' (1875), which was translated into Swahili and printed at the Universities Mission Press at Zanzibar in 1895. From 1852 to 1866 he was honorary secretary of the Essex Archæological Society and editor of its 'Transactions.'

Cutts died at Holy Trinity Vicarage, Haverstock Hill, on 2 Sept. 1901, and was buried at Brookwood cemetery, Woking. He married on 23 April 1846 Marian, daughter of Robert Knight of Nottingham, and by her had ten children, seven of whom survived him. Mrs. Cutts died on 14 Dec. 1889.

[*The Times*, 4 and 6 Sept. 1901; *Guardian*, 11 Sept. 1901; *Athenæum*, 7 Sept. 1901; information from his son, John E. K. Cutts, F.R.I.B.A.] R. E. G.

D

DALE, SIR DAVID, first baronet (1829-1906), ironmaster, born on 11 Dec. 1829 at Moorshedabad, Bengal, was younger of two sons (in the family of three children) of David Dale (of the East India Company's service), judge of the city court there, by his wife Ann Elizabeth, daughter of the Rev. George Douglas of Aberdeen, who was married at Calcutta on her seventeenth birthday. His great-uncle was David Dale [q. v.], the Glasgow banker and philanthropist, whose daughter married the socialist Robert Owen [q. v.] and was mother of Robert Dale Owen [q. v.]. David's elder brother, James Douglas (1820-1865), joined the Indian army on the Madras establishment, and became lieutenant-colonel. The father died on board the Providence on 23 June 1830, during a voyage home with his wife and children. Mrs. Dale, while on a journey with her children to New Lanark to visit her kindred, was detained at Darlington by an accident to the mail coach, and received such kindness from members of the Society of Friends of that town that she returned and made the place her home. After four years' probation she was in 1841 received into the Friends' community. She died in 1879.

Dale was educated privately at Edinburgh, Durham, and Stockton. Brought up among Friends, he early displayed unusual steadfastness of purpose and sobriety of judgment. His adult career began in the office of the Stockton and Darlington Railway Company, and at the age of twenty-three he was appointed secretary to the Middlesbrough and Guisborough section of the line. After six years in that position he entered in 1858 into partnership with Mr. W. Bouch and became lessee of the Shildon Locomotive Works. Henceforth his activities rapidly expanded. He was concerned with the formation of the Consett Iron Co., of which he subsequently became managing director and chairman. In 1866 he embarked on extensive shipbuilding enterprises in co-operation with Richardson, Denton, Duck & Co. of Stockton, Denton, Grey & Co. of Hartlepool, and Thomas Richardson & Sons, Hartlepool, who combined together with a view to amalgamation. Dale became vice-chairman of this ambitious undertaking, but the union was not successful, and the companies reverted shortly afterwards to their former

independent positions. Dale retained an interest in the two first-named concerns. He was also managing partner of J. W. Pease & Co., later Pease & Partners Ltd., and chairman of companies working iron ore mines near Bilbao. In 1881 he became a director of the North Eastern Railway Company, having previously served as director of the Stockton and Darlington railway, and on the formation of the Dunderland Iron Ore Company in 1902 he was appointed chairman. He was an active member of the Durham Coal Owners' Association and of the Cleveland Mine Owners' Association.

Dale owes his main distinction to his work as pioneer in applying the principle of arbitration to industrial disputes. The first board of arbitration was formed in connection with the iron trade of the north of England in March 1869, and Dale was its first president. The success of the experiment was chiefly due to the tact, firmness, and discrimination of its president. 'Its inauguration ushered in a millennium of peace and goodwill between employers and employed compared with the chaotic and demoralising state of matters that previously existed' (JEANS, *Pioneers of the Cleveland Iron Trade*, p. 211). In recognition of Dale's services to the board he was publicly presented in 1881 with an address and a portrait painted at a cost of 500 guineas by W. W. Oulless. This is now in the possession of his son at Park Close, Englefield Green, Surrey. His high position and influence in the industrial world of the north led to his appointment on several royal commissions, amongst which were those on trade depression (1885-6); on mining royalties (1889-93); and on labour (1891-4). At the Berlin labour conference of 1890, convened at the instance of the German emperor, he was one of the representatives of Great Britain, and during the sittings he received marked attention from the emperor and from Bismarck. He had helped to found the Iron and Steel Institute in 1869, and acted as hon. treasurer from that date until 1895, when he was elected president. He was created a baronet in the same year.

In politics Sir David was a liberal. His business interests monopolised his attention, and he declined to contest a seat in

parliament. The University of Durham made him hon. D.C.L. in 1895. In 1888 he became high sheriff for Durham. He died at York on 28 April 1906, and was buried at Darlington. In his honour the 'Sir David Dale chair of economics' was instituted at Armstrong University, Newcastle-on-Tyne, in 1909, as well as a memorial lectureship on labour problems at Darlington; the first lecture was delivered by Sir Edward Grey on 28 Oct. 1910. Dale was twice married: (1) on 27 Jan. 1853 to Annie Backhouse (*d.* 1886), only daughter and heiress of Edward Robson and widow of Henry Whitwell of Kendal, by her he had a son, James Backhouse, who succeeded him in the baronetcy, and one daughter; and (2) on 2 Aug. 1888 to Alice Frederica, (*d.* 1902), daughter of Sir Frederick Accolom Milbank, Bart.

[Pioneers of the Cleveland Iron Trade, by J. S. Jeans, Middlesbrough, 1875; Journal of the Iron and Steel Institute, lxi.; Sir David Dale, inaugural lecture by Sir Edward Grey, with a Memoir by Howard Pease, 1910; Biographical Mag., June 1889; The Times, 30 April 1906; private information.]

L. P. S.

DALLINGER, WILLIAM HENRY (1842-1909), Wesleyan minister and biologist, born in Devonport on 5 July 1842, was son of Joseph Stephen Dallinger, artist and engraver. He was educated privately. In boyhood he showed a bent towards natural science, but his religious instinct led him to qualify for the Wesleyan ministry in 1861. After serving Wesleyan churches in Faversham, Cardiff, and Bristol, he passed to Liverpool, where he remained twelve years (1868-80). There in 1870 he began microscopic researches into minute septic organisms, which he pursued for ten years. In 1880 he was appointed governor and president of Wesley College, Sheffield, and had held the post for eight years, when the Wesleyan conference, recognising his scientific attainments, allowed him to retire from the position whilst retaining the status and privilege of a Wesleyan minister without pastoral charge. In addition to his work as minister and governor, Dallinger was a successful public lecturer on microscopical subjects. For thirty years he lectured for the Gilchrist Educational Trust.

Dallinger's contributions to science are of two kinds—his classical investigations into the life-history of certain micro-organisms, and his improvements in microscopical technique. The organisms he worked at in collaboration with Dr. John James

Drysdale of Liverpool were 'flagellates' or 'monads,' about the life-history of which little was known. Dallinger showed not only unwearied patience and application but a mastery of manipulation. By using a binocular instrument an individual monad was kept under observation first by one and then by the other of the two students for a considerable time; on one occasion for thirty-two hours. By such means the transformations of these obscure animals were established. In addition to these important investigations, Dallinger and his colleague contributed valuable evidence in regard to the then controverted question of abiogenesis. They were able to show that by acclimatising these monads to an increasingly high temperature, they acquired a power of living freely in a temperature far above the normal, and one which is lethal to unacclimatised specimens. Further, they proved that though the temperature of boiling water was fatal to all such monads in an active state, yet that their spores were extraordinarily resistant, enduring a temperature of 268° in water and 300° or more in a dry state. These discoveries showed that the ordinary precautions (such as boiling) by which organic solutions are sought to be sterilised are insufficient, and they also explain the origin of life in experiments where spontaneous generation had been supposed to occur.

As an expert microscopist, Dallinger enjoyed the highest reputation. He occupied the post of president of the Royal Microscopical Society four times (1884-7) and that of the Quekett Club (1890-2). He was elected F.R.S. in 1880; hon. LL.D. of Toronto in 1884; D.Sc. of Dublin in 1892, and D.C.L. of Durham in 1896. In 1879 he delivered the Rede lecture at Cambridge on 'The Origin of Life,' illustrated by the life-histories of the least and lowest organisms in nature. His chief papers are published in the 'Monthly Microscopical Journal' (1873-6). He rendered students a great service by editing and rewriting Carpenter's classical book, 'The Microscope and its Revelations' (1890; new edit. 1901). He was also author of a theologicco-scientific work, 'The Creator and what we may know of the Method of Creation' (1887). A good portrait of him was published in the 'Journal of the Royal Microscopical Society' for 1909.

He died at his residence, Ingleside, Lee, Kent, on 7 Nov. 1909. He married Emma, daughter of David Goldsmith of Bury St. Edmunds, and had one son.

F. W. G.

DALZIEL, EDWARD (1817–1905), draughtsman and wood-engraver, second of the Brothers Dalziel [see **DALZIEL, GEORGE**, and **DALZIEL, THOMAS BOLTON GILCHRIST SEPTIMUS**, Suppl. II], was fifth son of Alexander Dalziel by his wife Elizabeth Hills. Born at Wooler, Northumberland, on 5 Dec. 1817, he was educated at Newcastle-on-Tyne. Brought up at first for business, he followed his brother George to London in 1839 and entered into a partnership with him as engraver, and afterwards as publisher and printer, which lasted till 1893. He is said to have taken the leading part in extending the operations of the firm, and is credited with the faculty of discerning and fostering a talent for illustration in artists hitherto untried. He himself studied, after coming to London, at the Clipstone Street life school, where he was a contemporary of Sir John Tenniel and of Charles Keene; he painted in his leisure time both in oils and water-colours, and exhibited occasionally at the Royal Academy. As an illustrator he was less gifted and prolific than his brother Thomas. No book was illustrated entirely by him, but woodcuts from his designs appear in the following: 'Poetical Works of William Cullen Bryant' (New York, 1857); 'Home Affections with the Poets' (1858); Dalziel's 'Arabian Nights' (1864); 'A Round of Days' (1865); 'Poems' by Jean Ingelow (1867); Robert Buchanan's 'Ballad Stories of the Affections' (1866) and 'North Coast' (1868); Novello's 'Our National Nursery Rhymes' (1871); Dalziel's 'Bible Gallery' (1880). Thirty illustrations to Parnell's 'Hermit' from drawings made by Edward Dalziel in 1855 were privately printed at the Camden Press in 1904. Dalziel died on 25 March 1905 at 107 Fellows Road, South Hampstead, where he had resided since 1900, and was buried in old Highgate cemetery. Portraits of Edward Dalziel, from a painting by his brother Robert about 1841, and from a photograph of 1901, appear in 'The Brothers Dalziel,' the book of memoirs of which he was joint author with his brother George.

By his marriage in 1847 with Jane Gurden, who died in 1873, Edward Dalziel had five sons and four daughters. The eldest, Edward Gurden, born in London on 7 Feb. 1849, died on 27 April 1888; a painter and draughtsman of some merit (see **GRAVES**, *Dict. of Artists*), he illustrated 'Christmas

Stories,' 'The Uncommercial Traveller,' and the tales published with 'Edwin Drood,' in Chapman & Hall's 'Household' edition of Charles Dickens (1871–9). The second son, Gilbert, artist and journalist, born on 25 June 1853, a pupil of the Brothers Dalziel as wood-engraver, and a student at the Slade School of Art under Sir Edward Poynter, P.R.A., became proprietor and editor of 'Judy' and other comic papers and annuals. The third and fourth sons, Harvey Robert, born on 13 March 1855, and Charles Davison, born on 16 Jan. 1857, carried on the Camden Press, the printing business of the Brothers Dalziel, under the name of Dalziel & Co., Limited, from 1893 till 1905, when the press was closed.

[The Brothers Dalziel, 1901; Gleeson White's English Illustration: The Sixties, 1897; The Times, 27 March 1905; information from Mr. Gilbert Dalziel.] C. D.

DALZIEL, GEORGE (1815–1902), draughtsman and wood-engraver, the senior of the Brothers Dalziel [see **DALZIEL, EDWARD**, and **DALZIEL, THOMAS BOLTON GILCHRIST SEPTIMUS**, Suppl. II], was born at Wooler, Northumberland, on 1 Dec. 1815, and educated at Newcastle-on-Tyne. His father, Alexander Dalziel (1781–1832), was something of an artist, and seven of his eight sons by Elizabeth Hills (1785–1853) became artists by profession, four of them, George, Edward, John, and Thomas, constituting the firm which produced, as engravers, draughtsmen, and publishers, a large proportion of the English woodcut illustrations issued between 1840 and 1880.

Of the elder sons, William (1805–1873) was a painter of still life and heraldic decoration, Robert (1810–1842) a portrait and landscape painter, and Alexander John (1814–1836) a promising draughtsman in black and white. The two sons of Robert Dalziel, Alexander Aitcheson and John Sanderson, became pupils of the Brothers Dalziel in wood-engraving, but did not persevere in their profession.

John, the sixth son of Alexander Dalziel (born at Wooler on 1 Jan. 1822, died at Drigg, Cumberland, on 21 May 1869), the most notable member of the family after George, Edward, and Thomas, became associated with his brothers' firm in 1852, and was a highly accomplished engraver on wood, but failing health compelled him in 1868 to abandon artistic work and retire to Cumberland. He was twice married: in 1846 to Harriet Carter, by whom he had a son and two daughters, and in 1863 to Elizabeth Wells, who was

childless. The eighth son of Alexander Dalziel, Davison Octavian, born at Newcastle on 30 Oct. 1825, devoted himself to commerce.

A daughter, Margaret Jane Dalziel (born at Wooler on 3 Nov. 1819, died unmarried on 12 July 1894), was a skilful wood-engraver and aided her brothers from 1851 onwards.

George Dalziel came from Newcastle to London early in 1835 as pupil to the wood-engraver Charles Gray, with whom he remained four years. He then set up independently, but was soon joined by his brother Edward [q. v. Suppl. II], who entered into partnership with him as joint founder of 'The Brothers Dalziel.' John joined the firm in 1852 and Thomas [q. v. Suppl. II] in 1860. The work of the firm was done from 1857 onwards at 53 (afterwards 110) High Street, Camden Town, where John Dalziel lived, while his brothers resided at various addresses in Camden Town, Primrose Hill, and Hampstead. In their memoirs George and Edward Dalziel give 1840 as the opening date of their combined career. Some of their early wood-engravings are signed with their respective initials, but they soon adopted the common signature, 'Dalziel sc.,' and their individual work was thenceforth merged in the joint production of the firm. George Dalziel produced few original designs. Between 1840 and 1850 the brothers worked much in association with Ebenezer Landells [q. v.], through whose introduction they obtained the engraving of blocks for the early numbers of 'Punch' and the 'Illustrated London News.' Their Tyne-side connection brought them into relations with Bewick's pupil, William Harvey [q. v.], many of whose drawings they engraved from 1839 to 1866. Harvey introduced them to the publisher Charles Knight, for whose Shakespeare and 'The Land we live in' (1854-6) they engraved many blocks. They were also employed by T. Cadell of Edinburgh for the Abbotsford edition of the 'Waverley Novels.' About 1850 they entered into business relations with George Routledge, which continued for forty years; they were on similar friendly terms with the firm of Frederick Warne & Co., till 1865 partners of Routledge. Though the brothers Dalziel worked for many other publishers, including Cundall, Chapman & Hall, Longmans, Macmillan, Smith & Elder, Strahan, and Ward & Lock, it was mainly through Routledge and Warne that they were enabled to begin the issue of the long series of illustrated books by which their name became famous in a

generation which had grown tired of steel engravings. For these 'fine art' books, often issued in the name of other firms, the Dalziels made all arrangements and undertook the financial risk, commissioning artists on their own responsibility to design the woodcuts, contributing part of the designs themselves, and engraving the blocks by their own hands or those of pupils.

Much of their early work was done after artists whose popularity was already established, such as George Cruikshank, John Leech, Richard Doyle, Kenny Meadows, F. R. Pickersgill, and Sir John Gilbert. Their connection with the pre-Raphaelites began in 1855, when Millais was advised by Doyle to employ the Dalziels to cut one of the blocks which he was then preparing for Moxon's edition of Tennyson's poems (1857). Their first engravings after Millais, Rossetti, and Arthur Hughes were made for William Allingham's 'The Music Master and Day and Night Songs' (1855). Most of the illustrations of Rossetti and Holman Hunt passed through their hands, while Ford Madox Brown and Burne-Jones were contributors to their 'Bible Gallery.' They engraved a large proportion of Millais's black-and-white work, the most famous set of illustrations from his pen being the 'Parables of Our Lord,' commissioned in 1857 and completed in 1864. Other illustrators who owed much to the zeal and enterprise of the firm were Birket Foster, George du Maurier, Sir John Tenniel, and Harrison Weir. They cut the illustrations to the nursery classics, Edward Lear's 'Book of Nonsense' (1862) and Lewis Carroll's 'Alice in Wonderland' (1866) and 'Through the Looking-glass' (1872).

On the foundation of the 'Cornhill Magazine' in 1859 they were entrusted with the engraving of all the illustrations, and in 1862 they undertook, at the request of Alexander Strahan, the engraving and entire control of the illustrations to 'Good Words.' Such a commission gave them ample opportunities of enlisting new forces, and they deserve especial credit for discovering original talent for illustration in the cases of Frederick Walker, George John Pinwell, Arthur Boyd Houghton, Matthew James Lawless, John Dawson Watson, Frederick Barnard, and Mr. John W. North, A.R.A. The merit of English illustration during 1855-70 is due in no small measure to the co-operation of this distinguished band of draughtsmen on wood, and others, with such conscientious and artistic inter-

preters as the Dalziels. Their aim was to preserve each line intact when the drawings were made, as Gilbert and Tenniel made them, by a pure line method, but they often had the more difficult task of reproducing in facsimile a mixture of line and brush work, touched on the block with Chinese white, a practice habitual with later illustrators, such as Pinwell and Small. During the latter part of this period Joseph Swain [q. v. Suppl. II] and other engravers were doing interpretative work of equal merit, but no other firm combined technical skill with initiative to the same degree as the Dalziels. The most important books for the illustration of which they were wholly or in large part responsible are Staunton's *Shakespeare*, illustrated by Gilbert (1858-61), *'Lalla Rookh'* illustrated by Sir John Tenniel (1861), Birket Foster's *'Pictures of English Landscape'* (1862), John Dawson Watson's *'Pilgrim's Progress'* (1863), Millais's *'Parables'* (1864), *'The Arabian Nights' Entertainments'* (1864), illustrated largely by Houghton and Thomas Dalziel, Goldsmith's works, illustrated by Pinwell (1865), and Dalziel's *'Bible Gallery'* (1880). Complete sets of India proofs of the woodcuts to all these books, except the *'Arabian Nights'* and *'Bible Gallery'*, are in the print room of the British Museum. The Dalziels' work is also well represented in the Victoria and Albert Museum, and a framed collection of 226 India proofs was presented by Mr. Gilbert Dalziel in 1909 to the Hampstead Central Library. A complete illustrated record of the brothers' work in chronological sequence remains in Mr. Gilbert Dalziel's possession.

The *'Bible Gallery'*, completed in 1880 after many years of preparation, was the last important undertaking of the Dalziels on the artistic side. In the next decade the photo-mechanical processes were already beginning to prevail in competition with the slower and more expensive methods of the wood-engraver. The Dalziels' energies were thenceforth more devoted to the business of printing and the production of illustrated newspapers, chiefly comic. In 1870 they had become proprietors of *'Fun'*, which they continued to publish until 1893, and in 1871 they acquired *'Hood's Comic Annual'*, to which George Dalziel frequently contributed poems and stories; he also wrote much in *'Fun'*. Several volumes of stories and three volumes of verse from his pen were published by the firm. In 1872 the Brothers Dalziel acquired another comic paper, *'Judy'*, which they sold to Mr. Gilbert Dalziel in 1888. George

Dalziel and his brother Edward were joint authors of a volume of reminiscences, *'The Brothers Dalziel, a Record of Fifty Years' Work . . . 1840-90'*, published in 1901.

George Dalziel had no issue by his marriage, in 1846, to Mary Ann, daughter of Josiah Rumball, of Wisbech. After his wife's death he resided with his brother Edward at Hampstead, removing with him in 1900 to 107 Fellows Road, South Hampstead, where he died on 4 Aug. 1902; he was buried in old Highgate cemetery.

[The Brothers Dalziel, 1901 (with full list of books); Gleeson White's *English Illustration of the Sixties*, 1897; *The Times*, 8 Aug. 1902; information from Mr. Gilbert Dalziel.]
C. D.

DALZIEL, THOMAS BOLTON GILCHRIST SEPTIMUS (1823-1906), draughtsman, youngest and last surviving member of the firm of the Brothers Dalziel [see DALZIEL, EDWARD, and DALZIEL, GEORGE], was seventh son of Alexander Dalziel by his wife Elizabeth Hills. Born at Wooler, Northumberland, on 9 May 1823, he was educated at Newcastle-on-Tyne. Unlike his brothers, he was brought up as a copperplate engraver, but did not pursue that vocation after completing his apprenticeship. He came to London in 1843, and worked as an independent illustrator for the Dalziels among others, until he joined the firm in 1860. He did not take part in the engraving of blocks, but devoted himself to drawing on wood. He also undertook the important improvements to be carried out before a finished proof was submitted to the artist. He also painted both landscape and figure subjects in water-colour, and made drawings of coast scenery in charcoal. As an illustrator Thomas Dalziel holds a higher rank than any of his brothers. The hundred illustrations to the *'Pilgrim's Progress'* (Ward & Lock, 1865) are entirely by him, and he contributed eighty-nine illustrations to the *'Arabian Nights'* (1864), twenty to Jean Ingelow's *'Poems'* (1867), twenty-five to Robert Buchanan's *'North Coast'* (1868), fourteen to the *'Bible Gallery'* (1880), and a smaller number to several anthologies, illustrated by various artists and produced by the Brothers Dalziel. In designing the illustrations to the *'Arabian Nights'* he profited by the oriental costumes and objects of art in the collection of his collaborator, Arthur Boyd Houghton, with whom, as with Pinwell and Walker, he was on terms of intimate

friendship. Thomas Dalziel died at Herne Bay, Kent, where he had chiefly resided since 1893, on 17 March 1906, and was buried in old Highgate cemetery. By his marriage in 1856 with Louisa, daughter of Charles Gurden, who survived him, he had five sons and three daughters. His two elder sons, Herbert, born on 8 Dec. 1858, and Owen, born on 24 July 1860, are painters.

[The Brothers Dalziel, 1901; Gleeson White's English Illustration: The Sixties, 1897; Hampstead Express, 22 March 1906; information from Mr. Gilbert Dalziel.] C. D.

DANIEL, EVAN (1837-1904), writer on the Prayer-book, born at Pontypool on 4 Sept. 1837, was second son of Evan Daniel of Pontypool, builder and architect, by his wife Sarah Beach. After education at the national school, Pontypool, he entered St. John's Training College, Battersea, in 1856. He became lecturer in English literature at the college in 1859 and vice-principal in 1863. In the same year he was ordained deacon, and priest in 1864. He was appointed principal in 1866, a post which he held for 28 years. On assuming the office of principal he began reading for a degree at Trinity College, Dublin; and both in 1868 and 1870 he won there the vice-chancellor's prize for English verse, and in 1869 the prize for English prose. He graduated B.A. in 1870 as senior moderator and gold medallist in English literature, history, and political science, and proceeded M.A. in 1874.

Daniel was generally recognised as an educational expert. From 1873 to 1879 he served on the second London school board, and in 1881 he was appointed practical lecturer on education at Cambridge. In 1879 Anthony Wilson Thorold [q. v.], bishop of Rochester, made him an hon. canon of his cathedral; and from 1892 he was proctor in convocation for the dean and chapter of Rochester. On his resignation of the principalship of St. John's Training College in 1894, Archbishop E. W. Benson [q. v. Suppl. I] nominated him to the vicarage of Horsham, and in 1902 he became rural dean of Storrington. Daniel, who held broad church views, was esteemed a powerful preacher. He died at Horsham vicarage on 27 May 1904, and was buried in the churchyard there. He married in 1863 Elizabeth Mosell of Pontypool, who died in 1901. He had issue six daughters and three sons.

A portrait of Daniel, painted after his death by P. Keelan, is in the hall of St. John's College, Battersea, where he is also

commemorated by the establishment of the Daniel Library. A stained glass window to his memory is in Horsham parish church.

Daniel was best known for his valuable and popular work 'The Prayer-book, its History and Contents' (1877; 20th edit. 1901); this has been largely supplemented since, but not altogether superseded. He also published several educational books, including 'Outlines of English History' (1863; 2nd edit. 1872); 'The Grammar, History, and Derivation of the English Language' (1881); 'How to teach the Church Catechism' (1882); 'How to teach the Prayer-book' (1882); 'Elementary Algebra' (1st pt. 1883, 2nd pt. 1885); he edited Locke's 'Some Thoughts on Education' (1880).

[The Times, 28 May 1904; Guardian, 1 June 1904; Horsham Times, and Schoolmaster, 4 June 1904; Brit. Mus. Cat.; private information from Miss Daniel.] G. S. W.

DANVERS, FREDERIC CHARLES (1833-1906), writer on engineering, born at Hornsey on 1 July 1833, was second son of Frederick Samuel Danvers of Hornsey, an officer in the East India Company's service, by his wife Mary Matilda, daughter of H. Middleton of Wanstead, Essex. After education at the Merchant Taylors' School, King's College, London, and Addiscombe, he studied for two years as a civil and mechanical engineer. Then, adopting his father's career, he became, on 26 Jan. 1853, a writer in the old East India House. On the creation of the India office he was, in September 1858, made a junior clerk in its public and ecclesiastical department, and after being deputed in 1859 to Liverpool and Manchester to report on the fitness of traction engines for use in India, where railway construction was in its infancy, he was transferred on account of his technical knowledge to the public works department of the India office in 1861. He there rose to be senior clerk in June 1867, and assistant secretary in February 1875. Plans by him for a tunnel under the Hugli to continue the East India railway into Calcutta were forwarded by Sir Stafford Northcote [q. v.] to India in 1868. In addition to his official duties, he engaged in literary work, mainly of a technical character. He contributed articles on public works in India to 'Engineering' (1866-75), and an article on 'India' to Spon's 'Information for Colonial Engineers' (1877), besides compiling memoranda on Indian coal, coal washing, and artificial fuel (1867-9), and publishing 'Statistical Papers

relating to India' (parliamentary paper, 1869), 'Coal Economy' (1872), and 'A Century of Famines, 1770-1870' (1877).

In 1877 Danvers was transferred as assistant secretary to the revenue department of the India office, and was in January 1884 made registrar and superintendent of records. Marked efficiency in this capacity led to his being sent to Lisbon in 1891 to study records of Portuguese rule in the East. His report, based on research in the Torre do Tombo archives and the public libraries in Lisbon and Evora, was published in 1892. There followed his 'History of the Portuguese in India' (2 vols. 1894). This, his most ambitious work, was marred by want of perspective and incomplete reference to authorities. In 1893-5 Danvers studied at the Hague records of Dutch power in the East, but published nothing on the subject. He retired from the India office in July 1898.

Danvers read papers before the Society of Arts on 'Agriculture in India' (1878), 'Famines in India' (1886), and 'The India Office Records' (1889). The first and third of these papers gained the society's silver medal. He was elected a fellow of the Royal Statistical Society in 1880, subsequently served on its council, and read papers before it on 'Agriculture in Essex' (1897; *Stat. Soc. Journal*, lx. 251-69) and 'A Review of Indian Statistics' (1901; *ib.* lxiv. 31-65).

He died on 17 May 1906 at Broad Oaks, Addlestone, Surrey, and was buried at All Saints' Church, Benhilton.

Danvers married in 1860, at Hove, Louisa (b. 2 Nov. 1837), daughter of Elias Mocatta. She died at Sutton, Surrey, on 29 May 1909, and was buried beside her husband. There was issue three sons and five daughters.

Danvers also wrote: 1. 'The Covenant of Jacob's Heritage,' 1877. 2. 'Bengal, its Chiefs, Agents and Governors,' 1888. 3. 'The Second Borgian Map,' 1889. 4. 'Israel Redivivus,' 1905 (an endeavour to identify the ten tribes with the English people). He edited 'Memorials of Old Haileybury College' (1894), and wrote introductions to 'Letters received by the East India Company from its Servants in the East' (1896); 'List of Factory Records of the late East India Company' (1897); and 'List of Marine Records of the late East India Company' (1897).

S. E. F.

DARBYSHIRE, ALFRED (1839-1908), architect, son of William Darbyshire, manager of a dyeworks, by his wife Mary Bancroft, and nephew of George Bradshaw [q. v.], originator of the railway guide, was born at 8 Peru Street, Salford, on 20 June 1839. Of an old Quaker stock, he went to Quaker schools, first to that of Charles Cumber at Manchester, then to Ackworth school near Pontefract (1851-4), and finally to Dr. Satterthwaite's school at Alderley, Cheshire. After serving his articles in the office of Peter B. Alley, architect, Manchester, he began at the age of twenty-three to practise for himself, and was elected associate of the Royal Institute of British Architects in 1864 (fellow in 1870, and vice-president, 1902-5). His first commission was to carry out additions at Lyme Hall, Cheshire. Among other buildings he designed the Pendleton town hall, Alston Hall, near Preston, St. Cyprian's and St. Ignatius' churches, Salford, and he enlarged Galtee Castle, co. Cork. His reputation, however, was chiefly that of a theatrical architect. In Manchester he built the Comedy Theatre (afterwards called the Gaiety) and the Palace of Varieties, and carried out alterations at the Theatre Royal and the Prince's. He also designed a theatre at Rawtenstall and one at Exeter. In London he altered and decorated the Lyceum Theatre for (Sir) Henry Irving in 1878. For some years much of his time was occupied in designing and modelling on artistic plans temporary exhibitions, including a military bazaar at Manchester in 1884, a great Shakespearean show in the Royal Albert Hall, London, in the same year, and the Old Manchester section of the Royal Jubilee exhibition at Manchester in 1887.

Darbyshire had a strong leaning towards the stage, and was an amateur actor and a friend of actors. Charles Calvert [q. v.] received material artistic aid from him in the production of his Shakespearean revivals at the Prince's Theatre, Manchester (1864-74), and he was on intimate terms with (Sir) Henry Irving from about 1864 onwards. Irving was at that date a stock actor at the Theatre Royal, Manchester, and when he took leave of Lancashire in 1865, Darbyshire played the part of Polonius to his Hamlet. In the Calvert memorial performances at Manchester in October 1879 he was instrumental in obtaining the assistance of Tom Taylor, Herman Merivale, Lewis Wingfield, and Helen Faucit, who gave her last performance of Rosalind, Darbyshire acting the part of Jacques.

He was one of the original members of the Brasenose Club, Manchester, and wrote two volumes of reminiscences of that resort of literary and artistic bohemians. From 1901 to 1903 he was president of the Manchester Society of Architects, and did much to encourage the foundation of a chair of architecture at Manchester University. He was elected F.S.A. in 1894. An expert student of heraldry, he made a fine collection of books on that subject which was acquired by the John Rylands library.

Dying at Manchester on 5 July 1908, he was buried at Flixton church near that city. He married on 10 August 1870 Sarah, daughter of William Marshall of Westmoreland, and had one son and three daughters.

Besides several pamphlets and lectures, he wrote: 1. 'A Booke about Olde Manchester and Salford,' 1887. 2. 'A Chronicle of the Brasenose Club, Manchester,' 2 vols. 1892-1900. 3. 'An Architect's Experiences, Professional, Artistic, and Theatrical,' 1897 (with portraits). 4. 'The Art of the Victorian Stage,' 1907.

C. W. S.

DAUBENEY, SIR HENRY CHARLES BARNSTON (1810-1903), general, born at Ripon, Yorkshire, on 19 Dec. 1810, was eldest son of lieutenant-general Henry Daubeney, K. H., by his first cousin, Elizabeth, daughter of Charles Daubeney [q. v.], archdeacon of Sarum. Educated at Sandhurst, he entered the army as ensign of the 55th foot (later 2nd battalion Border regiment) in 1829. He served in that corps for thirty years until he attained the rank of colonel. In the Coorg campaign, in South India (1832-4), he served with his regiment with the northern column under Colonel Waugh; he was present at the assault and capture of the stockade of Kissenhully, and at the attack on that of Soamwarpettah. There he was in charge of one of the two guns attached to the column, and by his perseverance saved it from capture during the retreat. The British losses amounted to three officers and forty-five men killed and 118 men wounded, but the Rajah of Coorg, who was opposing the British advance, was defeated and deposed on 5 April 1834. Daubeney served with his regiment during the Chinese war of 1841-2, and as a captain commanded the light company at the repulse of the

enemy's night attack at Chinhae, and at the storm and capture of Chapou (18 May 1842). He was on the staff as major of brigade to Sir James Schoedde at Woosung, Shanghai, and Chin-Kiang, and was twice mentioned in despatches. He received the medal, was promoted brevet major on 23 Dec. 1842, and was made C.B. on 24 Dec. 1842. Becoming major (25 Nov. 1845) he went through the Crimean campaign of 1854. On 26 Oct. 1854 he helped to repulse the sortie of the Russians from Sevastopol. At Inkerman, on 5 Nov. 1854, Daubeney, at the head of thirty men of his regiment, executed a flank charge; without firing a shot he forced his way through the attacking Russian column, and by this manœuvre compelled the enemy's battalions to fall back in confusion. He was commended in despatches and was gazetted to a substantive lieutenant-colonelcy on 12 Dec. 1854 for his services at Inkerman, but he declined a promotion which would have removed him from the seat of war and placed him on half pay, while his regiment was serving in the field. General Sir John Pennefather recommended him for the Victoria Cross, but being a regimental field officer he was held to be ineligible according to existing rules. He received next year the reward for distinguished service, the medal with three clasps, the legion of honour, and the fourth class of the order of the Medjidie. From 1858 to 1869 he was inspector of army clothing. Promoted major-general on 6 March 1868 and lieutenant-general on 1 Oct. 1877, he was nominated K.C.B. on 30 May 1871, was appointed colonel of his regiment on 3 Feb. 1879, became general on 4 March 1880, and was promoted G.C.B. on 24 March 1884.

On his retirement from active service in 1880 Daubeney resided at Osterley Lodge, Spring Grove, Isleworth, where he died on 17 Jan. 1903. He was thrice married: (1) in 1840, to Amelia (d. 1857), only child of Samuel Davy Liptrop of Southampton, by whom he had two sons; (2) in 1859 to Henrietta Anne (d. 1876), only daughter of Charles Jacobomb of Upper Clapton, Middlesex; and (3) in 1878 to Eliza, second daughter of Charles Carpenter of Brunswick Square, Brighton.

H. M. V.

DAVENPORT-HILL, ROSAMOND (1825-1902), educational administrator. [See **HILL, ROSAMOND DAVENPORT**.]

DAVEY, HORACE, LORD DAVEY (1833-1907), judge, born at Horton, Buckinghamshire, on 29 August 1833, was second son of Peter Davey (1792-1879) of that place by his wife Caroline Emma, daughter of William Pace, rector of Rampisham-cum-Wraxall, Dorset. He was educated at Rugby and at University College, Oxford, where he won an open scholarship in 1852, matriculating on 20 March of that year. He gained a double first class in classics and mathematics, both in moderations in 1854 and in the final schools in 1856. He was chosen a fellow of his college in 1854. In 1857 he was elected Johnson's (now the junior) mathematical scholar of the university, and senior mathematical scholar in the following year; in 1859 he obtained the Eldon law scholarship. He graduated B.A. in 1856 and proceeded M.A. in 1859.

Davey was admitted a student of Lincoln's Inn on 19 Jan. 1857, and was called to the bar on 26 Jan. 1861, having read in the chambers of John Wickens [q. v.], then regarded as the most distinguished school of equity pleading. Lord Macnaghten, afterwards Davey's rival at the bar, but slightly his senior in standing, relates how Wickens announced to him one morning that in the person of Davey he had at last found a pupil of whose success he felt assured. From the first Davey acquired an extensive junior practice in the chancery courts, running neck and neck with Montagu Cookson, now Montagu Crackanthorpe, K.C., who had come down from Oxford with identical distinctions in the class lists. In 1865 Davey collaborated with (Sir) George Osborne Morgan [q. v. Suppl. I] in a standard work upon costs in Chancery (1865) and helped Morgan in 'The New Reports' (1863-5). On the appointment of Wickens as vice-chancellor in 1871 Davey became his secretary, and filled the same office under Vice-chancellor Hall, who succeeded Wickens in 1873. He took silk on 23 June 1875 'with strange misgivings,' says Lord Macnaghten, 'and much hesitation.' As a leader his success was instantaneous. He practised in the court of the master of the rolls, Sir George Jessel [q. v.], and soon divided the business there with J. W. Chitty [q. v. Suppl. I], afterwards lord justice. Davey's legal judgment was intuitive and almost infallible, and his wide acquaintance with foreign law systems gave him a marked advantage over his competitors, leading to constant employment in the privy council and in Scottish cases in the House of Lords. Before long he succeeded to the solid reputation which

Wickens had held as an unrivalled 'case lawyer,' so that at last his 'opinions' came to be regarded as equivalent to judgments and from time to time were accepted as decisions by mutual consent of the parties. His argument delivered in the court of appeal in 1876 on behalf of one of the interveners in the St. Leonards will case, shortly after he had become a Q.C., created a deep impression on the court and the bar. On the elevation of Sir Edward Fry to the bench in 1877 Davey became a 'special,' and was henceforward retained largely in the superior tribunals, his chief rivals being (Sir) John Rigby [q. v. Suppl. II], Montagu Cookson, and Edward (now Lord) Macnaghten. 'He was never dull or tedious,' writes the latter; 'he always knew his case thoroughly, nothing came amiss to him, nothing was too small for his attention, nothing was too great for his powers.' From his boyhood he had been remarkable for his clear-cut phrases and admirably constructed sentences. When his argument at Lambeth in the proceedings instituted against Bishop King of Lincoln in 1890 was praised for its style to Archbishop Benson, the archbishop remarked 'It was exactly in the same way that he used to construe Thucydides to me when I was school-house tutor at Rugby.'

In politics Davey was an advanced liberal, and he was returned to parliament in that interest for Christchurch in April 1880, but he lost his seat at the general election of November 1885. Following Gladstone in his home rule policy, he received the post of solicitor-general on 16 Feb. 1886, and was knighted on 8 March. His efforts to recover his place in the House of Commons involved him in a long series of electoral misfortunes. He was beaten in a bye-election at Ipswich in April, and at Stockport in the general election of July 1886, going out of office with his party a week or two later. At a bye-election in Dec. 1888 he was successful at Stockton-on-Tees, only to be defeated at the general election of July 1892. Owing to his exclusion from the house, Sir John Rigby became solicitor-general in his stead when Gladstone resumed office in August. Davey failed as a candidate because he could not adopt an ingratiating manner or suit his oratory to the requirements of an uncultivated audience. On the platform he provoked irritation owing to his intensely judicial habit of mind forcing him to qualify and guard every statement. Nor, though listened to with respect, did he ever succeed in winning the ear of the

House of Commons. While possessed of all the qualities of an advocate, he could never accommodate himself to any tribunal that was not purely forensic.

On 15 August 1893 he was appointed lord justice of appeal in the place of his lifelong friend, Lord Bowen, and was sworn of the privy council; in July 1894 he succeeded Lord Russell of Killowen as lord of appeal in ordinary, being created a life peer with the title of Lord Davey of Fernhurst. During his short sojourn in the court of appeal he created a most favourable impression, not only by the admirable judicial qualities which he displayed but by his patience and urbanity to all who appeared before him, whereas at the bar he had been admired rather than liked by those who were not admitted to his intimacy. In the House of Lords and on the judicial committee of the privy council, where the last thirteen years of his life were spent, Davey found himself in a position well adapted for the exercise of his highest faculties. As an old member of the equity bar he restored to that side of the profession the share of representation in the final court of appeal which it had lost since the withdrawal of Lord Selborne. Sitting with Lords Herschell, Watson, and Macnaghten he helped to give it a reputation for strength and originality which it has not always sustained, and he not unfrequently found himself in conflict with the vigorous personality and strongly conservative instincts of Lord Halsbury. His judgments in the cases relating to trades unionism, which occupied much of the time of the house during his latter years, were generally in favour of the men, but accident rendered him absent on the occasions when *Allen v. Flood* and the *Taff Vale* case were argued. In the case of the *Earl and Countess Russell* in 1896 he was one of the majority which held that the conduct of the latter in making vile and unfounded charges against her husband did not constitute cruelty such as the law could relieve. But he was in a minority of two who held, on a very different subject, that the 'ring' on the racecourse was 'a place within the meaning of the Act' for the suppression of betting places (16 & 17 Vict. c. 119). Davey had very decided views on the evils of gambling, and was largely responsible for the *Street Betting Act* of 1906 (6 Edward VII c. 43). The last reported case in which he delivered judgment was that of the *Attorney-General v. the West Riding County Council*, 14 Dec. 1906, when the House of Lords unanimously

overruled the decision of *Richard Henn Collins*, master of the rolls [q. v. Suppl. II], and Lord Justice Farwell, and held that the local education authority is bound to pay what is reasonable for denominational religious education in lawful hours in non-provided schools. Davey's judgments lacked the literary finish of Bowen, but they were conspicuous for conciseness, for lucid statement and clear arrangement, and for a mastery of legal principle. As well equipped with regard to the common law as in matters of pure equity and conveyancing, he was especially at home when it was necessary to construe the complicated *Income Tax Acts*. His death, after a short illness, at his house in London, on 20 Feb. 1907, was an almost irreparable loss both to the House of Lords and to the judicial committee of the privy council; his presence on the committee had been acknowledged by lawyers from every part of the empire as a chief element in its strength and prestige. Davey has been not unjustly described as the most accomplished lawyer of his day.

Through life Davey was handicapped in public by cold and ungenial manners, and by more than a touch of Oxford donnishness. Among congenial friends he was a delightful companion, and he was idolised by his family. Mr. Frederic Harrison in his '*Autobiographic Memoirs*' (ii. 78) speaks of the 'unerring judgment and inexhaustible culture of Horace Davey.' And in an unpublished communication to the writer of this article he adds that, 'in spite of his intensely laborious professional life—for he constantly began work at five before rising, and in earlier days would light his own fire at four—he always kept up a keen interest in literature, especially in French current works, of which he was an omnivorous reader. He had an almost unrivalled familiarity with modern European romances in various languages, and with classical literature, which he continued to read to the last.' He was a man of refined artistic taste and formed a small but choice collection of modern paintings which was dispersed at his death.

Davey was made an honorary fellow of his college in 1884, and received an honorary D.C.L. degree in 1894; he was standing counsel to the University of Oxford from 1877 to 1893. In 1898 he was appointed chairman of the royal commission appointed to make statutes for the reconstituted University of London, and therein showed himself a strenuous champion of a more scientific study of law.

He was elected a fellow of the British Academy in 1905. He interested himself in the work of the Society of Comparative Legislation; and wrote on legal reforms of the past thirty years in the 'Encyclopædia Britannica' (10th edit. 1902).

Davey married on 5 Aug. 1862 Louisa Hawes, daughter of John Donkin, civil engineer, who survived him. Of his family of two sons and four daughters, the two youngest daughters, Beatrix Wickens and Margaret Bowen (twins), married respectively Major-General Sir William Gatacre [q. v. Suppl. II] and F. W. Pember, son of Edward Henry Pember, K.C. [q. v. Suppl. II].

An oil painting of Davey by G. F. Watts, R.A., is in the possession of his widow. Another portrait, by Mr. S. J. Solomon, R.A., is at University College, Oxford; a replica of the latter by the artist belongs to the benchers of Lincoln's Inn.

[The Times, 22 Feb. 1907; Journal Soc. of Comparative Legislation, n.s. viii. 10 (Lord Macnaghten); Proc. Brit. Acad. 1907-8, pp. 371 seq. (by Sir Courtenay Ilbert); Oxford Historical Reg.; the Law Reports; private information; personal knowledge.]

J. B. A.

DAVIDSON, ANDREW BRUCE (1831-1902), Hebraist and theologian, born in 1831 at Ellon, North Aberdeenshire, was son of Andrew Davidson, a sturdy farmer who was keenly interested in the pending controversy respecting church government; his mother, Helen Bruce, was strongly attracted by the evangelical revival of the day. At his mother's wish he was sent in 1845 to the grammar school of Aberdeen, where James Melvin [q. v.] was headmaster; and in 1846 he gained a small bursary in what was then the Marischal University, Aberdeen. There in 1849 he graduated M.A. From 1849 to 1852 he was teacher at the Free church school in Ellon, and during those three years mastered not only Hebrew but various modern languages. In 1852 he entered the Divinity Hall of the Free church in Edinburgh, called the New College; and at the end of the four years' course was licensed in 1856 to become a preacher, but did little preaching or other parochial work. In 1858 he was appointed assistant to John Duncan (1796-1870) [q. v.], professor of Hebrew at the New College, who exerted upon him a stimulating influence. In 1863 he became Duncan's successor in the chair of Hebrew and Oriental languages, and held the post until his death, exerting from the first, partly by his writings, but chiefly by

his personality, a commanding influence. Of a small and spare figure, quiet and unpretending in speech and manner, retiring in disposition, he riveted in the lecture-room the admiration and affection of his pupils. 'Easy mastery of his subject, lucid and attractive discourse, the faculty of training men in scientific method, the power of making them think out things for themselves, were united in him with the capacity of holding their minds, quickening their ideas, and commanding their imaginations.' He had a keen sense of humour, and a power of quiet but effective sarcasm. He preached rarely, but his sermons show freshness, independence, religious sympathy, and penetration. He was an influential member of the Old Testament revision company (1870-1884), and was made hon. LL.D. of Aberdeen (1868), hon. D.D. of Edinburgh (1868) and Glasgow, and hon. Litt.D. of Cambridge (1900). He died unmarried at Edinburgh on 20 Jan. 1902.

Davidson devoted his life to the study of the Old Testament, its language, its exegesis, its theology. Whatever aspect of it he touched, his treatment was always masterly, sympathetic, and judicious. In his exegetical works one feels that, whatever opinion he puts forth upon a difficult subject, it is the result of long and mature study and represents the best conclusion which the circumstances of the case permit, and he excelled in the analysis of moral feeling and in the delineation of character.

At the time when he began to lecture, the Old Testament was mostly studied uncritically and superficially, and solely with a view to the dogmatic statements to be found in it. Davidson taught his pupils to realise its *historical* significance, to understand what its different writings meant to those who first heard them uttered, or read them, to trace the historical progress of religious ideas, to cultivate, in a word *historical* exegesis. Some of his pupils have left on record, what a revelation it was to them to find that the prophets, for instance, were men of flesh and blood like themselves, interested in the political and social movements of their times, eager to influence for good their own contemporaries. Davidson initiated in this country that *historical* view of the Old Testament which was afterwards more fully developed by his pupil William Robertson Smith [q. v.], and is now generally accepted among scholars. Davidson also gave valuable help in other directions. He was the power which lay behind W. R. Smith; and though he took hardly any personal part in the struggle of

1876-82 for liberty of biblical criticism, he by his moral weight was recognised as the real author of the victory which, at the cost of his own chair, Smith won for Scotland. Davidson supplied influence and guidance at a time when opinions which had come to be regarded by many as axiomatic were being rudely disturbed. He was equally alive to the historical and the religious importance of the Old Testament; and he was the first leader of thought in this country who taught successfully the reality of both.

Apart from numerous articles in theological periodicals and in Hastings' 'Dictionary of the Bible,' Davidson's chief publications were: 1. A grammatical and exegetical 'Commentary on Job,' 1862, unhappily never completed. 2. 'An Introductory Hebrew Grammar,' 1874; 9th edit. 1888, very largely used as a class-book (now in its 18th edit.). 3. 'A Hebrew Syntax,' 1894, intended for more advanced students, and remarkably thorough and complete. 4. Commentaries on the 'Epistle to the Hebrews,' 1882. 5. 'Job,' 1884; 6. 'Ezekiel,' 1892; 7. 'Nahum, Habakkuk, Zephaniah,' 1896: the last three in the 'Cambridge Bible.' There were published posthumously 'Biblical and Literary Essays' (1902); two volumes of sermons, 'The Called of God' (1902) and 'Waiting upon God' (1904); and two volumes based upon his lectures, 'Old Testament Prophecy' (1903) and 'The Theology of the Old Testament' (1904). There is a portrait by Sir George Reid in the New College, Edinburgh.

[British Weekly, 30 Jan. 1902; Expositor, Jan. 1888, p. 29 ff. (with portrait); Expos. Times, July 1897, p. 441 ff. (with portrait—the best); Biblical World (Chicago), Sept. 1902, pp. 167 seq., and Oct. 1902, pp. 288 seq. (by G. A. Smith); Introd. to The Called of God (with portrait), pp. 3-58; complete list of publications in Expos. Times, July 1904, pp. 450 seq.] S. R. D.

DAVIDSON, CHARLES (1824-1902), water-colour painter, born in London, of Scottish parents, on 30 July 1824, was left an orphan at an early age. After education at a school in Chelsea, he apprenticed himself to a seedsman and market-gardener at Brompton. At the end of a year he forfeited his premium in order to study music, but finally decided on painting, and worked for some years under John Absolon, a member of the New Water Colour Society (now the Royal Institute of Painters in Water Colours). Of that society he was himself elected an associate in 1847 and a member

in 1849. He resigned his membership in 1853, and on 12 Feb. 1855 was elected an associate of the Old Water Colour Society (now the Royal Society of Painters in Water Colours); he became a full member on 14 June 1858 and an honorary retired member in 1897. A friend of John Linnell, Samuel Palmer, and the Varleys, he soon established a high reputation. He exhibited from 1844 to 1902 at the Old Water Colour Society (where over 800 of his works appeared), at the New Water Colour Society, the Royal Academy, the British Institution, the Royal Society of British Artists, and elsewhere. His subjects were chiefly typical English landscapes, and he was skilful in depicting the homely scenes of the countryside. He worked a good deal in Wales. A few of his paintings were chromolithographed by Messrs. Day & Son.

Davidson resided for about twenty-eight years at Redhill, Surrey, and from 1882 at Trevena, Falmouth, where he died on 19 April 1902. About 1843 he married a sister of Francis William Topham [q. v.]; he had two sons and four daughters, the eldest of whom became the wife of Frank Holl, R.A. [q. v.]. The Victoria and Albert Museum owns six water-colour drawings by Davidson; four of them are at the Bethnal Green Museum.

[Private information; Graves, Dict. of Artists; A. M. Reynolds, Life of Frank Holl, 1912, pp. 36-40; Cat. of Water Colours, Victoria and Albert Museum; The Year's Art, 1890, p. 32 (portrait); W. J. Stillman, Autobiog. of a Journalist, 1901, pp. 110-2; The Times, 22 April 1902.]

B. S. L.

DAVIDSON, JOHN (1857-1909), poet, son of Alexander Davidson, minister of the Evangelical Union, by his wife Helen, daughter of Alexander Crockett of Elgin, was born at Barrhead, Renfrewshire, on 11 April 1857. Put to school at the Highlanders' Academy, Greenock, his education was soon interrupted. At the age of thirteen he entered the chemical laboratory of Walker's sugar house at Greenock (1870), and in 1871 became assistant to the town analyst there. In these employments he developed an interest in science which became an important characteristic of his poetry. In 1872 he returned for four years to the Highlanders' Academy as a pupil-teacher, and, after a year at Edinburgh University (1876-7), received in 1877 his first scholastic employment at Alexander's Charity, Glasgow. During the next six years he held positions in the following schools:

Perth Academy (1878-81), Kelvinside Academy, Glasgow (1881-2), and Hutchinson's Charity, Paisley (1883-4). He varied his career by spending a year as clerk in a Glasgow thread firm (1884-5), and subsequently taught in Morrison's Academy, Crieff (1885-8), and in a private school at Greenock (1888-9).

Davidson's first published work was 'Bruce,' a chronicle play in the Elizabethan manner, which appeared with a Glasgow imprint in 1886. Four other plays, 'Smith, a Tragic Farce' (1888), 'An Unhistorical Pastoral' (1889), 'A Romantic Farce' (1889), and the brilliant 'Scaramouch in Naxos' (1889) were also published while he was in Scotland. In 1889 Davidson abandoned schoolwork, and next year went to London to seek his literary fortune. Besides writing for the 'Speaker,' the 'Glasgow Herald,' and other papers, he produced several novels and tales, of which the best was 'Perfervid' (1890). But these prose works were written for a livelihood. Davidson's true medium was verse. 'In a Music Hall and other Poems' (1891) suggested what 'Fleet Street Eclogues' (1893) proved, that Davidson possessed a genuine and distinctive poetic gift. The second collection established his reputation among the discerning few. His early plays were republished in one volume in 1894, and henceforward he turned his attention more and more completely to verse. A volume of vigorous 'Ballads and Songs' (1894), his most popular work, was followed in turn by a second series of 'Fleet Street Eclogues' (1896) and by 'New Ballads' (1897) and 'The Last Ballad' (1899). For a time he abandoned lyric for the drama, writing several original plays which have not been staged and translating with success Coppée's 'Pour la Couronne' in 1896 and Victor Hugo's 'Ruy Blas' in 1904, the former being produced as 'For the Crown' at the Lyceum Theatre in 1896, the latter as 'A Queen's Romance' at the Imperial Theatre. Finally Davidson engaged on a series of 'Testaments,' in which he gave definite expression to his philosophy. These volumes were entitled 'The Testament of a Vivisector' (1901), 'The Testament of a Man Forbid' (1901), 'The Testament of an Empire Builder' (1902), and 'The Testament of John Davidson' (1908). Though he disclaimed the title of philosopher, he expounded an original philosophy which was at once materialistic and aristocratic. The cosmic process, as interpreted by evolution, was for him a fruitful source of inspiration. His later verse, which is often fine rhetoric

rather than poetry, expressed the belief which is summed up in the last words that he wrote, 'Men are the universe become conscious; the simplest man should consider himself too great to be called after any name.' The corollary was that every man was to be himself to the utmost of his power, and the strongest was to rule. Davidson professed to reject all existing philosophies, including that of Nietzsche, the German philosopher, as inadequate, but Nietzsche's influence is traceable in his argument. The poet planned ultimately to embody his revolutionary creed in a trilogy entitled 'God and Mammon.' Only two plays, however, were written, 'The Triumph of Mammon' (1907) and 'Mammon and his Message' (1908).

In 1906 he was awarded a civil list pension of 100l.; but poverty and ill-health made life burdensome. Late in 1908 Davidson left London to reside at Penzance. On 23 March 1909 he disappeared from his house at Penzance. He had committed suicide by drowning in a fit of depression. His body, which was discovered by some fishermen in Mount's Bay on 18 Sept., was, in accordance with his known wishes, buried at sea. In his will he desired that no biography should be written, none of his unpublished works published, and 'no word except of my writing is ever to appear in any book of mine as long as the copyright endures.' In 1885 Davidson married Margaret, daughter of John McArthur of Perth. She survived him with two sons, Alexander and Menzies.

Davidson was a prolific writer. Besides the works cited, he wrote: 1. 'The Great Men, and a Practical Novelist,' 1891. 2. 'Laura Ruthven's Widowhood,' a novel (with C. J. Wills), 1892. 3. 'Sentences and Paragraphs,' 1893. 4. 'Baptist Lake,' a novel, 1894. 5. 'A Random Itinerary,' 1894. 6. 'The Wonderful Mission of Earl Lavender,' a novel, 1895. 7. 'Miss Armstrong's Circumstances,' a novel, 1896. 8. 'Godfrida,' a play, 1898. 9. 'Self's the Man,' a tragic-comedy, 1901. 10. 'The Knight of the Maypole,' 1903. 11. 'A Rosary,' 1903. 12. 'The Theatrocrat: a Tragic Play of Church and State,' 1905. 13. 'Holiday and other Poems,' 1906. 14. 'Fleet Street and other Poems,' 1909. He translated Montesquieu's 'Lettres Persanes' (1892) and contributed to Shakespeare's 'Sonnets' (Renaissance edition, 1908) an introduction which, like his various prefaces and essays, shows him a subtle literary critic. Davidson's portrait was drawn by Walter Sickert and by Robert

Bryden. A caricature by Max Beerbohm appeared in 'The Chapbook,' 1907.

DAVIDSON, JOHN THAIN (1833-1904), presbyterian minister, born on 25 April 1833 at Broughty Ferry, near Dundee, was a twin son of David Davidson, parish minister of Broughty Ferry, who seceded from the established church at the disruption of 1843 and died a few months later. His grandfather, Dr. David Davidson of Dundee, and his great grandfather were also ministers of the church of Scotland. His mother, daughter of Dr. Ireland of Leith, removed to Edinburgh on her husband's death, and at her house the boy John met Drs. Guthrie, Candlish, Cunningham, and other religious leaders. Educated successively at Edinburgh High School and at Edinburgh University, he studied for the ministry at the Free Church Theological College. After a few months in charge of a mission station at Craigmill in Perthshire, and as a probationer in Free St. George's, Montrose, he was ordained on 19 Feb. 1857 a minister of the Free church at Maryton, near Montrose, and remained there until 1859, when he was inducted minister of the presbyterian church at Salford. Thenceforth his life was spent in England.

After three years in Salford, he removed on 5 August 1862 to the presbyterian church, Colebrooke Row, Islington. There he achieved a memorable success. He not only converted a decaying congregation into a large and growing one, but his influence spread beyond his own denomination. On 4 Oct. 1868 he inaugurated in the Agricultural Hall, and continued every Sunday for nearly twenty-three years, the novel enterprise of services on Sunday afternoons for non-churchgoing people. The services, held at first in the smaller hall, which seated about 1000, were soon transferred to the great hall, where about 4000 persons were regularly present. The meetings were catholic in spirit. The speakers included the earls of Shaftesbury, Aberdeen, and Kintore, the bishops of Ballarat and Bedford, Canon Fleming, the vicars of Islington, Holloway, and Clerkenwell, Dr. Guthrie and Dr. Talmage.

In 1872 he was elected moderator of the synod of the presbyterian church of England. Subsequently he received the degree of D.D. from Montgomery College, Alabama. After nearly thirty years' work at Islington, he removed in 1891 to Ealing,

where he became on 16 Sept. minister of St. Andrew's presbyterian church. In 1903 he obtained as colleague W. S. Herbert Wylie, M.A., who succeeded him. Dr. Davidson died on 7 November 1904 and is buried in the churchyard of Gray's 'Elegy' at Stoke Poges.

He married on 4 Oct. 1859 Isabella, daughter of M. McCallum of Glasgow, by whom he had two sons and six daughters.

Davidson's varied powers as a preacher were, perhaps, seen to best advantage in his monthly sermons to young men, commenced at Islington in 1878 and continued through the rest of his ministry. The main points in these addresses were published in 'Talks with Young Men' (1884); 'Forewarned, Forearmed' (1885); 'The City Youth' (1886); 'Sure to Succeed' (1888); 'A Good Start' (1890); and 'Thoroughness' (1892).

DAVIES, CHARLES MAURICE (1828-1910), author, born in 1828, was of Welsh origin. He entered Durham University as a scholar of University College in 1845, and graduated B.A. in 1848 with a second class in classical and general literature. He proceeded M.A. in 1852 and D.D. in 1864. Elected a fellow of the university on 1 Nov. 1849, he was ordained deacon in 1851 and priest in 1852. After serving various curacies Davies settled down to educational work in London. Meanwhile his religious views underwent a change. Once an active supporter of the tractarian movement, Davies soon adopted broad church principles, and published anonymously a series of sensational novels, attacking high church practices, among them being 'Philip Paternoster' (1858), 'Shadow Land' (1860), and 'Verts, or the Three Creeds' (3 vols. 1876). After holding the headmastership of the West London Collegiate School (1861-8) he devoted himself mainly to journalism. In 1870 he represented the 'Daily Telegraph' in France on the outbreak of the Franco-Prussian war, and was arrested as a suspected spy, while he was searching Metz for his colleague, George Augustus Sala [q. v.]. Amongst other contributions to the 'Daily Telegraph' was a series of independent studies of religious parties in the metropolis, which attracted attention. His articles were collected into a volume entitled 'Unorthodox London' (1873; 2nd edit. 1875). There followed on the same lines, 'Heterodox London, or Phases

of Free Thought in the Metropolis' (2 vols. 1874), 'Orthodox London, or Phases of Religious Life in the Church of England' (2 vols. 1874-5), and 'Mystic London, or Phases of Occult Life in the Metropolis' (1875). On quitting the service of the 'Daily Telegraph,' Davies went out to Natal to work under Bishop J. W. Colenso [q. v.]. After 1882, however, he abandoned holy orders. On his resettling in London, he was employed after 1893 in superintending a series of translations, undertaken at the instance of Cecil Rhodes [q. v. Suppl. II], of the original authorities used by Gibbon in his 'Decline and Fall of the Roman Empire.' Davies retired from active work in 1901, and died at Harlesden on 6 Sept. 1910.

[The Times, 9 Sept. 1910; Durham University Calendar, 1850; Brit. Mus. Cat.; Sir T. Fuller, Life of Cecil Rhodes, 1910, p. 133 seq.; private information from Mr. A. L. Humphreys.] G. S. W.

DAVIES, ROBERT (1816-1905), philanthropist, born at Llangefni, Anglesey, on 1 April 1816, was second son of Richard Davies (1778-1849) by Anne, daughter of Owen Jones of Coedhowel near Llangefni. The father (son of a yeoman at Capel Farm, Llangristiolus) was a general store-keeper at Llangefni and a Calvinistic methodist.

Robert was educated at the national school, Llangefni, and at a private school at Chester. As he and his brothers grew up, their father extended his business, opening a branch for importing timber and iron at Menai Bridge, which he placed under the management of his eldest son, John, who died unmarried in 1848 and to whose business ability the successful development of the family firm was largely due. A foundry at Carnarvon was put under Robert's charge, while a store at Redwharf Bay was entrusted to the youngest son, Richard. From purchasing ships to carry their own timber the firm came to confine itself to shipowning, with headquarters at Menai Bridge (where the three brothers settled), and the other businesses were disposed of. While at Carnarvon, Robert took an active part in the work of a ragged school there, and in subsequent years he had charge of a class of children in a Sunday school of which he was for a short time superintendent. With these exceptions, and that of serving as high sheriff for Anglesey for 1862, he took no part in public work. About 1856 he settled at Bodlondeb, a house overlooking the Menai Straits, near Bangor, and here he led a somewhat eccentric and parsimonious life, letting his share of the profits of the business accumulate. After 1885 he began giving money, generally anonymously or under assumed names, towards liquidating the debts of Calvinistic methodist chapels. He was popularly credited with giving half a million sterling towards chapel debts, but most probably it did not much exceed 150,000*l.* His other benefactions were 177,000*l.* to endow the Welsh Methodist Mission in India, 10,000*l.* to an orphanage (of the same connexion) at Bontnewydd, Carnarvon, and 10,000*l.* to the British and Foreign Bible Society (of which he was a vice-president). At a cost of 5000*l.* he built an English chapel for his connexion at Menai Bridge (where he is commemorated by a window and tablet), and gave 1200*l.* towards restoring the Welsh chapel at the same place, to the erection of which he and his brother had contributed largely. His gifts to educational objects, comparatively few and small, included 1000*l.* to the founding of the Normal College at Bangor in 1856, 1000*l.* to the University College at the same place in 1884, besides assistance in establishing and maintaining a British school at Menai Bridge. His almsgiving took the eccentric form of a weekly distribution for many years of twelve lbs. of flour to from seventy to a hundred persons, presumably poor, but not a few of them undeserving. It was a condition that each recipient should personally fetch this dole from Bodlondeb on Tuesday in each week.

Davies died unmarried and intestate at Bodlondeb on 29 Dec. 1905, and was buried in the parish churchyard of Llangefni. His estate was valued at under 500,000*l.*

His younger brother, RICHARD DAVIES (1818-1896), possessed business and public qualities of a high order. A liberal in politics, he unsuccessfully contested Carnarvon Boroughs in 1852, but in 1868 he was returned unopposed for his native county of Anglesey, for which he sat till 1886. He was high sheriff of Anglesey in 1858, and was appointed its lord-lieutenant by Gladstone on 27 April 1884, being probably the first nonconformist to hold those offices in Wales. He died at his residence, Treborth, near Bangor, on 27 Oct. 1896. He married in 1855 Annie, only child of the Rev. Henry Rees, a nonconformist divine, of Liverpool, and left issue (MARDY REES, *Notable Welshmen*, p. 445).

[The most trustworthy account of Robert Davies is by the Rev. T. Charles Williams, M.A., of Menai Bridge in *Y Drysorfa* (in

Welsh), 1906; reprinted in a volume of gossiping and often inaccurate reminiscences concerning Davies by the Rev. John Jones, Pwllheli—Adgofion am Mr. Robert Davies (Pwllheli, 1906). Cf. T. R. Roberts, *Eminent Welshmen*, p. 57. Private information has also been furnished by Mr. J. R. Davies (Richard Davies's son), Ceris, Bangor.] D. LL. T.

DAVIS, CHARLES EDWARD (1827–1902), architect and antiquary, born near Bath on 29 Aug. 1827, was son of Edward Davis by his wife Dorothy (widow of Captain Johnston of the Madras cavalry), whose maiden name was Walker. The father, an architect of Bath, had been a pupil of Sir John Soane [q. v.], restored Prior Bird's Chantry in Bath Abbey, the 'Gothic ornaments' of which he described in a volume (1834), designed several houses, and laid out the Victoria Park at Bath, opened in 1830. Charles Edward began the study of architecture as his father's pupil, and in 1863, having recently won a competition for the cemetery buildings on the lower Bristol Road, was appointed city architect and surveyor to the corporation of Bath. He held these offices for forty years. In 1863 he designed an escritoire, Bath's wedding gift to Queen Alexandra, presented in 1869 and costing 700*l*.

Davis carefully examined the mineral baths from both the antiquarian and the therapeutic points of view, with important results. Exploring in 1869 the site of the hot springs of the old King's bath, he found extensive remains of Roman thermal work and published a descriptive account. In 1877–8 he was successful in exposing the Roman well beneath the King's bath. This discovery was foreshadowed by Alexander Sutherland, M.D. ('An attempt to ascertain and extend the virtues of Bath and Bristol waters, &c.,' 2nd edit. 1764), who followed the researches made by Dr. Lucas in 1755 (cf. R. E. M. PEACH, *Bath Old and New*, pp. 35–6). In 1880–1 Davis found the Great bath and in 1884–6 the Circular bath, both Roman. With a view to collecting information on the nature and management of spas, Davis in 1885 made a tour of the chief continental springs. He applied his knowledge to various improvements at Bath, and was consulted by English corporations owning natural baths, such as Harrogate and Droitwich.

The old Queen's bath, constructed in 1597 and named after Anne, wife of James I, was removed in the course of the Roman discoveries of 1885. Davis's principal original design in connection with the baths was the new Queen's bath, begun in 1886,

completed in 1889, and costing something less than the contract piece of 20,000*l*. This work and the incidental restoration met with criticism on structural as well as archaeological grounds. Reports were made on behalf of the Society of Antiquaries by Professor J. H. Middleton [q. v. Suppl. I] and Mr. W. H. St. John Hope. Controversy in Bath grew warm, and an independent opinion was sought from Alfred Waterhouse, R.A. [q. v. Suppl. II], whose report, dated 14 Jan. 1887, decided (1) that the new works though somewhat slender in construction were not such as to cause apprehension on grounds of stability; (2) that on the whole Davis had judiciously compromised between the utility of the baths and their antiquarian value. Difficulties with the corporation regarding his official duties led in 1900 to the transfer to another of the supervision of the corporate property. But the baths and the provision markets were left in Davis's charge at a fixed salary of 400*l*.

Besides his work for the corporation Davis had an extensive private practice. He designed the church of St. Peter and schools at Twerton, restored several churches, including Northstoke (1888) and that of St. Thomas à Becket at Widcombe, and was architect of the Imperial Hotel, Bath, opened in 1901 and costing 50,000*l*. He was elected a fellow of the Society of Antiquaries in 1850, and published 'Mineral Baths of Bath; the Bath of Bathes Ayde in the Reign of Charles II' (4to, Bath, 1883), besides several pamphlets on the same subject.

The rank of major by which Davis was generally designated was due to his commission in the Worcestershire militia; he had also been a member of the Bath volunteer rifles.

Davis died at his residence, Bathwick Hill, on 10 May 1902. He married in 1858 Selina Anne, eldest daughter of Captain Howarth, who survived him without issue. A portrait by Leonard Skeates is in the Grand Pump Room at Bath.

[Builder, 1902, lxxxii. 504; Building News, lxxxiii. 696; Bath Herald, 10 and 12 May 1902; Keene's Bath Journal, 17 May 1902; Peach, *Bath Old and New*.] P. W.

DAVITT, MICHAEL (1846–1906), Irish revolutionary and labour agitator, born on 25 March 1846, at Straide, co. Mayo, came of a Roman catholic peasant stock, originally from Donegal. His father, who subsisted with his family on a small holding, was head of an agrarian secret society in his

youth, and was evicted in 1852 during the clearances that followed the great Irish famine. He emigrated with his wife and children to Lancashire, and settled at Haslingden. Here the boy Michael, as soon as he was able to work, was sent to a cotton mill. Forced in 1857 to mind a machine ordinarily attended by a youth of eighteen, he was caught in the machinery, and his mangled right arm had to be amputated. Thus disabled before he was twelve, he was removed from the factory and sent to a Wesleyan school. While still a lad, he organised a band of youths to defend catholic churches at Rochdale, Bacup, and Haslingden, which were threatened with destruction in anti-catholic riots. On leaving school, at about fifteen, he became in 1861 printer's devil and newsboy with a printer, who was also postmaster at Haslingden; afterwards he worked as book-keeper and assistant letter-carrier in the same employment. In 1865 he joined the Fenian organisation, and soon became 'centre' of the local (Rossendale) 'circle.' In February 1867 he was one of those told off to attack Chester Castle and seize the arms there. He first showed his abilities in extricating himself and his comrades from this fiasco. In 1868 he was appointed organising secretary of the Irish Republican Brotherhood for England and Scotland, and left his employment at Haslingden to assume the rôle of a commercial traveller in firearms, as a cloak for his revolutionary work—buying firearms and shipping them to Ireland. On 14 May 1870 he was arrested at Paddington while awaiting a consignment of arms from Birmingham. Tried at the Old Bailey by Lord Chief Justice Cockburn, he was sentenced to fifteen years' penal servitude for treason-felony. The principal evidence against him was a letter which he had written to prevent a young Fenian (whose name Davitt never would reveal) from assassinating a supposed spy, but which bore on the face of it (as Davitt's aim in writing was to gain time for the interference of the heads of the organisation) an apparent approval of the deed. He spent over seven years in prison—ten months in Millbank, and the remainder (except one month at Portsmouth in 1872) in Dartmoor. A pamphlet prepared by him in 1878, as the basis of his evidence (20 June 1878) before the royal commission on the working of the Penal Servitude Acts, gives a full account of what he endured, and how every prison rule was strained against him. On 19 Dec. 1877 he was released on ticket-of-leave, as

a result of the exertions of Isaac Butt [q. v.] and the Amnesty Association. In prison he had thought out his plans for an Irish movement of a new kind, to blend revolutionary and constitutional methods, while abandoning secret conspiracy. He at once rejoined the Fenian movement, with the view of converting its heads to this plan. After lecturing for some months in Great Britain on behalf of the amnesty movement, he went in August 1878 to America, whither his family had emigrated. Here he met not only all the leaders of the constitutional and extreme Nationalists but also Henry George. The latter's land programme harmonised with and developed the views which Davitt had already formed independently in prison. Before leaving America, he made a speech at Boston, on 8 Dec. 1878, in which he outlined the new departure in Irish agitation. The essence of his suggestion was to bring the movement for Irish independence into close touch with the realities of life in Ireland by linking it up with the agrarian agitation, and to give the latter a wider scope by demanding the complete abolition of landlordism. On his return to Ireland he laid his plan before the supreme council of the Irish Republican Brotherhood, which rejected it. Davitt proceeded with the work on his own responsibility, enlisting the sympathy of most of the rank and file Fenians. He organised a meeting at Irishtown, Mayo, on 20 April 1879, when the new land programme was put forward. A second meeting, at Westport on 8 June, was attended by Charles Stewart Parnell [q. v.], whom Davitt had convinced of the possibilities of the new movement. The agitation rapidly spread through the west; in August Davitt grouped the various local committees into the 'Land League of Mayo.' The 'Land League of Ireland,' in which Parnell's influence was soon to clash with Davitt's, came into being in October. In November Davitt and others were arrested and tried at Sligo for their share in the movement; but the prosecutions were dropped early in 1880. After the general election of 1880, in which Davitt assisted to procure the successes of Parnell's party, he was expelled from the supreme council of the Irish Republican Brotherhood; he remained an ordinary member of the body till 1882. In May 1880 Davitt went to America to organise the American Land League, and to raise funds. On his return he founded the Ladies' Land League, and devoted himself to the task of preventing outrages in connec-

tion with the policy of 'boycotting.' He also penetrated into Ulster, and addressed an enthusiastic meeting of Orangemen at Armagh on the land question. He urged the issue of the 'No Rent' manifesto in Feb. 1881 instead of later, but the Parliamentary section of the movement postponed its publication till Oct., when the liberal government retorted by suppressing the Land League. Meanwhile Davitt had been arrested as a ticket-of-leave man on 3 Feb. 1881, and endured a second but milder term of penal servitude in Portland. While in prison he was elected to parliament for co. Meath (24 Feb. 1882), but was disqualified as a treason-felony prisoner. He was released on 6 May 1882, and forthwith learned from Parnell that he had concluded the 'Kilmainham Treaty' with the government, that the agitation was to be mitigated, and that the Ladies' Land League had been suppressed by Parnell for declining to accept the compromise. Davitt at once prepared to fight Parnell in favour of a resumption of the agitation; but the assassination of Lord Frederick Cavendish, which took place on the day of Davitt's release, threw him back into alliance with Parnell, whose proposed co-operation with liberalism was necessarily for the time at an end.

After another visit to America, in June 1882, Davitt induced Parnell to found the National League, successor of the suppressed Land League; the programme of the new organisation, however, marked the triumph of parliamentarianism over the more revolutionary ideas of Davitt. He declined office in the National League, but spoke regularly on its platforms. In 1883 (Jan. to May) he was imprisoned on a charge of sedition for a further period of four months in Richmond Bridewell, Dublin. Between 1882 and 1885 he devoted much of his time to advocating land nationalisation, lecturing throughout Great Britain, either alone or in company with Henry George, who was touring in the United Kingdom. He brought George to Ireland, and spoke with him at a meeting in Dublin, on 9 April 1884. This brought on him a categorical repudiation of land nationalisation by Parnell. In 1885, his health having broken down, Davitt visited Italy, Palestine, and Egypt. He opposed the policy adopted by Parnell at the general election of that year, of throwing the Irish vote in England for the conservatives. In 1886 he again visited America, and married Miss Mary Yore, of Michigan. As a token of national regard, his wife was presented with a

house, known as Land League Cottage, at Ballybrack, co. Dublin. This was the only occasion on which Davitt accepted any material gift from the Irish people; he always refused to assent to any public testimonial, supporting himself, often with great difficulty, by his labours as a journalist. It was not till near the close of his life (1901) that a legacy from a relative of his wife relieved him of financial anxiety.

In 1887-8-9 Davitt was engrossed in the work involved by 'The Times' commission [see PARNELL, CHARLES STEWART], which was appointed to investigate the charges brought by 'The Times' against Parnell and others, namely, that their real aim was to bring about the total independence of Ireland, that they had instigated assassination and other outrages, and that they had accepted money and other assistance from open advocates of crime and dynamite. Davitt was not originally included in these charges, but on his presenting himself before the tribunal, 'The Times' repeated the same charges against him, with two additional ones, namely, that he had been a convicted Fenian, and that he had brought about the alliance between the Parnellite home rule party in Ireland and the party of violence in America—both of which were undoubted facts. The chief labour of the defence fell on him, as the link between the constitutional and extreme nationalists, between the Irish and American branches of the movement. It was Davitt who first suspected Richard Pigott [q. v.], and he, by the aid of a volunteer secret service, countered every move of 'The Times' in the collection of evidence (*Fall of Feudalism*, ch. 44-49). When Parnell and the other Nationalists withdrew from the proceedings of the commission, as a protest against the refusal of the judges to order the production of the books of the 'Loyal and Patriotic Union,' Davitt dissented from this course, and continued to appear. Conducting his own case, he made a five-days' speech before the tribunal (Oct. 24-31, 1889), afterwards published as 'The Defence of the Land League,' a book which contains the best record of Davitt's life and work up to that time. In the report of the commission, the chief findings relating to Davitt were that he had entered the agrarian movement with the intention of bringing about the absolute independence of Ireland, and that he had in a special manner denounced crime and outrage. Immediately after the commission's attack had failed, came the proceedings in the

divorce court against Parnell. Davitt had been led by Parnell to believe that the suit brought by William Henry O'Shea [q. v. Suppl. II] was another conspiracy, destined to the same collapse as the Pigott forgeries. He resented Parnell's misrepresentation, and immediately flung himself into the campaign against Parnell's leadership. He had just started 'The Labour World' (first number, 21 Sept. 1890) to be the organ of the labour movement in Great Britain, which was on a fair way to success, but was ruined by Davitt's attitude towards Parnell, and by his personal absorption in the political struggle. The paper lived only till May 1891. Davitt had many times declined a seat in parliament, but he now yielded to the urgencies and needs of the anti-Parnellite party, and in the end of 1891 contested Waterford City against Mr. John Redmond, the leader of the Parnellites after Parnell's death. Defeated here, he was elected for North Meath at the general election of 1892, and was unseated on petition, owing to the use in his favour of clerical influences which he had done his best to stop. He was returned unopposed for North-East Cork at the bye-election of Feb. 1893, but having been declared bankrupt was unseated next June. In 1895 he went lecturing in Australia, and returned home to find himself M.P. for two constituencies, East Kerry and South Mayo; he chose to sit for South Mayo. He was not a parliamentary success, but was always listened to with respect, especially on prison reform, a subject he had long made his own. In 1897 he visited the United States to stop the projected Anglo-American Alliance; his active work was mainly responsible for the rejection of that year's Anglo-American Arbitration Treaty by the United States Senate. In 1898 he helped Mr. William O'Brien to found the United Irish League, an organisation which brought about the reunion of the Parnellite and anti-Parnellite sections. On 25 Oct. 1899 he dramatically withdrew from parliament as a protest against the Boer War. Early in 1900 he went to South Africa in a capacity partly journalistic and partly diplomatic; he held the threads of a plot to bring about European intervention on behalf of the Boers—a plot which broke down because of the hesitancy at a critical moment, and the subsequent death, of Colonel de Villebois Mareuil, who was to have led the French contingent. Davitt fiercely attacked the Dunraven conference report on the land question (1903) and the Wyndham Land

Purchase Act of the same year, the purchase terms of which he regarded as a surrender of much that had been gained by the twenty-five years' agitation that he had started. Temporarily overborne by Mr. William O'Brien, he had the satisfaction of seeing, in little over a year, a complete revulsion of feeling in the Nationalist party with regard to Mr. O'Brien's policy. In 1903-4-5 he paid, mainly as the representative of American journals, three visits to Russia, where his sympathies were with the revolutionary party. At the general election of 1906 he devoted himself to supporting the labour party in England, and helped to secure many of their notable victories. The last months of his life were occupied with a struggle over the English education bill, on which he fell foul of the catholic clergy. The Irish Press having been closed to his letters advocating secular education, he was contemplating the establishment of a weekly paper, to express strongly democratic as well as nationalist views, when he caught cold after a dental operation. Blood poisoning set in, and he died in Dublin on 31 May 1906. He was buried in Straide, co. Mayo, where the 'Davitt Memorial Church' has been erected. His wife survived him with five sons and one daughter. A portrait by William Orpen is in the Dublin Gallery of Modern Art. Another was painted by Mr. H. J. Thaddeus.

Davitt stood for the reconciliation of extreme and constitutional nationalism; although he never wavered, as his latest writings show, from the ultimate idea of an independent Ireland he abandoned at an early stage all belief in those methods of secret conspiracy and armed rebellion which are generally associated with the separatist ideal. His notions of constitutional agitation were, however, always permeated by the vigour of his early revolutionary plans. He also stood for the harmonising of democracy and nationality. With his whole-hearted nationalism he combined from early life a growing conviction that any thoroughgoing regeneration of government and society in Ireland, and indeed throughout the world, must rest on a socialistic basis. In his collectivist, as in his anti-clerical, views he differed from most of the Irishmen with whom he was politically associated. His political affinities inclined to industrial and secularist democracy. His strength of character, disinterestedness, and steadiness of purpose won him the personal respect even of those who held his doctrines to be erroneous or pernicious.

Davitt's principal published works are: 1. 'Leaves from a Prison Diary,' 1884 (to be distinguished from the pamphlet on his experiences in Dartmoor, mentioned above). 2. 'The Defence of the Land League,' 1891. 3. 'Life and Progress in Australasia,' 1898. 4. 'The Boer Fight for Freedom,' 1902. 5. 'Within the Pale' (a study of anti-semitism in Russia), 1903. 6. 'The Fall of Feudalism in Ireland' (a history of the land agitation), 1904. He also wrote many pamphlets and a mass of uncollected journalistic work.

[Davitt's own books, especially *The Defence of the Land League* and *The Fall of Feudalism*; Michael Davitt: *Revolutionary, Agitator, and Labour Leader*, by F. Sheehy Skeffington, 1908; see also *Cashman's Life*, 1882; R. Barry O'Brien's *Life of Parnell*, 1898; *Life of Henry George*, 1900; D'Alton, *History of Ireland*, vol. iii. 1910.] F. S. S.

DAWSON, GEORGE MERCER (1849-1901), geologist, eldest surviving son of Sir John William Dawson [q. v. Suppl. I] by his wife Margaret Mercer, was born on 2 Aug. 1849 at Pictou, Nova Scotia, but was taken to Montreal in 1855, when his father became president of McGill College. At ten he went to the high school in that city, but was soon removed because of weak health, and studied under tutors at home. He joined McGill College for the session of 1868-9, spending the summer of the latter year at Gaspé in dredging for foraminifera, the results of which were described in his first scientific paper. In 1870 he began work at the Royal School of Mines in London. He went through the full course, obtained the associateship, the Duke of Cornwall's scholarship, the Edward Forbes medal and prize in palæontology, and the Murchison medal in geology, and in his summer holidays worked in the Lake district with James Clifton Ward [q. v.]. Dawson returned to Canada in 1872, and next year, after reporting on some mining properties in Nova Scotia and giving lectures at Morrin College, Quebec, was appointed geologist and botanist to the commission for drawing the boundary line between Canada and the United States from the Lake of the Woods to British Columbia. Facing without flinching much toil and hardship, he made a large collection of natural history specimens, now preserved partly at Kew and partly in the British Museum, and his excellent report, published in 1875, described a section over 800 miles in length, of which some 300 were previously unknown even to geographers. Dawson was next appointed

to the Canadian geological survey, and made a long and important series of exploratory investigations in the North West and British Columbia. His reports deal with both economic and scientific geology, and contain many valuable notes on other branches of natural history and on ethnology. He showed the relation of the laramie and cretaceous formations, the occurrence of a fresh-water episode in the latter, the existence of archæan and early palæozoic rocks in the plateau region of British Columbia, and of metamorphosed volcanic rocks in the Cordilleran region of that province and on the Lake of the Woods. Dawson also pointed out that an ice-sheet had once had its centre in British Columbia; believing, however, that the northern part of the great plain had been submerged. The prescience of his remarks on economic questions has been thankfully acknowledged by those engaged in developing the resources of this great territory. After 1884 Dawson took a leading part in a committee formed by the British Association for studying the north-western tribes of Canada, and subsequently engaged in the ethnological survey of the dominion. With W. F. Tolmie he published in 1884 'Comparative Vocabularies of the Indian Tribes of British Columbia.' In 1883 he was made assistant-director of the geological survey and succeeded Dr. A. R. C. Selwyn as director in 1895.

He was appointed one of the Behring Sea Commissioners in 1891 to investigate the conditions of seal life in the North Pacific, making a long cruise in that region (the scientific results of which were published by the Geological Society of America in 1894). Afterwards he took part in the conference at Washington and helped in preparing the British case for the arbitration at Paris in 1893. Sir Richard Webster (now Lord Alverstone) spoke in the highest terms of the value of Dawson's services.

Dawson was elected a fellow of the Geological Society in 1875 and of the Royal Society in 1891. He was also a fellow of the Royal Society of Canada, its president in 1894, and president also of the Geological Society of America in 1900. He received the degree of D.Sc. from Princetown University in 1887, of LL.D. from the Queen's University in 1890, from McGill University in 1891, and from Toronto University in 1897. He was awarded the Bigsby medal of the Geological Society of London in 1891 and the gold medal of the Royal Geographical Society in 1897. He was

created C.M.G. for his services in the Behring Sea arbitration.

Though rather small in stature, frail in aspect, and slightly deformed in consequence of an accident in childhood, Dawson was capable of prolonged physical and mental labour, was an excellent talker, and wrote with facility in prose and verse, the latter both grave and gay. His contributions to science were about 130 in number. He died unmarried at Ottawa of bronchitis, after a two days' illness, on 2 March 1901.

[*Geol. Mag.* 1897 (with portrait) and 1901; *Quarterly Journal of Geol. Soc.* 1902; *Proc. and Trans. Roy. Soc. of Canada* (memoir by Prof. Harrington, with portrait and list of publications), 1902.] T. G. B.

DAWSON, JOHN (1827-1903), trainer of racehorses, born at Gullane, Haddingtonshire, on 16 Dec. 1827, was a younger son in the family of seventeen children of George Dawson, who had previously trained horses at Bogside, in Ayrshire, by his wife Jean Alison. Three brothers who survived infancy, Thomas (*d.* 1880), Joseph (*d.* 1880), and Matthew [q. v. *Suppl.* I], also became expert trainers. All were brought up about their father's training stable at Gullane. Thomas, the eldest, left Gullane in 1830, and settled at Middleham, in Yorkshire, where he trained for Lord Eglinton. In 1838 he was joined by his brother Matthew as 'head lad,' and later Joseph and John also served apprenticeships at Middleham. In 1853, Joseph went to Ilsley. Thomas trained Ellington and Pretender, who won the Derbys of 1856 and 1869; Matthew prepared Thor-manby (1860), Kingcraft (1870), Silvio (1877), and Melton (1885). Joseph alone of the brothers failed to saddle a Derby winner, but he trained winners of the Two Thousand, One Thousand, and St. Leger.

In 1857 John left his eldest brother's stable at Middleham, and took Hamilton House, at Compton, Berkshire, a village which adjoins Ilsley. At Compton he trained Bel Esperanza, the first of four winners of the Lincolnshire Handicap which he saddled. In 1861 he removed to Warren House, Newmarket, where he lived for the remainder of his life. Shortly after settling there he was appointed private trainer to Prince Batthyany and General Peel, and in 1863 Lord Vivian became a patron of the stable. In later years horses belonging to Mr. R. C. Naylor and Sir Robert Jardine [q. v. *Suppl.* II] were trained at Warren House. The Lincolnshire Handicap was won for Prince Batthyany by Suburban in 1862, and by

Vandervelde in 1867; and for Sir Robert Jardine by Wise Man in 1889. For Mr. Naylor, Dawson won the Cesarewitch with Jester in 1878. In 1875 he won the Derby with Galopin. Dawson had four other successes in classic events. He trained Petrarch to win the Two Thousand Guineas and the St. Leger in 1876 for Lord Dupplin; Elizabeth the One Thousand Guineas in 1880 for Mr. T. E. Walker; and Disraeli the Two Thousand in 1898 for Mr. Wallace Johnstone. Other patrons included General Owen Williams, Mr. E. Loder, Mr. Renfrew, and Mr. C. Alexander.

Dawson's triumphant career was checked by the sudden death, in 1883, of Prince Batthyany. One of the two-year-olds belonging at that time to the prince was St. Simon, who won all the races for which he started, and afterwards had a most distinguished career at the stud. Immediately after Prince Batthyany's death, St. Simon was sold to the duke of Portland, and went into Matthew Dawson's stable. Perdita II, who, when mated with St. Simon, produced Florizel II, Persimmon, and Diamond Jubilee, bearers of Edward VII's colours, was for a time trained at Warren House. Dawson gave up training in 1900. He died on 13 May 1903, and was interred in Newmarket cemetery.

In 1855 Dawson married Miss Grant Peddie. Of his five children, George and John enjoyed a reputation as trainers. A daughter, Ellen Rose (*d.* 1884), married Fred Archer [q. v. *Suppl.* I], the jockey.

A cartoon portrait appeared in 'Vanity Fair' in 1896.

[Notes from Mr. John A. Dawson, of St. Albans House, Newmarket; *Baily's Mag.* liv. 235-7; *Sportsman and Sporting Life*, 14 May 1903; *Ashgill, Life of John Osborne*, p. 32; *Ruff's Guide to the Turf.*] E. M.

DAY, SIR JOHN CHARLES FREDERIC SIGISMUND (1826-1908), judge, son of Captain John Day of the 49th foot, of Englishbath, near Bath, by his wife Emily, daughter of Jan Caspar Hartsinck, was born at the Hague on 20 June 1826. His parents were Roman Catholics, and he received his education at Freiburg and at the Benedictine College of St. Gregory at Downside, near Bath. In 1845 he graduated B.A. at London and entered at the Middle Temple (29 Oct.). Called to the bar by that society on 26 Jan. 1849, he chose the home circuit, and early made his mark by becoming joint editor of Roscoe's 'Evidence at Nisi Prius,' and by bringing out the first annotated edition of the Common Law Procedure Act of 1852

(4th edit. 1872), thus acquiring the reputation of an authority on the new methods of pleading and practice. He soon enjoyed a lucrative and substantial business as a junior, owing no small part of his success in advocacy to his whimsical countenance and his variety of facial expression. To the end of his life he retained the whiskers which were fashionable in his early manhood, and his dry humour, aided by much natural shrewdness and a wide acquaintance with human nature, made him irresistible to juries in breach of promise and libel cases. He was also largely employed in election petitions. He took silk in 1872 and was made a bencher of his inn next year; he served as treasurer in 1896. In June 1882 he was made a judge of the Queen's Bench Division, receiving the honour of knighthood. Though he occupied a seat on the bench for nearly twenty years, the reputation he acquired there never equalled that which he enjoyed at the bar; while a sound and capable lawyer, he showed little interest in the problems of law which came before him when sitting in banc, and his apparent inattention, combined with his habit of never taking notes, made him very unpopular with civil litigants. In reality his retentive memory and native commonsense seldom failed him. When administering the criminal law, especially on circuit, he showed a sternness and upheld a standard of conduct which belonged to another age. The severity with which he punished the young roughs locally known as the 'High Rip gang' at Liverpool in 1887 was long remembered with gratitude in the north of England. He was a firm believer in the lash, and by perambulating the worst streets of Liverpool at night accompanied by his marshal and a single detective he got a first-hand acquaintance with the conditions of life in that city. But the sentences which he habitually dealt out in cases of minor crimes or indiscretions were extraordinary as coming from a man who was remarkably tender-hearted in private life; and where sexual immorality was concerned he knew no compassion, and seemed lost to all sense of proportion. Here the intensity of his religious convictions swayed him to the prejudice of judicial calmness. But his punishments were inflicted on a system of his own after careful inquiry, which led to the now universal practice of furnishing the judge with a complete *dossier* of the prisoner, an innovation which in practice does not always conduce to the impartial administration of justice.

The fact of his being a very devout Roman catholic led to the only two incidents in Day's career which brought him prominently before the public at large. In October 1886, as representing his co-religionists, he was appointed chairman of the royal commission to inquire into the Belfast riots of the preceding summer, and his refusal to allow counsel for the incriminated parties to cross-examine the witnesses involved him in an acute controversy with some of the leaders of the Irish bar. In July 1888 he was nominated, with Sir James Hannen [q. v. Suppl. I] and Sir A. L. Smith [q. v. Suppl. II], one of the three members of what was known as the Parnell commission appointed by Act of Parliament to investigate the allegations against certain Irish members contained in the pamphlet entitled 'Parnellism and Crime.' Like his two colleagues Day had never taken any part in politics, but he had a year or two previously made some ill-judged or probably mis-reported remarks about Irishmen at the Liverpool assizes, and his appointment was bitterly assailed by the nationalist members. In the course of debate in the House of Commons (30 July) Mr. John (afterwards Viscount) Morley quoted a private letter from one of the Belfast commissioners, Judge Adams, who wrote that 'Mr. Justice Day is a man of the seventeenth century in his views, a catholic as strong as Torquemada, a tory of the old high fier and non-juror type.' Day was vigorously defended from the ministerial benches. During the protracted proceedings of the Parnell commission he maintained an almost unbroken silence, and his cadaverous features were expressive of profound boredom; but it was gossip in the Temple that it was his insistence on early proof being tendered of the authenticity of the letters attributed to Parnell which forced Pigott into the box and led to the collapse of that part of the case. Day resigned at the beginning of the Michaelmas sittings of 1901, and was sworn of the privy council.

Day's catholicism was of the continental rather than the English type, and he had small sympathy with modern thought or manners. But his convictions did not debar him from warm friendship with those who were his opposites from every point of view, and his constant travelling companion at home and abroad was a fervent baptist and radical, William Willis [q. v. Suppl. II], county court judge. Though no great horseman, he was fond when it was practicable of preserving

the old custom of riding round the circuit. From his early years he had been a keen and discriminating patron of contemporary painting; his collection, comprising some of the choicest works of Millet and Corot, fetched 95,000*l.* when sold by auction (13 May 1909) after his death. He died on 13 June 1908 at his residence, Falkland Lodge, Newbury, and was buried at the Roman catholic cemetery, Kensal Green. He was twice married: (1) on 1 Oct. 1846 to Henrietta (*d.* 26 March 1893), daughter of Joseph Henry Brown, by whom he had six sons and three daughters; (2) on 19 May 1900 to Edith, daughter of Edmund Westby; she survived him. A portrait in oils by Prince Troubetzkoy belongs to his widow. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1888.

[The Times, 14 June 1908; Men of the Time; Hansard, 3rd ser. cccxxix. 806; Sir John Day, by William Willis, K.C. (privately printed), 1909; personal knowledge; private information.] J. B. A.

DAY, LEWIS FOREMAN (1845–1910), decorative artist, born at Peckham Rye on 29 Jan. 1845, was son of Samuel Hulme Day, wine merchant in the City of London, of an old Quaker family of Essex, which claimed descent from John Day (1522–1584) [q. v.], the Elizabethan printer. His mother was Mary Ann Lewis. After attending a school in France, he entered Merchant Taylors' School in January 1853, and on leaving continued his education in Germany for eighteen months. He then after a short time as a clerk went at the age of twenty into the works of Lavers & Barraud, glass painters and designers. Thence he moved to the workshops of Clayton & Bell, makers of stained glass, and there he remained for two years, his principal work being to design the cartoons. In 1870 he worked for Heaton, Butler & Bayne on the decoration of Eaton Hall, Cheshire, and in the same year he started for himself in London. He took from his early training special interest in stained glass, gradually acquiring a wide reputation as a designer for textiles, pottery, carpets, wall-papers, and many other branches of manufacture. His designs were always carefully adapted to the material in which they were to be carried out, and to the processes of manufacture which had to be employed. He belonged to the same school of art-craftsmen as William Morris and Walter Crane, and his influence on contemporary ornament, if not so fully recognised as that of those two artists, was considerable. Many of the best-known designers of his day were taught by him.

One of the first promoters of the Arts and Crafts Society and a founder of the Art Workers Guild, of which he was at one time master, Day was from 1897 to his death almost continuously a member of the council of the Royal Society of Arts, before which society he delivered four courses of Cantor lectures. To the government department, originally that of science and art, and afterwards the board of education, he rendered important and well-appreciated service. From 1890 onwards he examined in painting and ornament, and later was, in addition, associated with William Morris, Walter Crane, and other decorative artists, in examining works sent in by schools of art for national competition. Shortly before 1900 he gave courses of lectures on ornamental art at the Royal College of Art at South Kensington, and he also inspected and reported on provincial schools of art where ornamental work was studied and practised.

When the Victoria and Albert Museum was established in its new building (1909) he was a member of the committee appointed to report upon the arrangement of the collections, and he greatly influenced the scheme which was eventually adopted.

A course of Cantor lectures at the Royal Society of Arts in 1886 on 'Ornamental Design' was followed by the publication of many important volumes on ornament and decoration. On his Cantor lectures were founded: 'Anatomy of Pattern' (1887) and 'The Planning of Ornament' (1887). The work which he esteemed his best was 'Windows' (1897; 3rd edit. 1909), the fruit of an exhaustive study of continental stained glass pursued in holiday tours of twenty years. He was also author of 'Instances of Accessory Art' (fol. 1880), 'Every Day Art' (1882; 2nd edit. 1894; Dutch trans. 1886); 'Alphabets Old and New' (1898; 3rd enlarged edit. 1910); (with Mary Buckle) 'Art in Needlework' (1900; 3rd edit. 1908); 'Lettering in Ornament' (1902); 'Pattern Design' (1903); the South Kensington handbook on 'Stained Glass' (1903); 'Ornament and its Application' (1904); 'Enamelling' (1907); and 'Nature and Ornament' (2 vols. 1908–9).

Day died at his house, 15 Taviton Street, W.C., on 18 April 1910, and was buried in Highgate cemetery. He married Ruth Emma Morrish in 1873, and had one daughter, Ruth.

[Personal knowledge; information from Mrs. Day; Merchant Taylors' School Reg. ii. 330; Manchester Guardian and Glasgow Herald, 19 April 1910; Journal Soc. of Arts, lviii. 560.]
H. T. W.

DAY, WILLIAM [HENRY] (1823–1908), trainer and breeder of racehorses, born on 9 Aug. 1823 at Danebury, Hampshire, was younger son of John Barham Day by an Irish lady whose surname was Goddard. His father, known as 'Honest John,' founded the famous Danebury racing stable, where he had for patrons the duke of Grafton, Lord George Bentinck, and Lord Palmerston, among many others. His grandfather, John Day of Houghton Down Farm, Stockbridge, was racing adviser to the Prince of Wales, afterwards George IV, and acquired the reputation of being able to drink two more bottles of wine than any of his companions. He was the 'Gloomy Day' of Deighton's caricature, made on the Steyne at Brighton in 1801.

William was educated privately with his cousin, the Rev. Russell Day, afterwards a master at Eton, by his uncle, Henry Thomas Day, LL.D., rector of Mendlesham, Suffolk. Entering his father's stable at Danebury, he acquired some fame as a jockey, and rode Lord George Bentinck's horse, Grey Momus, when it won the Ascot Cup. His eldest brother, John, was to succeed the father at Danebury; consequently William started training at Woodyates, by Cranborne Chase, Dorset. There on the splendid downs he trained many good winners, including Mr. James Merry's Lord of the Isles and his own Promised Land, who carried off the Two Thousand Guineas in 1855 and 1859 respectively; Sir F. Johnstone's Brigantine, who won the Oaks and the Ascot Cup in 1869, and many good handicap horses. His brother Alfred, a most elegant rider, often rode his horses. Day also won in 1859 the Goodwood Cup with Promised Land, who finished fourth in the Derby. Day's patrons included Lord Ribblesdale, the marquis of Anglesey, Lord Coventry, and Lord Westmorland.

In 1873 Day gave up training and sold off his stud, which realised upwards of 25,000*l.*, but resumed operations in 1881, when Mr. J. R. Keene sent him some horses to train, including Foxhall, who won the Grand Prix, the Cesarewitch and the Cambridgehire in 1881, and the Ascot Cup in 1882. Day afterwards trained a few horses at Salisbury, but finally retired in 1892. Meanwhile he formed a large breeding stud at Alvediston, near Salisbury, in 1873, and to it he devoted much attention. At that establishment there were over sixty thoroughbred brood mares. Cast-Off, the dam of Robert-the-Devil, winner of the St. Leger (1880), was bred there,

and for a time Flying Duchess, the dam of Galopin, the Derby winner of 1875, was also at Alvediston.

Day, who had literary aptitude, wrote several articles on turf politics in the 'Fortnightly Review.' He published 'The Racehorse in Training' (1880), which was translated into French, and was universally regarded as valuable; 'Reminiscences of William Day, of Woodyates' (1886); and 'The Horse: How to Breed and Rear him' (1888).

Of medium height, and possessed of an iron will, Day was a model man of business. Like his father, who, on Sunday evenings, used to read Blair's sermons to the stable lads until they fell asleep, he was most punctilious in the discharge of his religious duties. For his patrons he won stakes to the value of over 200,000*l.* At one time a comparatively rich man, he lost the bulk of his fortune by speculating in poor land.

Day died at Shirley, Southampton, on 29 Aug. 1908, and was buried by the side of his wife at the parish church, Pentridge, near Cranborne, Dorset. He married his cousin, Ellen, daughter of James Day, veterinary surgeon, of Kenford, Devonshire. They celebrated their golden wedding in 1896. Mrs. Day died shortly afterwards. Of five sons, Alfred James, the youngest, formerly lieutenant in the Middlesex yeomanry, and now a captain of cavalry in the national reserve, alone maintained the family associations with the turf, carrying on a training and breeding establishment near Arundel, Sussex.

[Notes supplied by Mr. Alfred James Day; Ruff's Guide to the Turf; Reminiscences of William Day, of Woodyates; *Sporting Life*, 31 Aug. 1908.] E. M.

DEACON, GEORGE FREDERICK (1843–1909), civil engineer, born at Bridgewater, Somerset, on 26 July 1843, was eldest son of Frederick Deacon, a solicitor of that town, who afterwards practised in Preston and was at one time sheriff of the county palatine. His mother was Katharine, third daughter of William H. Charlton, vicar of St. Mary's, Bryanston Square, London. Educated at Heversham grammar school, he was apprenticed at seventeen to Messrs. Robert Napier & Sons of Glasgow. During his apprenticeship he studied at Glasgow University under Professors Rankine [q. v.] and Thomson (Lord Kelvin) [q. v. Suppl. II].

On the recommendation of Lord Kelvin he was appointed assistant to Cromwell Fleetwood Varley [q. v.], the engineer to the Atlantic Telegraph Company, and under him he took part in 1865 in the

laying of the second Atlantic cable by the Great Eastern steamship. From 1865 to 1871 he practised at Liverpool as a consulting engineer, making so special a study of the Mersey estuary as to become a recognised authority in regard to it. He also lectured on civil engineering and mechanics at Queen's College, Liverpool. From 1871 to 1880 he was borough and water engineer of Liverpool.

As borough engineer he was responsible for the construction or reconstruction of about seventy miles of sewerage; and he laid the inner-circle tramway-rails in 1877, on a system of his own, besides introducing wood pavement into Liverpool and improving the method of set paving by adopting a solid concrete foundation for the wearing surface. His paper on 'Street Carriage-Way Pavements,' which he contributed to the 'Proceedings of the Institution of Civil Engineers' (lviii. 1) in 1879, was awarded a Watt medal and a Telford premium.

As water engineer his work was of even greater importance. In 1873 he invented the well-known waste-water meter which bears his name. The adoption of this meter throughout the corporation's district of supply satisfactorily economised the existing sources, which were becoming inadequate, largely owing to loss through leaky pipes and fittings. In 1875 he presented a paper on the subject to the Institution of Civil Engineers (*Proc.* xlii. 129), and was awarded a Telford medal and premium. In 1880 new sources of water-supply had become necessary, and Deacon projected a scheme, which was adopted, for the utilisation of the river Vyrnwy in North Wales. Thereupon he resigned the duties of borough engineer in order to devote himself entirely to those of water engineer, which he discharged until 1890. The works which Deacon designed, in conjunction with Thomas Hawksley [q. v. Suppl. I], included the fine masonry dam in the valley of the Vyrnwy, forming a lake 1121 acres in extent and having an average depth of seventy feet—the first reservoir in Great Britain in which a high masonry dam was employed. The dam has a maximum height to the overflow level of 144 feet, and impounds about 13,000 million gallons of water. From this lake the water is conveyed to Liverpool by an aqueduct seventy-six miles in length, which traverses three mountain tunnels and crosses under or over several railways and beneath a number of canals and rivers, including the Mersey. Messrs. Hawksley and Deacon were

joint engineers of the undertaking until 1885, when Hawksley retired and the undivided responsibility fell upon Deacon. The works were opened by the duke of Connaught in July 1892. A description of them was presented by Deacon to the Institution of Civil Engineers (*Proc.* cxxvi. 24) and gained for him a George Stephenson medal and a Telford premium.

In both branches of his work in Liverpool Deacon won for himself a high reputation. Every question or problem was studied with the scientific thoroughness with which his former teacher and lifelong friend, Lord Kelvin, had imbued him. He regarded no practical detail as too small for earnest study and attention. He recognised, too, the æsthetic claims of constructional work.

In 1890 Deacon established a consulting practice in Westminster. In that capacity he constructed waterworks for Kendal, Merthyr Tydfil, Todmorden, Biggleswade, Milton (Kent), and other places. At his death he was engaged upon the plans of works, now in course of construction, for supplying Birkenhead from the river Alwen, and of new works for Ebbw Vale. He reported in 1890 to the International Niagara Commissioners on the utilisation of the Falls; in 1897, in conjunction with Sir Benjamin Baker [q. v. Suppl. II], to the London county council on the water-supply of London; and in the same year, in conjunction with Dr. W. C. Unwin and Mr. John Carruthers, on the Coolgardie water-supply scheme.

Deacon was elected an associate of the Institution of Civil Engineers on 3 Dec. 1872, became a full member on 6 Jan. 1874, and was a member of the council from November 1900 until his death. He was also a member of the Institution of Mechanical Engineers and a fellow of the Royal Meteorological Society. He was president of the mechanical science section of the British Association in 1897, as well as of many professional societies. In 1902 the University of Glasgow conferred upon him the honorary degree of LL.D.

He died suddenly at his office, 16 Great George Street, Westminster, on 17 June 1909, and was buried at Addington. In 1910 two memorial windows were placed in Llanwddyn Church, near Lake Vyrnwy, one by members and officials of the corporation of Liverpool, and the other by his family. He married twice: (1) Emily Zoë, eldest daughter of Peter Thomson, of Bombay; and (2) Ada Emma (d. 1912), eldest daughter of Robert Pearce of Rury

St. Edmunds. By his first wife he had one son and three daughters.

Deacon read papers before the Society of Arts, the British Association, and provincial societies, and he wrote the article 'Water-supply' in the 'Encyclopædia Britannica' (10th edit.).

[Min. Proc. Inst. Civ. Eng. clxxvii. 284; Men and Women of the Time, 1899.]

W. F. S.

DEANE, SIR JAMES PARKER (1812-1902), judge, born at Hurst Grove, Berkshire, on 25 June 1812, was second son of Henry Boyle Deane by his wife Elizabeth, daughter of James Wyborn of Hull House, Shelden, Kent. He went to Winchester as a collegier in 1824, and matriculated at St. John's College, Oxford, on 29 June 1829, as a law fellow of founder's kin. In 1833 he obtained a second class in the final classical school and a third in the final mathematical school. He graduated B.C.L. on 28 May 1834, and proceeded D.C.L. on 10 April 1839, being admitted on 2 Nov. following a member of the College of Advocates. He had previously, on 8 Nov. 1837, entered as a student at the Inner Temple, and on 29 Jan. 1841 he was called to the bar by that society. He was made a Q.C. on 16 Jan. 1858, and became bencher of his inn in the same year, serving the office of treasurer in 1878.

In 1854 Deane was appointed legal adviser to Admiral Sir Charles Napier [q. v.] commanding the British fleet in the Baltic: he was present on board H.M.S. Duke of Wellington at the bombardment of Bomarsund, and formed one of the landing party. On the abolition of Doctors' Commons in 1858 Deane transferred himself to the courts of probate and divorce, where he obtained a large practice. An effective speaker and a vigorous advocate, he adapted himself to juries and to the *viva voce* examination of witnesses more readily than some of his old colleagues and rivals. His most conspicuous appearances, however, were in the ecclesiastical courts, in which the practice and the traditions of 'The Commons' still flourished, and for a quarter of a century there were few ecclesiastical cases of interest or importance in which Deane was not retained, the most celebrated of them, perhaps, being those of *Boyd v. Philpotts*, in which the legality of the Exeter reredos was challenged, and of *Martin v. the Rev. A. H. Mackonochie* [q. v.], which dragged on in one shape or another from 1867 to 1882, and in the earlier stages of which he appeared on behalf of the defendant. In 1872 he was

appointed vicar-general of the province and diocese of Canterbury on the resignation of Sir Travers Twiss [q. v.]; he had already (in 1868) been made Chancellor of the diocese of Salisbury by Bishop Hamilton. In 1868 he became admiralty advocate-general. He also discharged from 1872 to 1886, under the title of legal adviser to the foreign office, the duties of the now obsolete office of Queen's advocate. In this capacity he prepared the British case in the arbitration between Great Britain and Portugal over the territory south of Delagoa Bay, and he advised his government throughout the long disputes arising from the action of the Alabama and her consorts in the American civil war. On 1 Aug. 1885 he received the honour of knighthood, and in 1892 was sworn a member of the privy council. His duties as vicar-general did not interfere with his forensic work, and he held the leading brief in the famous case of the missing will of the first Lord St. Leonards [q. v.], tried in 1876. He continued to practise at the bar until increasing deafness forced him to retire. His picturesque figure was one of the most striking features in the proceedings against Bishop King of Lincoln in the library at Lambeth Palace, when he sat as vicar-general in full-bottomed wig and doctor's robes beside Archbishop Benson and his episcopal assessors. On the occasion of the confirmation of Bishop Winnington Ingram as Bishop of London at Bow Church on 17 April 1901, the turbulent conduct of the 'opposers' got beyond his power of control. His last public appearance was at the confirmation of Dr. Paget as Bishop of Oxford a few months later; he was then in his ninetieth year, the greatest age at which any Englishman since Serjeant Maynard is believed to have exercised judicial functions.

He and Dr. T. H. Tristram, Q.C., who survived him until 1912, were the last of the 'civilians' trained in 'The Commons' and described in Dickens's 'David Copperfield' and Warren's 'Ten Thousand a Year.' He died at his house in Westbourne Terrace on 3 Jan. 1902, having resigned his offices a few days previously. He was buried at Brackwood cemetery.

Deane was a strong conservative in politics, and in the general election of Nov. 1868 he contested the city of Oxford against Edward (afterwards Viscount) Cardwell [q. v.] and (Sir) William Vernon Harcourt [q. v. Suppl. II], but was heavily defeated.

He married in 1841 Isabella Frances (d. 1894), daughter of Bargrave Wyborn.

His only surviving son is Sir Henry Bargrave Deane, a judge of the probate, admiralty and divorce division of the high court of justice.

[Foster's Alumni Oxonienses; Foster's Men at the Bar; The Times, 18 April 1901, 4 Jan. 1902; private information.] J. B. A.

DE LA RAMÉE, MARIE LOUISE, 'OUIDA' (1839-1908), novelist, born on 1 Jan. 1839 at 1 Union Terrace, Bury St. Edmunds, was daughter of Louis Ramé and his wife Susan Sutton. She owed all her education to her father, a teacher of French, whose mental power was exceptional. She expanded her surname of 'Ramé' into 'De la Ramée' at an early age. A diary of girlhood from April 1850 to May 1853 (HUNTINGTON, *Memories*, 1911, pp. 228-96) proves her precocity, love of reading, and eagerness to learn. She visited Boulogne with her parents in 1850, and accompanied them to London in 1851 to see the Great Exhibition. In 1859 she was living in London at Bessborough House, Ravenscourt Park, Hammersmith, and her neighbour and medical adviser, Dr. Francis W. Ainsworth, introduced her to his cousin, William Harrison Ainsworth [q. v.]. She began her literary career under Harrison Ainsworth's auspices, publishing in 'Bentley's Miscellany' a short story entitled 'Dashwood's Drag; or, the Derby and what came of it' (1859). Ainsworth, convinced of her ability, accepted and published by the end of 1860 seventeen tales by her, none of which she reprinted, although they brought her into notice. Like her later novels they dealt with dubious phases of military and fashionable life. Her first long novel, 'Granville de Vigne,' appeared in the same magazine in 1863. Tinsley published it in three volumes, changing the title with her consent to 'Held in Bondage' and paying her 80%. On the title-page Miss Ramé first adopted the pseudonym of 'Ouida,' a childish mispronunciation of her name Louise, by which she was henceforth exclusively known as a writer. 'Strathmore' followed in 1865, and 'Idalia,' written when she was sixteen, in 1867. 'Strathmore' was parodied as 'Strapmore! a romance by "Weeder"' in 'Punch' by (Sir) Francis Burnand in 1878. Ouida's vogue, thenceforth established, was assisted by an attack which Lord Strangford made on her novels in the 'Pall Mall Gazette.'

From 1860 onwards 'Ouida' spent much time in Italy. When in London she stayed at the Langham Hotel, and attracted

attention—which was not always flattering—in literary society. William Allingham met her at a dinner in London in December 1868; he describes her as dressed in green silk, with a sinister clever face, her hair down, small hands and feet, and a voice like a carving-knife (H. ALLINGHAM and D. RADFORD, *William Allingham, a Diary*, 1907, pp. 193-4). She made a more favourable impression on Shirley Brooks in 1870 (LAXARD, *Shirley Brooks*, 1907). Bulwer Lytton greatly admired her work, and in 1871 on the publication of 'Folle-Farine' he wrote her an eight-page letter in which he hailed the book as a triumph of modern English romance. In 1874 she settled permanently with her mother in Florence, and there long pursued her work as a novelist. At first she rented an 'apartment' at the Palazzo Vagnonville. Later she removed to the Villa Farinola at Scandicci, three miles from Florence, where she lived in great style, entertained largely, collected *objets d'art*, dressed expensively but not tastefully, drove good horses, and kept many dogs, to which she was deeply attached. She declared that she never received from her publishers more than 1600% for any one novel, but that she found America 'a mine of wealth.' In 'The Massarenes' (1897) she gave a lurid picture of the parvenu millionaire in smart London society. This book was greatly prized by Ouida, but it failed to sustain her popularity, which waned after 1890. Thenceforth she chiefly wrote for the leading magazines essays on social questions or literary criticisms, which were not remunerative.

Unpractical, and not very scrupulous in money matters, Ouida fell into debt when her literary profits declined, and gradually became a prey to acute poverty. Her mother, who died in 1893, was buried in the Allori cemetery at Florence as a pauper. From 1894 to 1904 Ouida lived, often in a state bordering on destitution, at the Villa Massoni, at Sant' Alessio near Lucca. From 1904 to 1908 she made her home at Viareggio, where a rough peasant woman looked after her, and her tenement was shared with dogs which she brought in from the street. A civil list pension of 150% a year offered her by the prime minister, Sir Henry Campbell-Bannerman, on the application of Alfred Austin, George Wyndham, and Lady Paget, was at first declined on the score of the humiliation (AUSTIN, *Autobiography*, 1835-1910, ii. 105-6), but her scruples were overcome by her old friend, Lady Howard of Glossop, and Ouida accepted the recogni-

tion on 16 July 1906. The pension was granted her in August to date from the previous 1 April. An appeal made to her admirers to subscribe for her relief was met by Ouida's indignant denial that she was in want. She died on 25 Jan. 1908, at 70 Via Zanardelli, Viareggio, of the effects of pneumonia, and was buried in the English cemetery at the Bagni di Lucca. An anonymous lady admirer erected over the grave a monument representing the recumbent figure of Ouida with a dog at her feet.

Ouida had an artificial and affected manner, and although amiable to her friends was rude to strangers. Cynical, petulant, and prejudiced, she was quick at repartee. She was fond of painting, for which she believed she had more talent than for writing, and she was through life in the habit of making gifts of her sketches to her friends. She knew little at first hand of the Bohemians or of the wealthy men and women who are her chief dramatis personæ. She described love like a precocious school-girl, and with an exuberance which, if it arrested the attention of young readers, moved the amusement of their elders (cf. G. S. STREET in *Yellow Book*, 1895, vi. 167-176). Yet she wrote of the Italian peasants with knowledge and sympathy and of dogs with an admirable fidelity. Her affection for dumb animals grew into a craze, but it came of her horror of injustice. Her faith in all humanitarian causes was earnest and sincere. She strongly sympathised with the Boers through the South African war.

Slightly built, fair, with an oval face, she had large dark blue eyes, and golden brown hair. A portrait in red chalk, drawn in September 1904 by Visconde Giorgio de Moraes Sarmiento, was presented by the artist to the National Portrait Gallery, London, in 1908. He presented another drawing, made also in her declining years, to the Moyses Hall Museum, Bury St. Edmunds. A memorial drinking fountain (with trough), designed by Ernest G. Gillick, with a medallion portrait, was erected by public subscription at Bury St. Edmunds (unveiled on 2 Nov. 1909); the inscription is by Earl Curzon of Kedleston.

Ouida published forty-four works of fiction—either separate novels or volumes of collected short stories. The most popular were 'Held in Bondage' (1863, 1870, 1900); 'Strathmore' (1865); 'Idalia' (1867); 'Under Two Flags' (1867); 'Tricotrin' (1869); 'Puck' (1870); 'A Dog of Flanders and other Stories' (1872); 'Two Little Wooden Shoes' (1874); 'Moths' (1880);

and 'Bimbi, Stories for Children' (1882), which was translated into French for the 'Bibliothèque Rose.' Her books were constantly reprinted in cheap editions, and some of them translated into French, or Italian, or Hungarian. Many of her later essays in the 'Fortnightly Review,' the 'Nineteenth Century,' and the 'North American Review' were republished in 'Views and Opinions' (1895) and 'Critical Studies' (1900). There she proclaimed her hostility to woman's suffrage and to vivisection, or proved her critical insight into English, French, and Italian literature. Her uncompleted last novel, 'Helianthus' (1908), was published after her death.

Ouida tried to write a play for the Bancrofts, but did not get far beyond the title, 'A House Party' (cf. *The Bancrofts*, 1909, p. 293); a novel of that name appeared in 1887. An opera by G. A. à Beckett and H. A. Rudall was founded in 1893 on her novel 'Signa' (1875), and the light opera 'Muguettes' by Carré and Hartmann on 'Two Little Wooden Shoes.' Plays based on 'Moths' (by Henry Hamilton, produced at the Globe Theatre 25 March 1883) and on 'Under Two Flags' had much success.

DE LA RUE, SIR THOMAS ANDROS, first baronet (1849-1911), printer, born in London on 26 May 1849, was second of the four sons of Warren de la Rue [see RUE, WARREN DE LA], astronomer and inventor, by his wife Georgiana, third daughter of Thomas Bowles of Guernsey. Thomas de la Rue [q. v.] was his grandfather. He entered Rugby in Feb. 1864, and matriculating in 1868 from St. John's College, Cambridge, graduated B.A. in 1871 and proceeded M.A. in 1874. In 1871 he joined the family printing business established by his grandfather, which was celebrated for its playing cards and printed stamps. By his enterprise he helped to increase the firm's reputation for artistic quality and convenience in the production of the postage-stamp, contracts for the manufacture of which the firm held not only for the United Kingdom but for most of the colonies and for many foreign countries. On the death of his father in 1889, and the retirement of his elder brother, Warren, Thomas became head

of the business, and retained that position until 1896, when the firm became a limited company, of which his three sons subsequently became directors. De la Rue was created a baronet on 17 June 1898. He took a generous interest in the Royal Hospital for Diseases of the Chest, City Road, much of his spare time being devoted to its service. He died at his residence, 52 Cadogan Square, on 10 April 1911, and was buried at Golder's Green.

De la Rue married, on 1 Feb. 1876, Emily Maria (*d.* 11 Oct. 1904), daughter of William Speed, Q.C., by whom he had three sons, of whom Evelyn Andros, the eldest, succeeded to the baronetcy, and a daughter.

DE MONTMORENCY, RAYMOND HARVEY, third **VISCOUNT FRANKFORT DE MONTMORENCY** (1835–1902), major-general, born at Theydon Bower, Epping, Essex, on 21 Sept. 1835, was only son of Lodge Raymond, second viscount (1806–1889), by his wife Georgina Frederica (*d.* 1885), daughter of Peter Fitzgibbon Henchy, Q.C., LL.D., of Dublin. Educated at Eton and at the Royal Military College, Sandhurst, he was commissioned as ensign in the 33rd duke of Wellington's regiment on 18 Aug. 1854, promoted lieutenant on 12 Jan. 1855, and served with his regiment during that year in the Crimea in the war with Russia. He did duty in the trenches at the siege of Sevastopol, and took part in the storming of the Redan on 8 Sept., when Sevastopol fell. For his gallantry at the assault he was recommended for the Victoria Cross, but he did not receive it. For his services during the campaign he was given the British medal with clasp for Sevastopol and the Turkish and Sardinian medals.

De Montmorency accompanied his regiment to India. During the Indian Mutiny in 1857–8 he was in charge of a detachment against the mutineers in central India, and for his services he received the Indian Mutiny medal.

Promoted captain on 29 March 1861, de Montmorency exchanged into the 32nd duke of Cornwall's light infantry, and from 6 Dec. 1861 to 31 Dec. 1864 was aide-de-camp to his uncle by marriage, Major-general Edward Basil Brooke, commanding the troops in the Windward and Leeward Islands.

From 4 June 1865 de Montmorency was aide-de-camp to Lieut.-general (afterwards Field-marshal) Sir John Michel [q. v.], commanding the troops in British North America, and next year took part in the repulse of the Fenians, receiving the British medal for his services.

While travelling in Abyssinia, he volunteered under Sir Robert Napier, afterwards Lord Napier of Magdala [q. v.], in the hostilities against King Theodore (Oct. 1867). He accompanied the expedition to the gates of Magdala, when all volunteers were recalled. For his service he received the war medal.

De Montmorency commanded the frontier force during the operations in the Sudan in 1886–7, and received the Khedive's bronze star. In 1887 while commanding the troops at Alexandria with the local rank of major-general, he directed the operations of the British field column of the frontier force during the operations on the Nile, and was mentioned in despatches. He was promoted major-general on the establishment on 30 Nov. 1889, and succeeded to the peerage on the death of his father on 25 December.

From 1890 to 1895 Lord Frankfort commanded a first-class district in Bengal, and from 1895 to 1897 the Dublin district. He retired from the service on 21 Sept. 1897, on attaining 62 years of age. A keen soldier, a strict disciplinarian, and a master of the art of drill, kind-hearted and open-handed, he died suddenly of apoplexy at Bury Street, St. James's, London, on 7 May 1902, and was buried on the 12th in the village churchyard of Dewlish, Dorsetshire, with military honours.

De Montmorency married on 25 April 1866, at Montreal, Canada, Rachel Mary Lumley Godolphin, eldest daughter of Sir John Michel [q. v.]. She survived him. By her he had two sons and three daughters. The eldest son, Raymond Harvey de Montmorency (1867–1900), captain of the 21st lancers, distinguished himself in the charge of his regiment at Omdurman in 1898 and was awarded the Victoria Cross for his gallantry. He served in the South African war and was killed in action in February 1900 at Molteno, in Cape Colony, at the head of the corps of scouts which he had organised and which bore his name. [The Times, 8 May 1902; regimental records; private information.] R. H. V.

DERBY, sixteenth **EARL OF**. [See **STANLEY**, **SIR FREDERICK ARTHUR**, 1841–1908.]

DE SAULLES, GEORGE WILLIAM (1862–1903), medallist, was born on 4 Feb. 1862 at Villa Street, Aston Manor, Birmingham. His grandfather was a Frenchman, but his father, William Henry de Saulles, was settled in Birmingham as a glass merchant. At an early age he began his art training at the Birmingham School of Art, under the master, Mr. Taylor, and there he gained several prizes. He was apprenticed to Mr. Wilcox, die-sinker, in Birmingham, under whom he had varied practice, which included the execution of large labels for Manchester goods, at that time not inartistic in design. He came to London in 1884, and worked for Mr. John H. Pinches, the die-engraver, then in Oxenden Street, Haymarket. In 1888 he returned to Birmingham and worked for Joseph Moore [q. v.], the medallist.

During 1892 De Saulles was employed in London at the Royal Mint, on the death of Leonard Charles Wyon [q. v.], the chief engraver. In January 1893 he was gazetted 'engraver to the mint' (*Ann. Report of Deputy-Master of the Mint* for 1893, p. 30), and from that time till his death was actively engaged in the production of dies for English and colonial coins and for official medals. He was a skilful craftsman who worked with great rapidity, and he designed, modelled and engraved most of his dies. He was in some degree influenced by the French school of Roty and Chaplain, but in his official work there was no great scope for innovation and the play of fancy. He was a man of kindly disposition, entirely devoted to his craft. He was engaged in the preparation of the new seal of Edward VII when he died at Chiswick, after a few days' illness, on 21 July 1903. He was buried in Chiswick churchyard. He was married, but had no children.

His medallist work between 1894 and 1903 includes at least thirty medals and three plaques, among which may be mentioned the following medals: Sir George Buchanan (Royal Society Medal), 1894; Professor Stokes, 1899; Samuel Carnegie, 1901; coronation medal of Edward VII, 1902; Royal Society of British Architects, 1902; National Lifeboat Institution, 1903. Besides these he engraved and designed a number of official medals such as the South Africa medal, 1899–1902; the Ashanti medal, 1900; the Transport Service medal, 1902. A fuller list is given by J. H. Pinches in the 'Numismatic Chronicle,' 1903, pp. 312, 313, and by

Hocking, 'Catal. of Coins in Royal Mint,' ii. p. 301. He executed the dies for the new issue of coins of Queen Victoria in 1893, designed by Thomas Brock. He designed the Britannia reverse of the English bronze coins of 1895, and the issue of English coins made in 1902 after the accession of Edward VII. His signature on the coins is 'De S.' He also designed and engraved the dies for various colonial coins, such as the British East Africa copper coins, 1897; the British Honduras coins 1894; the British dollar for India, 1895, and the Straits Settlements dollar, 1903. He made the last great seal of Queen Victoria (1899), and many designs for official seals for the colonies. At the time of his death he was preparing the models for the great seals of the United Kingdom and those of Ireland and Scotland, subsequently executed by F. Bowcher. He was an exhibitor at the Royal Academy, 1898–1903.

[Memoir in *Numismatic Chronicle*, 1903, pp. 311–313, by Mr. John H. Pinches and private information supplied by him; Hocking's *Catal. of Coins in Royal Mint*, 2 vols. 1906–10; Forrer's *Biog. Dict. of Medallists*, 1904; Annual Reports of Deputy-Master of the Mint.] W. W.

DES VŒUX, SIR (GEORGE) WILLIAM (1834–1909), colonial governor, born at Baden on 22 Sept. 1834, was eighth of the nine children of Henry Des Vœux (1786–1857), who had given up clerical duty at home for foreign travel. The father was third son of Sir Charles Des Vœux (d. 1814), of Huguenot descent, who had held high office in the government of India and was created a baronet in 1787. His mother, his father's second wife, Fanny Elizabeth, eldest daughter of George Hutton—afterwards Hutton-Riddell—of Carlton, Nottinghamshire, died when William was two years old, and the father married in 1839, as third wife, Julia, daughter of John Denison of Ossington, and sister of Speaker John Evelyn Denison, first Viscount Ossington [q. v.]. Des Vœux always spoke with affection of his step-mother.

The family had returned to England from the continent in 1839, settling first in London and then at Leamington.

From a preparatory school William passed to Charterhouse (1845–1853) as a founder, and thence to Balliol College, Oxford, in 1854, but, unable to comply with his father's wish that he should take orders, he left Oxford in his third year without graduating. He went to Canada in 1856,

originally intending to farm, but instead settled at Toronto, graduating B.A. at the university there, and also passing in law. After a brief practice at the Canadian bar, he in 1863 became a stipendiary magistrate and superintendent of rivers and creeks in an up-river district of British Guiana. Transferred to a coast district including extensive sugar estates, which were worked largely by means of East Indian and Chinese 'coolie' labourers, imported under a careful system of indenture and under close government supervision, Des Vœux, new to the conditions, and a somewhat ardent liberal, conceived that the 'coolies' were grievously oppressed by the planters. He was reluctant, as magistrate, to enforce 'the Draconic laws against the coolie indentured labourers,' and rather demonstratively took the part of the labourer against the employer, thereby incurring—though not to the extent which he imagined—the hostility of the planters and the distrust of the government. Relations became so strained that he asked for a transfer to another colony, and was sent as administrator to St. Lucia in 1869. From his new post he at once wrote to Lord Granville of what he regarded as the grievances of the 'coolies' in Guiana. He himself afterwards characterised his letter as 'defective,' 'written in great haste,' and 'without notes to refresh his memory.' 'The Times' described it as 'the severest indictment of public officers since Hastings was impeached.' A royal commission of inquiry was appointed and Des Vœux was recalled to Guiana to prove his case. The commission corrected certain genuine abuses in the labour system, but Des Vœux failed to prove what he afterwards admitted to have been an exaggerated view.

Des Vœux returned to his duties in St. Lucia, 'depressed,' as he says, 'by a sense of personal failure,' although the colonial office did not condemn him. At St. Lucia he reorganised and codified the old French system of law in force there, put right the island finances, and started a central sugar factory.

In 1878 he left St. Lucia and acted for about a year as governor of Fiji during the absence on leave of Sir Arthur Gordon (afterwards Lord Stanmore). Des Vœux carried on with success Sir Arthur's task of creating the first British crown colony in the South Sea Islands, and after a visit home, during which he was appointed governor of the Bahamas (1880) but did not take up the post, he, on the retirement of Sir Arthur

Gordon in 1880, returned to Fiji as actual governor and as high commissioner of the Western Pacific. These posts he filled with credit till 1885. He was governor of Newfoundland in 1886 and of Hongkong from 1887 till his final retirement from the service in 1891.

Thenceforth Des Vœux lived quietly in England, chiefly in London. He published his autobiography, 'My Colonial Service,' in 1903, a pleasant, gossipy book, containing much of interest on colonial administration. He had been made G.C.M.G. in 1893. He died in London on 15 Dec. 1909.

Des Vœux, while on sick leave, married, on 24 July 1875, Marion Denison, daughter of Sir John Pender [q. v. Suppl. I], by whom he had two surviving sons and two daughters.

[Des Vœux, *My Colonial Service*, 1903; public records; personal knowledge.]

E. IM T.

DETMOLD, CHARLES MAURICE (1883–1908), animal painter and etcher, son of Edward Detmold, electrical engineer, by his wife Mary Agnes Luck, was born at Putney on 21 Nov. 1883. Together with his twin brother, Edward Julius, who shared in every stage of his artistic development, he was distinguished by extreme precocity. The two began as children, living at Hampstead, to draw and study animals in the Zoological Gardens and Natural History Museum, and they exhibited at the Royal Academy while still in their fourteenth year. On the advice of Burne-Jones they were not sent to any art school. They were profoundly influenced by Japanese art, and developed a style in which a searching study of natural forms, especially of the plumage of birds, was always subordinated to decorative arrangement. In 1897 both brothers began to etch, and in 1898 had made sufficient progress to issue jointly a portfolio of eight etchings of birds and animals. In 1899 a volume of coloured reproductions of their drawings was published by Dent under the title 'Pictures from Birdland.' In the same year appeared the first of a series of etchings executed jointly by the two brothers, each working on the same plate, which continued at intervals till 1906. Maurice produced in all ten etchings and two woodcuts in collaboration with Edward, and twenty-five etchings executed entirely by himself, though in part from drawings by his brother. Many of the brothers' etchings are immature, but the technical ability displayed in the best of them, especially

in the latest of the joint works, is very remarkable. In 1900 the Detmolds held an exhibition of their prints and water-colours at the Fine Art Society's galleries. In 1904 they contributed a joint etching to 'The Artist Engraver,' and on 12 Jan. 1905 they were elected associates of the Royal Society of Painter Etchers; they contributed some of their best work to the 1905 exhibition, but afterwards resigned their membership; two plates produced late in that year were Maurice's last etched works. Jointly with his brother he painted large illustrations in water-colour to Rudyard Kipling's 'Jungle Book,' which were published in 1903. For several years the two Detmolds, who continued to reside at Hampstead, spent part of the year at Ditchling, Sussex. On 9 April 1908, when about to leave Hampstead for the country, Maurice committed suicide by inhaling chloroform; his twin brother survives him.

[M. H. Spielmann in *Mag. of Art*, Jan. 1900 (portrait); A. Graves, *Royal Acad. Exhibitors; Cat. of Royal Soc. of Painter Etchers*, 1905; *The Times*, 14 April 1908; art. by C. Dodgson in *Die Graphischen Künste*, Vienna, 1910, xxxiii. 16, with complete catalogue of the etchings; private information.] C. D.

DE VERE, AUBREY THOMAS (1814–1902), poet and author, born at Curragh Chase, Adare, co. Limerick, Ireland, on 10 Jan. 1814, was the third son of a family of five sons and three daughters of Aubrey Thomas Hunt, afterwards Sir Aubrey de Vere, second baronet [q. v.], by his wife Mary (*d.* 1856), eldest daughter of Stephen Edward Rice of Mount Trenchard, co. Limerick, and sister of Thomas Spring-Rice, first Lord Monteagle [q. v.]. His elder brothers Vere and Stephen de Vere [q. v. Suppl. II] successively inherited their father's baronetcy. Save for a three years' visit to England between 1821 and 1824, Aubrey's boyhood was spent at his Irish home, where he was educated privately. While he was a boy a tutor encouraged an enthusiasm for English poetry, especially that of Wordsworth. In October 1832 he entered Trinity College, Dublin. 'Almost all the university course' was uncongenial and he devoted himself to metaphysics. In 1837 he won the 'first Downes premium' for theological essay-writing. He left college next year. To his father's wish that he should take orders in the established church he offered no objection and the idea was present to his mind for many years, but no active step was taken. His

time was spent in travel or in literary and philosophical study. In 1838 he visited Oxford and there first met Newman, who after Wordsworth's death filled the supreme place in De Vere's regard, and Sir Henry Taylor [q. v.], who became his lifelong friend. Next year he visited Cambridge and Rome. He was introduced at London or Cambridge to the circle which his eldest brother Vere and his cousin, Stephen Spring Rice, had formed at the university; of this company Tennyson was the chief, but it included Monckton Milnes, Spedding, Brookfield, and Whewell. In 1841 De Vere, whose admiration of Wordsworth's work steadily grew, made in London the poet's acquaintance. In 1843 he stayed at Rydal. He regarded the invitation as 'the greatest honour' of his life, and the visit was often repeated. He came to know Miss Fenwick, Wordsworth's neighbour and friend, and he began a warm friendship, also in 1841, with the poet Coleridge's daughter, Sara Coleridge [q. v.]. In 1843–4 De Vere travelled in Europe, chiefly in Italy, with Sir Henry Taylor and his wife. In 1845 he was in London, seeing much of Tennyson, and in the same year he made Carlyle's acquaintance at Lord Ashburton's house. Later friends included Robert Browning and R. H. Hutton. After visits to Scotland and the Lakes, De Vere returned to Ireland at the beginning of 1846 to find the country in the grip of the famine. He threw himself into the work of the relief committees with unexpected practical energy.

De Vere had already begun his career as a poet by publishing in 1842 'The Waldenses and other Poems,' a volume containing some sonnets and lyrics which now have a place in modern anthologies. 'The Search after Proserpine and other Poems' came out in 1843, the title-poem winning Landor's praise. Now in a poem 'A Year of Sorrow' he voiced the horrors of the winter 1846–7. Turning to prose, in which he showed no smaller capacity than in verse, he published in 1848 'English Misrule and Irish Misdeeds.' There he supported the union and loyalty to the crown, but betrayed intense Irish sympathy, criticised methods of English rule, and deprecated all catholic disabilities. Through all the critical events in Irish history of his time he maintained the same point of view. He always opposed concession to violent agitation, but when, after the Phoenix Park murders in 1882, he wrote a pamphlet on 'Constitutional and Unconstitutional Political Action,' he

admitted no weakening in his love of his country.

Meanwhile the death of his father in July 1846 and the experience of the Irish famine deepened De Vere's religious feeling, and from 1848 his sentiment inclined towards the Roman catholic church. Carlyle and other friends warned him in vain against the bondage which he was inviting. But in Nov. 1851 he set out for Rome in company with Henry Edward Manning, and on 15 Nov. was received into the Roman catholic church on the way in the archbishop's chapel at Avignon (see his explanatory letter to Mrs. Coleridge written the same day in WILFRID WARD, *Aubrey de Vere*, 1904, pp. 198, 199; and his own *Religious Problems of the 19th Century*, 1893).

In 1854 he was appointed by the rector, Newman, to be professor of political and social science in the new Dublin catholic university (cf. WILFRID WARD, *Cardinal Newman*, i. 359, 1912). He discharged no duties in connection with the post, but he held it in name until Newman's retirement in 1858. At Pope Pius IX's suggestion he wrote 'May Carols,' hymns to the Virgin and saints (1857; 3rd edit. 1881), with an introduction explaining his conversion.

Thenceforth he lived chiefly in his beautiful Irish home, exchanging visits and corresponding with his friends and publishing much verse and prose. Tennyson had spent five weeks with De Vere at Curragh in 1848, and De Vere from 1854 onwards constantly visited Tennyson at Farringford and Aldworth. Always interested in Irish legend and history, De Vere published in 1862 'Inisfail, a Lyrical Chronicle of Ireland,' illustrating the Irish annals of six centuries, and after another visit to Rome in 1870 set to work on 'The Legends of St. Patrick,' his most important work of the kind, which appeared in 1872. He made a first attempt at poetic drama in 'Alexander the Great' (1874), which was followed by 'St. Thomas of Canterbury' in 1876. The two dramas were designed to contrast pagan and Christian heroism.

Death of friends saddened his closing years. He published a volume of 'Recollections' in 1897, and next year he revisited the Lakes and other of his early English haunts. He died unmarried at Curragh Chase on 21 Jan. 1902, and was buried in the churchyard at Askeaton, co. Limerick.

A coloured drawing of De Vere at twenty, showing a handsome countenance, and an oil portrait also done in youth by Samuel Laurence, are at Curragh Chase. An oil

painting by Elinor M. Monsell (now Mrs. Bernard Darwin) when De Vere was eighty-seven is in her possession.

De Vere was a charming conversationalist; his grace of thought and expression was said to shed 'a moral sunshine' over the company of hearers, and he told humorous Irish stories delightfully. His verse is intellectual, dignified, and imaginative, but somewhat too removed from familiar thought and feeling to win wide acceptance. A disciple of Wordsworth from the outset, he had a predilection for picturesque and romantic themes. He was at his best in the poems on old Irish subjects, and in his sonnets some of which like 'The Sun-God' and 'Sorrow' reach a high standard of accomplishment. Sara Coleridge said of him that he had more entirely a poet's nature than even her own father or any of the poets she had known. His poetry enjoyed much vogue in America. An accomplished writer of prose, De Vere was judged by R. H. Hutton to be a better critic than poet. His critical powers are seen to advantage throughout his 'Critical Essays' (3 vols. 1887-9), but his correspondence with Sir Henry Taylor contains his best literary criticism.

Besides the volumes of verse cited De Vere wrote: 1. 'The Infant Bridal and Other Poems,' 1864; 1876. 2. 'Antar and Zara, an Eastern Romance,' 1877. 3. 'The Foray of Queen Meave,' 1882. 4. 'Legends and Records of the Church and Empire,' 1887. 5. 'St. Peter's Chains, or Rome and the Italian Revolution,' 1888. 6. 'Mediæval Records and Sonnets,' 1893. Other prose works are: 1. 'Picturesque Sketches of Greece and Turkey,' 2 vols., 1850. 2. 'The Church Settlement of Ireland,' 1866. 3. 'Ireland's Church Property and the Right Use of it,' 1867. 4. 'Pleas for Secularization,' 1867. 5. 'Ireland's Church Question,' 1868. 6. 'Proteus and Amadeus: a Correspondence about National Theology,' 1878. 7. 'Ireland and Proportional Representation,' 1885.

Brooke and T. W. Rolleston, *A Treasury of Irish Poetry*, 1900, pp. 311-14; Hallam, Lord Tennyson's *Alfred Lord Tennyson*, 1897, and his *Tennyson and his Friends*, 1911; Sir Henry Taylor, *Autobiography*, 1885; Mary Anderson, *A Few Memories*, 1896; private information.] E. L.

DE VERE, SIR STEPHEN EDWARD, fourth baronet (1812-1904), translator of Horace, and elder brother of the above, was born at Curragh Chase, Adare, co. Limerick, on 26 July 1812. He was educated at Trinity College, Dublin, and shared through life the literary tastes of his family. After reading at Lincoln's Inn, he was called to the Irish bar in 1836. His life was dedicated to the service of his fellow-countrymen, and he worked hard for the relief of the distress during the Irish famine. He believed emigration to be the only panacea, and encouraged the young men to go out to Canada. Hearing of the terrible sufferings of the emigrants on the voyage, in May 1847 he went himself as a steerage passenger to Canada. The emigrant ships were sailing vessels, and the voyage took six weeks or more. He returned to England in the autumn of 1848. His letter describing the voyage was read in the House of Lords by Lord Grey, with the result that the Passengers Act was amended, and proper accommodation provided for emigrants. His admiration of the Irish catholic peasants led him to embrace the Roman catholic religion, and his reception into that church took place during his visit to Canada in 1848.

De Vere was member of parliament for Limerick (1854-9). He was a liberal, but, though opposed to home rule, approved Gladstone's Land Act. He succeeded his brother Vere as fourth baronet in 1880. He died unmarried on 10 Nov. 1904 at Foynes, co. Limerick, an island in the river Shannon, and was buried there, by the door of the Roman catholic church, which was built mainly by his exertions. A fountain was erected in the village during his lifetime to commemorate his work in the district. His kindness to his tenants was remarkable; they were suffered to help themselves to wood from the park, and even, it is said, to the deer. The baronetcy became extinct at his death.

De Vere published 'Translations from Horace' in 1886, together with some original verse. The renderings of Horace are vigorous and are often finely turned, but he expands freely. He wrote also a few pamphlets, including 'Is the Hierarchy an Aggression?' in 1851 (two edits.).

[The Times, 11 Nov. 1904; Wilfrid Ward, Aubrey de Vere, pp. 183-4; Aubrey de Vere, Recollections, 1897, pp. 252-4; private information.] E. L.

DEVONSHIRE, eighth DUKE OF. [See CAVENDISH, SPENCER COMPTON, 1833-1908.]

DE WINTON, SIR FRANCIS WALTER (1835-1901), major-general and South African administrator, born at Pittsford, Northamptonshire, on 21 June 1835, was second son of Walter de Winton (1809-1840), of Maesllwch Castle, Radnorshire, whose surname was changed from Wilkins to De Winton by royal licence in 1839. His mother was Julia Cecilia, second daughter of Richard John Collinson, rector of Gateshead.

Educated at the Royal Military Academy, Woolwich, he entered the royal artillery as second lieutenant on 11 April 1854. Serving in the Crimean war, he was present at the siege and fall of Sevastopol, and received the medal with one clasp, Turkish medal, and the légion d'honneur, 5th class. Becoming captain in 1861, he acted as A.D.C. to Sir W. Fenwick Williams [q. v.] when commanding the forces in British North America, and was again on his staff when he was lieutenant-governor of Nova Scotia from 1864 to 1867 and when he was governor of Gibraltar in 1870-5. From 1877 to 1878 De Winton was military attaché at Constantinople, and from 1878 to 1883 he was secretary to the marquis of Lorne (afterwards ninth duke of Argyll) when governor-general of Canada. Promoted lieutenant-colonel in 1880, he became brevet-colonel in 1884, and was made C.M.G. in 1882 and K.C.M.G. in Feb. 1884.

In 1885 he was appointed administrator-general of the Congo under the Belgian government, just before it was raised to the rank of a state. He held this office only until 1886, when he was created a commander of the Order of Leopold. In 1887 he acted as secretary of the Emin Pasha relief committee, and assisted (Sir) H. M. Stanley [q. v. Suppl. II] in his preparations for the relief expedition (H. M. STANLEY, *In Darkest Africa*, i. 40). Subsequently Sir Francis, who became a substantive colonel in 1887, commanded the expedition against the Yonnies on the West Coast of Africa. Robarrie, the stronghold of the insurgents, was captured on 21 Nov. 1887, and the rebellion suppressed. For his services De Winton was made a C.B. in March 1888, receiving the medal and clasp, and on his return home he was appointed assistant quartermaster-general at headquarters. The end of 1889, however, found him once more in Africa. Repeated requests had been made by the King of Swaziland that his country should be taken under the protection of the British government, owing to the aggressive attitude of the Boers, but the government had declined to interfere. Left to them-

selves, the Boers gained virtual possession of the pastoral resources of Swaziland. In 1889 De Winton was sent as a commissioner to Swaziland, with instructions to hold an inquiry into its affairs in conjunction with a commissioner of the South African republic. He reached Pretoria in Nov. 1889, and after several interviews with President Kruger left for Swaziland, accompanied by Generals Joubert and Smit. The joint commissioners held a meeting of the native chiefs and head-men, and, amongst other things, promised them that the independence of the Swazis should be maintained by both governments; but, according to the report which De Winton subsequently made respecting his mission, the Swazis had already parted 'not only with all their actual territory but with rights which should only belong to the government of a country, to a lot of adventurers whose sole object was to make money by them.' He therefore considered a British protectorate inadvisable and impracticable. Not until the close of the South African war was the position of the Swazis improved. In May 1890 Sir Francis, who retired from the army on 21 June of that year with the honorary rank of major-general, was appointed governor of the Imperial East African Association's possessions; but he resigned in June 1891. In January 1892 he was appointed controller and treasurer of the household of the duke of Clarence, after whose death in January 1892 he continued to act in the same capacity in the household of the duke of York, now King George V. He was promoted G.C.M.G. in 1893. He was hon. sec. of the Royal Geographical Society in 1888-9. He was made hon. LL.D. of Cambridge in 1892, and was also hon. LL.D. of Durham. He died at Llanstephan, Llyswen, South Wales, on 16 Dec. 1901, and was buried at Glasbury, Breconshire.

He married in 1864 Evelyn, daughter of Christopher Rawson of Lennoxville, Canada, and had issue two sons and two daughters. One son predeceased him in 1892.

[Burke's Landed Gentry; The Times, 18, 19, and 21 Dec. 1901; G. Schweitzer, Life and Work of Emin Pasha, 1898, i. 309; H. M. Stanley, Autobiography, 1909, p. 338.]

J. H. L.-E.

DE WORMS, HENRY, first BARON PRIBRIGHT (1840-1903), politician, born in London on 20 Oct. 1840, was third and youngest child of Baron Solomon Benedict de Worms (1801-82), by his wife Henrietta, eldest daughter of Samuel Moses Samuel of London. The father, Solomon de Worms,

was son of Benedict de Worms of Frankfort-on-the-Maine, by his wife Jeanette, eldest daughter of Meyer Amschel Rothschild of the same city, and sister of Nathan Meyer Rothschild [q. v.], the first of the Rothschild family to settle in England. Solomon de Worms and his two brothers came to England in 1815 and formed a banking and colonial business in London. Becoming interested in coffee-planting in Ceylon, they did much to further the economic development of the island (Sir J. EMERSON TENNENT, *Ceylon*, 5th edit. ii. p. 250). Solomon de Worms was created hereditary baron of the Austrian empire in 1871, and in 1874 Queen Victoria gave him and his descendants permission to use the title in England, in recognition of the services rendered by the family to Ceylon.

Henry was educated at King's College, London, of which he became a fellow in 1873. He originally intended to devote himself to medicine (MONTAGU WILLIAMS, *Reminiscences*, i. p. 64), but in 1860 he entered the Inner Temple as a student, and in 1863 was called to the bar, joining the old home circuit and practising at the Kent sessions. Later he engaged with his eldest brother, George, in the management of the family business in Austin Friars, until it was dissolved in 1879.

From early manhood De Worms was interested in public affairs both at home and abroad. A frequent visitor to Austria, he formed a close acquaintance with the Austrian statesman Count von Beust, which grew more intimate during Beust's tenure of the Austrian embassy in London (1871-8). After Beust's death in 1886 De Worms edited with an introduction an English translation of the count's memoirs (1887, 2 vols.). Meanwhile De Worms had become an active politician in England on the conservative side. Beust had introduced him by letter to Disraeli in 1867, with the result that he contested the borough of Sandwich in Nov. 1868, when he was defeated. He was returned at the general election of 1880 as the conservative member for Greenwich, in succession to Gladstone, and was made parliamentary secretary to the board of trade in Lord Salisbury's first administration (June 1885-Jan. 1886). In Nov. 1885 he was elected for the East Toxteth division of Liverpool and was re-elected in June 1886. He resumed office at the board of trade in Lord Salisbury's second administration, and retained that position until February 1888, when he was appointed under-secretary for the colonies (1888-92) and a member of the

privy council, being the first Jew upon whom this honour was conferred. On 24 Nov. 1887 an international conference on sugar bounties met in London in the interest of the sugar-growing colonies. The United States was not represented. De Worms was chosen president. As one of the British plenipotentiaries he signed a protocol with a convention (19 Dec. 1887), wherein all the representatives of sugar producing or manufacturing countries condemned in principle the bounty system, and recommended legislation for its abolition. De Worms early next year visited the chief European capitals to urge practical effect being given to the convention. All countries, save France, Denmark, and Sweden, signed (30 Aug. 1888) a final convention, but this was not ratified by the English parliament. De Worms, despite the failure of his efforts, continued to denounce the bounty system in the interest of the sugar-growing colonies. On 15 Nov. 1895 he was raised to the peerage as Baron Pirbright, taking the title from the village of Pirbright, Surrey, where he had acquired an estate.

In the Jewish community he was long a prominent worker, serving as president of the Anglo-Jewish Association (1872-86). In 1886, on the marriage of his daughter Alice to John Henry Boyer Warner of Quorn Hall, Leicestershire, a union contrary to Jewish observance, he severed his connection with the Jewish community. He died on 9 Jan. 1903, and was buried in the churchyard of Wyke St. Mark, near Guildford.

De Worms, who was elected a fellow of the Royal Society, published: 1. 'The Earth and its Mechanism,' 1862. 2. 'The Austro-Hungarian Empire,' 1870; 2nd edit. 1872. 3. 'England's Policy in the East,' 1877.

He married: (1) in 1864 Fanny, eldest daughter of Baron von Todesco, of Vienna, by whom he had three daughters, and whom he divorced in 1886; and (2) in 1887 Sarah, then Mrs. Barnett, only daughter of Sir Benjamin Samuel Phillips. He left no heir.

A portrait of Lord Pirbright in his peer's robes, painted by Sir Luke Fildes, R.A., is in possession of Lady Pirbright. A cartoon portrait by 'Ape' appeared in 'Vanity Fair' in 1880. A public hall and recreation ground commemorate him at Pirbright. [Jewish Chronicle, 16 Jan. 1903; Hansard's Debates; private information.] M. E.

DIBBS, SIR GEORGE RICHARD (1834-1904), premier of New South Wales, born in Sydney on 12 Oct. 1834, was youngest son of Capt. John Dibbs, formerly

of the East India Co.'s service, by his wife Sophia Elizabeth Allwright. He was educated in Sydney at St. Philip's Church of England school and at Dr. Lang's Australian College. In 1857 he joined his father-in-law in a sugar refinery which passed into other hands. In 1859 he formed a shipping business (joined by his brother next year) in Sydney and Newcastle (New South Wales), and started a successful branch at Valparaíso. In 1866 the firm became bankrupt on the failure of the Agra bank. Later the creditors were paid in full, and Dibbs & Co. became one of the foremost firms in Sydney. In 1868 he toured through Europe and the British Isles. In 1871 he was cast in a libel suit and spent a year in Darlinghurst debtors' prison rather than pay damages.

At forty years of age he began his political career, advocating republicanism and free trade. He was one of the leading members of the Public Schools League, which championed free compulsory and secular education in state primary schools. In 1874 he was elected one of the members for West Sydney of the legislative assembly of New South Wales. In 1877 he was defeated, but in 1882 was returned for St. Leonards. In January 1883 he became treasurer and colonial secretary in the ministry of Sir Alexander Stuart [q.v.]. At this time, owing to enormous sales of crown land, the state coffers were overflowing with money. The Stuart-Dibbs government passed a law stopping these sales. On 7 Oct. 1885 Sir George Dibbs succeeded Sir Alexander Stuart as premier, first holding the office of colonial secretary, then that of treasurer. His ministry was defeated on 22 Dec. 1885. From 26 Feb. 1886 to January 1887 he was colonial secretary in the Jennings ministry. In 1887 he lost his seat at St. Leonards to Sir Henry Parkes [q.v. Suppl. I], but was immediately returned by the Murrumbidgee. From 17 Jan. to 6 March 1889 he was again premier and colonial secretary. During his new term of office he declared his conversion from free trade to protection and succeeded in carrying a tariff. His republican views had undergone modification, and in March 1891 he was appointed a delegate to the federation convention held in Sydney, in spite of Sir Henry Parkes's objection on the ground of his republican sympathies. On 23 Oct. 1891, on the defeat of Sir Henry Parkes's ministry, Sir George Dibbs became, for a third time, premier and colonial secretary. In June 1892 he visited England as premier of his colony and on a special mission to reassure London capitalists of the financial

stability not only of New South Wales but of Victoria, South Australia, Tasmania, and New Zealand. He was largely successful in his mission, and was created K.C.M.G. on 23 July 1892. In 1893 a financial crisis followed, many banks closed their doors, and the panic was stopped only by the prompt action of Sir George Dibbs's government in giving the banks a state guarantee. His popularity was thereby immensely increased, but he himself became bankrupt. He resigned his seat, while retaining the premiership, and was at once re-elected. At the elections in July 1894 he was defeated, and resigned office. He retired from political life in July 1897 and from that date was managing trustee of the savings banks of New South Wales till his death at Sydney on 5 Aug. 1904.

He married in 1857 Annie Maria, daughter of Ralph Meyer Robey, of the legislative council of New South Wales. Two sons and nine daughters survived him.

[Mennell's Dict. of Australas. Biog.; British Australasian, 18 Aug. 1904; Sydney Mail, 10 Aug. 1904.] A. B. W.

DICEY, EDWARD JAMES STEPHEN (1832-1911), author and journalist, born on 15 May 1832 at Claybrook near Lutterworth, Leicestershire, was second son of Thomas Edward Dicey, of an old Leicestershire family, who was senior wrangler in 1811, was a pioneer of the Midland Railway, and owned the 'Northampton Mercury.' His mother Anne Mary, sister of Sir James Stephen [q.v.], was aunt of Sir James Fitzjames Stephen [q.v.] and Sir Leslie Stephen [q.v. Suppl. II]. His younger brother is Professor Albert Venn Dicey.

Educated at home and, for about two years, at King's College, London, Edward went up to Trinity College, Cambridge, in 1850, was president of the Cambridge Union, and graduated B.A. in 1854 with a third class in the classical tripos, and as a senior optime in mathematics. After leaving Cambridge he went for a short time into business without success, and then took to writing, for which he had inherited from his mother and her family a singular facility. He travelled abroad and interested himself in foreign politics. In 1861 he published both 'Rome in 1860' and 'Cavour—a Memoir,' thereby establishing his position as a writer on public matters (GRAVES's *Life and Letters of Alexander Macmillan*, p. 180). In 1862 Dicey visited America, and wrote on the American civil war in 'Macmillan's Magazine' and the 'Spectator' with 'admirable honesty of style and thought,' and in a 'quiet judicial

tone' (*ibid.*). There followed in 1863 'Six Months in the Federal States,' which 'met with a somewhat lukewarm reception,' on account of the northern sympathies of the author (*ibid.*).

In 1861 Dicey became connected with the 'Daily Telegraph,' and his style and knowledge of foreign questions led to his being made a permanent member of the staff in 1862. Among his colleagues were Sir Edwin Arnold [q.v. Suppl. II], an old school friend, Francis Lawley [q.v. Suppl. II], and George Augustus Sala [q.v.]. He was a leader-writer for the paper, and also acted as special correspondent in the Schleswig-Holstein war of 1864, and the Seven Weeks' war of 1866. He embodied these experiences in the volumes 'The Schleswig-Holstein War' (1864), and 'The Battle-fields of 1866' (1866). He afterwards described other foreign excursions in 'A Month in Russia during the Marriage of the Czarevitch' (1867), and in 'The Morning Land, being Sketches of Turkey, the Holy Land, and Egypt' (1870), the result of three months' tour in the East.

While in the East in 1869 he accepted an offer of the editorship of the 'Daily News,' and held this post for three months in 1870. On leaving it he at once became editor of the 'Observer,' and filled that office for nineteen years (1870-89), continuing to write for the paper for some time after he ceased to edit it.

Subsequently he was a constant contributor to the 'Nineteenth Century,' the 'Empire Review,' and other periodicals. His interest in foreign politics remained keen, especially in the affairs of Eastern Europe. He was a frequent visitor to Egypt, and formed at first hand well-defined views of England's position there, at one time advocating the annexation of the country by Great Britain. He was a strong supporter of friendly relations between England and Germany, and closely studied South African matters in later years.

His latest books, which indicate the range of his interest, were: 1. 'England and Egypt,' mainly papers republished from the 'Nineteenth Century,' 1881. 2. 'Victor Emmanuel' in the 'New Plutarch' series, 1882. 3. 'The Peasant State, an Account of Bulgaria in 1894,' 1894. 4. 'The Story of the Khedivate,' 1902. 5. 'The Egypt of the Future,' 1907.

Dicey had entered at Gray's Inn as a student in 1865, and was called to the bar in 1875, but did not practise. During his later life he made his home in chambers in the Inn, of which he became a bencher in

1896, and treasurer in 1903 and 1904. In 1886 he was made a C.B. He was a familiar figure at the Athenæum and Garrick clubs. He died at his chambers in Gray's Inn on 7 July 1911, and was buried in the Brompton cemetery, the first part of the funeral service taking place in Gray's Inn Chapel. He married in 1867 Anne Greene Chapman of Weymouth, Massachusetts; she died in 1878. He had one son, who died in his father's lifetime. A portrait of him by a French artist, M. Laugée, is in the possession of his cousin, Godfrey Clark, Talygarn Pontyclun, Glamorganshire.

Dacey was by nature a singularly good observer; he had a great store of knowledge, much dry humour, a cool judgment, and a sound and vivid style. Though in a sense reserved and indifferent to outward appearances, he associated easily and genially with men around him, especially with foreigners, while he possessed a rare capacity for easy and clear description of scenes and events which were passing before his eyes. Being neither didactic nor controversial, nor in the ordinary sense professional, he exercised by his writings alike in books and newspapers considerable influence on public opinion.

C. P. L.

DICKINSON, HERCULES HENRY (1827-1905), dean of the Chapel Royal, Dublin, youngest son of Charles Dickinson, afterwards bishop of Meath, by his wife Elizabeth, daughter of Abraham Russell, of Limerick, was born at Dublin on 14 Sept. 1827. Two brothers, Charles and John Abraham, were in holy orders, and the eldest of his four sisters, Elizabeth, married John West, afterwards dean of St. Patrick's. Dickinson was educated at Dr. Flynn's school, Harcourt St., Dublin, and at Trinity College, Dublin, where he obtained a classical scholarship in 1848, graduating as senior moderator in logic and ethics in 1849. He was auditor of the College Historical Society in 1850. In the same year he gained Archbishop King's divinity prize, and the divinity testimonium (1st class) in 1851, when he was ordained deacon by his father's old friend, Archbishop Whately [q. v.], receiving priest's orders in 1852. Becoming curate of St. Ann's on his ordination,

he was appointed by Whately vicar of this important parish in 1855, and ministered there for forty-seven years. Dickinson, who proceeded D.D. in 1866, was appointed dean of the Chapel Royal, Dublin, by the Crown in 1868. He entered the chapter of St. Patrick's cathedral as treasurer in 1869, on the nomination of Archbishop Trench [q. v.], and became precentor in 1876. He was elected to the chair of pastoral theology in Dublin University in 1894 by the Irish bishops—a post for which his delight in the society of young men and his long pastoral experience specially qualified him. For many years he was a prominent figure in Dublin clerical life; and as examining chaplain to successive archbishops, as the most active supporter of the Association for Promoting Christian Knowledge, and as chairman of the Dublin Clerical Association, he rendered services of value to the church. He was also a member of the Representative Church Body; and at the annual meetings of the General Synod he was a frequent speaker, his ready and genial wit enlivening many debates. The dean was an ardent advocate of the temperance cause, and he served on the royal commission for licensing reform (1896-9). He was, besides, one of the commissioners of charitable donations and bequests, and few philanthropic enterprises in Dublin were carried on without his co-operation. As dean of the Chapel Royal he was also almoner to many viceroys. A pioneer in the movement for the higher education of women, he aided Archbishop Trench in the foundation in 1866 of Alexandra College, Dublin, of which he was warden for thirty-six years.

A disciple of Whately in theological matters, Dickinson was opposed to the tractarian movement, while he was a strong supporter of the Society for the Propagation of the Gospel at a time when it was not popular in Ireland. Of fearless honesty, chivalrous spirit, and unflinching wit, he had friends among all classes. Failing health obliged him to resign his offices in 1902, when he retired from active life. He died in Dublin on 17 May 1905, and was buried in Mount Jerome cemetery. As a memorial of his pastoral work, three decorated panels have been placed in the chancel of St. Ann's Church, Dublin.

Dickinson married, 2 Oct. 1867, Mary, daughter of Dr. Evory Kennedy of Belgard, co. Dublin, by whom he had nine children, of whom five sons and a daughter survived him.

He was author of 'Lectures on the Book of Common Prayer' (1859), and 'Scripture

and Science' (1879), besides occasional sermons and papers.

[Dublin University Calendars; obituary notices in Irish newspapers; personal knowledge.] JOHN OSSORY.

DICKINSON, LOWES [CATO] (1819-1908), portrait painter, born at Kilburn on 27 Nov. 1819, was one of the family of seven sons and four daughters of Joseph Dickinson by his wife Anne Carter of Topsham, Devonshire, whose kinsmen were officers in the navy. His paternal grandfather was a farmer in Northumberland, and his father started business in Bond Street as a stationer and publisher of lithographs. Educated at Topsham school and Dr. Lord's school, Tooting, Lowes Dickinson worked with his father at lithography, and was earning his own living from the age of sixteen. By the help of (Sir) Robert Michael Laftan [q. v.] he was enabled to visit Italy and Sicily, where he resided from Nov. 1850 to June 1853. Diary letters in the hands of his family give a vivid picture of artist life in Rome, Naples, and elsewhere during that period, and already reveal the strong sympathy both for man and nature which became characteristic. On returning to England he took a studio in Langham Chambers, where Millais then also had a studio. He was well acquainted with the Pre-Raphaelites, and about 1854 came into contact with Frederic Denison Maurice, and together with Charles Kingsley, Tom Hughes, John Malcolm Ludlow [q. v. Suppl. II], Llewelyn Davies, and others was one of the band of Christian socialists who, under Maurice's banner, strove to infuse Christian ideals into the budding movement for social reform. An important and permanent outcome of the movement was the foundation of the Working Men's College, where in early days Lowes Dickinson taught drawing with Ruskin and Dante Gabriel Rossetti, and in which, until his death, he maintained as one of the longest lived of the founders a warm interest, testified by the admirable portraits of Maurice, Kingsley, and Hughes which he painted for the college walls. In 1858 he painted portraits of the same three fellow-workers for his friend, Alexander Macmillan, the publisher, of whom in later life he made a most characteristic crayon drawing (GRAVES'S *Life and Letters of A. Macmillan*, 1910).

In 1860 he took an active part in the formation of the 'Artists' volunteer rifle corps, of which he was treasurer.

Dickinson regularly exhibited portraits at the Royal Academy from 1848 to 1891, missing only the years 1849, 1853, and 1884.

Among his numerous subjects were Queen Victoria, the Prince of Wales (afterwards Edward VII), Princess Alice, Lord Kelvin, *Richard Cobden (in the Reform Club), the duke of Argyll, *Lord Napier of Magdala, Sir Henry Norman, George Grote, Viscount Goschen, *Sir Henry Maine, Prof. Edmund Lushington, Sir Arthur Helps, Professor Cayley, Sir George Gabriel Stokes, Professor Clerk Maxwell, Dean Stanley (now at Rugby), Mr. Gladstone's cabinet in 1872 (now in the Devonshire club), Mr. Gladstone, Lord Cairns, Lord Palmerston, *Lord Granville, *John Bright, and Quintin Hogg. His striking posthumous portrait of *General Gordon at Khartoum hangs in the dining-hall of the Gordon Boys' Home. Many of his portraits hang in college halls at Cambridge, and those marked with an asterisk have been engraved. He had an almost unique gift for posthumous portraiture in crayons.

Shortly after his marriage he took a cottage at Hanwell, where he lived from 1864 to 1879, still retaining his studio in Langham Chambers. In 1879 he built the house close by, known as All Souls' Place, where he died on 15 Dec. 1908. He was buried at Kensal Green cemetery.

He married, on 15 Oct. 1857, Margaret Ellen, daughter of William Smith Williams, who, as reader to Messrs. Smith, Elder & Co., discovered the genius of the Brontës. Mrs. Dickinson died in 1882. Her sister, Anna Williams, was the well-known singer. He had a family of two sons and five daughters, who founded in his memory in 1909 the 'Lowes Dickinson Memorial Studentship' at the Working Men's College for the study of art abroad. His younger son, Goldsworthy Lowes Dickinson, fellow of King's College, Cambridge, has achieved distinction as an essayist and writer on political and social subjects.

[The Times, 21 Dec. 1908; Athenæum, 2 Jan. 1909; Working Men's Coll. Journal, Jan. and Feb. 1909; The Working Men's College, ed. J. Ll. Davies, 1904, with private information.] G. A. M.

DICKSON, SIR COLLINGWOOD (1817-1904), general, born at Valenciennes on 20 Nov. 1817, was third son of Major-general Sir Alexander Dickson [q. v.] and Eulalia, daughter of Don Stefano Brionès of Minorca. Educated at the Royal Military Academy, Woolwich, he was commissioned as second-lieutenant in the royal artillery on 18 Dec. 1835, and was promoted first-lieutenant on 29 Nov. 1837. In February of that year he had gone to

Spain with the artillery detachment, which formed part of the British legion under Sir George De Lacy Evans [q. v.], co-operating with the Christinist army against the Carlists. He served with this force on the north coast, distinguishing himself in the operations in front of San Sebastian, and being present at the capture of Hernani. In August 1839 he went to Catalonia as assistant to Colonel Edward Thomas Michell [q. v.], British commissioner with the Spanish army there. He was present at the actions of Andoain and Solsona. In the spring of 1840 he accompanied Michell to the headquarters of Espartero, and was present at the capture of Morella and the defeat of the Carlists near Berga. He was made a knight of Charles III, of San Fernando (1st class), and of Isabella the Catholic.

In March 1841 he went to Constantinople to instruct the Turkish artillery, and remained there till June 1845, being employed under the British foreign office. In the spring of 1846 he attended Ibrahim Pasha during his visit to England. He was promoted second-captain on 1 April 1846, and was given a brevet majority on 22 May. He became first-captain on 2 Sept. 1851, and was inspector of gunpowder at Waltham Abbey from 1 July 1852 to 14 Feb. 1854.

He served in the Crimea from June 1854 to July 1855. At the battle of the Alma he was on Lord Raglan's staff; and when Raglan rode forward to a knoll on the Russian flank, and asked for guns there, Dickson brought up two 9-pounders, and helped to serve them. Their fire was so effective that the Russian batteries guarding the post-road retired. He was made brevet lieutenant-colonel from that date, 20 June 1854. He commanded the siege train of the right attack during the siege of Sevastopol up to 21 July 1855. In the first bombardment on 17 Oct. 1854 the siege batteries ran short of powder, and under Dickson's direction several field-battery wagons were brought up under a heavy fire to supply the want, and he took a personal part in unloading them. For this he afterwards received the Victoria Cross, on 23 June 1855.

At the battle of Inkerman Dickson, after Colonel Gambier was wounded, brought up the two 18-pounders which dominated the Russian guns. He chose the site for them, and maintained them there, though he was urged by French officers to withdraw them. When the Russians retreated, Lord Raglan said to him—'You have covered yourself

with glory' (KINGLAKE, v. 372, 439). He was wounded on 4 Feb., but took part in the bombardments of 9 April and 17 June and in the expedition to Kerch. He was mentioned in despatches (*Lond. Gaz.* 2 Dec. 1854, 20 Feb. 1855, and 15 Feb. 1856), was made aide-de-camp to the Queen on 29 June 1855, and received the Crimean medal with four clasps, the Legion of Honour (officer), the Medjidie (2nd class), and the Turkish medal.

From September 1855 till the end of the war he was employed with the Turkish contingent, first as brigadier-general, and latterly with the temporary rank of major-general (15 Feb. 1856). After the war he was assistant adjutant-general for artillery in Ireland for six years from 4 Nov. 1856, and was then at Leith Fort for five years in command of the royal artillery. He was promoted regimental lieutenant-colonel on 23 February 1856, and regimental colonel on 5 April 1866. Four months later he became major-general. He had been made C.B. on 5 July 1855. In 1868-9 he served on the fortifications committee, which examined into the work done under the Palmerston loan for defences, and enlivened its proceedings by his boundless store of anecdote and humour.

From April 1870 till 1875 Dickson was inspector-general of artillery. The adoption of rifled guns had caused great changes in artillery material, and to qualify himself for his new duties he went through courses at Woolwich Arsenal and at Shoeburyness. His inspections were thorough, and he was punctilious on points of duty, but everyone felt the charm of his personality. He was made K.C.B. on 20 May 1871, and he became colonel commandant on 17 Nov. 1875, lieutenant-general on 8 June 1876, and general on 1 Oct. 1877. In May of that year he went to Constantinople as military attaché, his old friend Sir Austen Henry Layard [q. v.] being at that time British ambassador there. He remained in Turkey till 9 Sept. 1879, thus covering the whole period of the Russo-Turkish war. He was president of the ordnance committee (1881-5), though he was placed on the retired list under the age rules on 20 Nov. 1884. On 24 May in that year he received the G.C.B.

He married on 14 Jan. 1847 Harriet (d. Feb. 1894), daughter of Thomas Burnaby, vicar of Blakesley, Northamptonshire. After her death he lived a retired life at 79 Claverton Street till his death on 28 Nov. 1904. He was buried at Kensal Green. He had three sons, of whom two

predeceased him. He was a good linguist, speaking French, Spanish, and Turkish fluently, a ready writer, and a man of 'downright commonsense.' Dickson closely and affectionately studied the traditions of his regiment. He left a portrait of himself to it, and presented to the Royal Artillery Institution the Dickson MSS. written or collected by his father. These are now in course of publication under the editorship of Major J. H. Leslie, R.A., and supply valuable material for the history of the Peninsular war.

[The Times, 30 Nov. 1904; Duncan, The English in Spain, 1877; Kinglake, Invasion of the Crimea, 1863-87; materials furnished by Major J. H. Leslie, R.A.] E. M. L.

DICKSON, WILLIAM PURDIE (1823-1901), professor of divinity and translator, third son of George Dickson, parish minister of Pettinain, and afterwards of Kilrenny, Fifeshire, by his first wife, Mary Lockhart, was born at Pettinain manse, Lanarkshire, on 22 Oct. 1823. After attending Pettinain parish school and the grammar school, Lanark, he studied at St. Andrews (1837-44) for the ministry of the Church of Scotland. A high prizeman in Greek, at the Divinity Hall he gained in 1843 the Gray prize for an English essay. On 5 May 1845 he was licensed as a preacher by St. Andrews presbytery, and he retained his first charge at Grange-mouth, Stirlingshire, from 1846 to 1851. On 9 Sept. 1851 Dickson was ordained minister of Cameron parish, St. Andrews. There brought into touch with his university and its interests, he frequently lectured for Principal Tulloch and other professors, successfully helped to put the university library in order, and was classical examiner (1861-2). Meanwhile he proved a strong preacher and a diligent pastor.

From 1863 to 1873 Dickson filled with success the new chair of biblical criticism in Glasgow University, and from 1873 until his retirement in 1895 he was in succession to John Caird [q. v. Suppl. I] professor of divinity. From 1866 to his death he was curator of the Glasgow University library, the post having been created for him in recognition of his special fitness. He was president of the Library Association in 1888, when he delivered a scholarly and characteristically humorous address. From 1875 to 1888 he was the convener of the education committee of the Church of Scotland, but he twice declined nomination as moderator of the general assembly. He was made D.D. by both St. Andrews

in 1864 and Glasgow University in 1896 and hon. LL.D. by Edinburgh in 1885.

While minister of Cameron, Dickson began the translation of Mommsen's 'History of Rome,' at first practising only to improve his German knowledge. Duly verifying the numerous quotations, he completed a wholly admirable version, which was published with the author's approval (4 vols. 1862-7). A second and revised edition appeared in 1895. His translation of Mommsen's 'Roman Provinces' followed in 1887. Dickson edited the translation of Meyer's 'Commentary on the New Testament' (10 vols. 1873-80). As the Church of Scotland Baird lecturer in 1883 he discussed with learning and discrimination from the orthodox standpoint 'St. Paul's Use of the Terms Flesh and Spirit.'

Dickson died at 16 Victoria Crescent, Partick, on 9 March 1901, and was interred in Glasgow Necropolis. By way of memorial friends presented to the university library, which he reorganised, Migne's 'Patrologia' (388 vols.) in an oak bookcase.

On 7 Dec. 1853 Dickson married Tassie Wardlaw, daughter of John Small [q. v.], the Edinburgh University librarian, and had issue two daughters and a son, George, M.D. Glasgow.

[Information from Dr. George Dickson and Mr. J. J. Smith, University Library, St. Andrews; The Curator of Glasgow University, by Mr. James L. Galbraith; Mrs. Oliphant, Memoir of Principal Tulloch, 1888; Glasgow Herald, and Scotsman, 11 March 1901; personal knowledge.] T. B.

DIGBY, WILLIAM (1849-1904), Anglo-Indian publicist, third son of William Digby of Walsoken, Wisbech, by his wife Ann Drake, was born there on 1 May 1849. Scantly educated at the British schools, Wisbech, he studied for himself, and from 1864 to 1871 was apprentice in the office of the 'Isle of Ely and Wisbech Advertiser.' In 1871 he went out to Colombo as sub-editor of the 'Ceylon Observer.' There he advocated temperance and free trade, proved successful in his effort to abolish revenue farming, and publishing 'The Food Taxes of Ceylon' (1875) was elected in March 1878 an honorary member of the Cobden Club. As official shorthand-writer for the legislative council, he prepared six volumes of the Ceylon 'Hansard' (1871-6).

In 1877 he became editor of the 'Madras Times,' and persistently urged the need of alleviating the great Southern Indian

famine. Largely owing to his representations a relief fund was opened at the Mansion House in London, and 820,000*l.* was subscribed. He was active as honorary secretary in India of the executive committee, which distributed relief through 120 local committees. He was made C.I.E. on 1 Jan. 1878, and in his 'Famine Campaign in Southern India' (1878, 2 vols.) faithfully described the visitation.

Returning to England in 1879 for domestic reasons, Digby edited the 'Liverpool and Southport Daily News' for a few months in 1880, and from that year to 1882 was editor of the 'Western Daily Mercury' at Plymouth. From Nov. 1882 till 1887 he was the energetic secretary of the newly founded National Liberal Club in London, and eagerly flung himself into political work. He contested unsuccessfully in the liberal interest North Paddington in 1885 and South Islington in 1892.

In 1887 he established, and became senior partner of, the firm of William Hutchinson & Co., East India agents and merchants. Meanwhile he pursued in the press and on the platform with almost fanatical warmth the agitation for extending self-government among the natives of India. In 1885 he published 'India for the Indians—and for England,' a book praised by John Bright in a speech at St. James's Hall on 25 Feb. 1885. In 1887 he founded, and until 1892 he directed, the Indian political agency, which distributed information about India to the English public. In 1889 he became secretary to the newly constituted British committee of the Indian national congress, and he edited the committee's organ, 'India' (1890-2). In 'Prosperous British India' (1901) he claimed to prove a steady growth of poverty among the Indian masses under British rule.

Digby died from nervous exhaustion at his home, Dorset Square, London, N.W., on 24 Sept. 1904, and was buried by the side of his second wife at Bromley cemetery. An oil-painting of him by John Colin Forbes, R.C.A., was presented to the National Liberal Club by friends and admirers on 19 Dec. 1905.

He married (1) in 1874, Ellen Amelia, only daughter of Captain Little of Wisbech; she died in June 1878, leaving one son, William Pollard Digby, electrical engineer; and (2) in December 1879, Sarah Maria, eldest daughter of William Hutchinson, some time mayor of Wisbech; she died in January 1899, leaving a daughter and three sons, the eldest of whom, Everard,

has been editor of the 'Indian Daily News,' Calcutta.

Besides many pamphlets and the works cited, Digby published 'Forty Years of Official and Unofficial Life in a Crown Colony' (Madras, 1879, 2 vols.), being a biography of Sir Richard F. Morgan, acting chief justice in Ceylon.

[Digby's books and pamphlets; Biographical Mag., July 1885; Isle of Ely and Wisbech Advertiser, 24 and 27 Sept. 1904, and 20 Dec. 1905; personal knowledge.]

F. H. B.

DILKE, SIR CHARLES WENTWORTH, second baronet (1843-1911), politician and author, born on 4 Sept. 1843 in the house in Sloane Street, London (No. 76), which his father had occupied and in which he himself lived and died, was elder son of Sir Charles Wentworth Dilke, first baronet [q. v.]. Charles Wentworth Dilke [q. v.], the antiquary and critic, was his grandfather. His mother, Mary, daughter of William Chatfield, captain in the Madras cavalry, died on 16 Sept. 1853. His younger brother was Ashton Wentworth Dilke [q. v.], M.P. for Newcastle-on-Tyne from 1880 until his death in 1883.

Dilke, after being educated privately, became in 1862 a scholar of Trinity Hall, Cambridge—his father's college. There (Sir) Leslie Stephen was his tutor. He graduated LL.B. as senior legalist, i.e. head of the law tripos, in 1866, and proceeded LL.M. in 1869. He was an active member of the Cambridge Union, serving twice as vice-president and twice as president. He was an enthusiastic oarsman and rowed in his college boat when it was head of the river. That recreation he pursued all his life. In later years he built himself a bungalow at Dockett Eddy near Shepperton and spent much of his time on the water. He was also a keen and capable fencer and frequently invited his friends to a bout with the foils at his house in Sloane Street. He was called to the bar at the Middle Temple on 30 April 1866, but never practised.

In 1866 Dilke left England for a tour round the world, beginning with a visit to the United States. Here he travelled alone for some months, but was subsequently joined by William Hepworth Dixon [q. v.], editor of the 'Athenæum,' the paper of which his father was proprietor. The two travelled together for some time, visiting the Mormon cities of Utah, but they parted at Salt Lake City, Dixon returning to England and Dilke continuing his journey westward,

visiting San Francisco on his way to Panama. Thence he crossed the Pacific and visited all the Australasian colonies in turn. He returned home by way of Ceylon, India, and Egypt, reaching England at the end of 1867. In the following year he published the results of his studies and explorations in English-speaking and English-governed lands in a work entitled 'Greater Britain: a Record of Travel in English-speaking Countries during 1866 and 1867.' The book immediately achieved an immense success, and passed through four editions. The title, a novel and taking one, was Dilke's invention (see MURRAY'S *New Eng. Dict.*), and the whole subject as treated by Dilke was as new as its title. 'The idea,' wrote Dilke in the Preface, 'which in all the length of my travels has been at once my fellow and my guide—a key wherewith to unlock the hidden things of strange new lands—is a conception, however imperfect, of the grandeur of our race, already girdling the earth, which it is destined, perhaps, to overspread.' Thus, while Dilke was an advanced radical through life, he was also from first to last a convinced and well-informed imperialist.

In 1868 the first general election took place under the Reform Act of the previous year. Dilke was selected by the radical party in the newly constituted borough of Chelsea, to which two members were allotted, as one of its two candidates. His colleague was Sir Henry Hoare, and their opponents were (Sir) William H. Russell [q. v. Suppl. II] and C. J. Freaque. Dilke headed the poll on 17 Nov. with 7374 votes, Hoare receiving 7183, and Russell only 4177. He at once attracted the favourable notice of the party leaders and was chosen to second the address at the opening of the session of 1870. He joined the extreme non-conformists in opposition to Mr. Forster's education bill, and moved the amendment which the government accepted for the substitution of directly elected schoolboards in place of committees of boards of guardians. To the normal articles of the radical creed, Dilke added republican predilections, and he frankly challenged the monarchical form of government on many public platforms. He questioned whether monarchy was worth its cost. His statement at Newcastle on 6 Nov. 1871, in the course of an elaborate republican plea, that Queen Victoria paid no income tax excited a bitter controversy. At Bristol, Bolton, Derby, and Birmingham he pursued the propaganda, often amid scenes of disturbance. Heated protests

against his attitude were raised in the House of Commons, where he moved on 19 March 1872 for a full inquiry into Queen Victoria's expenditure. His confession of republican faith was then echoed by Auberon Herbert [q. v. Suppl. II], who seconded his motion. A passionate retort followed from Gladstone, the prime minister. Sir Wilfrid Lawson and another were the only members who voted in support of Dilke's motion, for which he and Herbert told. Sharply opposed at Chelsea on the score of his advanced opinions at the next election in 1874, he yet was the only one of three liberal candidates who was elected. He polled 7217 votes, and the conservative candidate was returned as his colleague.

In 1869, on the death of his father, Dilke succeeded to the baronetcy and also to the then lucrative proprietorship of the 'Athenæum' and of 'Notes and Queries'—the former purchased and edited by his grandfather and the latter established by him in 1849—and to a part proprietorship of the 'Gardeners' Chronicle.' He always took an active interest in the conduct of the 'Athenæum' and frequently contributed to its columns, though except during the occasional absence of the responsible editor he never edited it himself. He collected for the press his grandfather's 'Papers of a Critic' (1875), chiefly contributions to the 'Athenæum.' In 1872 he married Katherine Mary Eliza, only daughter of Captain Arthur Gore Sheil.

Meanwhile he was a frequent visitor to Paris, where he became intimate with Gambetta and other republican leaders. He spoke French fluently, though not perhaps quite with the accent of a Parisian. French influence was apparent in his second literary venture, which was published anonymously in 1874. A thin brochure bound in white, it was entitled 'The Fall of Prince Florestan of Monaco.' It told the story of a light-hearted prince, educated at Eton and Cambridge, who was unexpectedly called to the sovereignty of Monaco. He at once set to work to put in action the liberal and reforming ideas he had imbibed at Cambridge, and soon found himself at loggerheads with his subjects, who were all catholics and led by a Jesuit priest. Foiled in his projects of reform, he abdicated and returned to Cambridge. The story was brightly written and displayed no little satiric humour—which spared neither Dilke himself nor his radical contemporaries. It showed in Dilke a mood of genial banter and shrewd detachment from popular shibbo-

leths which was otherwise so little in evidence that few suspected its existence. The book passed through three editions and was translated into French. Perhaps it was better appreciated in France than in England.

In 1874 Dilke's first wife died after giving birth to an only son, Charles Wentworth Dilke, subsequently the third baronet. Next year Dilke made a second tour round the world, now visiting China and Japan, and thenceforth for many years he spent much leisure at a modest villa which he purchased near Toulon. At the same time during his second parliament (1874-80) he greatly improved his position. He became an effective speaker, and won the ear of the House of Commons (Lucy's *Diary of Parliament*, 1874-80, pp. 307-10). His radicalism lost nothing of its strength on shedding its republican features. He made an annual attack on unreformed corporations. On 4 March 1879 he seconded (Sir) George Trevelyan's resolution for extending the county franchise to the agricultural labourer, and on 31 March he moved on behalf of the liberal party a vote of censure on the government's South African policy. To the cause of Greece he proved himself a warm friend. At the general election of April 1880, Dilke for the third time headed the poll at Chelsea with 12,408 votes, carrying the second liberal candidate (Mr. J. B. Firth) in with him with 12,040 votes.

Before Gladstone returned to power in 1880, Dilke was an acknowledged leader of the radical section of his party. Mr. Joseph Chamberlain, M.P. for Birmingham since June 1876, was his chief colleague. Gladstone, however, was very slowly persuaded of the importance of the radical leaders. At first 'he never dreamed of them for his cabinet.' When at length he sent for Dilke while forming his administration, he was annoyed by Dilke's refusal 'to serve unless either himself or Mr. Chamberlain were in the cabinet.' In the end, despite Dilke's superior position in public esteem, Mr. Chamberlain entered the cabinet as president of the board of trade, and Dilke remained outside as under-secretary to the foreign office (cf. MORLEY, *Life of Gladstone*, ii. 630).

Dilke's knowledge of foreign affairs was exceptional, and as representing the foreign office in the commons with his chief, Lord Granville, in the lords, he enjoyed an influence little short of that of a cabinet minister not yet of the first rank. Of prodigious industry, he conducted the parliamentary business of his department

with assiduity, courtesy, and discretion. In 1881-2 he served as chairman of a royal commission for the negotiation of a commercial treaty with France in conjunction with commissioners of the French government. He spent many months over this business, which was conducted in London and in Paris. Early in 1880 his growing reputation had led the Prince of Wales (afterwards Edward VII) to seek his acquaintance and a close intimacy between them lasted through the next four years. They met in Paris as well as at home, and at Paris, by the prince's request, while the commercial negotiations were in progress, Dilke invited his close friend Gambetta to join them at breakfast (24 Oct. 1881).

On Forster's retirement from the Irish secretaryship in April 1882 Dilke was offered the post, but he declined it on the ground that it did not carry with it a seat in the cabinet. Towards the close of the year the cabinet was partially reconstructed, and Dilke at last obtained a place in it as president of the local government board (8 Dec.). At the statutory election at Chelsea he was returned without a contest. There were rumours of reluctance on Queen Victoria's part to assent to Dilke's appointment, which great firmness on the part of the prime minister was needed to dispel (*Annual Register*, 1882, p. 180). In the House of Commons there was now a general belief that he was destined before long to lead his party (cf. ACTON's *Letters to Mary Gladstone*). An indication of the public confidence which he commanded was shown by the bestowal on him of the freedom of the borough of Paisley (1 Nov. 1883). He had long given close attention to the problems of local government, and his tenure of office as president of the board was marked by much important legislation. In 1884 he presided as chairman over the royal commission on the housing of the working classes, of which the Prince of Wales, Lord Salisbury, and Cardinal Manning were members. He also took an active part in the negotiations which were initiated in that year by Queen Victoria between government and the opposition in the controversy over the Franchise Act of 1884 and the attendant redistribution of seats. By virtue of his office and by reason of what Lord Morley in his 'Life of Gladstone' called his 'unrivalled mastery of the intricate details' of the whole question of redistribution, he took charge of the redistribution bill and conducted it through the House of Commons with exceptional skill.

On 18 Jan. 1884 Dilke, Lord Granville, and Lord Northbrook met General Gordon with Lord Hartington and Lord Wolseley at the war office and they decided on behalf of the cabinet to send Gordon to the Soudan.

In 1885 the Gladstone ministry, externally weakened by the miscarriages of its Egyptian policy, and discredited by its failure to rescue Gordon, was also distracted almost to dissolution by internal dissensions arising out of its Irish policy. New bills for a partial renewal of the expiring Coercion Act, for land purchase and for local government in Ireland were before the cabinet early in 1885. Dilke and Mr. Chamberlain recommended a central administrative board, and resisted the other proposals without effect. On 19 May Gladstone announced in the House of Commons a land purchase bill. Thereupon Dilke and Mr. Chamberlain tendered their resignations. They were requested to reconsider them (MORLEY'S *Gladstone*, iii. 194). But that necessity was spared them. An unexpected defeat on a proposed increase in the beer duties under the budget gave the whole cabinet an opportunity, which they eagerly welcomed, of resigning (8 June 1885). Neither Dilke nor Mr. Chamberlain had favoured the increase of the beer duties. He and Mr. Chamberlain projected under Parnell's auspices a tour in Ireland for the autumn. But Parnell's negotiations with the new conservative lord-lieutenant, the earl of Carnarvon, led him to withdraw his support, and the visit was abandoned. Dilke never again held office under the crown.

Dilke's fall was sudden and tragical. In August 1885 Mr. Donald Crawford, liberal M.P. for Lanark, filed a petition for divorce against his wife on the ground of her alleged adultery with Dilke. Mrs. Crawford was a sister of the wife of Dilke's only brother Ashton, and with her family he was on intimate terms. On the announcement of the charge, Dilke denied its truth in an open letter to the liberal association of Chelsea. The association accepted his disclaimer. He stood for the constituency—now a single member division—at the general election in Dec. 1885 and was returned by 4291 votes against 4116 cast for the conservative candidate. The divorce suit was heard on 12 Feb. 1886, when Mr. Crawford obtained a decree nisi against his wife, solely on the evidence of her confession. Dilke offered to deny on oath in the witness-box Mrs. Crawford's story, but his counsel declined to call him and his friends unwisely dissuaded

him from insisting on being called. The outcome of the suit was equivocal. The case against Dilke was dismissed, but Mrs. Crawford's guilt was declared proven on her own evidence, which inculpated none but him. In public opinion Dilke was not cleared of the allegations against him.

Meanwhile Dilke was not included in Gladstone's third administration (Feb. 1886), but he attended parliament as usual, and voted for Gladstone's home rule bill (7 June). His liberal friends at Chelsea expressed sympathy with him, and he stood again at the general election of July 1886. But he was defeated by 176 votes. His connection with the constituency was thus severed after eighteen years. Mainly owing to Dilke's representations to the queen's proctor, the divorce case was re-opened before the decree nisi was made absolute. The queen's proctor did not intervene directly on Dilke's behalf, and the application of both Dilke and Mrs. Crawford to plead in the suit was refused—in Dilke's case on the ground that he had not given evidence at the first hearing (30 June). The second hearing began on 16 July 1886. Dilke and Mrs. Crawford both gave evidence at length and sustained a searching cross-examination. Mrs. Crawford acknowledged that she had committed adultery with a man not mentioned in her original confession, but withdrew none of her former charges against Dilke, and added odious details which were regarded by believers in Dilke's innocence to be inventions directed solely to prejudice. Dilke absolutely denied all the accusations. Finally the jury found that the original 'decree was obtained not contrary to the facts of the case and not by reason of material facts not having been brought before the court.' Public opinion for the most part took this finding as a verdict against Dilke and regarded it as just. Dilke, however, maintained from the first and through the rest of his life the attitude and demeanour of an innocent man, and many, though not all, of his friends avowed and manifested their unshaken confidence in his honour and veracity.

Dilke bowed at once to the decision. To the electors of Chelsea he announced his withdrawal from public life; he pointed out the legal disadvantages under which he laboured at the second trial in being denied the status of a party to the proceedings, and at the same time he reasserted his innocence.

At the opening of these difficulties, on 3 Oct. 1885, Dilke married at Chelsea Emilia

Francis, widow of Mark Pattison [q. v.; see DILKE, EMILIA FRANCIS, LADY, Suppl. II]. The marriage was singularly happy, and Dilke owed much to her affection and belief in his innocence. Although saddened, he was not soured nor corrupted by his political and social eclipse.

On his retirement from parliament in 1886 Dilke returned with great zeal and industry to the study of those larger English and imperial problems which had engaged his attention at the outset of his career. In 1887 he published 'The Present Position of European Politics' (translated into French) and in 1888 'The British Army.' In 1890 appeared his 'Problems of Greater Britain' in two volumes, designed as a sequel to his earlier work on 'Greater Britain.' It was a treatise on the present position of Greater Britain in which special attention was given to the relations of the English-speaking countries with one another and to the comparative politics of the countries under British government. Foreign travel varied his occupation. He paid at least one annual visit to Paris, where his French friends always welcomed him with enthusiasm. In the autumn of 1887 he made a journey through the Near East, visiting Greece, the cause of which he had always championed, and Constantinople, where he was entertained by the Sultan. In the winter of 1888-9 he was the guest of Lord Roberts, commander of the forces in India, and attended with his host the military manoeuvres of the season.

In 1892 Dilke returned to public life as member of parliament for the Forest of Dean. The electors had convinced themselves of his innocence. He beat his conservative opponent after a contest by a large majority. He represented that constituency till his death, fighting the elections of 1900 and Jan. and Dec. 1910, but being returned without a contest in 1895 and 1906. Henceforth a private member, he did not speak frequently in the House of Commons. He confined himself almost entirely to industrial questions, to foreign and imperial affairs, and to the larger questions of policy involved in the navy and army estimates. On these subjects his authority was recognised, but his position in the house remained one of some aloofness. He enjoyed, however, the complete confidence of the labour party. He continued his literary work, publishing in 1898 a little volume on 'Imperial Defence' in co-operation with Mr. (now Professor) Spenser Wilkinson; and yet another work on the British Empire in the

same year. Although he hospitably entertained his friends, he continued to be little seen in society. In Oct. 1904 the death of his wife gravely disabled him, and he prefixed a touching memoir to a work of hers, 'The Book of the Spiritual Life,' which appeared in 1905. In 1906 he served as chairman of the select committee on the income tax and drafted its report, some of the recommendations of which were subsequently embodied in legislation. In 1910 his health began to fail. After the exhausting session of that year he fought with success the general election of Dec. 1910 in the Forest of Dean. But he was unequal to the effort. He returned in Jan. 1911 from a brief vacation in the South of France only to die. He died of heart failure at his house in Sloane Street, on 26 Jan. 1911, and his remains were cremated at Golder's Green. He was succeeded in the baronetcy by his only son.

A portrait of Dilke by G. F. Watts was left to his trustees for presentation to a public institution. It is now on loan at the National Portrait Gallery. A caricature portrait appeared in 'Vanity Fair' in 1871.

Dilke owned a valuable collection of works of art, and he dedicated those which were of historic interest to public uses. He left by will the portrait by Watts of John Stuart Mill to the Westminster city council; the portrait by Madox Brown of Mr. and Mrs. Fawcett, and the portrait by Frank Holl of Mr. Joseph Chamberlain, to the National Portrait Gallery; the portrait of Gambetta by Alphonse Legros went to the Luxemburg Museum in Paris. Most of the relics of Keats, which he inherited from his grandfather, were bequeathed to the Hampstead public library. His literary executor, Miss Gertrude Tuckwell, his second wife's niece, was warned, in preparing his political papers for the press, against seeking the assistance of 'anyone closely connected with either the liberal or conservative party.' His pictures by old masters, water-colour drawings, tapestries, and miniatures were sold by auction at Christie's on 7-8 April 1911. The 'Athenæum' and 'Notes and Queries' were, in accordance with the powers given by the trustees under Dilke's will, transferred in 1911 to the printer and publisher, Mr. John Collins Francis.

[Authorities mentioned in the text; obituary notices in the press, especially The Times, 27 Jan. 1911; Dilke's publications; Herbert Paul's History of Modern England; personal knowledge and private information.]

J. R. T.

DILKE, EMILIA FRANCIS STRONG, LADY DILKE (1840-1904), historian of French art, born at Ilfracombe on 2 Sept. 1840, was fourth daughter of Major Henry Strong of the Indian army, by his wife Emily, daughter of Edward Chandler Weedon. Her grandfather, Samuel S. Strong (d. 1816), was settled at Augusta, Georgia, and was deputy surveyor-general of the state before the outbreak of the war of independence, during which he remained loyal to the British crown. Lady Dilke's father, who was educated at Addiscombe, served in India from 1809 till 1825; he ultimately became manager of the Oxfordshire branch of the London and County Bank, residing at Iffley. A friend of his, Francis Whiting, who was his daughter's godfather, gave her her second Christian name.

Educated at Oxford by a governess, who was sister of the African traveller, Thomas Edward Bowdich [q. v.], she made while a girl the acquaintance of leading professors at Oxford, including Goldwin Smith, Dr. Ince, and Dr. Henry Acland. From childhood she showed a taste for art, and on the recommendation of Ruskin, to whom Acland showed some of her drawings, she went to London in 1859 to study at South Kensington. She worked hard at the Art School there from March 1859 to Feb. 1861, and saw much artistic society. Her drawing showed promise, but her interests covered a wider field. She studied Dante and the 'Imitatio,' and developed a mystical sense of religion. At the same time her youthful spirits ran high and her outlook on life betrayed independence.

In September 1861 she married, at Iffley church, Mark Pattison, rector of Lincoln College, Oxford, her senior by twenty-one years. Thereupon she settled down to a life of literary study under her husband's direction. She devoted much time to the classics and to modern languages and acquired an exceptional facility in speaking French. Nor did she neglect academic society. She formed among her husband's friends a sort of salon at Lincoln College. Her circle soon included Robert Browning, with whom she long corresponded, Richard Congreve, Emanuel Deutsch, Prince Leopold, (Sir) Charles Newton (of the British Museum), and (Sir) Edgar Boehm (the sculptor). But the guest who attracted her most deeply was George Eliot (Marian Lewes). There is no doubt that Mrs. Mark Pattison suggested to George Eliot the character of Dorothea in her work 'Middlemarch' (1871),

and that the novelist's conception of Casaubon was based on Mark Pattison. But in neither case was the fictitious study realistic portraiture. Travel with her husband at home and abroad during her early married life widened Mrs. Pattison's interests and acquaintances. Nervous illness which constantly recurred from 1867 onwards led her to spend an increasing part of each of the next seventeen years abroad. She tried medical treatment at Wildbad and Aix, but after 1875 she was a constant visitor to Nice and Grasse, and permanently hired rooms at a villa at Draguignan, near Cannes.

Abandoning her practice of art, she soon concentrated her energies on its history and criticism. She sent notes on art to the 'Westminster Review,' and regularly reviewed books on art in the 'Saturday Review,' the 'Portfolio,' and from 1869 in the newly founded 'Academy.' In 1872, moved by the conviction that one ought to become an authority on a special subject, she began researches in the renaissance of art in France. From time to time she studied at the archives in Paris; corresponded with and entertained Eugène Muntz, the historian of French art; became intimate with many French artists, including Dalou and Legros; and visited galleries and collections in Rome, Vienna, and other European capitals. The organisation of the arts in France, as well as the practical development of them in all branches, came within her design. The results of her inquiries filled many volumes; the first appeared in 1879 under the title, 'Renaissance of Art in France' (1879). As an historian of art she was very thorough and painstaking. But her critical powers were inferior to her industry. A critical biography of Lord Leighton followed in 1881 in Dumas' 'Modern Artists,' and a life of Claude in French, largely from unpublished materials, in 1884.

Meanwhile such time as she spent in England was in part absorbed by zeal for social reform, especially for the improvement of the social and industrial condition of working women. She joined in 1876 the Women's Provident and Protective League, now the Women's Trades Union League, which had been founded in 1874 by Mrs. Paterson [q. v.], with the aim of organising women workers. She spoke at annual meetings of the league in London in July 1877 and in 1880, when she urged the need of technical education for women, and was supported by William Morris and Professor Bryce. She founded a branch at Oxford,

and showed immense enthusiasm for the cause. She also advocated the political enfranchisement of women, and joined the Woman's Suffrage Society at Oxford.

On 30 July 1884 Mark Pattison died at Oxford after a long illness. His widow, to whom he left his fortune, settled in the autumn at Headington Lodge and edited his early 'Memoirs,' which were published in 1885. In the spring of that year she paid a visit to her friend, Sir Mountstuart Elphinstone Grant-Duff [q. v. Suppl. II], then governor of Madras. An attack of typhoid fever delayed her return to England till the autumn. Meanwhile, in July she publicly announced her engagement to Sir Charles Wentworth Dilke [q. v. Suppl. II], with whom her relations had been friendly from youth. At the moment Sir Charles's brilliant political career was prejudiced by charges of immorality, which had been laid against him in the divorce court. The marriage took place at Chelsea on 3 Oct. 1885, and thenceforth her career was largely moulded by that of her second husband. She fully believed in his innocence, and when the verdict of the second trial (July 1886) was assumed by a large section of the public to imply his guilt, she resolved to consecrate her life to his rehabilitation in public esteem. At the same time she continued with undiminished ardour her pursuits as historian of French art and reformer of women's industrial status. She and her husband continued to travel much; they spent part of each year in Paris; in 1887 they extended their tour to Greece and Turkey, and late in 1888 they visited India. No opportunity was lost of inspecting art treasures abroad. At the same time her literary industry bore fruit in the elaborate treatises: 'Art in the Modern State, or the Age of Louis XIV' (1888); 'French Painters of the Eighteenth Century' (1889); 'French Architects and Sculptors of the Eighteenth Century' (1900), and 'French Engravers and Draughtsmen of the Eighteenth Century' (1902). She also attempted short stories of a mystical or allegorical temper. These were collected in her lifetime as 'The Shrine of Death, and other Stories' (1886) and 'The Shrine of Love, and other Stories' (1891). A posthumous collection was called 'The Book of the Spiritual Life' (1905). Her style in these tales shows an individuality which is wanting in her writings on art.

Meanwhile Lady Dilke's activity in the women's trades union movement knew

no intermission. The committee of the Women's Trades Union League was largely guided by her counsel. From 1889 to 1904 she attended each September the trades union congress as representative of the women's league. She thus was brought into constant touch with labour leaders, and she frequently spoke at meetings throughout the country on labour questions affecting women. She spared no pains to promote co-operation between the sexes in the field of manual labour, and championed with especial fervour the cause of unskilled workers in dangerous trades.

She died after a brief illness on 24 Oct. 1904 at Pyrford Rough, Woking, a house which was her personal property. Her remains were cremated at Golder's Green after a funeral service at Holy Trinity Church, Sloane Square. She had no issue.

In accordance with her direction some valuable jewels in her possession passed on her death to the Victoria and Albert Museum, South Kensington, together with her collection of art books, Aldines and Elzevirs. An early portrait by her friend, Pauline, Lady Trevelyan, of Cambo, Northumberland (reproduced in Sir Charles Dilke's 'Memoir,' p. 24), was left by Sir Charles Dilke, together with a miniature by Camino, to the National Portrait Gallery, but the trustees have, according to their rule, postponed the consideration of acceptance till the expiration of ten years from death. She was also painted by William Bell Scott and by J. Portaels in Paris in 1864.

[The Book of the Spiritual Life, with a memoir by Sir Charles W. Dilke, 1905; Athenæum, 30 Oct. 1904; The Times, 25 Oct. 1904, 2 Dec. (will); Cornhill, Feb. 1912 (letter from Lady Dilke to Sir Henry Lucy); private information.] S. L.

DILLON, FRANK (1823-1909), landscape painter, born in London on 24 Feb. 1823, was the youngest son of John Dillon, of the firm of Morrison, Dillon & Co., silk mercers, of Fore Street, London, and the owner of a fine collection of water-colour drawings which was sold by auction in 1869.

After having been educated at Bruce Castle School, Tottenham, he entered the schools of the Royal Academy, and subsequently became a pupil of James Holland, the water-colour painter. He there began painting in oil-colours, and in 1850 sent to the Royal Academy a view 'On the Tagus, Lisbon,' and until 1907 was a fairly regular contributor to its exhibitions, as well as to those of the British Institution until its close in 1867. He was one of the

original members of the Dudley Gallery, and after it ceased to exist he, in 1882, became a member of the Royal Institute of Painters in Water Colours. He travelled much, and as early as 1850 he published a folio volume of 'Sketches in the Island of Madeira.' He visited Egypt first in 1854, and many of his works were the outcome of this and subsequent visits to that country. Among these were: 'Rising of the Nile: Philæ,' 'The Nile Raft,' 'Luxor, on the Nile,' 'The Sphinx at Midnight,' 'The Great Pyramid,' 'The Pyramids from Gizeh,' 'The Date Harvest, Egypt,' and 'The Granite Quarries of Syene.' He took a keen interest in the preservation of the Arab monuments of Cairo, and was active in opposition to the destruction of Philæ. He also studied appreciatively the arts of Japan, spending a year in that country in 1876-7, and writing an introduction to the catalogue of the 'Exhibition of Japanese and Chinese Works of Art,' held at the Burlington Fine Arts Club in 1878.

In early life he was in full sympathy with the liberal movement of 1848, when he formed a lifelong friendship with Mazzini. He was intimate also with many of the leaders of the Hungarian revolution, and assisted them when in exile. Dillon died unmarried at 13 Upper Phillimore Gardens, Kensington, on 2 May 1909.

Eleven drawings by him of interiors of houses in Cairo are in the Victoria and Albert Museum.

[The Times, 5 and 8 May 1909; Athenæum, 8 May 1909; Art Journal, July 1909; Exhibition Catalogues of the Royal Academy, British Institution, Dudley Gallery, and Royal Institute of Painters in Water-colours, 1850-1907.] R. E. G.

DIMOCK, NATHANIEL (1825-1909), theologian, born at Stonehouse, Gloucestershire, on 8 July 1825, was son of John Dimock of Bridge-end, Stonehouse, and afterwards of Rylands, Randwick, Gloucestershire, by his wife Emma Rook, daughter of Dr. James Parkinson of Hoxton. Educated at two private schools, he matriculated from St. John's College, Oxford, on 31 May 1843, and in 1846 obtained a fourth class in the final classical school, graduating B.A. in 1847, and proceeding M.A. in 1850. He was ordained deacon in 1848, and priest in 1850. From 1848 to 1872 he was curate of East Malling, Kent. There he devoted himself to patristic and mediæval theology, began a series of 'Papers on the Doctrine of the English Church,' and wrote,

under the pseudonym of 'An English Presbyter,' numerous books and pamphlets, which attracted notice. In 1872 Dimock was appointed to the vicarage of Wymynswold, Kent, and in 1876 to St. Paul's, Maidstone. In 1887 he resigned his benefice owing to ill-health, and resided abroad, acting as English chaplain at San Remo (1887-8). Subsequently he lived at Eastbourne, and from 1896 until death at Redhill, Surrey.

In 1900 Dimock joined Bishop Creighton's 'Round Table Conference' at Fulham Palace, on the doctrine and ritual of the Holy Communion, and the deliberations largely turned on a statement of his views, which by request he printed for the use of the conference. He afterwards published 'Notes on the Round Table Conference.' He died at his residence, Hemstede, Redhill, on 3 March 1909, and was buried at Reigate. His valuable library was sold by Sotheby, Wilkinson, & Hodge on 26 May 1909. Dimock married at East Malling, on 31 March 1853, Georgiana, daughter of John Alfred Wigan of Clare House, Kent, and sister of Sir Frederick Wigan, first baronet. His wife died shortly after marriage, on 14 July 1853.

A profound student of sacramental questions from the evangelical standpoint, Dimock had an unrivalled knowledge of liturgy. His style was not attractive, and his pages are often too heavily weighted with footnotes and references, but his erudition was profound, his judgment sound, and his attitude to opponents absolutely fair. His most important works are: 1. 'Conversion, Six Plain Sermons,' 1855. 2. 'A Word for Warning and Defence of the Church of England against Ritualism and Romanism,' 1868. 3. 'The Real Objective Presence: Questions suggested by the Judgment of Sir Robert Phillimore,' 1870. 4. 'The Doctrine of the Sacraments in relation to the Doctrine of Grace,' 1871; new edit. 1908. 5. 'Essays on the Principles of the Reformation,' 1872. 6. 'The Romish Mass and the English Church,' 1874. 7. 'Eucharistic Worship in the Church of England,' 1876. 8. 'The Eucharist considered in its Sacrificial Aspect,' 1884. 9. 'The Apostolic Fathers and the Christian Ministry,' 1887. 10. 'Questions suggested by so much of the Lambeth Judgment as deals with the North Side Rubric,' parts i. and ii., 1891. 11. 'Curiosities of Patristic and Mediæval Literature,' parts i., ii., and iii., 1891, 1892, 1895. 12. 'The Doctrine of the Death of Christ,' 1890; 2nd edit. 1903.

13. 'Dangerous Deceits,' 1895. 14. 'Mis-sarum Sacrificia,' 1896. 15. 'Vox Liturgiæ Anglicanæ,' 1897. 16. 'The Christian Doctrine of Sacerdotism,' 2 edits. 1897. 17. 'The Crisis in the Church of England,' 1899. 18. 'Light from History on Christian Ritual,' 1900. 19. 'The Bennett Judgment cleared from Misconception,' 1900. 20. 'The History of the Book of Common Prayer in its bearing on present Eucharistic Controversies.' A 'Memorial Edition' of his chief works was published in 1910-11.

[The Times, 4 March 1909; Record, 5 March 1909; Guardian, 10 March 1909; English Churchman, 11 March 1909; Church Family Newspaper, 12 March 1909; Foster's Alumni Oxonienses; Crockford's Clerical Directory; Gloucestershire Notes and Queries, v. 245; Phillimore's County Pedigrees, Nottinghamshire, i. 65-71; private information, and personal knowledge.] W. G. D. F.

DIXIE, LADY FLORENCE CAROLINE (1857-1905), authoress and traveller, born in London on 24 May 1857, was youngest of six children of Archibald William Douglas, seventh marquis of Queensberry, by his wife Caroline Margaret, daughter of General Sir William Robert Clayton. Sir John Sholto Douglas, eighth marquis [q. v. Suppl. I], was her eldest brother. She was educated for the most part at home, and showed in youth literary talents. Verses from her pen were published when she was ten. Of impulsive, adventurous temper, she in early life developed a zeal for sport and travel. A first-rate rider, a good shot and swimmer, she became, while a girl, a huntress of big game; one of the first women to take up this form of sport in recent years, she visited Africa, Arabia, and the Rocky Mountains in its pursuit.

In 1875 she married Sir Alexander Beaumont Churchill Dixie, eleventh baronet (b. 1851), and had two sons, George Douglas (b. 1876) and Albert Edward Wolston Beaumont (b. 1878), a godson of King Edward VII when Prince of Wales.

Her marriage did not check her energies as a traveller. In 1878-9 she made an exploratory journey in Patagonia, and published her experiences in 'Across Patagonia' (1880). In 1879 she was war correspondent for the 'Morning Post,' during the Zulu war in South Africa. She advocated Cetewayo's release and restoration to Zululand (a course which was ultimately adopted); her views of Zulu affairs and her experiences she described in 'A Defence of Zululand and its King'

(1882) and 'In the Land of Misfortune' (1882).

Soon afterwards home politics attracted her attention. While professing advanced liberalism, including home rule all round, she vehemently denounced in letters to newspapers the tyranny of the land league agitation in Ireland of 1880-3. On 17 March 1883, when fenian outrages were exciting London, Lady Florence announced that, while she was walking by the Thames near Windsor, two men disguised as women, whom she inferred to be fenian emissaries, vainly attempted her assassination. Her statement attracted worldwide attention, but Sir William Harcourt, the home secretary, declared in the House of Commons that Lady Florence's story was unconfirmed, and nothing further followed.

Her discursive interests were thenceforth mainly concentrated on the advocacy of complete sex-equality. Her aims ranged from the reform of female attire to that of the royal succession law, which, she held, should prescribe the accession of the eldest child, of whichever sex, to the throne. She desired the emendation of the marriage service and of the divorce laws so as to place man and woman on the same level. She formulated such views in 'Gloriana, or the Revolution of 1900' (1890); her stories for children, 'The Young Castaways, or the Child Hunters of Patagonia' (1890), and 'Aniwee, or the Warrior Queen' (1890), had a like purpose. In later life she convinced herself of the cruelty of sport, which she denounced in 'Horrors of Sport' (1891; new edit. 1905) and the 'Mercilessness of Sport' (1901). Lady Dixie died at Glen Stuart, Annan, on 7 Nov. 1905, and was buried in the family grave at Kinmount.

Besides the works mentioned, she published: 1. 'Abel Avenged,' a dramatic tragedy, 1877. 2. 'Waifs and Strays, or the Pilgrimage of a Bohemian Abroad,' 1884. 3. 'Redeemed in Blood,' 1889. 4. 'Little Chérie, or the Trainer's Daughter,' 1901. 5. 'Songs of a Child,' under the pseudonym of 'Darling,' pt. i. 1902; pt. ii. 1903. 6. 'Ijain, or the Evolution of a Mind,' 1903. 7. 'Isola, or the Disinherited,' a drama, 1903. 8. 'Izra, or a Child of Solitude,' published posthumously, 1906.

A cartoon portrait appeared in 'Vanity Fair' in 1884.

[The Times, 8 Nov. 1905; Who's Who, 1902.] O. J. R. H.

DODS, MARCUS (1834-1909), presbyterian divine and biblical scholar, born in Belford Vicarage, Northumberland, on 11 April 1834, was youngest son of Marcus

Dods [q. v.] by his wife Sarah Palliser. On the father's death in 1838 the family removed to Edinburgh, where Dods first attended a preparatory school and, later, Edinburgh Academy (1843-1848). After spending two years in the head office of the National Bank in Edinburgh, he resolved in 1850 to study for the ministry of the Free church of Scotland. In 1854 he graduated M.A. at Edinburgh University and began his theological course at New College, Edinburgh. During his university career he was assistant in the Signet Library. On 7 Sept. 1858 he was licensed to preach by the presbytery of Edinburgh.

Dods had a long probationership. Although he preached in twenty-three vacancies, he failed for six years to get a church. During these years of enforced leisure he edited the complete works of Augustine (1871); translated Lange's 'Life of Christ' (Edinburgh, 1864, 6 vols.); and wrote his 'Prayer that Teaches to Pray' (1863; 5th edit. 1885) and 'Epistles to the Seven Churches' (Edinburgh, 1865).

On 4 Aug. 1864 he was inducted minister of Renfield Free church, Glasgow, and from its pulpit for exactly twenty-five years he exercised a notable influence, especially on young men of culture, chief among whom was Henry Drummond [q. v. Suppl. I] (GEORGE ADAM SMITH, *Life of Henry Drummond*, 7th edit. p. 132). The sermons at Renfield formed the substance of his popular volumes, 'Israel's Iron Age, or Sketches from the Period of the Judges' (1874; 4th edit. 1880), 'The Parables of our Lord' (first series, Matthew, 1883; second series, Luke, 1885), and they provided material for his editions of 'Genesis' (Expositor's Bible, 1888); of '1 Corinthians' (Expositor's Bible, 1889); and of 'St. John's Gospel' (Expositor's Greek Test. 1897).

Though not a theologian in the technical sense, Dods brought wide and exact scholarship and an expository gift to the popularising of modern critical views about the Bible. In 1877 Dods published a sermon on 'Revelation and Inspiration,' which questioned verbal inspiration. The presbytery of Glasgow, while declining to enter on a process, advised withdrawal of the sermon with a view to some modification. Dods assented on conditions; the matter was brought in 1878 before the general assembly, which declined by a majority to intervene.

Dods refused in 1869 an invitation to become colleague to Dr. Robert Smith Candlish [q. v.] at St. George's Free church, Edinburgh, the most influential congrega-

tion in the denomination. In 1889, when he celebrated the semi-jubilee of his ordination, he was appointed to the chair of New Testament criticism and exegesis in New College, Edinburgh. The appointment implied that the Free church of Scotland was prepared to tolerate critical views of the Bible for which Robertson Smith [q. v.] had been removed from his chair only eight years before. At the general assembly of 1890 Dods was libelled, along with Professor Alexander Balmain Bruce [q. v. Suppl. I], owing to his views on inspiration, which he had discussed anew in a paper read before the pan-presbyterian council in London. The general assembly, after a protracted debate, while exhorting Dods to teach the faith held by his church, declined to institute a process. In 1891 he received the honorary degree of D.D. from Edinburgh University, and in 1901 he declined nomination for the moderatorship of the general assembly of the United Free church of Scotland (formed in the previous year by the union of the Free and United Presbyterian churches). Appointed in May 1907, on the death of Dr. Robert Rainy [q. v. Suppl. II], principal of New College, Edinburgh, he was prevented by ill-health from entering on the duties of the office. He died at Edinburgh on 26 April 1909, and was buried in the Dean cemetery there.

In 1871 he married Catherine, daughter of James Swanston of Marshall Meadows, Berwickshire, by whom he had three sons and one daughter. His eldest son, Marcus Dods, M.A., is the author of 'Forerunners of Dante.'

A portrait in oils by Sir James Guthrie, P.R.S.A., presented by his friends to the United Free church, now hangs in the Rainy Hall, New College.

Dods' chief writings, besides those already mentioned and contributions to religious periodicals, were: 1. 'Mohammed, Buddha, and Christ' (four lectures on natural and revealed religion, delivered at the English Presbyterian College), 1877. 2. 'Isaac Jacob, and Joseph', 1880. 3. 'Erasmus and other essays', 1891; 2nd edit. 1892. 4. 'An Introduction to the New Testament' ('Theological Educator' series), 1891. 5. 'The Visions of a Prophet: Studies in Zechariah' ('Little Books on Religion' series), 1895. 6. 'Why be a Christian?' (the same series), 1896. 7. 'How to become like Christ, and other papers', 1897. 8. 'The Bible: its Nature and Origin' (Bross Lectures), 1905, a full account of his views on inspiration. Two volumes,

'Footsteps in the Path of Life' and 'Christ and Man' (sermons), were posthumously published in 1909, while two volumes of Dods' letters were edited by his son in 1910 and 1911 respectively.

[Dods' Early Letters 1910 (with memoir); his Later Letters, 1911; British Monthly, March 1904; British Weekly, 6 May 1909; Patrick Carnegie Simpson, Life of Principal Rainy (2 vols.), 1909; George Adam Smith, Life of Henry Drummond, 1898; personal knowledge.]

W. F. G.

DOLLING, ROBERT WILLIAM RAD-CLYFFE, 'FATHER DOLLING' (1851-1902), divine and social reformer, born on 10 Feb. 1851 in the old rectory, Magheralin, co. Down, was the sixth of nine children and the elder son of Robert Holbeach Dolling, a landlord in co. Down, and at one time high sheriff of Londonderry, by his wife Eliza, third daughter of Josias Du Pré Alexander, M.P., a nephew of James Alexander, first earl of Caledon. Dolling's childhood was spent at Kilrea, co. Derry. After education at a private school, the Grange, Stevenage, Hertfordshire (1861-4), and at Harrow (1864-8), he matriculated in 1868 from Trinity College, Cambridge; but bad health and ophthalmia compelled his withdrawal in the spring of 1869, and he spent the next twelve months in foreign travel, mostly in Italy and Florence. His mother's death in 1870 recalled him to Ireland, where he assisted his father in land agency work. His spare time in Kilrea was devoted to Bible-classes and night schools for young men and clubs for working men, and he similarly occupied himself in Dublin, whither his family soon removed. On his father's death on 28 Sept. 1878, he made London his permanent home; there he became intimate with 'Father' Stanton and Alexander Heriot Mackonochie [q. v.], whom he had met at Cambridge. The two men were then engaged in stubbornly defending the ritualistic services which they were conducting at St. Alban's, Holborn. Through their influence he became in 1879 warden of the south London branch of the St. Martin's Postman's League, and in that capacity did much social and religious work. But 'Brother Bob,' as he was called by the postmen, found more congenial work among the poorest classes in Southwark, and exerted a magnetic influence over not only the respectable but also the disreputable poor. Early in 1882 he entered Salisbury theological college, where his Bohemian temperament revolted against both social and theological convention.

Ordained on 23 May 1883, Dolling became curate of Corscombe, Dorset, and then missionary deacon of St. Martin's Mission at Holy Trinity, Stepney. Failing health and difficulties on questions of ritual with Frederick Temple, bishop of London [q. v. Suppl. II], led to Dolling's retirement from Stepney (1 July 1885). After a short stay at St. Leonards-on-Sea, Dolling became in 1885 vicar of the Winchester College Mission of St. Agatha's, Landport, where for ten years he did much to mitigate the evils of slum life, and was in frequent controversy with his diocesan concerning ritual observances. In 1895 the church of St. Agatha was rebuilt through Dolling's exertions. Fresh disagreements in regard to ritual with the newly appointed bishop (Randall Davidson) caused Dolling's resignation of his living on 8 Dec. 1895. In his enforced leisure he wrote 'Ten Years in a Portsmouth Slum' (1896), which gave a full account of his work and experiences at Landport.

During 1896-7 Dolling stayed in London with his sister at Earl's Court, giving occasional addresses in various parts of England. In May 1897 he went to America, visiting many of the cities there. At Chicago in March 1898 he was offered the deanery of the cathedral by Bishop McLaren; but meanwhile he had accepted the living of St. Saviour's, Poplar, and returned to England in July 1898. At Poplar, as at Landport, he sought to solve the social and municipal problems of the district; the East London water famine of 1898, the evils of overcrowding, and the small-pox epidemic of 1901 roused all his energies and he fiercely denounced those responsible for the scandals.

In March 1901 Dolling's health failed, and after vainly travelling abroad in hope of relief he died unmarried on 15 May 1902 at his sister's house, South Kensington; he was buried at Woking cemetery. In June 1902 a government annuity was purchased in his memory for his two sisters, Elise and Geraldine, who had helped him in his work, and the Dolling memorial home of rest for the working girls of Poplar and Landport was opened at Worthing under their management in 1903.

Dolling's missionary zeal curiously blended evangelical fervour with advanced ritual. Impatient of ecclesiastical authority, he was an unconventional and emotional preacher who appealed potently to the very poor. A radical in politics, he strongly advocated home rule, church

disestablishment, and the labour movement. He had a liking for the theatre, and was a frequent play-goer.

A portrait of Dolling, painted from a photograph after death, is at the Dolling memorial home, Worthing, Sussex.

[The Life of Father Dolling, by Charles E. Osborne, 1903; Father Dolling, a memoir, by Joseph Clayton, with preface by Canon Scott Holland, 1902; Robert Dolling, et blad af den Engelske Statskirkes historie 1 Bet. 19 Aarhundrede, by Richard Thomsen, Copenhagen, 1908; The Times, 16, 19, 21, 22 May, 10 June 1902; British Weekly, 22 May 1902 (with engraving of portrait taken in America); Lord Ronald Gower, Old Diaries, 1902.]

W. B. O.

DONKIN, BRYAN (1835-1902), civil engineer, born at 88 Blackfriars Road, London, on 29 Aug. 1835, was eldest son in a family of four sons and three daughters of John Donkin (1802-1854), civil engineer, and grandson of Bryan Donkin, F.R.S. [q. v.]. His mother was Caroline, daughter of Benjamin Hawes. He was educated at private schools and at University College, London, and then pursued for two years an engineering course at the École centrale des Arts et Métiers in Paris. From 1856 to 1859 he served three years' apprenticeship in the Bermondsey engineering works of Bryan Donkin & Company, which his grandfather established in 1803. He was then engaged in St. Petersburg on some very large mills, which his firm were erecting for the Russian government for the production of paper for making bank-notes and other purposes. He returned to the Bermondsey works in 1862, and became a partner in 1868. The firm was formed into a limited liability company in 1889 with Donkin as chairman. In 1900 there was an amalgamation with Messrs. Clench & Company of Chesterfield. He remained chairman for a time, though he ceased to take an active part in the management.

Donkin devoted much time and labour to scientific research, and proved to be an able, indefatigable, and accurate investigator. His researches were especially directed to the design and construction of heat-engines and steam-boilers and to the application to them of scientific tests. One of the first to practise systematic testing of the efficiency of steam-engines, he introduced a method of determining steam-consumption by measuring the condensed water flowing over a tumbling bay or weir. His researches into the action and behaviour of steam in the cylinders of steam-engines,

and the advantages of jacketing, formed the subject of four papers presented to the Institution of Civil Engineers (*Minutes of Proceedings*, xlviii. 250; c. 347; cvi. 264, and cxv. 263), and two to the Institution of Mechanical Engineers (*Proc.* 1893, p. 480; 1895, p. 90). In the course of these experiments he perfected his 'revealer,' an apparatus of glass which, attached to the cylinder of a steam-engine, rendered visible the condensation effects taking place within the cylinder. Meanwhile, after close study of internal-combustion engines, he published 'A Text-Book on Gas, Oil and Air Engines,' 1894 (5th edit. 1911), and in 1894 he also translated Rudolf Diesel's 'Theory and Construction of a Rational Heat Motor.'

His latest inquiry was into the practicability of working gas-engines with the gases produced in blast-furnaces, and a few weeks before his death he contributed to the 'Proceedings of the Institution of Civil Engineers' an important paper on 'Motive Power from Blast-Furnace Gases' (cxlviii. 1). He was a member of committees appointed by the Institution to report upon standards of thermal efficiency for steam-engines and on the tabulation of results of steam-engine and boiler trials. He was also a member of research committees of the Institution of Mechanical Engineers on the steam-jacket, on marine engines, on gas-engines, and on steam-engines. In conjunction with (Sir) Alexander Kennedy he made exhaustive tests of different types of boilers, the results of which were published in 'Engineering' from 1890 onwards, and he was author of 'The Heat Efficiency of Steam Boilers' (1898). Fuel calorimeters (*Proc. Inst. Civ. Eng.* cii. 292), centrifugal fans (*ibid.* cxvii. 265), the velocity of air through pipes (*ibid.* cxi. 345), the Perret system of forced draught (*Proc. North of Eng. Inst. Min. and Mech. Eng.* xlii. 32), and heat-transmission (*Proc. Inst. Mech. Eng.* 1896, p. 501) were among the other subjects of his investigation.

He was elected a member of the Institution of Civil Engineers on 5 Feb. 1884, and received its Watt medal in 1894, Telford premiums in 1889 and 1891, and a Manby premium in 1896, in recognition of the value of papers contributed to the Institution's 'Proceedings.' He was also, from 1873, a member of the Institution of Mechanical Engineers, and became a member of council in 1895 and a vice-president in 1901. He died suddenly at the Grand Hotel, Brussels, on 4 March 1902, and was buried at

Bromley, Kent. He married twice: (1) in 1869, Georgina, daughter of Frank Dillon, by whom he had issue one daughter and one son; (2) Edith Marshman Dunn (born Edith Marshman), by whom he had a daughter.

[Minutes of Proc. Inst. Civ. Eng. cl. 428; Proc. Inst. Mech. Eng. 1902, p. 378; Engineering, lxxiii. 320.] W. F. S.

DONNELLY, SIR JOHN FRETCHVILLE DYKES (1834-1902), major-general, royal engineers, born in the Bay of Bombay on 2 July 1834, was only child of Lieutenant-colonel Thomas Donnelly (1802-1881), at one time deputy adjutant-general of the Bombay army, and from 1851 staff captain and afterwards staff officer at the East India Company's military college at Addiscombe until the closing of the college in 1861 (see *VIBART'S Addiscombe*, with portrait). His mother was Jane Christiana, second daughter of Joseph Ballantine Dykes of Dovenby Hall, Cumberland. Educated at Highgate School (1843-8), he entered the Royal Military Academy at Woolwich at the head of the list after a year's private tuition in August 1849, passed out first, and received a commission as second-lieutenant in the royal engineers on 23 June 1853, and after professional instruction at Chatham was promoted first-lieutenant on 17 February 1854. Going out to the Crimea in June, Donnelly joined his corps on its march to Balaklava on 23 September, and next month was detailed for duty with the left attack on Sevastopol. He was present at the battle of Inkerman on 5 November, and subsequently worked in the trenches before Sevastopol with an energy to which Sir John Burgoyne called Lord Raglan's attention (21 Nov.). Through the severe weather of the winter of 1854-5 he was on duty in the trenches forty-one times by day and forty-three times by night. On the day after the abortive assault on the Redan (18 June), when he was with the second column, he by his promptitude and zeal obtained a substantial lodgment in the Russian rifle pits at the Little Mamelon. Donnelly was mentioned in Lord Raglan's despatches for this service. Soon after the fall of Sevastopol in September 1855, during which he was thrice in all mentioned in despatches (*London Gazette*, 18 Dec.), he was appointed aide-de-camp to Colonel E. T. Lloyd on 12 Nov. 1855, the commanding royal engineer in the Crimea, and accompanied him home in June 1856. He received the Crimea medal with clasps for Inkerman and Sevastopol, the Turkish

medal, and the 5th class of the legion of honour. He had been recommended for the Victoria Cross without result, and received no promotion nor British distinction.

Joining the London military district in 1856, he was placed in command of a detachment of royal sappers and miners employed in preparing for building purposes the ground purchased at South Kensington out of the surplus funds of the Great Exhibition of 1851. It was intended to erect there a permanent museum and centre of science and art. Sir Henry Cole [q. v.], the director of the scheme, secured Donnelly's services on 1 April 1858 in reorganising at South Kensington the science and art department, which was controlled by the privy council's committee of education. On 1 Oct. 1859 he was appointed inspector for science in connection with the department. He had been promoted second captain on 1 April 1859, and was now seconded in his corps for ten years. But he did not return to regimental duty, and the rest of his career was identified with South Kensington. In 1869 he was allowed two and a half years' special leave, and in 1872 was placed on the reserve list. His promotion continued, as he was still liable for emergency service, and he became lieutenant-colonel on 1 Oct. 1877 and brevet-colonel on 1 Oct. 1881, retiring with the honorary rank of major-general on 31 Dec. 1887.

The success of the scheme for national instruction in science and art was largely due to Donnelly, although some of his methods came to be reckoned reactionary. In agreement with a much controverted principle he arranged (by minute of 1859) that grants should be made to certificated teachers on the results of the examinations of their pupils. Prizes were at the same time to be awarded to successful students, whether trained in recognised schools or otherwise. He obtained due recognition for drawing and manual training as class subjects, and having induced the Society of Arts, which he joined in 1860, to form a class in wood-carving, he procured from City companies and other sources funds to carry it on as the School of Art Wood-carving, which is now located in Thurloe Place, South Kensington.

In 1874 his title at South Kensington became 'Director of Science,' and his duties included the supervision not only of the science schools and classes throughout the country but of other important

scientific institutions like the Government School of Mines, the Museum of Practical Geology, the Royal College of Chemistry, the Edinburgh Museum of Science and Art, and the Museum of Irish Industry, which developed into the Royal College of Science for Ireland. In 1868, as a member of a commission appointed to consider the question, he had drafted a report adverse to the establishment of a separate department of science and art for Ireland. In 1881 he was appointed in addition assistant secretary of the science and art department, and in 1884 secretary and permanent head of the department.

Joining the council of the Society of Arts in 1870, he was mainly responsible in 1871 for the society's scheme of technological examinations, out of which by his advice the City Guilds Institute for technical education was developed. As chairman of the council of the Society of Arts in 1894 and 1895, he led the society to organise the International Congress on Technical Education in 1897.

For many years the museums of science and art at Kensington had been housed in temporary and straggling makeshift galleries and sheds, and Donnelly was untiring in his efforts to secure parliamentary grants for the erection of permanent buildings. In 1896 the House of Commons appointed a select committee on whose report in 1899 a sum of 800,000*l.* was voted to complete the museums. In the course of the inquiry Donnelly's administration was called in question (see *Report and Evidence of Committee of House of Commons on the Museums of the Science and Art Department*, 1899). Whatever the defects of the educational policy pursued, the study of science grew immensely under Donnelly's direction. In 1859 the total number of science students was under 400; ten years later there were over 1400 classes comprising 25,000 students, while at the time of Donnelly's death these numbers were increased eight-fold. In accordance with the civil service rule he retired on 2 July 1899 on attaining the age of sixty-five. A minute of the privy council dated the following day animadverted on the committee's Report, stating that the sole responsibility lay on their lordships for the administration of the Science and Art Department, which had been loyally carried out by Colonel Donnelly and his staff, in whom they retained the fullest confidence. Sir John Gorst, vice-president of the committee of council on education,

when presenting Donnelly with a testimonial from 500 of the South Kensington staff (29 November), warmly defended him from adverse criticism, and Sir John presided at a complimentary dinner given by his old colleagues (12 December).

Donnelly was made C.B. in 1886 and K.C.B. (civil) in 1893. In 1888 he was elected a member of the Athenæum under Rule II. He was no mean artist, and from 1888 to 1901 he exhibited water-colour paintings and etchings at the Royal Academy or the New Gallery. In 1888 he took part in the formation of the committee for the preservation of the monuments of ancient Egypt. He wrote two pamphlets, on 'The Employment of Iron Shields in Siege Operations' (1868), and on 'Army Organisation' (1869) in which he advocated personal service.

He died on 5 April 1902 at his residence, 59 Onslow Gardens, London, and was buried at Brompton cemetery.

A portrait in oils by H. T. Wells, R.A. (exhibited at the Royal Academy in 1901), and a charcoal head by Sir E. J. Poynter, P.R.A., are in Lady Donnelly's possession.

Donnelly was twice married: (1) at Bridekirk, Cumberland, on 5 Jan. 1871, to his first cousin Adeliza (*d.* 1873), second daughter of Fretcheville Lawson Ballantine Dykes of Dovenby Hall, Cumberland; by her he had two daughters; (2) at Neuchâtel, Switzerland, on 17 Dec. 1881, to his first wife's elder sister, Mary Frances Dykes, who survives him; by her he had two sons, Thomas and Gordon Harvey, both lieutenants in the royal garrison artillery, and a daughter.

[Nature, 10 April 1902; Journ. of the Soc. of Arts, 11 April 1902; The Manual Training Teacher, April 1902; The Times, 7 April 1902; Standard, 12 April 1902; Daily Chronicle, 8 April 1902; Royal Engineers Records; Connolly's History of the Royal Sappers and Miners, 1855; Porter's History of the Corps of Royal Engineers, 1889; Russell's Letters from the Crimea; Report and Evidence of the Select Committee on the Museums of the Science and Art Department, 1899; Minute of 3 July 1899, of the Lords of the Committee of the Privy Council on Education.] R. H. V.

DONNET, SIR JAMES JOHN LOUIS (1816-1905), inspector-general of hospitals and fleets, born at Gibraltar in 1816, was son of Henry Donnet, surgeon, R.N. After studying at the University of Paris, where he graduated B. ès L., and Anderson College, Glasgow, he became L.S.A. of London in 1838, L.R.C.S. of Edinburgh in 1840, and M.D. at St.

Andrews in 1857. He entered the navy as assistant-surgeon in 1840. He was at once appointed to the *Vesuvius* and sent out to the Mediterranean, where, on the coast of Syria, he had his first experience of the realities of war, and where, after the capture of Acre, he was placed in charge of the wounded in a temporary hospital established on shore. Four years later he was medical officer and secretary of an embassy to the emperor of Morocco under (Sir) John Hay Drummond-Hay [q. v. Suppl. I], appointed in 1845 consul-general. Donnet was promoted to be surgeon, and in 1849 was in the *Calypso* in the West Indies during a violent outbreak of yellow fever. In 1850-1 he was surgeon of the Assistance in the Arctic with Captain (Sir) Erasmus Ommanney [q. v. Suppl. II], and helped to break the tedium of the long winter by editing 'an excellent periodical, entitled the "*Aurora Borealis*," to which the men as well as the officers contributed' (MARKHAM, 113). In 1854 he was surgeon of the President, flag-ship in the Pacific, and in her was present at the disastrous attacks on Petropaulowski, on 29 Aug. and 7 Sept. (CLOWES, vi. 429-32). In May 1867 he was promoted deputy inspector-general, and for the next two years was in medical charge of the hospital at Jamaica, years marked by an epidemic of yellow fever. In 1870 he was appointed honorary surgeon to the queen, and in 1873-4 was placed in charge of the medical wards of Haslar, crowded with cases of smallpox, enteric fever, and dysentery after the Ashanti war. On 14 April 1875 he was promoted inspector-general. He was after this employed on various committees and commissions, including one in 1876 to select a site for a college for naval cadets and one in 1877 to inquire into the causes of the outbreak of scurvy in Sir George Nares' Arctic expedition (1875-6). He was awarded a good-service pension in 1878, and was nominated K.C.B. at the Queen's Diamond Jubilee. During his last years he resided at Bognor, where he died on 11 Jan. 1905. He married in 1852 Eliza, daughter of James Meyer, who died in 1903 without issue. He published 'Notes on Yellow Fever.'

[Royal Navy Lists; Who's Who; The Times, 12 Jan. 1905; Markham, *Life of Sir Leopold McClintock*, 1909; Clowes, *Royal Navy*, vol. vi. 1901.] J. K. L.

DOUGLAS, SIR ADYE (1815-1906), premier of Tasmania, son of an officer in the army, was born at Thorpe near Norwich on 30 May 1815, and was intended for the navy. He was sent to school in Hampshire,

and then to Caen, Normandy, for two years. Returning to England, he was articled to a firm of solicitors in Southampton, and in 1838 was admitted to practice. He emigrated to Tasmania in 1839, and in the same year was admitted to the bar at Hobart. He was, however, soon (1840) tempted to try a squatter's life in Victoria, and there spent two years. Returning to Tasmania in 1842, he founded the legal firm of Douglas & Collins at Launceston, and became one of the leading lawyers in the colony.

In 1853, on the introduction of a regular municipal administration for Launceston, Douglas became an alderman of the town, of which he was subsequently five times mayor. It was about this time he made a name by his vigorous opposition to the system of transportation. He was defeated at his first attempt to enter the council, but in July 1855 he took his seat in the old legislative council as member for Launceston. He was from the first forward in urging the claims of Tasmania to a constitution of greater responsibility. In 1857 he revisited England for a time, and came back to Tasmania full of projects for introducing railways into the colony. In 1862, under the new constitution, he represented Westbury in the assembly. In 1863 he was delegate for Tasmania to the conference on intercolonial tariffs. In 1871 he was elected member for Norfolk plains and in 1872 for Fingal.

On 15 Aug. 1884, Douglas became premier and chief secretary of Tasmania, and after a somewhat uneventful period of office resigned on 8 March 1886 to go to England as first agent-general for the colony. He represented Tasmania at the Colonial Conference of 1887, but in October 1887 resigned his agency and returned to Tasmania.

In 1890 Douglas re-entered the political life of the colony as member for Launceston in the legislative council, and represented Tasmania at the Federal Convention at Sydney in 1891. He served in the Dobson ministry as chief secretary from 17 Aug. 1892 to 14 April 1894, when he became president of the legislative council; this position he held for ten years, being knighted at the coronation of Edward VII in 1902. In May 1904 he was defeated at the elections for Launceston, and retired from public life. He died on 10 April 1906 at Hobart, where he had come to reside ten years before; he was buried at the Cornelian Bay cemetery.

Of striking personality, he gave the impression of being brusque and unsympathetic, until he was more intimately known.

He was a good fighting leader, acute and tenacious in debate. He was married three times and left issue.

[Tasmanian Mercury and Examiner, 11 April 1906; John's Notable Australians; information checked by the agent-general for Tasmania.] C. A. H.

DOUGLAS, GEORGE (1869-1902), novelist. [See BROWN, GEORGE DOUGLAS.]

DOUGLAS, GEORGE CUNNINGHAME MONTEATH (1826-1904), Hebraist, born on 2 March 1826, in the manse of Kilbarchan, West Renfrewshire, was fourth son in the family of five sons and one daughter of Robert Douglas, minister of the parish, by his wife Janet, daughter of John Monteath, minister of Houston. The fifth son, Carstairs Douglas (1830-1877), became a missionary, and was a Chinese scholar of repute. George was educated at home by his father with such success that he entered the University of Glasgow in 1837 at the early age of eleven, and took a distinguished place in the classes of languages and philosophy. He graduated B.A. in 1843, the year of the disruption. Throwing in his lot with the Free church, he took the prescribed four years' training in theology at the theological college in Edinburgh, which the Free church had erected with Dr. Thomas Chalmers [q. v.] at its head. He was duly 'licensed to preach' by his presbytery, and, after some years spent in 'assistantships,' was ordained in 1852 minister of Bridge-of-Weir in Renfrewshire. In 1856 the Free church erected a third theological college, at Glasgow, and Douglas was appointed tutor of the Hebrew classes. The year after (26 May 1857) he became professor, and held this position until his retirement on 23 May 1892. On the death of Dr. Patrick Fairbairn, Douglas succeeded him as principal (22 May 1875), and held office till 26 May 1902. His whole public life was spent in Glasgow in close connection with its university and with its educational and social activities. He took a keen interest in the establishment of the system of national education, which now exists in Scotland, was chairman of the Free church committee on the matter, and was sent to London in 1869 to watch the progress of the education bill through parliament. He was member of the first two Glasgow school boards, and for several years an active member of Hutcheson's educational trust. He was also chairman of the university council's committee on university reform. He received the degree of D.D. in 1867. Douglas was an early member of the Old Testament company for

the revision of the authorised version, and served till the completion of the work in 1884; his accurate acquaintance with the Hebrew text rendered him a valuable coadjutor. He died at Woodliffe, Bridge-of-Allan, on 24 May 1904, and is buried in the Necropolis, Glasgow. A full-length portrait by G. Sherwood Calvert hangs on the walls of the Free Church College at Glasgow.

As a Hebraist Dr. Douglas belonged to the older school of scholars. He had an exact and minute acquaintance with the Massoretic text of the Old Testament and with extra-canonie Hebrew literature. He read widely and had at his command the results of Hebrew scholarship, German, French, and English. But he had a profound distrust of what he called 'the hasty generalisations' of the higher criticism, and was always ready to defend his conservative position. His writings fail to do justice to his genuine and extensive scholarship. He published: 'Why I still believe that Moses wrote Deuteronomy' (1878); 'Handbooks on Judges' (1881), and on 'Joshua' (1882); 'A Short Analysis of the Old Testament' (1889); 'The Six Intermediate Minor Prophets' (1889); 'Isaiah one and his Book one' (1895); 'Samuel and his Age' (1901); 'The Old Testament and its Critics' (1902); 'The Story of Job' (1905).

[Private information.]

T. M. L.

DOUGLAS - PENNANT, GEORGE SHOLTO GORDON, second BARON PENRHYN (1836-1907), born at Linton Springs, Yorkshire, on 30 Sept. 1836, was elder son of Edward Gordon Douglas (1800-1886), third son of John Douglas, second son of James Douglas, sixteenth earl of Morton. His mother, his father's first wife, was Juliana Isabella Mary (d. 1842), eldest daughter and co-heiress of George Hay Dawkins-Pennant of Penrhyn Castle. In 1841 the father, whose wife inherited vast property in North Wales, assumed the additional surname of Pennant by royal licence, and was raised to the peerage as Baron Penrhyn on 3 Aug. 1866. George was educated at Eton and Christ Church, Oxford. A project of entering the army was abandoned in deference to his father's wishes, but he always interested himself in military affairs. He was major of the Carnarvonshire rifles and honorary colonel of the 4th battalion of royal Welsh fusiliers. In 1866 he was elected conservative M.P. for Carnarvonshire, and held the seat until 1868. He was again elected in 1874, but was defeated in 1880 by Watkin Williams, Q.C. He succeeded to the peerage

on his father's death in 1886. Thenceforth he devoted the greater part of his time and energies to the management of the large property which came to the family through his mother. The Penrhyn estate contained no less than 26,278 acres, with a rent-roll of 67,000*l.*, and the family owned the Bethesda slate quarries which, when fully employed and in former times of good trade, were estimated to produce 150,000*l.* a year.

In his later years his father had allowed much of the management of the Bethesda slate quarries to pass into the hands of an elective committee of the men, with the result that they were in 1885 on the verge of bankruptcy. In that year the son George had been entrusted with full powers to reform their administration. One of his first actions was to repudiate the authority of the workmen's committee. Under fresh and strenuous management the quarries once again became busy and prosperous. But a section of the quarrymen, incited by outside interference and agitation, cherished deep resentment at their exclusion from control, and a great strike began in 1897. Lord Penrhyn replied by closing the quarries, and an angry debate took place in the House of Commons. But Lord Penrhyn would abate none of his conditions, and the men capitulated. Lord Penrhyn as a champion of free labour refused to allow the intervention of outsiders in dealings with his men, and late in 1900 a second strike of great extent broke out. The quarries were again closed, but were re-opened after a prolonged stoppage with 600 of the former non-union workmen. Penrhyn refused to re-engage the ringleaders of the agitation or to recognise any trades union officials. On 9 Aug. 1901 William Jones, M.P. for Carnarvonshire, raised a discussion as a matter of urgent public importance on the conduct of the local magistrates in requisitioning cavalry for maintaining peace in the district, but Penrhyn's position was unaffected. On 13 March 1903 he brought an action for libel against W. J. Parry, in respect of an article in the '*Clarion*,' accusing him of cruelty to his workmen; he received 500*l.* damages and costs. Penrhyn acted throughout in accordance with what he believed to be stern equity and from a wish to obtain justice for non-union men. In 1907 he generously accorded the workmen a bonus of 10 per cent. on their wages, owing to a spell of bad weather which had interrupted work at the quarries.

Fond of horse-racing and breeding, he

was elected to the Jockey Club in 1887, but was not very fortunate on the turf. In 1898, however, he won the Goodwood Cup with King's Messenger, which both in 1899 and 1900 carried his master's colours to the post for the Great Metropolitan Stakes at Epsom. With another horse, Quaesitum, in 1894 he won both the Chester cup and the Ascot gold vase. He was an excellent shot, but derived his chief enjoyment from fishing, in which he was exceptionally skilled. He was master of the Grafton hounds from 1882 to 1891.

Lord Penrhyn, who was a deputy-lieutenant for Carnarvonshire and was a county councillor for the Llandegai division of the county, was a man of strong and original character. A tory of the old school, he managed his estates in the feudal spirit, and with implicit justice and generosity. Though a thorough churchman he always insisted on equality of treatment for nonconformists both as tenants and quarrymen.

He scorned popularity, and played a detached part in public affairs. He was a founder of the North Wales Property Defence Association, of which he was chairman; in the course of his comprehensive evidence before the Welsh land commissioners in 1893, he stated that for many years he received from his land no income in excess of his expenditure upon it.

He died on 10 March 1907 at his town residence, Mortimer House, Halkin Street, S.W., and was buried near one of his country residences, Wicken, Stony Stratford. A portrait in oils, painted in 1907, after his death, by Miss Barbara Leighton, is at 37 Lennox Gardens, S.W.

He married twice: (1) in 1860 Blanche (*d.* 1869), daughter of Sir Charles Rushout Rushout; and (2) in 1875 Gertrude Jessie, daughter of Henry Glynne, rector of Hawarden. By his first wife he had a son, Edward Sholto, who succeeded as third Baron Penrhyn, and six daughters, and by his second wife two sons and six daughters.

[*The Times*, 12 March 1907; Burke's Peerage; Lucy's Balfourian Parliament, 1906, pp. 108 seq.; private information.] L. P. S.

DOWDEN, JOHN (1840-1910), bishop of Edinburgh, born in Cork on 29 June 1840, was elder son of John Wheeler Dowden, 'a staunch presbyterian,' and his wife Alicia Bennett, 'a devout churchwoman.' His younger brother, Edward Dowden (1843-1913), was professor of English literature in Dublin University. The family came from the south of England in the seventeenth century. John was educated at Cork, and

at sixteen gained a classical scholarship at Queen's College in that town, whence he proceeded in 1858 to Trinity College, Dublin. His tutor was his cousin, George Salmon [q. v. Suppl. II]. His college career was distinguished; he graduated B.A. in 1861, being senior moderator in ethics and logic, and in 1864 he passed through the divinity school with first classes in all the examinations. He was ordained deacon in 1864 by Dr. Verschoye, bishop of Kilmore, and priest next year. He married and for three years he was curate of St. John's, Sligo, until in 1867 he was appointed perpetual curate of Calry church, near Sligo, where he remained for eight years through the period of the disestablishment of the Irish church. From 1870 he also acted as chaplain to Earl Spencer, the lord-lieutenant of Ireland, and from 1872 was assistant minister of St. Stephen's church, Dublin.

A friend, the Rev. Percy Robinson, then headmaster of the boys' school at Glenalmond, to which was attached the theological college of the episcopal church of Scotland, was responsible for Dowden's association with the Scottish episcopal church. In 1874 he accepted the post of Pantonian professor of theology at Glenalmond. At the outset there was only one student, and the comparative leisure enabled Dowden to apply himself especially to ecclesiastical history and liturgiology. A fire in 1875 led to the removal of the few students to rooms in Edinburgh, until in 1880 the theological hall of the Scottish episcopal church was established, and Dowden became principal. At the same time he was made a canon of St. Mary's Cathedral, Edinburgh; in 1876 Dublin University had conferred upon him the degree of D.D. The success of the hall was largely due to Dowden, whose attractive personality and erudition won the loyal admiration of his students. The subsequent expansion and growth of the episcopal church owed much to the hall's prosperity under Dowden's guidance. On the death of Henry Cotterill, bishop of Edinburgh, in 1886 Dowden was as a consequence chosen to be his successor, after Canon Liddon's refusal. Dowden was consecrated on 21 Sept., when Dr. Salmon in a remarkable sermon on episcopacy in relation to unity defined generally the new bishop's theological position. The respect and affection in which the bishop was held by all sections of Edinburgh society was strikingly shown in 1904, when the degree of LL.D. was conferred upon him by Edinburgh

University, and his portrait by Mr. John Bowie, A.R.S.A., presented to him by a large committee of his laymen. Under Dowden's leadership his church and diocese prospered. Declining to regard the Scottish episcopal church as a mere appendage of the Church of England, he was a keen promoter of the movement which in 1904 established the consultative council on church legislation. In 1905 the council undertook the revision of the canons, and on an appendix to the new code of proposals for revision of the services Dowden worked till death.

While he was bishop Dowden continued his liturgical and historical studies and retained the post of Bell lecturer at the theological hall, lecturing there once a week to keep himself in touch with the students. In the annotated Scottish communion office which appeared in 1884 he illustrated his happy faculty of combining exact scholarship with literary style. It was the precursor of 'The Workmanship of the Prayer Book' (1899; 2nd enlarged edit. 1902), which quickly became a classic of liturgical criticism. A supplementary volume, 'Further Studies in the Prayer Book,' appeared in 1908 and 'The Church Year and Calendar' for the 'Cambridge Handbooks of Liturgical Study' in 1910. In 1885-6 the bishop delivered the Donnellan lectures in the University of Dublin. He was select preacher at Dublin in 1886-7 and at Cambridge in 1888. In 1886 a committee under Dowden's convenership founded the Scottish History Society, and for the society Dowden edited in 1893 'The Correspondence of the Lauderdale Family with Archbishop Sharp,' 'The Chartulary of the Abbey of Lindores' in 1903, and in 1908, assisted by W. A. Lindsay, K.C., and Dr. J. Maitland Thomson, 'Charters, Bulls, and other Documents relating to the Abbey of Inchaffray.' A more popular result of his historical inquiries was 'The Celtic Church in Scotland,' published in 1894. In 1896 he went to America to lecture before the General Theological Seminary in New York. The lectures were published in 1897 as 'Outlines of the History of the Theological Literature of the Church of England, from the Reformation to the close of the Eighteenth Century.' In 1901 he delivered the six Rhind lectures before the Society of Antiquaries of Scotland, which with revision and additions were published after the author's death in 1910 as 'The Mediæval Church in Scotland; its Constitution, Organisation, and Law.'

In 1890 Dowden's health failed, but a complete recovery followed. He died

suddenly on 30 Jan. 1910, and is buried in the Dean cemetery, Edinburgh. A memorial tablet in bronze, giving a full figure of Dowden in episcopal robes, designed by Sir Robert Lorimer, and modelled by Mr. Deuchars, with a Latin inscription, was placed in the floor of the north side of the choir in Edinburgh Cathedral on 27 Oct. 1911. His library was bought by public subscription after his death and placed in the chapter house of the cathedral (*Scottish Chronicle*, 3 Nov. 1911).

Dowden married in 1864 Louisa, only daughter of Francis Jones, civil engineer. His widow, two sons, and four daughters survive him.

In addition to the works mentioned, Dowden printed various charges, sermons, and pamphlets, and at his death was engaged in rewriting 'Keith's Catalogue of Scottish Bishops,' of which portions appeared in the 'Scottish Historical Review'; this was completed by Dr. J. Maitland Thomson and published in 1912.

[A biographical sketch of Bishop Dowden by his daughter, Alice Dowden, is prefixed to *The Mediæval Church in Scotland*, 1910; *The Times*, 1 Feb. 1910; *Guardian*, 14 Jan. and 4 Feb. 1910; *Men and Women of the Time*, 1899; a life by Antony Mitchell, bishop of Aberdeen, is in preparation (1912).]

R. B.

DOWIE, JOHN ALEXANDER (1847-1907), religious fanatic, was born in Leith Street Terrace, Edinburgh, on 25 May 1847. At a school in Arthur Street he gained a silver medal at the age of fourteen (1861). His parents emigrated to Adelaide, South Australia, in 1860; he followed them, but in 1868 returned to Scotland, and with a view to the congregational ministry attended the Edinburgh University for two sessions, 1869-71. His first place of ministry was the congregational church at Alma, near Adelaide, whence he soon moved to the charge of Manly church, Sydney, New South Wales, and later to a church at Newton, a suburb of Sydney. At this period he was prominent as a social reformer, a temperance advocate, and a pleader for free, compulsory, and undenominational education. It is stated that Sir Henry Parkes [q. v. Suppl. I] offered him a seat in his cabinet. In 1878 he declared himself against a paid ministry. Two lectures, which he delivered in the Victoria Theatre, Sydney, in 1879, on 'The Drama, the Press, and the Pulpit,' attracted attention and were published. In 1882 he built a tabernacle at Melbourne, Victoria, in connection with an association for 'divine

healing.' Healing was to be in answer to prayer. Dr. Dowie, as he was now styled, claimed that in ten years he laid hands on eighteen thousand sick persons, and healed most of them. He made expeditions to New Zealand, San Francisco (1888), Nebraska (1890), and in July 1890 made Chicago his headquarters, though extending his travels to Canada. In May 1893 he opened Zion's tabernacle, at Chicago, as a centre for the 'Divine Healing Association.' A move for the independent organisation of a new religious community in November 1895 led to trouble in the law courts. However, on 22 Jan. 1896 he succeeded in organising the 'Christian Catholic Church in Zion,' with a hierarchy of overseers, evangelists, deacons, and deaconesses. On 22 Feb. Dowie was made general overseer; his wife, Jane Dowie, was the only woman overseer; the wives of overseers were usually made elders; no unmarried man could be more than deacon. Zion City, on Lake Michigan, forty-two miles north of Chicago, was projected on 22 Feb. 1899; on 1 Jan. 1900, 6500 acres of land were secured, the title-deeds being held by Dowie as 'proprietor' and 'general overseer.' If Dowie is to be believed, his following had by 29 April 1900 increased from 500 to 50,000; his critics say that he never had more than half that number. The site of Zion temple was consecrated on 14 July 1900. Dowie now announced himself as 'Elijah the restorer,' otherwise 'the prophet Elijah,' and 'the third Elijah.' The gates of Zion City were opened on 15 July 1901; by 2 Aug. the first residence was ready. The religious organisation of the community, completed on 7 April 1902, was supplemented on 21 Sept. by the formation of a body of picked men, known as 'Zion restoration host.' The city was planned with great ostentation, and included both winter and summer residences for its inhabitants. Dowie distinguished himself by a showy costume of oriental appearance. On 18 Sept. 1904 he consecrated himself 'first apostle,' with authority to elect eleven others; the title of the body was now enlarged to 'Christian, Catholic, Apostolic Church in Zion,' and its purpose, frankly avowed by Dowie, was 'to smash every other church in existence.' Its members were bound to minute particulars of personal and ceremonial observance, alcohol and tobacco being prohibited. The leading motive was evidently the establishment of a sheer autocracy, wielded by Dowie. The publications of this body, including their

organ, 'Leaves of Healing,' were translated into German and French, some of them into Danish, Norwegian, and Dutch, and some even into Chinese and Japanese. Dowie twice visited England, where a congregation of disciples had been formed in London; in 1903 he was not well received in London and Manchester; in 1904 some disrespectful allusions to King Edward, uttered in Australia, caused an uproar at the Zionist tabernacle in Euston road, London. In April 1906, while Dowie was in Mexico for his health, came a revolt in Zion against his sway. He was charged with having advocated polygamy in private, and was deposed by the officers of his church, who, with the concurrence of his wife and son, put Deacon Granger in possession, not only of the church property, but even of Dowie's private belongings. Dowie instituted a suit in the United States District Court for reinstatement, estimating the property at two millions sterling. The court decided that, as the property had been made by contributions to Dowie in his representative capacity, it passed to his successor in the office of general overseer. In the course of the suit it was stated that Dowie's account in Zion City bank was overdrawn more than 480,000 dollars, that he had been drawing for his personal use at the rate of 84,000 dollars a year, and had lost 1,200,000 dollars in Wall Street in the 1903-4 'slump.' Dowie was now a broken man. He was afflicted with partial paralysis, and with strange illusions as to the importance of his intervention in international politics. He died on 9 March 1907 at Shiloh House, Zion City, Illinois.

Dowie was an attractive personality, a man of fine build, though obese and bow-legged, with brilliant, sparkling eyes and a flowing white beard; a turban veiled his baldness, and his fancy dress was tasteful and picturesque. He did not shine as a speaker, being long-winded and dull. After his death a rival fanatic, Mirza Ghulam Ahmad, 'the promised Messiah,' published a pamphlet (*n.d.*, but written in April 1907), in which the fate of Dowie was treated as a 'divine judgment' on his opposition to Islām.

[R. Harlan, J. A. Dowie, and the Christian Catholic Apostolic Church in Zion, 1906 (three portraits); The Times, 11 March 1907; Annual Register, 1907; sundry pamphlets and leaflets emanating from Zion city.]

A. G.

DOYLE, JOHN ANDREW (1844-1907), historian, born on 14 May 1844, was son of Andrew Doyle (*d.* 1888), for some time

editor of the 'Morning Chronicle,' and afterwards a poor law inspector. His mother (*d.* Dec. 1896) was the youngest of three daughters of Sir John Easthope, baronet [q. v.], through whom he inherited property which made him independent of a profession. At Eton from 1853 to 1862, Doyle, after a year of private tuition, matriculated at Balliol College, Oxford, in October 1863. He graduated B.A. in 1867, with a first class in the school of literæ humaniores, but continued to reside in Oxford for several terms in order to study history. In the spring of 1869 he obtained the Arnold prize for an essay on 'The English Colonies in America before the Declaration of Independence'; and in November of the same year he was elected to a fellowship at All Souls, which he retained until his death. Though he was not a continuous resident in Oxford, he spent much time in the college, and took a large part in college affairs, helping in the framing of the statutes made by the commissioners of 1887, in the management of the college library, of which he was librarian from 1881 to 1888, and in the work of general administration.

His home was with his parents at Plas-dulas in Denbighshire until 1880, when they moved to a property on which they built a house at Pendarren near Crickhowell in Breconshire. There Doyle continued to live after his parents' death. He took an active interest in local affairs, more especially in what concerned the higher education in Wales. He served as high sheriff of Breconshire in 1892-3, and was an alderman of the county council from 1889 until his last illness. He was a member of the joint committee for Breconshire under the Welsh Intermediate Education Act, 1889, of the Breconshire education committee under the Act of 1902, and of the council and agricultural committee of Aberystwyth College. He paid much attention to the development of agriculture in his own neighbourhood, which profited from his knowledge and interest in the breeding of stock and poultry.

The main literary work of his life was the 'History of the American Colonies down to the War of Independence,' an outcome of his studies for the Arnold essay. His aim was 'to describe and explain the process, by which a few scattered colonies along the Atlantic seaboard grew into that vast confederate republic, the United States of America.' After publishing in 1875 a 'Summary History of America' ('Historical Course for Schools') there followed the

volumes 'The English in America' (1882), 'The Puritan Colonies' (2 vols. 1887), 'The Middle Colonies' (1907), and 'The Colonies under the House of Hanover' (1907). These books constitute the most complete authoritative account of the English colonies in America down to the conquest of Canada. The subject does not lend itself to continuous narrative or dramatic literary treatment; it is broken up by the necessary transition from the affairs of one colony to those of another. But the history is set forth in clear, vigorous style, with fulness of detail and judicial temper.

Doyle's literary work left him leisure for other interests besides those of local administration. He was a volunteer from the commencement of the volunteer movement; he was in the rifle corps as a boy at Eton and as an undergraduate at Oxford, and he took up rifle shooting with enthusiasm. He accompanied the Irish team which visited America in 1874; he shot in the Irish eight for the Elcho shield in 1875, and made the top score for the team, (147 out of a possible 180), and he was for many years adjutant of the Irish eight. He did much to encourage long-range rifle shooting at Oxford by getting up competitions with Cambridge teams, by offering and contributing to prizes, and by readiness to help with advice which was much valued. Though he was never very successful as a rifle shot, his knowledge was extensive and his judgment sound, as is apparent from an article on modern rifle shooting in the 'Quarterly Review' (1895). He was a constant attendant at Wimbledon and Bisley and was a member of the council of the National Rifle Association from 1889 to his death.

Doyle was also an authority on the breeding of dogs and of racehorses. He was one of the earliest members of the Kennel Club, founded in 1873, and was specially famous as a breeder and judge of fox-terriers. His knowledge of the pedigrees of racehorses was great and his judgment as to their breeding of recognised value. His own experiments in this line were not on a large scale, but Rosedrop, a filly foal, bred by him and sold with the rest of his stock after his death, was the winner of the Oaks in 1910. Doyle died, unmarried, at his house at Pendarren on 5 Aug. 1907.

Besides the literary work already mentioned, Doyle contributed chapters on American history to the 'Cambridge Modern History' and many memoirs of early colonists in America to this Dictionary.

He also edited the 'Memoir and Correspondence (1782-1854) of Susan Ferrier' (1898) and 'Papers of Sir Charles Vaughan' (1902). A collection of his essays on various subjects (from the 'Quarterly,' the 'English Historical Review,' 'Baileys Magazine,' and the 'Kennel Encyclopædia') was published in 1911, being edited by Prof. W. P. Ker with an introduction by the present writer.

[Doyle's Essays on Various Subjects, 1911, introd.; personal knowledge; The Times, 7 Aug. 1907.] W. R. A.

DREDGE, JAMES (1840-1906), civil engineer and journalist, born in Bath on 29 July 1840, was younger son, by his wife Anne Vine, of James Dredge of that place, an engineer who designed and patented a form of suspension bridge with inclined suspension rods carrying the roadway. His elder brother, William, under whom he served articles, was also an engineer. After education at Bath grammar school Dredge spent three years (1858-61) in the office of D. K. Clark; in 1862 he entered the office of Sir John Fowler [q. v. Suppl. I], and was engaged for several years on work connected with the Metropolitan District railway. But Dredge soon gave up practical engineering for engineering journalism. From the start in Jan. 1866 of the weekly periodical 'Engineering,' which was founded by Zerah Colburn on his retirement from the editorship of the 'Engineer' in 1865, Dredge helped in illustrating and occasionally wrote for the paper. On Colburn's death in 1870 Dredge and W. H. Maw, the sub-editor, became joint editors and proprietors. Dredge helped actively in the management until May 1903, when he was disabled by paralysis.

Dredge was keenly interested in international exhibitions. He described for his journal those at Vienna (1873), Philadelphia (1876), and Paris (1878 and 1889), publishing his reports of the first and last in book form. He was also officially connected as a British commissioner with exhibitions at Chicago (1893), the transportation exhibits at which he described in a volume (1894), at Antwerp (1894), at Brussels (1897) and at Milan (1906). For services at Paris in 1889 he was appointed an officer of the Legion of Honour, and for his work at Brussels he was made C.M.G. in 1898.

As a close friend of the American engineer, Alexander Lyman Holley, he delivered an address in Chickering Hall, New York, on 2 Oct. 1890, at the installation of a bronze bust of Holley in Washington Square, New York (*Engineering*, l. 433). For the Ameri-

can Society of Mechanical Engineers, of which he was elected an honorary member in 1886, he prepared a special memoir of Sir Henry Bessemer [q. v. Suppl. I]. He also wrote the article on Bessemer for this Dictionary. He was elected a member of the Institution of Civil Engineers on 4 Feb. 1896, and of the Institution of Mechanical Engineers in 1874, and was a member of the council of the Society of Arts (1890-3). In 1901 he founded, as a monthly supplement to 'Engineering,' a journal called 'Traction and Transmission,' which he edited with much care until it ceased in 1904. Dredge died at Pinner on 15 August 1906. He was long a widower; an only child, Marie Louise, survived him. With Mr. Maw, Dredge published in 1872 'Modern Examples of Road and Railway Bridges.' Other of his publications, which were largely based on contributions to 'Engineering,' were: 'History of the Pennsylvania Railroad' (1879); 'Electric Illumination' (2 vols. 1882); 'Modern French Artillery' (1892), for which he received a second decoration from the French government, and 'The Thames Bridges from the Tower to the Source,' part i. (1897).

[Engineering (with portrait), 24 Aug. 1906; Min. Proc. Inst. Civ. Eng. clxvi. 382.]

W. F. S.

DRESCHFELD, JULIUS (1846-1907), physician and pathologist, born at Niederwären, near Bamberg, Bavaria, in 1846, was youngest son in the family of five sons and five daughters of Samuel Dreschfeld, a well-to-do merchant, by his wife Giedel (Elizabeth), a well-educated woman who had been acquainted with Napoleon I. The parents were orthodox Jews who were highly respected in their neighbourhood. The father lived till ninety-two and the mother till ninety-seven. After early education at Bamberg, Julius went with his mother to Manchester in 1861. Entering the Owens College, he took prizes in the English language, mathematics, and science. In 1863 he gained the Dalton chemical prize with an essay on 'The Chemical and Physical Properties of Water,' and in 1864 the Dalton junior mathematical scholarship. His medical education was received at the Manchester Royal School of Medicine (Pine Street). In 1864 he returned to Bavaria and continued his medical study at the university of Würzburg, where he graduated M.D. and acted for a time as assistant to von Bezold, professor of physiology. In 1866 he saw active service as an assistant army surgeon in the Bavarian army during

the Austro-Prussian war. Whilst at Würzburg he paid special attention, under Virchow, to pathology, the branch of medical science to which he devoted himself in later years. In 1869 he returned to England, and after becoming licentiate of the Royal College of Physicians in London settled down in practice in Manchester. In 1872 he was appointed honorary physician to the Hulme Dispensary, Manchester. Next year he became an honorary assistant physician at the Manchester Royal Infirmary; in 1883, on the resignation of Sir William Roberts, [q. v. Suppl. I], honorary physician, and in due course senior honorary physician in 1899. His association with the active staff of the infirmary lasted until October 1905, when, on reaching the age limit, he became an honorary consulting physician. Even then he was granted the unique privilege of having a few beds in the infirmary allotted to him and was asked to continue his clinical teaching there.

Meanwhile Dreschfeld was pursuing the study of pathology. In 1875 he supervised the pathological section of the medical museum at Owens College and classified and catalogued the specimens. In 1876 he began to lecture in pathology, and the efficiency with which he conducted his department led in 1881 to his appointment as professor of general pathology and morbid anatomy and also of morbid histology, the first chairs in these subjects in England. His pathological laboratory was said to be the first of its kind in England. The number of Dreschfeld's students rose from three in 1873 to 110 in 1891. His lectures were models of clearness, conciseness, and completeness. Through his influence pathology and morbid anatomy was made a special subject in the medical examinations of the Victoria University and not part of the medicine and surgery papers. This reform was soon followed by other examining bodies throughout the kingdom. In 1891 Dreschfeld withdrew from his pathological chair to become professor of medicine on the resignation of Dr. John Edward Morgan, and he retained that post till death.

Dreschfeld read widely the work of German clinicians and pathologists, and tested it in his own wards or laboratories. He was near forestalling Pasteur in the latter's classical researches on hydrophobia. In 1882-3, when Pasteur had just published his researches on 'intensification' and 'diminution' of the

poison of anthrax, which led to his results on 'immunisation,' Dreschfeld, in view of the presence of hydrophobia in Manchester, worked on hydrophobia poison on Pasteur's lines. He was apparently approaching success in attenuating its virulence sufficiently to use it for purposes of immunisation when the Vivisection Act stopped his work, no record of which was published. At the same time Dreschfeld was long the best-known consulting physician in the north of England, being specially in demand as a neurologist. At the Royal College of Physicians, of which he became a member in 1875 and a fellow in 1883, he delivered the Bradshawe lecture — 'on diabetic coma' — in 1887. He was preparing the Lumleian lectures on a subject connected with food and digestion at his death.

Dreschfeld took a prominent part in many local medical, scientific, and philanthropic societies. A slowly progressing disease of the spinal cord from which he suffered since 1897 scarcely affected his varied industry. He died suddenly from angina pectoris on 13 June 1907. He was buried in Holy Trinity churchyard, Hoghton Street, Southport.

He was married twice: (1) in 1888 to Selina, daughter of Felix Gaspari of Berlin, by whom he had two sons and two daughters, who survive him; and (2) in 1905, to Ethel, daughter of Dr. James Harvey Lilley of Leamington, who survives him.

Dreschfeld wrote no book, but published over 120 papers in English and German journals, besides contributing admirable articles on infective endocarditis, ulcer of the stomach and duodenum, and typhoid fever to Sir Clifford Allbutt's 'System of Medicine.' He was the first to recommend the now widely used dye eosin in watery solution as a stain for animal tissues; he recorded the first post-mortem in a case of primary lateral sclerosis, previously described clinically by Erb and Charcot; he described creeping pneumonia, now known as influenzal pneumonia, alcoholic paralysis, a disease which he worked out with James Ross, and the lung complications of diabetes.

With strong and impressive Jewish features, Dreschfeld spoke English readily with a rather guttural and foreign intonation. A portrait in oils, painted posthumously by George Harcourt, hangs in the medical school of the Victoria University. The Dreschfeld memorial volume, which contains a biography, portrait, and bibliography, with scientific papers written

by his former colleagues and students, was published in 1908.

A scholarship to his memory was founded in the Victoria University, to be awarded on the results of the entrance examination for medical students of the university.

[Personal knowledge; private information; Medical Chronicle, Nov. 1907 (with portrait); Dreschfeld Memorial Volume, ed. by Dr. E. M. Brockbank, 1908 (with collotype portrait); Brit. Med. Journal, 22 June 1907 (portrait); Lancet, 29 June 1907; Manchester Guardian, 14 June 1907 (portrait).]

E. M. B.

DREW, SIR THOMAS (1838-1910), architect, born at Victoria Place, Belfast, on 18 Sept. 1838, came of a good Limerick family. His father, Thomas Drew, D.D. (*d.* 1870), a militant Orange divine, was long rector of Christ Church, Belfast, subsequently becoming rector of Seaford, co. Down, and precentor of Down cathedral. A sister Catherine (*d.* Aug. 1901) was a well-known journalist in London. Thomas was educated in his native town, and in 1854 was articled to (Sir) Charles Lanyon, C.E. [q. v.], and showed great aptitude for architectural design. In 1862 he entered the office, in Dublin, of William George Murray, R.H.A. Next year he began to write for the 'Dublin Builder,' and subsequently acted for a time as editor, introducing antiquarian features. In 1864 he was awarded a special silver medal by the Royal Institute of the Architects of Ireland for his set of measured drawings of the Portlester chapel in St. Audoen's Church, Dublin. In 1870 he was elected associate of the Royal Hibernian Academy and full member next year. In 1875 he began independent practice in North Frederick Street, Dublin, subsequently removing to Upper Sackville Street, and again to No. 6 St. Stephen's Green, a house designed by himself. His office was latterly at 22 Clare Street. In 1889 Drew was elected fellow of the Royal Institute of British Architects, and in 1892 president of the Royal Institute of Architects of Ireland. A fluent and witty speaker, he delivered from 1891 an annual lecture on St. Stephen's Day, in Christ Church cathedral, on its history and fabric. He was also instrumental in establishing in the crypt a museum of Irish antiquities. In 1895-7 he was president of the Royal Society of the Antiquaries of Ireland.

Drew was elected tenth president of the Royal Hibernian Academy on 18 Oct. 1900, on the death of Sir Thomas Farrell, the sculptor, and was knighted by the lord-

lieutenant of Ireland, Earl Cadogan. In 1905 Dublin University gave him the honorary degree of LL.D.

Drew died in Dublin on 13 March 1910, and was buried in Dean's Grange cemetery, co. Dublin. He married in 1871 Adelaide Anne, daughter of William Murray, formerly architect of the board of works, Ireland, and a collateral descendant of Francis Johnston [q. v.], founder of the Royal Hibernian Academy. She survived him.

Among the chief buildings designed by Drew were the Rathmines town hall, the law library at the Four Courts, Dublin, and Clontarf presbyterian church in 1889, the Ulster bank, College Green, Dublin, in 1891, and Belfast cathedral in 1899. He was consulting architect to the three principal cathedrals of Ireland, and also restored Waterford cathedral. In ecclesiastical design he was noted for 'a robust and virile Gothic.' He built for himself a noble residence, Gortnadrew, near Monkstown, where he formed a good collection of miniatures, Waterford glass, and Georgian mantels.

[Irish Builder and Engineer, Jubilee issue, 1909, and 19 March and 2 April 1910; Belfast Newsletter, Irish Times, 14 March 1910.]

DRUMMOND, SIR GEORGE ALEXANDER (1829-1910), senator in the parliament of Canada, and president of the bank of Montreal, born in Edinburgh on 11 Oct. 1829, was son of George Drummond, a member of the city council, by his wife Margaret Pringle. Educated at the Edinburgh High School and attending the university for several terms, he emigrated in 1854 to Canada, and became manager for John Redpath & Son of Montreal, pioneers of the sugar refining industry. In 1879 he founded the Canada Sugar Refining Company, and became the first president. At the same time he interested himself in many other enterprises and was president of the Cumberland Railway Co., the Canada Jute Co., and the Intercolonial Coal Co. While president of the Montreal Board of Trade, a semi-official organisation of business men (1886-8), he induced the government to assume the cost of deepening the ship channel from Montreal to Quebec, so as to make it navigable by large ocean-going steamers. In 1882 he was elected director of the bank of Montreal, vice-president in 1887, and president in 1905, the position of highest distinction open in Canada to men engaged in finance.

Drummond began a political career in 1872, when he contested unsuccessfully the

constituency of Montreal West. From 1880 until his death he was senator in the parliament of Canada. He was created K.C.M.G. in 1904 and C.V.O. in 1908.

As philanthropist, he was best known as president of the Royal Edward Institute for the prevention of tuberculosis, and he endowed the home for incurables conducted by the sisters of St. Margaret.

Deeply interested in art, Drummond was president of the Art Association of Montreal 1896-9, and was a discriminating and successful collector of pictures. His collection includes first-rate examples of the work of Constable, Corot, Cuyp, Daubigny, Franz Hals, De Hooze, Israels, Jacob Maris, Matthew Maris, William Maris, Mauve, Troyon, Vandyck, Velasquez, Watts, Lorraine, and Rubens. He was owner of five pictures by Turner, namely, 'Port of Ruysdael,' 'Sun of Venice,' 'Zurich,' 'Dudley Castle,' and 'Chepstow.' The collection is maintained intact in Montreal by his widow, and is easily accessible by visitors.

In later years he spent a large part of his time at Huntleywood, his country place near Montreal, where he was a successful breeder of cattle and sheep. He was devoted to golf, and was president of the Canadian Golf Association. He died in Montreal on 2 Feb. 1910, and was buried in Mount Royal cemetery.

Sir George Drummond was twice married: (1) in 1857 to Helen, daughter of John Redpath of Montreal, having by her two daughters and five sons; and (2) in 1884 to Grace Julia, daughter of A. D. Parker, of Montreal, having by her two sons.

Portraits by Sir George Reid, Troubetzki, and Robert Harris are in possession of the family; a fourth, by Joliffe Walker, is owned by the Mount Royal Club, Montreal.

[Private information.] A. M.

DRUMMOND, WILLIAM HENRY (1854-1907), Canadian physician and poet, born on 13 April 1854 at Currawn, co. Leitrim, Ireland, was eldest of four sons of George Drummond, an officer in the Royal Irish constabulary, who was then stationed at Currawn. His mother was Elizabeth Morris Soden. In 1856 the family moved to Tawley, co. Donegal, where Paddy McNulty, one of the hereditary scholars of Ireland, gave the boy the rudiments of his education, and on the river Duff he first learned to cast a fly.

In 1865 the family went out to Canada, where the father soon died, and the mother and her four children were reduced to the

slenderest resources. After a few terms at a private school in Montreal, William Drummond studied telegraphy, and by 1869 was an operator at the village of Bord-à-Plouffe on the Rivière des Prairies. Here he first came in contact with the *habitant* and *voyageur* French-speaking backwoodsmen, whose simple tales and legends he was later to turn to literary account.

In 1876 Drummond, having saved sufficient money, resumed his studies, first in the High School, Montreal, then at McGill University, and finally at Bishop's College, Montreal, where he graduated in medicine in 1884. He practised his profession for two years at the village of Stornoway, near Lake Megantic, and then bought a practice at Knowlton in the township of Brome. Towards the close of 1888 he returned to Montreal. There he became professor of medical jurisprudence at Bishop's College in 1895, and soon made a literary reputation. He received the hon. degree of LL.D. from Toronto in 1902 and of D.C.L. from Bishop's College, Lennoxville in 1905. In the summer of 1905 Drummond and his brothers acquired property in the silver region of Cobalt, in northern Ontario, and most of his time until his death was spent in superintending the valuable Drummond mines. He acted as vice-president of the company. In the spring of 1907 he hurried from Montreal to his camp on hearing that small-pox had broken out there. Within a week of his arrival he died at Cobalt of cerebral hæmorrhage, on 6 April. He was buried in Mount Royal cemetery, Montreal.

In 1894 he married May Isabel Harvey of Savanna la Mar, Jamaica. Of four children, a son, Charles Barclay, and a daughter, Moira, survive.

It was after his marriage in 1894 that Drummond transcribed for publication the broken *patois* verse in which he had embodied his memories of the *habitant*, and which raised the dialect to the level of a literary language of unspoiled freshness and humour. 'The Wreck of the Julie Plante,' composed at Bord-à-Plouffe, the first piece of his to circulate widely, showed something of his whimsical fancy and droll powers of exaggeration. His mingled tenderness and mirth were revealed later. Three collections of Drummond's verse appeared in his lifetime: 'The Habitant' (1897); 'Johnny Courteau' (1901); and 'The Voyageur' (1905). There appeared posthumously 'The Great Fight' (1908), with a memoir by his wife. All these volumes have been many times reprinted. In a

preface to 'The Habitant' (1897) Louis Fréchette [q. v. Suppl. II] justly and generously transferred to Drummond a phrase which had been bestowed upon himself by Longfellow in 1863—'the pathfinder of a new land of song.' Few dialect poets have succeeded in equal measure with Drummond in capturing at once the salient and concealed characteristics of the persons whom they portray. Drummond's *habitant*, although using an alien speech, faithfully presents a highly interesting racial type. His humorous exaggeration of eccentricities never passes into unkindly caricature. Drummond had, too, at his command an admirable faculty of telling a story.

[Mrs. Drummond's memoir prefixed to The Great Fight, 1908; information from Drummond's brother, Mr. George E. Drummond.]

P. E.

DRURY-LOWE, SIR DRURY CURZON (1830-1908), lieutenant-general, born at Locko Park, Denby, Derbyshire, on 3 Jan. 1830, was second of the five sons (in a family of eight children) of William Drury-Lowe (1802-1877) of Locko Park, by his wife Caroline Esther (d. 1886), third daughter of Nathaniel Curzon, second Baron Scarsdale. His father, son of Robert Holden of Darley Abbey, Derbyshire, by his wife Mary Anne, only daughter and heiress of William Drury-Lowe (d. 1827), assumed the surname of Drury-Lowe in 1849 on his maternal grandmother's death. Educated privately and at Corpus Christi College, Oxford, Drury-Lowe graduated B.A. in 1853. Resolving on a military career at a comparatively late age, he obtained a commission in the 17th lancers (the Duke of Cambridge's own, 'Death or Glory Boys') on 28 July 1854, and was promoted lieutenant on 7 Nov. 1854, and captain on 19 Nov. 1856. With the 17th lancers he was associated throughout his active service. He accompanied his regiment to the Crimea (18 June 1855), and took part in the battle of the Tchernaya, and the siege and fall of Sevastopol, receiving the medal with clasp and the Turkish medal. Ordered to Bombay, he took part in the concluding episodes of the war of the Indian Mutiny, including the pursuit of the rebel force under Tantia Topi during 1858 and the action of Zerapore, when Evelyn Wood, who had just exchanged into the 17th lancers, was for the first time in action with him. Both won distinction. Drury-Lowe received the medal with clasp for Central India, having been mentioned in despatches (*Lond. Gaz.* 17 July 1860). He became major on 10 June 1862,

lieut.-colonel on 15 June 1866, and colonel on 15 June 1871. In the Zulu war of 1879-1880 he commanded the 17th lancers and the cavalry of the second division, and was present at the battle of Ulundi, where he was slightly wounded, being awarded the medal and clasp, and being made C.B. on 27 Nov. 1879 (*Lond. Gaz.* 21 Aug. 1879). He returned to South Africa to engage under Sir Evelyn Wood in the Transvaal campaign of 1881, serving in command of the cavalry brigade; but the operations were early suspended and peace followed.

It was in the Egyptian war of 1882 that Drury-Lowe, who became major-general on 9 Dec. 1881, made his reputation as a commander of cavalry in the field. He was in action throughout the campaign in command of a cavalry brigade, and afterwards of the cavalry division. After taking part in the action at Tel-el-Maskhuta, and the capture of Mahsama (25 Aug. 1882), he made a cavalry charge by moonlight at the first action of Kassasin (28 Aug.), which effectually assured the British forces their victory under Sir Gerald Graham [q. v. Suppl. I]. In the night march preceding the battle of Tel-el-Kebir and during the battle itself, Drury-Lowe's energy proved most useful. From the battle-field he pursued the enemy to Belbeis, and thence pushed on and occupied Cairo, where he received the surrender of Arabi Pasha (SIR CHARLES M. WATSON, *Life of Sir Charles Wilson*, 1909, p. 208). To Drury-Lowe's rapid movement was due the preservation of Cairo from destruction. Four times mentioned in despatches (*Lond. Gaz.* 8 Sept., 19 Sept., 6 Oct., and 2 Nov. 1882), he was afterwards thanked by both houses of parliament, received the second class of the Osmanieh, a medal with clasp, and the bronze star. On 18 Nov. 1882 he was made K.C.B.

In 1884 Drury-Lowe was put in command of a cavalry brigade at Aldershot, and from 1885 to 1890 was inspector-general of cavalry there. He made no innovations on the routine of his office and at Aldershot added little to his reputation. Promoted lieutenant-general on 1 April 1890, he was during 1890-1 inspector-general of cavalry at the Horse Guards. On 24 Jan. 1892 he was appointed colonel of the 17th lancers, his old regiment. He received the reward for distinguished service and on 25 May 1895 was nominated G.C.B. On his retirement he resided at Key Dell, Horndean, Hampshire. He died at Bath on 6 April 1908 and was buried at Denby, Derbyshire.

He married in 1876 Elizabeth, daughter of Thomas Smith, but had no issue. His portrait was painted by Henry Tanworth Wells in 1892.

DRYSDALE, LEARMONT (1866-1909), musical composer, born in Edinburgh on 3 Oct. 1866, was younger son of Andrew Drysdale, and was descended on his mother's side from the Border poet, Thomas the Rhymer. Educated at the High School, Edinburgh, he afterwards studied architecture, but abandoned it in 1888 and entered the Royal Academy of Music, London, where he remained until 1892. He had a brilliant career as a student, winning in 1891 the academy's highest honour in composition, the Charles Lucas medal, with his 'Overture to a Comedy.' During this period he appeared frequently as a solo pianist at the students' concerts, and wrote several works which elicited high praise, notably an orchestral ballade, 'The Spirit of the Glen' (1889), an orchestral prelude, 'Thomas the Rhymer' (1890), and a dramatic scena for soprano and orchestra, 'The Lay of Thora' (1891). In 1891 a picturesque overture, 'Tam o' Shanter,' written within a week, gained the prize of thirty guineas offered by the Glasgow Society of Musicians for the best concert overture. This was produced, with marked success, by (Sir) August Manns, first in Glasgow, and afterwards at the Crystal Palace. In 1894 a dramatic cantata, 'The Kelpie,' was performed in Edinburgh; and in the same year, in London, the fine overture 'Herondean,' exemplifying anew 'his command of flowing melody, skilful and effective workmanship, and highly coloured instrumentation' (KÜHN). A mystic musical play, 'The Plague,' created a strong impression when produced by Mr. Forbes-Robertson at Edinburgh in 1896. Two years later, a romantic light opera, 'The Red Spider,' libretto by Mr. Baring Gould, was enthusiastically received when first produced at Plymouth, and toured the provinces for twenty weeks. His 'Border Romance,' an orchestral poem, was given at Queen's Hall, London, in 1904. That year he became theoretical master at the Athenæum

School of Music, Glasgow; later he was conductor of the Glasgow Select Choir, for which he wrote, among other things, the choral ballade, 'Barbara Allan.' When Professor Gilbert Murray's 'Hippolytus' was staged at Glasgow in 1905 he composed special music for it of great beauty and appropriateness. This was followed by a dramatic cantata, 'Tamlane,' a sublimation of the old Border spirit. His original settings of Scots lyrics and his arrangements of folk-songs show a true insight into the spirit of national song. Many arrangements are included in the 'Dunedin Collection of Scots Songs' (1908), which he edited. In 1907 he collaborated with the duke of Argyll in 'The Scottish Tribute to France,' not as yet (1912) performed, for chorus and orchestra; and at his death he had practically finished a grand opera provisionally entitled 'Fionn and Tera,' to a libretto by the duke; the orchestration was completed by Mr. David Stephen. Many other works were left in MS., including 'The Oracle' and other light operas, a romantic opera, 'Flora MacDonald,' several cantatas, orchestral, piano and violin pieces, and songs. He died prematurely, unmarried, at Edinburgh on 18 June 1909. Imbued with the national sentiment, he showed much originality, versatility, and inspiration.

[Private information; personal knowledge; Musical Herald, July 1909 (with portrait); Ernest Kuhe in Scottish Musical Monthly, July 1894 (with portrait).] J. C. H.

DU CANE, SIR EDMUND FREDERICK (1830-1903), major-general, R.E., and prison reformer, born at Colchester, Essex, on 23 March 1830, was youngest child in a family of four sons and two daughters of Major Richard Du Cane (1788-1832), 20th light dragoons, of Huguenot descent, who served in the Peninsular war. His mother was Eliza, daughter of Thomas Ware of Woodfort, Mallow, co. Cork.

Du Cane, after education at the grammar school, Dedham, Essex, until 1843, and at a private coaching establishment at Wimbledon (1843-6), entered the Royal Military Academy at Woolwich in November 1846, and passed out at the head of his batch at the end of 1848, having taken first place in mathematics and fortification, and receiving a commission as second lieutenant in the royal engineers on 19 Dec. 1848. He joined at Chatham, and in December 1850 was posted to a company of royal sappers and miners commanded by Captain Henry Charles Cunliffe-Owen [q. v.]

at Woolwich. Du Cane was assistant superintendent of the foreign side of the International Exhibition of 1851 and assistant secretary to the juries of awards, and with the rest of the staff was the guest in Paris of the prince president, Louis Napoleon. From 1851 to 1856 Du Cane was employed in organising convict labour on public works in the colony of Swan River or Western Australia, which was then first devoted to penal purposes under the command of Captain (afterwards Sir) Edmund Henderson [q. v. Suppl. I.]. Promoted first lieutenant on 17 Feb. 1854, he was stationed at Guildford in charge of the works in the eastern district of the colony. He was made a magistrate of the colony and a visiting magistrate of convict stations. Although recalled early in 1856 by the requirements of the Crimean war, Du Cane arrived home on 21 June to find the war at an end, and joined for duty at the war office, under the inspector-general of fortification, in August 1856. He was soon employed upon the designs and estimates for the new defences proposed for the dockyards and naval bases of the United Kingdom. Promoted second captain on 16 April 1858, he during the next five years designed most of the new land works at Dover, and the chain of land forts at Plymouth extending for five miles from Fort Staddon, in the east, across the Plym, by Laira, to Ernsettle on the Tamar.

In 1863, on the recommendation of Lieutenant-colonel Henderson, who had become chairman of the board of directors of convict prisons, Du Cane was appointed director of convict prisons, as well as an inspector of military prisons. He administered the system of penal servitude as it was reformed by the Prisons Act of 1865, and made the arrangements for additional prison accommodation consequent on the abolition of transportation in 1867. In 1869 Du Cane succeeded Henderson as chairman of the board of directors of convict prisons, surveyor-general of prisons, and inspector-general of military prisons. On 5 Feb. 1864 he was promoted first captain in his corps; on 5 July 1872 major; on 11 Dec. 1873 lieutenant-colonel; and four years later brevet-colonel. He was placed on the supernumerary list in August 1877.

The charge of the colonial convict prisons was transferred to Du Cane in 1869. A strong advocate of the devotion of prison labour to works of national utility, on which he read a paper before the Society of Arts in 1871, Du Cane provided for

the carrying out by convicts of the break-water and works of defence at Portland, the docks at Portsmouth and Chatham, and additional prison accommodation. At the International Prison Congress in London in 1872 Du Cane fully described the British system of penal servitude.

Du Cane's main triumph as prison administrator was the reorganisation of county and borough prisons, which had long been mismanaged by some 2000 local justices and largely maintained by local funds. Du Cane in 1873 submitted to the secretary of state a comprehensive scheme for the transfer to the government of all local prisons and the whole cost of their maintenance. The much needed reform was legalised by the Prison Act of July 1877, when Du Cane, who had been made C.B., civil division, on 27 March 1873, was promoted K.C.B., civil division, and became chairman of the (three) prison commissioners under the new act to reorganise and administer the county and borough prisons. On 1 April 1878 these prisons came under government control. Their number was soon reduced by one-half, the rules made uniform, the progressive system of discipline adopted, the staff co-ordinated into a single service with a regular system of promotion, structural and other improvements introduced, and the cost of maintenance largely reduced. Useful employment of prisoners was developed and the discharged prisoner was assisted to earn his living honestly.

Du Cane also successfully inaugurated the registration of criminals. In 1877 he produced the first 'Black Book' list, printed by convict labour, of over 12,000 habitual criminals with their aliases and full descriptions. A register followed of criminals having distinctive marks on their bodies. Du Cane's suggestion to Sir Francis Galton that types of feature in different kinds of criminality were worthy of scientific study first prompted Galton to attempt composite portraiture (*Memories of My Life*, 1908). Du Cane encouraged the use of Galton's finger-print system in the identification of criminals. He retired from the army with the honorary rank of major-general on 31 Dec. 1887, and from the civil service on 23 March 1895. An accomplished man of wide interests, embracing archaeology, architecture, and Napoleonic literature, he was a clever painter in water-colours. A set of his sketches of Peninsular battlefields was exhibited at the Royal Military Exhibition at Chelsea in 1890. He died at his residence, 10 Portman Square, London, on 7 June 1903, and was

buried in Great Braxted churchyard, Essex.

He was twice married: (1) at St. John's Church, Fremantle, Western Australia, on 18 July 1855, to Mary Dorothea, daughter of Lieut.-colonel John Molloy, a Peninsula and Waterloo veteran of the rifle brigade, of Fairlawn, The Vasse, Western Australia; she died on 13 May 1881; (2) at St. Margaret's, Westminster, on 2 Jan. 1883, to Florence Victoria, widow of Colonel M. J. Grimston, of Grimston Garth and Kilnwick, Yorkshire, and daughter of Colonel Hardress Robert Saunderson. By his first wife Sir Edmund had a family of three sons and five daughters. A crayon drawing, done in 1851, is in Lady Du Cane's possession at 10 Portman Square.

Sir Edmund contributed largely to periodical literature, chiefly on penology, and frequently wrote to 'The Times' on military and other subjects. To the 'Royal Engineers Journal' he sent memoirs of several of his brother officers. In 1885 he published in Macmillan's 'Citizen' series 'The Punishment and Prevention of Crime,' an historical sketch of British prisons and the treatment of crime up to that date.

[War Office Records; R.E. Records; Men and Women of the Time, 1899; Biograph, 1883; The Times, 8 June 1903; Porter, History of the Royal Engineers, 1889, 2 vols.; private information.] R. H. V.

DUCKETT, SIR GEORGE FLOYD, third baronet (1811-1902), archaeologist and lexicographer, born at 15 Spring Gardens, Westminster, on 27 March 1811, was eldest child of Sir George Duckett, second baronet (1777-1856), M.P. for Lymington 1807-12, by his first wife, Isabella (1781-1844), daughter of Stainbank Floyd of Barnard Castle, co. Durham. His grandfather Sir George Jackson, first baronet (1725-1822) [q. v.], assumed in 1797 the surname of Duckett, having married the heiress of the Duckett family. After attending private schools at Putney and Wimbledon Common, young Duckett was at Harrow from 1820 to 1823, when he was placed with a private tutor in Bedfordshire. In 1827-8 he gained a thorough knowledge of German at Gotha and Dresden. Matriculating on 13 Dec. 1828 as a gentleman commoner of Christ Church, Oxford, he devoted himself chiefly to hunting, and left the university without a degree.

Joining the West Essex yeomanry, Duckett on 4 May 1832 was commissioned a sub-lieutenant in the second regiment of life guards. On his coming of age in 1832,

his father, whose means had been large, was ruined by wild speculations. Faced by beggary, Duckett began his economy by exchanging from the guards in 1834 into the 15th hussars, and subsequently into the 82nd regiment, in which he remained until 1839. Having obtained his company, he exchanged in 1839 into the 87th fusiliers, then on service at the Isle of France, and joined its dépôt in Dublin.

Meanwhile Duckett concentrated himself on the compilation of a 'Technological Military Dictionary' in German, English, and French. To make the work accurate, he obtained leave to visit the arsenals of Woolwich, Paris, Brussels, and Berlin. To complete his task he retired on half-pay. The important work was published in the autumn of 1848, and its merits were recognised abroad. He received gold medals from the emperor of Austria in 1850, Frederick William IV of Prussia, and Napoleon III. At home the book was for the most part ignored. On resuming his commission on full pay he was placed at the bottom of the captains' list of the reserve battalion of the 69th regiment, and thirty-two years later, in 1890, he was awarded 200*l.* (DUCKETT, *Anecdotal Reminiscences*, p. 131).

On the death of his father on 15 June 1856 he became third baronet. He abandoned interest in military matters, and thenceforth devoted himself to archæological and genealogical studies, to which he brought immense industry but small judgment or historical scholarship. In 1869 he published his exhaustive 'Duchetiana, or Historical and Genealogical Memoirs of the Family of Duket, from the Conquest to the Present Time' (enlarged edit. 1874). Here he claimed descent from Gundrada de Warenne [q. v.] and a title to a dormant barony of Wyndesore. In 'Observations on the Parentage of Gundreda' (1877; Lewes, 1878) he vainly sought to confirm his belief that Gundrada was daughter of William the Conqueror. Pursuing his research, he investigated in the Bibliothèque Nationale at Paris the history of the first Cluniac monastery in England at Lewes in 1077, which Gundrada was reputed to have founded. He privately printed 'Record Evidences among the Archives of the Ancient Abbey of Cluni from 1077 to 1534' (1886); and a monumental compilation, 'Monasticon Cluniacense Anglicanum, Charters and Records among the Archives of the Ancient Abbey of Cluni from 1077 to 1534' (2 vols., privately printed, Lewes, 1888). There followed

'Visitations of English Cluniac Foundations, 1262-1279' (1890, 4to); and 'Visitations and Chapters-General of the Order of Cluni' (1893). For the 'Monasticon Cluniacense' he received in 1888 the decoration of an officer of public instruction in France. Duckett continued his literary pursuits until 1895, when he published his 'Anecdotal Reminiscences of an Octo-nongenarian.' Subsequently blindness put an end to his literary activities. He was elected F.S.A. on 11 Feb. 1869. He died at Cleeve House, Cleeve, Somerset, on 13 May 1902, at the advanced age of ninety-one, and was buried in the cemetery at Wells.

He was the last of the ancient line of the Dukets. He married on 21 June 1845 Isabella (d. 31 Dec. 1901), daughter of Lieutenant-general Sir Lionel Smith, first baronet [q. v.], but had no issue, and the baronetcy became extinct.

Besides the works already mentioned, and numerous contributions to local archæological societies, Duckett's published works include: 1. 'The Marches of Wales' (Arch. Cambrensis), 1881. 2. 'Manorbeer Castle and its Early Owners' (Arch. Cambrensis), 1882. 3. 'Brief Notices on Monastic and Ecclesiastical Costume,' 1890. He edited 'Original Letters of the Duke of Monmouth,' in the Bodleian Library (Camden Soc.), 1879; 'The Sheriffs of Westmorland' (Cumb. and Westm. Ant. and Arch. Soc.), 1879; 'Evidences of Harewood Castle in Yorkshire' (Yorksh. Arch. Jo.), 1881; 'Description of the County of Westmorland, by Sir Daniel Fleming of Rydal, A.D. 1671' (Cumb. and Westm. Ant. and Arch. Soc.), 1882; 'Penal Laws and Test Act under James II' (original returns to the commissioners' inquiries of 1687-8), 3 vols., privately printed, 1882-3; 'Naval Commissioners, from 12 Charles II to 1 George III, 1660-1760,' 1890; 'Evidences of the Barri Family of Manorbeer and Olethan' (Arch. Cambrensis), 1891. He also translated from the German 'Mariolatry, Worship of the Virgin; the Doctrine refuted by Scripture' (1892).

DUDGEON, ROBERT ELLIS (1820-1904), homœopath, born at Leith on 17 March 1820, was younger son of a timber merchant and shipowner in that town. After attending a private school he received his medical education at Edinburgh, partly in the university and partly in the extra-

academical medical school. Having received the licence of the Royal College of Surgeons of Edinburgh in 1839, he attended the lectures of Velpeau, Andral, Louis, and others in Paris, graduated M.D. at Edinburgh on 1 Aug. 1841, and spent a semester at Vienna under Skoda, Rokitsky, Hebra, and Jaeger. At Vienna his fellow students John Drysdale and Rutherford Russell were attending the homœopathic practice which, invented by Hahnemann some forty years before, was then at its height in the city. Dudgeon was not at the time attracted by Hahnemann's system. From Vienna he went to Berlin to study diseases of the eye under Juengken, of the ear under Kramer, and organic chemistry under Simon; finally he passed to Dublin to benefit by the instruction of Graves, Stokes, Corrigan, and Marsh. Having started practice in Liverpool, in 1843 he was there persuaded by Drysdale to study homœopathy. The 'British Journal of Homœopathy' was first issued in this year, and Dudgeon translated for it German articles. After a second sojourn in Vienna to follow the homœopathic practice of Fleischmann in the Gumpendorf hospital, he began to practise in London in 1845. He was editor of the 'British Journal of Homœopathy' conjointly with Drysdale and Russell from 1846 until 1884, when the Journal ceased. In 1847 he published the 'Homœopathic Treatment and Prevention of Asiatic Cholera,' and devoted himself during the next three years to making a good English translation of Hahnemann's writings, of which the 'Organon' appeared in 1849 and the 'Materia Medica Pura' in 1880. In 1850 he helped to found the Hahnemann Hospital and school of homœopathy in Bloomsbury Square, with which was connected the Hahnemann Medical Society. Dudgeon lectured in the school on the theory and practice of homœopathy and published his lectures in 1854. In 1869 he was for a short time assistant physician to the homœopathic hospital. He was secretary of the British Homœopathic Society in 1848, vice-president in 1874-5, and president in 1878 and 1890. Although elected president of the International Homœopathic Congress which met in Atlantic City in 1904 he did not attend owing to ill-health.

In 1870-1 he was much interested in the study of optics, writing notes on the 'Dioptrics of Vision' (1871). He invented spectacles for use under water. The method adopted was to enclose a lens of air hermetically sealed between two con-

cave glasses, the curvature being so arranged as to correct the refraction of the water. Original but unaccepted views which he held on the mechanism of accommodation of the eye, and described to the International Medical Congress were published in 'The Human Eye: its Optical Construction popularly explained' in 1878.

In 1878 he obtained a Pond's sphygmograph, and with the help of a young watchmaker from the Black Forest he made the pocket instrument for registering the pulse which is now known by his name. He published an account of it in 'The Sphygmograph: its history and use as an aid to diagnosis in ordinary practice' (1882).

He died at 22 Carlton Hill, N.W., on 8 Sept. 1904 and was cremated at Golder's Hill, his ashes being buried in Willesden cemetery. Dudgeon was twice married, and had a family of two sons and three daughters.

Dudgeon edited several volumes for the Hahnemann Publications Society of Liverpool, amongst others the 'Pathogenetic Cyclopædia' (1850). Besides the works mentioned, he published 'Lectures on the Theory and Practice of Homœopathy' (1854), and 'The Influence of Homœopathy on General Medicine since the Death of Hahnemann' (1874).

He also translated Professor Fuchs' 'Causes and Prevention of Blindness' (1885) and François Sarcey's 'Mind Your Eyes' (1886), and wrote on 'The Swimming Baths of London' (1870). In 1890, at the age of seventy, he published 'On the Prolongation of Life,' which reached a second edition.

D'A. P.

DUFF, SIR MOUNTSTUART ELPHINSTONE GRANT (1829-1906), governor of Madras. [See GRANT-DUFF.]

DUFFERIN AND AVA, first MARQUIS OF. [See BLACKWOOD, FREDERICK TEMPLE HAMILTON-TEMPLE, 1826-1902.]

DUFFY, SIR CHARLES GAVAN (1816-1903), Irish nationalist and colonial politician, born in the town of Monaghan on 12 April 1816, was son of John Duffy, a shopkeeper, by his wife, who was the daughter of a gentleman farmer, Patrick Gavan. Save for a few months at a presbyterian academy in Monaghan, where there were then no catholic schools, he was self-educated; but a passion for reading was born in him; he devoured all the books

on which he could lay his youthful hands, and early developed a talent for journalism. When he was nearly eighteen he began to contribute to the 'Northern Herald,' a Belfast paper, whose founder, Charles Hamilton Teeling, an old United Irishman, had visited Monaghan for the purpose of promoting the interests of the journal. The 'Herald' urged the union of Irishmen of all creeds and classes in the cause of Irish nationality. Among the contributors was Thomas O'Hagan [q. v.], Duffy's lifelong friend, afterwards the first catholic lord chancellor of Ireland since the revolution. In 1836 Duffy left Monaghan for Dublin, where he joined the staff of the 'Morning Register' (founded by the Catholic Association); of this journal he finally became sub-editor. About the same time he became Dublin correspondent of Whittle Harvey's 'True Son' and wrote occasional articles for the 'Pilot.' In 1839 he left Dublin to edit the 'Vindicator,' a bi-weekly newspaper established in the interests of the northern catholics in Belfast. In the same year, while still editing the 'Vindicator,' he entered as a law student at the King's Inns, Dublin. In the autumn of 1841, while keeping his term in Dublin, he first met John Blake Dillon [q. v.], then a writer on the 'Morning Register.' Dillon introduced him to Thomas Davis [q. v.], also a writer on the 'Morning Register,' and the friendship which ultimately bound the three men together was soon cemented. Duffy suggested to his friends a new weekly journal, which should impart to the people sound political education based on historical study. The result was the 'Nation,' of which Duffy was proprietor and editor. The first number appeared on 15 Oct. 1842. Its motto was 'to create and foster public opinion in Ireland and to make it racy of the soil.' The creed of the Young Irelanders (as the writers of the 'Nation' came to be called) was to unite all Irishmen for the purpose of re-establishing the Irish parliament, by force of arms, if necessary.

Duffy gathered round him a brilliant staff, including Thomas Davis, Clarence Mangan, Denis Florence McCarthy, John Cornelius O'Callaghan, John Mitchell, John O'Hagan, and Lady Wilde. The articles in both verse and prose revealed a fervent, well-informed, and high-minded patriotism which captivated Ireland. They recalled memories which made the people proud of their country and filled them with detestation of the power which had destroyed its freedom. Liberal and tory publicists in both islands recognised that a new force

had entered politics. Lecky wrote later: 'What the "Nation" was when Gavan Duffy edited it, when Davis, McCarthy, and their brilliant associates contributed to it, and when its columns maintained with unqualified zeal the cause of liberty and nationality in every land, Irishmen can never forget. Seldom has any journal of the kind exhibited a more splendid combination of eloquence, of poetry, and of reasoning.' The Young Irelanders supplemented the newspaper propaganda by publishing books in prose and verse, to instruct and inspire the people. 'Their first experiment' (made in 1843), Duffy tells us, 'was a little sixpenny brochure printed at the "Nation" office, and sold by the "Nation" agents—a collection of the songs and ballads, published during three months, entitled "The Spirit of the Nation." Its success was a marvel. The conservatives set the example of applauding its ability, while they condemned its aim and spirit.' The next scheme was a collection of the speeches of the orators of Ireland. But the speeches of Curran, edited with a brilliant memoir by Davis, alone appeared. To the same series belonged popular editions of Maceoghegan's 'History of Ireland' (1844), MacNevin's 'Lives and Trials of A. H. Rowan and other Eminent Irishmen' (1846), Barrington's 'Rise and Fall of the Irish Nation' (1853), and Forman's 'Defence of the Courage, Honour and Loyalty of the Irish,' edited by Davis. Duffy also produced 'The Library of Ireland,' a series of shilling volumes of biography, poetry, and criticism, which included among other anthologies Duffy's 'Ballad Poetry of Ireland' (1845, fifty editions). No effort was spared to base political agitation on historical knowledge.

In the beginning the Young Irelanders were the devoted adherents of O'Connell. When in January 1844 O'Connell was indicted for seditious conspiracy, Duffy (with others) stood by his side in the dock. The prisoner's conviction by a packed jury on 30 May 1844 was quashed by the House of Lords [see O'CONNELL, DANIEL]. Afterwards the relations between O'Connell and the Young Irelanders became strained. In 1844 the leader showed some disposition to substitute a federal plan for simple repeal of the union. Duffy attacked the plan in the 'Nation,' and O'Connell ultimately returned to repeal; but the controversy left some bitterness behind. In 1845 there were more serious causes of difference. O'Connell resisted, and the Young Irelanders approved, Peel's pro-

posed new Queen's University in Ireland with affiliated colleges in Galway, Cork, and Belfast, which were to be open to both catholics and protestants.

In Michaelmas term, 1845, Duffy was called to the Irish bar, but he never practised. In the same year he made the acquaintance of Thomas Carlyle, to whom he was introduced by Frederick Lucas [q. v.]. An intimacy sprang up between them which lasted until Carlyle's death. Carlyle took some interest in the doings of the 'Young Ireland' party. He welcomed Duffy's gift of copies of the 'Nation,' and expressed sympathy with the cry 'Justice to Ireland—justice to all lands, and to Ireland first as the land that needs it most.' In 1846 Carlyle visited Ireland and spent some time with Duffy and his friends.

In the same year there was a final breach between O'Connell and the young men. O'Connell supported a resolution adopted by the Repeal Association to the effect that moral force furnished a sufficient remedy for public wrong in all times and in all countries, and that physical force must be abhorred. The young men declined to admit that physical force could never be justifiable. Open war followed between O'Connell and the 'Nation.'

Duffy and his associates formed a new association—the Irish Confederation—which disclaimed alliances with English parties and repelled O'Connell's moral force theory. In January 1847 the first meeting of the confederation was held. O'Connell's death in May and the outbreak of the famine caused fresh divisions in the national ranks. Mitchel, assistant editor of the 'Nation,' accepted Fenton Lalor's view that the direct demand for repeal of the union should be suspended, and that there should be a general strike against the payment of rent. Duffy allowed discussion of the proposal in the journal; but he declined to adopt it as the policy of the party. Mitchel then, towards the end of 1847, left the 'Nation' and started a new weekly paper, the 'United Irishman.' A report prepared by Duffy for the confederation in 1848 suggested that an independent Irish party should be sent to the English House of Commons—independent of English parties and governments, and pledged not to accept office from any government until repeal was conceded. The report was adopted by 317 to 188. Mitchel, who had no faith in a parliamentary agitation, opposed it, and leaving the confederation preached insurrection in the 'United Irishman.' The revolution in

Paris in February 1848 inspired the leaders of the confederation with revolutionary projects, to which Duffy in the 'Nation' lent support. Many of his associates were at once arrested.

The confederates began preparations for a rising in August. But before anything effective was done the government intervened. On 9 July Duffy was arrested. On the 28th the 'Nation' was suppressed. Between July 1848 and April 1849 Duffy was arraigned five times. On three occasions the trial was postponed for one reason or another. On two occasions the juries disagreed. Finally in April 1849 Duffy was discharged.

On regaining freedom he revived the 'Nation,' which finally ceased many years later. Suspending the demand for repeal, which at the moment he believed to be inopportune, he flung himself heart and soul into the question of land reform. The evictions and calamities following famine and pestilence had made land reform urgent. The Irish Tenant League, which Duffy joined, was now founded to secure reform on the basis of parliamentary enforcement of the three F's—fixity of tenure, fair rents, and free sale. In the summer of 1849 Carlyle again visited Ireland, and he and Duffy spent some weeks together travelling throughout the country. At the general election of 1852 Duffy was elected parliamentary representative of New Ross, and the party of independent opposition (which he had proposed in 1847) was formed to oppose every government which would not pledge themselves to grant the demands of the Tenant League. This party consisted of some fifty members. In November 1852 Lord Derby's government introduced a land bill to secure to Irish tenants on eviction, in accordance with the principles of the Tenant League, compensation for improvements—prospective and retrospective—made by them in the land. The bill passed the House of Commons in 1853 and 1854, but in both years failed to pass the House of Lords. In 1855 the cause of the Irish tenants, and indeed of Ireland generally, seemed to Duffy more hopeless than ever. Broken in health and spirit, he published in 1855 a farewell address to his constituency, declaring that he had resolved to retire from parliament, as it was no longer possible to accomplish the task for which he had solicited their votes.

On 8 Oct. 1855 he sailed for Australia, where he was received with great enthusiasm by his fellow-countrymen, and began

life anew as a barrister in Melbourne. But he soon glided into politics, and his admirers in the colony presented him with property valued at 5000*l.* to give him a qualification to enter the parliament of Victoria. In 1856 he became a member of the House of Assembly, quickly distinguished himself, and in 1857 was made minister of land and works, but resigned office in 1859 owing to a difference with the chief secretary, Mr. O'Shanassy, in respect of the management of public estates. It was Duffy's ambition to prove that one whose public life in Ireland had led to an indictment for treason could rise to the highest position in the state in a self-governing colony of England. After some years in opposition, he again became minister of land and works in 1862. He carried an important land bill which was known as Duffy's Land Act. Its main object practically was to facilitate the acquisition of the land by industrious inhabitants of the colony and by deserving immigrants, and to check the monopoly of the squatters. In 1865 he returned to Europe, visited England and Ireland (where he was fêted by his friends), and spent some months on the continent. On going back to Victoria he took up the question of the federation of the colonies and obtained the appointment of a royal commission to consider the question, anticipating in his action subsequent events. In 1871 he became chief secretary or prime minister of the colony; in 1872 he resigned on an adverse vote which left him in a minority of five. He advised the governor, Viscount Canterbury, to dissolve, but the governor refused. The refusal was regarded as a departure from constitutional usage, and was discussed in the imperial parliament.

In 1873 Duffy was knighted in recognition of his services to the colony. In 1874 he again returned to Europe, spending some time in England, Ireland, and the continent. He went back to the colony in 1876, and was unanimously elected speaker of the House of Assembly next year, when he was made K.C.M.G. During the early days of his speakership, he was an interested but independent observer of the struggle between the two branches of the legislature in 1877-8 over the question of payment of members [see BERRY, SIR GRAHAM, Suppl. II]. The legislative assembly, which supported the payment, appealed to the home government against the council, which resisted the payment, and the prime minister, Sir Graham Berry, named Duffy as the representative of the assembly in the

mission sent to London to lay its case before the imperial government; but objection was taken to Duffy's appointment on the ground of his position as speaker, and he resigned his place to Charles Henry Pearson [q. v.].

In 1880 Duffy resigned the office of speaker and left the colony for good. He spent the remainder of his life mainly in the south of Europe. During this period he devoted himself to literary work, and took the keenest interest in all that went on in Ireland. He published valuable accounts of his own experiences in 'Young Ireland, a Fragment of Irish History, 1840-50' (2 vols. 1880-3; revised edit. 1896); 'The League of North and South: an episode in Irish History, 1850-4' (1886); 'The Life of Thomas Davis' (1890; abridged edit. 1896); 'Conversations with Thomas Carlyle' (1892; new edit. 1896); and 'My Life in Two Hemispheres' (1898). He also projected and edited 'A New Irish Library,' based on the principles of the old. He died at Nice on 9 Feb. 1903, and was buried in Glasnevin cemetery, Dublin. He was married thrice: (1) in 1842 to Emily (*d.* 1845), daughter of Francis McLaughlin, of Belfast; (2) in 1846 to Susan (*d.* 1878), daughter of Philip Hughes of Newry; and (3) in 1881 to Louise, eldest daughter of George Hall of Rock Ferry, Cheshire (who died in 1890). Ten children survive him—six sons and four daughters.

A small portrait in oils from a daguerreotype is in the National Gallery of Ireland, together with a terra-cotta plaque with a life-sized head in profile.

[Duffy's works; *The Times*, 11, 16, 17 Feb., 9 March 1903; *Heaton's Dict. Austral.* Dates; private information.] R. B. O'B.

DUFFY, PATRICK VINCENT (1836-1909), landscape painter, born on 17 March 1836, at Cullenswood, near Dublin, was son of James Duffy, a jeweller and dealer in works of art in Dublin. Patrick studied in the schools of the Royal Dublin Society, where he was often premiated. While still a student he was elected an associate of the Royal Hibernian Academy, and promoted three months later to be a full member. In 1871 he was elected keeper of the academy, a post he retained for thirty-eight years, until his death at Dublin on 22 Nov. 1909. His pictures are very unequal in merit. His better works show that under favourable conditions he might have taken a high place as a painter of landscape. A good example of his art, 'A Wicklow Common,' is in the Irish National Gallery. He married Elizabeth, daughter

of James Malone, by whom he had one daughter.

[Private information.]

W. A.

DUNMORE, seventh EARL OF. [See MURRAY, CHARLES ADOLPHUS, 1841-1907.]

DUNPHIE, CHARLES JAMES (1820-1908), art critic and essayist, born at Rathdowney on 4 Nov. 1820, was elder son of Michael Dunphy of Rathdowney House, Rathdowney, Queen's County, Ireland, and of Fleet Street, Dublin, merchant, by his wife Kate Woodroffe. His younger brother, Henry Michael Dunphy (d. 1889), who retained the early spelling of the name, was called to the bar at the Middle Temple on 26 Jan. 1861, but became a journalist and critic, being for many years chief of the 'Morning Post's' reporting staff in the House of Commons. Charles Dunphie was educated at Trinity College, Dublin. Coming to London, he studied medicine at King's College Hospital, where he was a favourite pupil of Sir William Fergusson, but soon took to literature and journalism. For some years he was on 'The Times' staff, and when the Crimean war broke out in 1853 he was offered (according to family tradition) the post of its special correspondent. But having lately married he persuaded his colleague and countryman, (Sir) William Howard Russell [q. v. Suppl. II], to go in his stead.

During the war he was one of the founders of the 'Patriotic Fund Journal' (1854-55), a weekly miscellany of general literature, to which he contributed prose and verse under the pseudonym of 'Melopoy'n,' the profits being devoted to the Patriotic Fund. In 1856 he left 'The Times' to become art and dramatic critic to the 'Morning Post.' Those offices he continued to combine till 1895. From that date until near his death he only wrote in the paper on art. He thus spent over fifty years in the service of the 'Morning Post.' As a dramatic critic he belonged to the school of John Oxenford and E. L. Blanchard. His knowledge of art was wide and he had much literary power. A graceful writer of Latin, Greek, and English verse, and a semi-cynical essayist, Dunphie had something of the metrical dexterity of Father Prout and the egotistic fluency of Leigh Hunt. While serving the 'Morning Post' he contributed poems to 'Cornhill' and 'Belgravia,' and wrote essays for the 'Observer' (signed 'Rambler') and the 'Sunday Times.' Collected volumes of his essays appeared under the titles: 'Wildfire: a Collection

of Erratic Essays' (1876), 'Sweet Sleep' (1879), 'The Chameleon: Fugitive Fancies on Many-Coloured Matters' (1888). In 'Freelance: Tiltings in many Lists' (1880) he collaborated with Albert King.

Of handsome presence and polished manners, Dunphie died at his house, 54 Finchley Road, on 7 July 1908, and was buried at Putney Vale cemetery. He married on 31 March 1853 Jane, daughter of Luke Miller, governor of Ilford gaol. Besides two sons, he left a daughter, Agnes Anne, wife of Sir George Anderson Crichtett, first baronet.

[Private information; Foster's Men at the Bar, 1885; The Times, and Morning Post, 10 July 1908.]

A. F. S.

DUPRÉ, AUGUST (1835-1907), chemist, born at Mainz, Germany, on 6 Sept. 1835, was second son of F. Dupré, merchant, of Frankfurt-am-Main. Both father and mother were of Huguenot descent. Migrating to London in 1843, the elder Dupré resided at Warrington until 1845, when, returning to Germany, he settled at Giessen. There and at Darmstadt August received his early schooling. In 1852, when seventeen years old, he, with his brother Friedrich Wilhelm (d. 1908), entered the University of Giessen, where they studied chemistry under Liebig and Will. In 1854 both proceeded to Heidelberg University, where they continued their chemical studies with Bunsen and Kirchhoff. After August had graduated Ph.D. at Heidelberg in 1855, he and his brother came to London, where he acted as assistant to Dr. W. Odling, then demonstrator of Practical Chemistry in the medical school of Guy's Hospital. In collaboration with Odling he discovered the almost universal presence of copper in vegetable and animal tissues (see *On the Presence of Copper in the Tissues of Plants and Animals, Report Brit. Assoc. 1857*; *On the Existence of Copper in Organic Tissues, Reports Guy's Hosp. 1858*). Friedrich meanwhile became lecturer in chemistry and toxicology at Westminster Hospital Medical School. In 1863 August succeeded Friedrich in the latter office, which he held till 1897. In 1866 he became a naturalised British subject. From 1874 to 1901 he was lecturer in toxicology at the London School of Medicine for Women.

With his hospital appointment Dupré soon held many responsible offices in which he turned his mastery of chemical analysis to signal public advantage. From 1873 to 1901 he was public analyst to the city of Westminster. Meanwhile in 1871 he was appointed chemical referee to the

medical department of the local government board, and for the board conducted (1884-5, 1887) special inquiries respecting potable waters and the contamination and self-purification of rivers (see official *Reports*). Subsequently with W. J. Dibdin, Sir Frederick Abel [q. v. Suppl. II], and other chemists, he made a series of investigations, on behalf of the metropolitan board of works, on the condition of the river Thames, and on sewage treatment and purification methods (for details see *Report of the Royal Commission* (1884) on *Metropolitan Sewage Discharge* and paper by DIBDIN, *The Purification of the Thames*, with remarks by DUPRÉ, *Proc. Inst. Civil Eng.* cxxix.). 'Dupré was foremost' (wrote Otto Hehner) 'in giving the now orthodox modes of water analysis their present form; and contributed to the analytical methods of the examination of alkaloidal and other drugs. He was the first to observe (with H. Bence Jones) the formation of alkaloidal substances or "ptomaines" by the decomposition of animal matters' (see *On a Fluorescent Substance resembling Quinine in Animals*, *Proc. Roy. Soc.* 1866; *On the Existence of Quinoidine in Animals*, *Proc. Roy. Inst.* 1866).

Dupré was long officially engaged in researches on explosives. From 1873 he was consulting chemist to the explosives department of the home office; in 1888 he was nominated a member of the war office explosives committee, of which Sir Frederick Abel was chairman; and in 1906 he became a member of the ordnance research board. During thirty-six years he examined 'nearly four hundred entirely new explosives of the most varied composition, and further examined, at frequent intervals, all explosives imported into England, as to safety. He had often to evolve original methods of analysis or of testing for safety, and therein especially rendered important services' (H. WILSON HAKE). At the time of the Fenian outrages in 1882-3 he discharged dangerous duties in the examination of 'infernal machines' and especially in connection with the detection (1883) of the man Whitehead, at Birmingham, who had been secretly engaged there in the manufacture of nitro-glycerine (see *Eighth Annual Report of the Inspectors of Explosives*, 1883, and SIR WILLIAM HARCOURT, home secretary, in the House of Commons, *Hansard*, 16 April 1883).

The treasury was also among the government departments which sought Dupré's

opinion in matters of applied chemistry, and he was often a witness in medico-legal cases in the law courts. At the Lamson poisoning trial in 1881 he gave notable evidence for the crown.

Dupré was elected a fellow of the Chemical Society in 1860, and served on the council (1871-5). He was president of the Society of Public Analysts (1877-8); was an original member of the Institute of Chemistry (1877), and a member of the first and four later councils. He was an original member of the Society of Chemical Industry, serving on the council (1894-7). Dupré was elected F.R.S. on 3 June 1875.

Dupré died at his home, Mount Edgecumbe, Sutton, Surrey, on 15 July 1907, and was buried at Benhilton, Sutton. He married in 1876 Florence Marie, daughter of H. T. Robberds, of Manchester, and had issue four sons and one daughter.

Dupré was joint author with Dr. Thudichum of a work, 'On the Origin, Nature, and Varieties of Wine' (1872); and with Dr. H. Wilson Hake, of 'A Short Manual of Inorganic Chemistry' (1886; 3rd edit. 1901). From 1855 he communicated many scientific papers to the publications of the Royal Society, the Chemical Society, the Society of Public Analysts, and the Society of Chemical Industry, at times in collaboration with his brother, Prof. Odling, H. Bence Jones, F. J. M. Page, H. Wilson Hake, and Otto Hehner. He also contributed much to the 'Analyst,' 'Chemical News,' 'Philosophical Magazine,' and foreign periodicals.

Congress of Applied Chemistry; O. Guttman, *The Manufacture of Explosives*, 1909.] T. E. J.

DUTT, ROMESH CHUNDER (1848-1909), Indian official, author and politician, born in Calcutta on 13 Aug. 1848, was son of Isan Chunder Dutt, a Kayasth, who was one of the first Indians to become a deputy collector in Bengal. Romesh's great-uncle, Rasamoy Dutt, was the first Indian to be secretary to the Sanskrit College, Calcutta, and to be made a judge of the court of small causes. His female cousins, Aru and Toru Dutt, accomplished French and English scholars, both gave great poetic promise

at the time of their early deaths from consumption in 1874 and 1877 respectively. Losing his father when he was thirteen, Romesh came under the guardianship of his uncle, Sasi Chunder Dutt, registrar of the Bengali secretariat, and a voluminous writer on Indian life and history. Educated at Hare's school and at the presidency college, Calcutta, Romesh took second place in the first examination in arts of the university in 1866. Some two years later, he, with his lifelong friend Mr. Behari Lal Gupta (afterwards judge of the Bengal high court), ran away from home, and the two, joined by Mr. Surendranath Banerjee, (afterwards famous as a Bengal political leader), set sail for England on 3 March 1868. The practice of studying in England was then rare among Indian youths and was deprecated by the orthodox. Entering University College, London, the three friends studied with diligence, and were all successful in the 1869 examination for the Indian civil service, Dutt taking third place. He also studied for the bar at the Middle Temple, and was called on 7 June 1871.

Joining the Bengal service at the close of 1871, Dutt went through the usual novitiate of district work. Devoting all his leisure through life to literary pursuits, he described in his first book his 'Three Years in Europe' (Calcutta, 1872; 4th edit. with additional matter, 1896). In 1874, in 'The Peasantry of Bengal,' a collection of articles which he had contributed serially to the 'Bengal Magazine,' he urged that the permanent settlement was unwise and ill-conceived, unfairly benefiting the zamindars at the cost both of the cultivators and of the state. His biographical and critical 'History of Bengali Literature' (Calcutta, 1877), issued under the pseudonym of Ar. Cy. Dae, reappeared under his own name in 1895. At the persuasion of Bunkim Chandra Chatterji, a vernacular Bengali writer of repute, he wrote six historical and social romances in his mother tongue, three of which were translated into English—'Shivajee, or the Morning of Maratha Life' (Broach, 1899); 'The Lake of Palms' (London, 1902; 2nd edit. 1903); and 'The Slave Girl of Agra' (London, 1909).

In April 1883 Dutt was appointed collector of Backerganj, being the first Indian to receive executive charge of a district since the establishment of British rule. The experiment was justified by the peace of this difficult district during his two years' tenure. Taking long furlough in

1885, he devoted the first portion to a Bengali translation of the 'Rig Veda.' The vernacular press contended with heat, that Brahman pundits alone could deal with the sacred text. But Dutt persevered, and published in 1886 the first, and still the only complete, Bengali translation of the ancient hymns. He never completely broke with orthodox Hinduism; and though in later years he showed strong leanings to the Brahmo Samaj, founded by Keshub Chunder Sen, he did not join that movement. On return to duty in 1887 he held charge successively of the Pabna, Mymensingh, Dinajpur, and Midnapur districts. While at Mymensingh he wrote an able 'History of Civilisation in Ancient India' based on Sanskrit literature (Calcutta, 3 vols., 1888-90; London, 2 vols., 1893), and also prepared school primers of Bengal and Indian history.

On 25 May 1892 Dutt was created a C.I.E. and in April 1894 he was appointed acting commissioner of Burdwan, being the only Indian to rise to executive charge of a division in the nineteenth century. He served on the Bengal legislative council from January to October 1895, when he was transferred to the commissionership of Orissa, with ex-officio superintendence of the twenty tributary mahals, or native states, of the province. In October 1897, after twenty-six years' work, he resigned the civil service, moved by a twofold desire to pursue his literary labour and to take part freely in Indian politics.

Settling in London, he published there 'England and India: a Record of Progress during 100 Years' (1897). It was a plea for extending the popular share in legislation and administration. At the close of 1899 he went to India to preside at the fifteenth annual national congress at Lucknow. India was then suffering from a severe famine, and he mainly devoted his presidential address to a condemnation of the land revenue policy of the government. Lord Curzon of Kedleston, the viceroy, gave him a long audience, and Dutt published 'Famines in India' (London, 1900), a series of open letters to Lord Curzon, setting forth in detail his views of agrarian policy and attributing famine to high assessments. The provincial governments were directed to examine his statements, and upon their replies was based the elaborate resolution of Lord Curzon's government (dated 16 Jan. 1902) on land revenue administration, which was presented to parliament (Cd. 1089). The official papers convicted Dutt's information of much

inaccuracy (cf. S. M. MITRA, *Indian Problems*, London, 1908). Dutt sought to vindicate his conclusions in a new and exhaustive criticism of British agrarian and economic policy in India in two substantial volumes: 'Economic History of British India, 1757-1837' (1902), and 'India in the Victorian Age' (1904). They were brought out in a second edition under the uniform title of 'India under Early British Rule' (1906). A series of minor, yet cumulatively important, changes in land revenue administration, designed to protect the cultivators, were partly attributable to Dutt's representations. Prejudice disqualified him from becoming a safe guide on agrarian history, but the historian of Lord Curzon's viceroyalty admits that on the whole Dutt's agitation had beneficial results (L. FRASER'S *India under Curzon and After*, i. pp. 154-7).

Dutt acted as lecturer on Indian history at University College, London, from 1898 to 1904, and he found time to continue his Sanskrit studies. He translated into English metre large extracts of the two great epics, the 'Mahabharata' and the 'Ramayana,' linking the excerpts together by short explanatory notes (published in the 'Temple Classics' 1899-1900 and subsequently in Dent's 'Everyman's Library'). Max Müller acknowledged the value of Dutt's scheme. His versatile interests were illustrated by a volume of original poetry, 'Reminiscences of a Workman's Life' (Calcutta, 1896; privately printed).

While on a visit to India in 1904 Dutt was appointed revenue minister of the independent state of Baroda, and during his three years' active tenure (August 1904-July 1907) he helped on the reforms of the enlightened Gaekwar (Sayaji Rao). He was the Indian member of the royal commission on Indian decentralisation, which travelled through the country from November 1907 to the following April. He signed the report, but noted his dissent on many points of detail. With Mr. G. K. Gokhale he was unofficially consulted by Lord Morley respecting the scheme of political reforms which were promulgated in 1908-9. Returning to Baroda as prime minister in March 1909, he died there of a heart affection on 30 Nov. of that year, and was accorded a public funeral by order of the Gaekwar.

Dutt married in 1864 a daughter of Nobo Gopal Bose; a son is a barrister in practice in Calcutta, and of five daughters, three are married to native officials in government service.

[Biography by Dutt's son-in-law, J. N. Gupta, I.C.S., 1911; sketch of Dutt's career, a 4-anna (*4d.*) pamphlet pub. by Natesan, Madras, 1909; Indian National Congress, Natesan, Madras, 1907; Papers regarding Land Rev. System of Brit. DUTTON, JOSEPH EVERETT (1874-1905), biologist, born on 9 Sept. 1874 at New Chester Road, Higher Bebbington, Cheshire, was fifth son of John Dutton, a retired chemist of Brookdale, Banbury, by his wife Sarah Ellen Moore. After education at King's School, Chester, from January 1888 till May 1892, he entered the University of Liverpool, where he gained the gold medal in anatomy and physiology, and the medal in *materia medica* in 1895. At the Victoria University he won the medal in pathology in 1896, graduated M.B., C.M. in 1897, and was elected Holt fellow in pathology. He then acted as house surgeon to Prof. Rushton Parker and house physician to Dr. R. Caton at the Liverpool Royal Infirmary. In 1901 he gained the Walter Myers fellowship in tropical medicine.

In 1900 he accompanied Dr. H. E. Annett and Dr. J. H. Elliott of Toronto on the third expedition of the Liverpool school of tropical medicine to southern and northern Nigeria to study the life-history and surroundings of the mosquito and generally to take measures for the prevention of malaria. Two reports were issued as a result of this expedition, one dealing with anti-malaria sanitation, the other a very complete monograph upon filariasis. In 1901 Dutton proceeded alone to Gambia on the sixth expedition of the Liverpool school of tropical medicine, and drew up a most comprehensive and useful report on the prevention of malaria. During this expedition he identified in the blood of a patient at Bathurst a trypanosome belonging to a group of animal parasites which had hitherto been found only in animals. He described it accurately and named it *Trypanosoma Gambiense*. He found the same organism subsequently in numerous other cases in Gambia and elsewhere. Dutton's discovery of the first trypanosome in man was an important factor in determining the cause of sleeping sickness, which was afterwards shown by other observers to be due to the same parasite. In addition to this *Trypanosoma*

Gambiense he also described several other trypanosomes new to science. In 1902 he proceeded to the Senegambia with Dr. J. L. Todd and drew up a report on sanitation which was presented to the French government; he also published further papers on trypanosomiasis. His last expedition was made to the Congo in charge of the twelfth expedition of the Liverpool school of tropical medicine. He started in August 1903, accompanied by Dr. J. L. Todd and Dr. C. Christie. The expedition reached Stanley Falls about the end of 1904 and discovered independently the cause of tick fever in man, a discovery which had been anticipated by a few weeks by Major (Sir) Ronald Ross and Dr. Milne in the Uganda protectorate. Dutton was able to show the transference of the disease from man to monkeys. During the investigation Dutton and Christie contracted the disease. Dutton died of spirillum fever on 27 Feb. 1905 at Kosongo in the Congo territory. His burial was attended by more than 1000 persons, mostly natives to whom he had endeared himself and whose maladies he had treated.

Dutton's cheering enthusiasm made him a welcome comrade in every field of work. The skill and ability which he brought to the science of tropical medicine were of the highest order, and his work gave promise of future fruit.

[Brit. Med. Journal, 1905, i. 1020; Lancet, 1905, i. 1239; information kindly obtained by Professor H. E. Annett, M.D.] D'A. P.

DUVEEN, SIR JOSEPH JOEL (1843-1908), art dealer and benefactor, born at Meppel in Holland on 8 May 1843, was elder son in a family of two sons and two daughters of Joseph Duveen of that place by his wife Eva, daughter of Henry van Minden of Zwolle. His grandfather, Henry Duveen, who had first settled at Meppel during the Napoleonic wars, was youngest son of Joseph Duveen of Giessen, army contractor to the King of Saxony; Napoleon's repudiation of the debts of the Saxon forces ruined this Duveen, whose twelve sons were then driven to seek their fortunes in different countries.

Joseph left Meppel in 1866 and settled at Hull, starting as a general dealer on a site now partly covered by the Public Art Gallery built in 1910. He possessed a good knowledge of Nankin porcelain, then coming into fashion, and of which cargo loads had been brought to Holland by the early Dutch traders with China; he purchased large

quantities of this in various parts of his native country, shipped it to Hull, and found a ready market for it in London. In partnership with his younger brother Henry he soon secured the chief American trade in Oriental porcelain, and in 1877 opened a branch house at Fifth Avenue, New York. They formed many fine collections in America, among others that of Garland, which they bought back *en bloc* in March 1902, selling it at once to Mr. Pierpont Morgan. They also largely helped in the formation of the Taft, Widener, Gould, Altmann and Morgan art collections.

In 1879 the brothers erected fine art galleries adjoining the Pantheon in Oxford Street, London, and at once took an important share in the fine art trade, extending their interests in nearly every branch, particularly in that of old tapestry, of which they became the largest purchasers. When Robinson & Fisher vacated their auction rooms at 21 Old Bond Street the Duveens secured the additional premises and built spacious art galleries in the spring of 1894. From 1890 onwards they purchased pictures and were large buyers at the Mulgrave Castle sale of 1890 and at the Murrieta sale two years later. They purchased the whole of the Hainauer collection of renaissance objects of art for about 250,000*l.* in June 1906, and in 1907 the Rodolphe Kann collection of pictures and objects of art and vertu in Paris, for nearly three quarters of a million sterling (*The Times*, 7 Aug. 1907; *The Year's Art*, 1908, 367-72).

Duveen, whose fortune grew large, was generous in public benefaction. He was a subscriber to the public purchase of the 'Venus' of Velasquez for the National Gallery in 1906, in which year also he presented J. S. Sargent's whole-length portrait of Miss Ellen Terry as Lady Macbeth (bought in at the Irving sale at Christie's, 16 Dec. 1905, for 1200*l.*) to the National (Tate) Gallery of British Art, Millbank. In May 1908 he undertook the cost (about 35,000*l.*) of an addition of five rooms, known as 'The Turner Wing,' to that gallery (*The Times*, 7 May 1908; *Cat. of Nat. Gall. of Brit. Art*, 1911, pp. vi-vii). He was knighted on 26 June 1908.

He died at Hyères, France, on 9 Nov. 1908, and was buried at the Jewish cemetery, Willesden. He left a fortune tentatively valued at 540,409*l.*, with personalty of the net value of 486,675*l.* (*The Times*, 7 Dec. 1908; *Morning Post*, with fuller details, of same date). In 1869 he married Rosetta, daughter of Abraham

Barnett of Carr Lane, Hull, who survived him, and by whom he had a family of ten sons and four daughters.

His portrait by Emil Fuchs, M.V.O., is in the Turner wing of the gallery at Millbank. His eldest son, Joseph, who made additions to his father's benefaction to the Tate

Gallery, presented to the new Public Art Gallery of Hull, as a memorial of his father's association with the town of Hull, 'The Good Samaritan,' by Edward Stott, A.R.A.

[Private information from the family and Mr. A. C. R. Carter; The Year's Art, 1908, (with portrait).] W. R.

E

EARLE, JOHN (1824–1903), philologist, born on 29 Jan. 1824 at Elston in the parish of Churchstowe near Kingsbridge, South Devon, was only son of John Earle, a small landed proprietor who cultivated his own property, by his wife Anne Hamlyn. Their other child, a daughter, married George Buckle, afterwards canon of Wells, and was mother of Mr. George Earle Buckle, editor of 'The Times.' John Earle received his earliest education in the house of Orlando Manley, then incumbent of Plymstock, whence he passed to the Plymouth new grammar school. He spent the year 1840–1 at the grammar school of Kingsbridge, and matriculated at Magdalen Hall, Oxford, in October 1841, graduating B.A. in 1845 with a first class in literæ humaniores. In 1848 he won a fellowship at Oriel College, then one of the chief distinctions in the university. The colleagues with whom Earle was brought into contact at Oriel included Charles Marriott, Fraser (afterwards bishop of Manchester), Clough, Matthew Arnold, Henry Coleridge, Alexander Grant, Sellar, and Burgon—men of very varied schools of thought. In ecclesiastical matters Earle was never a partisan, though his historical sense made him value whatever illustrated the continuity of the English church or conduced to the seemliness of public worship. In 1849 he proceeded M.A., was ordained deacon, and was elected to the professorship of Anglo-Saxon, then tenable only for five years. At the time the chair was little more than an elegant sinecure, but Earle raised it to a position of real usefulness before his retirement in 1854. Thenceforth he assiduously pursued his Anglo-Saxon studies. Meanwhile in 1852 he became tutor of Oriel in succession to his future brother-in-law, George Buckle. In 1857, when he took priest's orders, he was presented by his college to the rectory of Swanswick, near Bath, which he retained till death. In 1871 he was appointed to the prebend of Wanstrow in Wells cathedral, and from 1873 to 1877 he was rural dean of Bath.

In 1876 he was re-elected professor of Anglo-Saxon by convocation; his competitor was Thomas Arnold [q. v. Suppl. I]. The tenure of this chair had then been made permanent, and he held the post for the rest of his life. His inaugural lecture, 'A Word for the Mother Tongue,' was one of many published pleas for the bestowal of a place in the university curriculum on English philological study.

Earle was an industrious writer, and combined devotion to research with a power of popularising its fruits. His earliest published work was 'Gloucester Fragments, Legends of St. Swithun and Sancta Maria Aegyptiaca' (1861, 4to). In 1865 appeared 'Two of the Saxon Chronicles Parallel, with Supplementary Extracts from the Others, edited with Introduction, Notes, and a Glossarial Index.' This was in many ways his most important work, and was the first attempt to give a rational and connected account of the growth of the chronicle, and the relations of the different MSS. It was recast by the present writer in two volumes (1892, 1899). In 1866 appeared both 'A Book for the Beginner in Anglo-Saxon' (4th edit. 1902) and 'The Philology of the English Tongue' (5th edit. 1892). The latter volume was Earle's most popular work; it largely helped to popularise the results of the new science of comparative philology, as applied to the English language. With the later developments of comparative philology Earle hardly kept pace. He was always more interested in tracing the development of language as an instrument of thought, and in analysing the various elements which had contributed to the formation of English, than in purely philological science. In 1863 an abortive scheme was proposed for a 'final and complete critical edition' of 'Chaucer' to be published by the Clarendon Press, with Earle as general editor (*Letters of Alexander Macmillan*, 1908, pp. 160–1). Apart from English philology, Earle was an efficient Italian scholar. He wrote an introduction to Dr. Shadwell's translation of Dante's 'Purga-

torio' (1892), and a remarkable essay on Dante's 'Vita Nuova' in the 'Quarterly Review' (1896).

A man of varied intellectual interests and of generous enthusiasms, Earle died on 31 Jan. 1903, at Oxford, and was buried in Holywell cemetery. A brass tablet was erected to his memory in Swanswick Church. In 1863 he married Jane, daughter of George Rolleston, vicar of Maltby, and sister of George Rolleston [q. v.], Linacre professor of anatomy at Oxford. By her Earle had three sons and four daughters. His second daughter, Beatrice Anne Earle, married her first cousin, Mr. George Earle Buckle. Earle's widow survived till 13 May 1911.

Besides the works cited, Earle's chief publications were: 1. 'Guide to Bath, Ancient and Modern,' 1864. 2. 'Rhymes and Reasons, Essays by J. E.,' 1871. 3. 'English Plant Names,' 1880. 4. 'Anglo-Saxon Literature,' 1884. 5. 'A Handbook to the Land Charters and other Saxon Documents,' 1888. 6. 'English Prose, its Elements, History and Usage,' 1890. 7. 'The Deeds of Beowulf, done into Modern Prose, with an Introduction and Notes,' 1892. 8. 'The Psalter of 1539, a Landmark in English Literature,' 1894. 9. 'Bath during British Independence,' 1895. 10. 'A Simple Grammar of English now in Use,' 1898. 11. 'The Alfred Jewel,' 4to, 1901. To a volume on Alfred the Great (ed. Alfred Bowker, 1899) he contributed an article 'Alfred as a Writer,' and to an English miscellany presented to Dr. Furnivall (1901) an essay on 'The Place of English in Education.'

[The Times, 2 Feb. 1903 (by his brother-in-law, Canon Buckle); Oxford Mag. 11 Feb. 1903, by present writer; Men and Women of the Time, 1899; personal knowledge; private information.] C. P.

EAST, SIR CECIL JAMES (1837-1908), general, born at Herne Hill, London, on 10 July 1837, was son of Charles James East, merchant, of London, by his wife Eliza Frederica Bowman. After private education he entered the army on 18 Aug. 1854 as ensign in the 82nd regt., and became lieutenant on 5 June 1855. He served with his regiment in the Crimea from 2 Sept. 1855, and was present at the siege and fall of Sevastopol, for which he received the medal with clasp and Turkish medal. Subsequently he took part in the war of the Indian Mutiny in 1857 and was severely wounded at Cawnpore on 26 Nov. 1857, when he was awarded the medal. Promoted captain on 17 Nov. 1863, he joined

the 41st regiment, and served as assistant quartermaster-general with the Chittagong column of the Lushai expeditionary force in 1871-2; he was mentioned in despatches and received the thanks of the governor-general in council as well as the medal with clasp and brevet of major (*Lond. Gaz.* 21 June 1872). Through the latter part of the Zulu war of 1879 he acted as deputy adjutant and quartermaster-general, and was present at the engagement at Ulundi, receiving the medal with clasp and brevet of colonel (*Lond. Gaz.* 21 August 1879). During the Burmese expedition in 1886-7 he commanded the first brigade after the capture of Mandalay and was mentioned in despatches by the government of India (*Lond. Gaz.* 2 Sept. 1887), receiving two clasps and being made C.B. on 1 July 1887. From 1883 to 1888 he commanded a second-class district in Bengal and Burma, and a first-class district in Madras from 1889 to 1893, having been made major-general on 23 Jan. 1889. Leaving India in 1893, he was till 1898 governor of Royal Military College at Sandhurst. He was nominated K.C.B. on 22 June 1897. He became lieutenant-general on 28 May 1896, and general in 1902, retiring next year. After 1898 he resided at Fairhaven, Winchester, where he died on 14 March 1908, being buried at King's Worthy.

He married (1) in 1863 Jane Catharine (d. 1871), eldest daughter of Charles Case Smith, M.D., of Bury St. Edmunds, Suffolk, by whom he had issue one son and a daughter; (2) in 1875 Frances Elizabeth, daughter of Rev. Arthur Mogg of Chilcompton, Somerset, and widow of Edward H. Watts, by whom he had a daughter.

[The Times, 16 March 1908; selections from State Papers in Military Dept., 1857-8, ed. G. W. Forrest, 1902, ii. 383; Dod's Knightage; Hart's and Official Army Lists; Walford's County Families.] H. M. V.

EASTLAKE, CHARLES LOCKE (1836-1906), keeper of the National Gallery, London, born on 11 March 1836 at Plymouth, was fourth son of George Eastlake, who was admiralty law agent and deputy judge advocate of the fleet. His father's brother was Sir Charles Eastlake [q. v.], president of the Royal Academy. He was educated at Westminster School, where he became Queen's scholar in 1846. He maintained through life his interest in the school and in later years joined the governing body. Showing a taste for architecture, he became a pupil of Philip Hardwick, R.A. [q. v.], and then entered the Royal Academy Schools. There in 1854 he gained a silver medal for

architectural drawings, and he exhibited two designs at the Academy in 1855-6. Developing some skill in water-colours, he gave up architectural work and for three years studied art abroad. On his return to England his interest again changed, and he devoted himself to literary work and design in various branches of industrial art.

From 1866 to 1877 he was secretary of the Royal Institute of British Architects. In 1878 Lord Beaconsfield appointed him keeper and secretary of the National Gallery, and he performed efficiently the duties of this post till 1898. During that period he rearranged and classified all the paintings at Trafalgar Square under the different schools to which they belonged, and had them placed under glass to protect them from the London atmosphere. He opened several rooms for the exhibition of Turner's sketches and water-colour drawings, and increased the accommodation for art students and copyists. He was greatly disappointed that he did not succeed Sir Frederic Burton [q. v. Supp. I], who retired in 1894, as director of the gallery. The post then fell to Sir Edward Poynter, and four years later Eastlake retired from the keepership.

Eastlake made a substantial reputation as a writer on art, publishing several books and occasionally contributing to the leading magazines. His earliest and best-known book, 'Hints on Household Taste in Furniture, Upholstery, and Other Details' (1868), shows strong Gothic bias; it at once became popular in England and America; it reached its fourth London edition in 1887. The sixth American edition (New York, 1881) has notes by Mr. C. C. Perkins. 'A History of the Gothic Revival' followed in 1871. In 1876 he issued 'Lectures on Decorative Art and Art Workmanship,' which he had delivered at the Social Science Congress. A series of illustrated 'Notes on the Principal Pictures' in foreign galleries dealt with the Brera Gallery at Milan (1883), the Louvre at Paris (1883), the old Pinakothek at Munich (1884), and the Royal Gallery at Venice (1888). In 1895, under the pseudonym of Jack Easel, he published 'Our Square and Circle,' a series of social essays.

Eastlake died on 20 Nov. 1906 at his house in Leinster Square, Bayswater, and was buried at Kensal Green. He married on 1 Oct. 1856 Eliza, youngest daughter of George Bailey; she survived him without issue until 2 Nov. 1911.

An oil painting by Mr. Shirley Fox belonged to Mrs. Eastlake.

[Art Journ. 1906; The Times, 22 Nov. 1906; Who's Who, 1906; Lady Eastlake, Memoirs of Sir Charles Eastlake.] F. W. G.-N.

EATON, WILLIAM MERITON, second **BARON CHEYLESMORE** (1843-1902), mezzotint collector, second son in a family of three sons and two daughters of Henry William Eaton, first Baron Cheylesmore (d. 1891), by his wife Charlotte Gorham (d. 1877), daughter of Thomas Leader Harman of New Orleans, was born at 9 Gloucester Place, Regent's Park, London, on 15 Jan. 1843. His father founded the prosperous firm of H. W. Eaton & Son, silk brokers, represented Coventry in parliament as a conservative from 1865 to 1880 and from 1881 to 1887, and was raised to the peerage at Queen Victoria's jubilee in 1887 as first Baron Cheylesmore. He was an authority on fine arts and an enthusiastic collector; among his treasures was Landseer's 'Monarch of the Glen,' which, at the sale of his collection at Christie's in April 1892, fetched 6900 guineas.

After education at Eton, William entered his father's firm and subsequently became partner. He took, however, little part in the business, and from 1866 onward devoted himself to politics in the conservative interest with little success. He failed in his attempts to enter parliament for Macclesfield in 1868, 1874, and 1880. He succeeded to the peerage on his father's death in 1891.

Like his father, Cheylesmore had artistic tastes. In 1869 he started a collection of English mezzotint engravings, by way of illustrating each item in the catalogue compiled by John Chaloner Smith [q. v.]. Eaton gave Chaloner Smith much assistance in preparing his work. Although his collection was fully representative, only a small percentage of it was in the choicest condition. The prints which crowded his residence at Prince's Gate formed the largest and best private mezzotint collection ever formed; it included, with the work of all the best practitioners, examples of Ludwig von Siegen (fl. 1650), the inventor of the art of mezzotint, and was especially rich in the engravings of James MacArdell (1729-1765) [q. v.]. Thirty-nine of Cheylesmore's mezzotints, including the valuable 'Miranda,' engraved by W. Ward, after Hoppner, which he had bought from Mr. Herbert Percy Horne for 40*l.*, were shown at the exhibition in 1902 of English mezzotint portraits (1750-1830)

of the Burlington Fine Arts Club, of whose committee Cheylesmore was a member. Cheylesmore died unmarried at his residence, 16 Prince's Gate, on 10 July 1902, and was buried at Highgate cemetery. He was succeeded in the peerage by his younger brother, Herbert Francis (b. 25 Jan. 1848), to whom passed his collection of mezzotints other than portraits. The portraits—some 11,000—were bequeathed to the British Museum, where a small portion was exhibited from 1905 to 1910. The acquisition filled many gaps in the national collection.

[The Times, 11 and 12 July and 5 Aug. 1902; Daily Telegraph, 7 July 1905; Burke's Peerage; British Museum Guide to an Exhibition of Mezzotint Engravings, chiefly from the Cheylesmore Collection, compiled by Freeman M. O'Donoghue, with preface by Sidney Colvin, 1905; Cat. of Exhibition of English Mezzotint portraits, Burlington Fine Arts Club, 1902; Connoisseur, Jan. 1902, illustr. art. on Lord Cheylesmore's mezzotints (with portrait); private information.]

W. B. O.

EBSWORTH, JOSEPH WOODFALL (1824–1908), editor of ballads, born on 2 Sept. 1824 at 3 Gray's Walk, Lambeth, was younger son (in the family of thirteen children) of Joseph Ebsworth [q. v.], dramatist and musician, by his wife Mary Emma Ebsworth [q. v.], writer for the stage. Thomas Woodfall of Westminster, son of Henry Sampson Woodfall [q. v.], the printer of Junius's letters, was the boy's godfather. In 1828 the family removed to Edinburgh, where the father opened a bookshop, and Joseph made good use of his opportunities of reading. At fourteen he entered the board of trustees' school of art, where he studied successively under Charles Heath Wilson, Sir William Allan, and David Scott. For the last he cherished a lifelong affection. In 1848 he went to Manchester to serve as chief artist to Faulkner Bros., lithographers, who were busy with railway plans during the railway mania, but he soon left for Glasgow, where he became a master at the school of design. In 1849 he exhibited for the first time at the Scottish Academy, sending four large water-colour views of Edinburgh. One of these pictures (the north view) he engraved privately. In 1850 he sent a picture illustrating Tennyson's 'Locksley Hall.' In July 1853 he started on a solitary pedestrian tour through central Europe and Italy. He returned to Edinburgh in 1854, and busied himself until 1860 with painting, engraving, and

writing prose and verse for the press. Then his plans changed and he matriculated at St. John's College, Cambridge. He graduated B.A. in 1864 and M.A. in 1867. On 31 July 1864 he was ordained deacon, and in 1868 priest. He was successively curate of Market Weighton (1864–5), of St. Stephen's, Bowling, near Bradford (1866–7), and of All Saints (1868–9) and Christ Church (1870–1), both in Bradford.

In January 1871 Ebsworth became vicar of Molash near Ashford. The parishioners were few and of small means, and he raised outside the parish 1600*l.* wherewith to build a vicarage. A practical and genial sort of piety and an affectionate disposition enabled Ebsworth to discharge his clerical duties efficiently, although the bohemian strain in his nature made him impatient of much clerical convention. But the chief part of his time at Molash was devoted to literary work at home or to researches which he pursued in the British Museum. He had published at Edinburgh two collections of miscellaneous prose and verse, 'Karl's Legacy' (2 vols. 1867) and 'Literary Essays and Poems' (1868). Concentrating his interest on the amatory and humorous poems and ballads of the seventeenth century, he now produced a notable series of reprints of light or popular poetic literature. In 1875 he published editions of 'The Westminster Drolleries' of 1671 and 1672, and 'The Merry Drolleries' of 1661 and 1670. 'The Choyce Drolleries' of 1656 followed next year. The 'Ballad Society,' which had been founded in 1868, soon enlisted his services, and he became its ablest and most industrious supporter. For that society he edited the 'Bagford Ballads' from the British Museum (2 pts. 1876–8), together with the 'Amanda Group of Bagford Poems' (1880). His main labour for the Ballad Society was the completion of its edition of the Roxburghe collection of ballads in the British Museum. William Chappell [q. v. Suppl. I] edited three volumes (1869–79). From 1879 onwards Ebsworth continued Chappell's work and published volumes iv. to ix. of the Roxburghe collections between 1883 and 1899. The separate pieces numbered 1400, and Ebsworth classified them under historical and other headings, bringing together, for example, 'Early Naval Ballads' (1887), 'Early Legendary Ballads' (1888), 'Robin Hood Ballads' (1896), and 'Restoration Ballads' (1899). Ebsworth, who transcribed the texts which he reprinted, supplied exhaustive introductions, notes, and indices.

At the same time he interspersed his editorial contributions with original verse, and also executed with his own hand woodcuts after the original illustrations. A sturdy champion of the seventeenth century royalists, and a hearty hater of puritanism, he freely enlivened his editorial comments with the free expression of his personal prejudices, and with scornful references to current political and religious views from which he dissented. But despite editorial eccentricities his work forms a serious and invaluable contribution to the history of English ballad literature. Ebsworth was elected F.S.A. in 1881.

In 1894 he retired from Molash vicarage to live privately at Ashford. There he died on Whitsunday, 7 June 1908; he was buried in Ashford cemetery. His library was sold in 1907. On 29 May 1865 he married Margaret, eldest daughter of William Blore, rector of Goodmanham, East Yorkshire. She died on 18 April 1906, leaving no issue.

A portrait in early life was painted by Thomas Duncan [q. v.] of Edinburgh. Another portrait was taken in 1873 for the collection of portraits of the Canterbury clergy formed by Mrs. Tait, wife of the archbishop.

Besides the works mentioned, Ebsworth printed in 1887, for private circulation, a hundred and fifty copies of 'Cavalier Lyrics for Church and Crown.' Many of the poems were scattered through his reprints of the 'drolleries' and ballads. All reflect the manner of Suckling or Carew, and more or less genially expound the thorough-going torism which was part of Ebsworth's nature. He also edited Shakespeare's 'Midsummer Night's Dream' of 1600 (Furnivall's 'Facsimile Texts,' 1880); 'Poems by Thomas Carew' (1892); 'Poems of Robert Southwell' (1892); and Butler's 'Hudibras' (1892, 3 vols.). With Miss Julia H. L. De Vaynes he edited 'The Kentish Garland' (2 vols. 1881-2), and for the early volumes of this Dictionary he wrote lives of his father and mother and of Charles and Thomas John Dibdin.

EDDIS, EDEN UPTON (1812-1901), portrait-painter, was the eldest son of Eden Eddis, a clerk in Somerset House, by his wife Clementia Parker. His grandfather, William Eddis, was secretary to Sir Robert Eden, governor of Maryland. Born on 9 May 1812, in London, he showed as a boy a talent for drawing, and became a pupil in

the art school of Henry Sass. In 1828 he entered the painting school of the Royal Academy, and in 1837 won the silver medal. He first exhibited at the Academy in 1834, and then annually from 1837 to 1881. He also exhibited occasionally at the British Institution and at Suffolk Street.

While a young man, Eddis travelled and sketched on the continent with his friend James Holland [q. v.]. In 1848 he settled in Harley Street, where most of his professional life was passed.

Some portrait-drawings in chalk of members of the Athenæum, made when he was still quite young, were very successful and procured him many commissions. Though he had cherished wider ambitions, he determined to embrace the opportunity thus afforded by portrait-painting, chiefly from a generous desire to help his family. In 1838 he exhibited a portrait of Lord John Beresford, archbishop of Armagh, and in the following year one of Viscount Ebrington, lord-lieutenant of Ireland, together with a sketch of Chantrey, the sculptor. These were the first of a long list of distinguished sitters, men eminent in politics, law, the army, and the church, and women celebrated in the society of the day. The painter's social gifts made him a delightful companion; and many of his sitters became lifelong friends. Among the closest and most intimate of his friends were Samuel Jones Loyd, Lord Overstone [q. v.], and his family. Eddis exhibited a portrait of Lord Overstone in 1851; and thirteen of his pictures (not all portraits) are in the collection of Lady Wantage, Lord Overstone's daughter. Between 1840 and 1850 he painted, in addition to portraits, 'Naomi,' other biblical subjects, and two pictures illustrating a poem of Keble's. After 1860 the portraits were increasingly varied by subjects of rustic genre and pictures of children. Several of these were engraved by Every, Joubert, and others, and had great popularity as prints. Macaulay (1850), Archbishop Sumner (1851), Bishop Blomfield (1851), George Dallas, the American Minister (1857), Sir Erasmus Wilson (1859), Lord Coleridge (1878), and Sydney Smith were among those who sat to Eddis. His portrait of Theodore Hook is in the National Portrait Gallery. A series of his portrait-drawings in chalk was lithographed by Gauci.

In 1883 Eddis's health threatened to give way; he determined to exhibit no more after that year, and retired to Shalford, near Guildford. The trouble passed, and he lived, hale and strong, till 1901, continuing

to paint for his own pleasure portraits of his friends and delicate studies of flowers. His personality and conversation charmed all who knew him, and to the last he was the centre of a large and devoted circle, and an especial favourite with the young. He died at Shalford on 7 April 1901, and is buried there.

He married Elizabeth Brown, who predeceased him, and had one son and one daughter.

[Graves's Royal Academy Exhibitors, 1905-1906; private information.] L. B.

EDOUIN, WILLIE, whose real name was WILLIAM FREDERICK BRYER (1846-1908), comedian, born at Brighton on 1 Jan. 1846, was son of John Edwin Bryer, a dancing master, by his wife Sarah Elizabeth May. He was the youngest member of a family of five clever children, all of whom took early to the stage. He first appeared in public in the summer of 1852 (with two sisters and others) in a juvenile troupe of 'Living Marionettes' at the Théâtre des Variétés, Linwood Gallery, Leicester Square, in farces, ballets d'action, and extravaganzas. At Christmas in 1852 and 1854 the Edouin children acted in pantomime at the Strand Theatre. In 1857 'The Celebrated Edouin Family' were taken by their parents on a prolonged tour of Australia, India, China, and Japan. In 1863, after the disbandment of the troupe, Willie and his sister Rose (afterwards Mrs. G. B. Lewis, of the Maidan Theatre, Calcutta) were both members of Fawcett's stock company at the Princess's Theatre, Melbourne, playing in burlesque. Subsequently Willie made a long stay in California. On 2 June 1870 he first appeared in New York, at Bryant's Minstrel Hall, as Mr. Murphy in 'Handy Andy.' Shortly afterwards he began a notable association with Lydia Thompson [q. v. Suppl. II], playing with her burlesque troupe at Wood's Museum, New York, in October and November. In the company was Alice Atherton, whom Edouin subsequently married. At Wallack's Theatre, New York, in August 1871 he was first seen in his droll impersonation of Washee-Washee the Chinaman, in Farnie's burlesque of 'Bluebeard.' In this character he made his first adult appearance in London at the Charing Cross Theatre on 19 Sept. 1874. In 1877 Edouin returned with the Lydia Thompson troupe to New York, where pantomime or burlesque largely occupied him for the next six years.

On 9 Sept. 1884 Edouin made his first experiment in London management by opening Toole's Theatre with 'The Babes, or Whines from the Wood,' which, with himself and his wife in the principal characters, ran 100

nights [see BROUGH, LIONEL, Suppl. II]. On 31 July 1886 he commenced a six weeks' season at the Comedy as Carraway Bones in the farcical comedy 'Turned Up,' which proved so successful that he transferred it, under his own management, to the Royalty Theatre, where it ran over 100 nights. On 25 Feb. 1888 Edouin began his first managerial period at the Strand by producing 'Katti, the Family Help,' with himself and his wife (Alice Atherton) in the principal characters. On 13 June 1889, at the Prince of Wales's Theatre, he proved very successful as Nathaniel Glover (an amiable caricature of Sir Augustus Harris [q. v. Suppl. I]) in 'Our Flat.' A fortnight later he transferred the play to the Opera Comique, under his own management, where it had a run of close on 600 nights. During 1891 and 1893 he resumed management of the Strand, appearing there in light pieces suiting his idiosyncrasy. On 18 June 1894 he had a congenial part in Jeremiah Grubb in Mark Melford's 'The Jerry Builder,' a farcical comedy in which, as Mattie Pollard, his daughter May made a promising début. On 24 Feb. 1897 he won great success at the Prince of Wales's with his quaint embodiment of Hilarious in 'La Poupée.' On 4 Feb. 1899 his wife, who had long acted with him, died. In 1900 he went to America for a brief period. In June 1901 he created Samuel Twanks in 'The Silver Slipper' at the Lyric. Subsequently he performed in sketches in South Africa. On his return he originated the rôle of Hoggeneheimer in 'The Girl from Kay's' at the Apollo (15 Nov. 1902). Afterwards his acting showed a serious falling off, notably in 'The Little Michus' at Daly's in April 1905. In 1907 he was playing in vaudeville in the United States, but developed symptoms of mental failure. Returning home, he died in London on 14 April 1908. He was buried at Kensal Green. Two daughters survived him. A coloured portrait of the comedian as Hilarious in 'La Poupée' accompanies his memoir in 'Players of the Day' (1902).

In parts of grotesquerie and whim Edouin was an admirable comedian. As a manager he showed little business aptitude. He made large sums of money but died poor.

EDWARD VII (1841-1910), KING OF GREAT BRITAIN AND IRELAND AND OF THE BRITISH DOMINIONS BEYOND THE SEAS, EMPEROR OF INDIA, was eldest son and second child of Queen Victoria and her husband Prince Albert. Their first-born child, Victoria, Princess Royal [q. v. Suppl. II], was born on 21 Nov. 1840.

I

The prince was born at Buckingham Palace at 10.48 a.m. on Tuesday 9 Nov. 1841, and the birth was duly recorded in the parish register of St. George's, Hanover Square.

Birth,
9 Nov. 1841. The conservative prime minister, Sir Robert Peel, who had just

come into office, with the duke of Wellington, the archbishop of Canterbury (William Howley), and other high officers of state, attended the palace to attest the birth. No heir had been born to the reigning sovereign since the birth of George IV in 1762, and the event was the signal for immense national rejoicings. The annual feast of the lord mayor of London took place the same evening, and the infant's health was drunk with abundant enthusiasm. A special thanksgiving service was arranged for the churches by the archbishop of Canterbury, and the birth was set as the theme of the English poem at Cambridge University for the next year, when the successful competitor was Sir Henry Maine. The child was named Albert Edward—Albert after his father, and Edward after his mother's father, the duke of Kent. In the family circle he was always called 'Bertie,' and until his accession his signature was invariably 'Albert Edward.' He inherited according to precedent the titles of Duke of Cornwall and Rothsay, Earl of Carrick, Baron of Renfrew, Lord of the Isles, and Great Steward of Scotland, but by his parents' wish he was gazetted in addition as Duke of Saxony, his father's German title. The innovation was adversely criticised by Lord Palmerston and his friends, who disliked the German leanings of the court. On 4 Dec. 1841 he was further created, in accordance with precedent, by patent under the great seal, Prince of Wales and Earl of Chester.

From the outset it was his mother's earnest hope that in career and character her son should be a copy of his father. On 29 Nov. 1841 she wrote to her uncle, King Leopold of Belgium, 'Our little boy is a wonderfully strong and large child. I hope and pray he may be like his dearest papa' (*Letters*, i. 456). A week later she

repeated her aspirations to her kinsman: 'You will understand how fervent are my prayers, and I am sure everybody's must be, to see him resemble his father in *every*, *every* respect both in body and mind' (MARTIN, *Life of Prince Consort*). From the boy's infancy to his manhood Queen Victoria clung tenaciously to this wifely wish.

The prince was baptised by the archbishop of Canterbury on 25 Jan. 1842 at Baptism and
sponsors,
25 Jan. 1842. St. George's Chapel, Windsor. The boy's grand-uncle, the duke of Cambridge, seventh son of George III, and his great-aunt, Princess Sophia, daughter of George III, were the English sponsors. The princess's place was filled through her illness by the duke of Cambridge's daughter Augusta, afterwards grand duchess of Mecklenburg-Strelitz. The other sponsors were members of German reigning families. At their head came Frederick William IV, king of Prussia, who was present in person with Baron Alexander von Humboldt, the naturalist, in attendance upon him. The king much appreciated the office of godfather. He was chosen instead of the queen's beloved counsellor and maternal uncle, King Leopold of Belgium, for fear of giving offence to her difficult-tempered uncle, King Ernest of Hanover, but the plan hardly produced the desired effect of conciliation. The other German sponsors were absent. They were Prince Albert's stepmother, the duchess of Saxe-Coburg, who was represented by Queen Victoria's mother, the duchess of Kent; Prince Albert's widowed kinswoman, the duchess of Saxe-Gotha, who was represented by the duchess of Cambridge; and Prince Albert's uncle, Duke Ferdinand of Saxe-Coburg, who was represented by Princess Augusta of Cambridge. The Queen specially asked the duke of Wellington to bear at the ceremony the sword of state.

Gifts and orders, which were always congenial to the prince, were showered on his cradle by foreign royalty. The king of Prussia, whose baptismal offering was an elaborate gold shield adorned with figures cut in onyx, conferred on him the Order of the Black Eagle. The Emperor Ferdinand I of Austria, Emperor Francis Joseph's uncle, made the infant 'quite proud' with his present of the Grand Cross of St. Andrew on 18 June 1844. Louis Philippe sent him a little gun on his third birthday.

The lines which the education of the heir-apparent should follow became his parents'

anxious concern very soon after he was born. Baron Stockmar, Prince Albert's mentor, whose somewhat pedantic counsel carried great weight in the royal circle, was from the first persistent in advice. Before the boy was six months old, the baron in detailed memoranda defined his parents' heavy responsibilities. He warned them of the need of imbuing the child with a 'truly moral and truly English sentiment,' and of entrusting him to the care of 'persons morally good, intelligent, well-informed, and experienced, who fully enjoyed the parental confidence' (6 March 1842). After due consultation and deliberation Lady Lyttelton was installed as head of Queen Victoria's nursery establishment in April 1842. Her responsibilities grew with the rapid increase of the queen's family. She held the post till 1851, and inspired the prince with the warmest affection.

In 1843 an anonymous pamphlet—'Who shall educate the Prince of Wales?'—which was dedicated to Queen Victoria, bore witness to the importance generally attached to the character of the prince's training. The anonymous counsellor restated Stockmar's unexceptionable principles, and Prince Albert sent a copy to the sententious baron. An opinion was

also invited from Lord Melbourne, the late prime minister, in whom the queen placed the fullest confidence (19 Feb. 1843). He laid stress on the 'real position' and 'duties' which attached to the rank of heir-apparent and on 'the political temptations and seductions' to which previous heirs-apparent, notably George III's eldest son, the prince regent (afterwards George IV), had succumbed. Melbourne recalled the tendency of English heirs-apparent to incur the jealousy of the reigning sovereign and to favour the party in opposition to the sovereign's ministers. Without Lord Melbourne's reminder Queen Victoria was well aware that her uncle George IV was a signal object-lesson of the evil propensities to which heirs-apparent were liable. Nor did she forget that she herself, while heir-presumptive to the crown, had suffered from the jealous ill-will of King William IV (*Queen's Letters*, i. 580).

In the result Lord Melbourne's hints and Stockmar's admonitions decided Queen Victoria and her consort's educational policy. Stockmar, tackling the question afresh, on 28 July 1846 deduced from the spirit of revolution abroad the imperative need of endowing the child with a sense of

the sacred character of all existing institutions, a sound faith in the Church of England, a capacity to hold the balance true between conservative and progressive forces, and a sympathy with healthful social movements. With the utmost earnestness the boy's parents thereupon addressed themselves in Stockmar's spirit to the task of making their son a model of morality, of piety, of deportment, and of intellectual accomplishment, at the same time as they secluded him from any active political interest. Their effort was not wholly beneficial to his development. Yet, whether or no the result were due to his parents' precautions, the country was spared in his case, despite occasional private threatenings, any scandalous manifestation of the traditional rivalry between the sovereign and the next heir to the throne.

English, French, and German governesses soon joined the royal household. German the prince spoke from infancy with his father and mother, and he habitually conversed in it with his brothers and sisters (BUNSEN'S *Memoirs*, ii. 120). He always retained through life a full mastery of all the complexities of the language. To his many German relations he spoke in no other tongue, and to his grand-uncle, King Leopold I of Belgium, and to that monarch's son and successor, King Leopold II, with both of whom he was through youth and manhood in constant intercourse, he talked in German preferably to French. Yet French, too, he learned easily, and acquired in due time an excellence of accent and a width of vocabulary which very few Englishmen have equalled.

Childhood and boyhood were wholly passed with his parents, sisters, and brothers in an atmosphere of strong family affection. His eldest sister, Victoria, whose intellectual alertness was in childhood greatly in excess of his own, was his inseparable companion, and his devotion to her was lifelong. His next sister, Alice (b. 25 April 1843), and next brother, Alfred (b. 6 Aug. 1844), soon joined in the pursuits of the two elder children, but the tie between the prince and Princess Victoria was closer than that between him and any of his juniors.

The children's time was chiefly spent at Buckingham Palace or Windsor Castle, but there were frequent sojourns at Claremont, Esher, the residence of King Leopold, and at seaside resorts. The prince stayed as a baby with the duke of Wellington at

Views of his education.

Melbourne's advice.

Episodes of childhood.

Walmer Castle (Nov. 1842), and several times in infancy at the Brighton Pavilion, the royal residence which was abandoned by the queen in 1845, owing to the pertinacity of sight-seers. In the same year Osborne House in the Isle of Wight became the regular seaside home of the royal family, and was thenceforth constantly visited by the prince.

In 1846 he and the rest of the family made a first yachting excursion from Osborne, paying a first visit to Cornwall, which was his own appanage. Next year he made a tour through Wales, the principality which gave him his chief title. In the autumn of 1848 he paid his first visit to Scotland, staying at Balmoral House, then a hired shooting lodge. The Scottish visit was thenceforth an annual experience. the future Archbishop Benson saw the royal party at their first Braemar gathering (15 Sept. 1848), and described the little prince as 'a fair little lad of rather a slender make with an intelligent expression.' A like impression was made on all observers. 'Pretty but delicate looking' was Macaulay's description of him when the child caught the historian's eye as he stood shyly holding the middle finger of his father's hand at the christening of his third sister, Princess Helena, at Windsor on 26 July 1846 (LORD BROUGHTON'S *Recollections*, vi. 181).

In 1849 he made his first acquaintance with another part of his future dominions. He accompanied his parents on their first visit to Ireland. Queen Victoria on her return commemorated the Irish people's friendly reception of her and her family by creating her eldest son by letters patent under the great seal, Earl of Dublin (10 Sept. 1849). Her father had borne the same title, and its revival in the person of the heir-apparent was a politic compliment to the Irish capital. The visit to Ireland was repeated four years later, when the royal family went to Dublin to inspect an exhibition of Irish industries (Aug. 1853). In later life no member of the royal family crossed the Irish Channel more frequently than the prince.

Meanwhile his education was progressing on strict lines. In the spring of 1849 Henry Birch, an under-master of Eton, 'a young, good-looking, amiable man,' according to Prince Albert, was after careful inquiry appointed his first tutor. Birch held office for two years, and was succeeded by Frederick W. Gibbs, a barrister, who was recom-

mended to Prince Albert by Sir James Stephen, then professor of history at Cambridge. Gibbs filled his post till 1858. Other instructors taught special subjects, and with M. Brasseur, his French teacher, the prince long maintained a cordial intimacy.

Endowed with an affectionate disposition, which was readily moved by those about him, he formed with most of his associates in youth of whatever age or position attachments which lasted for life. Very typical of his fidelity to his earliest acquaintances in all ranks was his lifelong relation with (Sir) David Welch (1820-1912), captain of the Fairy and Alberta, Queen Victoria's earliest royal yachts. The prince made his first sea voyage in Welch's charge when little more than seven, and thenceforth until the prince's death Welch belonged to his inner circle of friends. They constantly exchanged hospitalities until the last year of the prince's life, nearly sixty years after their first meeting.

The prince's chief tutors performed their functions under the close surveillance

of Prince Albert, who not only drafted elaborate regulations for their guidance and made almost daily comments on their action, but in the name of the queen and himself directly addressed to his son long written exhortations on minutest matters of conduct. To his religious training especial care was attached, and a sense of religion, if of a rather formal strain, soon developed in permanence. But to his father's disappointment, it was early apparent that the prince was not studious, that books bored him, and that, apart from progress in speaking French and German, he was

slow to learn. It was difficult to interest him in his lessons. The narrow range of books at his disposal may partly explain the defect. History, the chief subject of study, was carefully confined to bare facts and dates. Fiction was withheld as demoralising, and even Sir Walter Scott came under the parental ban. In the result the prince never acquired a habit of reading. Apart from the newspapers he practically read nothing in mature years. He wrote with facility and soon corresponded voluminously in a simple style. By his parents' orders he kept a diary from an early age, and maintained the habit till his death, but the entries were invariably brief and bald. At the same time he was as a boy observant, was quick at gathering information from talk, and developed a retentive memory for facts outside school study.

His parents meanwhile regarded the drama, art, and music as legitimate amusements for their children. The prince showed some liking for drawing, elocution, and music, and was soon introduced to the theatre, visiting Astley's pantomime as early as 24 March 1846. From 1848 to 1858 he attended all the annual winter performances at Windsor, where Charles Kean and his company provided the chief items of the performance. As a boy he saw at Windsor, too, the younger Charles Mathews in 'Used up' and the farce of 'Box and Cox' (4 Jan. 1849). To the London theatres he paid frequent visits. In 1852 he heard Meyerbeer's 'Huguenots' at the Opera House in Covent Garden. In the spring of 1853 he witnessed more than once Charles Kean's revival of 'Macbeth' at the Princess's Theatre. In 1855 he witnessed at Drury Lane a pantomime acted by amateurs for the benefit of Wellington College, in which his father was deeply interested, and he showed the utmost appreciation of the fun. In 1856 he saw Mme. Celeste in pantomime at the Adelphi, and was a delighted spectator of some old farces at the same house. The early taste for drama and opera never left him.

The royal children were encouraged by their father to act and recite, and George

Amateur
acting.

Bartley the actor was engaged to give the prince lessons in elocution. He made sufficient progress to take part in dramatic entertainments for his parents' amusement. In Jan. 1853 he played the part of Abner to the Princess Royal's *Athalie* in some scenes from Racine's tragedy. Next month he played Max in a German piece, 'Die Tafelbirnen,' his sisters and brother supporting him, and on 10 Feb. 1854 he in the costume of 'Winter' recited lines from Thomson's 'Seasons.'

As a draughtsman he showed for a time some skill. Edward Henry Corbould [q. v.

Progress in
drawing.

Suppl. II.] gave him instruction. For an art exhibition in the spring of 1855 in aid of the Patriotic Fund for the benefit of soldiers' families during the Crimean war, he prepared a drawing called 'The Knight,' which sold for fifty-five guineas. Opportunities for experiment in other mechanical arts were provided at Osborne. There a Swiss cottage was erected in 1854 as a workshop for the prince and his brothers. The prince and his brother Alfred during the Crimean war were busy over miniature fortifications in the grounds.

The gravest defect in Prince Albert's deliberate scheme of education was the practical isolation which it imposed on the prince from boys of his own age. Prince Albert to a greater extent than the queen held that members of the royal family and especially the heir-apparent should keep aloof from their subjects, and deprecated intercourse save in ceremonial fashion. He had a nervous fear of the contaminating influence of boys less carefully trained than his own sons. There were always advisers who questioned the wisdom of the royal policy of exclusiveness, and Prince Albert so far relented, when his eldest son was a child of six or seven, as to invite a few boys whose parents were of high character and good position to play with the prince in the gardens of Buckingham Palace. Among these child associates were Charles Carrington (afterwards first Earl Carrington and Marquis of Lincolnshire) and Charles Lindley Wood (afterwards second Viscount Halifax). Some seven years later the practice was continued at Windsor, whither a few carefully chosen Eton boys were summoned to spend an occasional afternoon. Besides Charles Wood, there now came among others George Cadogan (afterwards fifth Earl Cadogan) and Lord Hinchinbrooke (afterwards eighth earl of Sandwich); but the opportunities of intercourse were restricted. Prince Albert, who was often present, inspired the boy-visitors with a feeling of dread.

Companions
of youth.

The young prince's good-humour and charm of manner endeared him to them and made most of them his friends for life, but owing to his seclusion from boys' society he was ignorant of ordinary outdoor games, and showed small anxiety to attempt them. This want was never supplied. Subsequently he showed some interest in croquet, but ordinary games made no appeal to him, and he betrayed no aptitude for them. The only outdoor recreation which his parents urged on him was riding. He was taught to ride as a boy, and as a young man rode well and hard, possessing 'good hands' and an admirable nerve, while at the same time he developed a genuine love of horses and dogs.

Meanwhile the prince's presence at public ceremonies brought him into prominent notice. On 30 Oct. 1849 he attended for

the first time a public function. He then accompanied Prince

Albert to the City to open the Coal Exchange. His sister, princess royal, accompanied him, but the queen was absent

through illness. The royal party travelled in the royal barge from Westminster to London Bridge. On 1 May 1851 he was at the opening of the Great Exhibition, and was much impressed by the stateliness of the scene. With his tutor and his brother Alfred he frequently visited the place in the next few months, and in June 1854 he attended the inauguration at Sydenham of the Crystal Palace, into which the exhibition building was converted. He accompanied his parents to the art treasures exhibition at Manchester, staying at Worsley Hall with Lord Ellesmere (29 June–2 July 1857). He was twice at Eton (4 June 1853 and 1855) and once at Harrow (29 June 1854) for the speech days, but solely as an onlooker. More important was his first visit to the opening, on 12 Dec. 1854, of a new session of parliament, which was called in view of public anxiety over the Crimean war. That anxiety was fully alive in the royal circle. With his parents the prince visited the wounded soldiers in Brompton Hospital, and was at his mother's side when she first presented the V.C. decoration in Hyde Park (July 1857).

To the Crimean war, which brought his mother into alliance with Napoleon III, emperor of the French, the youth owed a new and more interesting experience than any that had yet befallen him. In August 1855 he and his eldest sister accom-

panied their parents on their

to Paris, 1855.

panied their parents on their glorious visit to Napoleon III and the Empress Eugénie at the Tuileries. It was the boy's first arrival on foreign soil. At once he won the hearts of the French people. His amiability and his delight in the attentions paid him captivated everybody. Prince Albert wrote to Stockmar with unusual lightness of heart how his son, 'qui est si gentil,' had made himself a general favourite. The impression proved imperishable. Frenchmen of every class and political creed acknowledged his boyish fascination. 'Le petit bonhomme est vraiment charmant,' wrote Louis Blanc, a French exile in England, who as he wandered about London caught frequent sight of the boy; 'il a je ne sais quoi qui plaît et, aux côtés de ses parents, il apparaît comme un vrai personnage de féerie.' This early friendship between the prince and France lasted through his life, and defied all vicissitudes of his own or of French fortunes.

While the prince's general demeanour gratified his parents, they were not well

satisfied with his progress. He was reported to be wanting in enthusiasm and imagination, and to be subject to fits of ill-temper, which although brief were easily provoked. Prince Albert earnestly sought new means of quickening his intelligence. The curriculum was widened. In January 1856

the prince and his brother
Faraday's lectures, 1856.

Alfred attended Faraday's lectures on metals at the Royal Institution; and William Ellis was summoned to the palace to teach the prince and his eldest sister political economy. Ellis, like all the royal tutors, noted the superior quickness of the girl, and failed to move much interest in the boy. At the end of August 1856, a fortnight's walking tour was made with his tutor Gibbs and Col. William Henry Cavendish, groom-in-waiting to Queen Victoria and a first cousin of the duke of Devonshire. Starting from Osborne, the party slowly travelled incognito through Dorset, for the most part on foot, putting up at inns without ceremony. But the secret of the prince's identity leaked out, and the experiment was spoilt by public curiosity.

Prince Albert did not conceal his anxiety over his son's backwardness. He invited the counsel of Lord Granville (22 Jan. 1857). Granville frankly advised 'his being mixed up with others of his own age away from home.' He ridiculed as futile the visits of Eton boys to the

Castle for a couple of hours.
Lord Granville's protest against mode of education.

Never out of the sight of tutors or elderly attendants, he was not likely to develop the best boyish characteristics. A foreign tour with boys of his own age was suggested, and at some future date a voyage through the colonies and even to India. In a modified fashion the advice was at once taken. In the spring of 1857 a second tour was made to the English lakes in the company of certain of the Eton boys who had been already occasional visitors to Windsor. Among them were Charles Wood, Mr. Gladstone's son, W. H. Gladstone, and Frederick Stanley, afterwards earl of Derby. Dr. Alexander Armstrong went as medical attendant and Col. Cavendish and Gibbs were in general charge. Lancaster, Bowness, Grasmere, and Helvellyn were all visited. But on the prince's return Prince Albert examined his son's diary and was distressed by its scantiness. A foreign tour followed in the summer. It was designed to combine study, especially of German, with the pleasures of sightseeing. On 26 July 1857 the prince left England to spend a month at

Königswinter near Bonn on the Rhine.

The same company of boys went with him and the suite was joined by Prince Albert's equerries, Col. Grey and Col. Ponsonby, as well as Charles Tarver, afterwards canon of Chester, who was appointed to act as classical tutor. No very serious study was pursued, but the experiences were varied. On the journey down the Rhine, the party met the ill-fated Archduke and Archduchess Maximilian of Austria, who were on their honeymoon. From Germany the prince and his companions went on to Switzerland. At Chamonix Albert Smith acted as guide. The prince walked over the Great Scheidegg, and Roundell Palmer (afterwards Earl Selborne), who was traversing the same pass, wrote with enthusiasm in his diary of 'the slender fair boy' and of his 'frank open countenance,' judging him to be 'everything which we could have wished the heir to the British throne at that age to be' (SELBORNE, *Memorials*, ii. 327). The prince also visited at the castle of Johannisburg the old statesman Prince Metternich, who reported to Guizot that 'le jeune prince plaisait à tout le monde, mais avait l'air embarrassé et très triste' (REID, *Life of Lord Houghton*).

Home again at the end of October, he enjoyed in the winter his first experience of hunting, going out with the royal buckhounds near Windsor. He found the sport exhilarating, and soon afterwards tried his hand at deer-stalking in Scotland. In January 1858 the festivities in honour of his elder sister's marriage with Prince

Frederick of Prussia absorbed the attention of his family. The prince attended the ceremony at St. James's Palace dressed in highland costume (25 Jan.). He felt the parting with the chief companion of his childhood, but corresponded incessantly with his sister and paid her repeated visits in her new home. The close relations with the Prussian royal family which had begun with his baptism were thus greatly strengthened. On 1 April 1858 he was confirmed at Windsor by the archbishop of Canterbury, John Bird Sumner. 'Bertie,' wrote

his father, 'acquitted himself extremely well,' in the preliminary examination by Gerald Wellesley, dean of Windsor. His mother described 'his whole manner' as 'gentle, good and proper,' epithets which well expressed his attitude towards religion

through life. A few days later he made a short pleasure tour with his tutor to Ireland. It was his third visit to that country. He now extended his knowledge of it by going south to Killarney and leaving by way of Cork.

A further trial of the effect of absence from home was made in May. It was decided that he should join the army, and on 5 May 1858, with a view to preparing him for military service, he was sent to stay at

In residence at White Lodge, 1858. White Lodge in Richmond Park, the unoccupied residence of the ranger, the duke of Cambridge. A sort of independent household was there first provided for him. In view of the approach of manhood, his parents redoubled their precautions against undesirable acquaintances, but after careful investigation three young officers, Lord Valletort (the earl of Mount Edgumbe's son), Major Christopher Teesdale [q. v.], and Major Lindsay, afterwards Lord Wantage [q. v. Suppl. II], were appointed to be the prince's first equerries. For their confidential instruction, Prince Albert elaborated rules whereby they might encourage in the prince minute care of his 'appearance, deportment, and dress,' and foster in him good 'manners and conduct towards others' and the 'power to acquit himself creditably in conversation or whatever may be the occupation of society.'

Already at fifteen he had been given a small allowance for the purchase of hats and ties, for which he carefully accounted to his mother. Now he was advanced to the privilege of choosing his own dress, and the queen sent him a formal minute on the sober principles which should govern his choice of material. To neatness of dress he always attached importance, and he insisted on a reasonable adherence to laws of fashion on the part of those about him. To the formalities of official costume he paid through life an almost exaggerated attention. This quality was partly inherited from his grandfather, the duke of Kent, but was greatly stimulated by his parents' counsel. Gibbs was in chief charge at White Lodge, and intellectual society was encouraged. Richard Owen the naturalist was several times invited to dine, and Lord John Russell, who was residing at Pembroke Lodge, was an occasional guest. The talk ranged over many topics, but was hardly calculated to interest very deeply a boy under seventeen (*Life of R. Owen*). He spent some time rowing on the river, and attended his first

The Princess Royal's marriage, 26 Jan. 1858.

Confirmation, 1 April 1858.

dinner-party at Cambridge Cottage, Kew, the residence of his great-aunt, the duchess of Cambridge, but all was too strictly regulated to give a youth much satisfaction. His sojourn at White Lodge was interrupted in August, when he went with his parents to Cherbourg, and renewed his acquaintance with the emperor and empress of the French. On 9 Nov. 1858, his seventeenth birthday, one purpose of his retirement to Richmond was fulfilled. He was made a colonel in the army un-

attached and at the same time was nominated K.G., though the installation was postponed. The date was regarded by his parents as marking his entry on manhood. Among their gifts was a memorandum signed by themselves solemnly warning him of his duties as a Christian gentleman. Gibbs, too, retired from the prince's service, and his precise post was allowed to lapse.

But there was no real change in the situation. His parents relaxed none of their vigilance, and a more complete control of the prince's affairs and conduct than Gibbs had exercised was now entrusted to a governor, Colonel Robert Bruce. The colonel fully enjoyed Prince Albert's confidence; his sister, Lady Augusta, was a close friend of the queen and was lady-in-waiting of his grandmother, the duchess of Kent. At the same time Charles Tarver was formally installed as instructor in classics.

For the next four years the prince and Col. Bruce were rarely parted, and Col. Bruce's wife, Catherine Mary, daughter of Sir Michael Shaw Stewart, usually assisted her husband in the strict discharge of his tutorial functions. The first incident in the new régime was a second foreign expedition of more imposing extent than the first. Travel was proving attractive, and his parents wisely encouraged his taste for it. During December a short visit, the first of many, was paid to his married sister at Potsdam (December 1858). Next month he with Colonel and Mrs. Bruce started from Dover on an Italian tour. Stringent injunctions were laid on Bruce by his parents to protect the prince from any chance intercourse with strangers and to anticipate any unprincipled attempt of journalists to get into conversation with him. The prince was to encounter much that was new. He travelled for the first time under a formal incognito, and took the title of Baron of Renfrew. On leaving

England he presented colours to the Prince of Wales's royal (100th) Canadian

regiment, which was in camp at Shorncliffe (10 Jan. 1859), and delivered to the soldiers his first

speech in public. The duke of Cambridge was present and pronounced it excellent. From Dover he crossed to Ostend to pay at the palace of Laeken, near Brussels, a first visit to his grand-uncle, King Leopold I. The king's influence over him was hardly less than that which he exerted on the boy's mother and father. Passing through Germany, the party made a short stay at Berlin, where Lord Bloomfield gave a ball in his honour. It was the first entertainment of the kind he had attended, and he was 'very much amused' with his first cotillon. He reached Rome near the end of January and settled down for a long stay. King Victor Emanuel was anxious to offer him hospitality at Turin. But Queen Victoria deemed King Victor's rough habit of speech, of which she had some experience at Windsor in 1855, an example to be avoided, and the invitation, somewhat to Cavour's embarrassment, was declined. At Rome the prince was soon busily engaged in seeing places and persons of interest. Attended by Bruce, he called on the Pope, Pius IX, and talked with him in French. The interview 'went off extremely well,' Queen Victoria wrote to King Leopold (15 Feb. 1859), and the pope interested himself in the endeavour to make the visit to Rome 'useful and pleasant' (*Queen's Letters*, iii. 411). Of duly approved English sojourners the prince saw many. He impressed Robert Browning as 'a gentle, refined boy'; he was often in the studio of the sculptor John Gibson, and an introduction there to Frederic Leighton led to a lifelong intimacy.

The outbreak of war between Italy and Austria in April hastened the prince's departure at the end of three months. H.M.S. Scourge carried him from Civita Vecchia to Gibraltar, where he was met by the royal yacht Osborne. From Gibraltar he passed to Lisbon, where he was entertained by Pedro V, king of Portugal. Queen Victoria and Prince Albert were attached to the Portuguese royal house by lineal ties and sentiments of affection. King Pedro's mother, Queen Maria, had been a playmate of Queen Victoria, and his father, Prince Ferdinand of Saxe-Coburg, was a first cousin of both Queen Victoria and her consort. With Portugal's successive monarchs the Prince

Col. Bruce governor, 10 Nov. 1858.

of Wales was always on friendliest terms. The prince only reached home in June, after six months' absence, and was then formally invested K.G. with full ceremony. On 26 June Prince Hohenlohe, the future chancellor of Germany, dined at Buckingham Palace, and learned from the prince's lips something of his travels. The young man gave the German visitor an impression of good breeding, short stature, and nervous awe of his father.

Prince Albert was not willing to allow his son's educational course to end prematurely. An academic training was at once devised on comprehensive lines, which included attendance at three universities in succession. A beginning was made at Edinburgh

At
Edinburgh,
1859.

in the summer of 1859. Holyrood Palace was prepared for his residence. His chief instruction was in science under the guidance of Lyon Playfair, whose lectures at the university on the composition and working of iron-ore the prince attended regularly. He showed interest in Playfair's teaching, visiting with him many factories to inspect chemical processes, and proved his courage and obedient temper by dipping at Playfair's bidding in one of the workshops his bare arm into a hissing cauldron of molten iron by way of illustrating that the experiment could be made with impunity (GRANT DUFF, *Notes from a Diary*, 1877-86, ii. 27). At the same time Leonhard Schmitz taught him Roman history, Italian, German, and French. For exercise he paraded with the 16th lancers, who were stationed in the city, and made excursions to the Trossachs and the Scottish lakes. But the stay in Edinburgh was brief.

On 3 Sept. the prince consort held a conference there with the youth's professors and tutors to decide on his future curriculum. The Edinburgh experience was proving tedious and cheerless. The prince mixed with none but serious men advanced in years. The public at large was inclined to protest that now when it seemed time to terminate the state of pupillage, there were visible signs of an almost indefinite extension. 'Punch' voiced the general sentiment in a poem entitled 'A Prince at High Pressure' (24 Sept. 1859). But Prince

At Oxford,
Oct. 1859.

Albert was relentless, and in October the prince migrated to Oxford on conditions as restrictive as any that went before. The prince matriculated as a nobleman from Christ Church, of which Dr. Liddell was dean, on 17 Oct.

It was the first recorded occasion on which a Prince of Wales had become an undergraduate of the University of Oxford. Tradition alone vouches for the story of the matriculation in 1398 of Prince Henry, afterwards Henry V—Prince Hal, with whom the new undergraduate was occasionally to be linked in satire hereafter. No other preceding Prince of Wales was in any way associated with Oxford. But Prince Albert's son was not to enjoy any of an undergraduate's liberty. A special residence, Frewen Hall, a house in the town, was taken for him. Col. Bruce accompanied him and rarely left him. Prince Albert impressed on Bruce the boy's need of close application to study, and of resistance to social calls, as well as the undesirability of any free mingling with undergraduates. Herbert Fisher, a student of Christ Church, was on the recommendation of Dean Liddell appointed his tutor in law and constitutional history. He did not attend the college lectures, but Goldwin Smith, professor of modern history, with three or four chosen undergraduates, waited on him at his residence and gave him a private course in history. The text-book was the 'Annals of England,' by W. E. Flaherty (1855), and the professor only partially compensated by epigram for the dryness of the work. By Prince Albert's wish, Arthur Penrhyn Stanley, then professor of ecclesiastical history, gave him some religious instruction, while Dr. Henry Acland, his medical attendant, occasionally invited him to social gatherings at his house. With both Stanley and Acland the prince formed very friendly relations. He saw comparatively little of the undergraduates. He confirmed his acquaintance with Mr. Charles Wood. At the same time fox-hunting was one of his permitted indulgences, and the recreation brought him into touch with some young men of sporting tastes, to a few of whom, like Mr. Henry Chaplin and Sir Frederick Johnstone, he formed a lifelong attachment. He hunted with the South Oxfordshire hounds, of which Lord Macclesfield was master, and he saw his first fox killed near Garsington on 27 Feb. 1860, when he was presented with the brush. Hunting was his favourite sport till middle age. The discipline which Col. Bruce enforced prohibited smoking. But the prince made surreptitious experiments with tobacco, which soon induced a fixed habit.

The prince remained in residence at Oxford with few interruptions during term time until the end of the summer term 1860. He was summoned to Windsor on

9 Nov. 1859 for the celebration of his eighteenth birthday, which was reckoned in royal circles a virtual coming of age. His parents again presented him with a carefully penned exhortation in which they warned him that he would henceforth be exempted from parental authority, but that they would always be ready with their counsel at his request. As he read the document the sense of his parents' solicitude for his welfare and his new responsibilities moved him to tears. But the assurance of personal independence lacked genuine significance. In the Easter vacation of 1860 he paid a first visit to his father's home at Coburg, and made 'a very good impression.' He pleased his parents by the good account he brought them of 'dear' Stockmar's state of health (*Letters of Queen Victoria*, iii. 5; 25 April 1860). On his return home he found (Sir) Richard Owen lecturing his brothers and sisters on natural history, and he attended once (23 April 1860). In London at the opening of the long vacation he enjoyed the first of his many experiences of laying foundation stones. He performed the ceremony for the School of Art at Lambeth.

A formidable journey was to interrupt his Oxford undergraduate career. In July 1860 he carried out a scheme long in his parents' minds, which exerted on his development a far more beneficial effect than any likely to come of his academic training. During the Crimean war the Canadian government, which had equipped a regiment of infantry for active service, had requested the queen to visit Canada. She declined the invitation, but promised that the Prince of Wales should go there as soon as he was old enough. When that decision was announced, the president of the United States, James Buchanan, and the corporation of New York, both sent the queen requests that he should visit America. The queen very gradually overcame maternal misgivings of the safety of an English prince among American republicans. The American invitations were at length accepted, with the proviso that the American visit was to be treated as a private one. In any case the projected tour acquired something more than a merely colonial interest. An impressive introduction to public life was thus designed for the heir to the English throne. A large and dignified suite was collected. The prince was accompanied by the duke of Newcastle, secretary of state for the colonies, by the earl of St. Germans, lord steward of the

royal household, and by Col. Bruce, his governor. Major Teesdale and Capt. Grey (*d.* 1874), son of Sir George Grey, went as equerries, and Dr. Acland as physician. Young Lord Hinchinbrooke, one of the Eton associates, was to join the party in America.

Leaving Southampton on 9 July 1860 in H.M.S. *Hero*, with H.M.S. *Ariadne* in attendance, the prince reached Newfoundland on the 23rd. The colonial progress opened at St. John's with processions, presentations of addresses, reviews of volunteers, levees, and banquets, which were constant features of the tour. Thence they passed to Halifax and Nova Scotia (30 July). On 9 Aug. he landed on Prince Edward Island, and on the 12th, near the mouth of the St. Lawrence, the governor-general of the Canadas, Sir Edmund Head, boarded the royal vessel. On the 20th the prince made a state entry into Quebec, the capital of French Canada. He stayed at Parliament House, which had been elaborately fitted up for his residence, and a guard of honour of 100 men was appointed to form his escort through the colony. At Montreal on 1 Sept. he opened the great railway bridge across the St. Lawrence; and passing thence to Ottawa, he there laid the foundation stone of the Parliament building. On the way to Toronto, the capital of upper Canada, the only untoward incident took place. Strong protestant feeling in the upper colony resented the enthusiasm with which the French Roman Catholics of lower Canada had welcomed the prince, and the Orange lodges resolved to emphasise their principles by forcing on the prince's notice in their street decorations the emblems of their faith. At Kingston on Lake Ontario the townsfolk refused to obey the duke of Newcastle's direction to remove the orange colours and portraits of William III from the triumphal arches before the royal party entered the town. Consequently the royal party struck the place out of their itinerary and proceeded to Toronto, where a like difficulty threatened. Happily the Orangemen there yielded to persuasion, and the reception at Toronto proved as hearty as could be wished.

Leaving Canada for the United States, the prince made an excursion to Niagara Falls (17 Sept.), where, somewhat to his alarm, he saw Blondin perform on the tight rope, and at the neighbouring village of Queens-town (18 Sept.) he laid the crowning stone on the great monument erected to the memory of Major-general Sir Isaac Brock [q. v.], who was slain in the American war

of 1812. Crossing Detroit river, he touched United States soil at Detroit on 19 Sept.; there he was met by Lord Lyons, minister at Washington. At once scenes of extravagant enthusiasm belied all fears of a cool reception. Short stays in Chicago, St. Louis, Cincinnati, and Pittsburg preceded his arrival at Washington (3 Oct.), where President Buchanan (an old man of seventy-seven) received him at the White House with friendliest cordiality. A crowded levee at White House was given in his honour.

At Washington, on 5 Oct. Mount Vernon, Washington's home and burial place, and planted a chestnut by the side of the tomb. Such a tribute from the great-grandson of George III was greeted by the American people with loud acclamations of joy, and England was hardly less impressed. 'The Prince of Wales at the Tomb of Washington' was the subject set for the English poem at Cambridge University in 1861, and the prize was won by Frederic W. H. Myers. Going northwards, the prince stayed at Philadelphia (7 Oct.), where he heard Madame Patti sing for the first time. At New York (11 Oct.) he remained three days. A visit was paid later to the military school at West Point, and proceeding to Boston he went over to Cambridge to inspect Harvard University. At Boston he met Longfellow, Emerson, and Oliver Wendell Holmes. He embarked for home in H.M.S. *Hero* from Portland in Maine on 20 Oct. and arrived after a bad passage at Plymouth on 15 Nov., six days after completing his nineteenth year.

Everywhere the prince's good-humour, courteous bearing, and simple delight in novel experiences won the hearts of his hosts.

Effect of the American tour. 'Dignified, frank, and affable,' wrote the president to Queen Victoria (6 Oct. 1860), 'he has conciliated, wherever he has been, the kindness and respect of a sensitive and discriminating people.' The tour differed in every regard from his previous trips abroad. It was originally planned as a ceremonial compliment to the oldest and most important of English colonies on the part of the heir to the throne travelling as the reigning sovereign's official representative. No British colony had previously received a like attention. Canada accorded the prince all the honours due to his royal station. In the United States, too, where it was stipulated by Queen Victoria that he should travel as a private person under his incognito of

Baron of Renfrew, the fiction went for nothing, and he was greeted as England's heir-apparent no less emphatically than in British North America. The result satisfied every sanguine hope. It tightened the bond of affection between Canada and the mother country at the moment when a tide of public sentiment seemed setting in another direction, and it reinforced the sense of unity among the British American colonies, which found expression in their internal union of 1867. On the relations of the United States and England the effect was of the happiest. On 29 Nov. 1860 Sir Charles Phipps, who was high in the confidence of Queen Victoria and Prince Albert, gave expression to the general verdict in a letter to Dr. Acland. 'The success of the expedition has been beyond

The general verdict. all expectation; it may be reckoned as one of the most important and valuable state measures of the present age, and whether we look to the excitement and encouragement of loyalty and affection to the mother country in Canada, or to the soothing of prejudice and the increase of good feeling between the United States and Great Britain, it seems to me impossible to overrate the importance of the good results which the visit promises for the future.'

On the youth himself the tour exerted a wholly beneficial influence. The duke of Newcastle noticed in the prince a perceptible intellectual development. The journey left a lasting impression on his mind. If at times in later reminiscence he associated Canadian life with some want of material comfort, he always cherished gratitude for the colonial hospitality, and never lost a sense of attachment to the American people. His parents felt pride in the American welcome, and a year later, when Motley, then American minister at Vienna, was passing through England, he was invited to Balmoral, to receive from Queen Victoria and Prince Albert expressions of their satisfaction. Some American publicists were inclined to attribute to the heartiness of the prince's reception Prince Albert's momentous diplomatic intervention in behalf of the north over the affair of the Trent. When the American civil war broke out next year, Prince Albert on the eve of his death powerfully discouraged English sympathy with the revolt against the authority of the government at Washington, which had given his son an ovation.

The prince's career in England pursued its normal course. He returned to Oxford

in November for the rest of the Michaelmas term, and in December the queen paid him a visit there. At the end of the year he left Oxford for good. Next month his protracted education was

continued at Cambridge. As at Oxford, a private residence, Madingley Hall, was hired for him. The Cambridge house was of more inspiring character than Frewen Hall; it was an old and spacious country mansion, four miles from the town, 'with large grounds and capital stables.' Col. Bruce and his wife took domestic control, and under their eyes the prince was free to entertain his friends. He entered Trinity College, while Dr. Whewell was Master, on 18 Jan. 1861. A set of rooms in the college was placed at his disposal, but he did not regularly occupy them. Joseph Barber Lightfoot [q. v.] was his college tutor, and when in 1897 the prince visited Durham, of which Lightfoot was then bishop, he recalled the admiration and regard with which Lightfoot inspired him. History remained his main study and was directed by the professor of history, Charles Kingsley. The prince attended Kingsley's lectures at the professor's own house, together with some half-dozen carefully selected undergraduates, who included the present Viscount Cobham, and George Howard, ninth earl of Carlisle [q. v. Suppl. II]. The prince rode over thrice a week to the professor's house and each Saturday Kingsley recapitulated the week's work with the prince alone. He was examined at the

Kingsley's lectures.

end of each term; the course finally brought English history up to the reign of George IV. Kingsley was impressed by his pupil's attention and courtesy, and like all who came into contact with him, bore him thenceforth deep affection.

In 1861 there began for the court a period of gloom, which long oppressed it. On 16 March the prince's grandmother, the duchess of Kent, died; and he met his first experience of death at close quarters. He first attended a drawing-room on 24 June 1861 in the sombre conditions of official mourning. But more joyful experience intervened, before there fell on him the great blow of his father's premature death. In the summer vacation he went for a fourth time to Ireland, at first as the guest of the lord-lieutenant, the eighth Earl of Carlisle; but his chief purpose was to join in camp at the Curragh the second battalion, grenadier guards. For the first time in his life

he was freed from the strict and punctilious supervision of his veteran guardians and

mentors. The pleasures of liberty which he tasted were new to him. A breach of discipline exposed him to punishment, and he grew impatient of the severe restrictions of his previous career. His mother and father came over in August to a review of the troops in which he took part. 'Bertie,' she wrote, 'marched past with his company, and did not look at all so very small' (*Letters*, 26 Aug. 1861). With his parents he spent a short holiday in Killarney, and then for a second time he crossed the Channel to visit his sister, the Princess Royal, at Berlin (Sept. 1861). After accompanying her and her husband on a tour through the Rhenish provinces, he witnessed at Coblenz the military manœuvres of the German army of the Rhine.

This German tour had been designed with an object of greater importance than mere pleasure or change. The prince was reaching a marriageable age, and the choice of a wife was in the eyes of King Leopold, of Stockmar, and of the youth's parents a matter of momentous concern. It was inevitable that selection should be made from among princely families of Germany. Seven young German princesses were reported to be under the English court's consideration as early as the summer of 1858 (*The Times*, 5 July 1858). Fifth on this list was Princess Alexandra, eldest daughter of Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg, next heir to the throne of Denmark, which he ascended on 15 Nov. 1863 as Christian IX. She was barely seventeen, nearly three years the prince's junior. Her mother, Louise of Hesse-Cassel, was sole heiress of the old Danish royal family, and the princess was born and brought up at Copenhagen. Though her kinship was with Germany, her life was identified with Denmark. King Leopold, who discussed the choice of a bride with Queen Victoria, reported favourably of her beauty and character. But the prince's parents acknowledged his right of selection, and a meeting between him and Princess Alexandra was arranged, while he was in Germany in the summer of 1861. The princess was staying near at hand with her mother's father, the Landgrave of Hesse-Cassel, at the castle of Rumpenheim. The prince saw her for the first time in the cathedral at Speier (24 Sept. 1861). Next day they met again at Heidelberg.

Prospects of marriage.

selection, and a meeting between him and Princess Alexandra was arranged, while he was in Germany in the summer of 1861. The princess was staying near at hand with her mother's father, the Landgrave of Hesse-Cassel, at the castle of Rumpenheim. The prince saw her for the first time in the cathedral at Speier (24 Sept. 1861). Next day they met again at Heidelberg.

Each made a favourable impression on the other. On 4 Oct. Prince Albert writes; 'We hear nothing but excellent accounts of the Princess Alexandra; the young people seem to have taken a warm liking to one another.' Again, when the Prince of Wales returned to England a few days later, his father writes to Stockmar: 'He has come back greatly pleased with his interview with the princess at Speier.'

For the present nothing further followed. The prince resumed his residence at Cambridge. He was in London on 31 Oct., when he was called to the bar at the Middle Temple, was elected a bencher, and opened the new library at the Inn. But his studies at Cambridge went forward during the Michaelmas term. The stringent discipline was proving irksome, and he was involuntarily coming to the conclusion, which future experience confirmed, that his sojourns at the two English universities were mistakes. On 25 Nov. Prince Albert arrived to offer him good counsel. He stayed the night at Madingley Hall. A chill caught on the

Prince Albert's
death,
14 Dec. 1861.

journey developed into what unhappily proved to be a fatal illness. On 13 Dec. the prince was summoned from Cambridge to Windsor to attend his father's deathbed. Prince Albert died next day.

At his father's funeral in St. George's Chapel on 23 Dec. the prince was chief mourner, in his mother's absence. He joined her the same day at Osborne. At the queen's request he wrote a day or two later a letter publicly identifying himself with her overwhelming anxiety to pay her husband's memory all public honour. On the 28th he offered to place, at his own expense, in the gardens of the Royal Horticultural Society, a statue of the prince instead of one of the queen which had already been cast for erection there, by way of memorial of the Great Exhibition of 1851.

II

The sudden death of his father, when the prince was just turned twenty years of

Queen
Victoria's
parental
control.

age, was a momentous incident in his career. The strict discipline, to which his father had subjected him, had restrained in him every sense of independence and had fostered a sentiment of filial awe. He wholly shared his mother's faith in the character and attainments of the dead prince. In her husband's lifetime the queen had acknowledged his superior right to control her sons. But after his death she regarded herself to be under a solemn obligation to

fill his place in the family circle and to regulate all her household precisely on the lines which he had followed. To all arrangements which the prince consort had made for her sons and daughters she resolved loyally to give effect and to devise others in the like spirit. The notion of consulting their views or wishes was foreign to her conception of duty. Abounding in maternal solicitude, she never ceased to think of the Prince of Wales as a boy to whom she owed parental guidance, the more so because he was fatherless. A main effect of his father's death was consequently to place him, in his mother's view, almost in permanence 'in statu pupillari.' She claimed to regulate his actions in almost all relations of life.

Earlier signs were apparent, even in Prince Albert's lifetime, of an uneasy fear on the queen's part that her eldest son might, on reaching manhood, check the predominance which it was her wish that her husband should enjoy as her chief counsellor. In 1857 she had urged on ministers a parliamentary enactment for securing Prince Albert's formal precedence in the state next to herself. Stockmar was asked to press upon her the imprudence of her proposal, and it was with reluctance dropped (FITZMAURICE, *Lord Granville*). But the episode suggests the limitations which threatened the Prince of Wales's adult public activity. In his mother's sight he was disqualified by his filial relation from filling the place which her husband had held in affairs of state or from relieving her of any political duties. His mother accurately described her lasting attitude alike to her husband's memory and to her children in a letter to King Leopold (24 Dec. 1861): 'And no human power will make me swerve from what he decided and wished. I apply this particularly as regards our children—Bertie, &c.—for whose future he had traced everything so carefully. I am also determined that no one person, may he be ever so good, ever so devoted among my servants—is to lead or guide or dictate to me' (*Letters*, iii. 606).

The Prince of Wales always treated his mother with affectionate deference and considerate courtesy. Naturally docile, he in his frequent letters to her addressed her up to her death in simple filial style, beginning 'Dear Mama' and ending 'Your affectionate and dutiful son.' To the queen the formula had a literal significance. But on reaching man's estate the prince's views of life broadened. He travelled far from the rigid traditions in which he had been

brought up. Difference of view regarding his official privileges became with the prolongation of his mother's reign inevitable. The queen was very ready to delegate to him formal and ceremonial labours which were distasteful to her, but she never ceased to ignore his title to any function of government. His place in the royal succession soon seemed to him inconsistent with that perpetual tutelage, from which Queen Victoria deemed it wrong for him to escape in her lifetime. Open conflict was averted mainly by the prince's placable temper, which made ebullitions of anger of brief duration; but it was a serious disadvantage for him to be denied by the queen any acknowledged responsibility in public affairs for the long period of nearly forty years, which intervened between his father's death and his own accession to the throne.

As soon as the first shock of bereavement passed, Queen Victoria set herself to carry out with scrupulous fidelity two plans which her husband devised for his eldest son's welfare, another foreign tour and his marriage.

The tour to the Holy Land which was to conclude his educational travel had been arranged by Prince Albert in consultation with Arthur Penrhyn Stanley. The suite included Gen. Bruce, Major Teesdale, Col. Keppel, Robert Meade, who had been associated with Lord Dufferin on his mission to Syria in 1860, and Dr. Minter as physician. The queen's confidence in Stanley was a legacy from her husband, and at her persuasion he somewhat reluctantly agreed to join the party. The prince travelled incognito, and owing to the family mourning it was the queen's wish that ceremonial receptions should as far as possible be dispensed with. Leaving Osborne on 6 Feb. 1862, the prince and his companions journeyed through Germany and Austria. At Darmstadt he was welcomed by the Grand Duke, whose son was to marry his second sister, Alice; thence he passed to Munich, where he inspected the museums and the galleries and saw the king of Bavaria. At Vienna he met for the first time the Emperor Francis Joseph, who formed a favourable impression of him, and thenceforth cherished a genuine affection for him. At Vienna he was introduced to Laurence Oliphant [q. v.], who was well acquainted with the Adriatic coast of the Mediterranean. Oliphant readily agreed to act as guide for that part of the expedition. From Trieste, where

Stanley joined the party, the royal yacht Osborne brought the prince to Venice, to Corfu, and other places of interest on the passage to Egypt. Oliphant, who served as cicerone for ten days, wrote that the prince 'was not studious nor highly intellectual, but up to the average and beyond it in so far as quickness of observation and general intelligence go.' He recognised the charm of his 'temper and disposition' and deemed travelling the best sort of education for him. His defects he ascribed to a 'position which never allows him responsibility or forces him into action' (MRS. OLIPHANT'S *Life of L. Oliphant*, i. 269). The prince was on his side attracted by Oliphant, and many years later not only entertained him at Abergeldie but took him to dine at Balmoral with Queen Victoria, who shared her son's appreciation of his exhilarating talk.

The prince disembarked at Alexandria on 24 Feb. Passing to Cairo, he lodged in the palace of Kasr-en-nil, In Egypt. and every attention was paid him by the viceroy Said. A three weeks' tour was made through upper Egypt. He climbed the summit of the Great Pyramid without assistance and with exceptional alacrity; he voyaged up the Nile to Assouan (12 March), and explored the temple of Carnac at Luxor. At length on 31 March he arrived in the Holy Land, where no English prince had set foot since Edward I, more than six hundred years before.

Jerusalem was thoroughly explored, and the diplomacy of General Bruce gained admission to the mosque of At Jerusalem. Hebron, into which no European was known to have penetrated since 1187. 'High station,' remarked the prince, 'has after all some merits, some advantages.' Easter Sunday (20 April 1862) was spent on the shores of Lake Tiberias and at Galilee. Through Damascus the party reached Beyrout and thence went by sea to Tyre, Sidon, and Tripoli (in Syria). During the tour Stanley succeeded in interesting the prince in the historic traditions of Palestine. While he was easily amused, he was amenable to good advice, and readily agreed that sporting should be suspended on Sundays. 'It is impossible not to like him,' Stanley wrote. 'His astonishing memory of names and persons' and his 'amiable and endearing qualities' impressed all the party.

On 15 May the Osborne anchored at the isle of Rhodes. Thence the prince passed to Constantinople, where he stayed at the embassy with Sir Henry Bulwer, ambassa-

Tour in the Holy Land, Feb.-May 1862.

dor, and was formally entertained in his rank of Prince of Wales by the sultan. He saw the sights of the city. His host reported favourably of his tact and manner, and while he did not anticipate that he would learn much from books, he discerned powers of observation which would well supply the place of study. But he detected a certain danger in an ease of demeanour which at times challenged his dignity and in the desire for amusement. A first sojourn in Athens, where he was to be a frequent visitor, and a landing at Cephallonia brought him to Marseilles. At Fontainebleau he was welcomed hospitably by the Emperor Napoleon III and the Empress Eugénie, and on 13 June he rejoined his mother at Windsor. One unhappy incident of the highly interesting journey was the serious illness contracted by General Bruce in the marshes of the upper Jordan. He managed with difficulty to reach London, but there he died on 27 June 1862. The prince was thus deprived finally of the close surveillance which his father had deemed needful to his welfare.

While the court was still in deep mourning the marriage of his second sister, Princess Alice, to Prince Louis of Hesse-Darmstadt took place at Windsor on 1 July 1862.

The International Exhibition of 1862, which the prince consort had designed, had been duly opened in May by the duke of Cambridge, to whom much court ceremonial was for the time delegated by Queen Victoria. The prince inspected the exhibition in the summer and received with charming grace the foreign visitors—to one of whom, General de Galliffet, he formed a lifelong attachment. But the queen's chief pre-occupation was the scheme for the prince's marriage which King Leopold and the prince consort had inaugurated the previous year.

In the summer the queen wrote to Prince Christian, formally soliciting the hand of his daughter, Princess Alexandra, for her eldest son. Assent was readily given. At the end of August Queen Victoria left England to revisit Coburg, her late husband's home. On the journey she stayed with her uncle Leopold at his palace of Laeken, near Brussels. Her future daughter-in-law was with her father on a visit to Ostend, and Princess Alexandra came over to Laeken to meet Queen Victoria for the first time. The queen left for Coburg on 4 Sept. On the same date the prince set out to meet his mother and to begin what proved another long continental tour. On the 7th he

arrived at Brussels, and paid his respects to Princess Alexandra at Ostend. Both were summoned by King Leopold to the palace of Laeken, and there on 9 Sept. 1862 they were formally betrothed. Next day they went over the battlefield of Waterloo together, and in the evening they attended a court banquet which King Leopold gave in their honour. They travelled together to Cologne, where they parted, and the prince joined his mother at Coburg.

The engagement was made public on 16 Sept. in a communication to the press drafted by Queen Victoria. It was stated that the marriage 'privately settled at Brussels' was 'based entirely upon mutual affection and the personal merits of the princess,' and was 'in no way connected with political considerations.' 'The revered Prince Consort, whose sole object was the education and welfare of his children, had,' the message continued, 'been long convinced that this was a most desirable marriage.' On 1 Nov. 1862 the queen gave her formal assent to the union at a meeting of the privy council. The announcement was received in England with enthusiasm. The youth and beauty of the princess and her association with Denmark appealed to popular sympathies. 'I like the idea of the Danish connection; we have had too much of Germany and Berlin and Coburgs,' wrote Lady Palmerston (R^{ESP}, *Lord Houghton*, ii. 83). In spite of the queen's warning, a political colour was given to the match in diplomatic circles. Prussia and Austria were steadily pushing forward their designs on the Schleswig-Holstein provinces which Denmark claimed. Public feeling in England, which favoured the Danish pretensions, was stimulated. In Germany it was openly argued that the queen and prince consort had betrayed the German cause.

Although the match was wholly arranged by their kindred, it roused a mutual affection in the prince and princess. But they saw little of each other before their marriage. On 8 Nov. Princess Alexandra paid her first visit to England, coming with her father to Osborne as the guest of the queen. There and at Windsor she remained three weeks, spending much of her time alone with the queen.

By Queen Victoria's wish the prince was out of the country during his bride's stay. On leaving Coburg he had invited his sister and her husband, the crown prince and princess of Prussia, to

At Constantinople.

The coming marriage.

Princess Alexandra in England, Nov. 1862.

accompany him on a Mediterranean tour on the yacht Osborne. They embarked at Marseilles on 22 Oct. 1862. A most interesting itinerary was followed. A first experience of the Riviera was obtained by a

The prince's foreign tour, Nov. 1862. landing at Hyères. Palermo, the capital of Sicily, was visited, and thence a passage was made to Tunis, where the ruins of Carthage were explored.

Owing to an accident to the paddle-wheel of the royal yacht, the vessel was towed by the frigate Doris from the African coast to Malta. On 5 Nov. the party reached Naples, and there the prince's twenty-first birthday was passed without ceremony. There was some incongruity in celebrating so interesting an anniversary in a foreign country. Yet the experience was not out of harmony with the zest for travel and for foreign society which was born of the extended and varied wanderings of his youth. Before leaving southern Italy he ascended Vesuvius, and on the return journey to England he revisited Rome. From Florence he made his way through Germany by slow stages. At Lille on 3 Dec. he met Princess Alexandra on her way from England. He reached home on 13 Dec. By far the greater part of the year had been spent abroad on three continents—America, Asia, and Europe. Although he was barely turned one and twenty, the prince was probably the best travelled man in the world. There was small chance that he should cultivate in adult life any narrow insularity.

A separate establishment was already in course of formation at home. On reaching

The prince's income. his majority he had come into a substantial fortune. The

duchy of Cornwall was his appanage, and provided a large revenue. Owing to the careful administration of the prince consort the income of the duchy had risen from 16,000*l.* a year at the time of his son's birth to 60,000*l.* in 1862. The receipts had been allowed to accumulate during his minority, and these were now reckoned to amount to 700,000*l.* Out of these savings, the sum of 220,000*l.* was bestowed with the prince consort's approval on the purchase for his son from Spencer Cowper of the country residence and estate of Sandringham in Norfolk. The transaction was carried out in 1861. The estate covered 7000 acres, which the prince subsequently extended to 11,000; and the rental was estimated at 7000*l.* a year. The existing house proved unsuitable and was soon rebuilt. A London house was

provided officially. Marlborough House had reverted to the crown in 1817 on the lapse of the great duke of Marlborough's long lease. It had since been lent to the Dowager Queen Adelaide, widow of William IV, on whose death in 1849 it was employed as a government art school and picture gallery. In 1859 it was decided to fit it up as a residence for the Prince of Wales. During 1861 it was thoroughly remodelled, and in 1862 was ready for his occupation.

For the next three months preparations for his marriage absorbed his own and the country's attention. Simultaneously with

The first household. his return to England the 'London Gazette' published an official list of his first household.

General Sir William Knollys, the prince consort's close friend, became comptroller and treasurer and practically chief of the establishment; Earl Spencer was made groom of the stole; the Earl of Mount Edgumbe and Lord Alfred Hervey lords of the bedchamber; Robert Henry Meade and Charles Wood, afterwards Lord Halifax, grooms of the bedchamber; and Major Teesdale, Captain G. H. Grey, and Lieut.-colonel Keppel equerries. Herbert Fisher, his Oxford tutor, who had resumed his work at the bar, was recalled to act as private secretary, and he held the office till 1870. Mr. Wood was a very early companion, and all save Earl Spencer, General Knollys, and Lord Alfred Hervey had been closely associated with the prince already.

On 14 Dec. 1862 the prince was at Windsor, celebrating with his mother the first anniversary of his father's death. The queen refused to relax her habit of seclusion, and on 25 Feb. 1863 the prince took her place for the first time at a ceremonial function. He held a levee in her behalf at St. James's Palace. The presentations exceeded 1000, and severely tested his capacity for the fatigue of court routine. At a drawing-room which followed at Buckingham Palace (28 Feb.) the prince was again present; but his sister, the crown princess of Prussia, represented the sovereign.

Parliament opened on 5 Feb. 1863, and the prince took his seat for the first time

In the House of Lords, 5 Feb. 1863. in the House of Lords with due formality as a peer of the realm. He was introduced

by the dukes of Cambridge and Newcastle. He showed his interest in the proceedings by staying till half-past nine at night to listen to the debate, which chiefly dealt with the cession of the Ionian islands to Greece.

The queen was absent. Her speech from the throne, which had been read by the lord chancellor at the opening of the session, announced the conclusion of her son's marriage treaty, which had been signed at Copenhagen on 10 Jan. 1863, and ratified in London the day before. The prime minister, Lord Palmerston, informed the House of Commons that the marriage might 'in the fullest sense of the word be called a love match' and was free of any political intention (HANSARD, *Commons Report*, 5 Feb. 1863). A few days later a message from the queen invited the House of Commons to make pecuniary provision for the bridegroom. Parliament on the motion of Palmerston granted him

Pecuniary provision.

an annuity of 40,000*l.*, which with the revenues of the duchy of Cornwall brought his annual income up to 100,000*l.* At the same time an annuity of 10,000*l.* was bestowed on Princess Alexandra, with a prospective annuity of 30,000*l.* in case of widowhood. Advanced liberals raised the issue that the revenues of the duchy of Cornwall supplied the prince with an adequate income, and that parliament was under no obligation to make addition to it. It was complained, too, that public money had been voted to the prince on his creation as K.G. and for the expenses of his American tour. But Gladstone defended the government's proposal, and the resolutions giving it effect were carried *nem. con.* The grant finally passed the House of Commons without a division. No other of Queen Victoria's appeals to parliament for pecuniary grants to her children enjoyed the same good fortune.

The marriage was fixed for 10 March. The princess left Copenhagen on 26 Feb. and spent three days (2-5 March) on the

The Princess's entry into London, 7 March.

journey in Brussels as the guest of King Leopold, who was a chief sponsor of the union. On 7 March the prince met his bride on her arrival at Gravesend. Traveling by railway to the Bricklayers' Arms, Southwark, they made a triumphal progress through the City of London to Paddington. The six carriages, headed by a detachment of life-guards, seemed to many onlookers a mean pageant, but a surging mass of people greeted the couple with boundless delight (cf. LOUIS BLANC'S *Lettres sur l'Angleterre*, 2nd ser. i. 13 seq.). At times the pressure of the enthusiastic mob caused the princess alarm. From Paddington they went by railway to Slough, and drove thence to Windsor. The poet laureate, Tennyson, summed

up the national exultation in a Danish alliance when in his poetic 'Welcome,' 7 March 1863, he greeted the princess, with some poetic licence, as

'Sea-kings' daughter as happy as fair,
Blissful bride of a blissful heir,
Bride of the heir of the kings of the sea.'

The wedding took place on 10 March in St. George's Chapel, Windsor. The prince was in the uniform of a general and wore the robes of the Garter. Queen Victoria in widow's weeds overlooked the proceedings from a gallery. 'A fine affair, a thing to remember,' wrote Disraeli of the ceremony. Kingsley, who attended as royal chaplain, admired 'the serious, reverent dignity of my dear young master, whose manner was perfect.' The crown princess brought her little son, Prince William (afterwards the German Emperor William II), who wore highland dress. The short honeymoon was spent at Osborne.

On 17 March the prince and princess were back at Windsor, and on the 20th they held a court at St. James's Palace in honour of the event. At Marlborough House they received an almost endless series of congratulatory addresses. Numerous festivities and entertainments followed, and the prince's social experience widened. On 2 May he attended for the first time the banquet of the Royal Academy. He had hardly spoken in public before, and he had learnt by heart a short speech. His memory momentarily failed him and he nearly broke down. The accident led him to rely henceforth in his public utterances on the inspiration of the moment. He mastered the general idea beforehand but not the words. His tact and native kindness stood him in good stead, and he soon showed as an occasional speaker a readiness of delivery and a grace of compliment which few of his contemporaries excelled. Lord Houghton, who was a pastmaster in the same art, judged the prince to be only second to himself.

Public engagements.

The corporation of the City of London presented the prince with the freedom on 7 June, and gave a ball in honour of himself and his bride on the same evening at the Guildhall. He had already identified himself with civic life by accepting the freedom of the Fishmongers' Company on 12 Feb., which his father had enjoyed. A second City company, the Merchant Taylors', paid him a like compliment on 11 June. In this busy month of June

the prince and princess went, too, to Oxford to take part in the pleasures of Commemoration. They stayed with Dean Liddell at the prince's college, Christ Church (16-18 June), and at the encanenia he received from the chancellor, Lord Derby, the honorary degree of D.C.L. A year later similar experiences awaited the prince and princess at Cambridge during May week. They stayed in the royal apartments at Trinity College, and the prince received the honorary degree of LL.D. Meanwhile a sumptuous ball given by the guards regiment in the exhibition building at South Kensington on 26 June 1863 brought the gaieties of their first season to an end.

The prince's married life was mainly spent at Marlborough House. But Sandringham constantly drew him from London; he visited friends in all parts of the country for sport or society, and was in Scotland every autumn. Nor was his habit of foreign travel long interrupted. Part of the early spring was soon regularly devoted to Cannes or Nice in the Riviera, and part of the early autumn to Homburg, while tours on a larger scale were not infrequent.

Outside London his career for the most part resembled that of any man of wealth and high station. At Sandringham the prince until his death spent seven or eight weeks each year, living the life of a private country gentleman. The first Easter after

Sandringham
rebuilt, 1870.

his marriage was spent at Sandringham, but the old house was then condemned as inadequate, and a new mansion was completed in 1870. The hospitality at Sandringham was easy and unconstrained; and the prince's guests were drawn from all ranks and professions. He interested himself in his tenants, and maintained his cottages in admirable repair. On every detail in the management of the estate he kept a watchful eye. The furniture and decorations of the house, the gardens, the farm, the stables, the kennels, were all under his personal care. For his

His love of
animals.

horses and dogs he always cherished affection. The stables were always well filled. In the kennels at Sandringham were representatives of almost every breed. He was an exhibitor of dogs at shows from 27 May 1864, and was patron of the Kennel Club from its formation in April 1873. He actively identified himself with the sport of the county. For some twelve years he hunted with the West Norfolk hounds, at times with the

princess for his companion, but after 1880 he abandoned hunting, both at home and on visits to friends. Shooting at Sandringham gradually took its place as the prince's main sport. To his shooting parties were invited his Norfolk neighbours as well as his intimate circle of associates. He reared pheasants and partridges assiduously, profiting by useful advice from his neighbour, Thomas William Coke, earl of Leicester, of Holkham. Partridge-driving grew to be his favourite sporting recreation. He was a variable and no first-rate shot, but was successful with high pheasants.

For his autumnal vacation at Scotland during September and October Queen

Victoria lent him Abergeldie Castle, on Deeside near Balmoral, which she had leased in

1862 for sixty years. He varied his sojourn there by visits to Scottish noblemen, with one of whom, the duke of Sutherland, he formed an intimate friendship. The duke's mother was a beloved associate of Queen Victoria, and at the ducal seat, Dunrobin Castle, the prince was a frequent guest. In Scotland the prince's chief sports were grouse-shooting and deerstalking. He had killed his first stag on 21 Sept. 1858; on 30 Aug. 1866 he killed as many as seven, and for years he was no less successful. Fishing never attracted him. But he was always fond of the sea, and his early life on the Isle of Wight made him an eager yachtsman. Succeeding his father as patron of the Royal Yacht Squadron at Cowes, he became a member on 8 July 1865, commodore in 1882, and finally admiral in 1901. He was soon a regular witness of the Cowes regatta in August, and as early as 1866 was owner of a small yacht, the Dagmar. But neither horse-racing nor yacht-racing occupied much of his interest till he reached middle life.

But while country life had no lack of attraction for the prince, London, which Queen Victoria had practically abandoned for Osborne, Balmoral, or Windsor, was the chief centre of his mature activities.

In the capital city he rapidly became the leader of fashionable life. The queen's withdrawal

left him without a rival as ruler and law-giver of the world of fashion, and his countenance was sedulously sought by all aspirants to social eminence. With manhood he developed increasingly an accessibility and charm of manner, a curiosity about persons, a quickness of observation, and a love of hearing promptly the

current news. He took genuine pleasure in the lighter social amusements and gave them every encouragement. Consequently society in almost all its phases appealed to him, and the conventions of royal exclusiveness, to which he had been trained, gave way to his versatile human interests. There was a democratic and a cosmopolitan breadth about his circle of companions. He did not suffer his rank to exclude him from gatherings to which royalty rarely sought admission. He attended the reunions of the Cosmopolitan Club as a private member, or dined with friends at the Garrick Club, or attended the more bohemian entertainments of the Savage Club. In 1869 there was formed under his immediate auspices and guidance a new club called the Marlborough Club, with a house in Pall Mall almost overlooking Marlborough House. The members were drawn from the wide range of his personal acquaintances, and he joined them at the Marlborough Club without ceremony. A chance meeting at the Cosmopolitan Club in 1867 with the Hungarian traveller, Arminius Vambéry, made the stranger thenceforth a favoured associate. The experience was typical of his easy catholicity of intercourse.

His mother, while denying his title to political responsibility, was well content that the prince should carry on in her behalf her husband's works of charity and public utility. He readily obeyed her wish in this regard. No public institution or social movement, which his father had favoured, sought his countenance in vain. Of the Society of Arts he was soon elected president (22 Oct. 1863) in succession to the prince consort. He always took an active part in the choice of the recipient of the Albert medal, which was founded by the society in 1862 in his father's memory to reward conspicuous service in the arts, manufactures, and commerce. When on his accession to the throne he exchanged the post of president for that of patron, he accepted with much satisfaction the award of the Albert medal to himself. But he went far beyond his father in his personal association with great public institutions. He created a new precedent by accepting the presidency of St. Bartholomew's Hospital on 20 March 1867,

His philanthropic energy.

an office which he also held till his accession. His public energy in any genuine cause of social improvement, education, or philanthropy knew indeed no slackening till his death. In every part of the country he was busy

pronouncing benedictions on good works. Among his early engagements of this kind were the opening of the British Orphan Asylum at Slough (24 June 1863); the opening of the new town hall at Halifax (August 1863); the laying of foundation stones of the new west wing of the London Hospital (June 1864), of the British and Foreign Bible Society (11 June 1866), and of new buildings at Glasgow University (8 Oct. 1868); and the unveiling of the statue of Peabody, the American philanthropist, in the City of London (23 July 1869). He presided at innumerable charity festivals, beginning on 18 May 1864 with the Royal Literary Fund dinner, and he repeated that experience at the centenary celebration of the Fund in 1890. Like his father, too, he was especially active, when the opportunity offered, in organising exhibitions at home and abroad.

Early visits to Ireland had brought that country well within the scope of his interest, and although political agitation came to limit his Irish sojourns, he lost few opportunities in manhood of manifesting sympathy with efforts for the country's industrial progress. As guest of the viceroy, Lord Kimberley, on 8 May 1865, he

Visits to Ireland.

opened the Grand International Exhibition at Dublin. It was thus in Ireland that he first identified himself in an authoritative way with the system of exhibitions. He returned to Dublin in the spring of 1868 on a visit of greater ceremony, and the princess came with him to pay her first visit to the country. The lord-lieutenant was the marquis (afterwards first duke) of Abercorn, whose eldest son, Lord Hamilton, had joined the prince's household in 1866 and was a very intimate associate. The prince was now invested on 18 April with the order of St. Patrick; he was made honorary LL.D. of Trinity College, Dublin, witnessed the unveiling of Burke's statue outside the college, attended Punchestown races, and reviewed the troops in Phoenix Park. It was the period of the Fenian outbreak, and there were threats of disturbance, but they came to little, and the prince and princess were received with enthusiasm. The lord mayor of Dublin in an address of welcome expressed a hope that the prince would acquire a royal residence in Ireland. Before and since the recommendation was pressed on the English government and it was assumed that it had the prince's acquiescence. A third visit was paid to Ireland during the prince's adult career, in August 1871, when he opened the Royal

Agricultural Exhibition at Dublin. Earl Spencer, the lord-lieutenant, and Lord Hartington, the chief secretary, were his personal friends, and under their auspices he enjoyed a week of brilliant festivity. Unluckily at its close (Sunday, 7 Aug.), while he was staying at the Viceregal Lodge in Phoenix Park, a proposed meeting in the park of sympathisers with Fenian prisoners in England was prohibited. A riot broke out by way of demonstrating that 'patriots are dearer to [Irish] hearts than princes.' The political disaffection, although it did not prejudice the prince's relations with the Irish masses, was not easily silenced, and fourteen years passed before the prince sought a new experience of Irish hospitality.

III

His mother's desire to exclude the prince from all political counsels was not altogether

fulfilled. Her ministers at the outset of his adult career questioned her prudence in keeping him in complete ignorance of political affairs. From 1864 onwards the prince, stirred in part by the princess's anxiety for the fortunes of her family, was deeply interested in the wars which disturbed central Europe. Prussia and Austria continued their endeavours to deprive Denmark of all hold on Schleswig-Holstein. The prince's Danish sentiment was in accord with popular English feeling. But it caused embarrassment to Queen Victoria, who in spite of her private German leanings was resolved on the maintenance of England's neutrality. Her relations with her son were often strained by his warm support of the Danes.

In 1865 Lord Russell, the prime minister, avowed sympathy with the prince's request for access to those foreign despatches which were regularly placed at the disposal of all cabinet ministers. The queen reluctantly so far gave way as to sanction the communication to the prince of carefully selected specimens of the confidential foreign correspondence. The restrictions which guarded the privilege dissatisfied the prince, and his endeavours to secure their diminution or removal formed a constant theme of debate with the sovereign and ministers till near the end of his mother's reign. The queen's oft-repeated justification for her restraints was the prince's alleged lack of discretion and his inability to keep a secret from his intimates. Resigning himself with some impatience to the maternal interdict, the prince sought

other than official means of information and influence in foreign matters. To foreign ambassadors he offered abundant hospitality, and with them he always cherished frank and cordial intercourse.

The prince's relations with the French ambassador in London, Prince de la Tour d'Auvergne, during the Danish crisis of 1864 show him in a characteristic light. On 8 Jan. 1864 a first child, a boy, had been

born to the prince and princess an heir, at Frogmore. There were many festive celebrations, and the prince's guests were influential. But the rejoicings over the new experience of fatherhood did not lessen the prince's excitement regarding the foreign situation. On 10 March the christening took place at Buckingham Palace. At a concert in the evening the French ambassador was present. Napoleon III was making proposals for arbitration between Denmark and the German powers. The prince at once questioned his French guest on the subject with what the latter described to his government as the prince's customary indifference to

rules of etiquette. The prince warned the ambassador with heat that the Danes were a brave people, who were ready to meet death rather than any kind of humiliation (10 March 1864). King Leopold, who was staying with Queen Victoria, sought to moderate the prince's energy. Twelve days later the ambassador dined at Marlborough House, and was surprised by signs of greater prudence and moderation in the prince's talk, which he attributed to the influence of King Leopold. The prince now agreed that Denmark would be wise in assenting to a pacification. He also spoke in favour of the idea of Scandinavian unity. The ambassador in reporting fully to his government the prince's deliverances, pointed out that the views of the heir to the English throne needed consideration, and that it would be wise for France, in view of the prince's opinion, to do what was practicable in support of Danish interests (*Les origines diplomatiques de la guerre de 1870-1*, Paris 1910, tom. ii. pp. 109 seq.). Thus while Queen Victoria and her ministers held that the prince's opinions counted for nothing, he contrived privately to give foreign ambassadors quite a different impression. The discrepancy between the home and foreign verdicts on his relations with foreign policy grew steadily.

The prince's tact always more or less controlled his personal feelings. Gladstone detected only 'a little Danism' in the

prince's conversation. If the prince was careful to prevent Count von Beust, the Austrian ambassador, whose hostility to Denmark was admitted, from even approaching the princess, he succeeded in establishing the best social relations between himself and the count. A passion for direct personal intercourse with all who dominated great events tended to override personal sentiment and prejudice. In April 1864 he drew on himself a severe rebuke in the royal circle by visiting Garibaldi, who was staying with the prince's friend, the duke of Sutherland, at Stafford House. He sought out first-hand intelligence of all that was passing abroad. In July of the same year, when he dined with Lord Palmerston, Sir Horace Rumbold, who was then secretary of legation at Athens, was of the company. The prince at once sent for him to learn the exact position of affairs in Greece, where his wife's brother, Prince William of Denmark, had just been elected king as George I.

It was, too, never his practice to depend for his knowledge of foreign complications on those whom he met at home. Scarcely a year passed without a foreign tour which combined amusement with political discussions. In September 1864 the prince paid a visit to his wife's family in Denmark, crossing from Dundee to Copenhagen.

In Denmark
and Sweden,
Sept. 1864.

He extended his tour to Stockholm, where he was entertained by King Charles XV and had a first experience of elk-shooting. He freely discussed the political situation from various points of view. The expedition extended his intimacy among the royal families of Europe. Not only did he make a lasting acquaintance with the cultured Swedish ruler, King Charles XV, who as the grandson of General Bernadotte had a warm affection for France and a keen suspicion of Prussia, but he then inaugurated a long and cordial intimacy with the Russian dynasty. During his visit to Copenhagen the Princess of Wales's sister Dagmar was betrothed to the Grand Duke Nicholas of Russia, the heir of the Tsar Alexander II. The grand duke's death next year annulled the match, but the princess transferred her hand to the grand duke's next brother, Alexander, afterwards Tsar Alexander III, and a first link between the royal families of England and Russia was thereby forged.

From Denmark the prince proceeded to Hanover and thence visited his sister Alice in Darmstadt. On the return journey he was the guest at Brussels of his grand-uncle King Leopold, who was fertile in political

counsel. The prince was home again on 6 Nov. The visit to Germany was repeated in 1865, when Queen Victoria unveiled a statue of the prince consort at Coburg. The prince there saw much of his German and Prussian relatives, with some of whom he stalked and shot bustards.

His foreign engagements in 1866 brought him for the first time to Russia. On the journey he stayed for a few days at Berlin, where his sister and her husband gave in his honour a banquet which the king of Prussia attended. On 9 Nov., his twenty-fifth birthday, he reached St. Petersburg to attend the wedding of his wife's sister Dagmar with the tsarevitch Alexander.

The ceremony took place at a first visit to Russia, the Winter palace. A visit Nov. 1866. to Moscow preceded his return to Berlin on the way home. On the Russian court he exerted all his habitual charm. Indeed throughout Europe his personal fascination was already acknowledged. Lord Augustus Loftus, the English ambassador in Berlin, noted on his leaving Berlin that the golden opinions he was winning in every country and every court of Europe had an 'intrinsic value' in England's international relations. On the affection of Parisians he had long since established a hold. France welcomed him with marked cordiality when, as the guest of Napoleon III, he visited the International Exhibition in Paris in June 1867. He served on the royal commission for the British section—a first taste of a common later experience. A fellow guest in Paris was Abdul Aziz, the sultan of Turkey, whose acquaintance he had made at Constantinople in 1862. The sultan reached England next month, and the prince was active in hospitalities on the queen's behalf.

The prince's family was growing. A second son, George, who ultimately succeeded him on the throne as George V, was born to him at Marlborough House on 3 June 1865. Their first daughter, Princess Louise (afterwards Princess Royal), was

The prince's children. born at Marlborough House

on 20 Feb. 1867. A second daughter, Princess Victoria, was born on 6 July 1868, and a third daughter, Princess Maud, on 26 Nov. 1869. Visitors at Sandringham or Marlborough House were invariably introduced to the children without ceremony and with parental pride. After the birth of Prince George in 1865, the princess accompanied the prince on a yachting cruise off Devonshire and Cornwall, in the course of which they visited the Scilly Islands and descended the

Botallack tin mine near St. Just. For the greater part of 1867, after the birth of Princess Louise, the Princess of Wales was disabled by severe rheumatism, and in the autumn her husband accompanied her to Wiesbaden for a six weeks' cure.

A year later a foreign trip of the comprehensive type, to which the prince was well accustomed, was accomplished for the first time with his wife. In November

1868 they left England for a seven months' tour, seven months' travel. At Paris Nov. 1868- they stayed at the Hotel Bristol, May 1869. which was the prince's favourite

stopping place in Paris through life. They visited the emperor at Compiègne, and the prince took part in a stag hunt in the park. Thence they passed to Copenhagen. The prince paid another visit to the king of Sweden at Stockholm, and there his host initiated him into the Masonic order, in which he subsequently found a new interest. Christmas was celebrated at the Danish court. Another sojourn at Berlin with the crown prince and princess (15-20 Jan. 1869) was attended by elaborate festivities. The king of Prussia formally invested the prince with the collar and mantle of the order of the Black Eagle. He had been knight of the order since his birth, but the full investiture could be performed only in the Prussian capital. The collar was the one which the prince consort had worn. In the evening

there was a state banquet in the prince's honour, and then he had his first opportunity of conversing with Prince Bismarck, who with rare amiability wore, by command of his master, the Danish order of the Dannebrog in compliment to the guests. From Berlin the prince and princess passed to the Hofburg palace at Vienna, where the Emperor Francis Joseph was their host, and renewed an earlier acquaintance with the prince. They offered their consolation to the exiled king and queen of Hanover before leaving for Trieste.

There they embarked on H.M.S. *Ariadne*, which was fitted up as a yacht, and travel began in earnest. The duke of Sutherland was chief organiser of the expedition, and he enlisted in the company Sir Samuel Baker the African explorer, Richard Owen the naturalist, (Sir) William Howard Russell the war correspondent, and (Sir) John Fowler the engineer, who were all capable of instructive guidance. The ultimate aim was to inspect the great enterprise of the Suez Canal, which was nearing completion, but by way of prelude a voyage

was made up the Nile. The itinerary followed the same route as the prince had taken eight years before. At

On the Nile. Cairo the party saw much of the viceroy Ismail Pasha. On the Nile, Baker arranged for the prince's sport, Owen gave lectures on geology, and Fowler described the wonders of the Suez venture. The prince was in the gayest spirits, playing on his guests harmless practical jokes, and putting all at their ease.

On 25 March the prince and his party reached Ismailia to visit the Suez Canal works. The Khedive was awaiting them, but a more interesting figure, M. de Lesseps, conducted them over the newly excavated waterway. The prince opened the sluice

At the Suez Canal. of a completed dam, allowing the Mediterranean to flow into an empty basin connecting with the Bitter Lakes. Before the Khedive parted with his English friends at Ismailia he invited Baker to take command of an expedition against the slavers on the White Nile. The prince took an active part in the negotiation and suggested the terms of service, which Baker finally accepted with good result (W. H. RUSSELL'S *Diary*).

The prince was deeply impressed by the proofs he witnessed of M. de Lesseps' engineering skill. The Suez Canal was opened on 16 Nov. following, and next summer Lesseps paid a visit to London. On 4 July 1870 the prince, as president of the Society of Arts, formally presented to him the Albert gold medal founded in his father's memory for conspicuous service. In an admirable French speech he greeted Lesseps as his personal friend, whose attendance on him at Suez he reckoned an inestimable advantage.

On the return journey from Alexandria on 1 April 1869, the royal party paused at Constantinople, where the Sultan Abdul

Áziz was their host. But the In Turkey and Greece. prince interrupted his stay there to make a tour of the Crimean battle-fields and cemeteries. Subsequently they went to Athens, to stay with the Princess of Wales's brother, King George of Greece, and to visit the country's historic monuments. Paris was reached by way of Corfu, Brindisi, and Turin. For a week Napoleon III offered them splendid entertainment at the Tuileries. Not until 12 May 1869 were they home again at Marlborough House.

A year later France was exposed to external and internal perils, and the prince's generous host fell from his high estate. The whole tragedy moved the prince; it

stimulated his political interests and thirst for political news. It was at a dinner-party at Marlborough House that Delane, the editor of 'The Times,' who was one of the guests, received the first intelligence in England of the outbreak

of the Franco-German war on 15 July 1870 (MORIER, *Memoirs*). Throughout the conflict the prince's sympathies inclined to France. His mother's hopes lay with the other side. But the queen was no less anxious than her son to alleviate the sufferings of the emperor and empress of the French, when they sought an asylum in England from their own country. The empress arrived at Chislehurst in September 1870, and the emperor on release from his German prison in March 1871. The prince and princess were assiduous in their attention

to the exiles. To the young Prince Imperial especially he extended a fatherly kindness, and when in 1879 the French youth met his death in the Zulu war in South Africa, the prince personally made arrangements for the funeral at Chislehurst, and was himself a pall-bearer. He was a moving spirit of the committee which was formed for erecting a monument to the French prince's memory in Westminster Abbey in 1880, and when the House of Commons refused to sanction that project, he urged the transfer of the memorial to St. George's Chapel, Windsor. He was present, too, when a statue of the French prince was unveiled at Woolwich (13 Jan. 1883). But the downfall of the French empire and the misfortunes of the French imperial family in no wise diminished the cordiality of the prince's relations with France under her new rulers. No sooner was the republican form of government recognised than he sought the acquaintance of the republican leaders, and he left no stone unturned to maintain friendly relations with them as well as with his older friends in the French capital. The perfect quality of his social charm enabled him to keep on good terms with all political parties in France without forfeiting the esteem of any. The prince showed his lively curiosity about the incidents of the Franco-German war by exploring in August 1871 the battle-fields round Sedan and Metz in the company of Prince de Ligne and of his equerry, Major Teesdale. He travelled incognito as Baron of Renfrew. From Alsace he passed on to join the princess once again at Kissingen. His strong French leanings were kept well under control in German company,

The Prince Imperial.

A certain coolness towards the Prussian royal family was popularly imputed to him during the course of the recent war. But when the crown prince of Prussia visited London in Sept. 1871 the prince greeted him with a geniality which caused surprise in Germany. His courtesies led Bismarck's circle to imagine some diminution of his affection for France. But his conduct merely testified to his natural complacency of manner in social life.

While performing with admirable grace the ceremonial and social functions attaching to his station, and while keenly studying current political events from a detached and irresponsible point of view, the prince somewhat suffered in moral robustness through the denial to him of genuine political responsibility, and his exclusion from settled and solid occupation. The love of pleasure in his nature which had been carefully repressed in boyhood sought in adult life free scope amid the ambiguities of his public position. The gloom of his mother's court helped to provoke reaction against conventional strictness. From the early years of his married life reports spread abroad that he was a centre of fashionable frivolity, favouring company of low rank, and involving himself in heavy debt. There was gross exaggeration in the rumours. But they seemed in many eyes to receive unwelcome confirmation, when a member of fashionable London society, Sir Charles Mordaunt, brought an action for divorce against his wife, and made in his petition, solely on his wife's confession, a serious

Allegations against the prince.

allegation against the Prince of Wales. The prince was not made a party to the suit, but the co-respondents, Viscount Cole, afterwards earl of Enniskillen, and Sir Frederick Johnstone, were among his social allies. The case opened before Lord Penzance on 16 Feb. 1870, and the prince volunteered evidence. Amid great public excitement he denied the charge in the witness-box (23 Feb.), and the court held him guiltless. Apart from the prince's intervention, the case presented legal difficulties which riveted on it public attention. Lady Mordaunt was proved to have become hopelessly insane before the hearing, and on that ground the court in the first instance refused the petitioner relief, but after five years' litigation the divorce was granted (11 March 1875).

The Mordaunt case, Feb. 1870.

Public feeling was roused by the proceedings, and the prince's popularity was

for a time in peril with the austere classes of the nation. The sensational press abounded in offensive scandal, and during the spring of 1870 the prince's presence at the theatre, and even on Derby race-course, occasioned more or less inimical demonstrations. He faced the situation with characteristic courage and coolness. The public censure was reinforced by a wave of hostility to the principle of monarchy which, partly owing to the republican triumph in

Public criticism.

France, was temporarily sweeping over the country. Enterprising writers sought to drive the moral home. At the end of 1870 there was published a clever parody of Tennyson's 'Idylls of the King' called 'The Coming K—', which with much insolence purported to draw the veil from the prince's private life. The assault was pursued next year by the same authors in 'The Siliad,' and the series was continued in 'The Fijiad' (1873), 'Faust and 'Phisto' (1874), 'Jon Duan' (1875), and finally in a prophetically named brochure, 'Edward VII; a play on the past and present times with a view to the future' (1876). All current politics and society came under the satirists' lash. But the burden of the indictment, phrased in various keys of scurrility, was that the prince's conduct was unfitting him for succession to the throne. The recrudescence of Queen Victoria's popularity and the manifest good-nature and public spirit of the prince soon dissipated for the most part the satiric censure. Yet an undercurrent of resentment against reputed indulgences of the prince's private life never wholly disappeared.

There was never any serious ground for doubting the prince's desire to serve the public interest. On 13 July 1870 the queen's dread of public ceremonies imposed on him the important task of opening

The Thames Embankment, 13 July 1870.

the Thames Embankment. The queen had promised to perform the ceremony, and her absence exposed her to adverse criticism. Three days later the prince illustrated his fixed resolve to conciliate democratic feeling and to encourage industrial progress by inaugurating the Workmen's International Exhibition at the Agricultural Hall. His attendance proved his native tolerance and broad-minded indifference to social prejudice. The trades-union leaders who were the organisers existed on sufferance in the eye of the capitalist public, and Auberon Herbert [q. v. Suppl. II], who received the prince on behalf of the

promoters, was a leading advocate of republicanism. But it was the sturdy faith in the virtue of exhibitions which he had inherited from his father that chiefly brought him to the Agricultural Hall. Already on 4 April 1870 he had placed himself at the head of a movement for the organisation of annual international exhibitions at South Kensington in modest imitation of former efforts. He played an active part in preliminary arrangements, and he opened the first of the series on 1 May 1870. The experiment was not a success, but it was continued for four years. The prince was undaunted by the failure, and a few years later revived the scheme on a different plan.

The year 1871 was one of sadness in the prince's household. On 6 April his last child, a son, was born to the princess and died next day. In the autumn he went into camp with his regiment, the 10th hussars, at Bramhill, and commanded the cavalry division in manœuvres in Hampshire. A private visit which he paid from the camp to his Cambridge lecturer Kingsley at Eversley illustrates his kindly memory for his early associates. Subsequently in October he stayed with the earl and countess of Londesborough at Londesborough Lodge near Scarborough.

Serious illness, Nov.-Dec. 1871.

On returning to Sandringham early in November typhoid fever developed (19 Nov.), and a critical illness followed. Two of his companions at Londesborough Lodge, the eighth earl of Chesterfield and his own groom, Blegge, were also attacked, and both died, the earl on 1 Dec. and Blegge on 14 Dec. (cf. *The Times* 22 Jan. 1872). The gravest fears were entertained for the prince. His second sister, Alice, was staying at Sandringham, and she and the Princess of Wales were indefatigable in their attendance in the sick chamber. On 29 Nov. Queen Victoria arrived for a few days, and a serious relapse on 6 Dec. brought her back on an eleven days' visit (8-19 Dec.). Sunday 10 Dec. was appointed as a day of intercession in the churches with a special form of prayer. Four days later, on the tenth anniversary of the prince consort's death, there were signs of recovery which proved true. The date was long thankfully remembered. Princess Alexandra presented to Sandringham church a brass eagle lectern inscribed 'A thanksgiving for His mercy, 14 Dec. 1871.'

By Christmas the danger was past, and rejoicing succeeded to sorrow. There was an elaborate national thanksgiving

at St. Paul's Cathedral on 27 Feb. 1872, when the prince accompanied the queen and the princess in public procession. The queen privately demurred to 'this public show' on the ground of 'the dreadful fatigue' for the prince, and of the incongruity of making religion 'a vehicle' for a display of popular feeling. But the whole nation had shared the anxiety of the royal family, and claimed a share in their elation.

A visit to the Riviera completed the prince's convalescence. He left on a yachting expedition to Nice on 11 March, and afterwards voyaged down the coast to Italy. Before coming home he repeated an

early experience which always interested him. In full state he paid a third visit to Pope Pius IX. He was home again on 1 June ready for his public work. In the interests of health he made his headquarters at Chiswick House, which the duke of Devonshire lent him. There he gave garden parties, which surprised many by the number and range of invited guests. His chief public engagement in London was a rare visit to the East End in behalf of the queen. On 24 June he opened the Bethnal Green Museum, to which Sir Richard Wallace [q. v.] had lent a portion of his great collection. The prince's appearance at Ascot in the same month was the occasion of a highly popular greeting.

IV

The prince's illness evoked a new enthusiasm for the monarchy. The duke of Cambridge voiced the general sentiment, when he wrote to his mother that it had 'routed' the recent republican agitation. 'The republicans say their chances are up—thank God for this! Heaven has sent this dispensation to save us' (SHEPPARD'S *Duke of Cambridge*, i. 310). Yet the mighty outbreak of popular sympathy, though it discredited and discouraged criticism of the prince, had not wholly silenced it, nor was the anti-monarchical agitation altogether extinguished. On 19 March 1872 Sir Charles Dilke [q. v. Suppl. II], then a rising liberal politician, who had lately preached through the country republican doctrine; moved in the House of Commons for a full inquiry into Queen Victoria's expenditure, and the motion was seconded by Auberon Herbert, who shared Dilke's republican views. Gladstone, the prime minister,

who strenuously resisted the motion, impressively confessed his firm faith in the monarchy, amid the applause of the whole house. But at the same time Gladstone in private admitted the moment to be opportune to improve the prince's public position. With the prince Gladstone's relations were uninterruptedly happy. He often spoke with him on politics, thought well of his intelligence and pleasant manners, and treated him with punctilious courtesy. On 25 Jan. 1870 Gladstone spent an hour explaining to the prince the Irish land bill, and was gratified by the prince's patience. The prince was no party politician, and he cherished no rigid political principles. His interest lay in men rather than in measures, and his native tact enabled him to maintain the best personal terms with statesmen whose policy he viewed with indifference or disapproval. Gladstone's considerate treatment of him conciliated his self-esteem without affecting materially his political opinions. The personal tie between the political leader and the heir-apparent was involuntarily strengthened, too, by the comprehensive differences which separated Queen Victoria from the liberal statesman.

In the summer of 1872, to Queen Victoria's barely concealed chagrin, Gladstone invited

her attention to the delicate question of the prince's official status. The welfare of the prince and the strength and dignity of the crown required, Gladstone urged, that he should be regularly employed. At great length and with pertinacity Gladstone pressed his views in writing on the sovereign. He offered various suggestions. The prince might be associated with the rule of India and join the Indian council. With somewhat greater emphasis Ireland was recommended as a fit field for the prince's energies. Some of the duties of the lord-lieutenant might be delegated to him, and a royal residence might be purchased for his occupation for several weeks each year. The Irish secretary, Lord Hartington, the prince's intimate friend, favoured the proposed Irish palace. But the queen was unconvinced. She doubted whether the duties of the Indian council were onerous enough to keep the prince employed. In Ireland the prince's intimacy with the family of the duke of Abercorn imbued him with Orangeism. She evasively allowed that increased occupation would be advantageous to the prince, and she gave vague

Gladstone and the prince's position, 1872.

assurances of assent to Gladstone's general proposition. But her unwillingness to pursue the matter in detail brought the negotiation to an end.

The prince's career underwent no essential change, although there was a steady widening of experience on the accepted lines. New titular honours were from time to time bestowed on him. On 29 June 1875 he was, much to his satisfaction, made a field-marshal. The distinction stimulated his interest in the army, which was in name at least his profession. Foreign tours abroad became more frequent, alike in France, Germany, and Austria. The great International Exhibition at Vienna in 1873 gave him opportunity of assiduous work. He was president of the royal commission for the British section, and took an active share in its organisation. At the opening ceremonies in Vienna in May he was the guest of the Emperor Francis Joseph, and played his part with his accustomed grace. At the

In Russia,
Jan. 1874.

beginning of 1874 he went for a second time to St. Petersburg, again as a wedding guest, now to attend the marriage of his next brother, Alfred, the duke of Edinburgh, to the Duchess Marie. The bride was Tsar Alexander II's daughter, and her sister-in-law, the tsarevna, was the Princess of Wales's sister. The prince's amiability won him fresh laurels at the Russian court. On his way home he stayed once more in Berlin with the old German Emperor William I, and then with the crown prince and princess at Potsdam, joining his brother-in-law in a boar-hunt. In July 1874 the prince and princess gave evidence of their earnest wish to play with brilliance their part at home at the head of London society. They then gave at Marlborough House a fancy dress ball on a more splendid scale of entertainment than any they had yet attempted. The prince wore a Van Dyck costume, with doublet cloak of light maroon satin embroidered in gold. The only guests who were excused fancy dress were the duke of Cambridge and Disraeli. Two days later the duke of Wellington acknowledged the force of the example by offering the prince a similar festivity at Apsley House, where the prince appeared in the same dress.

An experience a few months later illustrated the good-humour and cool conciliatory temper in which the prince faced public affairs. The prince and princess decided to pay a first visit to the city of Birmingham.

The mayor, Mr. Joseph Chamberlain, a friend of Sir Charles Dilke, was acquiring a general reputation as an advocate of extreme radicalism, and had in articles in the 'Fortnightly Review' shown republican leanings.

At Birmingham, 3 Nov. 1874. The programme included a procession of the royal party through the streets of the city, the reception of an address in the town hall, an entertainment at lunch by the mayor, and visits to leading manufactories. All anticipations of constraint or unpleasantness between the prince and the mayor were belied. With a tact which the prince himself could not excel, Mr. Chamberlain proposed his guest's health in the words: 'Here in England the throne is recognised and respected as the symbol of all constituted authority and settled government.' The prince was as discreet in reply (3 Nov.). (Sir) John Tenniel's cartoon in 'Punch' (14 Nov. 1874), entitled 'A Brummagem Lion,' showed Mr. Chamberlain as a lion gently kneeling before the prince and princess, and the accompanying verses congratulated him on concealing his 'red republican claws and teeth,' and on comporting himself as 'a gentleman' in the glare of the princely sun. The episode merely served to illustrate the natural felicity with which both the chief actors in it could adapt themselves to circumstance.

In spite of the queen's qualms a more important public duty was laid on the prince than had yet been assigned him. Even in his father's lifetime a tour in India

had been suggested, and Gladstone had considered a plan for associating the prince with the government of India at home. Early in 1875 Disraeli's government decided that the prince should make a tour through India, with a view to proving the sovereign's interest in her Indian subjects' welfare (20 March). The unrest from which native India was never wholly free seemed to involve the project in some peril, and at the outset controversial issues were raised by politicians at home. The expenses were estimated at a sum approaching 200,000*l.*, although in the result they did not exceed 112,000*l.* The government decided to debit the amount to the Indian exchequer, and radical members of parliament raised a cry of injustice. The prince's status in India also raised a perplexing problem of a more academic kind. The unofficial position of the prince in England seemed to the queen and her advisers a just ground for denying him in India the formal rank

of her official representative. That position was already held by the viceroy, and his temporary suspension was deemed impolitic. Consequently the prince went nominally as the guest of the viceroy. The distinction was a fine one, and

The prince's precedence in India.

made little practical difference to the character of his reception.

But the precedence of the viceroy was left in form unquestioned, and the queen's exclusive title to supremacy was freed of any apparent risk of qualification for the time being. The prince's suite was large. It included the chief officers of his household, Lord Suffield, Colonel (Sir) Arthur Ellis, and Mr. Francis (now Lord) Knollys, who had become private secretary on Herbert Fisher's retirement in 1870, and held that office till his master's death. Other members of the company were Sir Bartle Frere and General (Sir) Dighton Probyn, both of whom had seen much service in India; Frere took with him Albert Grey (now Earl Grey) as his private secretary. Colonel (later General) Owen Williams and Lieutenant (now Admiral) Lord Charles Beresford acted as aides-de-camp; Canon Duckworth went as chaplain; (Sir) Joseph Fayrer as physician; (Sir) W. H. Russell as honorary private secretary (to write an account of the tour), and Sydney P. Hall as artist to sketch the chief incidents. Lord Alfred Paget, clerk marshal to Queen Victoria, was commissioned to go as her representative. Private friends invited by the Prince of Wales to be his guests were the duke of Sutherland, the earl of Aylesford, and Lord Carrington. The tour was so planned as to combine a political demonstration of amity on the part of the English crown with opportunity of sport and recreation for the prince. In both regards the result was thoroughly successful. The prince showed keenness and courage as a big game sportsman, bearing easily and cheerfully the fatigue, while he performed all the ceremonial functions with unvarying bonhomie.

The prince started from London on 11 Oct. 1875, and embarked at Brindisi on H.M.S. Serapis, an Indian troopship, which had been converted into a royal convoy. He stayed at Athens with King George of Greece, visited the khedive and Cairo, and after passing through the Suez Canal landed for a few hours at Aden. He

At Bombay.
8 Nov. 1875.

arrived off Bombay on 8 Nov., was received by the viceroy, Lord Northbrook, and was welcomed by the reigning princes. At Bombay he

stayed with the governor, Sir Philip Wodehouse, at Government House, where his birthday was celebrated next day. Having laid the foundation stone of the Elphinstone dock on 11 Nov. he picnicked at the caves of Elephanta (12 Nov.), and left on the 18th on a visit to the Gaekwar of Baroda. The Gaekwar provided him with his first opportunity of big game hunting. By his own special wish he came back to Bombay before the end of the month in order to proceed to Ceylon, where he engaged in some venturesome elephant shooting. Returning to the mainland, he reached Madras on 13 Dec., laid the first stone of a new harbour, and attended many festivities. Sailing for Calcutta on 18 Dec., he arrived on the 23rd. There the viceroy became his host, and he spent Christmas at the viceroy's suburban residence at Barakpore. On New Year's

Day 1876 he held a chapter At Calcutta,
1 Jan. 1876.

of the order of the Star of India, and unveiled a statue of Lord Mayo, the viceroy who had been assassinated in 1872. After receiving the honorary degree of D.C.L. from Calcutta University, he proceeded to North India, where he inspected scenes of the mutiny, and laid at Lucknow the first stone of a memorial to Sir Henry Lawrence and to those who fell in the defence of the city. On 11 Jan. he entered Delhi in formal procession. Passing thence to Lahore, he later in the month went into camp in Cashmere as the guest of the Maharajah of the state. At Agra on 25 Jan. he visited the Taj Mahal. February was mainly devoted to big game shooting, chiefly tigers, at Moradabad and in Nepal. A visit to Allahabad early in March and to Jabalpur as a guest of the Maharajah preceded his embarkation at Bombay on the Serapis (13 March). Smallpox was raging in the town and his departure was hurried. In a farewell letter to the viceroy he bore testimony to the satisfaction with which he had realised a long cherished hope of seeing India and its historic monuments, and of becoming more intimately acquainted with the queen's Indian subjects.

On the return journey he showed many tactful attentions. At Suez he received Lord Lytton, who was on his way out to succeed Lord Northbrook as viceroy. At Cairo he was again the guest of the khedive at the Ghezireh Palace. After leaving Alexandria he paused at two English possessions—Malta, where he met his brother, the duke of Connaught, and at Gibraltar. Subsequently he landed at Cadiz for the

purpose of visiting Alfonso XII, the new king of Spain, at Madrid. Thence he passed by rail to Lisbon to enjoy the hospitality of Luis I, king of Portugal.

On 5 May the Serapis reached Portsmouth, and the prince was met there by the princess and their children. The English people welcomed him with enthusiasm, and at the public luncheon at the Guildhall on 19 May he expressed anew his delight with the great experience. The Indian tour conspicuously broadened the precedent which the prince had set in boyhood by his visit to Canada. The personal tie between the princes of India and English royalty was greatly strengthened by his presence among them in their own country. In future years the prince's two sons successively followed his Indian example. His elder son, the duke of Clarence, in 1889-90, and his younger son and successor, George (when Prince of Wales), in 1905-6, both made tours through India in their father's footsteps. When King George visited India for the second time in the winter of 1911-2 after his coronation he went over much of the same ground and observed many of the same ceremonies as his father had done thirty-six years before.

The prince at once resumed his usual activities at home and on the European continent. The fascination which France exerted on him from boyhood had fully ripened, and in 1878 the popularity, which came of his repeated presence in Paris, acquired a signal strength. His position there was based on ever broadening foundations. Even when he was a favoured guest of the imperial court, he had not limited his French acquaintance to imperial circles. Louis Philippe and most of his large family, into whom the prince consort's kindred had married, had been exiles in England since 1848, and the prince from boyhood shared his parents' intimacy with them and their partisans. Thoroughly at home in Paris, he always succeeded in the difficult task of maintaining the friendliest intercourse with persons who were wholly alienated from one another by political sentiment or social rank. He enjoyed visits to the duc and duchesse de la Rochefoucauld-Bisaccia (15 Oct. 1874) and to the duc d'Aumale at Chantilly (22 Oct. 1874). La comtesse Edouard de Pourtalès, le comte La Grange, le marquis de Breteuil, and all the royalist members of the French Jockey Club who stood outside the political sphere, were among the most intimate of his French

associates, and with them he exchanged frequent hospitalities. The marquis de Galliffet, one of Napoleon's generals, who afterwards served the republic, was many times a guest at Sandringham. At the same time the prince was on equally good terms with republican politicians of all views and antecedents. On private visits to Paris the prince gained, too, admission to theatrical and artistic society. Freeing himself of all official etiquette, he indeed so thoroughly explored Parisian life that he was in person as familiar to the public of Paris as to that of London. To the French journalists and caricaturists he was a 'bon garçon,' an arbiter of fashions in dress, 'le plus parisien des anglais,' even 'plus parisien que les parisiens.' If the press made somewhat insolent comment on his supposed debts, his patronage of fashionable restaurants, his pupillage to his mother, and his alleged intimacies with popular favourites of the stage, the journalistic portrayal of him as a jovial Prince Hal was rarely ungenial (cf. JEAN GRAND CARTERET, *L'Oncle de l'Europe*, 1906, passim).

The International Exhibition in Paris of 1878 gave the prince an opportunity of publicly proving his identity with French interests in all their variety. The prince presided over the royal commission which was formed to organise the British section, and he impressed its members, among whom were the leaders of British commerce, with his business capacity as well as his courtesy. He spared no effort in promoting the success of the movement, which was intended to give the world assurance of France's recovery from the late war, and of the permanence of the new republican form of government. The prince entertained the members of the English commission at the Café de la Paix on 29 April before the exhibition opened. In the days that followed he together with the princess took part in Paris in an imposing series of public celebrations, and his presence deeply impressed the French people. On 13 May he attended in state the opening ceremony, which was performed by Marshal MacMahon, the French president. With the marshal and his ministers he was at once on the friendliest terms and lost no opportunity of avowing his affection for their country, and his strong desire for a good understanding between her and England. He was the president's guest at the Elysée, and Lord Lyons, the English ambassador, whose acquaintance he had made at Washington, gave in his honour a brilliant

Growth of
interest in
France.

ball, which was attended by the president and the chieftains of political and diplomatic society. At an entertainment provided by M. Waddington, minister for foreign affairs, the prince met for the first time Gambetta, whose career had interested him and whose oratory he had admired as a chance visitor to the *Chambre des Députés*. Lord Lyons undertook the introduction. Gambetta thanked the prince for his frank expression of sympathy with France, and the prince assured the republican statesman that he had never at any time been other than France's warm friend. The interview lasted three quarters of an hour. Before they parted the prince expressed the hope of seeing Gambetta in England. Though that hope was not fulfilled, the prince sought further intercourse with Gambetta in Paris. Later in the year (22 Oct.) the prince met the English exhibitors at the British embassy, and gracefully spoke of his wish to unite France and England permanently in bonds of amity. Nearly a quarter of a century later he was to repeat as king in the same place almost the identical words, with the effect of arresting the attention of the world.

V

The prince was less curious about domestic than about foreign policy, but his lively interest in every influential personality led him to cultivate the acquaintance of all who controlled either.

The prince and Lord Beaconsfield. It was still the queen's wish that her ministers should treat him with official aloofness, and habits of reticence were easy to Lord Beaconsfield, her favourite prime minister. Assiduously courting his royal mistress's favour, he tacitly accepted her modest estimate of her son's political discretion. Yet Lord Beaconsfield's forward foreign policy in opposition to Russia was quite as congenial to the prince as to his mother, and he made many professions of his agreement. In all companies he announced his anti-Russian sentiment, and he talked of applying for a command in the field, if war broke out between Russia and England (cf. RUMBOLD, *Further Recollections*, 1903, p. 126). He sedulously cultivated the conservative leader's society. In January 1880, when Lord Beaconsfield's political position speciously looked as strong as ever, the prince went by his own invitation on a visit to Hughenden, the prime minister's country residence (12 Jan.). The old statesman was somewhat embarrassed by the compliment.

After his fall from power, the prince's attentions continued, and Lord Beaconsfield dined with the prince at Marlborough House on 19 March 1881. It was the last time Lord Beaconsfield dined from home. Exactly a month later he died. The prince represented Queen Victoria at the funeral, and laid on the coffin a wreath with a card on which he wrote 'A tribute of friendship and affection.'

With a complete freedom from party prepossessions, the prince was at the same time seeking to extend his personal knowledge of the liberal leaders. The advanced radical wing of the liberal party won before the dissolution of 1880, both in parliament and the country, a prominent place which roused high expectations. Sir Charles Dilke was the radical chief, and Mr. Chamberlain, whom the prince met at Birmingham in 1874, was Dilke's first lieutenant. An invitation to Mr. Cham-

The prince and the radicals. berlain to dine at Marlborough House in 1879 caused the group surprise, and when on 12 March 1880 Lord Fife, a member of the prince's inner circle, invited Dilke to dinner to meet the Prince of Wales, 'who would be very happy to make your acquaintance,' the situation looked to the radical protagonist a little puzzling. But the prince's only purpose was to keep in personal touch with the promoters of every rising cause. To Dilke the prince 'laid himself out to be pleasant.' They talked nearly all the evening, chiefly on French politics and the Greek question.

From an early period the prince had occasionally attended debates in both houses of parliament, seated in the upper chamber on the cross benches and in the House of Commons in the peers' gallery in the place over the clock. He rarely missed the introduction of the budget or a great political measure. On 6 May 1879 he personally engaged in the parliamentary conflict. He voted for the second reading of the deceased wife's sister bill, which, in spite of his support, was rejected by 101 to

His vote in parliament. 81. Lord Houghton seems to have persuaded him to take the 6 May 1879. step, which challenged the constitutional tradition of the heir-apparent's insensibility in public to controversial issues. With the accession of Gladstone and the liberals to power in the spring of 1880 he set himself to follow the course of politics with a keener zest. He took the oath in the House of Lords at the opening of the new parliament with a view to regular attendance. The prime minister was willing

to gratify his request for the regular communication to him of the confidential despatches, but Queen Victoria was still unwilling to assent, save on terms of rigorous selection by herself, which the prince deemed humiliating. He let it be known that he asked for all the confidential papers or none. But Gladstone encouraged his thirst for political knowledge, although it could only be partially and informally satisfied.

With Dilke, who became under-secretary for foreign affairs in Gladstone's administration in May 1880, the prince rapidly developed a close intimacy, and through him apparently hoped to play a part on the political stage. The prince anxiously appealed to the under-secretary 'to be

Intimacy kept informed of foreign affairs.' with Sir Dilke perceived that the prince's Charles Dilke. views of modern history were somewhat vitiated by the habitual refusal to him of official knowledge. But in Feb. 1881 Dilke willingly assented to the prince's proposal that while in Paris next month he should see M. Jules Ferry, the premier, and endeavour to overcome his unreadiness to negotiate promptly a new Anglo-French treaty of commerce. Dilke prepared a note of what the prince should say. In March he satisfactorily performed his mission, which was a new and pleasing experience. Gambetta, who was Dilke's personal friend, wrote that the prince 'had made some impression.' But the general negotiation moved forward slowly. In the autumn Dilke arrived in Paris. The prince was there again at the time, and once more offered to use his influence, both with M. Ferry and with M. Tirard, minister of commerce. The prince showed himself anxious to become better acquainted with Gambetta, and Dilke invited the two to meet at 'déjeuner' (24 Oct. 1881). A day or two later (on a suggestion from the prince made through Dilke) Gambetta sent him his photograph, which he signed thus: 'Au plus aimable des princes. L. Gambetta, un ami de l'Angleterre.'

The cordiality of the relations between Gambetta and the prince forms an interesting episode in the career of both men. Gambetta was clearly impressed by the width of the prince's interest in European affairs. The prince in the Frenchman's eyes was far more than 'un festoyeur'; he loved France 'à la fois gaîment et sérieusement,' and his dream was of an Anglo-French entente. According to Madame Adam, Gambetta's confidante, the prince, by disclosing to the states-

man at an early meeting secret negotiations between Bismarck and Lord Beaconsfield, led Gambetta to qualify the encouragement which he was proposing to offer Greek ambitions for territorial expansion. But Madame Adam seems here to exaggerate the influence of the prince (ADAM, *Mes Souvenirs*, vii. 15 seq.).

In March 1881 the royal family was greatly shocked by the assassination of the Tsar Alexander II in St. Petersburg. Lord Dufferin, the English ambassador, promptly advised, on grounds of humanity

in and policy, that the prince in St. Petersburg, and princess, whose sister was March 1881.

the tsarevitch's wife, should come to Russia for the funeral of the murdered sovereign. Queen Victoria deemed the risk almost prohibitive, and warned Lord Dufferin that the responsibility for any untoward result would rest on him (LYALL'S *Life of Lord Dufferin*). But neither prince nor princess hesitated for a moment. They attended the funeral, and the prince invested the new tsar with the order of the Garter. Their presence proved an immense consolation to the Russian royal family and lightened the heavy gloom of the Russian court and capital. Courage was never lacking in the prince. In the summer of 1882 the outbreak of rebellion in Egypt, and the resolve of the English government to suppress it

Volunteers for the war in Egypt. July 1882.

by force of arms, deeply stirred his patriotic feeling. He at once offered to serve in the campaign. The duke of Cambridge, the commander-in-chief, to whom he addressed his proposal, forwarded it to the government, and Lord Granville, the foreign minister, replied to the duke on 30 July 1882, 'It is highly creditable to the pluck and spirit of the prince to wish to run the risks, both to health and to life, which the campaign offers, but it is clearly undesirable H.R.H. should go' (VERNER, *Duke of Cambridge*, 1901, ii. 234-5). Precedents for the appearance of the heir-apparent on the field of battle abounded in English and foreign history, but they were held to be inapplicable.

A desire to be useful to the state, in spite of his lack of official position,

The franchise bill, Nov. 1884.

repeatedly found expression during Gladstone's second administration. In the struggle between the two houses over the franchise bill (November 1884), the prince offered his services in negotiating a settlement. He asked Lord Rowton to let it be known that he was willing to act as intermediary

between Gladstone and Lord Salisbury, the leader of the opposition. But the friendly suggestion was not seriously entertained. The prince shared the queen's habitual anxiety concerning warfare between lords and commons, but his proffered intervention probably reflected nothing beyond a wish to figure in political affairs.

Friendliness with members of the liberal government did not always imply acquiescence in their policy. Of the liberal

Dissent from the liberal government, 1881-4.

government's attitude to many of the problems which South Africa and Egypt presented, the prince openly disapproved.

He was frank in private expression of dissatisfaction alike with the recall from the Cape in 1880 of Sir Bartle Frere, his companion in India, and with the treaty of peace made with the Boers after the defeat of Majuba in 1881. He was president of the committee for erecting a statue of Frere on his death, and unveiled it on the Thames Embankment on 5 June 1888, when he

Sir Bartle Frere.

called Frere 'a highly esteemed and dear friend of myself.'

Next year (1 Aug. 1889), when he presided at the Guildhall over a memorable meeting to celebrate the jubilee of the abolition of slavery in the British colonies, he paid in a stirring speech a further tribute to the services of his friend Sir Bartle Frere. Of the pusillanimity which seemed to him to characterise the liberal party's treatment of the Soudan in 1884 he spoke with impatience, and he earnestly deplored the sacrifice of General Gordon. When Lord Salisbury moved a vote of censure on the government for their vacillating policy he was in his place in the House of Lords on 25 Feb. 1885. He was present at the memorial service in St. Paul's Cathedral on the day of mourning for Gordon's death (13 March 1885). He actively interested himself in the movement for commemorating Gordon's heroism. He attended the first meeting for the purpose at the Mansion House on 30 May 1885, and moved the first resolution. He summoned another meeting at Marlborough House on 12 Jan. 1886, when the scheme of the Gordon boys' memorial home (now at Chobham) was inaugurated. On 19 May 1890 he unveiled Gordon's statue at Chatham.

On 8 Feb. 1884 the government decided to appoint a commission on the housing of the working classes. The prince's friend Dilke, now president of the local government board, was made chair-

man, and the prince expressed a desire to serve. Gladstone at once acceded to his request. The matter was referred to the queen, who raised no objection (13 Feb.). The subject interested him deeply. As duke of Cornwall he was owner of many small houses in south London, and as the leases fell in he was proposing to retain the buildings in his own hands, with a view to converting them into better habitations. The change in tenure improved the profits of the estate as well as the character of the dwellings. On 22 Feb. 1884 Lord Salisbury moved an address to the crown for the appointment of the commission. The prince supported the motion, making on the occasion his first and only speech as a peer in the House of Lords. 'I take the keenest and liveliest interest in this great question,' he said. He was flattered at having been appointed a member of the commission. He had greatly improved the dwellings on his Sandringham estate; he had 'visited a few days ago two of the poorest courts in the district of St. Pancras and Holborn, and had found the conditions perfectly disgraceful.' He hoped measures of a drastic kind would follow the inquiry.

The commissioners formed an interesting but hardly homogeneous assembly. Cardinal Manning had accepted a seat, and difficulties arose as to his precedence. The prince's opinion was invited. He thought that Manning, being a cardinal, ranked as a foreign prince next to himself. Among the other members of the commission, the marquis of Salisbury held highest rank. The queen with certain qualifications took the prince's view, which was finally adopted, but not without some heart-burnings. The commissioners included, too, Henry Broadhurst, a labour member of parliament, and Mr. Joseph Arch, a leader of agricultural labourers. The prince attended the meetings with regularity, and abridged his holiday at Royat in May 1884 in order to be present at one of the early sittings. On 16 Nov. he entertained many of the members at Sandringham. With all his colleagues he established very cordial relations. With Mr. Arch, who with Mr. Joseph Arch. lived in Warwickshire, at Barford Cottage, he was especially friendly, and the liking for him never waned. When Mr. Arch sat in the House of Commons (1885-6, 1892-1900) for the division of North West Norfolk in which Sandringham stands, the prince greeted him as his own representative and visited him at his home in the summer of 1898.

The commission decided to take evidence at both Edinburgh and Dublin (January 1885). It was deemed politic for the prince, if he travelled with the commission at all, to go to Dublin if he went to Edinburgh. The final decision was that he should go to Dublin independently of the commission and study the housing question there privately. In spite of the political agitation that was raging in the country, both the queen and Lord Spencer, the lord-lieutenant, saw some advantage in

Visit to Ireland, April 1885. such an expedition. The prince had not been to Ireland for fourteen years. It was now settled that he and the princess should revisit the country in April. The conditions admitted of his inspecting the crowded slums of Dublin and at the same time of his testing anew the loyalty of the Irish people.

The experiment was not without its dangers, but the threats of opposition came to little. The nationalist leaders issued a manifesto urging on their followers an attitude of reserve. The lord mayor and corporation of Dublin refused to present an address of welcome, but a city reception committee well filled their place (9 April). The prince visited without protection the poor districts of the city and was heartily received.

Nationalist attitude. On 10 April he laid the foundation stone of the New Museum of Science and of the national library; at the Royal University he received the hon. degree of LL.D. and the princess that of Mus.Doc. Next day he opened the new dock at the extremity of North Wall, and named it the Alexandra basin. He paid a visit to Trinity College, Dublin, and presented in the gardens of Dublin Castle new colours to the duke of Cornwall's light infantry.

On 13 April the royal party started for Cork. The home rulers of the south urged the people to resent the visit as a degradation. On the road hostile demonstrations were made. But the prince was undisturbed. From Cork he passed to Limerick, where no jarring notes were struck, and thence went by way of Dublin to Belfast, where there was abundant enthusiasm (23 April). After a day at Londonderry (26 April), he left Larne for Holyhead (27 April). The nationalists' endeavour to prove the disloyalty of Ireland met with no genuine success.

VI

One of the interests which grew upon the prince in middle life was freemasonry,

which powerfully appealed to his fraternal and philanthropic instincts. He lent his

As freemason. patronage to the craft in all parts of the British empire. Initiated into the order in Sweden in December 1868, he received the rank of Past Grand Master of England at a meeting of Grand Lodge on 1 Sept. 1869. In Sept. 1875, after the resignation of the marquis of Ripon, he was installed in great splendour at the Albert Hall as Grand Master of the order.

During the twenty-six years that the Prince of Wales filled the office he performed with full masonic rites the many ceremonies of laying foundation stones in which he took part. He did what he could to promote the welfare of the three great charitable institutions of freemasons, the Boys' School, the Girls' School, and the Benevolent Institution. He presided at festival dinners of all the charities, twice at the first (1870 and 1898) and the second (1871 and 1888), and once at the third (1873). On his accession to the throne he relinquished the grand mastership and assumed the title of protector of the craft in England. His interest in freemasonry never slackened.

Meanwhile Gladstone remained faithful to his resolve to provide the prince with useful and agreeable employment. One office

A trustee of the British Museum, 6 May 1881. which Lord Beaconsfield's death rendered vacant was filled on the prime minister's recommendation by the prince, with the result

that he entered on a new if minor sphere of interest which proved very congenial. On 6 May 1881 he was appointed a trustee of the British Museum, and eight days later joined the standing committee, again in succession to Lord Beaconsfield. Until the prince's accession to the throne he constantly attended the committee's meetings, kept himself well informed of all matters of importance in the administration of the museum, and warmly supported the action of the director whenever it was called in question. It was with reluctance that he retired from the management of the museum at his accession, on learning that a sovereign could not be member of a body which was liable to be sued in a court of law. One of the prince's services to the museum was the election, through his influence, of his friend Baron Ferdinand de Rothschild [q. v. Suppl. I] as fellow trustee; the baron's Waddesdon bequest was an important addition to the museum's treasures. In the capacity of trustee the prince received on 9 June 1885 the statue of Darwin, which was erected at the

entrance of the Natural History Museum, South Kensington, and was unveiled by Professor Huxley.

Association with the British Museum stimulated his earlier interest in new educational institutions, especially those which developed technical or artistic instruction. In music he delighted from childhood, and to efforts for the expansion of musical teaching he long lent his influence. As early as 15 June 1875 he had presided at a conference at Marlborough House

to consider the establishment of a National Training School for Music. Three years later he

accepted a proposal to institute a National College of Music. On 28 Feb. 1882 he presided at a representative meeting at St. James's Palace, and in an elaborate speech practically called into being the Royal College of Music. He formally inaugurated the college on 7 May 1883 in temporary premises, with Sir George Grove as director. Six years later he personally accepted from Samson Fox [q. v. Suppl. II] a sum of 30,000*l.* (increased to 40,000*l.*) for the provision of a special building, the foundation stone of which he laid on 8 July 1890. He opened the edifice in May 1894 and never lost his enthusiasm for the venture.

In no part of the country did he fail to encourage cognate enterprises with a readiness altogether exceeding that of his father, in whose steps in these regards he was proud to follow. In every town of England he became a familiar figure, opening colleges, libraries, art galleries, hospitals,

His philanthropic activities in the country.

parks, municipal halls, and docks. On 2 May 1883 he was at Oxford laying the foundation stone of the Indian Institute.

On 28 April 1886 he visited Liverpool to inaugurate the working of the great Mersey tunnel. Very readily he went on like errands to places which no member of the royal family had hitherto visited. The centres of industry of every magnitude, Sheffield, Leeds, Wigan, Bolton, Hull, Newcastle, Portsmouth, Blackburn, Middlesbrough, Great Grimsby, and Swansea, as well as Birmingham, Liverpool, and Manchester, all possess public buildings which were first dedicated to public uses by the prince. One of the most memorable of his provincial engagements was his laying the foundation stone of the new

cathedral at Truro on 20 May 1880. It was the first cathedral erected in England since St. Paul's was rebuilt in 1697. The bishop, Edward White Benson, was well known to

the prince in his earlier capacity of headmaster of Wellington College. By the prince's wish the ceremony was performed, despite clerical misgivings, with full masonic rites. Some seven years later (3 Nov. 1887) the prince returned to attend the consecration of the eastern portion of the building, the first portion to be used for divine worship. Dr. Benson, then archbishop of Canterbury, was his companion.

The development of his property at Sandringham stirred in him an active interest in agriculture, and his provincial visits were often associated with the shows of the Royal Agricultural Society, of which he was elected a life governor on 3 Feb. 1864, and subsequently became an active member. He was four

times president, for the first time in 1869, when the show was held at Manchester, afterwards in 1878 at Kilburn, in 1885 at Preston, and in 1900 at York. He rarely failed to attend the shows in other years, being present at Gloucester in the year before his death; he subsequently accepted the presidency for the meeting at Norwich in 1911, which he did not live to see. In 1889, the jubilee year of the society, he acted at Windsor for the queen, who was president, and presided the same year at the state banquet given in St. James's Palace to the council and chief officers of the society. He showed minute interest in the details of the society's work.

At the same time, there was no district of London to which he was a stranger. He not only laid the foundation stone of the Tower Bridge on 21 June 1886 but opened the complete structure on 30 June 1894. He showed interest in the East End by opening a recreation ground in Whitechapel on 24

June 1880. He laid the foundation stone of the People's Palace on 28 June 1886, and on 21 June

1887 he opened for a second time new buildings at the London Hospital. His educational engagements in the metropolis were always varied. They included during this period the formal installation of the Merchant Taylors' School in the old buildings of Charterhouse on 6 April 1878, the opening of the new buildings of the City of London School on 12 Dec. 1882, and of the City of London College in Moorfields on 8 July 1883, together with the new foundation of the City and Guilds of London Institute on 25 June 1884. On 21 Dec. 1885 he went to Sir Henry Doulton's works at Lambeth in order to present

His relations with the Royal Agricultural Society.

Public engagements in London from 1878.

Doulton with the Albert gold medal of the Society of Arts in recognition of his services to the manufacture of pottery.

His faith in the advantage of exhibitions was not shaken by the inauspicious experiments of 1871-4, and he actively aided in 1883 a revival on a more limited scale of the old scheme. His neighbour in Norfolk, Sir Edward Birkbeck, had interested him in his attempts to improve the fishing

His
enthusiasm
for London
exhibitions,
1883-7.

industry of the country, and under the prince's direct auspices a National Fisheries Exhibition at Norwich in April 1881 developed in 1883 into an International Fisheries Exhibition at South Kensington, which the prince ceremonially opened and closed (14 May-31 Oct.). The success of the undertaking justified sequels at the same place, in the International Health Exhibition next year, and in the International Inventions and Music Exhibition in 1885. There followed a far more ambitious enterprise in 1886, when the prince with exceptional vigour helped to organise an exhibition of the manufactures and arts of India and the colonies. It was the only one of these ventures which was controlled by a royal commission, and the prince was president of the commissioners. Queen Victoria, on her son's representations, showed an unwonted activity by opening this exhibition in person (4 May 1886). Great popular interest was shown in the enterprise, and a handsome profit was realised.

The prince was anxious to set on a permanent basis the scheme which had made so powerful an appeal to the public not only of Great Britain but of India and the colonies. Queen Victoria's jubilee was approaching, and many suggestions for a national celebration were under consideration. In the autumn of 1886 the prince proposed to the lord mayor of London that a permanent institute in London, to form

The Imperial
Institute,
1887.

a meeting-place for colonial and Indian visitors, and a building for the exhibition of colonial and Indian products, should be erected as a memorial of the queen's long reign. The prince professed anxiety to pursue his efforts to strengthen the good feeling between the mother country, India, and the colonies. At a meeting which he called at St. James's Palace on 12 Jan. 1887, the project of an Imperial Institute at South Kensington was adopted and a fund was started with 25,000*l.* out of the profits of the recent Indian and colonial Exhibition. Large donations were

received from India and the colonies. All promised well. Queen Victoria laid the foundation stone on 4 July 1887, and on 28 April 1891 the prince was formally constituted president of the corporation. The completed building was opened by Queen Victoria on 10 May 1893. A week later the Prince of Wales gave a great reception to all who had shown interest in the movement. Some interesting functions took place there under his guidance. On 28 July 1895 he presided when Dr. Jameson lectured on Rhodesia, and he attended a banquet to the colonial premiers on the occasion of the queen's diamond jubilee on 18 June 1897. But in spite of his active support the Institute failed to enjoy public favour. It satisfied no public need, and evoked no general enthusiasm. The prince reluctantly recognised the failure, and in 1899 assented to the transfer of the greater part of the building to the newly constituted London University. The operations of the Institute were thenceforth confined to very modest dimensions. Despite its chequered career, the venture gave the prince a valuable opportunity of identifying himself with the growing pride in the colonial empire, with that newborn imperialism which was a chief feature of the national sentiment during the close of his mother's reign.

Punctuality and a methodical distribution of his time enabled the prince to combine with his many public engagements due attention to domestic affairs, and at the same time he enjoyed ample leisure wherein to indulge his love of recreation at home and abroad. The education of his two sons, Albert Victor and George, called for consideration. In 1877 they were respectively thirteen and twelve years old. The prince

had little wish to subject them to a repetition of his own strict and elaborate discipline. Nor

had he much faith in a literary education for boys in their station. A suggestion that they should go to a public school, to Wellington College, met with Queen Victoria's approval; but the prince finally decided to send them as naval cadets to the Britannia training-ship at Dartmouth. He met his mother's criticism by assuring her that the step was experimental. But the prince was satisfied with the result, and in 1879 he pursued his plan of a naval training by sending the boys on a three years' cruise in H.M.S. *Bacchante* to the Mediterranean and the British colonies. The plan had the recom-

mentation of novelty. In providing for the youths' further instruction, the prince followed less original lines. The younger boy, George, like his uncle Alfred, Queen Victoria's second son, made the navy his profession, and he passed through all the stages of nautical preparation. The elder son, Albert Victor, who was in the direct line of succession, spent some time at Trinity College, Cambridge, in 1883, according to precedent. He then proceeded to Aldershot to join the army. In all important episodes in his elder son's career his father's presence testified his parental concern. When Albert Victor,

His elder son's career.

on coming of age, received the freedom of the City of London (29 June 1885), his father was the chief guest at the luncheon in the Guildhall which the corporation gave in honour of the occasion. The prince was with his son at Cambridge not only when he matriculated at Trinity in 1883 but when he received the honorary degree of LL.D. in 1888. A few years later the young man, pursuing most of his father's experiences, set out for an Indian tour, and his father accompanied him as far as Ismailia (October 1891).

Family rejoicings attended the celebration of the prince and princess's silver wedding on 10 March 1888, when Queen Victoria dined with them at Marlborough House for the first time. The old German emperor, William I, died the day before. With him the prince was always on affectionate terms and he had repeatedly accepted the emperor's hospitality in Berlin. He had visited him on 18 March 1885 to congratulate him on his eighty-eighth birthday. Queen Victoria was especially anxious to show his memory due respect, but she assented to the suspension of court mourning for the prince's silver wedding. The number of congratulations and presents bore striking witness to the prince's popularity.

The royal family was bound to experience many episodes of sorrow as well as joy. The prince was pained by the death in 1878 of his second sister, Alice, princess of Hesse-Darmstadt, who had helped to nurse him through his illness of 1871. To his acute distress, too, his youngest brother, Leopold, duke of Albany, died suddenly while on holiday at Cannes (24 March 1884), and the prince at once went thither on the melancholy errand of bringing the remains home. Subsequently he unveiled with much

public ceremony a statue of the duke at Cannes. But the prince and all his domestic

Accession of his nephew, Emperor William II.

circle were perhaps more deeply affected by the tragic death of his brother-in-law, the crown prince of Prussia, who after a three months' reign as Frederick III had succumbed to the painful disease of cancer of the throat (15 June 1888). The tragedy gave the prince many grounds for anxiety. His lifelong affection for the Empress Frederick, his eldest sister, was quickened by her misfortune. He showed her every brotherly attention. On her first visit to England during her widowhood the prince crossed over to Flushing to escort her to her native country (19 March 1889). In Germany her position was difficult. Her English predilections and her masterful disposition often roused hostility. Bismarck and his son Herbert had treated her and her husband with scant respect. The prince's sympathies lay with his sister in her struggles abroad, and not unfrequently was he moved to anger by what seemed to him the cruel indifference of the Bismarcks to her feelings. The complexity of the situation was increased by the conduct of her eldest son, the prince's nephew, who now became, as William II, German emperor in succession to his father. His uncompliant attitude to his mother often wounded his uncle and threatened alienation. Yet the native amiability of the prince did not suffer any lasting breach between himself and those whose conduct roused his disapproval. In his family circle there were some whose dislike of the young ruler was far more firmly rooted than his own. But the prince sought paths of peace and conciliation. The new emperor was his mother's favourite grandson and had at command a social charm which equalled his uncle's. When in 1890 the emperor dismissed Bismarck from his service and he became politically his own master, the outer world came to attribute to uncle and nephew a personal and political rivalry which hampered the good relations of the two peoples. This allegation was without foundation in fact. On occasion the kinsmen caused each other irritation, but there was no real estrangement. The mutual resentments which at times ruffled their tempers were harboured solely when they were absent from one another. The ill-feeling disappeared when they met. The prince's unconcealed leanings to France barely touched the personal relation with his nephew. The prince's good-nature was comprehensive. The younger Bismarck's manner was even less

Silver wedding, 10 March 1888.

complacent than that of his rough-spoken father, but the prince's social tact enabled him to meet the older man with a perfect grace and to extend a courteous greeting to Count Herbert Bismarck on his private visits to England.

No lack of cordiality marked the first meetings of uncle and nephew after the emperor's accession. The emperor arrived at Spithead on 2 Aug. 1889 in order to present himself to his grandmother in his new dignity; the prince met him on landing and welcomed him with warmth. Next year the prince and his second son, George, were the emperor's guests at Berlin (April 1890), just after Bismarck's dismissal. The emperor attested his friendly inclinations by investing Prince George with the distinguished order of the Black Eagle.

In 1889 a new factor was introduced into the prince's domestic history. The first marriage in his family took place. On 27 July 1889 his eldest daughter, Princess Louise, married the sixth earl of

His eldest daughter's marriage, 27 July 1889.
 Fife, then created first duke. The prince's son-in-law, who was eighteen years senior to his wife, belonged to his most intimate circle of friends. Objection was raised in some quarters on the ground of the bridegroom's age and of his place in the prince's social coterie, and in other quarters owing to his lack of royal status. But the union proved thoroughly happy, and it made opportune a review of the financial provision for the prince's children. The prince's family was growing up, and his domestic expenses caused him some anxiety. His income had undergone no change since his marriage, and he deemed it fitting to raise the question of parliamentary grants to his children. The prince's income was not exorbitant in view of the position that he had long been called on to fill, now that Queen Victoria had ceased to play her part in society.

Early in 1885, when his elder son came of age, the prince discussed the matter with the queen with the knowledge of the liberal ministry. There was no unwillingness on any side to treat his wishes considerably, but neither the queen nor her ministers showed undue haste in coming to close quarters with the delicate issue.

Lord Salisbury was now prime minister, but the conservative government was as reluctant as any liberal government to lay a large fresh burden on the revenues of the state in the interests of the royal family. The queen sent a message to the House

of Commons, asking provision for the prince's two eldest children (July 1889). A committee of inquiry representative of all parties in the House of Commons was thereupon appointed. Mr. Bradlaugh opposed the appointment on the ground that the queen should make the necessary provision out of her savings. The government proposed, with the approval of the queen, that the eldest son of the Prince of Wales should receive an annuity of 10,000*l.*, to be increased to 15,000*l.* on his marriage. The second son was to receive, on coming of age, an annuity of 8000*l.*, to be increased on his marriage to 15,000*l.* Each of the three daughters was to receive on coming of age an annuity of 3000*l.*, with a dowry of 10,000*l.* on marriage. There would thus fall due immediately 21,000*l.* a year, with 10,000*l.* for Princess Louise. But signs of discontent were apparent in the committee, and Gladstone, who deprecated any weakening of the monarchy by a prolonged controversy over its cost, recommended the compromise that the prince should receive a fixed additional annual sum of 36,000*l.* for his children's support, and that the new provision should terminate six months' after Queen Victoria's death. The proposal was adopted by the committee, but was severely criticised in the House of Commons. Henry Labouchere bluntly moved a peremptory refusal of any grant to the queen's grandchildren. His motion was rejected by 398 votes to 116. Mr. John Morley moved an amendment complaining that room was left for future applications from the crown for further grants to the queen's grandchildren, and that the proposed arrangement ought to be made final. Most of Gladstone's colleagues supported Mr. Morley; but his amendment was defeated by 355 votes to 134 and the grant of 36,000*l.* a year was secured.

On 17 May 1891 the prince enjoyed the new experience of becoming a grandfather on the birth of the duchess of First grandchild, Fife's first daughter. But a severe blow was to befall his domestic circle within a year. In December his second son, George, fell ill of enteric fever, from which he recovered; but early in the next year Albert Victor, his elder son, who had been created duke of Clarence (24 May 1890), was seized by influenza, which turned to pneumonia and proved fatal (14 Jan. 14 Jan. 1892, 1892). The calamity was for the moment crushing to both parents. But the sympathy of the nation was abundant,

and in a published letter of thanks the prince and princess gratefully acknowledged the national condolence. The duke's death was the more distressing owing to his approaching marriage to Princess Mary (May) of Teck. Next year, after the shock of mourning had passed away, Princess May was betrothed to the second son, Prince George, who filled his brother's place in the succession to the throne and was created duke of York on 24 May 1892. The marriage took place on 6 July 1893, and the succession to the throne was safely provided for when a first child, Prince Edward of Wales, was born on 23 June 1894.

Amid all his domestic responsibilities and his other engagements the prince always found ample leisure for sport and amusement. Of the theatre and the opera he

The prince's recreations.

was from boyhood an ardent admirer, and both in London and Paris he enjoyed the society of the dramatic and musical professions. The lighter forms of dramatic and musical entertainment chiefly attracted him. But his patronage was comprehensive. Wagner's operas he attended with regularity, and Irving's Shakespearean productions at the Lyceum Theatre from 1872 onwards stirred his enthusiasm. With Irving, the leader of the dramatic profession through a great part of the prince's career, his social relations were of the friendliest. He supped on the stage of the Lyceum with Irving and a few of his friends after the performance of 'Much Ado about Nothing' (8 May 1883), and when Queen Victoria was on a visit to Sandringham (26 April 1889), he invited Irving to perform in her presence 'The Bells' and the trial scene from 'The Merchant of Venice.' With the comic actor J. L. Toole he was on like cordial terms, and thrice at the prince's request Toole appeared in characteristic parts on visits to Sandringham. Toole was there at the celebration of Prince Albert Victor's coming of age on 8 Jan. 1885. (Sir) Charles Wyndham, (Sir) Squire Bancroft, (Sir) John Hare, and many other actors in addition to Irving and Toole were the prince's guests on occasion at Marlborough House. The dramatic profession generally acknowledged his sympathetic patronage by combining to present him on his fiftieth birthday (9 Nov. 1891) with a gold cigar box. To the prince's influence is attributable the bestowal of official honours on leading actors, a practice which was inaugurated by the grant of a knighthood to Henry Irving in 1895.

But the recreation to which the prince mainly devoted himself from middle life onwards with unremitting delight was horse-

The prince and the turf.

Club on 13 April 1864. But it was not for at least ten years that he played any part on the turf. His colours were first seen at the July meeting at Newmarket in 1877. In 1883 he leased a few horses at John Porter's Kingsclere stable, and two years later he inaugurated a breeding stud at Sandringham. In 1893 he left John Porter's stable at Kingsclere, and thenceforward trained horses at Newmarket under Richard Marsh, usually having at least eleven horses in training. By that date he was a regular visitor at Newmarket, occupying a set of rooms at the Jockey Club. That practice he continued to the end of his life. He was a fair judge of horses, though hardly an expert. His luck as an owner was variable, and signal successes came late in his racing career. His main triumphs were

His racing successes.

due to the merits of the three horses Florizel II, Persimmon, and Diamond Jubilee, which he bred in 1891, 1893 and 1897 respectively out of the dam Perdita II by the sire St. Simon. With Persimmon, the best thoroughbred of his era, the prince won for the first time the classic races of the Derby and the St. Leger in 1896, and the Eclipse Stakes and the Gold Cup at Ascot in 1897. In 1900, when his winning stakes reached a total of 29,585*l.*, he first headed the list of winning owners. In that year his racing triumphs reached their zenith, when Persimmon's brother, Diamond Jubilee, won five great races, the Two Thousand Guineas, the Derby, Newmarket Stakes, Eclipse, and St. Leger. He had played a modest part in steeplechasing since 1878. But his only conspicuous success in that sport was also achieved in 1900, when his Ambush II won the Grand National at Liverpool. So imposing a series of victories for an owner in one year was without precedent. No conspicuous prosperity attended his racing during the early years of his reign. But in 1909 he was for a third time winner of the Derby with the horse Minoru, and was in the same year third in the list of winning owners. At the time of his death he had twenty-two horses in training, and his winning stakes since 1886 then amounted to 146,344*l.* 10*s.* 1*d.* The pastime proved profitable. He sold Diamond Jubilee to an Argentine breeder for 31,500*l.* The skeleton of Persimmon he presented to

the South Kensington Museum (5 Feb. 1910).

With fellow patrons of the turf the prince always maintained cordial intimacy. The members of the Jockey Club included his closest friends. For twenty years he entertained to dinner all the members at Marlborough House and afterwards at Buckingham Palace on Derby night. Rarely missing an important race meeting, he was regularly the guest of Lord Sefton at Sefton Park or of Lord Derby at Knowsley for the Grand National, of Lord Savile at Rufford Abbey for the St. Leger at Doncaster, and of the duke of Richmond at Goodwood for the meeting in the park there.

In yacht racing also for a brief period he was only a little less prominent than on the turf. In 1876 he first purchased a racing schooner yacht, *Hildegarde*, which won the first queen's cup at Cowes in 1877. In 1879 he acquired the well-known cutter *Formosa*, and in 1881 the schooner *Aline*, both of which enjoyed racing reputations. But it was not till 1892 that the prince had a racing yacht built for him. The vessel known as the *Britannia* was designed by George Lennox Watson [q. v. Suppl. II], and was constantly seen not only in the Solent, on the Thames, and on the Clyde, but also at Cannes. For five years the yacht enjoyed a prosperous career, winning many races in strong competitions, often with the prince on board. In 1893 prizes were won on the Thames (25-26 May), and the Victoria gold challenge cup at Ryde (11 Sept.). Twice at Cannes the *Britannia* won international matches (13 March 1894 and 23 Feb. 1895); and on 5 July 1894 it defeated on the Clyde the American yacht *Vigilant*; but that result was reversed in a race between the two on the Solent on 4 Aug. 1895. In 1895 the German emperor first sent out his yacht *Meteor* to meet his uncle's *Britannia*, and for three years interesting contests were waged between the two vessels. Thrice in English waters during 1896 was the German yacht successful—at Gravesend (4 June), at Cowes (11 June), and at Ryde (13 Aug.). But after several victories over other competitors the *Britannia* won the race for the queen's cup against the *Meteor* at Cowes (3 Aug. 1897), and three days later the emperor's *Meteor* shield was awarded his uncle's vessel.

The prince's open indulgence in sport, especially in horse-racing, attracted much public attention, and contributed to the general growth of his popularity. But

in 1891 there was some recrudescence of public impatience with his avowed devotion to amusement. An imputation of cheating against

The Tranby Croft case, 1891.

a guest at a country house when the prince was of the company led to a libel action, at the hearing of which the prince for a second time appeared as a witness in a court of law (5 June 1891). The host was Mr. Arthur Wilson, a rich shipowner of Hull, and the scene of the occurrence was his residence at Tranby Croft. The evidence showed that the prince had played baccarat for high stakes. A wave of somewhat reckless gambling had lately enveloped English society, and the prince had occasionally yielded to the perilous fascination. Cards had always formed some part of his recreation. From early youth he had played whist for moderate stakes, and he impressed Gladstone in a homely rubber at Sandringham with his 'whist memory.' On his tours abroad at Cannes and Homburg he had at times indulged in high play, usually with fortunate results. The revelations in the Tranby Croft case shocked middle-class opinion in England, and there was a loud outburst of censure. In a private letter (13 Aug. 1891) to Dr. Benson, archbishop of Canterbury, long on intimate terms with the royal family, the prince expressed 'deep pain and annoyance at the 'most bitter and unjust attacks' made on him not only 'by the press' but 'by the low church and especially the nonconformists.' 'I am not sure,' he wrote, 'that politics were not mixed up in it.' His genuine attitude he expressed in the following sentences: 'I have a horror of gambling, and should always do my utmost to discourage others who have an inclination for it, as I consider that gambling, like intemperance, is one of the greatest curses which a country could be afflicted with.' The scandal opened the prince's eyes to the perils of the recent gambling vogue, and he set himself to discourage its continuance. He gradually abandoned other games of cards for bridge, in which, though he played regularly and successfully, he developed only a moderate skill.

VII

During Lord Salisbury's ministry (1886-1892) the prince's relations to home and foreign politics remained as they had been. Queen Victoria's veto on the submission of official intelligence was in no way relaxed. The prince was socially on

pleasant terms with Lord Salisbury, who was foreign secretary as well as prime minister. The prince visited him at Hatfield, but they exchanged no confidences. Independently however of ministerial authority and quite irresponsibly, the prince with increasing freedom discussed foreign affairs with friends at home and abroad. At Biarritz, where he stayed in 1879, at Cannes, or at Paris he emphatically declared in all circles his love of France, his hope of a perpetual peace between her and England, and his dread of another Franco-German war. Nor did he qualify such sentiments when he travelled in Germany. He showed his open-mindedness as to the Channel tunnel scheme by inspecting the works at Dover (March 1882). In the spring of 1887 he was at Cannes during an alarming earthquake, and his cool and courageous behaviour during the peril enhanced his reputation in southern France. In the same year M. Taine, the historian, attached value to a rumour which credited the prince with meddling in internal French politics in order to keep the peace between France and Germany. The French prime minister, M. Rouvier, was threatened with defeat in the chamber of deputies at the hands of M. Floquet and M. Boulanger, who were reputed to be pledged to an immediate breach with Germany. The prince was reported to have persuaded the Comte de Paris to detach his supporters in the chamber from the war-faction and to protect with their votes the ministry of peace. M. Taine's rumour doubtless misinterpreted the prince's cordial relations with the Orleanist princes, but it bears witness to the sort of political influence which was fancifully assigned to the prince in France. It was rare, however, that his good-will to France incurred suspicion of undue interference. The monarchs of Europe looked askance on the French International Exhibition of 1889, which was designed to commemorate the revolution of 1789, and the prince abstained from joining the British commission, of which he had been a member in 1867 and president in 1878. But he had no scruples in visiting the exhibition together with the princess and his sons. They ascended under M. Eiffel's guidance to the top of the Eiffel Tower, which was a chief feature of the exhibition buildings. Before leaving the French capital, the prince exchanged visits with President Carnot, went over the new Pasteur Institute, took part in a meet of the French Four-in-Hand Club, and attended

the races at Auteuil. A few years later (March 1894), when diplomatic friction was arising between France and England over events in northern Africa, Lord Duferin, the English ambassador in France, addressed the British Chamber of Commerce, and denounced popular exaggeration of the disagreement. The prince, who was at Cannes, at once wrote to the ambassador, eagerly congratulating him on his prudent handling of his theme and reporting to him the commendations of German and Russian royal personages whom he was meeting on the Riviera. In Germany he was less suave in pronouncing his opinions. He complained to Prince von Hohenlohe at Berlin in May 1888 of the folly of the new and irritating system of passports which had lately been devised to discourage Frenchmen from travelling in Germany. But Bismarck ridiculed the notion that any importance attached to his political views. In Germany he was rarely regarded by publicists as other than a votary of Parisian gaiety.

A few months later, in Oct. 1888, he illustrated his love of adventure and his real detachment from current diplomatic controversy by extending his travels further east, where political conflict was rife among most of the great powers. He spent a week with the king of Roumania at his country palace of Sinaia, and Hungary, engaging in a bear hunt in the neighbourhood, and attending military manoeuvres. Thence he proceeded to Hungary to join the ill-starred crown prince Rudolph (d. 30 Jan. 1889) in bear-hunting at Gergény and elsewhere, finally accompanying him to Vienna (16 Oct.). No political significance attached to the tour. Subsequently he more than once boldly challenged the patrician prejudices of the German and Austrian courts by passing through Germany and Austria in order to shoot in Hungary as the guest of his friend Baron Hirsch, a Jewish millionaire, who was excluded from the highest Austrian social circles. In the autumn of 1894 he spent no less than four weeks with the baron at his seat of St. Johann. The sport was on a princely scale. The head of game shot during the visit numbered 37,654, of which 22,996 were partridges. According to German and Austrian strict social codes, the prince's public avowal of friendship with Baron Hirsch was a breach of royal etiquette. But he allowed neither social nor diplomatic punctilio to qualify the pleasures of foreign travel. His cosmopolitan sympathies ignored fine distinctions of caste.

Visits to
Roumania
and Hungary,
1888-94.

Russia throughout this period was the diplomatic foe of England, and the prince vaguely harboured the common English suspicion of Russian intrigues. But he lost no opportunity of confirming his knowledge of the country. Substantially Russia meant to him the home of close connections

of his wife and of the wife of his brother Alfred. He

signally proved how closely he was drawn to the land by ties of kindred in 1894, when he twice within a few months visited it at the call of family duty. In July 1894 he went to St. Petersburg to attend the wedding at Peterhof of the Grand Duchess Xenia, the daughter of Tsar Alexander III (the Princess of Wales's niece), to the Grand Duke Alexander Michailovitch. At the end of October 1894 he hurried to Livadia to the deathbed of his wife's brother-in-law, Tsar Alexander III. He arrived when all was over, but he attended the funeral ceremonies and greeted the accession of his wife's nephew, Tsar Nicholas II, who soon married a niece of his own. The old link between the prince and the Russian throne was thereby strengthened, but its strength owed nothing to diplomatic influences or to considerations of policy.

When Gladstone became prime minister in 1892, the problem of the prince's access to state business received a more promising solution than before. Gladstone

sought to gratify the prince's wish that information of the cabinet's proceedings should be placed at his disposal. The

queen's assent was not given very readily. She suggested that she herself should decide what official news should be passed on to her son. She deprecated the discussion of national secrets over country-house dinner-tables. But she finally yielded, and thenceforth the prince was regularly supplied by the prime minister's confidential secretary, Sir Algeron West, with much private intelligence. The privilege which the prince had long sought was thus granted on somewhat exceptional terms. The prince freely commented in writing on what was communicated to him. His interest was chiefly in persons, and he frankly criticised appointments or honours, and made recommendations of his own. He avoided intricate matters of general policy, but on minor issues he offered constant remark. Of the common prejudice of rank he gave no sign. Royal commissions of inquiry into social reforms continued to appeal to

him. In 1891 he had sought Lord Salisbury's permission to serve on the labour commission, but his presence was deemed impolitic. When the agricultural commission was in process of formation in 1893, he urged the nomination of Mr. Joseph Arch, his colleague on the housing commission. The queen protested, but Arch owed to the prince an invitation to sit. In the same year another royal commission was constituted to inquire into the question of old age pensions, under the chairmanship of Lord Aberdare. Of this body the prince was a member; he attended regularly, put pertinent questions to witnesses, and showed sympathy with the principle at stake. Gladstone informed the prince of his impending resignation in February 1894, and thanked him for unbounded kindness. The prince replied that he valued their long friendship. When Lord Rosebery formed a government in succession to Gladstone, the prince had for the only time in his life a close personal ally in the prime minister. But his influence on public business saw no increase. Lord Rosebery's administration chiefly impressed him by the internal dissensions which made its life precarious.

Gladstone and the prince continued to the last to exchange marks of mutual deference. When on 26 June 1896 the prince opened at Aberystwyth the new University of Wales, of which he had become

chancellor, Gladstone in spite of his infirmities came over from Hawarden to attend the ceremony, and at the lunch which

followed it the old statesman proposed the prince's health. They met again at Cimiez next year, when Gladstone took his last farewell of Queen Victoria. On 25 May 1898 the prince and his son George acted as pall-bearers at the funeral of Gladstone in Westminster Abbey. So emphatic an attention caused among conservatives some resentment, which was hardly dissipated by the prince's acceptance of the place of president of the committee formed to erect a national memorial to Gladstone (1 July 1898). But it was not in a spirit of political partisanship that the prince publicly avowed his admiration of Gladstone. The prince acknowledged Gladstone's abilities, but he was chiefly grateful for the cordial confidence which had distinguished Gladstone's relations with him. Gladstone, who respected his royal station and deemed him the superior in tact and charm of any other royal personage within his

Confidential relations with Gladstone's ministry, 1892-4.

Final relations with Gladstone, 1896-7.

range of knowledge, saw imprudence in Queen Victoria's denial to him of all political responsibility.

On the fall of Lord Rosebery's ministry and the accession to office of Lord Salisbury, the prince illustrated his attitude to the party strife by inviting the out-going and the in-coming ministers to meet at dinner at Marlborough House. Other men of distinction were there, including the shahzada, second son of the amir of Afghanistan, who was visiting this country. The entertainment proved thoroughly harmonious under the cheerful influence of the prince. A little later, when Lord Salisbury's administration was firmly installed, the prince's right to receive as matter of course all foreign despatches was at length formally conceded. Like the members of

The concession of the 'cabinet' key, 1895.

the cabinet he was now invested with a 'cabinet' key to the official pouches in which private information is daily

circulated among ministers by the foreign office. The privilege came too tardily to have much educational effect, but it gave the prince a better opportunity than he had yet enjoyed of observing the inner routine of government, and it diminished a veteran grievance. Yet his main energies were, even more conspicuously than of old, distributed over society, sport, and philanthropy, and in spite of his new privileges he remained an unofficial onlooker in the political arena.

In some directions his philanthropic interest seemed to widen. The ardour and energy with which at the end of the nineteenth century the problems of disease were pursued caught his alert attention, and he gave many proofs of his care for medical research. He regularly performed the duties of president of St. Bartholomew's Hospital, and learned much of hospital management there and elsewhere. He did what he could to encourage the study of consumption, and the investigation of cancer interested him. When he laid the foundation stone of the new wing of Brompton Consumption Hospital in 1881, he asked, if the disease were preventable, why it was not prevented. On 21 Dec. 1888 he called a meeting at Marlborough House to found the National Society for the Prevention of Consumption. It was, too, under his personal auspices that the fund was formed on 18 June 1889 to commemorate the heroism of Father Damien, the Belgian missionary who heroically sacrificed his life to the lepers of the Sandwich Islands. A

Interest in medical science.

statue of Father Damien which was set up at Kalawayo was one result of the movement. Another was the National Leprosy Fund for the treatment and study of the disease, especially in India. On 13 Jan. 1890 the prince presided at a subscription dinner in London in support of this fund, and to his activity was in part attributable the foundation of the Albert Victor Hospital for leprosy at Calcutta. He was always on good terms with doctors. Through his friendship with Sir Joseph Fayrer, who had accompanied him to India, he was offered and accepted the unusual compliment of being made honorary fellow of the Royal College of Physicians on 19 July 1897. He received not only the diploma but a model of the goldheaded cane in possession of the college, whose line of successive owners included Radcliffe and the chief physicians of the eighteenth century.

In the summer of 1897 the prince took an active part in the celebration of Queen

Victoria's diamond jubilee. The queen gave public expression of her maternal regard, which

no differences on political or private matters effectually diminished, by creating in his behalf a new dignity—that of Grand Master and Principal Grand Cross of the Order of the Bath. In all the public festivities the prince filled a chief part. Among the most elaborate private entertainments which he attended was a fancy dress ball given by his friends the duke and duchess of Devonshire at Devonshire House, where the splendours recalled the prince's own effort of the same kind at Marlborough House in 1874.

But the prince was responsible for a lasting memorial of Queen Victoria's diamond jubilee in the form of a scheme for permanently helping the London hospitals to lessen their burden of debt. On 5 Feb. 1897 the prince in honour of the jubilee inaugurated a fund for the support of London hospitals to which would be received

The prince's hospital fund.

subscriptions from a shilling upwards. The prince became president of the general council, and a meeting at Marlborough House christened the fund 'The Prince of Wales's Hospital Fund for London.' Success was at once achieved. Within a year the donations amounted to 187,000*l.* and the annual subscriptions to 22,050*l.* The fund continued to flourish under the prince's and his friends' guidance until his accession to the throne, when it was renamed 'King Edward VII Hospital Fund,' and his son took his place as president. The effort has

conspicuously relieved the pecuniary strain on the chief London hospitals.

VIII

Three years and a half were to pass between the celebration of Queen Victoria's sixty years of rule and the end of her prolonged reign. French caricaturists insolently depicted the extreme senility which would distinguish the prince when his time for kingship would arrive. But the prince as yet showed no loss of activity and no narrowing of interest. As soon as the diamond jubilee festivities ended the prince and princess proved their liking for modern music by attending the Wagner festival at Baireuth (Aug. 1897). Thence the prince went on his customary holiday to Homburg, and on his way home visited his

sister the Empress Frederick at Cronberg. One of those recurring seasons of coolness was dividing his nephew the German emperor and himself. Private and public events alike contributed to the disagreement. There was a renewal of differences between the emperor and his mother, and the emperor had imprudently expressed by telegram his sympathy with President Kruger of the Transvaal Republic, who was resisting the demands of the British government in South Africa. The emperor disclaimed any intention of wounding English susceptibilities. He deemed himself misunderstood. The prince, however, for the time absented himself from Berlin on his foreign travels, and did not recommend himself to German public favour by an emphatic declaration of unalterable personal devotion to France, at the moment that a period of estrangement menaced that country and England. In the spring of 1898, when the two governments were about to engage in a sharp diplomatic duel over their relations in north Africa, the prince laid the foundation stone of a new jetty at Cannes and pleaded in public the cause of peace.

Varied anxieties and annoyances were accumulating. The ambiguity of his position at home was brought home to him in April, when he was requested to preside, for the first and only time in his career of heir-apparent, over the privy council. Since 1880, when Queen Victoria had made it her practice to spend the spring in the

The prince
and the privy
council.

Riviera, a commission had been privately drafted empowering the prince and some of the ministers to act, in cases of extreme urgency, on her behalf in her absence from the council.

Hitherto the commission had lain dormant, and the prince merely learnt by accident that such a commission existed and that his name was included in it. The concealment caused him annoyance. Now in April 1898, on the outbreak of the Spanish-American war, it was necessary to issue a proclamation of neutrality, and he was called upon to fill the queen's place in the transaction.

In the summer an accidental fall while staying at Waddesdon with his friend Baron Ferdinand de Rothschild caused a fracture of his kneecap (18 July 1898), and disabled him for two months. The illness of his next brother, Alfred, now become duke of Saxe-Coburg, was a serious grief. His relations with the duke, who died on 30 July 1900, had been close from boyhood, and the wrench with the past was severe. At the end of 1899 the gloom had been lightened by the arrival, after a four years' absence, of the German emperor on a friendly visit to Queen Victoria and the prince. The episode was an eloquent proof that there was no enduring enmity between the emperor and either his uncle or his uncle's country, whatever were the passing ebullitions of irritation. The emperor arrived just after the

The German
emperor's
visit,

outbreak of the South African war, in the course of which the prince was to learn that even in France there were limits to the effective exercise of his personal charm.

During 1899 and 1900 misrepresentations of England's aim in the war excited throughout Europe popular rancour which involved the prince, equally with his mother and the English ministers, in scurrilous attack. The war was denounced as a gross oppression on England's part of a weak and innocent people. The emperor's presence in England when the storm was breaking was a welcome disclaimer of approval of the abusive campaign. But in the spring of 1900 the prince suffered practical experience of the danger which lurked in the continental outcry. On his way to Denmark, while he and the princess were seated in their train at the Gare du Nord, Brussels, a youth, Sipido, aged fifteen, fired two shots at them (4 April).

Attempt on
the prince's
life, 4 April
1900.

They were unhurt, and the prince showed the utmost coolness. The act was an outcome of the attacks on England which were prompted by the Boer war. It was the only occasion on which any nefarious attempt was made on the prince's life. The sequel was not reassuring to British feeling. Sipido and three alleged accomplices were put on their trial at Brussels

on 1 July. The three associates were acquitted, and Sipido was held irresponsible for his conduct. Ordered to be kept under government supervision till he reached the age of twenty-one, he soon escaped to France, whence he was only extradited by the Belgian government after a protest by British ministers. There was much cause for friction at the time between England and Belgium. Not only had the Boer war alienated the Belgian populace like the other peoples of Europe, but the old cordiality between the royal houses had declined. The close

Strained relations with Leopold II, king of the Belgians.

intimacy which had bound Queen Victoria to her uncle the late king, Leopold I, had been echoed in the relations between

his successor King Leopold II and the prince. But the queen's sense of propriety was offended by reports of her royal cousin's private life, and the charges of cynical cruelty to which his policy in the Congo gave rise in England stimulated the impatience of the English royal family. After the outrage at Brussels, the prince and King Leopold II maintained only the formalities of social intercourse. The hostile sentiment which prevailed in Europe deterred the prince from attending the Paris International Exhibition of 1900. This was the only French venture of the kind in the long series of the century which he failed to grace with his presence. As in the case of 1878 he was president of the royal commission for the British section, and he was active in the preliminary organisation. During 1899 he watched in Paris the beginnings of the exhibition buildings. But the temper of France denied him the opportunity of seeing them in their final shape.

IX

Early in 1901 the prince's destiny was at length realised. For some months Queen Victoria's strength had been slowly failing. In the middle of January 1901 physical prostration rapidly grew, and on 20 Jan. her state was critical. The Prince of Wales arrived at Osborne on that day, and was with his mother as life ebbed away. Her last articu-

Queen Victoria's death, 22 Jan. 1901.

late words were an affectionate mention of his name. Whatever had occasioned passing friction between them, her maternal love never knew any diminution. The presence of his nephew, the German emperor, at the death-bed was grateful to the prince and to all members of his family. Queen Victoria died at Osborne at half-past six on the evening of Tuesday, 22 Jan. 1901.

Next morning the new king travelled to London, and at a meeting of the privy council at St. James's Palace took the oaths of sovereignty under the style of Edward VII. 'I am fully determined,' he said, 'to be a constitutional sovereign in the strictest sense of the word, and as long as there is breath in my body to work for the good and amelioration of my people.' He explained that he had resolved to be known by the name of Edward, which had been borne by six of his ancestors, not that he undervalued the name of Albert, but that he desired his father's name to stand alone.

King Edward's first speech as sovereign, deliberately and impressively spoken, was made without any notes and without consultation with any minister. According to his habit, he had thought it over during his journey, and when he had delivered it he embarrassed the officials by his inability to supply them with a written copy. He had expected a report to be taken, he explained. The published words were put together from memory by some of the councillors and their draft was endorsed by the king. The episode, while it suggested a certain unfamiliarity on his part with the formal procedure of the council, showed an independent sense of his new responsibilities. A few days later (29 Jan. 1901) the king issued appropriate addresses to the army and the navy, to his people of the United Kingdom, to the colonies, and to India.

In the ceremonies of Queen Victoria's funeral (2-4 Feb.) the king acted as chief mourner, riding through London behind the bier from Victoria station to Paddington, and walking through the streets of Windsor

Queen Victoria's funeral.

to St. George's Chapel, where the coffin was first laid. On Monday he again walked in procession from the Albert Memorial Chapel at Windsor to the burial place at the Royal Mausoleum at Frogmore. His nephew, the German emperor, was at his side throughout the funeral ceremonies. The emperor's brother, Prince Henry of Prussia, and his son the crown prince were also in the mourning company. Almost the first act of the king's reign was to give public proof of his good relations with his royal kinsmen of Germany. It had been Queen Victoria's intention to invest the crown prince her great-grandson with the order of the Garter. This intention the king now carried out; at the same time he made the

emperor a field-marshal and Prince Henry a vice-admiral of the fleet. By way of marking his chivalric resolve to associate his wife with all the honour of his new status, he devised at the same time a new distinction in her behalf, appointing her Lady of the Garter (12 Feb. 1901).

His first public function as sovereign was to open in state the new session of parliament on 14 Feb. 1901. This royal duty, which the queen had only performed seven times in the concluding forty years of her reign and for the last time in 1886, chiefly brought the sovereign into public relation with the government of the country. The king during his nine years of rule never omitted the annual ceremony, and he read for himself the speech from the throne. That practice had been dropped by the queen in 1861, and had not been resumed by her.

Queen Victoria had been created Empress of India in 1876, and King Edward was the first British sovereign to succeed to the dignity of Emperor of India. By Act of Parliament (1 Edw. VII, cap. 15) another addition was now made to the royal titles with a view to associating the crown for the first time directly with the colonial empire.

His new style.

He was declared by statute to be King not only of Great Britain and Ireland but of 'the British dominions beyond the seas.' On the new coinage he was styled 'Britt. Omn. Rex,' in addition to the old designations.

Queen Victoria left the new king her private residences of Osborne and Balmoral,

His pecuniary position.

but her pecuniary fortune was distributed among the younger members of her family. The king was stated on his accession to have no debts and no capital. Gossip which erroneously credited him with an immense indebtedness ignored his business instincts and the good financial advice which he invariably had at his disposal in the inner circle of his friends. Like Queen Victoria he relinquished on his accession the chief hereditary revenues of the crown, which had grown in value during her reign from 245,000*l.* to 425,000*l.* As in 1837, the duchies of Lancaster and Cornwall were held, despite radical misgivings, to stand on another footing and to be royal appanages in the personal control of the royal family. The duchy of Lancaster, which produced 60,000*l.* a year, was reckoned to be the sovereign's private property, and the duchy of Cornwall, which was of like value, that of the heir-

apparent. On his ceasing to be Prince of Wales the parliamentary grant to him of 40,000*l.* lapsed, while the duchy of Cornwall passed to his son. The king's income, in the absence of a new parliamentary grant, was thus solely the 60,000*l.* from the duchy of Lancaster. The Act of 1889, which provided 36,000*l.* a year for his children, became void six months after the late sovereign's death.

On 5 March a royal message invited the House of Commons to make pecuniary provision for the king and his family. A select committee of twenty-one was appointed on 11 March 1901 to consider the king's financial position. The Irish nationalists declined to serve, but Henry Labouchere represented the radical and labour sections, to whom the cost of the monarchy was a standing grievance. The committee was chiefly constituted of the leaders of the two chief parties in the state. It was finally decided to recommend an annual grant of 470,000*l.*, a sum which was 85,000*l.* in excess of the income allowed to the late queen. The increase was justified on the ground that a larger sum would be needed for the hospitalities of the court. No special grant was made to Queen Alexandra, but it was understood that 33,000*l.* would be paid her out of that portion (110,000*l.*) of the total grant allotted to the privy purse; 70,000*l.* was secured to her in case of widowhood. The king's son and heir, George, duke of York, who now became duke of Cornwall and York, received an annuity of 20,000*l.*, and his wife, the duchess, received one of 10,000*l.*, with an additional 20,000*l.* in case of widowhood; the three daughters of the king were given a joint annual income of 18,000*l.* Some other expenses, like the repair of the royal palaces (18,000*l.*) and the maintenance of royal yachts (23,000*l.*), were provided for independently from the Consolidated Fund. The resolutions to these effects were adopted by 250 to 62. They were resisted by the Irish nationalists and by a few advanced radicals, including Henry Labouchere, Mr. Keir Hardie, and Mr. John Burns. Mr. Burns warmly deprecated a royal income which should be comparable with the annual revenues of Barney Barnato [q. v. Suppl. I], Alfred Beit [q. v. Suppl. II], or Mr. Andrew Carnegie. The civil list bill which embodied the resolutions was finally read a third time on 11 June 1901 by 370 against 60, and it became law on 2 July (1 Edw. VII, cap. 4). The generous terms were accepted by the nation with an enthusiasm which proved the sureness of the crown's

popularity and augured well for the new reign. The Irish opposition was mainly due to a feeling of resentment at the refusal of the government to alter the old terms of the sovereign's accession oath, in which while declaring himself a protestant he cast, in the view of Roman catholics, insult on their faith. Nowhere was there any sign of personal hostility to the new ruler.

The king came to the throne in his sixtieth year endowed with a personality of singular charm and geniality, large worldly experience, wide acquaintance with men and women, versatile interests in society and philanthropy, enthusiasm for sport, business habits, and a resolve to serve his people to the best of his ability. Among the king's friends there were fears that he would prove himself unequal to his new station, but the anticipations were signally belied. His mother's deliberate

The king's conduct in his new station. exclusion of him from political work placed him under some disadvantages. He was a stranger to the administrative

details of his great office and he was too old to repair the neglect of a political training. Nor was he of an age at which it was easy to alter his general mode of life. He cherished a high regard for his mother's statesmanship and political acumen, but he had no full knowledge of the precise manner in which they had been exercised. At the outset there were slight indications that he over-estimated the sovereign's power. In consultation over a king's speech he seemed in some peril of misinterpreting the royal function. But his action was due to inexperience and to no impatience of ministerial advice. Despite his share in two royal commissions he had never studied deeply domestic legislation, and about it he held no well-defined views. He had watched more closely the course of foreign politics. His constant habit of travel, his careful maintenance of good relations with his large foreign kindred, his passion for making the personal acquaintance of interesting men and women on the continent, gave him much knowledge of foreign affairs both political and social. Yet the diplomatic details of foreign policy lay outside his range of study. While he was desirous of full information from his ministers, he soon came to view them as responsible experts whose procedure was rarely matter for much personal comment. The minutes of each cabinet meeting, with which the prime minister supplied the sovereign, usually provoked from Queen Victoria's pen voluminous criticism. King

Edward VII usually accepted the prime minister's notes without remark, or if he was moved to avowal of acquiescence or remonstrance, he resorted to a short personal interview.

It's relations with ministers. The immense correspondence between the sovereign and the prime minister which continued during Queen Victoria's reign almost ceased, and its place, so far as it was filled at all, was taken by verbal intercourse, of which the king took no note. To appointments and the bestowal of honours he paid closer attention than to legislative measures or details of policy, and he was never neglectful of the interests of his personal friends, but even there he easily and as a rule gracefully yielded his wishes to ministerial counsel. His punctual habits enabled him to do all the formal business that was required of him with despatch. In signing papers and in dealing with urgent correspondence he was a model of promptitude. No arrears accumulated, and although the routine tried his patience, he performed it with exemplary regularity. He encouraged more modern technical methods than his mother had approved. He accepted type-written memoranda from ministers, instead of obliging them as in the late reign to write out everything in their own hands. He communicated with ministers through his chief secretary more frequently than had been customary before. Although he was for most of his life a voluminous letter writer, his penmanship greatly deteriorated in his last years and grew difficult to decipher. When the situation did not admit of an oral communication, he preferred to use a secretary's pen.

It was inevitable that his place in the sphere of government should differ from that of his mother. Queen Victoria for the greater part of her reign was a widow and a recluse, who divided all her thought

Contrasts between his rule and that of his mother. with unremitting application between politics and family affairs. The new king had wider interests. Without his

mother's power of concentration or her tenacity of purpose, he distributed his energies over a more extended field. On acceding to his new dignity there was no lessening of his earlier devotion to sport, society, and other forms of amusement. He was faithful to his old circle of intimate friends and neither reduced nor extended it. His new official duties failed to absorb his whole attention. But it was in the revived splendours and developments of royal ceremonial that to the public eye

the new reign chiefly differed from the old. Though Queen Victoria had modified her seclusion in her latest years, her age and her dislike of ceremonial functions had combined to maintain the court in much of the gloom in which the prince consort's death had involved it. The new king had a natural gift for the exercise of brilliant hospitality, and he sought to indulge his taste with liberality. London became the headquarters of the court for the first time for forty years. No effort was spared to make it a prominent feature of the nation's social life. Over the ceremonial and hospitable duties of sovereignty the king exercised a full personal control, and there he suffered no invasion of his authority.

The first year of the new reign was a year of mourning for the old. In its course it dealt the royal family another sorrow-

ful blow. The king's eldest sister, the Empress Frederick, was suffering from cancer. On

23 Feb., within a month of his accession, the king left England for the first time during the reign to pay her a visit at Friedrichshof, her residence near Cronberg. They did not meet again. She died on 5 Aug. following. The king with the queen now crossed the Channel again to attend the funeral at Potsdam. Then the king went, according to his custom of thirty years' standing, to a German watering place, Homburg. No change was apparent there in his old habits which ignored strict rules of royal etiquette. Subsequently he joined the queen at Copenhagen, where he met his wife's nephew, the Tsar Nicholas of Russia, and the tsar's mother, the dowager empress, sister of Queen Alexandra. It was a family gathering of the kind which the king had long since been accustomed to attend periodically. As of old, it was wholly innocent of diplomatic intention. But the increased publicity attaching to the king's movements in his exalted station misled some domestic and many foreign observers into the error of scenting a subtle diplomatic purpose in his established practice of exchanging at intervals visits of courtesy with his royal kindred on the European continent. With his insatiable curiosity about men and things, he always liked frank discussion of European politics with foreign statesmen, and he continued the practice till his death. But such debate was scarcely to any greater degree than in earlier years the primary aim of his foreign tours.

Meanwhile the king accepted without change the arrangements already made for

a colonial tour of his son and his daughter-in-law. On 17 March he took leave of the duke and duchess of Cornwall and York on

their setting out for Australia in the Ophir in order to open the new commonwealth parliament at Melbourne. On their return journey they visited Natal and Cape Colony, and thence traversed the whole of Canada. The king after a first visit as sovereign to Scotland met them on their arrival at Portsmouth on 1 Nov., and declared the tour to be a new link in the chain which bound the colonial empire to the throne. A few days later he created by letters patent the duke of Cornwall Prince of Wales. It was not easy, suddenly, to break the long association of that title with himself.

On 22 Jan. 1902 the year of mourning for the late queen ended, and court festivities began on a brilliant scale. Buckingham Palace and Windsor Castle had been thoroughly overhauled and newly decorated, the former becoming the chief residence of the court. Windsor saw comparatively little of the new king. Sandringham remained his country residence, and he spent a few weeks each autumn at Balmoral, but Osborne he abandoned, giving it over to the nation as a convalescent home for army and navy officers (9 Aug. 1902). Although little of his time was spent at Windsor or Balmoral, he greatly improved the facilities of sport in both places in the interests of his guests.

The first levee of the new reign was held on 11 Feb. at St. James's Palace, and the first evening court on 14 March at Buckingham Palace.

The end of mourning. The court initiated a new form of royal entertainment; it was held at night amid great magnificence, and replaced the afternoon drawing-rooms of Queen Victoria's reign. A tour in the west of England during March gave the king and queen an opportunity of showing their interest in the navy. At Dartmouth the foundation stone of the new Britannia Naval College was laid, while the queen launched the new battleship Queen at Devonport and the king laid the first plate of the new battleship Edward VII. A few weeks later he made a yachting tour off the west coast, paying a visit to the Scilly Isles on 7 April. The expedition followed a course with which he had familiarised himself in early youth.

Throughout the early period of the reign the nation's political horizon was

clouded. Not only was the war in South Africa still in progress, but the alienation of foreign public opinion, which was a fruit of the conflict, continued to embarrass England's foreign relations. Neither in France nor Germany had scurrilous caricature of the king ceased. The king had always shown the liveliest sympathy with the British army in the field, and he did not conceal his resentment at the attacks made in England by members of the liberal party

The close of the South African war, 31 May 1902.

during 1901 on the methods of the military operations. On 12 June he presented medals to South African soldiers, and then conferred the same distinction on both Lord Roberts and Lord Milner, who was on leave in England discussing the situation. The king, though he did not interfere with the negotiations, was frank in his expressions of anxiety for peace. It was therefore with immense relief that he received the news that the pacification was signed in South Africa on 31 May 1902. He at once sent messages of thanks to the English plenipotentiaries, Lord Milner, high commissioner for South Africa, and Lord Kitchener, who had lately been in chief military command, and to all the forces who had been actively engaged in the war. On 8 June the king and queen attended a thanksgiving service in St. Paul's.

X

The peace seemed an auspicious prelude to the solemn function of the coronation, which had been appointed for 26 June 1902. The king warmly approved proposals to give the formality exceptional magnificence. Since the last coronation sixty-four years ago the conception of the monarchy had broadened with the growth of the colonial empire. The strength of the crown now lay in its symbolic representation of the idea of imperial unity. There were anachronisms in the ritual, but the central purpose well served the present and the future. Representatives were invited not only from all the colonies but, for the first time, from all manner of administrative institutions—county councils, borough councils, learned societies, friendly societies, and railway companies. The king desired to render the event memorable for the poor no less than for the well-to-do. He gave the sum of 30,000*l.* for a commemorative dinner to 500,000 poor persons of London, while the queen undertook to entertain the humble

class of general servants in the metropolis. Two other episodes lent fresh grace to the ceremony. The king announced his gift of Osborne House to the nation, and he instituted a new order of merit to be bestowed on men of high distinction in the army, navy, science, literature, and art. The order was fashioned on the lines of the Prussian 'pour le mérite' and was a more comprehensive recognition of ability than was known officially in England before. The total official cost of the coronation amounted to the large sum of 359,289*l.* 5*s.*, a sum greatly in excess of the 200,000*l.* voted by parliament for Queen Victoria's coronation (cf. *Blue Book* (382), 1909).

A few days before the date appointed for the great ceremony rumours of the king's ill-health gained currency and were denied. But on 24 June 1902, June, two days before Coronation Day, it was announced, to the public consternation, that the king was suffering from perityphlitis. An operation was performed the same morning with happy results, and during the next few weeks the king made a steady recovery.

While still convalescent he had his first experience of a change of ministry. Lord Salisbury, whose failing health counselled retirement from the office of prime minister, had long since decided to resign as soon as peace in South Africa was proclaimed. But when that happy incident arrived, he looked forward to retaining his post for the six weeks which intervened before the coronation. The somewhat indefinite postponement of the ceremony led him to carry out his original purpose on 11 July 1902. On his recommendation his place was taken by Lord Salisbury's nephew, Mr. Balfour, who was already leader of the House of Commons. There was no immediate change in the complexion or the policy of the government, and no call for the sovereign's exertion. Although there was little in common between the temperament and training of the king and his first prime minister, the king was sensible of the value of Lord Salisbury's experience and wisdom, and the minister, whose faith in the monarchical principle was strong, showed him on his part a personal deference which he appreciated. The intellectual brilliance of Lord Salisbury's successor often dazzled the king, but a thoroughly constitutional conception on each side of their respective responsibilities kept a good understanding alive between them.

The king's illness, 24 June 1902.

Lord Salisbury's resignation, 11 July 1902. Mr. Balfour prime minister.

Plans for coronation.

On 9 August the postponed coronation took place in Westminster Abbey. The ritual was somewhat abbreviated, but the splendour scarcely diminished. ^{The postponed coronation, 9 Aug.} Although many of the foreign guests had left London, the scene lost little of its impressiveness. The crown was placed on the king's head by Frederick Temple, archbishop of Canterbury. Queen Alexandra was crowned at the same time by W. D. Maclagan, archbishop of York. There followed a series of public functions which aimed at associating with the ceremony various sources of imperial strength. An investiture and parade of colonial troops took place on 12 Aug., a review of Indian troops on 13 Aug., and a naval review at Spithead on 16 Aug. Next day at Cowes the king received visits from the Boer generals Delarey, De Wet, and Botha, who had greatly distinguished themselves in the late war and had come to England to plead on behalf of their conquered country for considerate treatment. The shah of Persia arrived to pay the king his respects three days later. On 22 Aug. the king and queen started for Scotland in the royal yacht *Victoria and Albert*; they went by the west coast, and visited on the passage the Isle of Man. On the return of the court to the metropolis, the king made a royal progress through south London (24 Oct.), and lunched with the lord mayor and corporation at the Guildhall. Two days later he attended at St. Paul's Cathedral a service of thanksgiving for his complete restoration to health.

With the close of the South African war England began to emerge from the cloud of animosity in which the popular sentiment of a great part of Europe had enveloped her. There was therefore every reason why the king

^{The king's foreign tours.}

should now gratify his cosmopolitan sympathies and his lively interest in his large circle of kinsmen and friends abroad by renewing his habit of foreign travel. Save during the pro-Boer outbreak of ill-will, he had always been a familiar and welcome figure among all classes on the continent. His cheering presence invariably encouraged sentiments of good-will, and it was congenial to him to make show of a personal contribution to an improvement of England's relations with her neighbours, and to a strengthening of the general concord. He acknowledged the obligation that lay on rulers and statesmen of preserving European peace; and he wished England, subject to a fit recognition of her rights, to stand well with the

world. At the same time his constitutional position and his personal training disqualified him from exerting substantive influence on the foreign policy which his ministers alone could control. He repeatedly gave abroad graceful expression of general approval of his ministers' aims, and his benevolent assurances fostered a friendly atmosphere, but always without prejudice to his ministers' responsibilities. He cannot be credited with broad diplomatic views, or aptitude for technical negotiation. While he loved conversation with foreign statesmen, his interest in foreign lands ranged far beyond politics. In the intimacies of private intercourse he may have at times advanced a personal opinion on a diplomatic theme which lacked official sanction. But to his unguarded utterances no real weight attached in official circles either at home or abroad. His embodiment in foreign eyes of English aspirations inevitably exaggerated the popular importance of his public activities abroad. The foreign press and public often made during his reign the error of assuming that in his frequent interviews with foreign rulers and statesmen he was personally working out a diplomatic policy of his own devising. Foreign statesmen and rulers knew that no subtler aim really underlay his movements than a wish for friendly social intercourse with them and the enjoyment of life under foreign skies, quite unencumbered by the burden of diplomatic anxieties.

In his eyes all rulers of state were bound together by ties of affinity, and these ties

^{His kinship with foreign rulers.}

were strengthened for him by many bonds of actual kinship. At his accession the rulers of Germany, Russia, Greece, and Portugal were related to him in one or other degree, and two additions were made to his large circle of royal relatives while he was king. In October 1905 his son-in-law, Prince Charles of Denmark, who had married his youngest daughter, Maud, in 1896, was elected king of Norway (as Haakon VII) when that country severed its union with Sweden; while on 31 May 1906 Alfonso XIII, king of Spain, married Princess Ena of Battenberg, daughter of the king's youngest sister, Princess Beatrice. There was good justification for the title which the wits of Paris bestowed on him of 'l'oncle de l'Europe.' Most of the European courts were the homes of his kinsfolk, whose domestic hospitality was always in readiness for him. In return it gratified his hospitable instinct to

welcome his royal relatives beneath his own roof.

To no country of Europe did his attitude as king differ from that which he had adopted while he was prince. To France his devotion was always pronounced. He had delighted in visiting Italy, Russia, Austria, and Portugal. His relations with Germany had always stood on a somewhat peculiar footing, and they, too, underwent small change. They had been coloured to a larger extent than his other foreign connections by the personal conditions of family kinship. Since the Danish war, owing to the influence of his wife and her kindred, he had never professed in private much sympathy with German political ambitions. The brusque speech and manner, too, with which Bismarck invariably treated the English royal family had made German policy uncongenial to them. Despite the king's affection for his nephew, the German emperor, short seasons of domestic variance between the two were bound to recur, and the private differences encouraged the old-standing coolness in political sentiment. But the king was never long estranged from his nephew. He was thoroughly at home with Germans and when he went among them evoked their friendly regard. No deliberate and systematic hostility to the German people could be truthfully put to the king's credit. His personal feeling was very superficially affected by the mutual jealousy which, from causes far beyond his control, grew during his reign between the two nations.

While ambitious to confirm as king the old footing which he had enjoyed on the European continent as prince, his conservative instinct generated involuntary misgivings of England's friendship with peoples outside the scope of his earlier experience. He was startled by so novel a diplomatic step as the alliance with Japan, which was concluded during the first year of his reign (12 Feb. 1902) and was expanded later (27 Sept. 1905). But he was reassured on learning of the age and dignity of the reigning Japanese dynasty. When the Anglo-Japanese arrangement was once effected he lent it all the advantage of his loyal personal support. He entertained the Japanese Prince and Princess Arisugawa on their visit to London, and conferred on the prince the distinction of G.C.B. (27 June 1905). In 1906, too, after the Russo-Japanese war, he admitted to the Order of Merit the Japanese heroes of the conflict,

Field-marshal Yamagata and Oyama, and Admiral Togo.

XI

Family feeling solely guided the king's first steps in the foreign arena. After his eldest sister's death the king and emperor made open avowal of mutual affection.

On 26 Jan. 1902 the Prince of Wales was the emperor's guest at Sandringham, at Berlin for his birthday, and on the king's coronation the emperor made him an admiral of the German fleet. At the end of the year, on 8 Nov. 1902, the emperor arrived at Sandringham to attend the celebration of his uncle's sixty-first birthday. He remained in England twelve days, and had interviews with the prime minister and the foreign secretary. Details of diplomacy were not the theme of the uncle and nephew's confidences. Rumours to a contrary effect were current early next year, when the two countries made a combined naval demonstration in order to coerce the recalcitrant president of the Venezuelan republic, who had defied the just claims of both England and Germany. It was imagined in some quarters that the king on his own initiative had committed his ministers to the joint movement in an informal conversation with the emperor at Sandringham. Much wrangling had passed between the statesmen and the press of the two countries. But the apparently sudden exchange of a campaign of altercation for concerted action to meet a special emergency was no exceptional diplomatic incident.

The spring of 1903 saw the first foreign tour of the king's reign and his personal introduction to the continent in his new rôle. On 31 March 1903 he left Portsmouth harbour on board the royal yacht the Victoria and Albert, on a five weeks' cruise, in the course of which he visited among other places Lisbon, Rome, and Paris. The expedition was a vacation exercise, which gave him the opportunity of showing friendly courtesy to foreign rulers and peoples. He went on his own initiative. His travelling companions were members of his own household, who were personal friends. There was also in his retinue a member of the permanent staff of the foreign office, the Hon. Charles Hardinge, assistant under-secretary there. Mr. Hardinge, who was made K.C.V.O. and K.C.M.G. in 1904, and Baron Hardinge of

The status in his suite of Mr. Charles Hardinge.

Penshurst in 1910, served as British ambassador at St. Petersburg from 1904 to 1906 and was permanent under-secretary at the foreign office from 1906 till the king's death. While he was attached to the foreign office, he usually accompanied the king on his foreign tours, and the precise capacity in which he travelled with the sovereign occasionally raised a constitutional controversy, which the true facts deprived of genuine substance. The presence of the foreign minister or at any rate of a cabinet minister was necessary to bring any effective diplomatic negotiation within the range of the king's intercourse with his foreign hosts. Mr. Hardinge was personally agreeable to the king. He was well fitted to offer advice or information which might be of service in those talks with foreign rulers or statesmen on political themes in which the sovereign occasionally indulged. He could also record suggestions if the need arose for the perusal of the foreign minister. In debates in the House of Commons some ambiguity and constitutional irregularity were imputed to Mr. Hardinge's status in the king's suite, but it was made clear that no ministerial responsibilities devolved either on the king or on him during the foreign tours, and that the foreign policy of the country was unaffected by the royal progresses (*Hansard*, 23 July 1903 and 4 June 1908).

The king's route of 1903 was one with which he was familiar. His first landing-

At Lisbon.

place was Lisbon, where he was the guest of King Carlos. The two monarchs complimented each other on their lineal ties and on the ancient alliance between their two countries. After short visits to Gibraltar and Malta, the king disembarked at Naples on 23 April, and four days later reached Rome. The

At Rome.

good relations which had always subsisted between England and Italy had been little disturbed by pro-Boer prejudice. The Roman populace received King Edward with enthusiasm, and he exchanged with King Victor Emanuel professions of warm friendship. With characteristic tact the king visited Pope Leo XIII at the Vatican, where he had thrice before greeted Pope Pius IX. From Rome the king passed with no small gratification to his favourite city

At Paris.

of Paris for the first time after more than three years. He came at an opportune moment. The French foreign minister, M. Delcassé, had for some time been seeking a diplomatic understanding with England, which

should remove the numerous points of friction between the two countries in Egypt, Morocco, and elsewhere. The king's ministers were responsive, and his visit to Paris, although it was paid independently

of the diplomatic issue, was well calculated to conciliate French public opinion, which was slow in shedding its

pro-Boer venom. On the king's arrival the temper of the Parisian populace looked doubtful (1 May), but the king's demeanour had the best effect, and in his reply to an address from the British chamber of commerce on his first morning in Paris he spoke so aptly of the importance of developing good relations between the two countries that there was an immediate renewal of the traditional friendliness which had linked him to the Parisians for near half a century.

The king and President Loubet.

The president, M. Loubet, and M. Delcassé did everything to enhance the cordiality of the welcome. The president entertained the king at a state banquet at the Elysée and the speeches of both host and guest gave voice to every harmonious sentiment. The king accompanied the president to the Théâtre Français, to a military review at Vincennes, and to the races at Longchamps. He did not neglect friends of the old régime, and everywhere he declared his happiness in strengthening old ties. His words and actions closely resembled those which marked his visit to Paris under Marshal MacMahon's auspices in 1878. But, in view of his new rank and the recent political discord, the episode was generally regarded as the propitious heralding of a new departure. On 5 May he returned to London and was warmly received.

The king lost no time in returning the hospitalities of his foreign hosts. On 6 July

President Loubet in London, 6 July 1903.

President Loubet came to London to stay at St. James's Palace as the king's guest, and M. Delcassé was his companion.

Friendly negotiations between the two governments took a step forward. On

The king's royal guests.

17 Nov. the king and queen of Italy were royal guests at

Windsor, and were followed just a year later by the king and queen of Portugal. There was nothing in the visits of the foreign sovereigns to distinguish them from the ordinary routine of courtesy. The visit of the president of the French republic was unprecedented. It was proof of the desire of France to make friends with England and of the king's sympathy

with the aspiration. M. Delcassé's policy soon bore practical fruit; on 14 Oct. 1903 an arbitration treaty was signed by the two governments. Its provisions did not go far, but it indicated a new spirit in the international relation. The Anglo-French agreement, which was concluded on 8 April 1904 between M. Delcassé and Lord Lansdowne, the English foreign secretary, was an instrument of genuine consequence. It formally terminated the long series of difficulties which had divided England and France in many parts of the world, and was a guarantee against their recurrence. The king's grace of manner both as guest and host of President Loubet helped to create a temper favourable to the 'entente cordiale.' But no direct responsibility for its initiation or conclusion belonged to him. Some French journalists who were oblivious of his aloofness from the detail of state business placed the understanding to his credit, and bestowed on him the title of 'le roi pacificateur.' The title is symbolically just but is misleading if it be taken to imply any personal control of diplomacy.

It was not the king's wish to withhold from Germany and the German emperor, whatever the difficulties between the two governments, those attentions which it had been his habit to exchange with his nephew from the opening of the emperor's reign. On 29 June 1904 the king sailed for Kiel in his yacht *Victoria* and Albert, attended by an escort of naval vessels. He was received by the emperor with much cordiality, visited under his nephew's guidance the German dockyards, attended a regatta off Kiel, and lunched at Hamburg with the burgomaster. In his intercourse with the German emperor it flattered the king's pride to give to their meetings every show of dignity, and contrary to his usual practice a cabinet minister now joined his suite. The presence of Lord Selborne, first lord of the admiralty, gave the expedition something of the formal character of a friendly naval demonstration, but no political significance attached to the interchange of civilities. An arbitration treaty with Germany of the same tenour as that with France was signed on 12 July 1904, but such a negotiation was outside the king's sphere of action. The failure of the Kiel visit to excite any ill-feeling in France indicated the purely external part which his charm of manner and speech

was known to play in international affairs.

The king's habitual appetite for foreign tours was whetted by his experience in the spring of 1903. While constant movement characterised his life at home, and a business-like distribution of his time enabled him to engage in an unending round of work and pleasure through the greater part of his reign, he spent on an average some three months of each year out of his dominions. His comprehensive travels did not embrace the colonies or dependencies outside Europe, but his son and heir, who had visited the colonies in 1901, made a tour through India (Nov. 1905–May 1906), and the king thus kept vicariously in touch with his Indian as well as with his colonial subjects. His travelling energy was freely lavished on countries nearer at hand. Five or six weeks each spring were spent at Biarritz, and a similar period each autumn at Marienbad. These sojourns were mainly designed in the interests of health. But with them were combined four cruises in the Mediterranean (1905, 6, 7, and 1909) and one cruise in the North Sea (1908), all of which afforded opportunities of pleasurable recreation, and of meetings with foreign rulers. In addition, he paid in the winter of 1907 a visit to Prussia and in the summer of 1908 one to Russia. Such frequent wanderings from home greatly increased the king's foreign reputation. It was only occasionally that he paid visits to foreign courts in the panoply of state. He travelled for the most part incognito. Few episodes, however, of his migrations escaped the notice of the journalists, who sought persistently to confirm the erroneous impression that he was invariably engaged on a diplomatic mission.

In Paris he resumed his old career. Each year, on his way to or from the south, he revisited the city, seeing old friends and indulging in old amusements. In meetings with the president of the French republic and his ministers he repeated his former assurances of amity. When M. Loubet retired in January 1906, he showed equal warmth of feeling for his successor, M. Fallières, to whom he paid the courtesy of a state visit (3 May). In the summer of 1908 he had the satisfaction of entertaining the new president in London with the same ceremony as was accorded to his predecessor in 1904. He was loyal to all his French acquaintances new and old. On M. Delcassé's

Range of the king's foreign travel.

His social circle in Paris.

fall from power in June 1905 he continued to exchange friendly visits with him during his later sojourns in the French capital. M. Clemenceau, who became prime minister in October 1906, and held office for nearly three years, was reared in Gambetta's political school, members of which had always interested the king since his pleasant meetings with their chief. M. Clemenceau was the king's guest at Marienbad on 15 Aug. 1909. Political principles counted for little in his social intercourse. He was still welcomed with the same cordiality by representatives of the fashionable royalist noblesse as by republican statesmen. A modest estimate was set on his political acumen when in informal talk he travelled beyond safe generalities. An irresponsible suggestion at a private party in Paris that the entente ought to be converted into a military alliance met with no response. Nor was much heed paid to some vague comment which fell from his lips on the intricate problem of the relations of the European powers on the north coast of Africa. But everyone in France appreciated his French sympathies and acknowledged his personal fascination.

His cruises to the Mediterranean during these years took him to Algiers in 1905, and to Athens and the Greek archipelago in April 1906; at Athens, where he was the guest of his brother-in-law, King

George I, he witnessed the Olympic games. In 1907 he landed from his yacht at Cartagena to meet the young king of Spain, who had married his niece the year before. Twice in the course of the same journey he also met the king of Italy, first at Gaeta (18 April), and secondly on the return journey by rail outside Rome (30 April). Two years later (1909) he enjoyed similar experiences, meeting the king of Spain at San Sebastian and Biarritz, and the king of Italy at Baiae; then he also visited Malta and Sicily, besides Pompeii and other environs of Naples. In April 1908 he cruised in the North Sea, and he visited in state the three northern courts of Denmark, Sweden, and Norway. In Denmark he

was a familiar figure. To the new kingdom of Norway, where his son-in-law reigned, he went for the first time. At Stockholm he had been the frequent guest of earlier Swedish kings while he was Prince of Wales.

During a single year, 1905, the German emperor and the king failed to exchange

hospitalities. Germany lay outside the ubiquitous route of his pleasure cruises, and circumstances deterred the king from deliberately seeking personal intercourse with his nephew. For the continued friction between Germany and

England the king had no sort of responsibility. But the emperor was for the moment inclined to credit his uncle with want of sympathy, and there followed one of those short seasons of estrangement to which their intimacy was always liable. Reports of unguarded remarks from the royal lips in the course of 1905 which reached the emperor from Paris had for him an unfriendly sound. Meanwhile the German press lost no opportunity of treating the king as a declared enemy of Germany. The king's voyages were held to be shrewd moves in a diplomatic game which sought German humiliation. The meetings of the king with the king of Italy were misconstrued into a personal attempt on the king's part to detach Italy from the triple alliance. The interview at Gaeta in April 1907 was

especially denounced as part of the king's Machiavellian design of an elaborate coalition from which Germany was to be excluded.

Adverse comment was passed on his apparent desire to avoid a meeting with the emperor. He was represented as drawing a cordon round Germany in the wake of his foreign journeys, and there were even German politicians who professed to regard him as a sort of Bismarck who used the velvet glove instead of the iron hand. He was deemed capable of acts of conciliation to suit his dark purposes. It was pretended that, with a view to soothing German irritation for his own objects, he by his own hand excised from the official instructions to the English delegates at the Hague conference (June 1907) his ministers' orders to raise the question of a general reduction of armaments. Serious French publicists well knew the king to be innocent of any such wiles. French caricaturists, who made merry over his 'fièvre voyageuse,' only echoed the German note in a satiric key. They pictured the king as a 'polype Européen,' which was clutching in its tentacles all the sovereigns of Europe save the German emperor, without prejudice to the international situation.

The German fancies were complete delusions. The king had no conception of any readjustment of the balance of European power. There was no serious quarrel

between emperor and king. The passing cloud dispersed. On 15 Aug. 1906 the

king visited the emperor at Friedrichshof, 15 Aug. 1906.

On his journey to Marienbad, and a general conversation which only dealt in part with politics put matters on a right footing. Sir Frank Lascelles, the English ambassador at Berlin, who had accompanied the king from Frankfort, was present at the interview. Just a year later (14 Aug. 1907) a like meeting at Wilhelmshöhe renewed the friendly intercourse, and in the same year the German emperor and empress paid a state visit to Windsor (11-18 Nov.). The emperor exerted all his charm on his host and his fellow guests. The formal speeches of both emperor and king abounded in felicitous assurances of good-will. During the emperor's stay at Windsor the king gathered about him as imposing an array of royal personages as ever assembled there. On 17 November he entertained at luncheon twenty-four men and women of royal rank, including the king and queen of Spain, Queen Amélie of Portugal, and many members of the Orleans and Bourbon families, who had met in England to celebrate the marriage of Prince Charles of Bourbon to Princess Louise of Orleans. The entertainment showed the king at the head of the royal caste of Europe, and attested his social power of reconciling discordant elements. The emperor remained in England till 11 December, sojourning privately at Highcliff near Bournemouth on leaving Windsor. Again on his way to Marienbad the king spent another pleasant day with the emperor at Friedrichshof (11 August 1908). King Edward returned

At Berlin, the German emperor's formal visit to Windsor in February 1909, when he and the queen stayed in Berlin.

For the second time during his reign a cabinet minister bore him company on a foreign expedition. At Kiel some four years earlier the first lord of the admiralty, Lord Selborne, had been in the king's suite when he met his nephew. The king was now attended by the earl of Crewe, secretary for the colonies. On neither of the only two occasions when a cabinet minister attended the king abroad did the foreign minister go. In both instances the minister's presence was of complimentary rather than of diplomatic significance, and was a royal concession to the German emperor's love of ceremonial observance. The king's Berlin expedition

did not differ from his visits of courtesy to other foreign capitals.

With the aged emperor of Austria, whom he had known and liked from boyhood, and in whose dominions he had often sojourned, the king was equally desirous of repeating friendly greetings in person. He paid the emperor a visit at Gmünden on his way out to Marienbad in August 1905, and on each of the two meetings with the German emperor at Cronberg, in August 1907 and August 1908, he went the next day to Ischl to offer salutations to Emperor Francis Joseph.

Meetings with the emperor of Austria, 1905-8.

All these meetings fell within the period of the king's usual autumn holiday. But on his second visit to Ischl the emperor of Austria entertained him to a state banquet, and Baron von Aerenthal, who was in attendance on his master, had some political conversation on affairs in Turkey and the Balkan provinces with Sir Charles Hardinge, who was in King Edward's retinue. But the king's concern with the diplomatic problem was remote. He was once more illustrating his zeal for ratifying by personal intercourse the wide bounds of his friendships with European sovereigns.

On the same footing stood the only visit which the king paid to the tsar of Russia during his reign. He made the visit to Russia, with the queen a special journey 9 June 1908. (9 June 1908) to Reval. It was the first visit ever paid to Russia by a British sovereign. It followed his cruise round the other northern capitals, and the king regarded as overdue the personal civility to the tsar, who was nephew of his wife, and to whom he was deeply attached. The tsar had been driven from his capital by revolutionary agitation and was in his yacht off Reval. The interview proved thoroughly cordial. French journalists hailed it with satisfaction; Germans scented in it a new menace, but the journey was innocent of diplomatic purpose. Objection was raised in the House of Commons that the king's visit showed sympathy with the tsar's alleged oppression of his revolutionary subjects. The suggestion moved the king's resentment. He acknowledged no connection between a visit to a royal kinsman and any phase of current political agitation. The unrest in Russia was no concern of his, and only awoke in him sympathy with the ruler whose life it oppressed. Unwisely the king took notice of the parliamentary criticism of his action, and cancelled the invitation to a royal garden party

(20 June) of three members of parliament, who had questioned his prudence. His irritation soon passed away, but his mode of avowing annoyance was denounced by the labour party 'as an attempt by the court to influence members of parliament.' It was the only occasion during the reign on which the king invited any public suspicion of misinterpreting his constitutional position. The criticism to which he was subjected was due to a misunderstanding of the character of his foreign tours, but the interpellation was no infringement of public right.

He was hardly conscious of the deep-seated feeling which the alleged tyranny of the Russian government had excited in many quarters in England. When in the

Protest against the king's friendliness with the tsar.

customary course of etiquette the king received the tsar as his guest at Cowes in August 1909 a fresh protest against his friendly attitude took the form of an influentially signed letter to the foreign secretary. But politics did not influence the king's relations with the tsar. The tsar was accompanied at Cowes by his foreign minister, M. Isvolsky; but as far as the king was concerned, the visit was solely a confirmation of old personal ties with the Russian sovereign, and lengthened impressively the roll of European rulers whom he sought to embrace in his comprehensive hospitality.

With the perilous vicissitudes of royalty the king naturally had a lively sympathy, and he suffered a severe shock on learning of the assassination of his friend and cousin and recent guest, King Carlos of Portugal,

The assassination of the king of Portugal, 2 Feb. 1908.

and of his son the crown prince in Lisbon on 2 Feb. 1908. Queen Amélie of Portugal had been a prominent figure in the great assembly of royal personages at Windsor less than three months before. By way of emphasising their intense sorrow the king and queen and other members of the royal family defied precedent by attending a requiem mass at St. James's church, Spanish Place, near Manchester Square, on 8 Feb. in memory of the murdered monarch. It was the first time that an English sovereign had attended a Roman catholic service in Great Britain since the Reformation. By the king's wish, too, a memorial service was held next day in St. Paul's cathedral, which he and his family also attended. Both houses of parliament presented an address to the crown expressing indignation and deep concern at the outrages. The king's heartfelt sympathy

went out to the new king of Portugal, the late king's younger son, Manoel, and in November next year he entertained the young monarch at Windsor, investing him with the order of the Garter, and greeting him at a state banquet on 16 Nov. as 'the heir of our oldest ally in history.' King Manoel was King Edward's last royal guest. There was some irony in the circumstance. King Manoel's royal career was destined to be brief, and within five months of King Edward's death his subjects established a republic and drove him from his throne to seek an asylum in England.

XII

Although so substantial a part of his reign was passed abroad, the king manifested activity in numberless directions when he was at home. From London, which was his headquarters, he made repeated expeditions into the country. As of old he was regular in attendance at Newmarket and other race meetings. Although he did not repeat during the reign his early triumphs on the turf, the successes of his horse Minoru, who won the Derby in 1909, greatly delighted the sporting public. He encouraged the opera and the theatres by frequent attendance. He was lavish in entertainment at Buckingham Palace and freely accepted hospitalities at the London houses of his friends. He was indefatigable in paying attention to foreign visitors to the capital, especially those of royal rank. When the duke of Abruzzi came at the end of 1906 to lecture to the Royal Geographical Society on his explorations of the Ruwenzori mountains in east Africa, the king was present and with impromptu grace and manifest desire to prove his interest in foreign policy moved a vote of thanks to the lecturer, whom he hailed as a kinsman of his ally the king of Italy (2 Jan. 1907). At stated seasons he was the guest for shooting or merely social recreation at many country houses, where he met at ease his unchanging social circle. From 1904 to 1907 he spent a week each January with the duke of Devonshire at Chatsworth. In the autumn he went a round of Scottish mansions.

While unremitting in his devotion to social pleasures, he neglected few of the philanthropic or other public movements with which he had already identified himself. Occasionally his foreign tours withdrew him from functions which could only be performed effectively at

home. During the colonial conference of 1907 he was away from England, but he returned in time to entertain the colonial premiers at dinner on 8 May. On his birthday later in the year (9 Nov.) he received as a gift from the Transvaal people the Cullinan diamond, the largest diamond known, which was a notable tribute to the efficiency of the new settlement of south Africa. Two sections of the magnificent stone were set in the royal crown.

Every summer the king was at work both in London and the provinces, laying foundation stones and opening new public institutions. In London and the neighbourhood his varied engagements included the inaugurations

Public engagements in London and neighbourhood, 1905-9.

of St. Saviour's cathedral, Southwark (3 July 1905); of the new streets Kingsway and Aldwych (18 Oct. 1905); of the new Victoria and Albert Museum, South Kensington (22 June 1909), and the laying of the first stone of the new buildings of the Imperial College of Science and Technology, South Kensington (8 July 1909).

To his earlier interests in medicine and therapeutics he was always faithful. On 3 Nov. 1903 he laid the foundation stone of the King Edward Sanatorium for Consumption at Midhurst, and he opened the building on 13 June 1906. He gave abundant proofs of his care for general hospitals; he opened a new wing of the London Hospital (11 June 1903) and laid foundation stones of the new King's College Hospital, Denmark Hill (20 July 1909), and of the new King Edward Hospital at Windsor (22 June 1908). His broad sympathies with philanthropic agencies he illustrated by receiving at Buckingham Palace 'General' Booth of the Salvation Army (22 June 1904) and Prebendary Carlile, head of the Church Army (13 Jan. 1905). His veteran interest in the housing of the poor led him to pay a visit (18 Feb. 1903) to the L.C.C. model dwellings at Millbank, and he showed a characteristic anxiety to relieve the sufferings of poverty by giving 2000 guineas to Queen Alexandra's Unemployment Fund (17 Nov. 1905).

In the country his public labours were year by year even more conspicuous. On 19 July 1904 he laid the foundation stone of the new Liverpool cathedral; and inaugurated the new King's Dock at

Public engagements in the provinces, 1904-9.

Swansea (20 July) and the new water supply for Birmingham at Rhayader (21 July). A year later he visited Sheffield to instal the new university, and he went to Manchester to

open a new dock of the Manchester Ship Canal and to unveil the war memorial at Salford. On 10 July 1906 he opened the high-level bridge at Newcastle, and later new buildings at Marischal College, Aberdeen (28 Sept.). In 1907 he laid the foundation stones of new buildings of University College of Wales at Bangor (9 July) and opened Alexandra Dock at Cardiff (13 July). In 1908 he opened the new university buildings at Leeds (7 July) and the new dock at Avonmouth, Bristol (9 July). In 1909 he returned to Manchester to open the new infirmary (6 July), and then passed on to Birmingham to inaugurate the new university buildings. His last public philanthropic function was to lay the corner stone of a new wing of the Norfolk and Norwich Hospital at Norwich (25 Oct. 1909).

To the public schools he showed as before many marks of favour. He twice visited

Eton, on 13 June 1904, and Visits to public schools, again on 18 Nov. 1908, when he opened the hall and library, which formed the South African war memorial there. He was at Harrow School on 30 June 1905, and he opened the new buildings of University College School, Hampstead, on 26 July 1907, and a new speech room at Rugby on 3 July 1909. To Wellington College, founded by his father, he remained a frequent visitor, and on 21 June 1909 he attended the celebration of the college's jubilee. He proved his friendly intimacy with the headmaster, Dr. Bertram Pollock, by nominating him, as his personal choice, just before his death in 1910, to the bishopric of Norwich. It was the diocese in which lay his country seat.

To Ireland, where, in spite of political disaffection, the prince's personal charm had always won for him a popular welcome, he gave as king evidence of the kindest feeling. In July 1903 he and the queen paid their first visit in their capacity of sovereigns soon after his first foreign tour. They landed at

The king in Ireland.

Kingstown on 31 July. Although the Dublin corporation refused by forty votes to thirty-seven to present an address, the people showed no lack of cordiality. The king with customary tact spoke of the very recent death of Pope Leo XIII whom he had lately visited, and he bestowed his favours impartially on protestant and Roman catholic. The catholic archbishop of Dublin, Dr. Walsh, attended a levee, and the king visited Maynooth College. He subsequently went north to stay with Lord Londonderry at Mount Stewart, and after a visit to Belfast made a yachting tour

round the west coast, making inland excursions by motor. Coming south, he inspected the exhibition at Cork, and on leaving Queenstown on 1 August issued an address of thanks to the Irish people for his reception. He expressed a sanguine belief that a brighter day was dawning upon Ireland. There was good ground for the anticipation, for the Land Purchase Act which was passed during the year gave promise of increased prosperity.

A second visit to Ireland of a more private character followed in the spring of 1904 and confirmed the good impression of the first visit. Two visits of the sovereign in such rapid succession were unknown to recent Irish history. The king was now the guest of the duke of Devonshire at Lismore Castle, and of the marquis of Ormonde at Kilkenny Castle, and he attended both the Punchestown and Leopardstown races. His chief public engagement was the laying the foundation stone of the new buildings of the Royal College of Science at Dublin (25 April-4 May). A third and last visit to Ireland took place in July 1907, when the king and queen opened at Dublin the International Exhibition (10 July). The popular reception was as enthusiastic as before.

In his relations with the army and the navy he did all that was required of their titular head. Like his mother Relations with the army and navy. he was prouder of his association with the army than with the navy, but he acknowledged the need of efficiency in both services, and attached vast importance to details of etiquette and costume. He was an annual visitor at Aldershot, and was indefatigable in the distribution of war medals and new regimental colours. He did not study closely the principles or practice of army or navy organisation and he deprecated breaches with tradition. But he put no real obstacles in the way of the effective application of expert advice. He received daily reports of the army commission inquiry at the close of the South African war (1902-3), which led to extensive changes. The chief military reform of his reign was the formation in 1907 by Mr. (afterwards Viscount) Haldane of a territorial army. The king shared Queen Victoria's dislike of any plan that recalled Cromwell's régime, and he mildly demurred to the employment of Cromwell's term, 'County Association,' in the territorial scheme. But he was flattered by the request to inaugurate personally the new system. On 26 Oct. 1907 he summoned the

lord-lieutenants of the United Kingdom to Buckingham Palace, and addressed them on the new duties that had been imposed on them as officers of the new territorial army. Twice in 1909—on 19 June at Windsor and on 5 July at Knowsley—he presented colours to territorial regiments. His attitude to measures was always conditioned to a large extent by his interest in the men who framed them, and his liking for Mr. Haldane, the war minister who created the territorial army, mainly inspired his personal patronage of the movement.

In the navy the same sentiment His faith in Lord Fisher. was at work. His faith in Lord Fisher, who played a leading part in the re-organisation of the navy during the reign, reconciled him to alterations which often conflicted with his conservative predilections. A large increase in the navy took place while he was king, and one of his last public acts was to review in the Solent on 31 July 1909 an imposing assembly of naval vessels by way of a royal benediction on recent naval policy.

In home politics the king was for the most part content with the rôle of onlooker.

He realised early that the constitution afforded him mere His position in home politics. formalities of supervision which required no close application. He failed to persuade his ministers to deal with the housing question. Few other problems of domestic legislation interested him deeply, and he accepted without searching comment his ministers' proposals. To complicated legislative details he paid small heed, and although he could offer shrewd criticism on a subsidiary point which casually caught his eye or ear, he did not invite elaborate explanation. His conservative instinct enabled him to detect intuitively the dangers underlying political innovations, but he viewed detachedly the programmes of all parties.

When the tariff reform controversy arose in 1903 he read in the press the chief pleas of the tariff reformers, and remarked that it would be difficult to obtain popular assent to a tax on bread. He deprecated licensing reform which pressed unduly on the brewer and he was displeased with political oratory which appealed to class prejudice and excited in the poor unwarranted hopes. He was unmoved by the outcry against Chinese labour in south Africa. He was not in favour of woman's suffrage.

Disapproval of political action usually took the shape of a general warning addressed to the prime minister. In filling all

offices he claimed to be consulted, and freely placed his knowledge and judgment of persons at his minister's disposal. But, save occasionally where he wished to serve a friend in a military, naval, colonial, diplomatic, or ecclesiastical promotion, the minister's choice was practically unfettered. The personal machinery of government interested him, however, more than its legislative work or policy, but he effected little of importance even in that direction. When in 1904 resignations rent asunder Mr. Balfour's ministry and reconstruction became necessary, the king made some endeavour to repair the breaches. He sought to overcome in a powerful quarter hesitation to co-operate with Mr. Balfour. But to the king's disappointment nothing came of his effort. It was one of many illustrations of his virtual powerlessness to influence political events.

On 5 Dec. 1905 the king accepted Mr. Balfour's resignation, and admitted to office his third prime minister, Sir Henry Campbell-Bannerman [q. v. Suppl. II], the leader of the liberal party. The change of ministry was emphatically ratified by the general election of January 1906, and the liberals remained in power till the king's death. The fall of the conservatives caused the king little disquiet. The return of the liberals to office after a ten years' exclusion seemed to him to be quite fair, and to maintain a just equilibrium between opposing forces in the state. His relations with Gladstone had shown that a distrust of the trend of liberal policy need be no bar to friendly intimacy with liberal leaders. He had slightly known Campbell-Bannerman as minister of war in the last liberal administration of 1892-5. But the politician's severe strictures on military operations in south Africa during 1901 had displeased the king. Early in the reign he had hesitated to meet him at a private dinner party, but he suppressed his scruples and the meeting convinced him of Campbell-Bannerman's sincere anxiety to preserve the peace of Europe, while his Scottish humour attracted him.

With constitutional correctness the king abstained from interference in the construction of the new cabinet, and he received the new ministers with open-minded serenity. The innovation of including among them a labour member, Mr. John Burns, was not uncongenial to him. His earlier relations with Mr. Broadhurst and Mr. Arch taught him the prudence of bestowing

responsible positions on representatives of labour. Mr. Burns personally interested him, and he was soon on cordial terms with him. With another of the liberal ministers, Lord Carrington, afterwards marquis of Lincolnshire, minister for agriculture, he had been intimate since boyhood. Mr. Herbert Gladstone, home secretary, was a son of his old friend. Mr. Haldane, secretary for war, whose genial temper and grasp of German life and learning appealed to him, quickly became a *persona grata*. With the ministers in other posts he found less in common, and he came into little contact with them, save in ceremonial functions.

The grant by the new ministry of self-government to the newly conquered provinces of south Africa excited the king's serious misgivings, and he feared a surrender of the fruits of the late war. But he contented himself with a remonstrance, and there was no diminution of his good relations with the liberal prime minister. After little more than two years of power Campbell-Bannerman fell ill, and from February 1908 his strength slowly failed. Just before setting out on his annual visit to Biarritz the king took farewell of the statesman at his official residence in Downing Street (4 March 1908). The king manifested Mr. Asquith prime minister, the kindest sympathy with 8 April 1908. his dying servant. A month later the prime minister forwarded his resignation, and recommended as his successor Mr. Asquith, the chancellor of the exchequer. The king was still at Biarritz, and thither Mr. Asquith travelled to surrender his old place and to be admitted to the headship of the government. There was a murmur of dissatisfaction that so important a function of state as the installation of a new prime minister should be performed by the king in a foreign hotel. Nothing of the kind had happened before in English history. The king's health was held to justify the breach of etiquette. But the episode brought into strong relief the king's aloofness from the working of politics and a certain disinclination hastily to adapt his private plans to political emergencies.

Mr. Asquith's administration was rapidly formed without the king's assistance. It mainly differed from that of his predecessor by the elevation of Mr. Lloyd George to the chancellorship of the exchequer and the admission of Mr. Winston Churchill to the cabinet. Neither appointment evoked

royal enthusiasm. Mr. Lloyd George's speeches in the country often seemed to the king reckless and irresponsible. Mr. Churchill's father, Lord Randolph, had long been a close friend. Knowing the son from his cradle, the king found it difficult to reconcile himself to the fact that he was a grown man fitted for high office. With his new prime minister he was at once in easy intercourse, frankly and briefly expressing to him his views on current business, and suggesting or criticising appointments. While he abstained from examining closely legislative details, and while he continued to regard his ministers' actions as matters for their own discretion, he found little in the ministerial proposals to command his personal approval. Especially did Mr. Lloyd George's budget of 1909, which imposed new burdens on landed and other property, cause him searchings of heart. But his tact did not permit him to forgo social courtesies to ministers whose policy seemed to him dangerous. In society he often gave those of them whose political conduct he least approved the fullest benefit of his charm of manner.

Attitude to
the budget
of 1909.

XIII

Domestic politics in the last part of his reign brought the king face to face with a constitutional problem for which he had an involuntary distaste. All disturbance of the existing constitution was repugnant to him. In view of the active hostility of the upper chamber to liberal legislation, the liberal government was long committed to a revision of the powers of the House of Lords. The king demurred to any alteration in the status or composition of the upper house, which in his view, as in that of his mother, was a bulwark of the hereditary principle of monarchy. A proposal on the part of conservative peers to meet the outcry against the House of Lords by converting it partly or wholly into an elective body conflicted as directly with the king's predilection as the scheme for restricting its veto. The king deprecated the raising of the question in any form.

In the autumn of 1909 a very practical turn was given to the controversy by the lords' threats to carry their antagonism to the year's budget to the length of rejecting it. Despite his dislike of the budget, the king believed the lords were herein meditating a tactical error. He resolved for

the first time to exert his personal influence to prevent what he judged to be a political disaster. He hoped to exert the reconciling power which his mother employed in 1869 and again in 1884, when the two houses of parliament were in collision:

in the first year over the Irish church disestablishment bill, in the second year over the extension of the franchise. The circumstances differed. In neither of the earlier crises was the commons' control of finance in question. Nor was the king's habit of mind as well fitted as his mother's for the persuasive patience essential to success in a difficult arbitration. The conservative peers felt that the king was in no position, whatever happened, to give their house protection from attack, and that he was prone by temperament to unquestioning assent to ministerial advice, which was the path of least resistance. Early in October 1909 he invited to Balmoral Lord Cawdor, one of the most strenuous champions of the uncompromising policy of the peers. The interview produced no result. A like fate attended the king's conversation, on his arrival at Buckingham Palace later in the month (12 Oct.), with the leaders of the conservative opposition in the two houses, Lord Lansdowne and Mr. Balfour. Although these negotiations could only be strictly justified by the emergency, there was no overstepping of the limits of the royal power. Mr. Asquith was willing that the interviews should take place. The conversations were in each case immediately communicated by the king to the prime minister in personal audience.

The king's proved inability to qualify the course of events was a disappointment. The finance bill, which finally passed the House of Commons on 5 November by a majority of 379 to 149, was rejected by the lords on 30 November by 350 to 75. War to the knife was thereupon inevitable between the liberal party and the House of Lords, and the king at once acquiesced in the first steps of his government's plan of campaign. On 15 Dec. by the prime minister's advice he dissolved parliament, for the second time in his reign. The general election gave the government a majority which was quite adequate for their purpose. They lost on the balance seventy-five seats, and their former numerical superiority to any combination of other parties disappeared. But with nationalists and labour members they still were 124 in excess of their unionist oppo-

nents, and their efficient power to challenge the House of Lords' veto was unmodified. Mr. Asquith continued in office. The king was in no way involved in Mr. Asquith's declaration at the Albert Hall on the eve of the general election (10 Dec. 1909) that he would not again assume or hold office without the safeguards necessary to give legislative effect to the decisions of the majority in the House of Commons. Before the new parliament opened Mr. Asquith saw the king when he was staying privately at Brighton on 13 Feb. 1910. The king offered no impediment to the government's immediate procedure, which was publicly proclaimed eight days later when the king opened parliament and read his ministers' words: 'Proposals will be laid before you, with all convenient speed, to define the relations between the houses of parliament, so as to secure the undivided authority of the House of Commons over finance and its predominance in legislation. These measures, in the opinion of my advisers, should provide that this House [of Lords] should be so constituted and empowered as to exercise impartially, in regard to proposed legislation, the functions of initiation, revision, and, subject to proper safeguards, of delay.'

between the houses of parliament, so as to secure the undivided authority of the House of Commons over finance and its predominance in legislation. These measures, in the opinion of my advisers, should provide that this House [of Lords] should be so constituted and empowered as to exercise impartially, in regard to proposed legislation, the functions of initiation, revision, and, subject to proper safeguards, of delay.'

The presence in the second sentence of the phrase 'in the opinion of my advisers' gave rise to the misconception that the words were the king's interpolation, and were intended to express his personal unwillingness to identify himself with his ministers' policy. As a matter of fact the phrase was, like the rest of the paragraph, from the prime minister's pen, and the king made no comment on it when the draft was submitted to him. A similar formula had appeared previously in the speeches of sovereigns to parliament when they were under the formal obligation of announcing a warmly controverted policy of their ministers' devising. The king's personal misgivings of the constitutional change were well known, and it was courteous to absolve him of any possible implication of a personal responsibility.

In March the cabinet drafted resolutions (with a view to a future bill) which should disable the lords from rejecting or amending a money bill, and which should provide that a bill being passed by the commons in three successive sessions and being thrice rejected by the lords should become law in spite of the lords' dissent. The terms of the resolutions were laid before the king, and

The commons' resolution on the lords' veto.
March 1910.

he abstained from remonstrance. The resolutions were duly carried on 12 April, and the bill which embodied them was formally introduced into the commons. Meanwhile Lord Rosebery on 14 March moved that the House of Lords resolve itself into committee to consider the best means of reforming its constitution so as to make it strong and efficient, and on 16 March the lords agreed to Lord Rosebery's motion. For such a solution of the difficulty the king had no more zest than for the commons' scheme. On 25 April parliament adjourned for Easter, and next day the text of the commons' veto bill was circulated. The controversy went no further in the king's lifetime.

The ministers were resolved in case of the peers' continued obduracy to advise the king to employ his prerogative so as to give their policy statutory effect. Should the majority of peers decline to pass the bill for the limitation of their veto, the ministers determined on a resort to Lord Grey's proposed plan of 1832, whereby a sufficient number of peers favourable to the government's purpose would be formally created in the king's name to outvote the dissentients. But the time had not arrived when it was necessary directly to invite the king's approval or disapproval of such a course of action. The king for his part did not believe that the matter would be pressed to the last extremity, and was content to watch the passage of events without looking beyond the need of the moment.

The political difficulty caused the king an anxiety and irritation which domestic policy had not previously occasioned him. He found no comfort in the action of any of the parties to the strife. The blank refusal of the conservative leaders to entertain his warnings was unwelcome to his *amour propre*. The prospect of straining his prerogative by creating peers solely for voting purposes could not be other than uncongenial. But while he tacitly recognised his inability to decline the advice of his responsible ministers, he had before him no plan for the creation of peers to call for an expression of opinion. To the last he privately cherished the conviction that peace would be reached by some less violent means. His natural buoyancy of disposition and his numerous social pleasures and interests outside the political sphere effectually counteracted the depressing influence of public affairs. While the last battle of his reign was waging in the houses

of parliament he was spending his annual spring holiday at Biarritz, where his time was mainly devoted to cheerful recreation. He returned to England on 27 April, just when the Easter vacation called a parliamentary armistice. Within nine days he was dead.

On the political situation the effect of his death was a prolongation of the truce.

The lords controversy 1910-11. A conference of representatives of the two parties met in the endeavour to adjust amicably the differences between the two houses. The effort failed (15 Nov. 1910), and after another dissolution of parliament (28 Nov.) the liberal government's plan, in which King Edward had tacitly acquiesced, was carried into law, with the consent of a majority of the upper chamber and without the threatened special creation of peers (10 Aug. 1911).

XIV

Since his severe illness of 1902 the king's physical condition, though not robust, had

The king's health. borne satisfactorily the strain of a busy life. He benefited greatly by his annual visits to Biarritz and Marienbad and by his yachting cruises, and he usually bore the appearance of good health. A somewhat corpulent habit of body rendered exercise increasingly difficult. He walked little and ate and smoked much. On the shooting expeditions in which he still took part he was invariably mounted, and his movements were slow. There were occasionally disquieting symptoms, and the king was not very ready in obeying medical directions when they interfered with his ordinary habits. But his general health was normal for his age.

For the past few years he was subject to sudden paroxysms of coughing, which indicated bronchial trouble.

Bronchial trouble. A seizure of the kind took place at the banquet at the British Embassy in Berlin on 8 Feb. 1909. On the outward journey to Biarritz early in March 1910 he stayed two days in Paris. A cold caught in the Théâtre Porte St. Martin, where he witnessed the performance of M. Rostand's 'Chantecler,' developed rapidly on the way south. A severe attack of bronchitis followed and caused his physician in attendance (Sir James Reid) much anxiety. The news of the illness was not divulged, and at the end of ten days recovery was rapid. A motor tour through the Pyrenees as far as Pau preceded his return home.

The king arrived in London from the continent on 27 April in good spirits. The same evening he went to the opera at Covent Garden. Queen Alexandra was absent on a Mediterranean cruise, sojourning for the time at Corfu. Next day the king paid his customary visit to the Royal Academy exhibition. On 29 April he entertained at lunch Viscount Gladstone on his departure for south Africa, where he had been appointed governor-general. Sunday, 1 May, was spent at Sandringham, where the king inspected some planting operations. There he contracted a chill. He reached Buckingham Palace next afternoon, and imprudently dined out in private

Last illness, 2 May 1910. the same evening. On reaching Buckingham Palace late that night his breathing became difficult, and a severe bronchial malady set in. Next morning his physicians regarded his condition as somewhat serious, but no early crisis was anticipated. The king rose as usual and transacted business, making arrangements for his reception the following week of Mr. Theodore Roosevelt, the late president of the United States of America, who had announced a visit to England. He spoke regretfully of the superiority of the climate of Biarritz to that of London. During the two following days the symptoms underwent little change. The king continued to transact business, receiving each morning in formal audience one or more representatives of the colonies. On Thursday, 5 May, he received Sir John Dickson-Poynder, Lord Islington, who had been appointed governor of New Zealand, and he considered details of the welcome to be accorded to a royal visitor from Japan, Prince Fushimi. He sat up and was dressed with his customary spruceness, but he was counselled against conversation. The breathing difficulty fluctuated and did not yield to treatment. Meanwhile Queen Alexandra had been informed of the king's illness and was returning from Corfu. The king was reluctant for any public announcement of his condition to be made. But on the Thursday evening (5 May) he was persuaded to assent to the issue of a bulletin on the ground that his enforced inability to meet the queen, according to custom on her arrival at the railway station, called for explanation. He modified the draft with his own hand. Queen Alexandra reached the palace that night, and next morning (6 May) the news of the king's condition appeared in the press. That day proved his last. He rose as usual, and in

the morning saw his friend, Sir Ernest Cassel. As the day advanced, signs of coma developed. In the evening his state was seen to be hopeless. Death, 6 May 1910. About ten o'clock at night he was put to bed. He died just before midnight.

The shock of grief was great at home and abroad. The public sorrow exceeded that mighty outburst which his mother's death awoke in 1901. Yet the king may fairly be judged to be 'felix opportunitate mortis.' To the last he was able to conduct his life much as he pleased. In the course of the illness he had faced without repining the thought of death. He was spared any long seclusion from society or that enforced inactivity of slowly dwindling strength of which he cherished a dread. His popularity had steadily grown through his reign of nine years and three and a half months. There had been no conflicts with public opinion. Practically all his actions, as far as they were known, had evoked the enthusiasm of the mass of his subjects. There was a bare possibility of his injuring, there was no possibility of his improving, his position, in which he had successfully reconciled pursuit of private pleasure with the due performance of public duty.

On 7 May the king's only surviving son met the privy council at St. James's Palace, and was proclaimed as King George V on 9 May. On 11 May the new monarch formally announced his bereavement in messages to both houses of parliament, which had been in recess and were hastily summoned to meet. Addresses of condolence were impressively moved by the leaders of the two great parties in both houses of parliament—in the House of Lords by the earl of Crewe and Lord Lansdowne, and by Mr. Asquith and Mr. Balfour in the House of Commons. Mr. Enoch Edwards, on behalf of the labouring population, also gave voice in the lower house to the general sentiment of admiration and grief.

Fitting funeral ceremonies followed. For two days (14-15 May) the coffin lay in state in the throne room at Buckingham Palace, and there it was visited privately by relatives, friends, and acquaintances. On 16 May the coffin was removed in ceremonial procession to Westminster Hall, and there it lay publicly in state for four days. Some 350,000 persons attended. The interment took place on 20 May. The procession passed from Westminster Hall to Paddington station, and thence by train

to Windsor. After the funeral service in St. George's Chapel, the coffin was lowered to the vault below. Besides the members of the king's family the chief mourners included the German emperor (the king's nephew), the king of Norway (his son-in-law), and the kings of Denmark and Greece (his brothers-in-law). Four other kings were present, those of Spain, Bulgaria, Portugal, and Belgium, together with the heirs to the thrones of Austria, Turkey, Roumania, Servia, and Montenegro. There were also kinsmen of other rulers, the prince consort of the Netherlands, Grand Duke Michael of Russia, and the duke of Aosta. The American republic had a special envoy in Mr. Roosevelt, lately president, and the French republic in M. Pichon, minister for foreign affairs. No more representative assembly of the sovereignty of Europe had yet gathered in one place. The exclusively military character of the ceremonial excited some adverse comment, but all classes took part in memorial services and demonstrations of mourning, not only in London and the provinces but throughout the empire and the world. In India, Hindus and Mohammedans formally celebrated funeral rites.

XV

Edward VII eminently satisfied contemporary conditions of kingship. He inherited the immense popularity which belonged to the crown at the close of his mother's reign, and his personality greatly strengthened the hold of royalty on public affection. The cosmopolitan temperament, the charm of manner, the social tact, fitted him admirably for the representative or symbolic function of his great station. A perfect command of the three languages, English, French, and German, in all of which he could speak in public on the inspiration of the moment with no less grace than facility, gave him the ear of Europe. Probably no king won so effectually the good-will at once of foreign peoples and of his own subjects. He was a citizen of the world, gifted with abounding humanity which evoked a universal sympathy and regard.

The outward forms of rule were congenial to him. He deemed public ceremony essential to the royal state, and attached high value to formal dignity. Spacious splendour appealed to him. By all the minutiae of etiquette he set great store, and he exerted his authority in securing

The king and royal state.

their observance. For any defect in costume or uniform he had an eagle eye and was plainspoken in rebuke.

King Edward cannot be credited with the greatness that comes of statesmanship and

His relations with politics. makes for the moulding of history. Neither the constitutional checks on his power nor his discursive tastes and training left him much opportunity of influencing effectually political affairs. No originating political faculty can be assigned him. For the most part he stood with constitutional correctness aloof from the political arena at home. On questions involving large principles he held no very definite views. He preferred things to remain as they were. But he regarded all party programmes with a cheerful optimism, sanguinely believing that sweeping proposals for reform would not go very far. From youth he followed with close attention the course of foreign politics, and it was not only during his reign that he sought in tours abroad and in hospitalities at home to keep in personal touch with foreign rulers and statesmen. His main aim as a traveller was pleasurable recreation and the exchange of social

His love of peace.

courtesies. But he rarely missed an occasion of attesting his love of peace among the nations.

Not that he was averse from strong measures, if he thought them necessary to the due assertion of his country's rights. But in his later years he grew keenly alive to the sinfulness of provoking war lightly, and to the obligation that lay on rulers of only appealing to its arbitrament in the last resort. He was a peacemaker, not through the exercise of any diplomatic initiative or ingenuity, but by force of his faith in the blessing of peace and by virtue of the influence which passively attached to his high station and to his temperament. His frequent absences from his dominions remotely involved his position in a certain element of danger. There was a specious ground for the suggestion that in home affairs he did too little and in foreign affairs too much. The external show of personal control which belongs to the crown at home seemed at times to be obscured by his long sojourns in foreign countries. The impression was at times encouraged, too, that the king was exerting abroad diplomatic powers which under the constitution belonged to his ministers alone. He grew conscious of the exaggerated importance which the foreign public attached to his foreign movements, and he confessed at times to some embarrassment. But he fully realised the futility of encroaching on

ministerial responsibilities, and in his intercourse with foreign rulers and diplomatists, so far as politics came within the range of the conversation, he confined himself to general avowals of loyal support of ministerial policy.

His sociability, his love of pleasure, and the breadth of his human interests stood him in good stead in all relations

His social instincts.

of life. He had an unaffected desire for others' happiness,

and the sport and amusements in which he openly indulged were such as the mass of his subjects could appreciate and share. The austere looked askance on his recreations or deemed that the attention he paid them was excessive. But his readiness to support actively causes of philanthropy and social beneficence almost silenced articulate criticism. His compassion for suffering was never in question. He valued his people's approbation, and welcomed suggestions for giving every class opportunities of greeting him in person. Many times he cheerfully responded to a schoolmaster's request that in passing a schoolhouse on a private or public journey he should pause and exchange salutations with the schoolchildren. With the promptitude of an expert man of business, he was able to distribute his energies over a very wide field with small detriment to any of the individual calls on his time. He had a passion for punctuality. The clocks at Sandringham were always kept half an hour fast. He gave every encouragement to the progress of mechanical invention for the economising of time which distinguished his reign. He became an ardent devotee of motoring, in which he first experimented in 1899, and which during his last years formed his ordinary mode of locomotion at home and abroad. In the development of wireless telegraphy he also showed much interest, exchanging some of the earliest wireless messages across the Atlantic with Lord Minto, governor-general of Canada (21 Dec. 1902), and with President Roosevelt (19 Jan. 1903).

He had a strong sense of ownership and was proud of his possessions. Though his attitude to art was largely that of a rich owner of a great collection, he had a keen eye for the fit arrangement of his treasures, and knew much of their history. He disliked wasteful expenditure, but personally made careful provision for his own and his friends' comfort. No pride of rank limited

His hospitality.

his acquaintance, and he always practised hospitality on a generous scale. If he had a predilection for men of wealth, his catholic favour embraced every kind of faculty and fortune.

He rejoiced to escape from the constraints of public life into the unconventional ease of privacy. At times he enjoyed practical joking at the expense of close friends. But while encouraging unembarrassed social intercourse, he tacitly made plain the limits of familiarity which might not be overstepped with impunity. He loved the old fashions of domesticity. His own and his relatives' birthdays he kept religiously, and he set high value on birthday congratulations and gifts.

While he derived ample amusement from music and the drama, chiefly from the theatre's more frivolous phases, he showed small capacity for dramatic criticism. A man of the world, he lacked the intellectual equipment of a thinker, and showed on occasion an unwillingness to exert his mental powers. He was no reader of books. He could not concentrate his mind on them. Yet he was always eager for information, and he gathered orally very varied stores of knowledge. A rare aptitude for rapidly assimilating the outlines of a topic

His gift of assimilation.

enabled him to hold his own in brief talk with experts in every subject. He did not sustain a conversation with much power or brilliance; but his grace and charm of manner atoned for any deficiency of matter. If his interest lay more

His love of conversation.

in persons than in things, he remembered personal details with singular accuracy. He illustrated his curiosity about persons by subjecting all his guests at Sandringham to the test of a weighing machine, and by keeping the record himself. At the same time he deprecated malicious gossip, and his highest praise of anyone was that he spoke no ill-natured word. He was never happy save with a companion who could talk freely and cheerfully. Solitude and silence were abhorrent to him.

A loyal friend, he was never unmindful of a friendly service, and he was always faithful to the associates of

His loyalty in friendship.

his early days. He was fond of offering his friends good advice, and was annoyed by its neglect. He could be at times hasty and irritable; but his anger was short-lived, and he bore no lasting ill-will against those who excited it. His alert memory enabled him from boyhood to death to recognise persons with sureness, and many stories are told how instantaneously he greeted those to whom he had been once casually introduced when meeting them years afterwards in a wholly unexpected environment. His circle

of acquaintances at home and abroad was probably wider than that of any man of his time. But he never seems to have forgotten a face.

Physical courage was an enduring characteristic. By bodily peril or adverse

criticism he was wholly unmoved. If his native shrewdness stimulated an instinct of

self-preservation, he never showed any sign of flinching in the face of danger. He admired every manifestation of heroism, and in 1907 he instituted the Edward medal to reward heroic acts performed by miners and quarrymen. Two years later a like recognition was designed for brave service on the part of policemen and firemen. While religion played no dominant part in his life, he was strict in religious observances, and required those in his employment at Sandringham to attend church regularly. He had a perfect tolerance for all creeds, and treated with punctilious courtesy ministers of every religious persuasion. He was greatly attached to dumb animals, and his love for dogs excelled even that for horses. A favoured dog was always his companion at home and abroad. On tombstones in the canine graveyard at Sandringham there are many inscriptions bearing witness to the king's affection for his dog companions. The latest of these favourites, his terrier, 'Caesar,' was led behind his coffin in the funeral procession.

XVI

As the heir to the crown, the eldest son of Queen Victoria and Prince Albert was

the subject of portraiture from his infancy. The earliest portrait apparently is the large chalk drawing by Sir George Hayter in 1842. As a child the Prince of Wales was painted several times by Winterhalter, the court painter, and was also drawn and painted in miniature by Sir William C. Ross. Most of these early portraits, some of which are familiar from engravings or lithographs, remain in the royal collection at Buckingham Palace or Windsor Castle. The prince was painted in groups with his parents and brothers and sisters by Sir Edwin Landseer and Robert Thorburn, as well as by Winterhalter. A portrait by W. Hensel was painted in 1844 for King Frederick William of Prussia, one of the prince's godfathers. Other portraits were also drawn by R. J. Lane and artists who enjoyed the queen's confidence. As the youth of the Prince of Wales happened to synchronise with the invention and great development of portrait

photography, his portraits during boyhood up to the time of his marriage were for the most part based on photography, several excellent engravings being made from them. When about sixteen the prince was drawn and painted by George Richmond, R.A., and in 1862 a portrait in academical robes was painted by command for the University of Oxford by Sir J. Watson Gordon. Portraits of the prince in plain clothes were painted by S. Walton (1863) and Henry Weigall (1865). After the prince entered the army and joined the 10th hussars, he was painted in uniform several times by Winterhalter (1858), by Lowes C. Dickinson (1868), by H. Weigall (1870), and by H. von Angeli (1876). At the time of his marriage to Princess Alexandra of Denmark in 1863 a pair of portraits of the bridal couple were painted by Winterhalter. Among foreign artists who painted the Prince of Wales were Karl Sohn and Theodor Jentzen, but perhaps the most interesting was J. Bastien-Lepage, to whom the prince sat in Paris in 1880. During his later years as Prince of Wales the prince was not very frequently painted, except for official purposes, such as the portraits by Frank Holl, painted in 1884 for the Middle Temple and in 1888 for the Trinity House. A full-length portrait, painted by G. F. Watts, R.A., for Lincoln's Inn, was not considered successful, and was therefore withdrawn by the painter; it is now in the Watts Gallery at Compton in Surrey. The most successful of official pictures was the full-length standing portrait by A. Stuart-Wortley, painted in 1893 for the United Service Club. W. W. Ouless's painting of the prince as commodore of the Royal Yacht Squadron was executed in 1900. After the accession of King Edward VII to the throne in 1901, portraits of his majesty became more in demand. The official state portrait was entrusted to Mr. (afterwards Sir) Luke Fildes, R.A., and was exhibited at the Royal Academy in 1902. The design for the portrait of the king on the coinage, postage-stamps, and certain medals was entrusted to Mr. Emil Fuchs. Subsequent portraits of the king were painted by H. Weigall (for Wellington College), Harold Speed (for Belfast), Colin Forbes (for the Canadian Houses of Parliament at Ottawa), A. S. Cope, A.R.A. (in Garter robes; for Sir Ernest Cassel), P. Tennyson-Cole (for the Liverpool Chamber of Commerce, by whom it was presented to the king; a replica is in the possession of the Grocers' Company), James Mordecay (now in St. James's Palace), and Sir E. J. Poynter P.R.A. (for the Royal Academy). During

the reign and after the king's death the number of pictorial presentments of every description increased to an indefinite extent. The king sat to more than one foreign painter. The greater number of the portraits mentioned here were exhibited at the Royal Academy.

Portraits in sculpture of King Edward VII as Prince of Wales or as king are also very numerous, whether busts or statues, from his childhood to his death, while posthumous busts continue in demand. He sat to both English and foreign sculptors, including Canonica, the Italian. A colossal bronze equestrian statue of the Prince of Wales as colonel of the 10th hussars, by Sir J. Edgar Boehm, was presented to the city of Bombay by Sir Albert Sassoon in 1878.

The pictures of public events in which the king played the chief part are very many, including his baptism in 1842, painted by Sir George Hayter, Louis Haghe, George Baxter, and others; his marriage in 1863, painted by W. P. Frith, R.A., and G. H. Thomas; the paintings of the jubilee ceremonies in 1887 and 1897; the marriages of his brothers, sisters, and children; ceremonies at Windsor Castle, such as 'The Visit of Louis Philippe' and 'The Emperor of the French receiving the Order of the Garter'; leading up to the events of his own reign, 'The King opening his First Parliament' by Max Cowper; 'The King receiving the Moorish Embassy in St. James's Palace' by J. Seymour Lucas, R.A.; 'The Coronation of King Edward VII' by E. A. Abbey, R.A., and like events. During the Indian tour of 1875 a number of incidents were recorded in drawings by Sydney P. Hall, W. Simpson, and other artists. Most of these remain in the royal collection. A valuable collection of original drawings for illustrated periodicals, depicting scenes in his majesty's reign, is in possession of Queen Alexandra.

King Edward was a good and willing sitter, but a difficult subject. Hardly any portrait gives a satisfactory idea of a personality in which so much depended upon the vivacity of the likeness. One of the best likenesses is considered to be that in the group of the Prince of Wales and the duke of Connaught at Aldershot, painted by Edouard D  taille, and presented to Queen Victoria by the royal family at the Diamond Jubilee in 1897. Another good portrait is that in the group of Queen Victoria with her son, grandson, and great-grandson, painted by (Sir) W. Q.

Orchardson, R.A., in 1900 for the Royal Agricultural Society.

Memorials of the king were planned after his death in all parts of the world. In England it was decided that there should be independent

local memorials rather than a single national memorial. In London it is proposed to erect a statue in the Green Park, and to create a park at Shadwell, a poor and crowded district of east London. In many other cities a statue is to be combined with some benevolent purpose, such as a hospital or a fund for fighting disease. Statues have been designed for Montreal, Calcutta, and Rangoon, and hospitals are also in course of erection at Lahore, Calcutta, Bombay, Madras, Secunderabad, Cashmere, Bornu, Bassein, and Poona. Memorial tablets have been placed in the English churches at Homburg, Marienbad, and Copenhagen. A statue by M. Denys Puech was unveiled at Cannes on 13 April 1912 by M. Poincaré, prime minister of France, amid an imposing naval and military demonstration. A new street and a 'place' in the heart of Paris are to be named after 'Edouard VII.' At Lisbon a public park was named after him in memory of the visit of 1903. At Cambridge University Sir Harold Harnsworth endowed in 1911 'The King Edward VII chair of English literature.'

[No attempt at a full biography has yet been made. The outward facts are summarised somewhat hastily and imperfectly in the obituary notices of the press (7 May 1910), but they are satisfactorily recorded, with increasing detail as the years progressed, in *The Times*, to which the indexes are a more or less useful guide. The fullest account of the external course of his life from his birth to his accession is given in W. H. Wilkins's *Our King and Queen* (1903), republished in 1910 with slight additions as *Edward the Peacemaker*. Various periods and episodes of his career have been treated either independently or in the biographies of persons who were for the time associated with him. A good account of the king's education from private documents at Windsor by Lord Esher appeared anonymously in the *Quarterly Review*, July 1910. The main facts of his youth are detailed in A. M. Broadley's *The Boyhood of a Great King* (1906); *Queen Victoria's Letters 1837-61* (ed. Esher and Benson, 1907); Sir Theodore Martin's *Life of Prince Consort* (1874-80). The Greville Memoirs and the memoirs of Baron Stockmar are also useful. For his early manhood and middle age Sidney Whitman's *Life of the Emperor Frederick* (1901) is of value. For the Canadian and American tour of 1860 see N. A. Woods, *The*

Prince of Wales in Canada and the United States (1861), Bunbury Gooch's *The King's visit to Canada, 1860* (1910), and J. B. Atlay's *Life of Sir Henry Acland* (1903). For the tour in the Holy Land of 1862 see Prothero and Bradley's *Life of Dean Stanley* (1883), who published Sermons before the Prince during the Tour (1863). For the tour of 1869 see Mrs. William Grey's *Journal of a Visit to Egypt, Constantinople, the Crimea, Greece, &c., in the Suite of the Prince and Princess of Wales* (1869), and (Sir) W. H. Russell, *A Diary in the East during the Tour of the Prince and Princess of Wales* (1869). The chief account of the Indian tour is W. H. Russell's *Diary* (1877). Sir Joseph Fayrer, who privately printed *Notes of the Indian Tour*, gives very many particulars in *Recollections of my Life* (1900). The prince's philanthropic work can be followed in Sir H. C. Burdett's *An Account of the Social Progress and Development of our own Times*, as illustrated by the Public Life and Work of the Prince and Princess of Wales (1889), with *The Speeches and Addresses of the Prince of Wales, 1863-1888*, ed. by James Macaulay (1889), and *The Golden Book of King Edward VII* (1910), which collects many of his public utterances. References of varying interest appear in Lady Bloomfield's *Reminiscences of Diplomatic Life* (1883); Lord Augustus Loftus's *Reminiscences* (1892-4); Lord Malmesbury's *Memoirs* (1884); Sir Henry Keppel's *A Sailor's Life under Four Sovereigns* (1899); Col. R. S. Liddell's *Memoirs of the 10th Royal (Prince of Wales's own) Hussars* (1891); Arminius Vambéry's *Memoirs* (1904); Morley's *Life of Gladstone*; Sir Alfred Lyall's *Life of Lord Dufferin* (1905); Sir Horace Rumbold's *Recollections of a Diplomatist* (2 vols. 1902). Further *Recollections* (1903), and *Final Recollections* (1909); Edgar Sheppard's *George, Duke of Cambridge, a Memoir of his Private Life* (chiefly extracts from his diary), 2 vols. 1906; Sir C. Kinloch-Cooke's *Mary Adelaide, Duchess of Teck* (1900); as well as in *Lives of Charles Kingsley*, (Sir) Richard Owen, Laurence Oliphant, Sir Richard Burton, Lord Houghton, and Sir Samuel Baker. Some hints on the social side of his career are given in *The Private Life of King Edward VII* (1903); *Society in the New Reign*, by a foreign resident (i.e. T. H. S. Escott) (1904); *Paoli's My Royal Clients* (1911), gossip of a detective courier, and more authentically in Lady Dorothy Nevill's *Reminiscences* (1906) and Mme. Waddington's *Letters of a Diplomat's Wife* (1903). His chief residences are described in Mrs. Herbert Jones's *Sandringham* (1873) and A. H. Beavan's *Marlborough House and its Occupants* (1896); A full account of *The Coronation of King Edward VII*, by J. E. C. Bodley, appeared in 1903. *Edward VII as a Sportsman* (1911), by Alfred E. T. Watson, with introd. by Capt. Sir Seymour Fortescue, and contributions by

various friends, gives an adequate account of the king's sporting life. Of foreign estimates of the king, which are for the most part misleading, the most interesting are Louis Blanc's *Lettres sur l'Angleterre* (1867); J. H. Aubry's *Edward VII Intime* (Paris, 1902), a favourable but outspoken estimate; Jean Grand-Carteret's *L'oncle de l'Europe* (1906), a study of the king in French and other caricature; M. Henri Daragon's *Voyage à Paris de S.M. Édouard VII* (1903), a detailed journal of the visit; Émile Flourens' *La France Conquise: Édouard VII et Clemenceau* (1906), an indictment of the policy of the 'entente cordiale,' and an allegation that King Edward was personally moved by a Machiavellian design of holding France in subjection to English interests; and Jacques Bardoux, *Victoria I; Édouard VII; Georges V* (Paris, 2nd ed. 1911, pp. 149 seq.). The German view may be gleaned from Austin Harrison's *England and Germany* (1909) and Max Harden's *Köpfe* (part ii., Berlin, 1912). Some hints of the king's relations with the successive rulers of Germany are given in: *Memoirs of Prince Chlodwig of Hohenlohe-Schillingsfürst* (trans., 2 vols. 1906); Moritz Busch's *Bismarck, Some Secret Pages from his History* (trans., 3 vols. 1898); *Bismarck, His Reflections and Reminiscences* (trans., 1898); untranslated Supplement ('Anhang') to latter work, in 2 vols. respectively entitled *Kaiser Wilhelm und Bismarck* and *Aus Bismarcks Briefwechsel*, ed. Horst Kohl (Stuttgart, 1901). The account of the portraits has been supplied by Mr. Lionel Cust. In preparing this article the writer has had the benefit of much private information, but he is solely responsible for the use to which the material has been put.] S. L.

EDWARD OF SAXE-WEIMAR, PRINCE (1823-1902), field-marshal, was eldest son of Duke Bernard (1792-1862) of Saxe-Weimar-Eisenach by his wife Princess Ida (1794-1852), daughter of George duke of Saxe-Meiningen. His father was younger son of Charles Augustus, grand duke of Saxe-Weimar, well known as Goethe's patron. His mother was younger sister of Princess (afterwards Queen) Adelaide [q. v.], wife of the duke of Clarence, afterwards King William IV. His parents were frequent visitors at the royal residence in Bushey Park, while the duke and duchess of Clarence were its occupants, and there Prince Edward, whose full names were William Augustus Edward, was born on 11 Oct. 1823. Brought up chiefly in England by his aunt, Queen Adelaide, the young prince was one of Queen Victoria's playfellows and was always on affectionate terms with her and her family. Another of his boyish associates, George, second duke of Cam-

bridge [q. v. Suppl. II], became one of his closest friends. Having been duly naturalised, he passed through Sandhurst and entered the army as an ensign on 1 June 1841. His long career was wholly identified with British military service. Originally attached to the 67th foot, he was shortly afterwards transferred as ensign and lieutenant to the grenadier guards, became a captain on 19 May 1846, and was adjutant from November 1850 to December 1851. Prince Edward accompanied the 3rd battalion of grenadier guards to the Crimea, where he served with distinction as major (brevet major 20 June 1854) at Alma, Balaclava, and the siege of Sevastopol. He was wounded in the leg in the trenches on 19 Oct. and was mentioned in despatches (*Lond. Gaz.* 7 Nov. 1854). At Inkerman Prince Edward, who was on picket duty with his company at Quarter-guard Point, successfully repelled the attack of a Russian column on the flank of the British lines (*KINGLAKE'S Invasion of the Crimea*, vi. 107; *Letters of Queen Victoria*, 1837-1861, iii. 69:—*Prince Edward's Report of his experiences to the Queen*). On 15 June 1855 he was appointed A.D.C. to Lord Raglan, and three days later engaged in the desperate but unsuccessful attack on the Malakoff and the Redan. He was appointed A.D.C. to Queen Victoria on 5 Oct. 1855, and retained the position till 22 Feb. 1869, when he was promoted major-general. For his services he received the C.B., the Crimean medal, Turkish medal, legion of honour, and fourth class of Medjidie. From 1 April 1870 to 31 July 1876 he held command of the home district. On 6 July 1877 he became lieutenant-general, and from 1 Oct. 1878 till 30 April 1881 he commanded the southern district (Portsmouth). In 1878 he was appointed colonel of the Lincoln regiment, and on 14 Nov. 1879 became general. On relinquishing the southern district in 1881, he was unemployed for four years. In October 1885 he was given the command of the forces in Ireland, which he retained till 30 Sept. 1890, when he was succeeded by Viscount Wolsley. The Irish command carried with it the position of privy councillor of Ireland. On 24 May 1881 he was made K.C.B., and on 21 June 1887 G.C.B. In 1888 he held the command of the 1st life guards as colonel-in-chief till his death, and in that capacity filled the office of gold stick-in-waiting to the Queen. He was placed on the retired list on 11 Oct. 1890. In 1891 Dublin University conferred on him the honorary degree of LL.D., and on 22 June

1897 Queen Victoria made him a field-marshal. In addition to these honours he was created a knight of St. Patrick in 1890, and on 8 March 1901 G.C.V.O.

An excellent soldier who was popular with all ranks, he cherished the cultured traditions of his family. He exercised a wide hospitality at his London house, and his guests included representatives of literature, art, and science, as well as soldiers and men in public life. He was always on cordial terms with King Edward VII. He died at 16 Portland Place on 16 Nov. 1902, and was buried in Chichester Cathedral with military honours.

A portrait of Prince Edward by F. Marks is in the possession of the duke of Richmond and Gordon at Goodwood. On 27 Nov. 1851 he married in London Lady Augusta Katherine, second daughter of Charles Gordon-Lennox, fifth duke of Richmond and Gordon. The marriage wasmorganatic and the princess was given in Germany the title of countess of Dornburg; but she was later on granted the title of princess in Great Britain by royal decree in 1866. She died without issue on 3 April 1904.

[The Times, 17 Nov. 1902; Army and Navy Gazette, 22 Nov. 1902; Army List; Kinglake's *Invasion of the Crimea*, 6th edit. 1877, vols. iii. iv. and vi.; Edgar Sheppard, *Duke of Cambridge*, 1906; Willoughby Verner, *Military Life of the Duke of Cambridge*, 1905; Sir C. Kinloch-Cooke, *Life of the Duchess of Teck*, 2 vols. 1900.] H. M. V.

EDWARDS, SIR FLEETWOOD ISHAM (1842-1910), lieutenant-colonel, royal engineers, second son of Thomas Edwards of Woodside, Harrow-on-the-Hill, by his wife Hester, daughter of the Rev. William Wilson, of Knowle Hall, Warwickshire, was born at Harrow on 21 April 1842. Educated at Uppingham and at Harrow, he entered the Royal Military Academy in 1861, and on 30 June 1863 received a commission as lieutenant in the royal engineers. After professional instruction at Chatham, where he was captain of the cricket eleven, Edwards was acting adjutant at Dover. From 1867 to 1869 he accompanied General Sir Frederick Chapman [q.v.], governor, to Bermuda as private secretary and aide-de-camp. After serving at Fermoy, Ireland, he was appointed assistant inspector of works at the Royal Arsenal, Woolwich (Nov. 1870), and became aide-de-camp to General Sir John Lintorn Simmons [q.v. Suppl. II], inspector-general of fortifications (1 Aug. 1875). Promoted captain on 5 July 1877, he accompanied, in 1878, his chief to the Berlin Congress, where he came under the

notice of Lords Beaconsfield and Salisbury. Appointed assistant privy purse and assistant private secretary to Queen Victoria in Oct. 1878, he became also groom-in-waiting in 1880, an extra equerry in Oct. 1888, and keeper of the privy purse and head of H.M.'s personal household in May 1895 in succession to Sir Henry Ponsonby [q. v.]. Promoted major (30 June 1883), lieutenant-colonel (22 Oct. 1890), he was made C.B. in 1882 and K.C.B. in 1887 and a privy councillor on his retirement from the army on 12 Oct. 1895.

From May 1895 Edwards was one of the most trusted and intimate advisers of the Queen until her death in 1901, and was one of the executors of her will. Retiring in demeanour, he was a man of remarkable charm and of strong moral fibre. Edward VII in 1901 made him a G.C.V.O., serjeant-at-arms of the House of Lords, and an extra equerry to himself, granting him a pension. George V appointed him paymaster to the household and an extra equerry. He died at his residence, the Manor House, Lindfield, Sussex, on 14 Aug. 1910, and was buried in Cuckfield cemetery.

Edwards married (1) on 19 April 1871, Edith (d. 1873), daughter of the Rev. Allan Smith-Masters of Camer, Kent; (2) on 20 May 1880, Mary, daughter of Major John Routledge Majendie, 92nd highlanders; she survived him.

[R.E. Records; *Memoirs in the Royal Engineer Journal*, by General Sir Richard Harrison; Porter, *History of the Corps of Royal Engineers*, 1889, 2 vols.; The Times, 15 August 1910.] R. H. V.

EDWARDS, HENRY SUTHERLAND (1828-1906), author and journalist, born at Hendon on 5 Sept. 1828, was eldest child in the family of three sons and three daughters of John Edwards, of independent means, by his wife Harriet Exton Teale Morris. After education at the Brompton grammar school and in France, where he acquired a full command of the language, Edwards engaged at a very early age in London journalism. He contributed to 'Pasquin,' a small weekly rival of 'Punch,' which lasted only from August to October 1847. To another short-lived rival of 'Punch,' 'The Puppet Show,' which the firm of Vizetelly [see VIZETELLY, HENRY] started in March 1848, Edwards also contributed, and on the recommendation of Gilbert à Beckett he, in 1848, joined the staff of 'Punch.' That engagement proved brief, although in 1880 he renewed his association with 'Punch' as an occasional contributor. He early collaborated with

Robert Barnabas Brough [q. v.] in writing for the London stage 'Mephistopheles, or an Ambassador from Below,' an extravaganza, and he also joined in 1851 and at later dates Augustus Septimus Mayhew [q. v.] in light dramatic pieces, including 'The Goose with the Golden Eggs,' a farce (Strand Theatre, February 1859), and 'The Four Cousins,' a comic drama (Globe, May 1871). Edwards meanwhile found active employment in varied branches of serious journalism. He was in Paris during the coup d'état of 1852, and in 1856 he went to Russia as correspondent of the 'Illustrated Times' to describe the coronation of the Tsar Alexander II. He remained at Moscow for some time to study the language, and was soon well versed in Russian politics and literature.

Returning to England he published 'The Russians at Home,' sketches of Russian life (1861). In 1862 and again in 1863 he was correspondent for 'The Times' in Poland and witnessed the insurrection until his friendly relations with the insurgents led to his expulsion. After revisiting Moscow and St. Petersburg he produced 'Polish Captivity, an Account of the Present Position of the Poles in Austria, Prussia and Russia' (2 vols. 1863), and he embodied his experiences in his 'Private History of a Polish Insurrection' (2 vols. 1865). 'The Times' sent him to Luxemburg in 1867, and for the same paper he accompanied the German army during the Franco-German war of 1870-1. His observations were collected as 'The Germans in France, Notes on the Method and Conduct of the Invasion.' A close student of the affairs of the Balkan Peninsula, he republished in 1876 a series of papers contributed to the 'Pall Mall Gazette' under the general title 'The Slavonian Provinces of Turkey.' In 1885 appeared his 'Russian Projects against India from the Czar Peter the Great to Skobelev.' Foreign politics was only one of many themes of Edwards's fertile pen. He wrote much on musical history and criticism. A 'History of Opera' (2 vols.) appeared in 1862; 'The Lyrical Drama,' a collection of papers, in 1881; and 'Rossini and his School,' 1881; together with lives of Rossini (1869) and Sims Reeves (1881).

Edwards was the first editor of the 'Graphic' (1869), and in 1877 he undertook an unfortunate venture, the 'Portrait,' photographs and biographical notices of notable persons, which ran to fifteen numbers. Edwards also tried his hand at fiction. His first novel, 'The Three

Louisas,' appeared in 1866, and six others followed, the last, 'The Dramatist's Dilemma' (1898), being written in collaboration with Mrs. Church (Florence Marryat [q. v.]). His later years were largely devoted to translations from the French or Russian. A busy compiler to the end, Edwards brought out 'The Romanoffs, Tsars of Moscow and Emperors of Russia' in 1890, 'Personal Recollections' in 1900, and in 1902 a life of Sir William White, English ambassador at Constantinople. He died at his house, 9 Westbourne Terrace Road, London, on 21 Jan. 1906, being buried at St. John's cemetery, Woking.

On 2 Feb. 1857 he married in the English church, Moscow, Margaret, daughter of Thomas Watson, a Scottish engineer settled in Russia. She survived him with one son, Mr. Gilbert Sutherland Edwards.

Besides the works mentioned, Edwards published: 1. 'Famous First Representations,' 1886. 2. 'The Faust Legend,' 1886. 3. 'The Prima Donna,' 2 vols. 1888. 4. 'Idols of the French Stage,' 2 vols. 1889. 5. 'Old and New Paris,' 2 vols. 1892-4.

[Edwards's Personal Recollections, 1900, Lacy's British Theatre, vols. 25, 44, and 92; Brit. Mus. Cat.; private information; H. Vizetelly's Glances Back through Seventy Years, 1893; Spielmann's History of Punch.]

EDWARDS, JOHN PASSMORE (1823-1911), editor and philanthropist, born at Blackwater, near Truro, on 24 March. 1823, was second son in a family of four sons of William Edwards by his wife Susan Passmore of Newton Abbot, Devonshire. His father, a carpenter by trade, kept a small public-house, to which was attached a large fruit garden; he was a calvinistic methodist, and his wife an orthodox baptist. John, after a very rudimentary education at the village school, helped his father from the age of twelve in brewing or gardening, continuing his attendance at the school of an evening, and reading, with the help of a dictionary, the 'Penny Magazine' and such cheap books as he was able to purchase. At fifteen he made futile experiments in verse and as a lecturer. Afterwards he helped to found and run a free evening school with good results.

In 1843 Edwards became at a salary of 10*l.* a year clerk to Henry Sewell Stokes [q. v.], a lawyer in Truro, and a poet. He had already interested himself in the Anti-Corn Law League agitation, and had distributed pamphlets for which he had applied to the league's secretary. At the

end of eighteen months he left Stokes's employment and some months later became representative in Manchester of the 'Sentinel,' a new London weekly newspaper started in the interest of the Anti-Corn Law League. The paper failed, and Edwards received only 10*l.* for fifteen months' service. He met a debt to his landlord by lecturing for temperance societies at one shilling a lecture. At Manchester he heard Cobden and Bright at public meetings, and became a staunch adherent of the Manchester political school.

In 1845 Edwards went to London, and while maintaining himself by lecturing and journalism developed his interest in political and social reform. He actively promoted the Early Closing Association, and he suggested the invitation which led Emerson in 1848 to lecture on behalf of the association at Exeter Hall on 'Montaigne,' 'Napoleon,' and 'Shakespeare.' He showed sympathy with the Chartist movement but deprecated the use of physical force. The London Peace Society sent him as a delegate to the Peace Conference at Brussels in Sept. 1848, and he was at Paris and Frankfort-on-the-Maine on the like errand in 1849 and 1850.

In 1850 Edwards with savings of some 50*l.* started 'The Public Good,' a weekly newspaper, which he wrote, printed, and published single-handed in a small room where he lived in Paternoster Row. The paper, though widely sold, did not pay, and Edwards started others, the 'Biographical Magazine,' the 'Peace Advocate,' and the 'Poetic Magazine,' in the vain hope that they would advertise and so support each other. After a three years' struggle his health broke down and he became bankrupt, paying five shillings in the pound to his creditors. Engaging strenuously in journalistic work, he so far recovered his position as to be able to purchase at a nominal price in 1862 the 'Building News.' By careful management the paper was brought to a flourishing condition, and in 1866 Edwards paid in full his old debts, from which he was legally absolved. An inscription on a watch and chain presented by his former creditors on 29 Aug. 1866 at a banquet given in his honour at the Albion Tavern, Aldersgate Street, testified to their appreciation of 'his integrity and honour.' In 1869 he also acquired for a small sum the 'Mechanics' Magazine,' which rapidly returned substantial profits.

Edwards's next venture was the purchase in 1876 of the 'Echo,' the first halfpenny newspaper. He bought it from Baron

Albert Grant [q. v.], who in 1875 had acquired it from Cassell, Petter & Galpin, its founders in 1868. Edwards became his own editor, and under his control the paper gained greatly in popularity. Its politics were liberal and it advocated the causes of social reform in which Edwards interested himself. After some years he excluded betting news, a step by which the paper gained commercially rather than lost. In 1884 he sold a two-thirds share of the paper to Andrew Carnegie and Samuel Storey for, it is said, 50,000*l.*, but, difficulties of management arising, he re-bought it almost immediately at double the price. He retained control of the paper till 1896, when it was sold at a high figure to a syndicate specially formed for its purchase. The 'Echo' collapsed in 1905. Together with the 'Echo' Edwards also ran for many years the 'Weekly Times,' a periodical acquired from Sir John Hutton.

To all progressive movements Edwards accorded active and continuous support. From 1845 onwards he was on the committee of societies for the abolition of capital punishment, of taxes on knowledge and of flogging in the army and navy. He helped to direct the Political and Reform Association, the Ballot Society, and the Society for the Suppression of the Opium Trade. He became president (in 1894) of the London Reform Union, formed to stimulate progressive municipal legislation in London, and of the Anti-gambling League. He pressed his views on the public in pamphlets like 'The Triple Curse' (1858), which dealt with the effects of the opium trade on England, China, and India, and 'Intellectual Tollbars' (1854), a protest against taxes on paper and newspapers. An almost fanatical member of the Peace Society, he protested in 'The War: a Blunder and a Crime' (1855) against the Crimean war, and in later years strongly advocated the Transvaal's claim to independence. He was president of the Transvaal Independence Committee (1881) and of the Transvaal Committee (1901).

At the general election of 1868 Edwards was an unsuccessful candidate in the liberal interest for Truro, but made no further attempt to enter parliament till 1880, when he was returned with William Henry Grenfell (now Lord Desborough) for Salisbury. An unsupported charge of bribery led to a petition against Edwards's election, but it was contemptuously dismissed by the court. Edwards was disappointed at the lack of opportunity for

useful work which the House of Commons offered, and he withdrew at the dissolution of 1885.

His later years Edwards mainly devoted to generous yet discriminate philanthropy, his public gifts generally taking the form of free libraries and hospitals. In all some seventy public institutions bear his name as founder. The first institution founded by him was a lecture and reading room at his native village, Blackwater, in 1889, followed in the same year by a school and meeting-room at St. Day, a literary institute at Chacewater, and a mechanics' institute at St. Agnes, all small villages in Cornwall within three miles of his birthplace. Among the hospitals which he afterwards established were those at Falmouth, Liskeard, Willesden, Wood Green, Acton, Tilbury, East Ham, and Sutton in Surrey. He also founded convalescent homes at Limpsfield, Cranbrook, Perranworth, Herne Bay, and Pegwell Bay. At Chalfont St. Peter, Buckinghamshire, he established separate epileptic homes for men, boys, women, and girls; and at Swanley, Bournemouth, and Sydenham 'homes for boys.' He erected free libraries at Whitechapel, Shoreditch, Hoxton, Edmonton, Walworth, Hammersmith, East Dulwich, St. George's in the East, Acton, Poplar, Limehouse, Nunhead, East Ham, Plaistow, North Camberwell, Newton Abbot, Truro, Falmouth, Camborne, Redruth, St. Ives, Bodmin, Liskeard, and Launceston. He also founded an art gallery for the Newlyn colony of artists, near Penzance, and technical schools at Truro, and contributed to the foundation of art galleries at Whitechapel and Camberwell. To him were also due the erection of the West Ham Museum; the Passmore Edwards Settlement, Tavistock Place, with Mrs. Humphry Ward as honorary secretary; University Hall, Clare Market, and the Sailors' Palace, Commercial Road. He erected drinking fountains in various places, presented over 80,000 volumes to libraries and reading-rooms, and placed thirty-two memorial busts of Lamb, Keats, Ruskin, Hogarth, Elizabeth Fry, Emerson, Dickens, and other well-known men in public institutions through the country. At Oxford in 1902, on the suggestion of John Churton Collins [q. v. Suppl. II], he endowed a Passmore Edwards scholarship for the conjoint study of English and classical literature, and he presented a lifeboat to Broughty Ferry, near Dundee, and a public garden to Woolwich.

Edwards declined offers of knighthood

from both Queen Victoria and Edward VII. He accepted the honorary freedom of the five boroughs West Ham, Liskeard, Falmouth, Truro, and East Ham.

In 1905 Edwards printed privately 'A Few Footprints,' a rough autobiography (2nd edit. published 1906). He died at his residence, 51 Netherhall Gardens, Hampstead, on 22 April 1911, and was buried at Kensal Green cemetery. His net personalty was sworn at 47,411*l*. He made no public bequests. Edwards married Eleanor, daughter of Henry Vickers Humphreys, artist. One son and one daughter survived him.

A bust by Sir George Frampton was presented to Mrs. Edwards in 1897 and exhibited at the Royal Academy in 1898. Replicas were made and presented to various institutions in Cornwall. A portrait was painted by G. F. Watts for the National Portrait Gallery. A cartoon portrait by 'Ape' appeared in 'Vanity Fair' in 1885.

[Daily Telegraph, and The Times, 24 April 1911; A Few Footprints; J. J. Macdonald, Passmore Edwards Institutions, 1900; E. H. Burrage, J. Passmore Edwards, philanthropist, 1902; J. J. Ogle, The Free Library, 1897; Life and Memoirs of John Churton Collins, 1911.] S. E. F.

ELGAR, FRANCIS (1845-1909), naval architect, born at Portsmouth on 24 April 1845, was eldest son of nine children of Francis Ancell Elgar, who was employed at Portsmouth dockyard, by his wife Susanna Chalkley. At fourteen Elgar was apprenticed as a shipwright in Portsmouth dockyard, where his general education was continued at an excellent school for apprentices maintained by the admiralty. There he won a scholarship entitling him to advanced instruction. In 1864, when the admiralty, with the science and art department, established the Royal School of Naval Architecture and Marine Engineering at South Kensington, Elgar was appointed, after a competitive examination among shipwright apprentices in the dockyards, one of eight students of naval architecture. After the three years' course, he in May 1867 graduated as a first-class fellow, the highest class of diploma. Of much literary ability, he long helped as an old student in the publication of the school's 'Annual.' From 1867 to 1871 Elgar was a junior officer of the ship-building department of the royal navy, and was employed at the dockyards and in private establishments.

Leaving the public service in 1871,

Elgar became chief professional assistant to Sir Edward James Reed [q.v. Suppl. II], who was practising in London as a consulting naval architect. At the same time he helped Reed in the production of the quarterly review entitled 'Naval Science.' General manager of Earle's shipbuilding and engineering company at Hull (1874-6), he practised as a naval architect in London (1876-9). From 1879 to 1881 he was in Japan as adviser upon naval construction to the Japanese government, and from 1881 to 1886 resumed private practice in London, advising leading steamship companies on designs of new ships, but specially investigating the causes of loss of, or accident to, important vessels. His reports on the *Austral*, which foundered in Sydney harbour in 1881, and the *Daphne*, which capsized when being launched on the Clyde in 1883, made him a leading authority on the stability of merchant ships. Elgar also served in 1883 on a departmental committee of the board of trade whose report formed the basis of subsequent legislation and of the regulations for fixing the maximum load-line for seagoing merchant ships of all classes and of most nationalities.

In 1883 Elgar was appointed to the first professorship of naval architecture to be established in a university; it was founded at Glasgow by the widow of John Elder [q. v.], the marine engineer. Although permitted to continue private practice, Elgar during the next three years mainly devoted himself to the organisation of the new school. His personal reputation secured the sympathy of shipowners and shipbuilders, and attracted many students. In 1886 Elgar on the invitation of the admiralty re-entered the public service as director of dockyards—a newly created office. During his six years' control, work in the dockyards was done more economically and rapidly than before. Resigning this appointment in 1892, he was until 1907 consulting naval architect and director of the Fairfield shipbuilding and engineering company of Glasgow. The company, founded by John Elder and developed by Sir William Pearce, fully maintained its position during Elgar's management. The works were enlarged and improved, and their productive capacity increased. Novel types of vessels were designed and built, including torpedo-boat destroyers and cross-Channel steamers of high speed. Steam turbines and watertube boilers were employed at an early date, with satisfactory results.

In 1908, after voluntarily retiring from Fairfield with a view to rest, Elgar, at the request of friends interested in the business, undertook as chairman the reorganisation of the firm of Cammell, Laird & Co. of Maryport, Cumberland, whose operations embraced steel and armour manufacture as well as shipbuilding and engineering. Soon after he became in addition chairman of the Fairfield company, which had intimate relations with Cammell, Laird & Co. Elgar's efforts proved successful, but the strain told on his health.

Combining a wide range of scientific knowledge with practical and commercial capacity, Elgar was made hon. LL.D. of Glasgow University in 1885; F.R.S. Edinburgh soon after, and F.R.S. London in 1895. To the Royal Society's 'Proceedings' he contributed important papers on problems of stability and strength of ships. Of the Institution of Naval Architects, of which he was a member from the outset of his career, he served on the council for twenty-six years, was treasurer for seven years, and finally was an honorary vice-president. His chief contributions to technical literature are in the 'Transactions' of the institution, and include valuable papers on 'Losses of Ships at Sea,' 'Fast Ocean Steamships,' 'The Cost and Relative Power of Warships,' and problems of strength and stability of ships. A member of the Institution of Civil Engineers for twenty-five years, Elgar sat on the council for six years, and as 'James Forrest Lecturer' in 1907 delivered an address on 'Unsolved Problems in the Design and Propulsion of Ships.' He also served on the council of the Royal Society of Arts and was a royal commissioner for the international exhibitions at Paris (1889) and Chicago (1894). His interests were wide outside professional matters. Literature always attracted him. He was elected F.S.A. in 1896, and from 1904 he served as a member of the Tariff Commission.

He died suddenly at Monte Carlo on 17 Jan. 1909, and was buried at Highgate cemetery. He married in 1889 Ethel, daughter of John Howard Colls of London, who survived him, but left no issue.

Elgar founded a scholarship for students of naval architecture at the Institution of Naval Architects, and provided for its future maintenance by his will. He also made large bequests to the Institution of Naval Architects and the department of naval architecture in Glasgow University.

He published in 1875 an admirably illustrated book on 'The Ships of the Royal

Navy,' and as president of the London dining club called the 'Sette of Odd Volumes' (1894-5) he privately printed an interesting paper on the earlier history of shipbuilding.

W. H. W.

ELIOT, SIR JOHN (1839-1908), meteorologist, born at Lamesley in Durham on 25 May 1839, was son of Peter Elliott of Lamesley, schoolmaster, by his wife Margaret. He changed the spelling of his surname to Eliot. Matriculating at the rather late age of twenty-six at St. John's College, Cambridge, in 1865, he graduated B.A. in 1869 as second wrangler and first Smith's prizeman.

Soon elected to a fellowship, he accepted, owing to weak health and with a view to avoiding the climate of England, the professorship of mathematics at the Engineering College at Roorkee in the North-West Provinces, under the Indian government. In 1872 he was transferred to the regular Indian Educational Service as professor of mathematics at the Muir Central College, Allahabad. With that office was combined that of superintendent of the Meteorological Observatory. In 1874 he migrated to Calcutta as professor of physical science in the Presidency College and meteorological reporter to the government of Bengal. In 1886 he succeeded Henry Francis Blanford [q. v. Suppl. I] as meteorological reporter to the government of India and was appointed in addition director-general of Indian observatories in 1899. Eliot completed the organisation of meteorological work which Blanford began. 'The number of observatories working under or in connection with the department was increased from 135 to 240 (including two at an elevation of over 11,000 ft.) and the co-operation of the larger native states was secured. Under Sir John Eliot's superintendence the diffusion of weather information was extended by the issue of frequent reports at various centres. Methods of giving warnings of storms at sea were developed and telegraphic intimations of impending floods to engineers on large works under construction or in charge of railway canals and bridges saved the state from heavy losses. Vast improvement was effected in the mode of announcing . . . prospective drought and consequent danger of famine over greater or lesser areas.'

Eliot was elected fellow of the Royal

Society in 1895, and was made C.I.E. in 1897. His last official step in India was to secure for his successor the increase of the scientific staff of which he had himself felt the need. He retired from India in 1903 and was created K.C.I.E. On his return to England he actively pursued his meteorological work. He joined the committee of management of the Solar Physics Observatory at South Kensington under the board of education. He was a member of the International Meteorological Committee from 1896 till his death. He was also secretary of the solar commission, suggested by Sir Norman Lockyer to the International Meteorological Committee which met at Southport in 1903. The purpose of the committee was to collect comparable meteorological data from all parts of the world and solar data for comparison with them. At the British Association meeting at Cambridge in 1904 he presided over the subsection for astronomy and cosmical physics, and there advocated the organisation of meteorological work upon an imperial basis and an imperial provision 'for organised observations from areas too wide to be within the control of any single government.' He died suddenly of apoplexy on 18 March 1908 at Bon Porto, the estate which he had acquired on account of his wife's health at Var in the south of France. He was buried within his own estate. An accomplished musician, he played well on both the organ and the piano. He married in 1877 Mary, daughter of William Nevill, F.G.S., of Godalming, who survived him with three sons.

Eliot's contributions to meteorological science are chiefly to be found in the long and important series of Indian meteorological memoirs published by his department. Of special value is a short paper on Indian famines contributed to the Congress of Meteorologists at Chicago in 1893.

Of his separate publications the chief are : 1. 'Report of the Vizingsapatam and Backergunge Cyclones of October 1876,' with charts (Calcutta, 1877, fol.), a copy of which was ordered to be laid on the table of the House of Commons. 2. 'Report on the Madras Cyclone of May 1877,' with charts (Calcutta, 1879, fol.). 3. 'Handbook of Cyclonic Storms in the Bay of Bengal' (Calcutta, 1890; 2nd edit. 1900), a work of the highest service to navigation by its warnings and counsel. 4. 'Climatological Atlas of India,' 1906, Indian Meteorological Department, 120 plates (published by authority of the government of India), a wonderful pictorial representation of patient and

painstaking work combined with skilful and stringent organisation.

[The Times, 20 March 1908; Nature, lxxvii. 490; Who's Who, 1907; Brit. Mus. Cat.]

W. N. S.

ELLERY, ROBERT LEWIS JOHN (1827-1908), government astronomer of Victoria, Australia, born at Cranleigh, Surrey, on 14 July 1827, was son of John Ellery, surgeon, of that place. After education at the local grammar school he was trained for the medical profession; but attracted by the goldfields of Australia he left England for Melbourne in 1851. He had already interested himself in astronomy and meteorology, and a suggestion made, apparently by Ellery, in the colonial press as to the growing need of an authoritative means of testing ships' chronometers and adjusting nautical instruments for purposes of navigation in Australian waters led the colonial government of Victoria to establish an observatory at Williamstown, four miles from Melbourne, in 1853. Ellery was appointed to organise the observatory and became its superintendent. At the outset the observatory consisted of a time ball on Gellibrand's Point, Williamstown, the ball being dropped at one o'clock local time, which was ascertained by Ellery from sextant observations. A few months later a small transit instrument and an astronomical clock were added, and the arrangement for the time signal made more complete, a night-signal being added by eclipsing the light of the lighthouse at two minutes to eight and suddenly exposing it exactly at eight o'clock; but for some years Ellery's work was confined to the determination of local time, the finding of the longitude and latitude of the place, and the keeping of a 'Journal of Meteorological Observations.' Meanwhile he was placed in charge for a short time of the electric telegraph line between Williamstown and Melbourne, and in 1858, when the Victorian government resolved to undertake a geodetic survey of the colony, Ellery was entrusted with the post of director. He retained the office till 1874.

In January 1860 a board of visitors was appointed to improve the organisation of the observatory, and Ellery induced the board to remove it from the town of Williamstown, whose growth made that place an unsuitable site, to an appropriate building and location to the south of Melbourne. The new observatory, begun in October 1861, was finished early in 1863. Ellery remained director of the new observatory and government astronomer of Victoria until

1895. As director he was responsible for three catalogues of star places, the first a small catalogue of 546 stars made at the original observatory at Williamstown, and the first and second Melbourne general catalogues published respectively in 1874 and 1890. With a view to examining the nebulae that can only be seen in the southern hemisphere a large telescope was needed, and a new four-foot reflecting telescope ordered in 1865 from the firm of Grubb in Dublin, which took three years to complete, proved on arrival disappointing in its performance.

Ellery thereupon learned the art of figuring and polishing mirrors and put the Melbourne great reflector into order with his own hands. Photographs of the moon were taken with the reflector, and it was used for a systematic revision of all the southern nebulae and for examination of comets as they arrived. Ellery observed the transits of Venus in 1874 and 1882. Under Ellery's control, the magnetic and meteorological work at the observatory grew heavy, and other work was added. He joined in 1887 in the great co-operative scheme of making a photographic chart of the whole sky, and a photographic catalogue of all the stars down to the eleventh magnitude (see *Report of Melbourne Observatory* for 1891, *Monthly Notices*, lii. 265).

Ellery was one of the founders of the Royal Society of Victoria, was its president from 1856 to 1884, and contributed many papers to its 'Proceedings.' He identified himself fully with public life in Australia, not alone on the scientific side. In 1873 he organised the Victorian torpedo corps which subsequently became the submarine mining engineers, and he was lieutenant-colonel of the corps. He was elected on 8 July 1859 a fellow of the Royal Astronomical Society, to whose 'Monthly Notices' he was a contributor from 1855 to 1884, and he became F.R.S. in 1873. In 1874 he was entrusted with an exploring expedition to northern Australia, but bad weather cut the scheme short. He was absent in England on a year's leave in 1875. He was created C.M.G. in 1889. After his resignation of his office of government astronomer in 1895, he joined the board of visitors, and lived in his house in the observatory domain until his death there on 14 Jan. 1908. Ellery married twice: (1) in 1853 a daughter of Dr. John Shields of Launceston, Tasmania (*d.* 1856); and (2) in 1858 his first wife's sister Margaret, who survived him.

Ellery's work is mainly recorded in the 'Astronomical Results of the Melbourne Observatory,' vols. i. to viii. (1869-88), in the 'First Melbourne General Catalogue' (1874), the 'Second Melbourne General Catalogue' (1890), and in various papers and Reports of the Melbourne Observatory by him in the 'Monthly Notices, R.A.S.' vols. xv. to lv. A 'Third Melbourne General Catalogue' was in preparation at his death.

[Melbourne Observatory Publications, i. p. vi; Proc. Roy. Soc. lxxxii.; Heaton's Austral. Dict. of Dates.] H. P. H.

ELLICOTT, CHARLES JOHN (1819-1905), bishop of Gloucester, was born on 25 April 1819 at Whitwell, near Stamford, where his father, Charles Spencer Ellicott, was rector. His mother was a Welsh lady, Ellen, daughter of John Jones. His grandfather was also a clergyman beneficed in Rutland, and was grandson of John Ellicott [q. v.], clock-maker to King George III and man of science. Ellicott was educated at the grammar schools of Oakham and Stamford, and proceeded in 1837 to St. John's College, Cambridge, where he won in 1838 the Bell University scholarship. At his tripos examinations he only passed as a senior optime and as second in the second class of the classical tripos; but he won the members' prize for a Latin essay in 1842 and the Hulsean prize for an essay on the Sabbath in 1843 (published the following year), and was elected to a Platt fellowship at St. John's College in 1845. He graduated B.A. in 1841 and M.A. in 1844, and was ordained deacon in 1846 and priest in 1847. After taking his degree he engaged in tutorial work. His fellowship lapsed on his marriage in 1848, and he accepted the small living of Pilton, Rutlandshire, where he pursued mathematical studies, publishing in 1851 'A Treatise on Analytical Statics.' He also began a series of commentaries on St. Paul's Epistles, and contributed an essay on the apocryphal gospels to 'Cambridge Essays' (1856). Until Bishop Lightfoot's works began to appear, Ellicott's commentaries on St. Paul's Epistles were recognised as the best in the English language for scholarship and breadth of view. His commentary on Galatians came out in 1854 (5th edit. 1884); that on Ephesians, on the pastoral epistles, on Philippians, Colossians, and Philemon, and on Thessalonians, followed successively in 1855-6-7-8; all reached four editions. The commentary on 1 Corinthians was not published until 1887, and those on Romans and on 2 Corinthians

he never completed. In 1851 Ellicott reviewed the first volume of Henry Alford's New Testament in the 'Christian Remembrancer,' complaining of his reliance upon German commentators. Alford issued a pamphlet in reply, but his cordial appreciation of Ellicott's 'Galatians' in 1854 led to a close friendship. Alford helped to broaden Ellicott's intellectual and religious views. In 1858 Ellicott left Pilton to succeed Trench as professor of New Testament exegesis at King's College, London. In 1859 he was Hulsean lecturer at Cambridge, and delivered the 'Historical Lectures on the Life of our Lord Jesus Christ' (1860; 6th edit. 1876), which proved one of his most popular books. Next year he became Hulsean professor, holding the post for some time with his King's College professorship and residing in Cambridge. On 19 Feb. 1860 he was seriously injured in a railway accident at Tottenham, while travelling from Cambridge to London; his gallantry in ministering spiritually to his fellow sufferers attracted public admiration. Despite a permanent limp (he could never wear episcopal gaiters), he continued to skate and enjoyed mountaineering. He joined the Alpine Club in 1871 and remained a member till 1904.

In 1861 Ellicott was made dean of Exeter, and also undertook the task of organising a diocesan training college. In the same year he contributed to 'Aids to Faith,' a volume designed as a counterblast to 'Essays and Reviews'; his essay dealt with Jowett's article on the 'Interpretation of Scripture.' In 1863 he was called to the united sees of Gloucester and Bristol, and was consecrated in Canterbury Cathedral on 25 March 1863.

Ellicott's episcopate lasted for forty-two years. He threw himself vigorously into diocesan work, improving the efficiency of his clergy, showing himself sympathetic to all schools of thought, helping the establishment of the Gloucester Theological College, and raising in Bristol £5,000. for the restoration of the 'truncated and naveless' cathedral. He promoted the work of church extension, forming in Bristol in 1867 the Church Aid Society, and encouraging the Bristol Church Extension Fund. Outside his own diocese his activity and influence were so conspicuous that in 1868, on Archbishop Longley's death, he was recommended by Disraeli for the vacant see of Canterbury; but Queen Victoria chose Archibald Campbell Tait [q. v.]. Ellicott was secretary of the first Lambeth conference in 1867, and of its successors in 1878 and 1888; at the conference of 1898 he

was made registrar, and was the only English prelate who attended the four conferences. In 1867 he was a member of the royal commission on ritual and the rubrics (1867-70). Samuel Wilberforce (*Life*, iii. 216) described Ellicott as 'hot and intemperate in trying to force on condemnation of chasuble.' As a result of the fourth report of the commission, Ellicott formed one of a committee of bishops to consider the question of re-translation of the Athanasian creed, and in February 1872 read a proposed revision in Convocation, delivering one of the 'four great speeches' (*Life of Tait*, ii. 140) on the subject. In 1873 a committee of the upper house of Convocation drew up a report on confession. Magee, Ellicott's friend and ally, tells us that 'it was mine and Gloucester and Bristol's' (*Life of Magee*, 296). This declaration was in the main adopted by the Lambeth conference of 1878.

Among all Ellicott's activities he was proudest of his share in the revision of the Bible. As early as 1856, in the preface to his edition of 'St. Paul's Pastoral Epistles,' he had advocated revision, as against a new translation; and he was one of the 'five clergymen' who in 1857 published a revision of the Gospel of St. John (3rd edit., with notes, 1862), which was followed by revisions of Romans and Corinthians in 1858 and other epistles in 1861. In 1870 he brought the whole subject before the public in a volume of 'Considerations.' He was the chairman of the company which revised the New Testament, missing only two out of the 407 sittings, and in 1881 he presented the completed work to Convocation. He then attached himself to the company revising the Apocrypha, and presented the result of their labours to Convocation in 1896. Finally, in 1899, he presented the marginal references. A sharp controversy arose on the publication of the revised New Testament with regard to Ellicott's conduct as chairman. He was accused of allowing more changes in the text than his instructions permitted, but he defended himself with learning and good temper, and his 'Addresses on the Revised Version' of Holy Scripture (1901) remains the best popular account of the undertaking. His most important literary labour in the later part of his life was 'The Old and New Testaments for English Readers,' which he began to edit in 1878. He collected a strong band of collaborators, including Plumptre and Dr. Sanday. In scholarship and breadth of view the work was much in advance of any previous commentary

for general use. 'A New Testament Commentary for English Readers' appeared in 3 vols. 1878-9; 3rd edit. 2 vols. 1892-6. 'An Old Testament Commentary' in 5 vols. 1882-4; reissued 1884-92. An abridgement of the 'New Testament Commentary,' 'for the use of schools,' followed in 14 vols. (1878-83), and was succeeded by 'The Complete Bible Commentary for English Readers,' 7 vols. 1897 (new edit. 1905, with 48 plates).

In 1891 the publication of 'Lux Mundi' stirred Ellicott to challenge the soundness of 'the analytical view' of the Old Testament. In his 'Christus Comprobator' (1891) he insisted that fresh views of doctrine as well as of history were involved in the new views. Although in his most popular volumes he might seem to stem the tide of modern thought, Ellicott's influence was not reactionary. His courage and honesty forced him continually to the task of correlating old and new views, and his conspicuous candour and courtesy always raised the tone of controversy. His last charge (1903) was a final proof that his mind to the end was open to new truth.

In 1897, with Ellicott's concurrence, the united sees of Gloucester and Bristol were divided. He remained bishop of Gloucester, surrendering 90% of his income. As a memorial of his thirty-four years' connection with Bristol, a reredos from the designs of J. L. Pearson was dedicated in the cathedral on 19 Oct. 1899. In 1903 the fortieth anniversary of his consecration was celebrated in the chapter house of Gloucester Cathedral. He resigned on Lady day 1905, and died on 15 Oct. 1905 at Birchington-on-Sea, where he was buried. A recumbent effigy was erected to his memory in Gloucester Cathedral. A portrait in oils by Holl, which was presented to the see, is in the Palace, Gloucester. A replica belongs to the widow. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1885.

On 13 Aug. 1848 he married Constantia Annie, daughter of Admiral Alexander Becher, and had by her a son and two daughters. In addition to the works mentioned above, he published numerous annual reviews of 'diocesan progress,' charges, collections of addresses, and sermons and prefaces to books.

[Eagle, xxvii. No. 138, 84-106, and No. 139, 253-6; The Times, 16 Oct. 1905; Alpine Journal, xxiii. 171.] R. B.

ELLIOT, SIR GEORGE AUGUSTUS (1813-1901), admiral, born at Calcutta on 25 Sept. 1813, was the eldest son of Admiral Sir George Elliot [q. v.] by his wife

Eliza Cecilia, daughter of James Ness of Osgodby, Yorkshire. Entering the navy in November 1827, he was made lieutenant on 12 Nov. 1834. For the next three years he was in the *Astræa* with Lord Edward Russell [q. v.] on the South American station, and on 15 Jan. 1838 was promoted to the command of the *Columbine* brig, in which he served on the Cape and West Coast station, under the orders of his father, for two years, with remarkable success, capturing six slavers, two of them sixty miles up the Congo. In February 1840 he went on to China in company with his father, and on 3 June was promoted, on a death vacancy, to be captain of the *Volage*, in which in the following year he returned to England, his father, who was invalided, going with him as a passenger. From 1843 to 1846 he commanded the *Eurydice* frigate on the North American station, and after a prolonged spell of half-pay was appointed in December 1849 to the *Phaeton* frigate, which under his command attained a reputation as one of the smartest frigates in the service, and is even now remembered by the prints of the Channel fleet with the commodore in command making the signal 'Well done, Phaeton!' in commendation of a particularly smart piece of work in picking up a man who had fallen overboard (11 Aug. 1850). Early in 1853 the *Phaeton* was paid off, and in January 1854 Elliot commissioned the *James Watt*, one of the first of the screw line-of-battle ships, which he commanded in the Baltic during the campaigns of 1854 and 1855. On 24 Feb. 1858 he became rear-admiral, and was then captain of the fleet to Sir Charles Fremantle, commanding the Channel squadron. In 1861 he was a member of a royal commission on national defences, and from 1863 to 1865 was superintendent of Portsmouth dockyard. On 12 Sept. he became vice-admiral, and in the following year was repeatedly on royal commissions on naval questions, gunnery, tactics, boilers, ship-design, &c. In 1870 he reached the rank of admiral; and in 1874 was elected conservative M.P. for Chatham; but he resigned his seat in the following year on being appointed commander-in-chief at Portsmouth. On 2 June 1877 he was nominated a K.C.B., and the following year, 26 Sept., he was placed on the retired list. Continuing to occupy himself with the study of naval questions, he published in 1885 'A Treatise on Future Naval Battles and how to fight them.' He died in London on 13 December 1901.

He married in 1842 Herscy, only daughter of Colonel Wauchope of Niddrie, Midlothian, and left issue.

[Royal Navy Lists; O'Byrne's Naval Biographical Dictionary; Who's Who; The Times, 14 Dec. 1901; information from the family.] J. K. L.

ELLIOT, SIR HENRY GEORGE (1817-1907), diplomatist, born at Geneva on 30 June 1817, was second son of Gilbert Elliot, second earl of Minto [q. v.], by his wife Mary, eldest daughter of Patrick Brydone of Coldstream, Berwickshire. His eldest sister, Lady Mary, married on 18 September 1838 Sir Ralph Abercromby, who was British minister at Turin and the Hague. Another sister, Lady Frances, on 20 July 1841 became the second wife of Lord John Russell [q. v.]. Educated at Eton and Trinity College, Cambridge, where he took no degree, Elliot served as aide-de-camp and private secretary to Sir John Franklin [q. v.] in Tasmania from 1836 to 1839, and as précis writer to Lord Palmerston at the foreign office in 1840. Entering the diplomatic service in 1841 as attaché at St. Petersburg, he was promoted to be secretary of legation at the Hague 1848, was transferred to Vienna in 1853, and in 1858 was appointed British envoy at Copenhagen. On the accession of Francis II to the throne of the Two Sicilies on 22 May 1859, the British government decided on resuming diplomatic relations with the court of Naples. These had been broken off by Lord Palmerston's government in 1856, in consequence of the arbitrary and oppressive character of the administration and the refusal of the government of King Ferdinand II to pay any attention to the joint representations of England and France. Elliot was in England on a short leave of absence early in 1859, and Lord Malmesbury, then foreign secretary, despatched him on a special mission to congratulate King Francis II on his accession, with instructions to hold out the expectation of the re-establishment of a permanent legation, if a more liberal and humane policy were pursued in the new reign, and also to dissuade the king from allying himself with Victor Emanuel in the war which had broken out between Piedmont and France on one side and Austria on the other. Elliot's brother-in-law, Lord John Russell [q. v.], who succeeded Lord Malmesbury at the foreign office in June, instructed Elliot to remain on at Naples, and eventually on 9 July appointed him permanent minister. In regard to neutrality, he was instructed not to press

that course, if the public opinion of Naples so strongly favoured alliance with Piedmont as to render neutrality dangerous to the dynasty. Elliot's efforts to obtain constitutional reform and abandonment of the arbitrary methods of the previous reign were approved and supported, but had no substantial result. Francis II after some faint signs of a disposition to improve the methods of rule returned to the old methods. Elliot's representations seem on one occasion to have been instrumental in obtaining the release of a certain number of prisoners, who were being detained indefinitely without trial, but generally speaking the advice and the warnings given by him partly on his own initiative and partly under instructions from his government were neglected. The result was not slow in coming. Early in 1860 Garibaldi, with a force of 1000 volunteers, seized Sicily in the name of King Victor Emanuel. In August he advanced on Naples, and handed over the fleet, which surrendered to him, to the Piedmontese admiral. The British government decided on maintaining an attitude of non-intervention, despite the appeals of France to oppose Garibaldi. The favourable disposition which the British government manifested towards the progress of Italian unity was largely attributable to the reports of Sir James Hudson [q. v.], the envoy at Turin, and of Elliot regarding the condition of public feeling in Italy. On 10 Sept. Elliot, in pursuance of instructions from Lord John Russell, had an interview with Garibaldi in the cabin of Admiral Munday on board H.M.S. Hannibal, which was then stationed in the Bay of Naples. Elliot stated that he was instructed to remain at Naples for the present, and endeavoured to dissuade Garibaldi from any ulterior intention of attacking Venice (cf. WALPOLE'S *Life of Lord John Russell*, ii. 322 seq.). Garibaldi was not much impressed by the arguments of the British minister. But the resistance offered by Francis II's forces at Capua hampered Garibaldi's plans. In October a portion of the Piedmontese army under King Victor Emanuel joined the Garibaldian forces, and finally drove King Francis and his troops into Gaeta, which surrendered after a three months' siege. On 21 October a plébiscite in Sicily and Naples gave an enormous majority of votes for Italian unity under King Victor Emanuel. The formal ceremony of annexation took place at Naples on 8 Nov. Thenceforward the British legation had no *raison d'être*, and

Elliot left for England a few days later. For some time he was without active employment.

On the death of Sir Thomas Wyse [q. v.], British minister at Athens, in April 1862, he was sent on a special mission to Greece, where discontent against the rule of King Otho was assuming dangerous proportions, and had manifested itself in a mutiny of the garrison of Nauplia. Here again his instructions were to urge the necessity of a more liberal system of administration and of the observance of the rules of constitutional government. He was also to make it clear that the British government would not countenance aggressive designs against Turkey. He returned in July, Peter Campbell Scarlett [q. v.] having received the appointment of minister. During his short residence at Athens he had been greatly impressed with the unpopularity of the king, and his forebodings were soon justified. In October a provisional government deposed the king. The British government declined the offer of the crown to Prince Alfred, but promised, if a suitable candidate were chosen, and if the constitutional form of government were preserved and all attempt at aggression against Turkey were abandoned, to cede the Ionian Islands. Elliot was sent back to Athens on special mission to arrange matters with the provisional government on this basis. Prince William, second son of King Christian of Denmark, was on 30 March 1863 unanimously elected as King George I. Elliot returned to England in the following month. In September of the same year he succeeded Sir James Hudson as British envoy to the king of Italy, taking up his residence at Turin. The foreign secretary, Lord John Russell, was freely charged, both in private correspondence and in the press, with unjustly superseding Hudson to make a place for Elliot, his own brother-in-law. 'The Times' had already suggested (13 March 1860) such an intention on Lord John's part, and a warm political controversy, which Hudson did much to fan, followed the announcement in 1863 of Elliot's appointment. But the imputation of jobbery has no justification. Hudson's retirement was quite voluntary, and he in the first instance warmly approved the choice of his successor (WALPOLE'S *Lord John Russell*, ii. 423 seq.; G. ELLIOT'S *Sir James Hudson and Lord Russell*, 1886). In May 1865 Elliot moved from Turin to Florence, which had been made the capital of the kingdom, and there his sister and

Lord John Russell visited him in November 1866. In July 1867 he was appointed ambassador at Constantinople and sworn a privy councillor. At his new post he was almost at once engaged in the discussion over the troubles in Crete in 1868-9, and the consequent rupture of diplomatic relations between Turkey and Greece. In the winter of 1869 he was British representative at the opening of the Suez Canal, and was made G.C.B.

On 6 June 1870 a great fire broke out in Pera, in which the British embassy house was almost completely destroyed. Lady Elliot and her children narrowly escaped with their lives, and all the ambassador's private property was destroyed. though he and the staff succeeded in saving the government archives and much of the furniture of the state rooms. With the Russian ambassador at Constantinople, General Ignatieff, Elliot was often in conflict, and was held by the aggressive party in England to be no match for Russian ambition, but in the view of Lord Granville, the foreign secretary, Elliot by his 'quiet firmness' well held his own against all Russian intrigue in the sultan's court (FITZMAURICE, *Lord Granville*, ii. 412-3).

In 1875 an insurrection in Herzegovina which rapidly spread to Bosnia commenced the series of events issuing successively in the outbreak of war between Russia and Turkey in April 1877, the treaty of San Stefano, and the congress of Berlin in 1878. In 1876 Serbia and Montenegro declared war against Turkey, and an insurrectionary movement commenced in Bulgaria. The Turkish authorities, being insufficiently provided with regular troops, proceeded to enrol irregulars and 'Bashi-Bazuks,' who resorted at once to savage massacres, which became notorious under the term of 'the Bulgarian atrocities.' The British embassy at Constantinople and the consular officers in the vicinity were at the time much criticised for their delay in reporting these events, which first became known through the public press. There was, in fact, no British consular officer very close to the spot, but it was not till January 1876 that the fact became known that a despatch from the British consul at Adrianople to the consul-general at Constantinople, which mentioned the receipt of reports of appalling massacres, had not been communicated to either the ambassador or the foreign office by the consul-general, who was at the time suffering from a mortal illness. As soon as it appeared that there was solid foundation for the rumours,

both the consul at Adrianople and a secretary of the British embassy were sent to investigate the facts, and on receipt of their reports the ambassador was instructed to protest in the strongest manner against the barbarities perpetrated, and to demand the arrest and punishment of those responsible. In reply to attacks which were made on him, as not having been sufficiently alive to the danger of such occurrences, Elliot was able to show that he had constantly and urgently warned both the Porte and his own government of the consequences which were certain to attend the employment of irregular forces. Negotiations for the conclusion of peace between Turkey, Serbia, and Montenegro were carried on by the ambassador under instructions from the British government in September 1876, and as these proved unsuccessful, he was instructed on 5 Oct. as a last resource to demand the conclusion of an armistice for at least a month, at the end of which a conference was to be called at Constantinople to consider the whole question. Failing compliance with this request, he was instructed to withdraw from Constantinople. The reply of the Porte was as usual unsatisfactory, but a Russian ultimatum delivered in October procured an armistice of two months, and on the proposal of Great Britain a conference met at Constantinople in December, to which the marquis of Salisbury, then secretary of state for India, was sent as first British plenipotentiary, Elliot being associated with him. In the meanwhile the supreme authority in the Turkish empire had twice changed hands. On 29 May 1876 the Sultan Abdul Aziz was deposed in pursuance of a *fetvah* obtained from the Sheikh-ul-Islam, and shortly afterwards he committed suicide or was assassinated. He was succeeded by his nephew Murad, who was in his turn removed as incompetent on 31 Aug., and replaced by his brother Abd-ul-Hamid II. The deliberations of the conference resulted in the presentation to the Turkish government in January 1877 of proposals for the pacification of the disturbed provinces, including supervision of these measures by an international commission supported by a force of 6000 Belgian and Swiss gendarmes. After ten years' experience of Turkish ways Elliot entertained little hope that the scheme would be accepted by the Porte, or that if accepted it would be found practicable in execution. He had moreover considerable faith in the sincerity and capacity of the new grand vizier, Midhat

Pasha, and in his power to carry through the measures of reform which he was introducing. But the suggestion, which was made in some organs of the press, that he failed to give Lord Salisbury the senior British plenipotentiary, full and loyal support, or that he encouraged the Turkish government to resist the demands of the powers, was warmly repudiated by him, and must be dismissed at once by all who had any knowledge of his character. The proposals of the conference were refused by the Turkish government, who simultaneously with the opening of the conference had proclaimed the grant of a constitution to the empire, with representative institutions. The conference consequently separated without result. A further conference held in London in March 1877 presented demands which were again refused, and war was declared by Russia on 24 April. Elliot, whose health had suffered much during the continued strain, was granted leave of absence at the end of February, being replaced by the appointment of Sir A. H. Layard [q. v. Suppl. I] as special ambassador *ad interim*. At the close of the year Elliot was appointed ambassador at Vienna, where he took part in the critical negotiations which ensued between the conclusion of the treaty of San Stefano and the meeting of the congress at Berlin. In March 1880 he reported to his government the resentment caused in Vienna by Gladstone's attack, during his Midlothian campaign, on the Austrian government, and their desire for some disavowal, which Gladstone subsequently made (FITZMAURICE, *Life of Lord Granville*, ii. 200-3). Elliot remained at Vienna till his retirement on pension in January 1884. The rest of his life was passed mainly in England. In February 1888 he caused general surprise by publishing in the 'Nineteenth Century' his recollections of the events connected with the deposition and death of Sultan Abdul Aziz, and the efforts made for constitutional reform by Midhat Pasha. The article gave great umbrage to the reigning Sultan, whose subsequent policy he severely criticised. He died at Ardington House, Wantage, on 30 March 1907. His portrait by von Angeli is at Minto House, Hawick. A good photogravure is in 'The British Museum of Portraits'; a set is in the art library of the Victoria and Albert Museum. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1877.

He married on 9 Dec. 1847 Anne (d. 1899), second daughter of Sir Edmund Antrobus.

By her he had one son, Sir Francis Edmund Hugh Elliot, G.C.V.O., K.C.M.G., British minister at Athens, and one daughter.

[The Times, 1 April 1907, which contains some inaccuracies; Foreign Office List, 1908, p. 397; Cambridge Modern History, xi. 390, 611, xvi. 381; papers laid before Parliament; Nineteenth Century, February 1888. Elliot printed for private circulation a volume of Diplomatic Recollections, which is cited in Mr. G. M. Trevelyan's Garibaldi and the Thousand, and his Garibaldi and the Making of Italy, together with letters from Elliot to Lord John Russell.] S.

ELLIOTT, SIR CHARLES ALFRED (1835-1911), lieutenant-governor of Bengal, born on 8 Dec. 1835 at Brighton, was son of Henry Venn Elliott [q. v.], vicar of St. Mary's, Brighton, by his wife Julia, daughter of John Marshall of Hallsteads, Ulleswater, who was elected M.P. for Leeds with Thomas Babington Macaulay in 1832. After some education at Brighton College, Charles was sent to Harrow, and in 1854 won a scholarship at Trinity College, Cambridge. In 1856 the civil service of India was thrown open to public competition. Elliott, abandoning his Cambridge career, was appointed by the directors, under the provisions of the Act 16 & 17 Vict. c. 97, one of fifteen members of the civil service of the East India Company (*Despatch*, 1 Oct. 1856). He was learning his work unattached to any district, when the mutiny broke out at Meerut, and he was then posted on 12 June 1857 as assistant magistrate to Mirzapur in the Benares division of the N.W. Provinces. That large district of 5238 sq. miles was the scene of fierce conflicts with the rebels. Elliott led several small expeditions from headquarters to quell disturbances, was favourably mentioned in despatches, and received the mutiny medal.

In the following year he became an assistant-commissioner in Oudh, where he served in Unao, Cawnpore, and other districts until 1863. In Unao he gave early proof of his industry by collecting information about its history, its folklore, and its families. He published in 1862 at Allahabad for private circulation 'Chronicles of Oonao,' believing 'that a knowledge of the popular traditions and ballads gives to its possessor both influence over the people and the key to their hearts.' When this treatise was printed he was serving in the N.W. Provinces, and in the following year (Sir) Richard Temple [q. v. Suppl. II], wishing to strengthen the administrative staff of the Central Provinces, then under his control, secured Elliott's transfer, entrusting to

him the settlement of the Hoshangabad district. This task, which greatly raised his reputation, was completed in 1865, being regarded as a most successful operation, which has stood the test of time. Taking furlough, Elliott returned to duty in the N.W. Provinces, and was entrusted with the settlement of the Farukhabad district. He had assessed the whole district except the Tahwatahsil, when in 1870 he was chosen by Sir William Muir [q. v. Suppl. II] to be secretary to government. The final report, drawn up by H. F. Evans, 22 July 1875, included the rent rate reports written by Elliott 'in that elaborate and careful manner which,' according to Sir Charles Crosthwaite, 'has become the model for similar reports.' The cost of the settlement exceeded five lakhs, and although the rates charged were moderate, government received additional revenue of 22 per cent. on the expenditure, while the records were a permanent gain to the people. Settlement work, to which Elliott had thus devoted his best years, was in those days the most important and most coveted employment in the civil service, and it gave Elliott a thorough acquaintance with the needs of the people and the administrative machinery.

From 1872 to 1875 he held the post of secretary to the government of the N.W. Provinces, being concerned chiefly with settlement and revenue questions, with measures for suppressing infanticide in certain Rajput communities, and municipal administrations. Knowing every detail, he was inclined to interfere too much with subordinate authorities. After Sir John Strachey [q. v. Suppl. II] had succeeded to the government of Sir William Muir, he went to Meerut as commissioner. Thence he was summoned by Lord Lytton to visit Madras, and subsequently to apply to Mysore the famine policy of the paramount power. As Lord Lytton wrote in Nov. 1878, when reviewing his famine report on Mysore, 'he organised and directed relief operations with a patience and good sense which overcame all difficulties, and with the fullest tenderness to the people in dire calamity.' Elliott did not minimise the human suffering and the administrative shortcomings which he witnessed, and his experience and report indicated him as the best secretary possible to the royal commission on Indian famines (16 May 1878). Other commissions in 1898 and 1901 have built on the foundation laid by the famous report of 7 July 1878, but it will always remain a landmark in Indian history; for from that date the

British government determined to fight with all its resources recurring and inevitable droughts, which had previously entailed heavy loss of life. For the planning of the requisite organisation no knowledge of detail was superfluous, and no better secretary could have been found for guiding and assisting the commissioners.

This work completed, Elliott became for a few months census commissioner for the first decennial census for 1881 which followed the imperfect enumeration of 1872. In March 1881 he became chief commissioner of Assam, and in Feb. 1886 was entrusted with the unpopular task of presiding over a committee appointed to inquire into public expenditure throughout India, and report on economies. A falling exchange and a heavy bill for war operations compelled Lord Dufferin to apply the shears to provincial expenditure, and while the committee inevitably withdrew funds needed by the local governments, it was generally recognised that immense pains were taken by Elliott and his colleagues. Elliott, who had been made C.S.I. in 1878, was promoted K.C.S.I. in 1887, and from 6 Jan. 1888 to 17 Dec. 1890 he was a member successively of Lord Dufferin's and then of Lord Lansdowne's executive councils. On the retirement of Sir Stuart Bayley, Elliott, although he had never served in Bengal, became lieutenant-governor of that province, holding the post, save for a short leave in 1893, until 18 Dec. 1895. The greatest service which Elliott rendered to Bengal was the prosecution of the survey and the compilation of the record of rights in Bihar, carried out in spite of much opposition from the zemindars, opposition that received some support from Lord Randolph Churchill. Sir Antony MacDonnell's views as to the maintenance of the record were not in harmony with those of Elliott, but Lord Lansdowne intervened to reduce the controversy to its proper dimensions. Public opinion has finally endorsed the opinion expressed by Mr. C. E. Buckland in 'Bengal under the Lieutenant-Governors' (1901), that 'there was not another man in India who could have done the settlement work he did in Bihar and Bengal, so much of it and so well.' In his zeal for the public service Elliott courageously faced unpopularity. Economy as well as efficiency were his principles of government. Towards the native press he took a firm attitude, prosecuting the editor and manager of the 'Bangobasi' for sedition in the teeth of hostile criticism. He was inclined to establish a press bureau, but Lord Lansdowne's government did not

sanction his proposals. With the distressed Eurasian community he showed generous sympathy, and, always on the watch for the well-being of the masses he pushed on sanitary and medical measures, being largely instrumental in the widespread distribution of quinine as a remedy against fever. In foreign affairs he was impatient of Chinese delays in the delimitation of the frontiers of Tibet and Sikkim, and urged Lord Elgin to occupy the Chambi valley (19 Nov. 1895), and even to annex it.

After a strenuous service of forty years he retired in December 1895, and was soon afterwards co-opted a member of the London school board as a member of the moderate party, being elected for the Tower Hamlets division in 1897 and 1900. In 1904 he was co-opted a member of the education committee of the London county council, serving till 1906. From 1897 to 1904 he was chairman of the finance committee of the school board, and his annual estimates were remarkable for their exceptional agreement with the actual expenditure. A strong churchman, he took active part in the work of missionary and charitable societies; he was a member of the House of Laymen as well as of the Representative Church Council. He was also chairman of Toynbee Hall. He died at Wimbledon on 28 May 1911. He married twice: (1) on 20 June 1866 Louisa Jane (*d.* 1877), daughter of G. W. Dumbell of Belmont, Isle of Man, by whom he had three sons and one daughter; and (2) on 22 Sept. 1887 Alice Louisa, daughter of Thomas Gaussen of Hauteville, Guernsey, and widow of T. J. Murray of the I.C.S., by whom he had one son, Claude, now fellow of Jesus College, Cambridge. His eldest son by his first marriage, Henry Venn Elliott, is vicar of St. Mark's, Brighton. In his possession is a portrait of his father by Hugh Rivière. As a memorial to Elliott it is proposed to add a wing to St. Mary's Hall, Brighton, a church school in which he was especially interested.

Elliott's contributions to Indian literature were mainly official. They included, besides the 'Chronicles of Oonao,' 'Report on the Hoshangabad Settlement' (1866); 'Report on the Mysore Famine' (1878); 'Report on the Famine Commission' (1879); and 'Report on the Finance Commission' (1887).

ELLIS, FREDERICK STARTRIDGE (1830-1901), bookseller and author, the sixth son of Joseph Ellis, hotel-keeper, of Richmond, was born there on 7 June 1830. He entered, at the age of sixteen, the house of Edward Lumley of Chancery Lane, and afterwards became assistant to C. J. Stewart, the well-known bookseller of King William Street, Strand, from whom he acquired his knowledge of books. In 1860 he went into business for himself at 33 King Street, Covent Garden, and in 1871 took into partnership G. M. Green (1841-1872), who had enjoyed the same training. After the death of Green in 1872 Ellis took the premises, 29 New Bond Street, previously occupied by T. & W. Boone, and carried on a large and successful business, chiefly in old books and MSS. His next partner was David White, who retired in 1884. For many years Ellis was official buyer for the British Museum, which brought him into rivalry with trade opponents in the auction rooms. Mr. Henry Huth entrusted to him the editing of the catalogue of his famous library, which was printed in 1880 (5 vols., large 8vo). The English books were catalogued by W. C. Hazlitt, those in other languages by Ellis. Another excellent catalogue compiled by Ellis was 'Descriptive Catalogue of a Collection of Drawings and Etchings by Charles Meryon, formed by the Rev. J. J. Heywood' (1880, 4to, privately printed). He also produced 'Hore Pembrochianæ: some account of an illuminated MS. of the Hours of the B.V.M., written for William Herbert, first earl of Pembroke, about 1440' (1880), and a biographical notice appended to an account of 'The Hours of Albert of Brandenburg,' by W. H. J. Weale (1883, 4to). In 1885 he retired from business, and his stock of rarities was sold by Messrs. Sotheby for about 16,000*l.* He was succeeded in business by Mr. G. I. Ellis, a nephew.

Ellis was a publisher on a limited scale, and brought out the works of William Morris and Dante Gabriel Rossetti, with whom he formed a close personal intimacy. Among other friends were A. C. Swinburne, Sir Edward Burne-Jones, and John Ruskin, whose 'Stray Letters to a London Bibliopole' were addressed to Ellis and republished by him (1892). Ruskin called him 'Papa Ellis' (*E. T. Cook, Life of John Ruskin*, 1911, i. 371). It was in 1864 that Morris was first introduced by Swinburne to Ellis. They remained close friends to the end of

Morris's life, and Ellis was one of the poet's executors (J. W. MACKAIL, *Life of W. Morris*, 1899, i. 193).

After his retirement from business he gave himself up to a literary life. The firstfruits of his labours on Shelley was 'An Alphabetical Table of Contents to Shelley's Poetical Works,' drawn up for the Shelley Society in 1888. He devoted six years to compiling 'A Lexical Concordance to the Poetical Works of P. B. Shelley; an attempt to classify every word found therein according to its signification' (1892, 4to), an excellent piece of work on which his reputation must largely rest. He was an enthusiastic supporter of Morris's Kelmscott Press, and read the proofs of the folio edition of Chaucer's 'Works' (1896), Morris's masterpiece of printing, and edited many other productions of that press, including Cavendish's 'Life of Wolsey' (1893); Caxton's 'Golden Legend' (1892), which also appeared in the 'Temple Classics' (1899 and 1900). He further edited Guillaume de Lorris's 'Romance of the Rose,' 'englished' (1900, 'Temple Classics'), and 'H. Pengelly's Memoir,' with a preface (1897), and contributed some memoirs to Quaritch's 'Dictionary of English Book Collectors.'

He died at Sidmouth on 26 Feb. 1901, after a short illness, in his seventy-first year. He was a widely read and accomplished man, tall of stature and handsome in appearance, warm-hearted and good-natured, of genial manners, with a wide circle of literary and artistic friends.

His portrait was painted by H. S. Tuke, A.R.A.

He married in 1860 Caroline Augusta Flora, daughter of William Moates of Epsom, and left issue two sons and a daughter, who with his wife survived him.

ELLIS, JOHN DEVONSHIRE (1824-1906), civil engineer and metallurgist, born at Handsworth on 20 April 1824, was son of Charles Ellis, a Birmingham brass manu-

facturer. Educated at King Edward VI's School, Birmingham, he obtained a practical knowledge of the manufacture and working of brass in his father's works, and in 1848 became a partner in the firm. In 1854 he purchased with (Sir) John Brown [q. v. Suppl. I] and William Bragge the Atlas engineering works at Sheffield, then a modest establishment covering about three acres and employing about 250 persons. Shortly after the partners took over the works the adoption of armour by the French for warships (1858) led Messrs. Brown and Ellis to produce iron plates by a new and cheaper process of rolling and welding them. Four-inch plates made by this process were fitted to the *Black Prince* and *Warrior*, the earliest ironclads of the British navy. For several years Ellis was occupied in devising appliances for the manufacture of thicker and thicker plates for guns and projectiles. Steel was tried, but was not found to have the necessary toughness under the impact of shot. After many experiments Ellis perfected a process for uniting a hard steel face with a wrought-iron backing. Such compound armour was used down to about 1893, the Royal Sovereign class of battleships being protected with an 18-inch belt of it on the water-line. Meanwhile, as early as 1871, Ellis had turned his attention to the process of cementation, and in that year he took out a patent relating to it; but it was not until the chilling process devised by Captain T. J. Tresidder, in which the heated surface of a plate was chilled by means of water under pressure, was applied in conjunction with cementation, that satisfactory results were obtained. The first Ellis-Tresidder chilled compound plate was tried with success at Shoeburyness in 1891.

Ellis was largely instrumental in promoting the success of the Bessemer system. Sir Henry Bessemer [q. v. Suppl. I] established works close to the Atlas works, and Ellis, adopting at an early stage the new process, at once put up at the Atlas works the first plant in England outside the inventor's own works. In conjunction with William Eaves he introduced the Ellis-Eaves system of induced draught, and he devised a mill for rolling the ribbed boiler-flues of the Purves and other types, and also in connection with the manufacture of *Serve* tubes.

The Atlas works soon acquired a world-wide reputation for mechanical engineering of all kinds. The concern was formed into a limited liability company in 1864. The

capital rose to nearly three millions sterling; about 16,000 men were employed at Ellis's death, and the output exceeded 100,000 tons of steel per annum. Ellis was managing director from 1864 until 1905, when he became chairman of the company. Brown retired in 1870 and Bragge died in 1884, when Ellis acquired sole charge. In 1899 the Clydebank Shipbuilding and Engineering Works, employing 8000 men, were taken over by the concern.

In 1867 Ellis was decorated with the Cross of the Order of Vasa in recognition of his aid in certain fortifications in Sweden. From the Iron and Steel Institute, of which he was a member from 1875, a member of council in 1888, and a vice-president in 1901, he received the Bessemer gold medal in 1889, when Sir Henry Bessemer acknowledged Ellis's services in establishing the process. He was elected a member of the Institution of Civil Engineers on 8 Jan. 1884. For many years he was a member of the Cutlers' Company. He took little part in the public affairs of Sheffield, but was a magistrate for the West Riding, and was for ten years chairman of the South Yorkshire Coalowners' Association. He died at his residence, Sparken, Worksop, on 11 Nov. 1906, and was buried at Carlton in Lindrick.

He married on 5 Dec. 1848 Elizabeth Parsons Bourne of Childs Ercall, Shropshire, by whom he had five sons and one daughter.

A portrait by A. S. Cope, R.A., is at the Atlas Works, Sheffield.

ELSMIE, GEORGE ROBERT (1838-1909), Anglo-Indian civilian and author, born at Aberdeen on 31 Oct. 1838, was only child of George Elsmie, shipowner, of Aberdeen, and from 1843 on the Southampton staff of the Royal Mail Steam Packet Company. His mother was Anne, daughter of Robert Shepherd, parish minister of Daviot, Aberdeenshire, whose family had been parish ministers in that county for several generations. Educated at private schools at Southampton and from 1852 to 1855 at the Marischal College, Aberdeen, Elsmie was studying German at Canstatt near Stuttgart in August 1855, when he was nominated to a writership in India by his maternal uncle, John Shepherd (1796-1859), for many years director and thrice chairman of the East India Company, and on the transfer of India to the crown member of the

Council of India. Elsmie was among the last batch of men to enter, at the close of 1855, the East India College at Haileybury, and to pass out on the eve of its abolition in Dec. 1857.

Arriving in India on 12 Feb. 1858, he was appointed assistant commissioner in the Punjab, and served in various districts until 1863, when he acted as a judge of the small causes courts at Lahore, Delhi, and Simla. Meanwhile he prepared a useful 'Epitome of Correspondence regarding our Relations with Afghanistan and Herat, 1854-63' (Lahore, 1863). In March 1865 he became deputy commissioner (magistrate and collector) of Jullundur, and in October 1868 under-secretary to the government of India in the home department. Taking furlough in the spring of 1869, he entered Lincoln's Inn as a student, and was called to the bar on 27 Jan. 1871.

Returning to India immediately afterwards, he was appointed additional commissioner of the Amritsar and Jullundur divisions, his duties being almost entirely judicial. In October 1872 he was transferred to Peshawur to perform like functions, the lieutenant-governor being anxious to improve the judicial administration and reduce crimes of violence in the district. Elsmie's firmness and good sense in dealing with the Pathans had the desired effect at some personal risk. His suggestions to the government and his detailed examination of the subject in 'Crime and Criminals on the Peshawur Frontier' (Lahore, 1884) largely contributed to the promulgation in 1887 of the 'Frontier Criminal Regulations,' which were specially adapted to borderland conditions.

Elsmie left Peshawur in January 1878 to officiate as judge of the Punjab chief court for a year. After furlough in December 1880 he became commissioner of Lahore, and in April 1882 was appointed permanently to the chief court bench. In the same year he served on the Punjab reorganisation committee. In agreement with its recommendations the Lahore commissionership was greatly enlarged in area and relieved of judicial appellate work, and was bestowed anew on Elsmie in February 1885. He was on special duty for the Rawal Pindi durbar for Lord Dufferin to meet the Ameer Abdur Rahman (April 1885) and was vice-chancellor of the Punjab University (1885-7). He was made second financial commissioner in April 1887, a member of the governor-general's legislative council in May 1888, and first financial commissioner from March 1889.

He thus attained the highest positions in the province, short of the lieutenant-governorship, on both the judicial and executive sides. He was re-appointed to the governor-general's legislative council in June 1892, and was made C.S.I. in Jan. 1893. He left India on 4 Feb. 1894.

On 20 July 1904 Elsmie received from Aberdeen University the hon. degree of LL.D. He mainly devoted himself in his retirement to literary work. With General Sir Peter Lumsden he wrote Sir Harry Lumsden's biography, 'Lumsden of the Guides' (1899). On material collected by Sir Henry Cunningham he based the authorised life of Field-marshal Sir Donald Stewart [q. v. Suppl. I] (1903), and he edited letters of his mother (1804-1879) under the title of 'Anne Shepherd or Elsmie: a Character Sketch of a Scottish Lady of the Nineteenth Century as disclosed by her Letters' (Aberdeen, 1904). In his pleasant 'Thirty-Five Years in the Punjab' (Edinburgh, 1908) Elsmie threw much light on the contemporary history of his province; the book is dedicated to his university.

Elsmie died at Torquay on 26 March 1909, and was buried at Deeside cemetery, Aberdeen. He married at Southampton, on 27 Oct. 1861, Elizabeth, youngest daughter of Thomas Spears of Kirkcaldy, who survived him. Of a family of three sons and eight daughters, two sons became officers in the Indian army, four daughters married Indian civil servants (Sir Thomas W. Holderness, now revenue secretary, India office, being one of Elsmie's sons-in-law), and two daughters married officers in the army.

[Elsmie's Works; The Times, 28 March 1909; family details kindly given by Sir T. W. Holderness.] F. H. B.

ELWORTHY, FREDERICK THOMAS (1830-1907), philologist and antiquary, eldest son of Thomas Elworthy, woollen manufacturer, of Wellington, Somerset, by his wife Jane, daughter of William Chorley of Quarm, near Dunster, was born at Wellington on 10 Jan. 1830, and was educated at a private school at Denmark Hill. Though studious from boyhood, he did not enter on authorship until middle life. He became eminent first as a philologist and later as a writer on folk-lore. His two books on the evil eye and kindred superstitions contain much curious information gathered during travels in Spain, Italy, and other countries, in the course of which he made perhaps the finest collection of charms, amulets, and such-like trinkets in existence; this

collection, at present in the possession of his widow, is destined for the Somersetshire Archaeological Society's museum at Taunton. He contributed to 'Archæologia,' was on the council of the Philological Society, and in 1891-6 was editorial secretary of the Somersetshire Archaeological Society, for whose 'Proceedings,' as well as for those of the Devonshire Association, he wrote some valuable papers. He was elected F.S.A. on 14 June 1900. He was a good linguist and possessed considerable skill as a draughtsman and as an artist in water-colours. He was a prominent churchman, and the erection of All Saints' Church, Wellington, was largely due to his liberality and exertions. He was a magistrate, a churchwarden, an active member of the Wellington school board, and a prominent freemason. After an illness which began in the summer of 1906 he died at his residence, Foxdown, Wellington, on 13 Dec. 1907, and was buried in the churchyard of the parish church there.

By his marriage with Maria, daughter of James Kershaw, M.P., on 17 Aug. 1854, he had three sons, who all predeceased him, and three daughters, two of whom survived him.

Elworthy prepared for publication by the English Dialect Society: 1. 'The Dialect of West Somerset,' 1875 (a paper read before the Philological Soc.). 2. 'An Outline of the Grammar of the Dialect of West Somerset,' 1877 (papers read before the Philolog. Soc. in 1876 and 1877); this work was described by Sir James A. H. Murray, editor of the 'New English Dictionary,' as 'the first grammar of an English dialect of any scientific value.' 3. 'An edition of 'An Exmoor Scolding and an Exmoor Courtship, with a Somersetshire Man's Complaint,' 1879. 4. 'The West Somerset Word-book, a Glossary,' 1886. Elworthy also published: 5. 'Canonsleigh,' 1892, reprinted from the 'Transactions of the Devonshire Association.' 6. 'Some Notes on the History of Wellington,' 4to, 1892. 7. 'The Evil Eye,' 1895. 8. 'Horns of Honour and other Studies in the Byways of Archæology,' 1900. From the inception of the 'New English Dictionary' to his death Elworthy gave much voluntary help both in supplying quotations and in assisting in arrangement.

[Wellington Weekly News, 18 Dec. 1907, with an appreciation by Sir James Murray; Athenæum, 21 Dec. 1907; Somerset Archæol. Soc. Proc., 3rd ser. vol. xiii. 1908 (with good portrait); information supplied by Mr. C. Tide of Taunton; personal recollection.] W. H.

EMERY, WILLIAM (1825-1910), archdeacon of Ely, born in St. Martin's Lane, London, on 2 Feb. 1825, was son of William Emery of Hungerford Market, feltmaker and Master of the Feltmakers' Company in 1848, who married Mary Ann Thompson. He was the first boy to enter, in 1837, the new City of London School, then erected on the site of Honey Lane Market in accordance with a reformed scheme for employing the ancient charity of John Carpenter [q. v.]. At the school he was a favourite pupil of the headmaster, G. F. W. Mortimer [q. v.], and was the first holder of the newly founded 'Times' scholarship [see WALTER, JOHN, 1776-1847]. Admitted at Corpus Christi College, Cambridge, on 29 March 1843, he was elected Mawson scholar in May 1844; was fifth wrangler in 1847, graduating B.A., and proceeding M.A. in 1850 and B.D. in 1858. In March 1847 he became fellow of Corpus, retaining his fellowship till 1865; he was dean of the college (1853-5); bursar 1855-60; and tutor, along with E. H. Perowne [q. v. Suppl. II] (1855-65). He was made honorary fellow in 1905. Ordained deacon in 1849 and priest in 1853, he never confined himself to academic concerns. Among his interests in Cambridge was the volunteer movement. At a meeting in his college rooms on 2 May 1859, 'a volunteer corps for the university, town and county of Cambridge' was set on foot. In 1859, too, he helped to form in Cambridge a branch affiliated to the central Church Defence Institution. In October 1861 the Cambridge committee invited individual churchmen and the secretaries of church defence associations to join in a Church Congress on the pattern of 'annual meetings of societies for the advancement of science, archaeology, &c.' (cf. *Preface to First Report*, p. iii). The first Church Congress met in the hall of King's College, Cambridge (27-29 Nov. 1861), when Emery was senior proctor, the chair being taken by the archdeacon of Ely, Francis France. Emery spoke on free seats in church, on diocesan associations for increasing the endowment of poor benefices, and on church rates. He became permanent secretary of the Church Congress in 1869, and with the exception of the meeting in Dublin in 1867 was present at every congress from the first to the forty-seventh at Great Yarmouth in 1907, being the most familiar feature and the chief organiser of every meeting. In 1864 Lord Palmerston nominated him to the archdeaconry of Ely, and he became residentiary canon of Ely in 1870. As

archdeacon, he soon organised a diocesan conference, the first in the country, remaining its honorary secretary till 1906. In 1881, when the institution had spread widely, he helped to establish a central council of diocesan conferences, of which he was honorary secretary till 1906. He was also instrumental in founding the Hunstanton Convalescent Home (of which he was chairman 1872-1908) and the Church Schools Company for the promotion of the religious secondary education of the middle classes (of which he was chairman 1883-1908).

Owing to failing powers he resigned his archdeaconry in 1907. He retained his canonry till his death at the college, Ely, on 14 Dec. 1910. He was buried in the precincts of Ely Cathedral. On 6 July 1865, at St. John's, Stratford, London, he married Fanny Maria, eldest daughter of Sir Antonio Brady [q. v.]. He had six children, of whom two daughters and three sons survive.

Emery was a man of affairs, energetic and tactful, rather than a teacher. The Church Congress is his monument. Among his publications were his charges on 'Church Organisation and Efficient Ministry' (1866), and on 'The New Church Rate Act' (1869), and a popular explanation of the 'Free Education Act, 1891.'

[The Times, 15 Dec. 1910; Guardian, 16 Dec. 1910; Record, 16 Dec. 1910; Reports (annual) of Church Congresses, especially 1861 and 1910; the latter contains good portrait.] E. H. P.

ETHERIDGE, ROBERT (1819-1903), palaeontologist, born at Ross, Herefordshire, on 3 Dec. 1819, was elder of two sons of Thomas Etheridge, shipper, of Gloucester, by his wife Hannah Pardoe, of a Worcestershire family. Through his mother he was cousin to Dr. John Beddoe [q. v. Suppl. II]. His paternal grandfather, formerly a seaman, and later harbour-master at Bristol, gave Robert shells and other natural objects or 'curiosities' from various countries, and stimulated the boy to form a museum of local plants, fossils, and other geological specimens. Educated at the grammar school at Ross, he served as usher there and at a school at Bristol, and after filling a post in a business house in that city, in 1850 he was made curator of the museum of the Bristol Philosophical Institution. All his leisure had been devoted to natural science. He worked hard at the museum till 1857, acting for five of the seven years as lecturer in vegetable physiology and botany in the Bristol

Medical School. In 1857 he gave a course of lectures at the Bristol Mining School on 'Geology; its Relation and Bearing upon Mining,' published in 1859. An active member of the Cotteswold Naturalists' Club, Etheridge in 1856, while on a visit to the carl of Ducie at Tortworth Court, was introduced to Sir Roderick Impey Murchison [q. v.], then director-general of the geological survey. This led to his appointment in 1857 as assistant palaeontologist to the geological survey; and on the retirement of J. W. Salter he became palaeontologist in 1863. Here his principal task was the naming of the invertebrate fossils collected during the progress of the geological survey and arranged in the Museum of Practical Geology at Jermyn Street; aid was also given at times to the officers in the field. Etheridge's results were embodied in memoirs published during 1858-81. He also assisted Professor Huxley by giving demonstrations in palaeontology to students of the Royal School of Mines, and he and Huxley jointly prepared a catalogue of the fossils in the museum, which was published in 1865. At this date Etheridge began to make a list of all the known British fossils, with references to their geological formations and to published figures and descriptions. When completed up to 1888 it was reckoned that about 18,000 species had been catalogued. Only one volume of this great work, that dealing with the palaeozoic fossils, was published ('Fossils of the British Islands, Stratigraphically and Zoologically arranged,' vol. i. Palaeozoic Species, 1888). In 1881 Etheridge was appointed assistant keeper in geology at the British Museum natural history branch at Cromwell Road, where he laboured till his retirement from the public service in 1891.

Etheridge was elected F.R.S. in 1871, and afterwards served on the council and as vice-president of the Royal Society. He was awarded the Murchison medal by the council of the Geological Society in 1880, and was president from 1880 to 1882. He was also president of section C at the meeting of the British Association in 1882, and treasurer of the Palaeontographical Society from 1880 to 1903. He was created an honorary fellow of King's College, London, in 1890, and received the first Bolitho medal from the Royal Geological Society of Cornwall in 1896. Etheridge was an assistant editor of the 'Geological Magazine' from 1865 until the close of his life. Always active and genial, he died

at Chelsea, London, on 18 Dec. 1903, aged eighty-four, and was buried at Brompton cemetery. He was three times married, and by his first wife he had an only child, Robert Etheridge the younger, now curator of the Australian Museum at Sydney, New South Wales.

Among Etheridge's communications to scientific societies were papers on the palaeontology of parts of Queensland, the Himalayas, Brazil, and the Arctic regions. In England he had given special attention to the Rhætic beds, and afterwards to the Devonian system. When the sequence of strata in North Devon was challenged by Joseph Beete Jukes [q. v.] in 1866, Etheridge was instructed by Murchison to investigate the evidence, and the results were published by the Geological Society in 1867 in an elaborate paper 'On the Physical Structure of West Somerset and North Devon, and on the Palaeontological Value of the Devonian Fossils.' Later discoveries, by Dr. H. Hicks, of Lower Devonian (or possibly Silurian) fossils in the Morte slates, showed that the sequence of strata in North Devon was not so clear as Etheridge and others had maintained. To questions of water-supply Etheridge gave much practical attention, and in later years he acted as consulting geologist to the promoters of the Dover coal-boring.

Etheridge published 'Stratigraphical Geology and Palaeontology' (1887). He also prepared the third edition of John Phillips's 'Illustrations of the Geology of Yorkshire' (part i. 1875), and he re-wrote the second edition of part ii. of Phillips's 'Manual of Geology' (1885).

[Obituary by Dr. Henry Woodward, *Geol. Mag.*, Jan. 1904, p. 42 (with portrait and bibliography); memoirs by H. B. Woodward in *Proc. Roy. Soc.* lxxv. 1905, and in *Proc. Bristol Nat. Soc.* ser. 2, vol. x. 1904, p. 175 (with portrait).] H. B. W.

EUAN-SMITH, SIR CHARLES BEAN (1842-1910), soldier and diplomatist, one of several sons of Euan Maclaren Smith of George Town, British Guiana, by his wife Eliza Bean, was born at George Town on 21 Sept. 1842. He was educated at a preparatory school near Rugby, and subsequently by an English tutor at Bruges. Appointed ensign in the Madras infantry at the age of seventeen, he was promoted lieutenant in 1861, captain in 1870, major in 1879, lieutenant-colonel in 1881, and colonel in 1885, retiring in 1889. After serving in the expedition to Abyssinia in 1867 he was present at the capture of Magdala, was secretary in 1870-1 to Sir Frederick Gold-

smid [q. v. Suppl. II] during the special mission of the latter to Persia, to settle various frontier questions, and accompanied Sir Bartle Frere [q. v.] in his special anti-slave trade mission to Zanzibar and Muscat in 1872 as military attaché. He was made C.S.I. in November of that year. Subsequently he was in charge of the consulate-general at Zanzibar from June to September 1875, was first assistant resident at Hyderabad in 1876, and received the appointment of consul at Muscat in July 1879. During the Afghan war of 1879-80 he was on special duty as chief political officer on the staff of Lieut.-general Sir Donald Stewart [q. v. Suppl. I], and subsequently took part in Lord Roberts's expedition for the relief of Kandahar, receiving the medal with two clasps and the bronze star for his share in the campaign. During the following years he held political appointments in Mewar, Banswara, Bhartpur and Karauli. In December 1887 he was appointed to succeed Sir John Kirk as British consul-general at Zanzibar. Here he was plunged into the various thorny discussions arising out of German annexations and claims advanced by France and other European countries to the immunities flowing from consular jurisdiction in the territories on the mainland, which had been acquired from the sultan by the British East Africa Company. He showed much skill in dealing with these questions, and in June 1890 he obtained the consent of the sultan to an agreement by which the latter placed himself under the protection of Great Britain, thus paving the way to the conclusion of agreements by the British government with France and Germany, and greatly facilitating an ultimate settlement. He had been made C.B. in 1889, and on this occasion was advanced to be K.C.B. in the civil division. In March 1891 he was appointed British envoy in Morocco, and was furnished by Lord Salisbury with special instructions, foremost among which was a direction to negotiate a new commercial treaty on a broad and liberal basis. In April 1892 he started from Tangier on a special mission to Fez, taking with him the draft of a commercial treaty, the terms of which had been settled in consultation with the Foreign Office, and provided also with instructions as to the language he should hold with regard to the questions of slavery and of the rights of protection exercised under treaty by the legations of foreign powers. A long and wearisome negotiation with the sultan and his ministers ensued, in which every device of in-

timidation, obstruction, and tergiversation was employed by the Moorish negotiators, and eventually, after the treaty had more than once been accepted by the sultan only to be again rejected or subjected to entirely inadmissible modifications, Euan-Smith left Fez with the staff of the mission. Fresh negotiations were opened by commissioners sent by the sultan, while the mission was on its way to the coast, but these proved equally delusive, and the British envoy returned to Tangier having effected little or nothing beyond the appointment of a British vice-consul at Fez, where France, Spain, and the United States already had consular agents. The objections of the sultan and his advisers to the proposals with which Euan-Smith had been charged were clearly too deep-rooted to be removed by arguments of persuasion, and Lord Salisbury decided on desisting from further efforts. But the effect of the negotiations and of episodes connected with them was seriously prejudicial to Euan-Smith's influence as British representative, and he ceased to hold the appointment in July 1893. In June of that year the University of Oxford conferred on him the honorary degree of D.C.L. and he was made hon. fellow of St. John's College, Oxford. He devoted his attention for the rest of his life to commercial business, taking an active part as chairman or director of several companies. In July 1898 he was offered by Lord Salisbury and accepted the appointment of minister resident at Bogota, in the republic of Colombia, but resigned it without proceeding to his post. He died in London on 30 Aug. 1910. He married in 1877 Edith, daughter of General Frederick Alexander, R.A., and had by her one daughter.

[The Times, 31 Aug. 1910; Foreign Office List, 1911, p. 417; India Office List; papers laid before Parliament.] S.

EVANS, DANIEL SILVAN (1818-1903), Welsh scholar and lexicographer, born at Fron Wylm Uchaf, Llanarth, Cardiganshire, on 11 Jan. 1818, was son of Silvanus Evans by his wife Sarah. Having commenced to preach as a member of Penycae congregational church, he entered the academy of Dr. Phillips of Neuaddlwyd with a view to the congregational ministry. In 1843 he thought of emigrating to America, but later resolved to seek orders in the established church. In 1846 he entered St. David's College, Lampeter, where he was senior scholar, and was ordained deacon in 1848 and priest in 1849. His first curacy

was at Llandegwining and Penllech, Carnarvonshire (1848-52), his second at Llangian in the same district (1852-62). In 1862 he became rector of Llanymawddwy near Machynlleth, and in 1876 exchanged to the neighbouring rectory of Llanwrin; the greater part of his life's work was done in these two retired parsonages. Evans made his first appearance before the Welsh public as a writer of verse; lyrical poems and hymns from his pen were published in 1843 and in 1846. But the study of the Welsh language soon absorbed all his attention. Already in 1847 he was planning the English-Welsh dictionary which was his first considerable work (*Archæologia Cambrensis*, first series, vol. ii. (1847), p. 282). Four years after his ordination the first volume of this appeared, and henceforward he was engaged without intermission in Welsh literary and philological studies. Through all his labours as editor and translator he kept steadily in view the more ambitious lexicographical work which was to be the coping-stone of his career, viz. the 'Dictionary of the Welsh Language,' planned on a great scale, of which the first part appeared in 1887. The heavy task, however, was carried no further than the letter E when he died. In later life Evans's eminence as a Welsh scholar received full recognition. In 1868 he received the honorary degree of B.D. from Lampeter; from 1875 to 1883 he was lecturer in Welsh in the University College of Wales, Aberystwyth; in 1897 he was elected to a research fellowship in Jesus College, Oxford, and in 1901 the newly established University of Wales gave him the honorary degree of D.Litt. He was made honorary canon of Bangor in 1888, prebendary of Llanfair in 1891, and chancellor of the cathedral in 1895. From January 1872 to August 1875 he was editor of '*Archæologia Cambrensis*,' but archæology was not one of his special interests; his reputation rests on his encyclopædic knowledge of the whole range of Welsh literature and his skill in using this material as a lexicographer. He died on 12 April 1903, and was buried at Cemmes. He married Margaret, daughter of Walter Walters of Hendre, Cardiganshire, and left a son, John Henry Silvan Evans, who assisted his father in his great dictionary.

The 'Dictionary of the Welsh Language,' published by Spurrell of Carmarthen, appeared as follows: A, 1887; B, 1888; C, 1893; Ch, D, 1896; E-Enyd, 1906. The whole extends to 1923 pages, all words of importance being illustrated by examples of their use. Evans also published: 1.

'Blodau Ieuaino,' poems, Aberystwyth, 1843. 2. 'Telynegion,' lyrics, 1846 (2nd edit. 1881). 3. 'English and Welsh Dictionary' (Denbigh), vol. i. 1852; vol. ii. 1858. 4. 'Llythyræth yr Iaith Gymraeg' (on Welsh orthography), Carmarthen, 1861. 5. 'Ystên Sioned' (jointly with John Jones), a collection of folk stories, Aberystwyth, 1882 (2nd edit., Wrexham, 1894). 6. 'Telyn Dyfi,' poems, Aberystwyth, 1898.

Evans edited, among other works, Ellis Wynne's 'Bardd Cwsg' (Carmarthen, 1853; 4th edit. 1891); the works of Gwallter Mechain (Rev. Walter Davies) (Carmarthen, 1868, 3 vols.); the Cambrian Bibliography of William Rowlands (Llanidloes, 1869); the works of Ieuan Brydydd Hir (Carnarvon, 1876); the second edition of Stephens's 'Literature of the Kymry' (1876); the 'Celtic Remains' of Lewis Morris (for the Cambrian Archaeological Association, London, 1878). Evans was editor of the 'Brython,' a Welsh magazine issued at Tremadoc from 1858 to 1863, and contributed to Skene's 'Four Ancient Books of Wales' (Edinburgh, 1866) the translation into English of three of the four MSS. of ancient poetry therein edited.

J. E. L.

EVANS, EDMUND (1826-1905), wood-engraver and colour-printer, born in Southwark on 23 Feb. 1826, was son of Henry Evans by his wife Mary. Educated at a school in Jamaica Row kept by Bart Robson, an old sailor, he in November 1839, at the age of thirteen, became 'reading boy' at Samuel Bentley's printing establishment at Bangor House, Shoe Lane. On the suggestion of an overseer, who found that the boy had a talent for drawing, his parents apprenticed him in 1840 to Ebenezer Landells [q. v.], the wood-engraver. Birket Foster, one year senior to Evans, was articled to Landells at the same time, and the two pupils often joined in sketching excursions. On the completion of his apprenticeship in May 1847, Evans started business as a wood-engraver on his own account, taking small premises at first in Wine Office Court, Fleet Street, and in 1851 moving to 4 Racquet Court. Orders soon came to him from the 'Illustrated London News' and from the allied firm of Ingram, Cooke & Co. In 1852 Birket Foster was preparing for Ingram, Cooke & Co. a set of illustrations to Madame Ida Pfeiffer's 'Travels in the Holy Land.'

These were handed over to Evans, who engraved them for three printings, a key-block giving the outlines in brown, and two other blocks adding tints in buff and blue. This experiment led to further work in colour, notably the preparation of an illustrated cover, then quite a novelty, for Mayhew's 'Letters Left at the Pastry-cook's' (1853). This was printed in blue and red on a white paper; but, finding that the white cover easily soiled, Evans substituted a yellow paper with an enamel surface, which had an immediate popularity and was greatly in request for railway novels, whence the term 'yellow-back.' During thirty years Evans produced a vast quantity of these and similar covers for various publishers.

Though he executed wood-engravings in black and white to illustrate Scott's poetical works (A. & C. Black, 1853-6), Cowper's 'Task' (Nisbet & Co., 1855-6), and other volumes, Evans became known from this time almost entirely as a colour engraver. His process of printing in oil colour from a series of wood blocks carried on the tradition which had descended from the early chiaroscuro engravers, and was almost identical with that of his immediate predecessor, George Baxter (1804-1867), except that he did not, like Baxter, use an engraved key plate of copper or steel.

Evans's first colour-printing of real importance as book illustration was for 'The Poems of Oliver Goldsmith' (1858), with pictures by Birket Foster. Foster made his drawings as usual on the block, and then coloured a proof pulled on drawing paper. This was followed most carefully by Evans, who bought the actual colours used by the artist, ground them by hand, and did the printing on a hand-press. Other successful publications between 1858 and 1860, with printing done in six to twelve colours on a hand-press, were 'Common Objects of the Sea Shore,' and 'Common Objects of the Country,' by the Rev. J. G. Wood, illustrated by W. S. Coleman [q. v. Suppl. II], and 'Common Wayside Flowers,' by T. Miller, containing drawings by Birket Foster. Another work, described by Evans as 'the most carefully executed book I have ever printed,' was 'A Chronicle of England' (1864), written and illustrated by James William E. Doyle [q. v. Suppl. I]. For that book, with its eighty-one illustrations, each produced by nine or ten colour-blocks, a hand press was employed for the last time. Evans also executed the first coloured plates presented

by the 'Graphic' to its readers, a double-page picture of the Albert Memorial (1872) and 'The Old Soldier,' from a water-colour drawing by Basil Bradley (1873).

It was, however, by the colour-printing of children's books by Walter Crane, Randolph Caldecott, and Kate Greenaway, that Evans built his most enduring monument. From 1865 to 1869 he was occupied with the production of a series of six-penny toy-books, published partly by Ward & Lock and partly by Routledge, with illustrations in colour by Walter Crane. In 1877 Evans arranged on his own account with Crane to illustrate a child's book entitled 'The Baby's Opera.' A first edition of ten thousand copies at five shillings apiece was sold, and a second edition was soon in demand. The volume was followed by many others in which artist and colour-printer worked in combination. At the end of 1879 Evans made another venture with 'Under the Window,' by Kate Greenaway [q. v. Suppl. II], a book that won immediate popularity, and was the forerunner of a fruitful partnership. Evans also printed the well-known 'Graphic' pictures by Randolph Caldecott [q. v.] and, by persuading him to embark on illustrations for children's books, inaugurated the famous series which began in 1878 with 'John Gilpin' and closed in 1885 with 'The Great Panjandrum Himself.' These three artists thoroughly grasped the possibilities and limitations of Evans's reproductive process, and worked in simple lines and flat washes of decorative colour, which the engraver could reproduce almost in facsimile. Shortly before his death Evans admitted that colour-printing from wood must yield to the three-colour process.

In 1864 Evans married Mary Spence Brown of North Shields, a niece of Birket Foster, and went to live at the Surrey village of Witley, which was the home of an interesting group of artists and authors. George Eliot, J. C. Hook, R.A., Birket Foster, Charles Keene, and Mrs. Allingham all belonged to his circle, and Kate Greenaway was a frequent visitor at his house.

Owing to ill-health, Evans retired from business in 1892, and settled at Ventnor, where he died on 21 Aug. 1905, being buried in Ventnor cemetery. His business is carried on by his two sons, Edmund Wilfred (b. 1869) and Herbert (b. 1871).

[Art Journal, Easter Art Annual, 1898; British and Colonial Printer, 31 March 1904, 7 Sept. 1905; Publishers' Circular, 14 Oct. 1905; Spielmann and Layard's Kate Green-

away, 1905; Hardie's English Coloured Books, 1906; Burch's Colour-Printing and Colour Printers, 1910; correspondence with Mr. Edmund Evans in 1904; private information.] M. H.

EVANS, GEORGE ESSEX (1863-1909), Australian poet, born at Cumberland Terrace, Regent's Park, London, on 18 June 1863, was youngest son of John Evans, Q.C., who was a bencher and treasurer of the Middle Temple and liberal M.P. for Haverford West (1847-52). After education at Haverford West grammar school and in the island of Guernsey, Evans emigrated to Australia in 1881. He attached himself to a survey party, and during a tour through the bush was first inspired to sing the praises of his adopted country. Subsequently he joined a brother, J. B. O. Evans, on a farm near Allora, Queensland; but cherishing literary ambitions he soon engaged in journalism. In 1882 he became a regular contributor to the 'Queenslander,' in which his earliest poems appeared under the pseudonym of Christophus, and after a struggling existence he established a connection with leading Australian papers like the 'Brisbane Courier' and the 'Sydney Bulletin.' In 1888 he settled at Toowoomba, where he was appointed district registrar by the Queensland government; he continued, however, to devote himself to literary pursuits. In 1892, 1893, and 1897 he edited a literary annual called 'The Antipodean'; but the venture, despite the collaboration of R. L. Stevenson, proved a failure owing to Evans's lack of business experience. His pen was also employed on less congenial tasks. In 1899 he compiled a guide to Darling Downs entitled 'The Garden of Queensland,' and later his services were enlisted by the government in preparing a report on the resources of Queensland, which was distributed in London at the Franco-British exhibition of 1908.

Evans's first volume of poetry, 'The Repentance of Magdalene Despard, and other Verses' (London, 1891), containing some spirited patriotic utterances, attracted little attention. He was more successful with 'Loraine, and other Verses' (Melbourne, 1898), a long narrative poem, vividly descriptive of Australian life on a sheep farm, and in January 1901 he won the fifty-guinea prize offered by the New South Wales government for the best ode on the inauguration of the Australian commonwealth. He added to his reputation by the publication of 'The Sword of Pain' (Toowoomba, 1905) and 'The Secret Key,

and other Verses' (Sydney, 1906), and both in England and America he was recognised as an Australian poet of power and individuality. With a view to fostering in Australia appreciation of art and literature, he founded the Toowoomba Austral Association in May 1903. In an enthusiastic ode entitled 'Queen of the North' (*The Times*, 7 Aug. 1909) he celebrated the fiftieth anniversary of the foundation of Queensland. He died at Toowoomba shortly afterwards, on 11 Nov. 1909. He married in 1899 Blanche, widow of E. B. Hopkins of Goodar station, Queensland, and daughter of the Rev. W. Eglington, by whom he had one son. His admirers propose to commemorate him by a complete edition of his works.

Evans's poetic inspiration came from Australian life and country. He believed that Australian poetry should strike a new and distinctive note. Unlike some Australian poets, he was no pessimist. He encouraged his countrymen 'to face and subdue the resistance of nature,' and his verse breathes an intense appreciation of strenuous effort and robust courage. While his blank verse lacks technical finish, many of his stirring odes and lyrics reach a high level of poetic form.

[*The Times*, 14 Dec. 1909; *Brisbane Courier*, and *Brisbane Daily Mail*, 11 Nov. 1909; B. Stevens, *Anthology of Australian verse*, 1906; Sir J. Symon, *Poetry and its claims*, 1911.]

G. S. W.

EVANS, SIR JOHN (1823-1908), archæologist and numismatist, born on 17 Nov. 1823 at Britwell Court, Burnham, Buckinghamshire, was second son of Arthur Benoni Evans, D.D. [q. v.], headmaster of the grammar school of Market Bosworth, Leicestershire, by his wife Anne, daughter of Thomas Dickinson, R.N. Anne Evans, [q. v.] was a sister, and Sebastian Evans [q. v. Suppl. II] a brother. John was educated at his father's school, and was entered in 1839 for matriculation at Brasenose College, Oxford, of which college he was towards the close of his life (1903) made an honorary fellow. He did not, however, proceed to the university, but after spending seven months in Germany entered in 1840, at the age of seventeen, the paper-manufacturing business of John Dickinson & Co., at Nash Mills, Hemel Hempsted, Hertfordshire, of which firm his uncle, John Dickinson, F.R.S., was founder and senior partner (*The Firm of John Dickinson*, 1896, p. 15). In 1850 Evans was admitted a partner. He proved a strenuous man of business, keenly alive to every scientific

improvement and quick to grapple with complicated details.

Although he did not retire from the active duties of his firm till 1885, he always pursued many and diverse interests. When a boy of nine he had shown leanings towards natural science, and had hammered out for himself a collection of fossils from the Wenlock limestone quarries at Dudley. His later scientific studies were partly influenced by the practical requirements of his business. Water-supply being of primary importance to the paper-manufacturer, and his firm being engaged in an important law-suit, *Dickinson v. The Grand Junction Canal Co.*, he made a special study of the subject, on which he became a recognised authority. He gave evidence before the royal commission on metropolitan water-supply, 1892. In his own district he explored the superficial deposits, as well as the deeper water-bearing strata, and investigated such matters as the relations between rainfall and evaporation, and the percolation of rain through soil. He kept in his own care the rain-gauges and percolation-gauges erected by his uncle at Nash Mills. In 1859 Evans accompanied Sir Joseph Prestwich [q. v. Suppl. I], the geologist, to France, as his assistant in an examination of flint-implements found in the old river-gravels of the valley of the Somme. Prestwich and Evans confirmed the opinion of the discoverer, Boucher de Perthes (*circ.* 1841-7), that these chipped flints were human handiwork and that they helped to prove the antiquity of man in western Europe. Evans wrote in 1860 in the 'Archeologia' on 'Flint Implements in the Drift, being an account of their discovery on the Continent and in England' (xxxviii. 280; cf. xxxix. 57). He now began to devote more continuous attention to the traces of early man in river-gravels and cavern-deposits, and formed a remarkable collection of stone and bronze implements, partly by the purchase of representative examples, partly by his own keenness in the discovery of specimens, even on ground already explored by other collectors. From time to time he published notices, in the 'Proceedings' of the Society of Antiquaries and of the Royal Society, of the discovery and distribution of new specimens. He was also interested in fossil remains of extinct animals and published an important paper, ('Nat. Hist. Rev.' 1865; cf. 'Geol. Mag.' 1884, pp. 418-24) on the 'Cranium and Jaw of an Archeopteryx.' Evans also formed various collections of mediæval

and other antiquities, Anglo-Saxon, Lombardic jewellery, posy-rings, bronze weapons, and ornaments. In two books on primitive implements Evans gathered together all the evidence as to provenance, types, and distribution, and they were recognised as standard treatises. The first, 'The Ancient Stone Implements, Weapons and Ornaments of Great Britain,' was published in 1872 (French trans. 1878), a second and revised edition being issued in 1897. The other work, 'The Ancient Bronze Implements, Weapons, and Ornaments of Great Britain and Ireland,' was published in 1881 (French trans. 1882).

Evans had a special predilection for numismatics, and formed splendid collections of ancient British money, of gold coins of the Roman emperors, including some unique specimens, and of Anglo-Saxon and English coins, among which the gold series was especially noticeable. To the pages of the 'Numismatic Chronicle' he made more than a hundred contributions, many of them accounts of hoards and of unpublished coins from his own cabinets. His important paper ('Numismatic Chronicle,' 1865) on 'The "short-cross" Question,' was the outcome of an examination of more than 6000 specimens of the early silver pennies inscribed with the name *Henricus*, and he was able to show that these coins belonged to several classes and that they were attributable to the respective reigns of Henry II. Richard, John, and Henry III. But his attention was chiefly concentrated on the coinage of the ancient Britons. His paper 'On the Date of British Coins,' published in the 'Numismatic Chronicle' for 1849-50 (xii. 127), was the first attempt to place the study of this coinage on a scientific basis. He showed, with pre-Darwinian instinct, that the appearance on these coins of horses, wheels, and ornaments, of which, previously, fanciful explanations had been given, was due to a slow process of evolution, and that the designs ('types') on the coins were the remote and degraded descendants of those on the gold *staters* of Philip of Macedon. Evans's conception of evolution as applied to the 'types' and 'fabric' of coins has since borne fruit in other branches of numismatics (cf. KEARY, *Morphology of Coins*, and EVANS's own paper, 'Coinage of the Ancient Britons and Natural Selection,' in the *Transactions of the Hertfordshire Natural History Society*, vol. iii. 1885). In 1864 he published the standard work, 'The Coins of the Ancient Britons,' for which he was

awarded the Prix Allier de Hauteroche of the French Academy. A 'Supplement' was published in 1890, in which Evans described the discoveries subsequent to 1864, and inserted a map showing the find-spots of British coins.

Evans's varied knowledge, his grip of business, and habit of rapid decision made him a valuable officer of learned societies. He was elected F.R.S. in 1864, and for forty years took a conspicuous part in the society's business. He was a vice-president from 1876 and treasurer from 1878 to 1898. He joined the Geological Society in 1857, served as honorary secretary (1866-74), as president (1874-6), and acted as foreign secretary from 1895 till his death. In 1880 he received its Lyell medal for services to geology, especially post-tertiary geology, and his labours were eulogised as having bridged over the gulf that had once separated the researches of the archaeologist from those of the geologist. He became a fellow of the Society of Antiquaries in 1852, and was its president from 1885 to 1892. The Numismatic Society of London (since 1904 the Royal Numismatic Society) was one of the earliest bodies that he joined. He became a member in 1849, was hon. secretary from 1854 to 1874, and president from 1874 till his death. From 1861 onwards he was a joint-editor of the society's journal, 'The Numismatic Chronicle.' In 1887 he received the society's medal (struck in gold) for distinguished services to numismatics.

He acted as president of the Anthropological Institute (1878-9), the Egypt Exploration Fund, the Society of Arts (chairman in 1900), the Paper-makers' Association, and the Society of Chemical Industry. He was president of the British Association in 1897-8 (Toronto meeting), when he gave an address on the Antiquity of Man, and was a trustee of the British Museum from 1885 till his death; he took an active part in the meetings of its standing committee. Evans was a member of numerous scientific and archaeological bodies in foreign countries and had many academic honours. He was hon. D.C.L. of Oxford, LL.D. of Dublin and Toronto, Sc.D. of Cambridge, and a correspondent (elected in 1887) of the Institute of France (Academy of Inscriptions). In 1892 he was created K.C.B.

In spite of almost daily engagements in London, Evans lived nearly all his life at his home at Nash Mills, Hemel Hempsted, in an old-fashioned house, close to the mills. It was filled in every corner with

books and antiquities (cf. *Herts County Homes*, 1892, p. 138). Here Evans was seen in his happiest mood, showing his treasures freely and with undisguised pleasure, and entertaining almost every European antiquary of note, not excluding many young scholars and collectors, from whom he never withheld encouragement. He was active too in county business. For some years he was chairman of quarter sessions, and vice-chairman and chairman of the county council, Hertfordshire. He served as high sheriff of the county in 1881. He was president and one of the founders (1865) of the Watford (afterwards the Herts) Natural History Society, and for more than twenty-three years chairman of Berkhamsted school.

In 1905 Sir John built a house, Britwell, on the edge of Berkhamsted Common, removing from Nash Mills in June 1906. He maintained his activities in old age, dying at Britwell on 31 May 1908, after an operation. He was buried in the parish church of Abbot's Langley, where there is a marble memorial of him, with a portrait-medallion by Sir William Richmond, R.A. A memorial window was placed by subscription in the chapel of Berkhamsted school.

Evans married in 1850 Harriet Ann, daughter of his uncle, John Dickinson, by whom he had three sons and two daughters. The eldest son, Sir Arthur John Evans, F.R.S., is the well-known archaeologist and explorer of Crete. One daughter became the wife of Mr. Charles James Longman, the publisher. By his second marriage in 1859 to his cousin Frances, daughter of Joseph Phelps of Madeira, he had no children. He married, thirdly, in 1892, a lady of kindred archaeological tastes, Maria Millington, daughter of Charles Crawford Lathbury of Wimbledon. Lady Evans and the one child of the marriage, a daughter Joan, survive him.

Evans left his principal collections of implements, coins, rings, and ornaments to his son, Sir Arthur Evans, who has presented certain portions of them to the Ashmolean Museum, Oxford. His collection of Lambeth pottery was sold at Christie's on 14 Feb. 1911. Many of the later varieties of his collection of Roman gold coins were sold by auction at the Hotel Drouot, Paris, on 26 and 27 May 1909.

An admirable portrait was painted by A. S. Cope, R.A., for the Royal Society (there are photogravure reproductions issued by the Fine Art Society, New Bond Street, London). A second portrait by the Hon.

John Collier was presented by subscription in 1905 in recognition of his public work in Hertfordshire (a replica is in the court house, St. Albans). A portrait-bust is on the obverse of the jubilee medal of the Numismatic Society of London (1887), engraved by Pinches from a drawing, and a large bronze cast medallion was executed by Frank Bowcher in 1899 for the Numismatic Society of London to celebrate Evans's fifty years' membership of the society (there is a reduced photograph of it in the 'Numismatic Chronicle,' 1899, pl. xi.). A good photograph is in the 'Geological Magazine,' 1908, plate i.

Herts, geneal., 1907, p. 9; information kindly given by Lady Evans and Sir Arthur Evans; personal knowledge.] W. W.

EVANS, SEBASTIAN (1830-1909), journalist, born on 2 March 1830 at Market Bosworth, Leicestershire, was youngest son of Arthur Benoni Evans [q. v.] by his wife Anne, daughter of Captain Thomas Dickinson, R.N. Sir John Evans [q. v. Suppl. II] was his elder brother. Sebastian, after early education under his father at the free grammar school of Market Bosworth, won in 1849 a scholarship at Emmanuel College, Cambridge, graduating B.A. in 1853 and proceeding M.A. in 1857. In youth he showed promise as an artist and an aptitude for Latin and English verse. While an undergraduate he published a volume of sonnets on the death of the duke of Wellington (1852). On leaving the university he became a student at Lincoln's Inn on 29 Jan. 1855, but was shortly appointed secretary of the Indian Reform Association, and in that capacity was the first man in England to receive news of the outbreak of the mutiny. In 1857 he resigned the secretaryship and turned his talent for drawing to practical use by becoming manager of the art department of the glassworks of Messrs. Chance Bros. & Co., at Oldbury, near Birmingham. This position he occupied for ten years, and designed

many windows, including one illustrating the Robin Hood legend for the International Exhibition in 1862.

Meanwhile he took a growing interest in politics as an ardent conservative. His work for the Indian Reform Association had brought him into touch with John Bright, and at Birmingham he made the acquaintance of Mr. Joseph Chamberlain, with whom, in spite of their political differences, he contracted a lasting friendship. In 1867 Evans left the glassworks to become editor of the 'Birmingham Daily Gazette,' a conservative organ. In 1868 he unsuccessfully contested Birmingham in the conservative interest and also helped to form the National Union of Conservative Associations. In the same year he took the degree of LL.D. at Cambridge. In 1870 he left the 'Gazette' to pursue an early design of a legal career. On 17 Nov. 1873 he was called to the bar at Lincoln's Inn, and joined the Oxford circuit. He quickly acquired a fair practice, but found time for both political and journalistic activity, writing leading articles for the 'Observer' and contributing articles and stories, chiefly of a mystical tenour, to 'Macmillan's' and 'Longman's' magazines. In 1878 he shared in the foundation of the 'People,' a weekly conservative newspaper, and edited it for the first three years of its career. When on the eve of the general election of 1886 the editor of the 'Birmingham Daily Gazette' died suddenly, Evans hurriedly resumed the editorship over the critical period.

Evans continued to cultivate art and poetry amid all competing interests. He exhibited at the Royal Academy and elsewhere pictures in oil, water-colour, and black and white, and practised wood-carving, engraving, and book-binding. As a poet, he combined a feeling for mediæval beauty with a humour which distinguishes him from the Pre-Raphaelites. He was an excellent translator in verse and prose from mediæval French, Latin, Greek, and Italian. In 1898 he published 'The High History of the Holy Graal' (new edit. 1910 in 'Everyman's Library'), a masterly version of the old French romance of 'Perceval le Gallois,' as well as an original study of the legend entitled 'In Quest of the Holy Graal.' Evans's versatility and social charm brought him a varied acquaintance. He knew Thackeray, Darwin, Huxley, Newman, Matthew Arnold, and Ruskin, and at a later period was the intimate friend of Burne-Jones, who shared his interests in mediæval legend and illustrated his history of the Graal. Towards the end of his life he retired

to Abbot's Barton, Canterbury, where he died on 19 Dec. 1909.

In 1857 he married Elizabeth, youngest daughter of Francis Bennett Goldney, one of the founders of the London Joint Stock Bank. Of two sons, Sebastian and Francis, the latter assumed the name of Francis Bennett Goldney, and was returned to parliament as independent unionist member for Canterbury in December 1909, after serving several times as mayor of the town. He owns two portraits of Evans, one, a three-quarter length, in oils, painted by Roden about 1870; the other a silver point drawing by Delamotte about 1856.

Evans's published collections of poems, apart from those already mentioned, were: 1. 'Brother Fabian's Manuscripts and other Poems,' 1865. 2. 'Songs and Etchings,' 1871. 3. 'In the Studio, a Decade of Poems,' 1875. He also translated St. Francis of Assisi's 'Mirror of Perfection' (1898) and 'Geoffrey of Monmouth's History' (1904), and with his son, Mr. Goldney, 'Lady Chillingham's House Party,' adapted from Pailleron's 'Le Monde où l'on s'ennuie' (1901). In 1881 he re-edited his father's 'Leicestershire Words' for the English Dialect Society.

[The Times, 20 Dec. 1909; Miles's Poets and Poetry of the Century; Men and Women of the Time; Graduati Cantabrigienses; Foster's Men at the Bar; Lady Burne-Jones's Memorials of Edward Burne-Jones, 1904; Brit. Mus. Cat.] F. L. B.

EVERARD, HARRY STIRLING CRAWFURD (1848-1909), writer on golf, born at Claybrook House, Leicestershire, on 30 Jan. 1848, was only son of Henry Everard of Gosberton, Spalding, by his wife Helen Maitland, daughter by his second wife of Captain William Stirling of Milton and Castlemilk, Lanarkshire. After education at Eton (1862-6) he matriculated from Christ Church, Oxford, on 23 May 1866, graduating B.A. in 1871. He became a student at the Inner Temple in 1867, but was not called to the bar. He settled at St. Andrews, to which he was attracted by its renowned facilities for golf. He enjoyed the game keenly, and achieved success at it, winning in the competitions of the Royal and Ancient Golf Club the silver medal (second prize at the spring meeting) in 1889, the Calcutta cup in 1890, and the silver cross (the first prize) in 1891. Everard was also a good cricketer, tennis player, pedestrian and swimmer.

Everard became one of the best-known writers on golf, both from the practical and from the literary side, contributing to the

'Scots Observer' and to the 'National Observer' (under Henley's editorship), and to the 'Spectator,' 'Saturday Review,' and many golfing periodicals. He published 'Golf in Theory and Practice' (1897; 3rd edit. 1898); 'The History of the Royal and Ancient Club of St. Andrews' (1907), and he wrote chapter xiii. on 'Some Celebrated Golfers' for the Badminton Library manual (1890; 5th edit. 1895).

Everard died, after a short illness, on 15 May 1909 at St. Andrews. He married in 1880 Annie, eldest surviving daughter of Colonel Robert Tod Boothby of St. Andrews (d. 1907), and had issue two sons and two daughters.

[The Times, 17 and 20 May 1909; personal knowledge; private information.]

W. W. T.

EVERETT, JOSEPH DAVID (1831-1904), professor of natural philosophy in Queen's College, Belfast, born at Rushmere, near Ipswich, Suffolk, on 11 Sept. 1831, was the eldest son of Joseph David Everett, a landowner and farmer of Rushmere, by his wife Elizabeth, eldest daughter of John Garwood, corn merchant of London. A younger brother, Robert Lacey Everett (b. 1833), was M.P. successively for the Woodbridge division (1885-6, 1892-5) and for south-east Suffolk (1906-10). Everett was educated at Mr. Buck's private school at Ipswich. On leaving he attended higher classes in mathematics at the Ipswich Mechanics' Institution under Stephen Jackson, proprietor of the 'Ipswich Journal,' who advised him to follow a scholastic life. After a short experience of teaching at a private school at Newmarket, where he had Charles Haddon Spurgeon [q. v.] as a colleague, he became, in 1850, mathematical master at Mr. Thorowgood's school at Totteridge, near Barnet. In 1854 he gained one of Dr. Williams's bursaries and became a student at Glasgow College (now University). After a most successful course he graduated B.A. in 1856 with honourable distinction in classics and mental philosophy, and M.A. in 1857 with highest distinction in physical science. He had thought of entering the ministry, but gave up the idea, and after acting for a short time as secretary of the Meteorological Society of Edinburgh, he became professor of mathematics in King's College, Windsor, Nova Scotia, in 1859. He returned to Glasgow in 1864 as assistant to Dr. Hugh Blackburn, professor of mathematics in the university (1849-79), and worked for a time in Lord Kelvin's laboratory. From 1867 till his retirement in 1897 he was professor of natural philosophy in

Queen's College, Belfast, serving on the council from 1875 to 1881.

Everett was elected F.R.S. Edinburgh in 1863; F.R.S. London in 1879; and was a vice-president of the Physical Society of London (1900-4). He acted as secretary and subsequently as chairman of the committee of the British Association for investigating the rate of increase of underground temperature downwards (1867-1904), and as secretary of the committee for the selection and nomenclature of dynamical units (1871-3). He was a fellow of the Royal University of Ireland.

Everett wrote many memoirs on dynamics, light, and sound (see *Royal Soc. Cat. of Scientific Papers*), which deal to a comparatively small extent with his own experimental work. He regarded it as his special mission to expound clearly the results of others. In his books and his lectures he spared no pains to make his statements precise and compact and to bring them up to date. His separate publications were: 1. 'Units and Physical Constants' (now 'The C.G.S. System of Units'), 1875; 3rd edit. 1886; Polish transl., Warsaw, 1885. 2. 'An Elementary Text Book of Physics,' 1877; 2nd edit. 1883. 3. 'Vibratory Motion and Sound,' 1882. 4. 'Outlines of Natural Philosophy,' 1887. He also translated Deschanel's 'Physics' (1870; 6th edit. 1882) and, in conjunction with his daughter Alice, Hovestadt's 'Jena Glass and its Scientific and Industrial Applications' (1902). The former work was largely rewritten by Everett.

He had many interests outside his professional work. He invented a system of shorthand which he published (1877 and 1883), was one of the pioneers of cycling, and invented a spring hub attachment for the spokes of bicycle wheels.

He moved from Belfast to London in 1898 and eventually settled at Ealing, regularly attending the meetings of scientific societies in London. He died from heart failure at Ealing on 9 Aug. 1904, and was interred at Ipswich. He married on 3 Sept. 1862 Jessie, daughter of Alexander Fraser, afterwards of Ewing Place Congregational Church, Glasgow (of the Frasers of Kirkhill, Inverness), and left three daughters and three sons, of whom the second, Wilfred, is professor of engineering in the Government Engineering College, Sibpur, Calcutta. A portrait by W. R. Symonds, presented in 1898, hangs in the great hall of Queen's College, Belfast.

[The Times, 12 Aug. 1904; Proc. Roy. Soc. London, lxxv. 377; Proc. Physical Soc.

London, 1905, xix. 11; private information from Miss A. Everett, M.A., A. F. Everett, B.A., R. L. Everett, J.P., Prof. G. Carey Foster, Prof. W. B. Morton, and W. I. Addison, Registrar of the University of Glasgow.]

C. H. L.

EVERETT, SIR WILLIAM (1844-1908), colonel, born on 20 April 1844, was son of Thomas Ellis Everett, rector of Theddingworth, Leicestershire, by Gertrude Louisa, daughter of Joshua Walker, formerly M.P. for Aldborough. Spending a term in 1856 at Marlborough, he entered Sandhurst, and was commissioned as ensign in the 26th foot on 28 June 1864. On 23 August he was transferred to the 33rd foot, and was promoted lieutenant on 11 Jan. 1867. After the return of the regiment to England from the Abyssinian expedition, in which he took no part, he was made adjutant (25 Nov. 1868). He was an excellent draughtsman, and on 1 Feb. 1870 he was appointed instructor in military drawing at the Royal Military Academy, Woolwich. He remained there seven years, becoming captain in his regiment on 8 Sept. 1874. He passed through the Staff College in 1878.

In 1879 he was employed on the Turco-Bulgarian boundary commission under Sir Edward Bruce Hamley [q. v. Suppl. I], and on 12 July he was appointed vice-consul at Erzeroum, to see to the execution of the provisions of the Anglo-Turkish convention. In July 1880 he served on a commission to define the Turco-Persian frontier. During the famine of 1881 he was active at Erzeroum in the administration of Lady Strangford's relief fund. From 11 Sept. 1882 till the end of 1887 he was consul in Kurdistan. An attempt on his life was made on 13 April 1884 by a Roman catholic Armenian on account of his active vigilance, and he was severely injured in the hand and foot. He received 1000*l.* as compensation, and was made C.M.G. on 6 Aug. 1886.

From 11 Jan. 1888 till September 1892 Everett was professor of military topography at the Staff College. He left his regiment, in which he had become major on 1 July 1881, for an unattached lieutenant-colonelcy. He was employed in the intelligence division of the war office as assistant adjutant-general, with the rank of colonel, from 7 June 1893 to 12 March 1901. He was technical adviser of the commission for the delimitation of the Sierra Leone frontier in 1895, and a commissioner for delimiting the Niger frontier in 1896-8, and the Togoland frontier in 1900. He was remarkable for tact, as well as for 'unfailing industry and a special skill in

unravelling the complicated tangle of frontier questions.' Becoming K.C.M.G. on 27 June 1898, he was in charge of the intelligence division during 1899 (a time of exceptional stress), while Sir John Ardagh was absent at the Hague conference.

Placed on the retired list on 20 April 1901, Everett died at Interlaken of heart failure on 9 Aug. 1908, and was buried at Dunsfold, near Godalming. He had married in 1870 Marie Georgina, daughter of Pietro Quartano di Calogeras, doctor-at-law, Corfu. His wife survived him without issue.

[The Times, 12 August 1908; Lady Malmesbury, Life of Sir John Ardagh, 1909; private information.] E. M. L.

EWART, CHARLES BRISBANE (1827-1903), lieutenant-general and colonel commandant R.E., born at Coventry on 15 Feb. 1827, was fourth son of Lieutenant-general John Frederick Ewart. His elder brother, Sir John Alexander, is noticed below. After passing with credit through the Royal Military Academy at Woolwich Ewart received a commission as second-lieutenant in the royal engineers on 18 June 1845. Promoted lieutenant on 1 April 1846, he served at Woolwich, in Ireland, at Gibraltar, and at Chatham. In January 1854 he accompanied General Sir John Fox Burgoyne [q. v.] on a special mission to Turkey to examine the defences of the Dardanelles and the expediency of holding the straits as a base of operations in the event of a war with Russia. After surveying the ground at Gallipoli Ewart went to Varna, and acted as brigade major, while assisting in the preparations for the arrival of the allied army. He landed with it in the Crimea in September, was present at the affairs of Bulganak and McKenzie's Farm, and at the battles of the Alma, Balaklava, and Inkerman, was promoted captain on 13 December 1854, and was acting adjutant throughout the siege of Sevastopol until its fall in September 1855. Mentioned in despatches, he was promoted brevet-major on 2 Nov. 1855, and acted as major of brigade to the royal engineers, until the troops left the Crimea in June 1856. Returning from the Crimea, Ewart did duty at Shorncliffe and Dover, and from 1860 to 1865 was assistant quartermaster-general at the Horse Guards. In the early part of 1866 he was on special service in France and Algeria, and was commanding royal engineer of the London district for another five years. Created a C.B., military division, he was (1869-72) in the barrack branch of the inspector-general of fortifications' office, of which he was head as

deputy director of works for barracks (1872-7). During these years his promotion had been steady: brevet lieutenant-colonel on 3 March 1866; regimental lieutenant-colonel on 4 March 1868; brevet colonel on 4 March 1873; and regimental colonel on 21 Oct. 1877.

As colonel on the staff and commanding royal engineer of the south-eastern district, he was at Dover (1877-9), and held a similar post at Gibraltar from 1879 to 1882. From Gibraltar he was sent in March 1881 to be commanding royal engineer of the Natal field force in the Boer war, but by the time of his arrival peace had been made. On returning from Gibraltar in Oct. 1882, he remained unemployed, living at Folkestone. In April 1883 he was appointed extra aide-de-camp to George, second duke of Cambridge [q. v. Suppl. II], and in April 1884 a member of the ordnance committee.

Promoted major-general on 27 Jan. 1885, Ewart was sent with the Soudan expedition under Sir Gerald Graham [q. v. Suppl. I] as a brigadier-general in command of the base and line of communications, including the general supervision of the railway construction from Suakin to Berber. For his services he was mentioned in despatches. After his return and two years' unemployment Ewart was lieutenant-governor of Jersey from Nov. 1887 until Nov. 1892. He was promoted lieutenant-general on 20 July 1888, retired from the service on 15 Feb. 1894, and was made a colonel-commandant of his corps on 30 March 1902. He died at Folkestone on 8 Aug. 1903, and was buried there.

Ewart married in 1860 his second cousin, Emily Jane, daughter of Peter Ewart, rector of Kirklington, Yorkshire, and sister of Major-general Sir Henry Peter Ewart, K.C.B., crown equerry; by her he had three sons and two daughters.

[War Office Records; Royal Engineers Records; Memoir in Royal Engineers Journal, 1903; Porter, History of the Corps of Royal Engineers, 1889, 2 vols.; The Times, 10 Aug. 1903.] R. H. V.

EWART, SIR JOHN ALEXANDER (1821-1904), general and colonel Gordon highlanders, born at Sholapore, Bombay, 11 June 1821, was third son in a family of four sons and a daughter of Lieutenant-general John Frederick Ewart, C.B., colonel of the 67th foot (d. 1854), by Lavinia, daughter of Sir Charles Brisbane [q. v.]. His younger brother, Charles Brisbane, is noticed above. Joseph Ewart [q. v.] was his grandfather. Educated at the Royal Military College, Sandhurst (1835-8), where he obtained special distinction, he entered

the army on 27 July 1838 as ensign in the 35th (royal Sussex) regiment, and was promoted lieutenant on 15 April 1842. He was a good cricketer and captain of the regimental eleven. After doing garrison duty at Cape Town and Mauritius, Ewart exchanged into the 93rd Sutherland highlanders in 1846, and became captain on 12 May 1848, brevet-major on 12 May 1854, major on 29 Dec. 1854, and brevet lieutenant-colonel on 2 Nov. 1855.

Ewart served with his regiment throughout the Crimean war from the first landing at Gallipoli in April 1854 until the final evacuation of the Crimea in June 1856. He was present at the battle of the Alma (20 Sept.) and at the occupation of Balaklava (25 Sept.), being appointed a deputy - assistant - quartermaster - general next day. At the battle of Balaklava (25 Oct.) he commanded the sixth company of 'the thin red line.' On 5 Nov. at Inkerman he was the first to apprise Lord Raglan of the Russian advance (KINGLAKE, *Invasion of the Crimea*, vi. 36-38). He took part in the early siege operations before Sevastopol, but in May accompanied the expedition to the Sea of Azoff, and was at the capture of Kertch and Yenikale. He returned to the besieging force before Sevastopol and engaged in the assaults on 18 June and 5 Sept. He received the Piedmontese medal for valour, the British medal with five clasps, and French and Turkish decorations.

Ewart served with his regiment in India during the mutiny. He took part in an engagement near Bunnee, holding for a short time a command consisting of three squadrons of cavalry, five guns, and 500 infantry, and being specially named in despatches. On 16 Nov. 1857 Ewart commanded the leading party of stormers at the assault of the Secunderabagh; he personally captured a colour, and received two sabre wounds in an encounter with the two native officers who were defending it (G. B. MALLESON, *History of the Indian Mutiny*, ii. 186). He was recommended for the Victoria Cross without result. When in action against the rebel Gwalior contingent at Cawnpore on 1 Dec. 1857 he was again very severely wounded by a cannon shot, his left arm being carried away. He received the mutiny medal with clasp, and was made C.B. on 24 March 1858. Promoted lieutenant-colonel on 16 April 1858, colonel on 26 April 1859, and aide-de-camp to Queen Victoria the same year, he commanded from 1859 to 1864 the 78th Ross-shire Buffs. Major-general on 6 March 1869,

and lieutenant-general on 1 Oct. 1877, he commanded from 1877 to 1879 the Allahabad division of the Indian army. He was made a general on 13 Jan. 1884. In 1883-4 he was honorary colonel of 1st battalion duke of Edinburgh's regiment, from 1884 to 1895 of 92nd Gordon highlanders, and from 1895 to 1904 of the Argyll and Sutherland highlanders. In 1887 he was created K.C.B., and received the reward for distinguished service. He was promoted G.C.B. two days before his death, which took place on 18 June 1904 at his residence, Craigcleuch, Langholm, Dumfriesshire. He was buried in the cemetery of Stirling Castle. He was J.P. for Dumfriesshire and Staffordshire.

He married 16 Nov. 1858 Frances (d. 1873), daughter of Spencer Stone of Callingwood Hall, Stafford. He had issue four sons and a daughter. Three of his sons became officers in the army.

He published: 1. 'A Few Remarks about the British Army.' 2. 'The Story of a Soldier's Life,' 2 vols. 1881.

[Ewart's *Story of a Soldier's Life*, 2 vols. 1881; *The Thin Red Line*, regimental paper of the Sutherland Highlanders, June, July (portrait), 1904; P. Groves, *History of the 93rd Sutherland Highlanders*, 1895; *Indian Mutiny*, 1857-8, *Selections from State Papers in the Military Department*, ed. G. W. Forrest, 1902, ii. 340 seq.; *Burke's Landed Gentry*; *Hart's and Official Army Lists*.]

H. M. V.

EYRE, EDWARD JOHN (1815-1901), governor of Jamaica, born at Hornsea, Yorkshire, on 5 Aug. 1815, was third son of Anthony William Eyre (of the Eyres of Hope, Derbyshire), who was incumbent of Hornsea and Long Riston, East Riding of Yorkshire. His mother was Sarah Mapleton, daughter of the doctor of Bath to whom De Quincey makes friendly reference in his autobiography.

Edward was educated at the Louth and Sedbergh grammar schools. Intended for the army, he chafed against the delay in gaining a commission. At seventeen he took 150*l.*, which had been deposited as purchase money, and obtaining an additional 250*l.* emigrated to Australia. He arrived in 1833, and engaged in sheep farming, at first in New South Wales and then in South Australia on the Lower Murray river.

Becoming magistrate and protector of aborigines, he in 1836 began a series of adventurous journeys through the unknown sand deserts of the interior. He was the first of the 'overlanders,' that is he first

found a way by which to drive live-stock overland from New South Wales to the new settlement at Adelaide. From this original and more practical purpose he was diverted by the absorbing attraction of exploring vast unknown regions. The most memorable of his journeys was that on which he, with white and native companions, started from Adelaide on 20 June 1840, and, all but one of his companions dropping off by the way, forced his own way, with a dogged tenacity of purpose and readiness of resource probably unsurpassed in history, round the head of the Great Australian Bight, through a region so utterly desolate and torrid as almost to preclude the passage of man, and with but a single companion, a native, reached King George's Sound on 13 July 1841. He proved himself a great explorer. In 1843 he received the founder's medal from the Royal Geographical Society. He described his journeys in 'Expeditions into Central Australia and Overland from Adelaide to King George's Sound, 1840-1' (2 vols. 1845), which were supplemented by papers on 'Expeditions Overland, Adelaide to Perth' in the 'Journal Roy. Geog. Soc.' (xiii. 161), 'Lower Course of the Darling' (xv. 327), and 'Considerations against an Interior Sea in Australia' (xvi. 200). Perhaps the most noticeable thing in Eyre's career in Australia was his exceptional kindness, combined with firmness, toward the aborigines.

Eyre revisited England in 1845, and in 1846, chiefly because of his success in handling natives, was appointed lieutenant-governor of New Zealand, Sir George Grey being governor. He held the office till 1853. From 1854 to 1860 he was governor of St. Vincent, and in 1860-1 he acted temporarily as governor of the Leeward Islands. In 1861 he went to Jamaica to act as captain-general and commander-in-chief during the absence on other duty of Sir Charles Darling [q. v.]. In 1864 Darling definitely relinquished the appointment, and Eyre was confirmed as governor of Jamaica. There his experiences gave him a terrible notoriety.

The negro peasantry of Jamaica, which had not long been emancipated from slavery, outnumbered the white population by something like twenty-seven to one. The negroes were mostly quite uneducated and were seething with discontent, stirred by agitators, mostly of their own race, against the few European residents. The American war, moreover, had raised the price of the necessaries of life; and the example

set by the neighbouring negroes in Haiti and St. Domingo, in setting up 'black republics' had made the situation with which Eyre had to deal very difficult.

On 7 Oct. 1865, in the planting district of Morant Bay in the county of Surrey, about five-and-twenty miles east of the capital, Kingston, some negroes successfully resisted the lawful capture of a negro criminal. On the 9th the police were forcibly prevented from arresting the chief rioters. On the 11th the 'Morant Bay rebellion' broke out, the court house of the district was burned, and at least twenty Europeans were killed and others wounded. The riot, which is believed to have been premeditated and organised, spread rapidly, and between 13 and 15 Oct. many atrocities were committed on the whites in outlying districts. Eyre, always prompt and self-reliant, called to his assistance all available naval and military officers, militia, European civilians, loyal negroes, and maroons. On 13 Oct., relying on a local statute, he held a council of war and proclaimed martial law throughout the county of Surrey except in Kingston. During the next eleven days he broke the back of the riot. Meanwhile George William Gordon, a coloured member of the legislature, who was long notorious for violence of speech and was believed to have instigated the rebellion, had been forcibly taken from Kingston (where martial law was not in force) into the zone of martial law at Morant Bay. There on 21 Oct. Gordon was tried by a court-martial presided over by Lieutenant Herbert Charles Alexander Brand, R.N. [q. v. Suppl. II], and being convicted he was sentenced to death. The next day being Sunday, the execution was deferred till Monday. Eyre, who was away at Kingston, was informed of the facts; and he—though not required to do so in the case of a sentence by court-martial—confirmed the sentence. Gordon was hanged on the morning of the 23rd. He had friends, and apart from the question of his guilt or innocence of a capital offence, these at once denounced the legality of Eyre's act in allowing the man to be taken within the zone of martial law for trial and punishment. Till the expiration of martial law, on 13 November, 608 persons were killed or executed, 34 were wounded, 600, including some women, were flogged, and a thousand dwellings, mostly flimsy leaf-built huts, were destroyed. Afterwards other culprits were tried and punished under the ordinary law of the colony—in some cases even by death.

The vast majority of the Europeans

resident in Jamaica were warm in their gratitude to Eyre. On 17 Jan. 1866 the legislative assembly voluntarily dissolved itself and abrogated the old popular constitution, leaving it to the home government to administer the island as a crown colony. Meanwhile the news of the riot and its manner of suppression reached England, and at first evoked approval of Eyre's prompt action; but presently passionate clamour arose from a large party, by which Eyre was held up to execration as a monster of cruelty. In turn another section of the public, with almost equal violence, made Eyre their idol. Lord Russell, the prime minister, surveyed the conflict with judicial impartiality. In December a royal commission of inquiry, consisting of Sir Henry Storks [q. v.], governor of Malta, Russell Gurney [q. v.], and John B. Maule, then recorder of Leeds, was sent to Jamaica, and Eyre was temporarily suspended from the governorship in favour of Storks. The commission arrived in Kingston on 6 Jan. 1866 and sat from 23 Jan. to 21 March. In February 1600*l.* was subscribed in Jamaica for Eyre's defence. On 9 April 1866 the commission reported that Eyre had acted with commendable promptitude and had stopped a riot which might have attained very serious dimensions, but that he had subsequently acted with unnecessary rigour, that Gordon's alleged offence of high treason was not proved, that there was no evidence of any organised conspiracy, and that many of the court-martials were improperly conducted. The House of Commons unanimously endorsed the findings of the commission. Lord Russell's government thanked Eyre for his promptitude, blamed him for excess in subsequent reprisal, and recalled him from his government. The accession of Lord Derby to power in June made no difference to Eyre. Sir J. P. Grant was gazetted in his place on 16 July.

Eyre arrived at Southampton on 12 Aug. 1866, and was publicly entertained there by his supporters, including Lord Cardigan and Charles Kingsley, on the 21st (cf. TRÉVELYAN'S *Ladies in Parliament*, 1869). But for the next three years his opponents, whom Carlyle styled a 'knot of nigger philanthropists,' maintained unceasing warfare upon him (cf. CARLYLE, *Shooting Niagara: and After, Crit. and Miscel. Essays*, London, 1899, v. 12). The 'Jamaica committee,' with John Stuart Mill as chairman, supported by Huxley, Thomas Hughes, Herbert Spencer, and Goldwin Smith, resolved on the prosecution for murder of Eyre and his

chief associates in Jamaica (27 July 1866); and in September an equally influential committee, with Carlyle as chairman and Ruskin and Tennyson among its subscribers, undertook his defence. Eyre's effigy was burnt at a working-class meeting on Clerkenwell Green, and liberals and radicals lost no opportunity of denunciation. On 8 Feb. 1867 Brand, who had presided over the court-martial on Gordon, and Colonel (Sir) Alexander Abercromby Nelson [q. v.], who had confirmed the capital sentence, were committed for trial at Bow Street on a charge of murder. Eyre had retired to Adderley Hall, Shropshire, and was brought before the local bench, who dismissed the case on 27 March. He was defended by Hardinge Giffard, afterwards earl of Halsbury. In April Lord Chief Justice Cockburn elaborately went over the whole ground when charging the grand jury at the Old Bailey in regard to the defendants Nelson and Brand. He questioned Eyre's right to proclaim martial law and advised the grand jury to find a true bill. But this the jury declined to do and the prisoners were set free. Next year (2 June 1868) the proceedings against Eyre were revived. Under a mandamus of the queen's bench, which had jurisdiction under the Colonial Governors Act, he was charged at Bow Street with misdemeanour and was committed for trial. The grand jury at the Old Bailey were now charged by Mr. Justice Blackburn, who expressed dissent from Cockburn's view, and the bill against Eyre was thrown out. Finally, at the instigation of the Jamaica committee, a negro named Phillips brought a civil action for damages for false imprisonment against Eyre (29 Jan. 1869). Eyre pleaded the act of indemnity passed by the local legislature and obtained a verdict. Mill, in his 'Autobiography' (pp. 298-9), justified the part which he took in the attack on Eyre, but the hostile agitation was so conducted as to create an impression of vindictiveness. Carlyle's conclusion 'that Eyre was a just, humane, and valiant man, faithful to his trusts everywhere, and with no ordinary faculty for executing them' was finally accepted. On 8 July 1872, after discussion in the House of Commons, the government ordered payment of Eyre's legal expenses from the public funds. In his speech at Bow Street Eyre made a very dignified protest, and after the bill had been thrown out by the grand jury he published a defence in a letter to the newspapers. It is, however, impossible to understand the quiescent attitude of Eyre throughout the

tragic crisis, unless his very remarkable habit of self-reliance, as shown in the story of his Australian journeys, is taken into account. Although he was not offered further public employment he received in 1874, from Disraeli's government, a pension as a retired colonial governor. From Adderley Hall, Shropshire, Eyre removed to Walreddon Manor, near Tavistock, where he continued to live in seclusion. There he died on 30 Nov. 1901, and there he was buried. He married in 1850 Adelaide Fanny Ormond, daughter of a captain R.N., and had four sons, all in the government service, and a daughter. His widow was awarded in 1903 a civil list pension of 100*l*. A characteristic portrait of Eyre is reproduced as a frontispiece to Hume's 'Life' (see below). Another, of much later date, hangs in the council room of the Royal Geographical Society.

[The Times, 1 Dec. 1901; Men and Women of the Time; Eyre's Expedition into Central Australia, 1845; Heaton's Australian Dictionary of Dates; Frank Cundall's Political and Social Disturbances in the West Indies, published for the 'Jamaica Institute,' 1896. For Eyre's part in the Jamaica riot and the subsequent controversy, see the Parliamentary Papers on Affairs of Jamaica, February 1866, Disturbances in Jamaica, 3 pts., February 1866, Report of the R. Commission, 2 pts., 1866, and Copy of Despatch from Rt. Hon. Edward Cardwell to Sir H. K. Storks, 1866. Among publications on behalf of the Jamaica committee (Eyre's opponents) the following are the most noteworthy: Facts and Documents

relating to the Alleged Rebellion in Jamaica, and the Measures of Repression, including Notes of the Trial of Mr. Gordon, 1866; The Blue Books, n.d.; Statements of the Committee and other Documents, n.d.; A Quarter of a Century of Jamaica Legislation, n.d.; Martial Law, by Frederic Harrison, 1867; Illustrations of Martial Law in Jamaica, by John Gorrie, 1867; and Report of Proceedings at Bow Street Police Court, on the Committal of Col. Nelson and Lieut. Brand for the Murder of Mr. G. W. Gordon, 1867. More favourable to Eyre are Dr. Underhill's Testimony on the Wrongs of the Negro in Jamaica examined, in a Letter to the Editor of the Times, by A. J[indo], Falmouth, Jamaica, 1866; Case of George William Gordon, by Baptist Noel, 1866; Narrative of the Rebellious Outbreak in Jamaica, by Arthur Warmington, London, 1866; Addresses to H.E. Edward John Eyre, 1865, 1866 (Kingston, Jamaica, 1866); Charge of the Lord Chief Justice of England to the Grand Jury at the Central Criminal Court in the Case of the Queen against Nelson and Brand, revised and corrected by Sir Alexander Cockburn, edited by Frederick Cockburn, London, 1867; Treatise upon Martial Law . . . with illustrations . . . from . . . the Jamaica Case, by W[illiam] F[rancis] F[inlason], London, 1866; the same author's Commentaries on Martial Law, London, 1867, and his valuable History of the Jamaica Case, 2nd edit., London, 1869; and Life of Edward John Eyre, by Hamilton Hume, 1867. For useful summaries of the events, see Herbert Paul's Hist. of Modern England, vol. iii. passim; and an article by J. B. Atlay in Cornhill, Feb. 1902.] E. IM T.

Reprinted 1927

PREFATORY NOTE

578 memoirs appear in the present volume which is designed to furnish biographies of noteworthy persons dying between 22 Jan. 1901 and 31 Dec. 1911. The contributors number 180. The callings of those whose careers are recorded here may be broadly catalogued under ten general headings thus :

	NAMES
Administration of Government at home, in India, and the colonies	73
Army and navy	37
Art (including architecture, music, and the stage)	80
Commerce and agriculture	16
Law	29
Literature (including journalism, philology, and philosophy)	125
Religion	68
Science (including engineering, medicine, surgery, exploration, and economics)	90
Social Reform (including philanthropy and education)	39
Sport	21

The names of eighteen women are included on account of services rendered to art, literature, science, and social or educational reform.

Articles bear the initials of their writers save in a very few cases where material has been furnished to the Editor on an ampler scale than the purpose of the undertaking permitted him to use. In such instances the Editor and his staff are solely responsible for the shape which the article has taken, and no signature is appended.

* * In the lists of authors' publications only the date of issue is appended to the titles of works which were published in London in 8vo. In other cases the place of issue and size are specified in addition.

Cross references are given thus: to names in the substantive work [q.v.]; to names in the First Supplement¹ [q.v. Suppl. I]; and to names in the present Supplement² [q.v. Suppl. II].

¹ i.e. Vol. XXII (of the thin paper edition).

² i.e. 1901-1911.

DICTIONARY OF NATIONAL BIOGRAPHY

1901-1911

Faed

I

Faed

FAED, JOHN (1819-1902), artist, born in 1819 at Barlay Mill, near Gatehouse-on-Fleet, in the Stewartry of Kirkcudbright, was eldest son of James Faed, a farmer, miller, and engineer there, whose cousin, Sir George Faed, K.C.B., fought at Waterloo. The family was notable for artistic talent. Thomas Faed, R.A. [q. v. Suppl. I], was the third son. Another brother was James Faed the engraver. John Faed's native taste for art was encouraged by his father. At the outset self-taught, he developed talent as a miniaturist. Leaving school in 1830, when only eleven, he visited next year many towns and villages of Galloway, painting miniatures for the gentry and middle-classes of the district, who regarded him as a prodigy. In 1839 he attended the art-classes at Edinburgh, and soon established a high reputation there as a miniaturist. For over forty years he practised in this department of art with eminent success. When he had obtained a secure position in Edinburgh, he brought thither his two brothers, Thomas and James, and supported them while they were studying art. From 1841 until near the close of his life Faed exhibited annually at the Royal Scottish Academy. He was chosen an associate of the Royal Scottish Academy in 1847, and an academician in 1851.

Gradually abandoning miniature-painting for figure-subjects, Faed found his themes in the Bible and the works of Shakespeare, Burns, Scott, and the ballad literature of Scotland. Among his charac-

teristic pictures are the following:—'Boyhood' (1850); 'The Cruel Sister' (1851), and 'Burd Helen' (now in Kelvin-grove Gallery, Glasgow); 'The Cottar's Saturday Night' (1854); 'Reason and Faith,' and 'The Philosopher' (1855); 'The Household Gods in Danger' (1856); 'Job and his Friends' (1858); and 'Boaz and Ruth' (1860). Other pictures were 'The Raid of Ruthven' (1856), 'Rosalind and Orlando,' 'Olivia and Viola,' and 'Shakespeare and his Friends at the Mermaid Tavern,' a companion picture to Thomas Faed's 'Scott and his Friends at Abbotsford.' Both of these last-named pictures were engraved by James Faed and were widely circulated.

'Annie's Tryst,' suggested by a Scottish ballad, his diploma picture for the Royal Scottish Academy, dated 1863, is in the National Gallery of Scotland, together with his notable picture 'The Poet's Dream' (1883), presented by him to the Royal Scottish Academy a few weeks before his death. 'The Wappenschaw,' an elaborate work, with numerous figures, was shown at the Royal Scottish Academy, and was purchased for 1200*l.* by James Baird of Cambusdoon.

From 1862 to 1880 Faed was in London, exhibiting regularly at the Royal Academy. Among the pictures shown there were 'Catherine Seyton,' 'Old Age,' 'The Stirrup Cup,' 'John Anderson my Jo,' 'Auld Mare Maggie,' 'After the Victory,' 'The Morning before Flodden,' 'Blenheim,' 'In Memoriam,' 'Goldsmith in his Study,' and 'The Old Basket-maker.'

Retiring to Ardmore, Gatehouse, near his birthplace, in 1880, Faed painted several landscapes in the neighbourhood, one being presented by him to Gatehouse town hall. He died at Ardmore on 22 Oct. 1902. Faed married in 1849 Jane, daughter of J. Macdonald, minister of Gigha in the Hebrides; she died in 1898. A painted portrait of Faed is in the possession of Mr. Donald Hall, Woodlyn, Gatehouse-on-Fleet.

Faed's practice as a miniaturist led to more elaboration of details in his pictures than contemporary taste approved. His art is typical of the best Scottish genre style of the late Victorian period.

[W. D. McKay's *Scottish School of Painting*; Bryan's *Dict. of Painters and Engravers*, revised ed.; *Cat. of Nat. Gal. of Scotland*, 42nd ed.; *Scotsman*, 23 Oct. 1902; *Dundee Advertiser*, 23 Oct. 1902.] A. H. M.

FAGAN, LOUIS ALEXANDER (1845-1903), etcher and writer on art, born at Naples on 7 Feb. 1845, was second son in a family of three sons and four daughters of George Fagan by his wife Maria, daughter of Louis Carbone, an officer in the Italian army. Robert Fagan [q. v.], diplomatist and artist, was his grandfather. The elder brother, Joseph George, a major-general in the Indian army, died in 1908; the younger, Charles Edward, is secretary of the Natural History Museum, South Kensington. His father, who joined the diplomatic service, was for many years from 1837 attaché to the British legation at Naples, then the capital of the kingdom of the Two Sicilies, and in his official capacity gave assistance to Sir Anthony Panizzi [q. v.] when on a political mission to Naples in 1851; he was made secretary of legation to the Argentine confederation in 1856, and after settling satisfactorily British claims in Buenos Aires in 1858 became consul-general successively to central America in 1860, to Ecuador (1861-5), and minister, chargé d'affaires, and consul-general to Venezuela (1865-9); he died of yellow fever at Caracas in 1869 (FAGAN, *Life of Panizzi*, ii. 101-2).

Fagan's boyhood was spent in Naples, where he early learned Italian and developed an interest in Italian life, literature, and art. In 1860 he was sent in charge of a queen's messenger to a private school at Leytonstone, Essex. In England, he was kindly received by his father's friend, Panizzi (*ibid.* ii. 213). While still a boy, on returning to Naples, he carried letters from Panizzi to the revolutionary leaders in the Two Sicilies, and he imbibed strong revolutionary

sympathies. Accompanying his father to America, he served in the British legation at Caracas (1866-7). In 1868 he was secretary to the commission for the settlement of British claims in Venezuela. He returned from South America in June 1869, and in September stayed in Paris with Panizzi's friend, Prosper Mérimée, who wrote of him as 'conservant malgré toutes les nationalités par où il a passé l'air de l'English boy' (*ibid.* ii. 274-5).

The same month he obtained on Panizzi's recommendation a post of assistant in the department of prints and drawings in the British Museum, afterwards becoming chief assistant under George William Reid [q. v.] and (Sir) Sidney Colvin successively. He retired through ill-health in 1894. A somewhat hasty temper occasioned friction with his colleagues. Yet during the twenty-five years of official life he helped to increase the usefulness of his department alike for students and the general public.

He published a 'Handbook' to his department (1876) and a series of volumes of service to collectors and connoisseurs, viz. 'Collectors' Marks' (1883); 'One Hundred Examples of Engravings by F. Bartolozzi, with Descriptions and Biographical Notice' (4 pts. 1885); 'A Catalogue Raisonné of the Engraved Works of William Woollett' (1885); 'Descriptive Catalogue of the Engraved Works of W. Faithorne' (1888); and 'History of Engraving in England' (3 pts. fol. 1893). He also gave lantern lectures on the British Museum through the country and published in 1891 'An Easy Walk through the British Museum.'

His Italian training, which made the Italian language as familiar to him as English, focussed his main interests on Italian art and literature. His chief works on these subjects were 'The Works of Correggio at Parma, with Biographical and Descriptive Notes' (folio, 1873); 'Catalogo dei disegni, sculture, quadri e manoscritti di Michelangelo Buonarroti esistenti in Inghilterra' (in vol. ii. of Aurelio Gotti's 'Vita di M. Buonarroti') (1875); 'The Art of Michel' Angelo Buonarroti as illustrated by Various Collections in the British Museum' (1883), and 'Raffaello Sanzio: his Sonnet in the British Museum' (1884). He translated Marco Minghetti's 'The Masters of Raffaello' in 1882.

Fagan was also a practical artist, painting well in water-colours, drawing with refinement, and etching with much delicacy. He exhibited at the Royal Academy a series of etchings in 1872 depicting views

and costumes of Naples; an etching of G. F. Watts's portrait of Sir Anthony Panizzi in 1878, and two etchings of Italian subjects in 1881. Some of these appeared in volume form in 'Twelve Etchings' (1873 fol.). He presented a collection of his etchings in various states of execution made between 1871 and 1877 to the British Museum in November 1879; they mainly depict Italian scenes and peasants.

Until Panizzi's death Fagan's relations with him remained close, and Panizzi appointed him his literary executor at his death in 1879. In 1880 Fagan published Panizzi's biography (2 vols.), which went through two editions and received Gladstone's commendation. In the same year Fagan edited and published at Florence 'Lettere ad Antonio Panizzi di uomini illustri e di Amici Italiani 1823-70,' and in 1881 he issued Mérimée's 'Lettres à M. Panizzi, 1850-1870,' of which English and Italian translations appeared the same year.

Fagan, who was a popular lecturer on art, travelled widely. He delivered the Lowell lectures at Boston in 1891, and in the course of long tours personally examined almost every art collection in Europe, America, and Australia. He advised on the arrangement of the art treasures at Victoria Museum, Melbourne.

A popular member of the Reform Club, Fagan published in 1886 'The Reform Club: its Founders and Architect.' After his retirement from the museum he lived for the most part in Italy, and built for himself a residence at Florence, where he died suddenly on 5 Jan. 1903. He married on 8 Nov. 1887 Caroline Frances, daughter of James Purves of Melbourne, Australia, who survived him. A portrait in oils (painted by J. S. Sargent, R.A., in 1894) was presented by his widow in 1911 to the Arts Club, Dover Street, London, W.

[The Times, 8 Jan. 1903; Mag. of Art, 1903, xxvii. 311; Bryan, Dict. of Painters and Engravers, 1903; Pratt, People of the Period, 1897; A. Graves, Royal Acad. Exhibitors, 1905; private information.]

W. B. O.

FALCKE, ISAAC (1819-1909), art collector and benefactor to the British Museum, born in 1819 at Yarmouth, was one of twenty children. His father removed to London soon after his son's birth and commenced business as an art dealer in Oxford Street, where in due course he was joined by his sons, David and Isaac. The business was eventually

moved to New Bond Street (No. 92), and there before 1858 Isaac Falcke accumulated a comfortable fortune. Thenceforth he chiefly devoted himself to the study of art and to the collection of art treasures mainly for his own gratification. He soon formed a collection of majolica and lustre ware, which owing to some unfortunate investment he sold to a kinsman, Frederick Davis, a Bond Street dealer, who in his turn sold it to Sir Richard Wallace; it now forms part of the Wallace collection.

Falcke soon recovered his financial stability, and next bestowed his chief attention on bronzes of the fifteenth and sixteenth centuries, which were bought by Dr. Bode of Berlin, where they form the nucleus of the splendid collection in the Kaiser Friedrich Museum.

Falcke was through life deeply interested in Wedgwood china, and he ultimately made a collection of Wedgwood ware which was unique. It was exhibited at the opening of the Crystal Palace in 1856, at South Kensington in 1862, at Leeds in 1868, at Bethnal Green in 1875-6-7, and at Burslem in 1893. This collection Falcke presented to the British Museum on 17 June 1909. It comprises about 500 pieces, and includes one of the few original copies of the famous Barberini or Portland vase and a basalt bust of Mercury by John Flaxman (see *Guide to the English Pottery and Porcelain, British Museum*, 1910, pp. 74-76).

A fourth collection, a small one of Chinese and other porcelain, with some good bronzes, Falcke retained till his death. It was sold at Christie's on 19 April 1910, and fetched the large sum of 37,769*l.* 5*s.* 6*d.*

Falcke died in London on 23 Dec. 1909, and was buried in the Jewish cemetery at Willesden.

He married on 13 May 1847 Mary Ann, daughter of James Reid, of Edinburgh, but left no children.

[Jewish Chronicle, 2 July 1909, 29 Dec. 1909; The Times, 29 Dec. 1909, 20 April 1910; Frederick Litchfield, Pottery and Porcelain, 1905; private information.]

M. E.

FALCONER, LANOE (pseudonym). [See HAWKER, MARY ELIZABETH, novelist, 1848-1908.]

FALKINER, CÆSAR LITTON (1863-1908), Irish historian, born in Dublin on 20 Sept. 1863, was the second son of Sir Frederick Richard Falkiner [q. v. Suppl. II]. From the Royal School, Armagh, he went to the University of Dublin, graduating

B.A. in 1886 and proceeding M.A. in 1890. At college he wrote an essay on Macaulay as an historian, which showed that he then formed his conception of the study of history. In 1885 he was elected president of the college Philosophical Society. Much interested in politics, he entitled his presidential address 'A New Voyage to Utopia,' a kind of appeal from the new whigs to the old, which was suggested by the passing of the third reform bill. In 1887 he was called to the Irish bar, and in 1888 he began to work actively on behalf of the unionist cause. At the general election of 1892 Falkiner contested, unsuccessfully, South Armagh. He served on the recess committee whose labours resulted in the creation of the Irish department of agriculture. Devoting much thought to the Irish land problem, he mastered the intricacies of the many Irish Land Acts. In 1898 he was appointed temporary assistant land commissioner, and in 1905 this appointment became permanent. For the first half of his work his duty lay in the western counties, for the latter half in the southern counties.

Meanwhile Falkiner was spending much time and energy on the study of Irish history and literature. He diligently collected and sifted original material. His first book, 'Studies in Irish History and Biography, mainly in the Eighteenth Century' (1902), threw new and valuable light on the history of Ireland in the last quarter of the eighteenth century. But subsequently he mainly devoted himself to the seventeenth century. In 1896 he became a member of the Royal Irish Academy, and after serving on the council was elected secretary in 1907. Papers read before the academy formed the first part of his 'Illustrations of Irish History and Topography, mainly of the Seventeenth Century' (1904). His posthumous book, 'Essays relating to Ireland' (1909), dealt with the same century. In 1899 he was appointed, in the room of Sir John Thomas Gilbert [q.v. Suppl. I], inspector under the historical manuscripts commission, with the duty of editing the Ormonde papers. From 1902 to 1908 five volumes of these seventeenth-century papers appeared, containing over 3000 pages—a noble contribution to the raw material of history. The introductions show his power of handling vast masses of evidence.

Falkiner's interests extended to literature, and in this Dictionary and in Chambers's 'Cyclopædia of English Literature' he dealt with men of letters. In 1903 he edited the poems of Charles Wolfe and selections

from the poems of Thomas Moore (in the 'Golden Treasury' series), and shortly before his death he designed editions of Moore's complete poetical works and of Dean Swift's letters.

Falkiner died on 5 August 1908, through an accident on the Alps while on a brief holiday at Chamonix. He was buried in the English churchyard in Chamonix.

On 4 Aug. 1892 he married Henrietta Mary, daughter of Sir Thomas Newenham Deane [q. v. Suppl. I], architect, of Dublin. She survived him with two daughters. A memorial tablet was placed by his friends in St. Patrick's Cathedral in 1910.

[Memoir by Prof. E. Dowden, prefixed to Falkiner's Essays relating to Ireland, 1909; Minutes, Royal Irish Acad. 1908-9.

R. H. M.

FALKINER, SIR FREDERICK RICHARD (1831-1908), recorder of Dublin, was third son of Richard Falkiner (1778-1833) of Mount Falcon, county Tipperary, who held a commission in the 4th royal Irish dragoons, by his wife Tempe Litton (1796-1888). Travers Hartley (b. 1829), an elder brother, was a well-known engineer; the fine railway line from Zurich to Chur was his design, and he supervised a large portion of the works in connection with the Forth Bridge. The family came to Ireland from Leeds in the time of the Protector, and was long engaged in the woollen manufacture.

Frederick, born at Mount Falcon on 19 Jan. 1831, was educated at Trinity College, Dublin, where he graduated B.A. in 1852. He was called to the Irish bar in the Michaelmas term of that year, and joined the north-east circuit. A man of great industry and natural eloquence, he soon won a foremost place in the ranks of the juniors and held briefs in many important cases. He took silk in 1867, and in 1875 he was appointed law adviser at Dublin Castle, an office since abolished. In the following year he was appointed recorder of Dublin, on the death of Sir Frederick Shaw [q. v.]. He threw himself with energy into the work of the court, and as the 'poor man's judge' he earned a reputation for humanity. During his early years as recorder he was called upon to decide many intricate points in the licensing laws. He took a keen interest in acts of parliament bearing on compensation to workmen for injuries received in the course of their employment, and when Mr. Chamberlain was engaged in drafting his bill on the subject in 1897 he adopted several of Falkiner's suggestions. In 1880

he was elected a benchor of the King's Inns, and in August 1896 he was knighted. He retired from his office on 22 Jan. 1905, when he was made a privy councillor.

Falkiner was one of the most prominent members of the general synod of the Church of Ireland, and in the debates of that body, especially on financial questions, he frequently intervened with much effect. He was chancellor to the bishops of Tuam, Clogher, Kilmore, and Derry and Raphoe. He was also chairman of the board of King's Hospital, better known as the Blue Coat School. Of this school he published in 1906 a history, which is in effect a history of Dublin from the Restoration to the Victorian era. Falkiner pursued literary interests; he wrote on Swift's portraits (*Swift's Prose Works*, 1908, vol. xii.), and a collection of his 'Literary Miscellanies' was published posthumously in 1909. He died at Funchal, Madeira, on 22 March 1908.

He married twice: (1) in 1861 Adelaide Matilda (*d.* 1877), third daughter of Thomas Sadleir of Ballinderry Park, county Tipperary; and (2) Robina Hall (*d.* 1895), third daughter of N. B. McIntire of Cloverhill, county Dublin. By his first wife he had issue three sons, including Cæsar Litton Falkiner [q. v. Suppl. II], and four daughters.

A portrait by Walter Osborne is in the National Gallery, Dublin.

[A biography by Falkiner's daughter May, prefixed to his *Literary Miscellanies*; The Falkiners of Mount Falcon, by F. B. Falkiner, 1894; Burke's Landed Gentry of Ireland, 1904.]

R. H. M.

FANE, VIOLET (pseudonym). [See CURRIE, MARY MONTGOMERIE, LADY, 1843-1905, author.]

FANSHAWE, SIR EDWARD GENNYNS (1814-1906), admiral, born at Stoke, Devonport, on 27 Nov. 1814, was eldest surviving son of General Sir Edward Fanshawe (1785-1858), R.E., and was grandson of Robert Fanshawe, who, after commanding with distinction the Monmouth in Byron's action off Grenada in 1779 and the Namur on 12 April 1782, was commissioner of the navy at Devonport, where he died in 1823. His mother was Frances, daughter of Sir Hew Whitefoord Dalrymple [q. v.], of whose services at Gibraltar and in Portugal in 1808 Fanshawe published (1895) a critical account. He entered the navy in 1828, and was promoted to be lieutenant in 1835. He was then in November appointed to the Hastings, in which, and afterwards in the Magicienne, he served on the home and Lisbon stations. During the greater

part of 1838 he was flag lieutenant to Rear-admiral Bouverie, the superintendent of Portsmouth dockyard, and in November was appointed to the Daphne corvette, at first off Lisbon, whence he went out to the Mediterranean, where he took part in the reduction of Acre and the other operations on the coast of Syria in 1840. On 28 Aug. 1841 Fanshawe was promoted to the rank of commander, and in September 1844 went out to the East Indies in command of the Cruiser. His conduct in command of the boats at the reduction of a pirate stronghold in Borneo won for him his promotion to captain on 7 Sept. 1845. In the Russian war of 1854-6 he commanded the Cossack, and afterwards the Hastings in the Baltic and in the Channel; from May 1856 to March 1859 the Centurion in the Mediterranean; from June 1859 to April 1861 the Trafalgar in the Channel, and from 1 April 1861 he was superintendent of Chatham dockyard. In November 1863 he was promoted to be rear-admiral, and in 1865 was nominated a lord of the admiralty. From 1868 to 1870 he was superintendent at Malta dockyard, with his flag in the Hibernia. On 1 April he became vice-admiral, and in 1871 was nominated a C.B. From 1870 to 1873 he was commander-in-chief on the North American station; during 1875-8 was president of the Royal Naval College at Greenwich, in succession to Sir Cooper Key; and during 1878-9 was commander-in-chief at Portsmouth. On 27 Nov. 1879, his sixty-fifth birthday, he was placed on the retired list. In 1881 he was nominated a K.C.B., and at Queen Victoria's jubilee in 1887 was advanced to G.C.B. He continued to take an active interest in naval questions, serving as vice-president or member of council of the Navy Records Society till shortly before his death. He died on the anniversary of Trafalgar, 21 Oct. 1906. He married on 11 May 1843 Jane (*d.* 1900), sister of Edward, Viscount Cardwell [q. v.], and had issue four sons. Admiral of the Fleet Sir Arthur Dalrymple Fanshawe, G.C.B., is his third son.

[Royal Naval List; O'Byrne's Naval Biographical Dict.; Burke's Landed Gentry: The Times, 23 Oct. 1906; Clowes, Royal Navy, vi. and vii. 1901-3; information from Sir Arthur Fanshawe.] J. K. L.

FARJEON, BENJAMIN LEOPOLD (1838-1903), novelist, second son of Jacob Farjeon (*d.* 1865), a Jewish merchant, by his wife Dinah Levy of Deal, was born in London on 12 May 1838. Educated at a private Jewish school until he was

fourteen, he entered the office of the 'Nonconformist' newspaper. At the end of three years, unwillingness to conform to the Jewish faith caused a disagreement with his parents. At seventeen he embarked for Australia, travelling steerage; during the voyage he produced some numbers of a ship newspaper, 'The Ocean Record,' and was transferred by the captain to the saloon. From the goldfields of Victoria he went to New Zealand, on hearing of rich finds there. Soon abandoning the quest of gold, he settled at Dunedin as a journalist. He assisted (Sir) Julius Vogel [q. v. Suppl. I] in the management of the 'Otago Daily Times,' the first daily paper established in the colony, which Vogel founded in 1861. Farjeon became joint editor and part-proprietor; but journalism did not satisfy his ambition, and he wrote a novel, 'Christopher Cogleton,' for the weekly 'Otago Witness,' in which Vogel was also interested, a play 'A Life's Revenge,' and several burlesques in which the leading parts were taken by Julia Matthews, who subsequently won a reputation in London. In 1866 he published at Dunedin a successful tale of Australian life, 'Grif,' and a Christmas story, 'Shadows on the Snows,' which he dedicated to Charles Dickens.

Encouraged by an appreciative letter from Dickens, Farjeon in 1868 returned to England. He travelled by way of New York, where he declined the offer by Gordon Bennett of an engagement on the 'New York Herald'; and settled in chambers in the Adelphi. During the next thirty-five years he devoted himself to novel-writing with unceasing toil. The success of 'Grif,' which was republished in London (1870; new edit. 1885), was maintained in a series of sentimental Christmas stories, 'Blade o' Grass' (1874; new edit. 1899), 'Golden Grain' (1874), 'Bread and Cheese and Kisses' (1874; new edit. 1901), and in many conventional three-volume novels mainly treating of humble life—such as 'Joshua Marvel' (1871), 'London's Heart' (1873), and 'The Duchess of Rosemary Lane' (1876). As a disciple of Dickens, Farjeon won passing popularity, but he turned later to the sensational mystery in which Wilkie Collins excelled, and there his ingenuity was more effective. 'Great Porter Square' (1884) and 'The Mystery of M. Felix' (1890) are favourable examples of his work in this kind. His best novel is the melodramatic 'Devlin the Barber' (1888; new edit. 1901). A play by Farjeon, 'Home, Sweet Home,' was produced by Henry Neville at the Olympic

Theatre in 1876, and in 1891 George Conquest put on at the Surrey Theatre Farjeon's dramatised version of his novel 'Grif,' which had already undergone unauthorised dramatisation. In 1873 he sat with Charles Reade and others on a committee formed by John Hollingshead [q. v. Suppl. II] to amend the law so as to prevent the dramatisation of novels without their writers' assent (HOLLINGSHEAD, *My Lifetime*, ii. 54).

In October 1877 he gave readings in America from one of his early successes, 'Blade o' Grass.'

Farjeon died at his house in Belsize Park, Hampstead, on 23 July 1903, and his remains were cremated and interred at Brookwood. He married on 6 June 1877 Margaret, daughter of the American actor, Joseph Jefferson; she survived him with four sons and one daughter. A head in pastels, by Farjeon's nephew, Emanuel Farjeon, a miniature-painter well known in the United States, belongs to the widow.

[The Times, 24 July 1903; Edmund Downey, *Twenty Years Ago*, 1905, p. 246; Tinsley, *Random Recollections of an Old Publisher*, 1900, ii. 309; private information.] L. M.

FARMER, EMILY (1826-1905), water-colour painter, was one of the three children of John Biker Farmer, of the East India Company's service, by his wife Frances Ann, daughter of William Churchill Frost. Alexander Farmer, a twin brother of her sister Frances, was an artist; he exhibited at the Royal Academy and elsewhere from 1855 to 1867, and is represented in the Victoria and Albert Museum by two small oil paintings of genre subjects; he died on 28 March 1869. Emily Farmer was born in London on 25 July 1826. She was educated entirely at home, and received instruction in art from her brother. In early life Miss Farmer painted miniatures, but she is best known for her refined and well-drawn groups of children and other genre subjects. She exhibited at the Royal Academy in 1847, and again in 1849 and 1850. In 1854 she was elected a member of the New Society (now the Royal Institute) of Painters in Water Colours, and she was a frequent contributor to its exhibitions until the year of her death. She resided for more than fifty years at Portchester House, Portchester, Hampshire, where she died on 8 May 1905. She is buried, with her mother, sister, and brother, in the churchyard of St. Mary's within the castle at Portchester. The Victoria and Albert Museum has two water-colour drawings by Miss Farmer, viz.

'In Doubt' and 'Kitty's Breakfast' (1883). Her best-known work is perhaps 'Deceiving Granny,' which was extensively reproduced. An oil portrait of Miss Farmer by her brother Alexander belongs to Miss M. A. Waller of Portchester.

[Information kindly supplied by Miss M. A. Waller; Catalogues of oils and water-colours, Victoria and Albert Museum; Graves, Dict. of Artists, Roy. Acad. Exhibitors, and British Institution Exhibitors; Cat. of the Roy. Acad. and Roy. Inst. of Painters in Water Colours; Art. Journal, 1905, p. 224.]

B. S. L.

FARMER, JOHN (1835-1901), musician, born at Nottingham on 16 Aug. 1835, was eldest of a family of nine. His father, also John Farmer, was a lace manufacturer and a skilful violoncellist; his mother, whose maiden name was Mary Blackshaw, was markedly unmusical, but possessed of considerable mechanical inventiveness. An uncle, Henry Farmer, was a composer and the proprietor of a general music-warehouse in Nottingham. Farmer was apprenticed to him at a very early age after schooling at Hucknall Torkard and at Nottingham, and taught himself to play piano, violin, and harp. At the age of fourteen he was sent to the Conservatorium at Leipzig, where he studied under Moscheles, Plaidy, Hauptmann, and E. F. Richter, and sang in the Thomaskirche. After three years at Leipzig he moved to Coburg, studied under Spaeth, and rehearsed the choral work at the opera and elsewhere. In 1853 he returned to England, and took a position in the London branch of his father's lace business, where, though the work was very uncongenial, he stayed till the death, in 1857, of his mother, who had strongly opposed an artistic career. He then ran away to Zürich, to support himself by music-teaching, solely influenced by the residence of Wagner there at the time; he had helped in the production of 'Tannhäuser' at Coburg, and had experienced a strong reaction from the strict academicism of Leipzig.

In 1861 Farmer returned to England, and, after some fluctuations of fortune, was engaged to give daily piano performances at the International Exhibition of 1862. The association with Harrow school, which gave him his chief reputation, was a fruit of this engagement. Some old Harrovians who visited the exhibition and were struck with Farmer's playing invited him to take charge of a small musical society (unconnected officially with the school itself) in which they were interested. He took up his residence

at Harrow at the end of 1862. In 1864, in spite of conservative scruples on the part of the authorities, he joined the staff of the school as music teacher. To words by Harrow masters [see BOWEN, EDWARD ERNEST, Suppl. II] he composed numerous songs which won great popularity and became an integral part of the permanent tradition of the school. In 1885, when Dr. Henry Montagu Butler, headmaster since 1859, who had given Farmer every encouragement, left Harrow, Farmer accepted an invitation (previously offered, but then declined) from Benjamin Jowett, Master of Balliol College, Oxford, to become organist there. At Balliol he remained till his death. Among numerous other college activities, he instituted, in the college hall, with the Master's full approval, classical secular concerts on Sunday evenings, which aroused for a short time considerable opposition.

There were many side outlets to Farmer's untiring energies. In 1872 a body of friends founded the Harrow Music School, an institution designed to systematise his method of instruction in classical piano music. Special stress was laid on the study of the work of Bach, the educational importance of which Farmer was one of the first in England to appreciate. He was also one of the earliest and firmest champions of Brahms. For the last twenty-five years of his life his method was adopted by the Girls' Public Day School Company, for which (as for many other schools) he acted as musical adviser and inspector. From 1895 onwards he was examiner to the Society of Arts, and he was also busily engaged in teaching and in lecturing in schools and in universities outside Oxford, taking up towards the end of his life a further interest—the music of soldiers and sailors. He died at Oxford on 17 July 1901, after a long paralytic illness.

Farmer married, at Zürich on 25 Oct. 1859, Marie Elisabeth Stahel, daughter of a Zürich schoolmaster; two of their seven children predeceased him.

Farmer's published compositions include numerous songs for Harrow, Balliol, St. Andrews, and elsewhere; oratorios, 'Christ and his Soldiers' (1878) and 'The coming of Christ' (1899); a fairy opera, 'Cinderella' (1882); a 'Requiem in memory of departed Harrow friends' (1884); and many works of smaller dimensions. Several extended pieces of chamber-music and other works remain in MS. He also edited many volumes of Bach and other standard composers; 'Gaudeamus, songs for colleges

and schools' (1890); 'Hymns and chorales for schools and colleges' (1892); 'Dulce domum, rhymes and songs (old and new) for children' (1893); 'Scarlet and Blue, songs for soldiers and sailors' (1896). He had a remarkable gift for writing straightforward healthy tunes suitable for unison singing, and to these compositions he himself attached chief importance. A warmhearted enthusiast of magnetic personality, with a deep belief in the ethical influence of music, he did much to popularise the classical composers and to elevate musical taste in the circles in which he moved.

A portrait in oils is in the speech room at Harrow school.

[Personal knowledge; private information; Abbott and Campbell's Benjamin Jowett (1897); Harrow School, ed. E. W. Howson and E. Townsend Warner, 1898, *passim*; Musical Gazette, Dec. 1901.] E. W.

FARNINGHAM, MARIANNE (pseudonym). [See HEARN, MARY ANNE, hymn-writer and author, 1834-1909.]

FARQUHARSON, DAVID (1840-1907), landscape painter, born at Lochend Cottage, Blairgowrie, on 8 Nov. 1840, was the younger son in the family of five children of Alexander Farquharson, dykebuilder there, and Susan Clark his wife. He served an apprenticeship in the shop of a painter and decorator in Blairgowrie in which was working about the same time another artist, William Geddes, who afterwards won a considerable reputation as a painter of fish. After following his trade in the south of Scotland, Farquharson returned to his native town, and with his brother started the business of A. and D. Farquharson, housepainters. On the dissolution of this partnership he devoted himself to the art of landscape painting, which, with little or no regular training, he had long practised in a desultory way. His first appearance at the Royal Scottish Academy, in 1868, was with a Solway landscape, and his sketching expeditions had already taken him as far as Ireland; but his main subjects throughout his career were found in his native glens and the Perthshire and western highlands.

About 1872-3 Farquharson removed to Edinburgh, and until 1882 had a studio there at 16 Picardy Place. His 'Last Furrow,' exhibited at the Scottish Academy in 1878, was purchased and engraved by the Royal Association for the Promotion of Fine Arts. It was followed by 'Noon-day Rest' (R.S.A. 1879), 'Sheep-plunging'

(R.A. 1880), 'The Links of Forth' (R.S.A. 1883). In 1882 he was elected A.R.S.A., and in the same year he removed to London, settling at first in St. John's Wood, but spending many months each year in painting in the Scottish highlands and the west of England, with one or two visits to Holland. From 1886 onwards he was a regular exhibitor at the Royal Academy, where he first exhibited in 1877, and he contributed once or twice to the New Gallery, while his work was always on view at the galleries of Messrs. Tooth. In 1897 his picture at the Royal Academy, 'In a Fog,' was purchased for £207. under the Chantrey Bequest.

By this time Farquharson had settled finally at Sennen Cove, Cornwall, which gave him the subject for a large landscape, 'Full Moon and Spring Tide,' hung in the place of honour in the large gallery in the Academy of 1904. This striking canvas, painted when the artist was sixty-four, first brought him into public notice, and it won him the associateship of the Royal Academy in the same year. With the exception of one or two of the foundation members, no artist became associated with the Academy at so advanced an age. 'Full Moon and Spring Tide' reappeared at the winter exhibition of the Academy in 1909, in the McCulloch collection, into which it had passed with several other of his large canvases, and again at the winter exhibition of 1911, with a selection of the painter's works, after his death. It was thus on view at Burlington House on three separate occasions in seven years—probably a unique record.

Farquharson's latest pictures included 'Birmam Wood' (R.A. 1906), also purchased by the Chantrey Trustees, and 'Dark Tintagel' (R.A. 1907). These, like all his large works, were painted with a broad and facile brush and a feeling for the large aspect of nature, but lacked the research and refinement of smaller landscapes painted earlier in the artist's life. The Manchester Art Gallery possesses one of Farquharson's oil-paintings; and there are two in the Glasgow Art Galleries.

Farquharson died at Balmore, Birnam, Perthshire, on 12 July 1907, and was buried in Little Dunkeld churchyard. Early in life he married Mary Irvine, whom he met in Ireland. She died in 1868. A son and daughter survived him.

FARRAR, ADAM STOREY (1826-1905), professor of divinity and ecclesiastical history at Durham, born in London on 20 April 1826, was son of Abraham Eccles Farrar, president of the Wesleyan conference, by his second wife, Elizabeth, daughter of Adam Storey of Leeds. Educated at the Liverpool Institute, he matriculated in 1844 at St. Mary Hall, Oxford, obtaining a first class in the final classical school and a second in mathematics, and graduating B.A. in 1850. In 1851 he was the first winner of the prize founded in memory of Arnold of Rugby, with an essay on 'The Causes of the Greatness and Decay of the Town of Carthage,' and in the following year proceeded M.A. and was elected Michel fellow of Queen's College. In two successive years, 1853 and 1854, he won the Denyer prize for a theological essay, his themes being respectively 'The Doctrine of the Trinity' and 'Original Sin.' Ordained deacon in 1852 and priest in 1853, he became tutor at Wadham College in 1855, and acted both as mathematical moderator and examiner in classics in 1856. He was appointed preacher at the Chapel Royal, Whitehall, in 1858, and Bampton lecturer at Oxford in 1862, and became B.D. and D.D. in 1864.

While at Oxford Farrar published his chief literary work, 'Science in Theology, [nine] Sermons before the University of Oxford,' in 1859, and 'A Critical History of Free Thought,' the Bampton Lectures in 1862. In the former work he sought 'to bring some of the discoveries and methods of the physical and moral sciences to bear upon theoretic questions of theology.' The Bampton Lectures proved Farrar to be a learned and clear historian of ideas. In 1864 Farrar was appointed professor at Durham, and in 1878 he became canon of the cathedral. From this time onward, although he travelled widely in his vacation, not only through Europe but in Asia Minor, his life was identified with his work as teacher and preacher at Durham. His colleague, Dr. Sanday, who described him as 'a born professor,' doubted if 'any of the distinguished theologians of the last century . . . had at once the same commanding survey of his subject and an equal power of impressing the spoken word upon his hearers. . . . His knowledge was encyclopædic; and his method was also that of the encyclopædia. He was never more at home than in classifying, dividing, and subdividing. His experience in the study of natural science dominated his treatment of literature and the history of thought.' Of commanding height and appearance, and of stately

manner, he by 'his physical presence heightened the effect of what he said.'

While at Durham, although he planned without executing an English church history, he only published a few sermons. He died at Durham on 11 June 1905, without issue. He married in 1864 Sarah Martha (1824-1905), daughter of Robert Wood, a Wesleyan minister.

[Guardian, 2 June 1905; Journal of Theological Studies, art. by Dr. Sanday, October 1905; Durham University Journal, 14 July 1905, with list of sermons.]

FARRAR, FREDERIC WILLIAM (1831-1903), dean of Canterbury, born on 7 Aug. 1831 in the fort at Bombay, was the second son of Charles Pinhorn Farrar, chaplain of the Church Missionary Society, by his wife Caroline Turner. At the age of three he was sent with his elder brother to England, and while under the care of two maiden aunts at Aylesbury attended the Latin school there. His parents came to England for a three years' furlough in 1839, and taking a house at Castleton Bay in the Isle of Man, sent their sons to the neighbouring King William's College, where they became boarders in the house of the headmaster, Dr. Dixon. The culture and comfort of the Aylesbury home and the comparative discomfort and roughness of the college are described by Farrar in his first story, 'Eric.' The religious teaching was strictly evangelical, but the standard of scholarship was inferior. In eight years Farrar rose to be head of the school, developing the strong self-reliance which distinguished him through life. Among his schoolfellows were Thomas Fowler [q. v. Suppl. II], Thomas Edward Brown [q. v. Suppl. I], and E. S. Beesly. In 1847, when his father left India and became curate-in-charge of St. James, Clerkenwell, Farrar lived with his parents, and attended King's College. Thenceforth, owing to his success in winning prizes and scholarships, his education cost his father nothing. He was first both in matriculation at London University and in the examination for honours, and graduated B.A. in 1852. His chief competitor was (Sir) Edwin Arnold [q. v. Suppl. II], and among the professors F. D. Maurice [q. v.] exercised a strong influence on him. From Maurice he learned a veneration for Coleridge's religious and philosophical writings. In October 1850 he went to Trinity College, Cambridge, with a sizarship and a King's College scholarship, and in 1852 he obtained a Trinity College

scholarship. His novel 'Julian Home' draws freely on his Cambridge experiences. He was a member of the Apostles' Club. He took no part in games. In 1852 he won the chancellor's medal for English verse with a poem on the Arctic regions. In 1854 he was bracketed fourth in the classical tripos and was a junior optime in the mathematical tripos; he graduated B.A. in 1854, proceeded M.A. in 1857, and D.D. in 1874.

Before the result of the tripos was announced, Farrar accepted a mastership at Marlborough College, where his friends E. S. Beesly and E. A. Scott were already at work. The headmaster, G. E. L. Cotton [q. v.], afterwards bishop of Calcutta, was engaged in the task of revivifying the school. Farrar at once showed special gifts as a master, readiness to make friends of his pupils and power of stimulating their literary and intellectual energies. On Christmas Day 1854 he was ordained deacon, and priest in 1857. He left Marlborough after a year to take a mastership under Dr. Vaughan at Harrow (November 1855). In the same year he won the Le Bas prize at Cambridge for an English essay, and in 1856 he won the Norrisian prize for an essay on the Atonement, and was elected a fellow of Trinity College. Dr. Whewell is said to have been impressed by his familiarity with Coleridge's philosophy.

Farrar soon became a house-master at Harrow, where he remained fifteen years, serving for the last eleven years under Dr. H. M. Butler on Vaughan's retirement (see Dr. Butler's estimate of him as a schoolmaster in *Life*, p. 138). At Harrow, Farrar devoted all his leisure to literary work—a practice which he followed through life. Before he left Harrow he had won for himself a public reputation in three departments of literature—in fiction, in philology, and in theology. He began with fiction. In 1858 he published 'Eric, or Little by Little,' a tale of school-life, partly autobiographical, which long retained its popularity; thirty-six editions appeared in his lifetime. 'Eric' lacks the mellowness and the organic unity of 'Tom Brown's School Days,' which appeared a year earlier. But it influences boys through its vividness and sincerity, which reflect Farrar's ardent temperament and unselfish idealism. There followed in 1859 'Julian Home: a Tale of College Life' (18th edit. 1905). In 1862 'St. Winifred's, or the World of School' (26th edit. 1903), was printed anonymously. In 1873, under the pseudonym of F. T. L. Hope,

'The Three Homes: a Tale for Fathers and Sons,' was contributed to the 'Quiver.' It was not acknowledged till 1896; it reached its 18th edition in 1903.

Philology and grammar were Farrar's first serious studies, and he was a pioneer in the effort to introduce into ordinary education some of the results of modern philological research. In 1860 he published 'An Essay on the Origin of Language: based on Modern Researches and especially on the Works of M. Renan.' It was followed in 1865 by 'Chapters on Language,' of which three editions appeared, and in 1870 by 'Families of Speech,' from lectures delivered before the Royal Institution. The last two were re-issued together in 1878 under the general title of 'Language and Languages.' Farrar was an evolutionist in philology, and his first essay caught Darwin's attention and led to a friendship between the two. On Darwin's nomination Farrar in 1866 was elected a fellow of the Royal Society in recognition of his work as a philologist. In order to improve the teaching of Greek grammar he composed a card of 'Greek Grammar Rules,' which reached its 22nd edition, and published 'A Brief Greek Syntax' (1867; 11th edit. 1880). He explained his educational aims in two lectures at the Royal Institution, the first of which, 'On Some Defects in Public School Education,' urged the serious teaching of science and the defects in the current teaching of classics. His views elicited the sympathy of Darwin and Tyndall. In 1867 he edited, under the title of 'Essays on a Liberal Education,' a number of essays by distinguished university men advocating reforms. In theology Farrar first came before the public as contributor to Macmillan's 'Sunday Library for Household Reading' of a popular historical account of Seneca, Epictetus, and Marcus Aurelius, which he called 'Seekers after God' (1868; 17th edit. 1902). After the appearance of his first volume of sermons, 'The Fall of Man and other Sermons' (1868; 7th edit. 1893), he was appointed chaplain to Queen Victoria in 1869 (being made a chaplain-in-ordinary in 1873) and Hulsean lecturer at Cambridge in 1870. The Hulsean lectures were printed in 1871 as 'The Witness of History to Christ' (9th edit. 1892).

Farrar was a candidate in 1867 for the headmastership of Haileybury, but was defeated by Dr. Bradby, one of his colleagues at Harrow. In 1871 he was appointed headmaster of Marlborough

College in succession to George Granville Bradley [q. v. Suppl. II]. An outbreak of scarlet fever had just caused a panic among parents, but Farrar soon revived confidence and maintained the prestige of Bradley's rule, carried out sanitary improvements and the additional building which had been previously planned, and began the teaching of science in accordance with his principles of educational reform. While at Marlborough he made his popular reputation by writing the 'Life of Christ.' He sought to meet the requirements of the publishers, Messrs. Cassell, Petter & Galpin, who suggested that the sketch should enable readers to realise Christ's 'life more clearly, and to enter more thoroughly into the details and sequence of the gospel narratives.' In 1870 he visited Palestine with Walter Leaf, his pupil at Harrow, and his task was completed after much hard work in 1874. The success was surprising. Twelve editions were exhausted in a year, and thirty editions of all sorts and sizes in the author's lifetime. It has had a huge sale in America and has been translated into all the European languages. Despite its neglect of the critical problem of the composition of the gospels, and the floridity which was habitual to Farrar's style, his 'Life of Christ' combined honest and robust faith with wide and accurate scholarship. The value of the excursions has been recognised by scholars. Farrar pursued his studies of Christian origins in the 'Life of St. Paul' (1879; 10th edit. 1904), an able and thorough survey of the Pauline epistles and the problems connected with them, and the most valuable of Farrar's writings; in 'The Early Days of Christianity' (1882, 5 edits.), in which the review of the writings of the New Testament was completed; and in his 'Lives of the Fathers: Church History in Biography' (1889), an attempt to bring his survey down to the end of the sixth century.

In 1875 Farrar declined the crown living of Halifax, but next year he accepted a canonry of Westminster with the rectory of St. Margaret's parish. His success as a preacher both at St. Margaret's church and in the Abbey was pronounced, and gave him the means of restoring the church. He thoroughly reorganised its interior, putting in many stained glass windows and spending 30,000*l.* on the building. At the same time he sought to restore to St. Margaret's its old position as the parish church of the House of Commons, and largely succeeded. In 1890 he was chosen

chaplain to the House, and filled the position with distinction for five years. As a parish priest he earnestly faced his parochial responsibilities, and the drunkenness in Westminster slums made him a pledged abstainer and an eager advocate of temperance. In 1883 he was appointed archdeacon of Westminster.

In 1877 he roused a storm of criticism by a course of five sermons in the Abbey (Nov.-Dec.) on the soul and the future life, the subject of a current discussion in the 'Nineteenth Century.' He challenged the doctrine of eternal punishment. The sermons were published with a preface and other additions under the title 'Eternal Hope' in 1878 (18th edit. 1901), and the volumes called forth numerous replies, of which the most important was E. B. Pusey's 'What is of Faith as to Everlasting Punishment?' Pusey and Farrar corresponded, and in some measure Farrar modified his position in 'Mercy and Judgment: a Few Last Words on Christian Eschatology with reference to Dr. Pusey's "What is of Faith"' (1881; 3rd edit. 1900). Farrar's teaching largely repeated that of his master, F. D. Maurice, but he reached a far wider audience. At Farrar's suggestion the offer was made on Darwin's death in 1882 to inter his body in Westminster Abbey; Farrar was one of the pall-bearers, and preached a notable funeral sermon on Darwin's work and character. In 1885 Farrar made a four months' preaching and lecturing tour through Canada and the United States. His lecture on Browning was reckoned the beginning of that poet's popularity in America. His preaching created a profound impression. His 'Sermons and Addresses in America' appeared in 1886. In the same year he served as Bampton lecturer at Oxford, his selection being an unusual compliment to a Cambridge divine. His theme was 'The History of Interpretation,' and was handled with scholarly effect.

His broad views long hindered his promotion, but in 1895 he became dean of Canterbury on the recommendation of Lord Rosebery. He threw himself with enthusiasm into his new duties. Repair and restoration of Canterbury Cathedral were urgent. In three years he raised 19,000*l.* by public subscription. The roofs were made watertight and the chapter house and crypt thoroughly restored. He improved the cathedral services and made the cathedral a centre of spiritual life for the town and diocese. In 1899 his right hand was affected by muscular atrophy

which slowly attacked all his muscles. After a long illness he died on 22 March 1903. He was buried in the cloister-green of the cathedral, near Archbishop Temple. In 1860 he married Lucy Mary, third daughter of Frederic Cudew, of the East India Company's service, by whom he had five sons and five daughters.

His portrait by B. S. Marks was painted for Marlborough College in 1879, and a caricature by 'Spy' appeared in 'Vanity Fair' in 1891. Dean Farrar Street, a new street in Westminster, is named after him.

Farrar exerted a vast popular influence upon the religious feeling and culture of the middle classes for fully forty years by virtue of his enthusiasm, always sincere if not always discriminating, and of his boundless industry. In his religious views he occupied a position between the evangelical and broad church schools of thought.

In addition to those already mentioned, Farrar issued many other collections of sermons, which were widely read, and separate addresses or pamphlets; he also wrote much for 'The Speaker's Commentary,' 'The Expositor's Bible,' 'The Cambridge Bible for Schools,' and 'The Men of the Bible,' as well as for Smith's 'Dictionary of the Bible' and Kitto's 'Biblical Encyclopædia.' Among his independent publications were: 1. 'Lyrics of Life,' 1859. 2. 'General Aims of the Teacher and Form Management,' 1883. 3. 'My Object in Life,' 1883; 8th edit. 1894. 4. 'Darkness and Dawn: a Tale of the Days of Nero,' 1891; 8th edit. 1898. 5. 'Social and Present Day Questions,' 1891; 4th edit. 1903. 6. 'The Life of Christ as represented in Art,' 1894; 3rd edit. 1901. 7. 'Gathering Clouds: Days of St. Chrysostom,' 1895. 8. 'Men I have Known,' 1897. 9. 'The Herods,' 1897. 10. 'The Life of Lives: Further Studies in the Life of Christ,' 1900. Two selections from his works have been published under the titles 'Words of Truth and Wisdom' (1881) and 'Treasure Thoughts' (1886).

[Life by Farrar's son Reginald Farrar, 1905, with bibliography; The Times, 23 March 1903; Memoir by Dean Lefroy, prefixed to biographical edit. of the Life of Christ, 1903; 'Dean Farrar as Headmaster,' by J. D. Rogers] in Cornhill Mag. May 1903; G. W. E. Russell's Sketches and Snapshots, 1910; Three Sermons preached in Canterbury Cathedral, 29 March 1903, by A. J. Mason, H. M. Spooner, and H. M. Butler; Farrar's Men I have Known, 1897, and other works, contain much autobiography.]

R. B.

FARREN, ELLEN, known as **NELLIE FARREN** (1848-1904), actress, born at Liverpool on 16 April 1848, was daughter of Henry Farren [q. v.] by his wife Ellen Smithson, and was grand-daughter of William Farren (1786-1861) [q. v.]. Her first appearance is stated to have been made at the Theatre Royal, Exeter, on 12 Dec. 1853, when she appeared as the young duke of York in 'Richard III.' At nine she was at the old Victoria Theatre in Waterloo Road, London, singing a song which caught the popular ear, entitled 'I'm ninety-five.' At eleven she undertook juvenile parts in the provinces.

Her first regular appearance was made on the London stage at Sadler's Wells Theatre on 26 Dec. 1862, as the Fairy Star in 'The Rose of Blarney,' a Christmas extravaganza, in which she sang and acted very prettily. At the Victoria Theatre, Waterloo Road, then under the management of Frampton and Fenton, she played, 2 Nov. 1863, the Begum in 'Nana Sahib,' and on 26 Dec. Hymen in another Christmas piece, 'Giselle, or the Midnight Dancers,' as well as such parts as Lucy in 'The Flying Dutchman,' and Ducie in Boucicault's 'Colleen Bawn.'

From the Victoria she migrated to the Olympic Theatre, under the management of Horace Wigan, first appearing there, on 2 Nov. 1864, as Fanny in J. M. Morton's farce 'My Wife's Bonnet,' and as Gwynedd Vaughan in Tom Taylor's 'The Hidden Hand.' She remained at this theatre until June 1868, playing leading parts in the burlesques which formed a prominent feature of the entertainment and laying the foundation of her fame as a burlesque actress. At the same time she secured genuine success in comedy characters like Charlotte in 'High Life below Stairs,' Sam Willoughby in 'The Ticket of Leave Man,' the Clown in Shakespeare's 'Twelfth Night,' Nerissa in 'The Merchant of Venice,' and Mary in 'Used Up' with Charles Mathews. Her renderings of Robert Nettles in Tom Taylor's 'To Parents and Guardians' and Nan in Buckstone's 'Good for Nothing' placed her for comic capacity beside Mrs. Keeley [q. v.]. She was next seen at the Queen's Theatre in Long Acre, under the management of Henry Labouchere, where Henry Irving was stage-manager and where the company included John L. Toole, Charles Wyndham, Lionel Brough, Alfred Wigan, John Clayton, and Nelly Moore. Here, on 20 June 1868, she appeared as Nancy Rouse in Burnand's burlesque of 'Fowl Play.'

On 21 Dec. 1868 she joined John Hollingshead's company for the opening of the Gaiety Theatre, appearing as Sprightley in 'On the Cards,' a comedy adapted from the French, and as Robert in W. S. Gilbert's burlesque 'Robert the Devil.' From that date until her retirement she was inseparably associated with the Gaiety Theatre, playing with success in every form of entertainment, from farce, burlesque, and comic opera to old English comedy and Shakespearean drama, under the management either of Hollingshead or of his successor, Mr. George Edwardes. As a boy 'Nellie Farren' proved at her brightest, and in that capacity became the idol of the Gaiety audiences. 'She could play anything,' wrote Hollingshead in 'My Lifetime,' 'dress in anything, say and do anything with any quantity of "go" and without a tinge of vulgarity. . . . She ought to go down to theatrical posterity as the best principal boy ever seen upon the stage since Sir William Davenant introduced ladies in the drama in the reign of Charles II. . . . She was essentially a boy-actress—the leading boy of her time—and for twenty years I tried to find her "double," and failed.'

She won immense popularity in rôles like Sam Weller in 'Bardell v. Pickwick' (24 Jan. 1871) and in comic singing parts like Leporello in Robert Reece's 'Don Giovanni' (17 Feb. 1873), Don Cæsar in H. J. Byron's 'Little Don Cæsar de Bazan' (26 Aug. 1876), Thaddeus in Byron's 'The Bohemian G'yurl' (31 Jan. 1877), Faust in his 'Little Dr. Faust' (13 Oct. 1877), Ganem in Reece's 'The Forty Thieves' (23 Dec. 1880), and Aladdin in Reece's burlesque of that name (24 Dec. 1881). Later, under Mr. George Edwardes's management, she played on 26 Dec. 1885 with enthusiastic acceptance Jack Sheppard in 'Little Jack Sheppard,' by Henry Pottinger Stephens and William Yardley, when she was first associated on the stage with Fred Leslie [q. v. Suppl. I]; she was Edmond Dantes in 'Monte Cristo, Jr.' by 'Richard Henry' (23 Dec. 1886), Frankenstein, by the same authors (24 Dec. 1887), and Ruy Blas in 'Ruy Blas, or the Blasé Roué,' by A. C. Torr (Fred Leslie) and F. Clarke (21 Sept. 1889).

In old comedy her best parts included Pert in 'London Assurance' (Drury Lane, 26 Feb. 1866), Miss Hoyden in 'The Man of Quality,' adapted from Vanbrugh's 'Relapse' (7 May 1870), Miss Prue in Congreve's 'Love for Love' (4 Nov. 1871), Charlotte in Bickerstaffe's 'Hypocrite,' with Phelps (15 Dec. 1873), Lydia Languish in 'The

Rivals' (7 Feb. 1874), the chambermaid in 'The Clandestine Marriage,' with Phelps (6 Apr. 1874), Tilburina in Sheridan's 'The Critic' (13 May 1874), Lucy in 'The Rivals' (2 May 1877), and Betsy Baker (5 Dec. 1883). She well sustained her reputation by performances of Ursula in Shakespeare's 'Much Ado about Nothing' (Haymarket, 12 Dec. 1874) and Maria in 'Twelfth Night' (4 Mar. 1876). Pathos was combined with comic power in rôles like Clemency Newcome in Dickens's 'Battle of Life' (26 Dec. 1873), Smikey in 'Nicholas Nickleby' (23 May 1886), Sam Willoughby in 'The Ticket of Leave Man,' as well as in Nan in 'Good for Nothing.'

In 1888-9 she visited America and Australia with Fred Leslie and the Gaiety company. She made her last regular appearance at the Gaiety as Nan on 6 April 1891, for the 'benefit' of the musical director and composer, Wilhelm Meyer Lütz [q. v. Suppl. II]. Sailing soon afterwards for Australia again, she opened at the Princess's Theatre, Melbourne, on 22 Aug. 1891, as Cinder-Ellen in Fred Leslie's burlesque 'Cinder-Ellen up too Late'; but before the end of the tour she was stricken with cardiac gout, which ultimately compelled her withdrawal from her profession. After returning to England a partial recovery allowed her in 1895 to undertake on her own account the management of the Opera Comique Theatre. The results were disastrous, and in three months all her savings vanished. A 'benefit' performance on 17 March 1899, at Drury Lane Theatre, on an unprecedented scale, brought her the substantial sum of 7200*l.*, which ensured her an adequate provision for life. By arrangement, she had the right to dispose of two-thirds of the capital sum by will, but 1000*l.* was reserved for the establishment at her death of a 'Nellie Farren' bed in a children's hospital, and 1000*l.* for division amongst theatrical charities.

Subsequently 'Nellie Farren' reappeared at other 'benefit' performances—for Lydia Thompson at the Lyceum Theatre, on 2 May 1899, as Justice Nell in a sketch of that name, specially written for her, and finally in the second scene of George Grossmith junior's *revue* 'The Linkman' on 8 April 1903, at the old Gaiety Theatre, which was then opened for the last time. She died from cardiac gout, at her residence in Sinclair Road, West Kensington, on 28 April 1904, and was buried in Brompton cemetery amid a concourse of admirers reckoned at 5000.

'Nellie Farren's' unbounded spirits and

good humour, her ready stores of drollery, and genuine sympathy with human weakness or distress gave her omnipotence over the average theatre-goer. She was neither tall nor beautiful, nor gifted with a wholly agreeable speaking or singing voice, but the charm of her individuality triumphed on the stage over all defects. An engraved portrait appears in John Hollingshead's *'Gaiety Chronicles.'*

She married on 8 Dec. 1867 Robert Soutar (1827-1908), an actor and stage manager of the Gaiety Theatre, and left two sons, one of whom, Farren Soutar, has achieved success on the stage.

[Personal correspondence and recollections; Hollingshead's *Gaiety Chronicles*, 1898; *The Times*, 29 April 1904; *Era*, 5 May 1904; Farquharson's *Short History of the Stage*, 1909.]

J. P.

FARREN, WILLIAM (1825-1908), actor, born at 23 Brompton Square, London, on 28 Sept. 1825, was natural son of William Farren (1786-1861) [q. v.], 'old Farren.' Henry Farren [q. v.] was his elder brother. Their mother was wife of J. Saville Faucit; Helena Saville Faucit, Lady Martin [q. v. Suppl. I], was one of Mrs. Faucit's six legitimate children. Beginning life as a vocalist, 'young William Farren' sang at the Antient Concerts in 1848. Turning to the stage, he, after slight training in the country, made his London début in the name of Forrester at the Strand Theatre, under his father's management, on 6 Sept. 1849. On 5 March 1850 he was the original Moses in Sterling Coyne's version of 'The Vicar of Wakefield.' Later in the year he accompanied his father to the new Olympic, and acted under the name of William Farren, jun. In January 1852 he appeared as Cassio to his brother Henry's Othello, and was credited with promise.

On 28 March 1853 he made his first appearance at the Haymarket, under Buckstone, as Captain Absolute, and was identified with the fortunes of that house either in juvenile tragedy or light comedy until 1867. His more interesting rôles were Guibert in Browning's 'Colombe's Birthday' (25 April 1853), the leading part in Bayle Bernard's new play, 'A Life's Trial', in March 1857 (cf. HENRY MORLEY, *Journal*), Mercury in Burnand's farcical comedy, 'Venus and Adonis' (28 March 1864), and Romeo on 31 Aug. 1867. In October 1869 he was engaged by Mrs. John Wood for the St. James's, where he appeared as Brizard in Daly's version of 'Frou Frou' (25 May 1870), and Arthur Minton in 'Two Thorns' (4 March 1871), in

which he struck the critic Dutton Cook as happily combining 'ease of manner with due impressiveness of delivery.' On 9 Sept. 1871 Farren migrated to the Vaudeville, with which he was long associated. There he was the original Sir Geoffrey Champneys in H. J. Byron's comedy 'Our Boys' on 16 Jan. 1875, and played the part, without intermission, until July 1878. Subsequently he was seen at the Royal Aquarium (afterwards Imperial Theatre) as Grandfather Whitehead (9 Nov. 1878), in which he was deemed inferior in pathos to his father; as young Marlow; as Archer in 'The Beaux' Stratagem' (Oct. 1879); as Sir Robert Bramble in 'The Poor Gentleman'; and as Adam in Miss Litton's revival of 'As You Like It'—a rôle which he repeated later at the opening of the Shaftesbury Theatre (20 Oct. 1888). Returning to the Vaudeville, he was Seth Pecksniff in 'Tom Pinch' (10 March 1881) and Sir Peter Teazle in the elaborate revival of 'The School for Scandal' (4 Feb. 1882). That part he resumed at the Criterion in April 1891 and at the Lyceum in June 1896. On 9 Dec. 1882 he challenged further comparison with his father by playing Sir Anthony Absolute. Subsequent parts included Colonel Damas at the Lyceum to the Pauline Deschappelles of Miss Mary Anderson (27 Oct. 1883).

In 1887, in conjunction with H. B. Conway, Farren started the Conway-Farren old comedy company at the Strand, appearing there as Lord Ogleby in 'The Clandestine Marriage,' old Dornton, and other characters. At the Criterion on 27 Nov. 1890 he played with great acceptance his father's original part of Sir Harcourt Courtly in 'London Assurance.' After 1896 his appearances on the stage were confined to occasional performances of Simon Ingot in 'David Garrick' with (Sir) Charles Wyndham. On his retirement in 1898 he settled at Rome. He died at Siena on 25 Sept. 1908, and was buried there.

Farren, like his father, ripened slowly. It was not until middle age, when juvenile rôles were abandoned, that he gradually established himself in public favour. One of the last of the traditional representatives of the Sir Anthony Absolutes and Mr. Hardcastles of classic English comedy, he achieved in Sir Peter Teazle, according to the critics of 1896, 'a masterpiece of sheer virtuosity,' but he lacked his father's powers, and his gifts of humorous expression were confined to the dry and caustic.

In 1846 Farren married Josephine

Elizabeth Davies, who was not connected with the stage, and by her had as surviving issue a daughter, who lived privately, and a son, Percy, an actor, known while his father was on the stage (from 1882) as William Farren, junior, and subsequently as William Farren.

W. J. L.

FAUSSET, ANDREW ROBERT (1821-1910), divine, born on 13 Oct. 1821 at Silverhill, co. Fermanagh, was the son of the Rev. William Fausset by his wife Elizabeth, daughter of Andrew Fausset, provost of Sligo. The family, of French origin, had been settled in co. Fermanagh for more than a century. Educated first at Dungannon Royal School, he obtained at Trinity College, Dublin, a Queen's scholarship in 1838, the first university scholarship and the vice-chancellor's prizes for Latin verse and Greek verse in 1841, the vice-chancellor's Greek verse prize and the Berkeley gold medal in 1842. He graduated B.A. in 1843 (senior moderator in classics), and won the vice-chancellor's Latin verse prize both in that year and in 1844. He obtained the divinity testimonium (second class) in 1845, and graduated M.A. in 1846, proceeding B.D. and D.D. in 1886.

On graduating, Fausset became a successful 'coach' at Trinity College, Dublin, but, drawn to parochial work, was ordained deacon in 1847 and priest in 1848 by the bishop of Durham, and served from 1847 to 1859 as curate of Bishop Middleham, a Durham colliery village. From 1859 until his death he was vicar of the poor parish of St. Cuthbert's, York. In 1885 he was made a prebendary of York. A good scholar and an eloquent preacher, he was an evangelical of strongly protestant sympathies, and wrote much in support of his convictions. He died at York on 8 Feb. 1910. Fausset was thrice married: (1) in 1859 to Elizabeth, daughter of William Knowlson, of York, by whom he had three sons and one daughter; (2) in 1874 to Agnes, daughter of Major Porter, of Hembury Fort, Honiton, by whom he had one son; and (3) in 1889 to Frances, daughter of the Rev. Dr. Strange, vicar of Bishop Middleham.

Fausset showed sound scholarship in critical editions of 'The Comedies of Terence' (omitting the 'Eunuch') (1844); of Homer's 'Iliad,' i.-viii. (1846), one of the first editions in English to take account of the criticism of Wolff, Niebuhr and Grote; and of 'Livy,' i.-iii., with prolegomena and notes (1849); and in translations of the 'Hecuba' (1850) and the 'Medea' (1851) of Euripides. His religious publications, most of which had wide circulation, were: 1. 'Scripture and the Prayer-Book in Harmony,' 1854; revised ed. 1894, an answer to objections against the liturgy. 2. Vols. ii. and iv. (Job, Ecclesiastes, Malachi, Corinthians I and Revelation) in the 'Critical and Explanatory Pocket Bible,' 1863-4. 3. Vols. iii., iv., and vi. (Psalms and Proverbs) in the 'Critical, Experimental and Practical Commentary,' 1864-70. 4. 'Studies in the CL. Psalms,' 1877; 2nd edit. 1885, an application of the argument from undesignated coincidences. 5. 'The Englishman's Critical and Expository Bible Cyclopædia,' originally issued in parts, in volume form, 1878. 6. 'Signs of the Times,' 1881. 7. 'Commentary on Judges,' 1885. 8. 'Guide to the Study of the Book of Common Prayer,' 1894, 3rd edit. 1903. Fausset also first translated into English J. A. Bengel's 'Gnomon of the New Testament' (1857), with notes and a life of Bengel.

[Record, 18 Feb. 1910; Gospel Magazine, April 1910; private information and personal knowledge.]
A. R. B.

FAYRER, SIR JOSEPH (1824-1907), surgeon-general and author, born at Plymouth on 6 Dec. 1824, was second son of the six sons and two daughters of commander Robert John Fayrer, R.N. (1788-1849), by his wife Agnes (*d.* 1861), daughter of Richard Wilkinson.

His father, on retiring from active service in the navy, commanded steam-packets between Portpatrick and Donaghadee, and Liverpool and New York, and was thus a pioneer of ocean steam navigation; in 1843 he commanded H.M.S. *Tenedos* as a stationary convict-ship at Bermuda. In Joseph's youth the family lived successively at Haverbrack, Westmoreland, where Joseph made the acquaintance of Wordsworth, Hartley Coleridge, and John Wilson (Christopher North); at Dalrymple, where he was a pupil of the Rev. R. Wallace (1835-6), and at Liverpool, where he studied natural science at a day school. In 1840, after a brief study of engineering, he made a voyage to West Indies and South America as mid-

shipman of the Thames in the new West Indian mail steam-packet service. In 1843 he accompanied his father to Bermuda, where an outbreak of yellow fever inclined him to the profession of medicine. Entering the Charing Cross Hospital in October 1844, where his fellow pupils included (Sir) William Guyer Hunter [q. v. Suppl. II] and Thomas Henry Huxley, he was appointed at the end of his second year house surgeon at the Westminster Ophthalmic Hospital. In July 1847 he was admitted M.R.C.S. England, becoming F.R.C.S. in 1878. On 4 Aug. 1847 he received a commission in the royal naval medical service, but soon resigned it to travel with Lord Mount-Edgumbe through France, Germany, and Italy. While at Palermo the Sicilian revolution broke out, and Fayrer, with his friend Dr. Valentine Mott, son of the well-known American surgeon, obtained his first experience of gunshot wounds. At Rome, where he arrived in April 1848, he studied at the university, and in 1849 obtained there the degree of M.D.

On 29 June 1850 Fayrer left England for Calcutta, to become assistant surgeon in Bengal. His connection with the Indian medical service lasted for forty-five years. On the outward voyage Fayrer had medical charge of a batch of recruits who proved insubordinate; but when the commanding officer handed them over to Fayrer, he promptly put the ringleader in irons and restored quiet. Arriving at Fort William on 9 Oct. 1850, he spent two years at Chinsura, Cherrapunji in the Khasi Hills, and Dacca. His successful service as a field assistant-surgeon with the Burma field force in the Pegu war of 1852 led Lord Dalhousie to appoint him, in July 1853, residency surgeon at Lucknow.

At Lucknow he received on 8 Sept. 1854 the additional appointment of honorary assistant resident, involving political duties. On 20 March 1856 he was appointed civil surgeon of Lucknow and superintendent of charitable institutions. On the annexation of Oudh, Fayrer was placed in charge of the deposed king's stud of horses, elephants, camels, and wild animals.

During the Mutiny Fayrer's house was used both as hospital and fortress, and he himself played a prominent part through the siege from 30 June until the final relief on 17 Nov. 1857 (cf. his *Recollections*). In March 1858 he left for England on furlough, and studying in Edinburgh, was admitted M.D. in March 1859. On 29 April, on returning to India, he became professor of surgery at the Medical College,

Calcutta. In January 1867 he was made president of the Asiatic Society of Bengal, which he had joined in January 1861, and in that capacity proposed a scheme for a Zoological society and gardens in Calcutta, which was finally carried out in 1875, when the gardens were opened by King Edward VII, then Prince of Wales.

In 1868 he was made C.S.I., and in 1869 surgeon in Calcutta to Lord Mayo, the new viceroy. On 1 Jan. 1870 he accompanied the Duke of Edinburgh on his travels through N.W. India. Owing to failing health he came home in March 1872. On his arrival he was elected F.R.C.P. London, and with (Sir) Lauder Brunton resumed his important researches on snake venoms which he had begun in India in 1867 and which he embodied in a great treatise, published in 1872. He joined the medical board of the India office in Feb. 1873 and was made president on 8 Dec., when he retired from the active list of the Indian army as a deputy surgeon-general. He continued president at the India office till January 1895, when he retired with the rank of surgeon-general and was awarded a good service pension in addition to his superannuation allowance.

Meanwhile, in 1875 Fayrer was selected to accompany Edward VII, when Prince of Wales, on his tour through India. The expedition left Brindisi on 16 October and returned to Portsmouth on 5 May 1876. On 7 March 1876, at Allahabad, Fayrer was made K.C.S.I. On his return he was gazetted honorary physician to the prince. With the prince he formed a cordial intimacy which lasted for life. He privately printed in 1876 'Notes' on the two royal visits to India.

On 19 April 1877 he was elected F.R.S., and joined the council in 1895. He was made honorary LL.D. of Edinburgh (July 1878) and of St. Andrews (1890). In 1879, as president of the Epidemiological Society, he gave an address on 'The Progress of Epidemiology in India' (1880). In 1881 he delivered the Lettsoman lecture before the Medical Society of London on 'Tropical Diseases' (published with papers on like subjects in that year), and in 1882 the Croonian lectures of the Royal College of Physicians on 'The Climate and some of the Fevers of India' (1882). He represented the government of India at the intercolonial congress at Amsterdam (with Dr. T. R. Lewis), and at the international sanitary congress at Rome (May-June 1885). He also represented both the Royal College of Physicians of London and

the University of Edinburgh at the tercentenary of Galileo at Padua (Dec. 1892), when he made a speech in Italian and received the honorary degree of doctor of philosophy. On 11 January 1896 he was made a baronet. The remainder of his life was passed chiefly at Falmouth, where he died on 21 May 1907.

He married on 4 Oct. 1855, at Lucknow, Bethia Mary, eldest daughter of Brigadier-general Andrew Spens, who was in command of the troops there; by her he had six sons and two daughters. His eldest son, Robert Andrew, born on 27 June 1856, died on 28 Dec. 1904. He was succeeded as second baronet by his eldest surviving son, Joseph, who joined the Royal Army Medical Corps.

Despite official and professional calls upon his energies, Fayrer was a prolific writer on Indian climatology, the pathology of Indian diseases, sanitation, and above all on venomous snakes. His great work on 'The Thanatophidia of India,' the best book on the subject, published in folio in 1872 by government, was illustrated with admirable coloured plates from the life by native members of the Calcutta School of Art (2nd edit. 1874). The book embodies all Fayrer's experiments and researches, accounts of which were forwarded from India to Dr. F. C. Webb, who put them into literary shape. To Fayrer's inquiries is due the efficacious permanganate treatment of venomous snake-bites. But his main conclusions were that there is no absolute antidote, and that safety is only to be attained when the bite is in such a position as to make the application of a ligature between it and the heart possible, together with the use of the actual cautery. These opinions were somewhat modified after some later experiments by Fayrer, Brunton, and Rogers (*Proc. Roy. Soc.*, 1904, lxxiii. 323); it was there shown that recovery might be expected if a ligature were applied within half a minute or even a longer period after a bite, the site of the injury being then incised and solid permanganate of potassium rubbed in.

Of his other writings not already mentioned the following are the most important: 1. 'Clinical Observations in Surgery,' Calcutta, 1863. 2. 'Clinical Surgery in India,' 1866. 3. 'Osteomyelitis and Septicæmia and the Nature of Visceral Abscess,' 1867. 4. 'Fibrinous Coagula in the Heart and Pulmonary Artery as a Cause of Death after Surgical Operations,' 1867. 5. 'Clinical and Pathological Observations in India,' 1873. 6. 'On the Preservation of Health in India,' 1880 (new

edit. 1894). 7. 'Epidemiology of Cholera,' 1888. 8. 'Sir James Ranald Martin,' 1897. 9. 'Recollections of My Life,' 1900. To 'Quain's Dictionary of Medicine' (1882) he contributed articles on 'Effects of Venom' and 'Venomous Animals,' and to 'Allbutt's System of Medicine' (1894) those on 'Sunstroke,' 'Climate,' and 'Fevers of India.'

Fayrer's portrait by Mr. Sydney P. Hall, in the Royal Medical College at Netley, was unveiled by Lord Wolseley.

[*Lancet*, 1 June 1907; *Proc. Roy. Soc.*, B 80, 1908; Fayrer's *Recollections of My Life*, 1900.] H. P. C.

FENN, GEORGE MANVILLE (1831-1909), novelist, born in Pimlico on 3 Jan. 1831, was third child and the eldest of three sons of Charles and Ann Louisa Fenn. After a scanty education at private schools, Fenn studied at the Battersea Training College for Teachers under Samuel Clark [q. v.] from 1851 to 1854, and became on leaving master of the small national school at Alford, Lincolnshire. After some employment as a private tutor, he moved to London in quest of work, and became a printer. Purchasing a small press at Crowle, Lincolnshire, he started 'Modern Metre,' a little magazine, entirely in verse, which was set up by himself, and ran from May to October 1862. In 1864 Fenn became part proprietor of the 'Herts. and Essex Observer,' published at Bishop's Stortford; but this venture proved no more successful. After endless disappointments, a short sketch entitled 'In Jeopardy' was accepted for 'All the Year Round' in 1864 by Dickens, and attracted the notice of other editors. Manuscripts were soon accepted by James Payn [q. v. Suppl. I] for 'Chambers's Journal' and by Edward Walford [q. v.] for 'Once a Week.' 'Readings by Starlight,' papers on working-class life, appeared in 1866 in the 'Star' newspaper under the editorship of Justin McCarthy, and were collected into four volumes in 1867. There soon followed 'Spots and Blots,' a similar series, in the 'Weekly Times' under Mr. (afterwards Sir John) Hutton.

'Hollowdell Grange,' Fenn's first boy's story, and 'Featherland,' a natural history tale for children, were both published by Messrs. Griffith & Farran in 1867; and from that date onwards he produced novel after novel, in magazine, newspaper, and volume form, with an industrious rapidity which few writers excelled. His separate books numbered more than 170. After 1881 his more successful works were books

for boys, in which he often effectively embodied studies of natural history and geography. The boys' books met with some success in America, where several were reprinted under the general title of 'The Fenn Books.'

Meanwhile in 1870 he succeeded Hugh Reginald Haweis [q. v. Suppl. II] as editor of 'Cassell's Magazine'; and in 1873 he purchased from James Rice [q. v.] 'Once a Week,' which he carried on at a loss until the close of 1879. He never wholly abandoned journalism, and was for some years dramatic critic of the 'Echo' newspaper. In 1887 he produced at the Comedy Theatre a three-act farce, 'The Barrister,' and at Terry's Theatre next year he prepared a like piece, 'The Balloon,' in collaboration with Mr. John Henry Darnley. In 1903 he wrote for the family a privately printed memoir of B. F. Stevens, the American bookseller and man of letters. A lover of the country and of gardening, Fenn resided for some years on a remotely situated farm near Ewhurst, in Sussex; but from 1889 he lived at Syon Lodge, Isleworth, an old house with a large garden, where he amassed a library of some 25,000 volumes and amused his leisure in constructing astronomical telescopes of considerable size. On the day of the completion in 1907 of his last book, a memoir of his friend George Alfred Henty [q. v. Suppl. II], Fenn's health finally broke. He died after a long illness at Syon Lodge on 26 Aug. 1909, and was buried in Isleworth cemetery.

Fenn married in 1855 Susanna, daughter of John Leake, of Alford, Lincolnshire, who survived him. By her he had two sons and six daughters. The eldest son, Frederick, and the second son, Clive, engaged in literary pursuits.

[Personal knowledge; private information; Sketch, 6 Aug. 1902, an 'interview,' with excellent portraits; the Captain, Oct. 1909.] G. S. B.

FERGUSON, MARY CATHERINE, LADY (1823-1905), biographer, born at Stillorgan, co. Dublin, in 1823, was eldest daughter of Robert Rundell Guinness by his wife Mary Anne Seymour. She was educated partly at home and partly at Woodside, Cheshire. Keenly interested from an early age in Irish art and archaeology, she made the acquaintance of (Sir) Samuel Ferguson [q. v.], and through him of George Petrie [q. v.], William Reeves [q. v.], and other workers in the same field. On 16 Aug. 1848 she married Ferguson, and thenceforth shared in his archaeological and literary labours, and helped him to

entertain in their house at 20 North Great George Street, Dublin, numerous native and foreign guests of like interests. In 1868 she published her popular book 'The Story of the Irish before the Conquest' (2nd edit. 1890), which is still in circulation. After her husband's death in 1886 she chiefly occupied herself in writing 'Sir Samuel Ferguson in the Ireland of his Day,' which appeared in 1896 (Edinburgh and London, 2 vols.), and pleasantly if discursively described the circle of which her husband was the centre. Her 'Life of William Reeves, D.D., Lord Bishop of Down, Connor and Dromore,' followed in 1893. Lady Ferguson also prepared for posthumous publication her husband's 'Ogham Inscriptions in Ireland, Wales and Scotland' (Edinburgh, 1887), 'The Hibernian Nights' Entertainments' (Dublin, 1887; three series), and popular editions of the 'Lays of the Western Gael' (Dublin, 1887; 3rd edit. 1897), 'Confession of St. Patrick' (1888), 'Congal' (Dublin, 1893), and 'Lays of the Red Branch' (1897). She died at her husband's house in Dublin on 5 March 1905, and was buried in her husband's grave at Donegore, co. Antrim. She had no children.

[Sir Samuel Ferguson in the Ireland of his Day, 1896; Life of William Reeves, D.D., 1893; Daily Express, Dublin, 7 March 1905; Who's Who, 1905; personal knowledge.] D. J. O'D.

FERGUSON, SIR JAMES (1832-1907), sixth baronet of Kilkerran, governor of Bombay, born on 14 March 1832 in Edinburgh, was eldest of four sons of Sir Charles Dalrymple Fergusson (1800-1849), fifth baronet, of Kilkerran in Ayrshire, by his wife Helen, daughter of David Lord Boyle [q. v.], lord justice-general. Sir David Dalrymple, Lord Hailes [q. v.], was father of his father's mother. A younger brother, Charles Dalrymple, who substituted the surname Dalrymple for that of Fergusson, was created a baronet on 19 July 1887. James entered Rugby under Dr. Tait in August 1845, together with George Joachim (afterwards Lord) Goschen, Sir John Stewart, who served with him in the Crimea, and Sir Theodore Hope, afterwards a member of the supreme government in India. At school he gained some reputation in the debating club, and in 1850 he proceeded to University College, Oxford, having in the previous year succeeded his father in the baronetcy. His inclinations turned towards a military career, and leaving Oxford without a degree he entered the grenadier guards. With the 3rd battalion

of that regiment he served in the Crimean war, 1854-5. He took part in the battle of Alma and was wounded at Inkerman on 5 Nov. 1854. On that day three of his brother officers were killed and five others wounded in the numerous encounters which the 1st division sustained, under George, duke of Cambridge. Close to him on the field of battle fell his friend and neighbour in Scotland, Colonel James Hunter Blair (KINGLAKE'S *Crimea*, vol. vi. chap. 6). At the dying man's suggestion, the electors chose Fergusson to take Blair's place in parliament as conservative member for Ayrshire, but he remained with the forces before Sevastopol until May 1855, when Lord Raglan advised him to enter upon his parliamentary duties. On his return home he received his medal from Queen Victoria, and retired from the army on 9 Aug. 1859. Although his active military career was thus brought to an early close, he remained an officer of the Royal Company of Archers, was colonel commanding the Ayr and Wigtown militia from 1858 to 1868, and also served in his county regiment of yeomanry.

In 1857 he lost his seat for Ayrshire, but recovered it in 1859, holding it until 1868. While attending to county business and the duties of a landlord, he devoted himself to his parliamentary work, and was appointed under-secretary of India under Lord Cranborne [see CECIL, LORD ROBERT. Suppl. II.] in the Derby government of 1866. A year later he was transferred in a similar capacity to the home office, where there was need for efficient aid to Gathorne Hardy (afterwards Lord Cranbrook) [q. v. Suppl. II]. The public mind was agitated by trades union outrages, the Fenian movement, and the reform bill. After Disraeli succeeded Lord Derby as prime minister in February 1868 Fergusson was made a privy councillor and governor of South Australia, where he arrived on 16 Feb. 1869. Until 1885 (save for the period 1875-80) his career was identified with the oversea dominions.

In South Australia, which was prosperous and peaceful, the working of responsible government made small demands upon the governor. But Fergusson gave material assistance to his ministers in organising the telegraph system. In 1873 he left South Australia for New Zealand, but after Disraeli became premier (Feb. 1874) Fergusson resigned his post there in 1875, being made K.C.M.G. On his return to England he tried to resume his parliamentary career. His attempts to capture Frome in 1876 and Greenock in 1878 were unsuccessful. But

he engaged actively in county affairs, and on 10 March 1880, on the eve of Lord Beaconsfield's fall from power, he accepted the post of governor of Bombay in succession to Sir Richard Temple [q. v. Suppl. II]. When the new governor was installed on 28 April 1880 Lord Lytton had tendered his resignation, Abdur Rahman was discussing terms with Sir Donald Stewart [q. v. Suppl. I] near Kabul, and Ayub Khan was meditating the attack upon Kandahar, which he successfully delivered at Maiwand on 27 July. Thus Fergusson's immediate duty was to push forward supplies and reinforcements through Sind. But his main duties were of an essentially civil character and connected with revenue administration. Before his arrival Sir Theodore Hope had carried through the supreme legislature the Dekhan Agriculturist Relief Act to enable the peasantry to shake off their indebtedness and meet the moneylender on more equal terms. The introduction of so novel an experiment met with opposition from the powerful lending classes and also from lawyers, who considered contracts sacred and the letter of bonds inviolable. New rules of registration were required, fresh courts instituted, and the system of conciliation organised. Fergusson, as a proprietor himself, threw his experience and heart into the work. The Act, which has been since amended, has abundantly vindicated its promoters. In another direction he sought the welfare of the Dekhan peasantry. Temple, while immensely increasing the area of forest reserves, had severely curtailed forest privileges long enjoyed by the cultivating classes in the uplands of the Ghat districts. Fergusson removed some part of the burden of forest conservancy which Temple had thrown on the people. He moreover inculcated moderation in assessing the land revenue and liberality in granting remissions in times of scarcity. To enable the state to deal more readily with famine, he gave attention to the alignment of the new Southern Maratha railway, mainly devised to carry food stuffs into districts liable to failure of the rains. In the same spirit he created the first agricultural department, and inaugurated experimental farms. In other departments he turned to account his experience at the home office. In the face of violent agitation he refused to exercise the clemency of the crown in favour of the high priest of the Vaishnava sect. This holy man had been convicted of complicity in postal robberies, and his religious followers regarded his punishment

as an act of impiety. Fond of riding, Fergusson covered long distances in his tours through a province of 123,000 square miles. In earnestness of purpose and indefatigable energy he almost rivalled Sir Richard Temple. He did much to develop the port of Bombay, and took deep interest in education, laying the foundation of the native college at Poona which is called by his name. He was assisted in his government by his colleague, Sir James Peile [q. v. Suppl. II], and at the close of it by (Sir) Maxwell Melville (1834-1887), a man of rare distinction. With Peile's aid he was able to satisfy Lord Ripon by the steps taken in Bombay to develop rural and urban self-government. If the Bombay government was unable to go as far as that viceroy wished, it went further than any other province in India. Altogether Fergusson's administration in Bombay was successful, and he well merited the honour of G.C.S.I. which he received on 25 Feb. 1885.

Fergusson did not await the arrival of his successor, Lord Reay, but after making arrangements for the Suakin campaign relinquished the government on 27 March 1885, hurrying home to resume a political career. On 9 June 1885 Gladstone resigned, and on 27 Nov. Fergusson was returned as one of the members for Manchester (N.E. division). He held the seat until January 1906. On the return of Lord Salisbury to power on 3 Aug. 1886, Fergusson served from 1886 to 1891 as under-secretary in the foreign office, and was responsible for answering questions and otherwise representing that department in the House of Commons. He performed his duties with stolid discretion. In 1891 he was made postmaster-general, retaining the office until Gladstone's return to power in August 1892. He did not take office again, but at the opening of the new parliament in 1901 he proposed the re-election as speaker of William Court Gully, afterwards Viscount Selby [q. v. Suppl. II]. Meanwhile Fergusson's business capacity found scope as director of the Royal Mail Steam Packet Company, the National Telephone Company, and similar concerns. In the interests of the first-mentioned company he went to Jamaica in January 1907 to attend the conference of the British Cotton Growing Association. On the first day of the conference, 14 Jan., Kingston was overtaken by a terrible earthquake, followed by a destructive fire. Fergusson was walking in the street near his hotel, when he was killed by the fall of a wall. He was buried in the churchyard of Half

Way Tree, near Kingston, and a memorial service was held on 21 Jan. in the Guards' Chapel, London.

Fergusson was thrice married: (1) at Dalhousie Castle on 9 Aug. 1859 to Lady Edith Christian, younger daughter of James Andrew Ramsay, first marquis of Dalhousie [q. v.]; she died at Adelaide on 28 Oct. 1871, leaving two sons and two daughters; (2) in New Zealand on 11 March 1873 to Olive, youngest daughter of John Henry Richman of Warnbunga, South Australia; she bore him one son, Alan Walter John (1878-1909), and died of cholera at Bombay on 8 Jan. 1882; (3) on 5 April 1893 to Isabella Elisabeth, widow of Charles Hugh Hoare, of Morden, Surrey, and daughter of Thomas Twysden, rector of Charlton, Devonshire. She survived him without issue. His elder son by his first wife, Major-general Sir Charles Fergusson, D.S.O., succeeded him in the title.

Fergusson's friends in Ayrshire, where he was much beloved for his charitable and kindly acts, erected to his memory a statue in bronze at the corner of Wellington Square in Ayr. It was executed by Sir Goscombe John, R.A., and unveiled by the earl of Eglinton in October 1910. In Jamaica, too, his memory is preserved in the restoration of the church of Half Way Tree and a mural tablet.

FERRERS, NORMAN MACLEOD (1829-1903), Master of Caius College, Cambridge, and mathematician, born on 11 Aug. 1829 at Prinknash Park, Gloucestershire, was only child of Thomas Bromfield Ferrers, stockbroker, of London (a descendant of the Taplow Court branch of the Ferrers family), by his wife Lavinia, daughter of Alexander Macleod of Harris. After spending three years, 1844-6, at Eton, he lived for about a year as a private pupil in the house of Harvey Goodwin [q. v. Suppl. I], the mathematician, then vicar of St. Edward's, Cambridge, afterwards bishop of Carlisle. Admitted a freshman of Caius College, Cambridge, on 6 March 1847, Ferrers graduated B.A. in 1851 as senior wrangler of his year, being also first 'Smith's prizeman.' Next year he was elected fellow of his college, and immediately afterwards went to London to study law. He was called to the bar, as a member of Lincoln's Inn, in 1855.

In 1856, owing to changes in the tutorial staff, there was an opening for a new mathematical lecturer in Caius College; and the Master, Dr. Edwin Guest [q. v.], invited Ferrers, who was by far the best mathematician amongst the fellows, to supply the place. His career was thus determined for the rest of his life. For many years head mathematical lecturer, he was one of the two tutors of the college from 1865. As lecturer he was extremely successful. Besides great natural powers in mathematics, he possessed an unusual capacity for vivid exposition. He was probably the best lecturer, in his subject, in the university of his day. He was ordained deacon in 1859 and priest in 1861.

On 27 Oct. 1880 he was elected Master of Gonville and Caius College, on Dr. Guest's resignation. He was admitted to the degree of D.D. on 7 June 1881. The honorary degree of LL.D. was conferred on him by the University of Glasgow in 1893.

For more than twenty years he was a member of the council of the senate at Cambridge: first in 1865, and continuously from 1878 to 1893, when increasing infirmity obliged him to decline re-election. In the mathematical tripos he acted as moderator or examiner more often, it is believed, than any one else on record. In 1876 Ferrers was appointed a governor of St. Paul's School, and in 1885 a governor of Eton College. He was elected F.R.S. in 1877.

In his early days Ferrers was a keen university reformer, within the limits in which reform was then contemplated. He heartily supported the abolition of religious tests, and the throwing open of all endowments to free competition; he introduced into his college a more systematic style of examination than was previously in vogue. But he held strongly the old view that a thorough training in mathematics was essential to a sound education. For new subjects, like natural science and mechanical engineering, he had scant sympathy. It was slowly, and probably with some reluctance, that he was induced to accept the principle that distinction in any subject which was recognised and taught in the university gave a valid claim to a scholarship or fellowship.

It was as a mathematician that Ferrers acquired fame outside the university. He made many contributions of importance to mathematical literature. His first book was 'Solutions of the Cambridge Senate House Problems, 1848-51.' In 1861 he published a treatise on 'Trilinear Co-

ordinates,' of which subsequent editions appeared in 1866 and 1876. One of his early memoirs was on Sylvester's development of Poincaré's representation of the motion of a rigid body about a fixed point. The paper was read before the Royal Society in 1869, and published in their 'Transactions.' In 1871 he edited at the request of the college the 'Mathematical Writings of George Green' (1793-1841) [q. v.], a former fellow. Ferrers's treatise on 'Spherical Harmonics,' published in 1877, presented many original features.

His contributions to the 'Quarterly Journal of Mathematics,' of which he was an editor from 1855 to 1891, were numerous (see list in the *Roy. Soc. Cat. Scientific Papers*). They range over such subjects as quadriplanar co-ordinates, Lagrange's equations and hydrodynamics. In 1881 he applied himself to study Kelvin's investigation of the law of distribution of electricity in equilibrium on an uninfluenced spherical bowl. In this he made the important addition of finding the potential at any point of space in zonal harmonics. (*Quart. Journ. Mathematics*, 1881).

In 1879 Ferrers was troubled with the first symptoms of rheumatoid arthritis: this gradually increased until he was rendered a complete cripple. He died at the College Lodge on 31 Jan. 1903, at the age of seventy-three.

On 3 April 1866 he married Emily, daughter of John Lamb [q. v.], dean of Bristol and Master of Corpus Christi College, Cambridge. He had a family of four sons and one daughter.

There is a portrait of him, by the Hon. John Collier, in the college.

[Personal knowledge; College and University Records; Dr. Edward Routh's memoir in Royal Society's Proceedings; Ferrers Family History, by C. S. F. Ferrers.] J. V.

FESTING, JOHN WOGAN (1837-1902), bishop of St. Albans, born at Brook House, Stourton, Somerset, on 13 Aug. 1837, was eldest son of Richard Grindall Festing by his wife Eliza, daughter of Edward Mammatt, of Ashby-de-la-Zouch. A younger brother, Major-General Edward Robert Festing (b. 1839), R.E., C.B., F.R.S., was director of the science museum, South Kensington (1893-1904). The family, descended from Michael Christian Festing [q. v.], the musician, was of German origin.

Educated at King's school, Bruton, and King's College school, London, Festing graduated B.A. from Trinity College, Cambridge, in 1860 (D.D. *jure dig* 1890) as

twenty-second senior optime, and in the same year was ordained deacon, becoming priest in 1861. From 1860 to 1873 he was curate of Christ Church, Westminster. In 1873 he was appointed to the vicarage of St. Luke, Berwick Street, a poor parish close to Seven Dials, which had recently been visited by cholera. Festing increased his reputation here for pastoral diligence, and on 19 May 1878 John Jackson, bishop of London, collated him to the important vicarage of Christ Church, Albany Street. There the church schools, in which he was always greatly interested, were a prominent feature of parish life, while the church itself was a recognised centre for the high church party, to which Festing adhered. He became rural dean of St. Pancras in 1887, and on 26 June 1888 prebendary of Brondesbury in St. Paul's Cathedral.

On 24 June 1890 Festing was consecrated bishop of St. Albans, succeeding Thomas Legh Claughton [q. v. Suppl. I.], who had resigned but was retaining the use for life of the palace at Danbury. The choice of a parish priest of no fame for eloquence or erudition caused surprise. But Lord Salisbury, the prime minister, had asked both Henry Parry Liddon [q. v.], who had himself declined the see, and R. W. Church [q. v. Suppl. I.], dean of St. Paul's, to suggest to him a man of parochial experience and zeal, and each independently suggested Festing. As bishop, Festing proved business-like, sympathetic towards hard work, and devout. While in private he urged obedience to the Prayer Book, his high church sympathies made him unwilling to hamper earnest clergy by coercive administration. His see embraced the counties of Essex and Hertfordshire; and he chose to reside at Endsleigh Street, London, W.C., near the chief railway termini. He afterwards secured a second house at St. Albans. His chief interest lay in the industrial and residential expansion of metropolitan Essex. Zealous in the cause of foreign missions, he mainly devoted himself to the Universities Mission to Central Africa, at the inauguration of which in the Cambridge senate-house he was present on 1 Nov. 1859. He was its assistant honorary secretary (1863-1882), treasurer (1882-1890), vice-president (1890-1892), and president and chairman (1892-1902), and advised on all the details of the mission's development.

Although no scholar, he was a studious reader, rising early each day for that purpose. He was fond of travel and skilful in water-colour drawing. He died un-

married at Endsleigh Street of angina pectoris on 28 Dec. 1902, and was buried at St. Albans. Choir-stalls were placed in his memory in St. Albans cathedral in 1903.

[The Times, 29 Dec. 1902; Guardian, 31 Dec. 1902; Record, 2 Jan. 1903; Central Africa (U.M.C.A. mag.), Feb. 1903.] E. H. P.

FIELD, WALTER (1837-1901), painter, youngest son of Edwin Wilkins Field [q. v.] by his second wife, Letitia Kinder, was born at Windmill Hill, Hampstead, on 1 Dec. 1837. He was a lincal descendant of Oliver Cromwell. After education at University College School, London, he was taught painting by John Rogers Herbert, R.A. [q. v.], and John Pye [q. v.] the engraver gave him lessons in chiaroscuro. Making art his profession, he painted outdoor figure subjects and landscapes, especially views of Thames scenery, which were often enlivened with well-drawn figures; he also produced a few portraits. At first he worked chiefly in oil, but subsequently executed many drawings in water-colour. His landscapes and coast scenes show skilful technique. Between 1856 and 1901 he exhibited at the Old Water Colour Society (Royal Society of Painters in Water Colours), at the Royal Academy (where he showed forty-two pictures), the British Institution (where he showed nine pictures), the Royal Society of British Artists, Dudley Gallery, and elsewhere. He was elected an associate of the Old Water Colour Society on 22 March 1880, but never attained full membership. He was also one of the earliest members of the Dudley Gallery, whose first exhibition was held in 1865. Field, who was devoted to his art, was a keen lover of nature; he was untiring in his efforts for the preservation of the natural beauties of Hampstead Heath, and was the chief founder of the Hampstead Heath Protection Society. A drinking fountain was erected on the Heath to his memory. He resided principally at Hampstead. He died at The Pryors, East Heath Road, on 23 Dec. 1901, and was buried in Hampstead cemetery.

The Victoria and Albert Museum has two water-colour drawings by Field, viz. 'Boy in a Cornfield' (1866) and 'Girl carrying a Pitcher' (1866); and three of his Thames views are in the Schwabe Collection in the Kunsthalle at Hamburg. Among his most popular works were 'The Milkmaid singing to Isaak Walton,' 'Henley Regatta,' which contains portraits from sittings of many famous oars-

men, and 'Come unto these Yellow Sands.' An exhibition of oil paintings by Field was held at the galleries of the Royal Society of Painters in Water Colours in September and October 1902; 216 works remaining in his studio after his death were sold at Christie's on 17 and 18 Nov. 1902.

By his wife, Mary Jane Cookson, whom he married on 14 May 1868, Walter Field had seven children.

[Information kindly supplied by Miss M. Field and Mr F. W. Hayward Butt; Müller und Singer, Allgemeines Künstler-Lexicon (date of death wrongly given in supplement: see death certificate at Somerset House); Graves, Dict. of Artists, Roy. Acad. and Brit. Inst. Exhibitors; Cats. of Old Water Colour Society (those of 1882-1901 contain reproductions of works by Field), Victoria and Albert Museum (water-colours), and the Hamburg Kunsthalle; The Year's Art, 1891, facing p. 86 (portrait); The Studio, Spring No., 1905, p. xlii; Illustrated London News, 27 Sept. 1902.]

B. S. L.

FIELD, SIR WILLIAM VENTRIS, BARON FIELD OF BAKEHAM (1813-1907), judge, born at Fielden, Bedfordshire, on 21 Aug. 1813, was second son of Thomas Flint Field of that place. After education at Burton grammar school he was articled to Messrs. Terrell, Barton & Smale, solicitors, of Exeter, his articles being subsequently transferred to Messrs. Picre & Bolton of Lincoln's Inn. In 1843 he became a member of the firm of Thompson, Debenham & Field, Salters' Hall Court, E.C. Having entered as a student at the Middle Temple on 15 Nov. 1843, and transferred himself on 17 Jan. 1846 to the Inner Temple, he practised as a special pleader from 1847 to 1850, and in the latter year was called to the bar. He first travelled the western circuit, where he enjoyed the friendship of John Duke (afterwards Lord Coleridge [q. v. Suppl. I]), but soon exchanged this for the Midland circuit. He was quickly recognised as a sound and painstaking lawyer, and obtained a large junior practice, chiefly of the kind known as commercial. Among his pupils at the bar was Sir James Fitzjames Stephen [q. v.], afterwards his colleague on the bench. In February 1864 he was appointed a queen's counsel, and in April of the same year was elected a bencher of his inn. He enjoyed for the next nine years a 'steady and lucrative' practice, and became the recognised leader of his circuit, though his name was not widely known to the general public.

In February 1875, upon the retirement from the bench of Mr. Justice Keating,

and the transfer to the court of common pleas of Mr. Justice Archibald, Field was appointed by Lord Cairns to fill the consequent vacancy in the court of queen's bench. He was the last judge appointed to that ancient tribunal, which six months later became a division of the high court of justice, itself a part of the supreme court of judicature. He was also nearly the last person to be made a serjeant-at-law, and he was, like other judges in the same situation, re-admitted to the bench of his own inn when Serjeants' Inn was dissolved in 1876.

As a judge Field showed great learning, a keen and vigorous intellect, and a somewhat irascible temper, which was due to, or was stimulated by, a chronic disorder described by himself as a general irritation of the mucous membrane. But he never allowed physical inconvenience to interfere with the thoroughness of his work. In his later years he also suffered from increasing deafness, and as he insisted upon hearing everything that was said, proceedings before him usually lasted longer than his impetuous nature would have permitted in more favourable circumstances. His hastiness of manner occasionally involved him in warm controversy with counsel, but he showed no subsequent resentment.

Field had his share in the trial of important litigation. He decided in favour of the plaintiff in the first instance the remarkable case of *Dobbs v. the Grand Junction Waterworks Co.*, and his judgment was ultimately confirmed by the House of Lords, which decided that houses were to be rated for water on the rated not the gross value; the successful litigant conducted his case personally against a great array of professional talent (Nov. 1883). The great licensing case of *Sharpe v. Wakefield* was also originally tried by Field. And in *Dalton v. Angus*, which decides the right of the owner of land to the 'lateral support' of his neighbour's land, the judgment of the House of Lords was in accordance with Field's answers to the questions which the peers had submitted to the judges.

In 1890 Field retired from the bench, taking leave of the profession in the chief justice's court. He was sworn of the privy council, and on 10 April was created a peer by the title of Baron Field of Bakeham near Staines, Middlesex. During the next two years he sat fairly often in the House of Lords, and with Lord Bramwell [q. v. Suppl. I] he differed in 1891 from the majority in the important case of the Bank of England

v. Vagliano [see LIDDERDALE, WILLIAM, Suppl. II]. His closing years were passed principally at Bognor, and he died there on 22 Jan. 1907, and was buried in a family vault at Virginia Water. Field married in 1864 Louisa, daughter of John Smith, who died on 24 May 1880 without issue.

A caricature by 'Spy' appeared in 'Vanity Fair' in 1887.

[The Times, 24 Jan. 1907; Foster's Men at the Bar; Who's Who, 1901; personal recollections.] H. S.

FINCH-HATTON, HAROLD HENEAGE (1856-1904), imperialist politician, born at Eastwell Park, Kent, on 23 Aug. 1856, was fourth son of George William Finch-Hatton, tenth earl of Winchilsea [q. v.], by his third wife, Fanny Margaretta, daughter of Edward Royd Rice, of Dane Court, Kent. His brother, Murray Edward Gordon Finch-Hatton, twelfth earl of Winchilsea (1851-1898), M.P. for South Lincolnshire (1884-5) and the Spalding division (1885-7), was well known as a leading agriculturist. Finch-Hatton was educated at Eton, and matriculated at Balliol College, Oxford, on 20 Oct. 1874, but did not graduate. In 1876 he joined a brother in Queensland remaining in the colony till 1883. For some time he was engaged in cattle-farming at a settlement named Mt. Spencer, but subsequently went prospecting for gold in the Nebo goldfields, some forty miles further inland and about 100 from Mackay. Gold was found at Mount Britten and shares were bought in other claims; but the working expenses, chiefly owing to the defective communication with the coast, made the venture unremunerative, and after some eighteen months the Finch-Hatton brothers disposed of their rights to a Melbourne syndicate, retaining only a fourth share in the concern. Finch-Hatton always preserved his interest in Queensland, and as permanent delegate and chairman of the London committee of the North Queensland Separation League rendered energetic service to the colony. In 1885 he published a readable record of his Australian experiences in a book entitled 'Advance, Australia!' containing a sympathetic estimate of the 'Blacks' (aborigines) founded on individual intercourse, and thoughtful surveys of the sugar and mining industries. The final chapter on Imperial Federation condemned the action of Lord Derby as colonial secretary in dealing with the New Guinea question. (For a criticism of some views expressed in the book

see A. PATCHETT MARTIN, *Australia and the Empire*, pp. 88-90.)

On his return to England Finch-Hatton occupied himself in financial work. But his chief interest was in imperial politics. He was one of the founders of the Imperial Federation League, and for some time acted as its secretary; he was also secretary to the Pacific Telegraph Company, formed for the promotion of cable communication between Vancouver and Australia. When, in the autumn of 1885, he contested East Nottingham as a conservative he strongly advocated imperial federation as a prelude to free trade within the empire. Finch-Hatton was defeated by a majority of 991. Twice afterwards, in July 1886 and July 1892, he was unsuccessful in the same constituency. His opponent at all three elections was Mr. Arnold Morley. At the general election of 1895 he was returned unopposed for the Newark division of Nottinghamshire. His political career, however, was brief. An able maiden speech (28 April 1896) on the second reading of the agricultural rating bill, in which he appealed to his twenty years' experience of Australian land legislation, was followed by bad health. Falling out of sympathy with his party, he resigned his seat rather suddenly in May 1898 (*The Times*, 13 May 1898). He regarded the conservative foreign policy as too timid, and disapproved of the Irish Land Act of 1896 and other domestic legislation. When not in London he henceforth lived at Harlech, and in 1903 was high sheriff of Merionethshire. Highly skilled in field sports, a good rifle shot and keen huntsman, he excelled at golf, often competing for the amateur championship. He could also throw the boomerang 'like a black.'

He died, unmarried, from heart-failure on his own doorstep at 110 Piccadilly, on 16 May 1904, 'after having completed the last of his morning runs round the park.' He was buried in Ewerby churchyard, near Sleaford, Lincolnshire.

[The Times, 18 May 1904; Burke's and G. E. C.'s Peerages; Foster's Alumni Oxon.; Finch-Hatton's 'Advance, Australia!' 1885; Hansard's Parl. Debates; Sleaford Gazette, 21 and 28 May 1904; Mennell's Dict. of Australasian Biogr.; R. Nevill and C. E. Jerningham's Piccadilly to Pall Mall, pp. 71-3.] G. Læ G. N.

FINLAYSON, JAMES (1840-1906), Scottish physician, born in Glasgow on 22 Nov. 1840, was third son and fourth child of the seven children of Thomas

Finlayson, a manufacturer in that city, by his wife Georgina Campbell, the daughter of an army surgeon in India. His elder brother, Thomas Campbell Finlayson, was a distinguished congregational minister, first at Downing Place, Cambridge, and later at Rusholme, Manchester, and was hon. D.D. Glasgow (1891). James received his early education at the High School of Glasgow, and in 1856 entered the old college in High Street as an arts student. From 1857 to 1862 he was in his father's business; but in 1863 he began the study of medicine, and graduated M.B. at Glasgow University with honours on 16 May 1867, with a thesis on 'The value of quantitative methods of investigation in medicine and allied sciences'; he proceeded M.D. in 1869, and on 18 April 1899 was made hon. LL.D. He was admitted a fellow of the Royal Faculty of Physicians and Surgeons of Glasgow in 1871, and was successively honorary librarian (1877-1901), visitor (1899), and president (1900-3) of that body. After serving as house surgeon at the Children's Hospital, Manchester, he was assistant to Sir William Tennant Gairdner [q. v. Suppl. II] at the Glasgow Royal Infirmary, and in 1875 was elected physician to the Western Infirmary, Glasgow, where he was a recognised teacher until his death. He was also physician (1883-98) and later consulting physician to the Royal Hospital for Sick Children, Glasgow, and for many years was medical adviser to the Scottish Amicable Insurance Company. He set a high standard of professional conduct and learning, and had a large and important practice in and around Glasgow.

Finlayson was a prolific writer on all aspects of medicine, including diseases of children. He wrote 150 papers, 60 of which appeared in the 'Glasgow Medical Journal.' He was especially interested in the history of medicine, and gave a number of lectures at Glasgow under the title of 'Bibliographical Demonstrations on Hippocrates, Galen, Herophilus, and Erasistratus' (1893-5), the substance of which he contributed to 'Janus,' an international medical journal. His most important works were: 1. 'Clinical Manual for the Examination of Medical Cases,' 1878; 3rd edit. 1891. 2. 'Account of the Life and Works of Maister Peter Lowe, the Founder of the Faculty of Physicians and Surgeons of Glasgow,' 1889. 3. 'An Account of the Life and Works of Dr. Robert Watt, Author of the "Bibliotheca Britannica,"' 1897. To 'Keating's Cyclopædia of the Diseases of

Children' (1889) he contributed an article on 'Diagnosis.'

Finlayson, who was unmarried, died suddenly from apoplexy on 9 Oct. 1906 at his residence, 2 Woodside Place, Glasgow; his remains were cremated at the Western Necropolis. A bust by McGillivray belongs to his sister. His friends endowed the Finlayson Memorial Lecture (on a subject connected with medicine, preferably its history) at the Royal Faculty of Physicians and Surgeons of Glasgow; the first lecture was delivered on 28 Feb. 1908 by Dr. Norman Moore on the 'Schola Salernitana.'

[Glasgow Med. Journ. 1906, lxvi. 360-7 (with portrait); Brit. Med. Journ. 1906, ii. 1067; information from Sir Hector Cameron, M.D.] H. D. R.

FINNIE, JOHN (1829-1907), landscape painter and engraver, son of John Finnie, brassfounder, by his wife Christian McIndoe, was born at Aberdeen, where he was baptised in the parish church on 4 May 1829. After serving apprenticeships to a house-painter at Edinburgh and a japanner at Wolverhampton he obtained employment with William Wales, a glass-painter at Newcastle, where he remained five years, attending the school of design under William Bell Scott [q. v.]. In 1853 he went to London, where he studied and taught in the Central School of Design at Marlborough House till, in 1855, he became master of the School of Art, then called the 'Mechanics' Institution, at Liverpool. In this position he continued forty-one years and six months, retiring at Christmas 1896. He is described as the dominating personality in the art life of Liverpool during that period. He began to send to the Liverpool Academy exhibitions in 1856, became an associate in 1861, a full member and trustee in 1865, and was president of the academy in 1887-8. He was also president of the Artists' Club and of the Liver Sketching Club. He joined the Royal Cambrian Academy in 1894 and became its treasurer in 1897. His earliest etching, the 'Head of Windermere,' dates from 1864. After some early experiments in etching and engraving Finnie adopted mezzotint as his favourite process in 1886. Though he exhibited pictures at the Royal Academy from 1861 onwards, and also at the British Institution and in Suffolk Street, he was best known in London by his original mezzotint engravings of landscape, exhibited at the Royal Academy and the Royal Society of Painters, Etchers, and Engravers, of which he became an associate on 24 Oct. 1887,

and a fellow on 6 April 1895. He sent forty-seven contributions in all to the society's gallery. His etchings and mezzotints, which are represented by specimens in the print-room of the British Museum, aim too much at a full pictorial effect, instead of observing the restrictions of graphic art. As a painter he is represented in the Walker Art Gallery at Liverpool. On retiring from the School of Art, in 1896, Finnie broke up his home in Huskisson Street and settled at Tywyn, near Llandudno, where he spent his life in painting, engraving, and music. He retained full vigour until an attack of influenza injured his heart in 1905. He returned to Liverpool, where he died on 27 Feb. 1907. He was buried at Smithdown Road cemetery beside his wife, Agnes James Ellison, who died on 8 July 1889. One son, Dr. Ellison Finnie, survived him. A memorial exhibition of his art, comprising 438 numbers, was held at the Walker Art Gallery, Liverpool, in 1907.

[Biographical Sketch by E. Rimbault Dibdin in Cat. of Finnie Memorial Exhibition, Liverpool, 1907; Graves, Royal Acad. Exhibitors, 1905; H. C. Marillier, *The Liverpool School of Painters*, 1904, p. 119.] C. D.

FISON, LORIMER (1832-1907), Wesleyan missionary and anthropologist, born on 9 Nov. 1832, was thirteenth child, in a family of twenty, of Thomas Fison of Barningham, Suffolk. His mother was a daughter of the Rev. John Reynolds, whose translations of Fénelon, Massillon, and Bourdaloue achieved some popularity. After education at Sheffield he matriculated as a pensioner from Caius College, Cambridge, on 27 June 1855. He studied mathematics under Robert Potts [q. v.], the editor of Euclid, whose second wife was Fison's sister, but left the university at the end of his second term after a boyish escapade, and sailed for Australia in search of gold. Coming under religious influence there, he joined at Melbourne the Wesleyan communion. In 1863 he was ordained a Wesleyan minister, and was almost immediately after sent to Fiji as a missionary. He served there for a first period of eight years, till 1871, winning the confidence of natives and Europeans.

While in Fiji Fison got into unusually close touch with the natives, and became much interested in the subject of family relationships. The publication of Lewis Morgan's 'Systems of Consanguinity' (1871) stimulated his interest and he met Alfred William Howitt [q. v. Suppl. II], who had been for very many years working at the same subject in

Australia. Fison spent the years 1871-5 in New South Wales and Victoria, combining ministerial labour with anthropological research. Thenceforward the names of Fison and Howitt were associated as fellow-workers [see under HOWITT, ALFRED WILLIAM, Suppl. II]. In 1875 he returned to Fiji, and remained there till 1884. During this period he was principal of the institution at Navuloa for the training of natives as teachers. Fison wrote a remarkable paper on the little understood subject of Fijian land tenure. Its substance was first published in the 'Journal of the Anthropological Institute' in 1881. It was reprinted in pamphlet form by the Fiji government press in 1903. Apart from this work and his collaboration with Howitt in 'Kamilaroi and Kurnai' (1880), he wrote in the 'Journal of the Royal Anthropological Institute' on Fijian antiquities (1881-95).

In 1884 Fison on returning to Australia engaged till 1888 in ministerial work at Hawthorn and at Flemington in Victoria. In 1888 he settled at Melbourne and from that year to 1905 he edited the Melbourne 'Spectator,' a Wesleyan periodical. He also helped to found the (Wesleyan) Queen's College in Melbourne University and was active in its management.

In 1892 he was president of the anthropological section of the Australian Advancement of Science meeting at Hobart Town. In 1894 he attended the meeting of the British Association at Oxford, when the results of his scientific research into the organisation of Australian tribes received full recognition. Of brilliant gifts as a linguist Lorimer excelled in conversation and greatly impressed scholarly society in England. After his return to Australia his health soon compelled absolute repose. But in 1904 he published 'Tales from Old Fiji,' which—partly perhaps because of a natural hesitation to publish for general information all that he knew about Fijian mythology—is the least valuable of his contributions to scientific anthropology. In 1905 he was awarded a civil list pension of 150*l*. He died at a house which he had built at Essenden, Victoria, on 29 Dec. 1907. His widow survived him with two sons and four daughters.

[Fison's writings; Johns' Notable Australians, 1908; J. G. Frazer's Howitt and Fison, in *Folklore*, June 1909, p. 144 seq.; *The Victorian Naturalist*, vol. xxiv. April 1908; *Australian Methodist Missionary Review*, Sydney, 4 Feb. 1908 (by Dr. George Brown).] E. M. T.

FITCH, SIR JOSHUA GIRLING (1824–1903), inspector of schools and educational writer, born in Southwark on 13 Feb. 1824, was second son in a family of six sons and two daughters of Thomas Fitch, a clerk in Somerset House, by his wife Sarah Tucker Hodges. Both parents were natives of Colchester. The eldest son, Thomas Hodges (1822–1907), became a Roman catholic and eventually was attached to the Marist Church, Notre Dame de France, in Leicester Square, London. The third son, William John (1826–1902), was headmaster of the Boys' British School, Hitchin, from 1854 till 1899. From a private school Joshua passed to the Borough Road school, Southwark, where he became a pupil teacher in 1838 and a full assistant in 1842. About two years later he was appointed headmaster of the Kingsland Road school, Dalston. Studying hard in his spare hours, he in 1850 graduated B.A. in the University of London, and in 1852 proceeded M.A. (in classics).

In 1852, after trial work there in the previous year, he joined the staff of the Borough Road Training College, soon after became vice-principal, and in 1856 succeeded to the principalship on the retirement of Dr. James Cornwell [q. v. Suppl. II]. He proved himself a brilliant teacher, especially stimulating his pupils by his lectures on 'Method' and by his enthusiasm for literature. Through life he laid stress on the importance to the teacher of literary training. After contributing to some of Cornwell's educational treatises, he entered in 1861 into the political arena with 'Public Education: Why is a New Code needed?' In 1862 he helped in the organisation of the education section of the International Exhibition, and in 1863 Lord Granville, lord president of the council, who on a visit to Borough Road was impressed by Fitch's power as a teacher, made him an inspector of schools.

The district assigned to Fitch was the county of York, with the exception of certain portions of the north and the west. His three reports on the Yorkshire district admirably describe its educational condition then. From 1865 to 1867 as assistant commissioner for the schools inquiry commission, he inspected the endowed and proprietary schools in the West Riding of Yorkshire and in the city and ainsty of York, as well as other endowed schools in the North and East Ridings of Yorkshire and in Durham, and his reports were most thorough and suggestive. In 1869 he acted as special commissioner on elementary

education in the great towns (Manchester, Birmingham, Liverpool, and Leeds), and from 1870 to 1877 was an assistant commissioner of endowed schools.

From 1877 to 1883 Fitch performed ordinary official duties as inspector of East Lambeth. In 1883 he became chief inspector of schools for the eastern division, including all the eastern counties from Lincoln to Essex. From 1885 to 1889 he was inspector of elementary training colleges for women in England and Wales. He was continued in this post till 1894, five years beyond the normal age of retirement from government service.

Occasionally detached for special duties in the later period of his public service, he prepared in 1888, after a visit to America, a report on American education under the title 'Notes on American Schools and Training Colleges'; in 1891 a memorandum on the 'Free School System in the United States, Canada, France, and Belgium'; and in 1893 'Instructions to H.M. Inspectors, with Appendices on Thrift and Training of Pupil Teachers.'

Fitch's educational activities passed far beyond his official work. His association with the University of London was always close. From 1860 to 1865 and from 1869 to 1874 he was examiner in English language and history. In 1875 he was appointed to the senate, and on his retirement in 1900 was made a life fellow.

Much of his energy was always devoted to the improvement of the education of women. He was an original member of the North of England Council for the Higher Education of Women (founded in 1866) and one of those who helped to found in 1867 the College for Women at Hitchin, which in 1874 became Girton College, near Cambridge. He took an active part in the establishment of the Girls' Public Day School Company in 1874, and was foremost among those who secured, in 1878, the new charter for the University of London which placed women students on equal terms with men. In 1890 he with Anthony John Mundella [q. v. Suppl. I] and Anna Swanwick [q. v. Suppl. I] selected the women's colleges and schools among which was distributed the sum of 60,000*l.* left by Mrs. Emily Pfeiffer [q. v.] for the promotion of women's education. He was consulted by Thomas Holloway [q. v.] about the constitution of Holloway College, Egham, and by the founders of the Maria Grey Training College and the Cambridge Training College for the training of women teachers for secondary schools.

In both 1877 and 1878 Fitch lectured with great success on practical teaching at the College of Preceptors, where he was examiner in the theory and practice of education (1879-81) and moderator in the same subjects (1881-1903). In 1879-80 he lectured at Cambridge for the newly appointed teachers' training syndicates and he published his course in 1881 as 'Lectures on Teaching' (new edit. 1882). The book established Fitch's position in England and America as an expert on school management, organisation, and method. In 1897 he published 'Thomas and Matthew Arnold and their Influence on English Education' in the 'Great Educators' series, and in 1900 he collected his chief lectures and addresses in 'Educational Aims and Methods.' Written with unusual charm of style, these volumes emphasised Fitch's position as that of a pioneer, especially on the practical side of education, as an earnest advocate for the better training of the elementary teacher, and for the more systematic training of secondary teachers.

The National Home Reading Union established by Dr. John Brown Paton [q. v. Suppl. II] and Dr. Hill, Master of Downing College, owed much to Fitch's account of 'The Chautauqua Reading Circles,' which he contributed to the 'Nineteenth Century' after his return from America in 1888.

After his retirement from the board of education in 1894 he was still active in public work. In 1895 he was a member of departmental committees of the board of education on industrial and naval and dockyard schools. In 1898-9 he was chairman of the council of the Charity Organisation Society. In 1902 he helped in the organisation of a nature study exhibition in London.

Fitch, who was made hon. LL.D. of St. Andrews in 1888, and a chevalier of the legion of honour in 1889 by the French government in recognition of the services he rendered in England to French travelling scholars, was knighted in 1896. He died at his residence, 13 Leinster Square, Bayswater, London, on 14 July 1903, and was buried at Kensal Green. In 1856 he married Emma, daughter of Joseph Barber Wilks, of the East India Company. She survived him without issue, and in 1904 received a civil list pension of 100*l.*; she died on 1 April 1909.

A portrait of Sir Joshua by Miss Ethel King was presented to him in 1890 in recognition of his services to the cause of

the higher education of women. It is now in the possession of Miss Pickton, niece of Lady Fitch and adopted daughter of Sir Joshua and Lady Fitch.

[The Rev. A. L. Lilley, Sir Joshua Fitch: an Account of his Life and Work (with a complete bibliography); Educational Record, Oct. 1903, pp. 422-3; private information.]
F. W.

FITZGERALD, GEORGE FRANCIS (1851-1901), professor of natural and experimental philosophy in the University of Dublin, born at 19 Lower Mount St., Dublin, on 3 Aug. 1851, was second of three sons of William FitzGerald [q. v.], rector of St. Ann's, Dublin, and afterwards successively bishop of Cork and of Killaloe. His mother, Anne Frances, was daughter of George Stoney of Oakley Park, Birr, King's County, and sister of George Johnstone Stoney [q. v. Suppl. II]. His younger brother, Maurice, was professor of engineering in Queen's College, Belfast, from 1884 to 1910. After education at home, under M. A. Boole, sister of George Boole [q. v.] the mathematician, he entered Trinity College, Dublin, at sixteen, and graduated B.A. in 1871 as first senior moderator in mathematics and experimental science, having won the university studentship in science. From boyhood he had shown an aptitude for mathematics, was athletic, and skilful with his fingers, but showed little ability for languages. For six years (1871-7), with a view to a fellowship, he studied the memoirs of mathematical physicists, and at the same time acquired a life-long reverence for the philosophy of Bishop Berkeley. He was awarded a fellowship in 1877 and became a tutor of the college. On the death of John R. Leslie in 1881 he became Erasmus Smith professor of natural and experimental philosophy, and held the post till his death.

Both as tutor and as professor FitzGerald exerted himself to bring the teaching of physical science at Trinity College up to the standard of the time, but he was hampered by lack of funds. He started, however, a physical laboratory, and gathered round him a small band of earnest workers whom he infected with his own enthusiasm. A large proportion of his teaching work was necessarily elementary, but his honours students fully appreciated his originality and suggestiveness.

FitzGerald showed a singular insight into difficult and obscure branches of physical science. His published work, 'not large in bulk but very choice and original,' deals mainly with the correction and development

of the electromagnetic theory of radiation first put forward by Professor Clerk Maxwell [q. v.]. He suggested in 1882 the principle of the method of production of 'electric waves' which Hertz used in 1887, and he contributed much himself to our knowledge of their properties. He took a leading part in the discussion of electrolysis, and supported the view, since confirmed, that 'cathode rays' are streams of electrified particles. 'He possessed extraordinary versatility, and in the deepest subjects was more at home than in the trivial,' throwing out luminous suggestions 'with splendid prodigality and rejoicing if they were absorbed and utilised by others.' All his writings—chiefly contributions to the periodicals of scientific societies—have been collected by Sir Joseph Larmor and issued by the Dublin University Press as 'The Scientific Writings of the late George Francis FitzGerald' (1902).

FitzGerald was elected F.R.S. London in 1883, and in 1899 was awarded a royal medal by the society for his investigations in theoretical physics. In 1900 he was made an honorary fellow of the Royal Society of Edinburgh. He acted as honorary secretary of the Royal Dublin Society from 1881 to 1889, and as registrar of Dublin University School of Engineering from 1886. He was president of the mathematical and physical section of the British Association at Bath in 1888, president of the Physical Society of London in 1892-3, and chairman of the Dublin local section of the Institution of Electrical Engineers on its foundation in 1899. For many years he was examiner in physics in the University of London, and he took a prominent part in the educational affairs of Ireland, serving on the boards of national, of intermediate, and of technical education for Ireland. In educational matters 'self-satisfied unprogressiveness excited his indignation.'

FitzGerald died at 7 Ely Place, Dublin, on 22 Feb. 1901, and was buried at Mount Jerome. He married Harriette Mary, second daughter of John Hewitt Jellett, F.R.S. [q. v.], and had by her three sons and five daughters. His widow was awarded a civil list pension of 100*l.* in 1903. A charcoal portrait done about 1877 by John Butler Yeats belongs to his brother Maurice. An enlargement of the engraved portrait which forms the frontispiece of the 'Collected Works' hangs in the engineering school of Trinity College, Dublin.

[The Times, 25 Feb. 1901; Nature, 7 March 1901; Electrician, 1 March 1901; Proc. Roy. Soc. vol. 75, 1905; Journal Inst. Elect. Eng. 30, pp. 510, 1244; Physical Review, May 1901,

FITZGERALD, SIR THOMAS NAGHTEN (1838-1908), surgeon, born on 1 Aug. 1838 at Tullamore, Ireland, was son of John FitzGerald of the Indian civil service. After attending St. Mary's College, Kingston, he received his professional education at Mercers' Hospital in Dublin, became L.R.C.S. Ireland in 1857, and obtained a commission in the Army Medical Staff. A sudden attack of illness obliged him to abandon his course at Netley, and he made a voyage to Australia in search of health. Arriving at Melbourne in July 1858, he was immediately appointed house surgeon at the Melbourne Hospital, and held the post for two years, after which he began to practise privately as a surgeon in Lonsdale Street. In 1860 he was appointed full surgeon to the hospital, to which he was elected a consulting surgeon on his resignation in 1900. He was also consulting surgeon to the Queen Victoria, St. Vincent, and Austin hospitals. He excelled in the operative part of his profession, and wrote papers for medical journals on cleft palate, fractured patella, club foot, drilling in bone formations, and like surgical topics. When the medical school was started at Melbourne he proved himself as good a teacher as he was a surgeon. In 1884 he revisited Ireland, and after examination became F.R.C.S. Ireland. He was knighted in 1897 on the occasion of the diamond jubilee of Queen Victoria. He was president of the Medical Society of Victoria both in 1884 and in 1890, and of the Inter-colonial Medical Congress in 1889. In 1900 he went to South Africa as consulting surgeon to the imperial forces then engaged in the Boer war, and for his services was made C.B. He published in the 'Inter-colonial Medical Journal of Australasia' (1 Dec. 1900) an interesting account of his experiences in South Africa, in which the work of the Royal Army Medical Corps and the nursing staff was commended. He died on 8 July 1908 on board the s.s. Wyreema between Cairns and Townsville, while on a voyage for his health. He was buried in the Melbourne general cemetery. He married in 1870 Margaret, daughter of James Robertson, Launceston, Tasmania, and by her, who died in 1890, he had issue three daughters.

[Australian Med. Gaz. vol. 27, 1908, p. 428 (with portrait); Lancet, 1908, ii. 200.]

D'A. P.

FITZGIBBON, GERALD (1837-1909), lord justice of appeal in Ireland, born in Dublin on 28 Aug. 1837, was eldest of the three children (two sons and a daughter) of Gerald FitzGibbon, K.C., master in chancery and a leading member of the Irish bar, by his wife Ellen, daughter of John Patterson of Belfast. His younger brother, Henry (d. 23 Feb. 1912), was at one time president of the Royal College of Surgeons in Ireland. Gerald became classical scholar in 1858 at Trinity College, Dublin, where he highly distinguished himself in classics, law, oratory, and English composition. He was made hon. LL.D. in 1895 (*Dublin Univ. Cal.* 1906-7, Suppl.). He was always deeply devoted to Trinity College, to which he said he owed everything and at whose service he constantly placed till death his eloquence and industry.

FitzGibbon was called to the Irish bar in Hilary Term, 1860, with Edward Gibson, afterwards Lord Ashbourne. The two were of the same age, and they subsequently took together on the same dates the various steps which brought them to the bench. FitzGibbon was soon the leading junior, both on his circuit (the Munster) and in Dublin. He refused silk in 1868, when offered it by Brewster, lord chancellor, but accepted the promotion from Lord Chancellor O'Hagan. He was called 'within the bar' in Trinity Term, 1872. FitzGibbon's senior practice was large, and he led the Munster circuit until his retirement from circuit on becoming a law officer. Even then he was taken 'special' in important cases throughout the country. Among the cases in which he proved his eminence as an advocate was that of *O'Keeffe v. (Cardinal) Cullen* (May 1873), in which he secured a verdict against the cardinal from a Dublin jury largely composed of catholics, though the verdict was afterwards set aside on technical grounds, and that of *Bagot v. Bagot*, a will case, lasting twenty-two days from 25 April 1878, in which his masterly statement for the plaintiff, Mrs. Bagot, secured her the verdict from a dubious jury, an adverse judge, and against the views of a host of medical experts (*Irish Times*, 26 April 1878 and following days; *Law Rep. Ireland*, vol. i.).

In 1876 FitzGibbon, who was a conservative in politics, became law adviser to Dublin Castle, an office since abolished. In 1877 he was made solicitor-general for Ireland in Lord Beaconsfield's government, and held the office until 13 Dec. 1878, when he was promoted lord justice of appeal. In the same year he was elected a bencher of

the King's Inns, and next year was made a privy councillor of Ireland. FitzGibbon's career as a judge, which lasted for over thirty-one years, was highly distinguished. Many of his judgments were reviewed by the House of Lords, and in every case where he differed from the colleagues of his own court his opinion was upheld by the House of Lords. In *Aaron's Reefs v. Twiss*, where shares had been allotted on a fraudulent prospectus, FitzGibbon differed from the lord chancellor of Ireland, the master of the rolls, and in a minor degree from the other lord justice, and was upheld by the lords, Halsbury, Herschell, Watson, Macnaghten, Morris, and Davey (1896, *Appeal Cases*, p. 273; 1895, *2 Irish Reports*, p. 207).

FitzGibbon was also a member of the English bar. Admitted to Lincoln's Inn on 12 Jan. 1857, he was called in Trinity Term, 1861, and was invited to the bench on 16 April 1901. He was made a privy councillor of England in 1900.

FitzGibbon was a man of many activities outside his profession. He did much for education in Ireland. He served with Lord Rosse and Lord Randolph Churchill on the commission appointed in 1878 to inquire into the condition and management of the endowed schools of Ireland (WINSTON S. CHURCHILL, *Lord R. Churchill*, pp. 78, 79; *Endowed Schools (Ireland), Report of the Royal Commissioners*, 1881). The Report led to the more important commission 'on educational endowments in Ireland,' of which FitzGibbon was chairman from 1885 to 1897. During its existence they framed schemes dealing with 1350 primary schools, eighty intermediate, and twenty-two collegiate schools and institutions, and the total annual income administered under these schemes was over 140,000*l.* Most of FitzGibbon's vacations were devoted to this commission. He was also a commissioner of national education in Ireland from 1884 to 1896, and in that capacity was specially successful in getting the rival denominations to agree.

In 1876 FitzGibbon joined the freemasons (Trinity College Lodge), and at once took a very active part in the charities. In 1879 he became a governor of the girls' school, and was devoted to its interest. In 1902 he defrayed the cost of the physical and chemical laboratory. After a visit to Canada in 1899 he became the representative in Ireland of the Grand Lodge of Canada. In 1908 he was elected president of the General Chapter of Prince Masons

in Ireland, and published a volume of 'Addresses' delivered in that office. On his death the freemason brethren founded in his memory the 'FitzGibbon Memorial Gymnasium' in the girls' school, the 'FitzGibbon Memorial Burse' in the boys' school, and the 'FitzGibbon annuity.'

He was also active in the affairs of the Church of Ireland, serving for many years on the diocesan board of patronage for Dublin, and proving his skill in debate in the general synod. He was chancellor of many diocesan courts and lay diocesan nominator for the archdiocese of Dublin. He was one of the chief promoters of, and a generous contributor to, 'The Auxiliary Fund,' by which the great depreciation in the investments of the church and the poverty of the incumbents was supplemented.

At his country house at Howth, FitzGibbon long entertained at Christmas parties of men of all kinds of distinction. In later years his regular visitors included George Salmon [q. v. Suppl. II], provost of Trinity, Monsignor Molloy, John (Viscount) Morley, Mr. Arthur Balfour, Lords Roberts and Wolseley. But his most intimate friend among English politicians was Lord Randolph Churchill, whose acquaintance he first made at Dublin Castle in 1876, when Lord Randolph's father, the duke of Marlborough, was lord-lieutenant. Subsequently they constantly corresponded on frank and confidential terms. FitzGibbon wrote to Lord Randolph deprecating his acceptance of the chancellorship of the exchequer in 1886, and expressing a preference for Goschen.

FitzGibbon died at Howth on 14 Oct. 1909, and was buried in the graveyard attached to the old ruined church of St. Fintan at Howth. In the court of criminal appeal in England the lord chief justice expressed (15 Oct.) sympathy with the bench of Ireland on his death, describing him as 'a great judge, a profound lawyer, and a man of wide and varied learning' (*The Times*, 16 Oct. 1909). Such a reference to an Irish judge from the bench of England seems to have been unprecedented (*Law Times*, 23 Oct. 1909).

FitzGibbon married in 1864 Margaret Ann, second daughter of Francis Alexander Fitzgerald, baron of the exchequer in Ireland, and had issue three sons and four daughters. His eldest son, Gerald, is king's counsel in Ireland, being the third generation of the family to attain that honour.

Two portraits in oils by Walter Osborne, R.H.A., one in the Masonic girls' school, Dublin, the other at Howth, were presented

by the Order to the school and to Mrs. FitzGibbon respectively. A full-length portrait was painted by Miss Harrison for the University Club, Dublin. A portrait in judicial robes for the banqueting hall of the King's Inns, by William Orpen, R.A., was subscribed for by the bench and bar of Ireland. A marble statue by A. Bruce Joy is to be placed in St. Patrick's Cathedral.

[Private information; Winston S. Churchill, Lord Randolph Churchill, 1906; Annual Report of the Masonic Female Orphan School of Ireland for 1909 (Dublin, 1910), and of the Grand Lodge of Free and Accepted Masons of Ireland for 1909; Thom's Directory, 1909; The Irish Reports, Common Law; The Irish Reports, Equity; The Irish Law Reports; Appeal Cases (both series) (England); Endowed Schools (Ireland) Report of the Royal Commission, 1881; Educational Endowments (Ireland), Reports of the Commission and Evidence, published in 1886; The Times, 16 Oct. 1909; The Law Times, 23 Oct. 1909.] D. F.

FLEAY, FREDERICK GARD (1831-1909), Shakespearean scholar, born at Deptford Broadway on 5 Sept. 1831, was son of John Goss Fleay, linen-draper, by his wife Jane. Both parents were of Somerset families. Of seven children, three—two sons and a daughter—alone lived to maturity.

Frederick, according to family tradition, was able to read at twenty months old. Entering, in 1843, King's College school, where Frederic Harrison was one of his companions, he rose to be captain, distinguishing himself alike in classics and mathematics. In Oct. 1849 he passed to Trinity College, Cambridge, his parents accompanying him in order to provide him with a home in the town. In his second year at Trinity he won an open mathematical scholarship, and after gaining several college prizes, graduated B.A. in 1853 as thirteenth wrangler, and sixth in the second class in the classical tripos. He was also placed third in the examination for Smith's prizes, and impressed the examiners with his aptitude for higher mathematics. Next year he obtained second place in the first class of the moral science tripos, and first place in the second class in the natural science tripos. Undergraduates dubbed him 'the industrious flea.' Despite the rare distinction of figuring in four tripos lists, Fleay just missed a fellowship at Trinity. He proceeded M.A. in 1856, and was ordained deacon in that year and priest in 1857.

Adopting a scholastic career, he was from 1856 to 1859 vice-principal of the Oxford

Diocesan Training College at Culham. From 1860 to 1866 he was second master and head of the scientific side at Leeds grammar school. After six months in 1867 as second master and head of the modern division at King Edward's School, Birmingham, he was headmaster of Hipperholme grammar school from 1868 to 1872, and filled a like post at Skipton grammar school from 1872 to 1876, when he abandoned the teaching profession. Although his teaching was mainly devoted to mathematics and science, he was an efficient instructor in both classics and English and interested himself in educational theory. Much practical value attaches to his 'Hints on Teaching,' which he published in 1874; and there is ingenuity in his 'Elements of English Grammar: Relations of Words to Sentences (Word Building)' (1859, 2 parts), and 'Logical English Grammar' (1884).

Fleay issued, while a schoolmaster, 'The Book of Revelation' (1864), a collection of orthodox sermons. But his independent and speculative habit of mind gradually alienated him from the Church of England, and on 7 February 1884 he relinquished his orders. He had studied sympathetically Comte's philosophy without accepting the Positivist religion. 'Three Lectures on Education' which show Comte's influence were read at Newton Hall in Nov. 1882, and published with a preface by Frederic Harrison in 1883. His love of more recondite speculation he illustrated in 1889 by privately circulating a highly complex mathematical study: 'Harmonics of Sound and Colour: their Law identical, their Use convertible.'

Meanwhile Fleay was devoting himself to literary work. From an early date he had interested himself in phonetics and in spelling reform. In 1858 he won the Trevelyan prize for an essay on phonetic spelling, which convinced one of the examiners, Max Müller, of his philological promise. There followed in 1878 his 'English Sounds and English Spelling.' In 1879 he joined the newly formed Spelling Reform Association and edited its journal, 'The Spelling Reformer' (1880-1). He devised two alphabets, the 'Victorian form' for educational purposes, and the 'Elizabethan form' for literary purposes. The former departed further than the latter from accepted orthography, but the method of both was sound.

In 1874 Fleay joined the New Shakspeare Society on its foundation by Frederick James Furnivall [q. v. Suppl. II], and he applied much of his manifold industry for some

twenty years to the elucidation of Shakspearean and Elizabethan drama. He contributed many papers to the 'Transactions of the New Shakspeare Society.' His Shakspearean books began modestly with an 'Introduction to Shakspeare Study' (1877). There followed a useful 'Shakspeare Manual' (1878), with editions of Marlowe's 'Edward II' (1877), and of Shakspeare's 'King John,' and of the anonymous play on the theme (1878), as well as two pamphlets, 'Actor Lists, 1578-1642' (reprinted from 'Royal Hist. Soc. Trans.' 1881), and 'History of Theatres in London' (1882). All these efforts were preliminary to his three imposing compilations: 'A Chronicle History of the Life and Work of William Shakspeare' (1886), 'A Chronicle History of the London Stage, 1559-1642' (1890), and 'A Biographical Chronicle of the English Drama, 1559-1642' (2 vols. 1891). The three works were handsomely printed in limited editions and quickly became scarce books.

Fleay's Shakspearean labours were severely practical, even statistical. Literary criticism lay outside his scope. He analysed with minuteness the changes in Shakspeare's metre and phraseology, and rigidly applied metrical and linguistic tests to a determination not only of the chronology of Shakspeare's and his fellow-dramatists' acknowledged work but of the authorship of anonymous plays of the era. His arbitrary identifications of the writers of the anonymous Elizabeth drama were often startling. He was no less dogmatic in his alleged detection of concealed topical or political allusions in text, plot, and character. At the same time the immense care with which he traced the history of the playing companies in the Shakspearean period threw much new light on English dramatic and theatrical history.

From Shakspearean and Elizabethan themes Fleay finally turned to Egyptology and Assyriology, chiefly in their bearing on biblical criticism. His main results were collected in 'Egyptian Chronology' (1899), dedicated to the memory of Edward White Benson [q. v. Suppl. I]. His latest inquiry concerned the Great Pyramid, on which he published a paper in 1905.

A self-denying and toilsome student who lived a secluded life. Fleay died at 27 Dafforne Road, Upper Tooting, London, on 10 March 1909, and was buried at Brookwood cemetery, Woking. He married on 14 Jan. 1869 Mary Ann Kite, who predeceased him in 1896. Their only child, John, survived him.

Besides the works cited Fleay published 'Almond Blossoms,' verse, in 1857; translations of 'Breton Ballads' (1870), and the 'Poetry of Catullus' and 'Vigil of Venus' (1874); 'A Guide to Chaucer and Spenser' (Glasgow, 1877, in 'Collins's School and College Classics'); and 'The Land of Shakespeare illustrated' (1889).

[Private information; Testimonials collected by Fleay, 1863-70 (privately printed); Athenæum, March 1909 (by Dr. A. W. Ward); Frederic Harrison's Autobiographical Memoirs, 1911.] S. L.

FLEMING, GEORGE (1833-1901), veterinary surgeon, born at Glasgow on 11 March 1833, was son of a working shoeing-smith there. Early in life he was taken by his father to Manchester, where both were employed in the farrier's shop of a veterinary surgeon. He subsequently entered the service of a well-known veterinary surgeon of Manchester, John Lawson, who sent him to Dick's College in Edinburgh. He took several medals and prizes, and in 1855 obtained the certificate of the Highland and Agricultural Society of Scotland, which was then recognised as a veterinary diploma. At the end of that year he entered the army veterinary service, and served in the Crimea until the termination of the war. In 1860 he volunteered for the expedition to North China, and was present at the capture of the Taku Forts and the surrender of Peking, receiving for his services a medal with two clasps. Whilst in China he undertook an expedition beyond the Great Wall, which he described in 'Travels on Horseback in Manchu Tartary' (1865). In 1866 he obtained the diploma of the Royal College of Veterinary Surgeons, and in 1867 served with the army in Syria and Egypt. On his return he spent some years with the royal engineers at Chatham. In 1879 he was appointed inspecting veterinary surgeon at the war office, and in 1883 principal veterinary surgeon to the army. In 1887 he was made C.B. and in 1890 he retired from the army.

Fleming became a vice-president of the Royal College of Veterinary Surgeons in 1867, a year after his admission, and a member of council in 1868. He was elected president in 1880, when the agitation for an act of parliament to restrict the title of veterinary surgeon to the diploma-holders of the college had become acute, and by his energy and pertinacity he was mainly instrumental in securing the passage through parliament of the Veterinary

Surgeons Act, 1881, which imposed a penalty upon unqualified persons who took or used the title of veterinary surgeon. The misuse of the title had become a public scandal. Fleming was in gratitude re-elected president for three years in succession (1881-4), and again in 1886-7. His portrait (full-length) was painted by B. Hudson, and presented to the college by subscription on 7 May 1883, 'as a token,' according to the inscription at the foot, 'of sincere esteem and gratitude.'

He received in 1883 the honorary degree of LL.D. from the University of Glasgow. He died on 13 April 1901 at Higher Leigh, Combe Martin, North Devon, his residence in later life. He was three times married: (1) to Alice, daughter of J. Peake of Atherstone in 1863; (2) to Susan, daughter of W. Solomon of Upchurch, Kent, in 1878; (3) to Anna, daughter of Colonel R. D. Pennefather of Kilbracken, co. Leitrim, who survived him and afterwards remarried.

Fleming was a voluminous writer, contributing largely to professional journals and to general reviews. He translated from the French Chauveau's 'Comparative Anatomy of the Domesticated Animals' (1873; 2nd edit. 1891), and from the German Neumann's 'Parasites and Parasitical Diseases of the Domesticated Animals' (1892; 2nd edit. 1905). His separately published works include: 1. 'Vivisection: Is it necessary or justifiable?' 1866. 2. 'Horse-Shoes and Horse-Shoeing—their Origin, History, etc.' 1869. 3. 'Animal Plagues: their History, Nature, and Prevention,' vol. i. 1871; vol. ii. 1882. 4. 'Practical Horse-Shoeing,' 1872; 10th edit. 1900. 5. 'Rabies and Hydrophobia,' 1872. 6. 'A Manual of Veterinary Sanitary Science and Policy,' 2 vols. 1875. 7. 'A Text Book of Veterinary Obstetrics,' 1878; 2nd edit. 1896. 8. 'The Influence of Heredity and Contagion in the Propagation of Tuberculosis,' 1883. 9. 'Operative Veterinary Surgery,' vol. i. 1884. 10. 'The Practical Horse-Keeper,' 1886. His library of 900 volumes of books on professional subjects was given by him in 1900 to the Royal College of Veterinary Surgeons.

[The Times, 16 April 1901; Veterinary Record, vol. xiii. 27 April 1901; personal knowledge.] E. C.

FLEMING, JAMES (1830-1908), canon of York, born at Carlow on 26 July 1830, was youngest of five children of Patrick Fleming, M.D., of Strabane, who married

in 1820 Mary, daughter of Captain Francis Kirkpatrick. Both families were of Scottish extraction. From 1833 to 1836 the boy was in Jamaica, his father having become paymaster to the 56th regiment; and on his father's death in 1838 his mother, who survived till September 1876, moved to Bath. His two brothers, William and Francis, were sent to Sandhurst, but ultimately took orders; William, an old-fashioned protestant, died vicar of Christ Church, Chislehurst, in May 1900. James went to King Edward VI's grammar school, Bath, in 1840, and to Shrewsbury in 1846, under Benjamin Hall Kennedy [q. v.]. He was in the school eleven, and won the Millington scholarship, matriculating on 15 Nov. 1849 at Magdalene College, Cambridge, from which he graduated in 1853, proceeding M.A. in 1857 and B.D. in 1864. Ordained deacon in 1853 and priest in 1854, he was curate, first, of St. Stephen, Ipswich (1853-5), and then of St. Stephen, Lansdown, in the parish of Walcot, Bath (1855-9), with charge of the chapel of All Saints, where his plain evangelical preaching attracted good congregations. He started classes of instruction in elocution for working people in 1859, and was a strong advocate of total abstinence. In 1866 he was appointed by trustees to the incumbency of Camden church, Camberwell, formerly held by Henry Melvill [q. v.], and in 1873 was presented by the marquis (afterwards first duke) of Westminster to the vicarage of St. Michael, Chester Square. Admitted on 19 Feb. 1874, he retained this benefice till his death, becoming chaplain to the duke of Westminster in 1875. On 21 June 1899 the second duke of Westminster, on behalf of the congregation, presented him with an address and 2000*l.* on the completion of twenty-five years' incumbency. During the period parochial schools and local churches increased and a convalescent home, for which a parishioner gave Fleming 23,500*l.*, was built at Birchington. Outside his parish his chief interests were Dr. Barnardo's Homes [see BARNARDO, THOMAS JOHN, Suppl. II]; the Religious Tract Society, of which he was an honorary secretary from 1880; and the Hospital Sunday Fund, to which he trained his congregation to make large annual contributions, amounting in twenty-eight years to nearly 35,000*l.*

Meanwhile on 30 May 1879 Lord Beaconsfield nominated Fleming to a residentiary canonry in York Minster (see *Debate in House of Lords*, 16 June 1879). William Thomson [q. v.], archbishop of York, made

him successor on 20 Aug. 1881, and precentor with a prebendal stall on 3 Jan. 1883. In 1880 Lord Beaconsfield was inclined to appoint him first bishop of Liverpool, but local pressure caused John Charles Ryle [q. v. Suppl. I] to be preferred. He afterwards declined the bishopric of Sydney with the primacy of Australia, Nov. 1884 [see BARRY, ALFRED, Suppl. II], and from reasons of income Lord Salisbury's successive offers of the deaneries of Chester (20 Dec. 1885) and of Norwich (6 May 1889). Honorary chaplain to Queen Victoria (1876) and chaplain in ordinary to her (1880) and to Edward VII (1901), Fleming from 1879 preached almost yearly before Queen Victoria, and before Edward VII, when Prince of Wales, at Sandringham. On 24 Jan. 1892 he preached at Sandringham the sermon in memory of the Duke of Clarence [see ALBERT VICTOR CHRISTIAN EDWARD, Suppl. I], which was published as 'Recognition in Eternity,' and had a continuous sale, reaching in 1911 to about 67,000 copies. The author's profits, amounting by May 1911 to 1725*l.*, were distributed between two charities named by Queen Alexandra—the Gordon Boys' Home and the British Home and Hospital for Incurables. From 1880 Fleming was Whitehead professor of preaching and elocution at the London College of Divinity (St. John's Hall, Highbury). Three times—1901, 1903, and 1907—he was appointed William Jones lecturer (sometimes called the Golden lectureship) by the Haberdashers' Company. Fleming, who early in 1877 denounced the 'folly, obstinacy, and contumacy' of the ritualists in 'The Times' (25 Jan. 1877), ceased to wear the black gown in the pulpit after the judgment in *Clifton v. Ridsdale* (12 May 1877). But his suspicion of ritualism increased with his years (*cf.* MRS. CREIGHTON'S *Life and Letters of Mandell Creighton*, ii. 308-309). In later life he supported the protestant agitation of John Kensit [q. v. Suppl. II]. His personal relations with C. H. Spurgeon [q. v.], William Morley Punshon [q. v.], and other nonconformist leaders were very cordial. Fleming died at St. Michael's Vicarage on 1 Sept. 1908, and was buried at Kensal Green cemetery. A reredos and choir stalls in memory of him were placed in St. Michael's (1911), and a statue of King Edwyn in York Minster. He married, on 21 June 1853, at Holy Trinity, Brompton, Grace, elder daughter of Admiral Purcell, who died on 25 May 1903. They had three sons and three daughters. A cartoon portrait

of Fleming by 'Spy' appeared in 'Vanity Fair' in 1889.

Fleming's personal charm and grace of speech made him popular, but he was neither a student nor a thinker. 'The Stolen Sermon, or Canon Fleming's Theft,' a pamphlet issued in 1887 (embodying an article in the 'Weekly Churchman,' 6 May), showed that one of two sermons by Fleming, published as 'Science and the Bible' (1886), reproduced almost verbatim 'The Bible Right,' a sermon by Dr. Talmage ('Fifty Sermons,' 2nd series, 2nd edit. 1876, pp. 312-21). Fleming explained in a published letter that he had inadvertently transferred Dr. Talmage's sermon from his common-place book. Apart from some twenty separate sermons, chiefly for special occasions, Fleming published a useful manual on 'The Art of Reading and Speaking' (1896) and 'Our Gracious Queen Alexandra' (1901) for the Religious Tract Society.

[A. R. M. Finlayson, Life of Canon Fleming, 1909; The Times, 2 Sept. 1908; Record, 4 Sept. 1908; Guardian, 2 and 9 Sept. 1908; Crockford, Clerical Directory, 1908.]

E. H. P.

FLETCHER, JAMES (1852-1908), naturalist, born at Ashe, near Wrotham, Kent, England, on 28 March 1852, was second son of Joseph Flitcroft Fletcher by his wife Mary Ann Hayward. The eldest son, Flitcroft Fletcher, was an artist who exhibited five pictures at the Royal Academy (1882-6), dying at the age of thirty-six. Fletcher was educated at King's School, Rochester, and joined the Bank of British North America in London in 1871. In 1874 he was transferred to Canada and stationed at Montreal. In 1875 he entered the Ottawa office of the bank, and, resigning in May 1876, was employed in the library of parliament until 1 July 1887. Fletcher, whose leisure was devoted to the study of botany and entomology, was then appointed entomologist and botanist to the recently organised Dominion experimental farms. Since 1884 he had acted as Dominion entomologist in the department of agriculture. Elected a fellow of the Linnæan Society on 3 June 1886 and a member of the Entomological Society of America and other scientific societies, he was one of the founders of the Ottawa Field Naturalists' Club. At his death he was president of the Entomological Society of Ontario, and honorary secretary of the Royal Society of Canada. In 1896 he received the honorary degree of LL.D. from Queen's University.

Fletcher was a voluminous writer. To the 'Transactions' of the Ottawa Field Naturalists' Club he contributed a 'Flora Ottawaensis,' and with George H. Clark he published 'Farm Weeds of Canada' (1906). Valuable papers on injurious insects and on the diurnal *lepidoptera* appeared at intervals. Seventeen species of butterflies bear his name. He died at Montreal on 8 Nov. 1908, and is buried in Beechwood cemetery, Ottawa.

He married in 1879 Eleanor Gertrude, eldest daughter of Collingwood Schreiber, C.M.G., Ottawa, by whom he had two daughters.

The Ottawa Field Naturalists' Club erected in his memory a drinking-fountain with bronze medallion at the experimental farm, and had a portrait painted by Franklyn Brownell, R.C.A., which now hangs in the Ottawa public library.

[Information supplied by Fletcher's daughter, Mrs. R. S. Lake; memorial notices by the Ottawa Field Naturalists' Club in The Ottawa Naturalist, vol. xxii, No. 10, Jan. 1909.]

P. E.

FLINT, ROBERT (1838-1910), philosopher and theologian, born near Dumfries on 14 March 1838, was the son of Robert Flint, at that time a farm overseer, by his wife (born Johnston). His first school was at Moffat. In 1852 he entered Glasgow University, where he distinguished himself (without graduating) in arts and divinity. Having been employed as a lay missionary by the 'Elders' Association' of Glasgow, he was licensed to preach in 1858, and for a short time acted as assistant to Norman Macleod the younger [q. v.], at the Barony Church, Glasgow. He was minister of the East Church, Aberdeen (1859-62) and of Kilconquhar, Fife (1862-4), a country parish, which gave him leisure for study, improved by visits to Germany. On the death of James Frederick Ferrier [q. v.] in 1864 Flint was elected to succeed him in the moral philosophy chair at St. Andrews University, among the competing candidates being Thomas Hill Green [q. v.]. This chair he held till 1876, when he succeeded Thomas Jackson Crawford [q. v.] in the divinity chair of Edinburgh University. On this appointment he was made LL.D. of Glasgow and D.D. of Edinburgh. Thomas Chalmers [q. v.] had similarly migrated from the one chair to the other. Flint was appointed to a number of foundation lectureships. He was Baird lecturer (1876-7); in 1880 he crossed to America, and delivered a course

as Stone lecturer at Princeton; in 1887-8 he was Croall lecturer. He was elected on 21 May 1883 corresponding member of the Institute of France (*Académie des sciences morales et politiques*), and was a fellow of the Royal Society of Edinburgh. He resigned his chair to devote himself to literary work, a purpose hampered by failing health. For some time he lived at Musselburgh. He delivered the Gifford lectures in 1908-9. He died, unmarried, at his residence, 3 Royal Terrace, Edinburgh, on 25 Nov. 1910.

Flint was in person spare but well knit; his pale features were an expression of self-command; his dark moustache gave distinction to his clerical garb. He had few intimates, and lived much of his life apart, devoted to his studies, always a hard reader, of extraordinary diligence in research and facile power of mastery. He had no taste for amusements, country walks being his one recreation. With his students he was popular, for he was patient and kind; yet it is said that of them all only two were ever privileged to accompany him in his walks. His methods were deliberate, his composition slow and sure in a small and neat handwriting, his speech measured and with some peculiarities of enunciation, e.g. 'awtoms,' 'know-ledge.' All his work was planned on a large scale; the cycle of his divinity lectures extended to seven sessions; his best-known books, complete in themselves, were parts of wider schemes; his sermons have been described as of 'magnificent length and toughness'; that his preaching was highly esteemed was due to his easy grasp of his subject, the elevation of his treatment, his straightforward style, and the convincing tones of his penetrating voice. As a thinker his characteristic was the confidence with which he brought all matters to the test of reason, trusting it as a guide to positive conclusions, and resting nothing on sentimental or prudential grounds. On lines of independent judgment he followed in the succession of Butler and Paley, welcoming every advance of physical science and speculative thought as enlarging the field for critical investigation and helping to clear the issue. His students were stimulated to the exercise of their own minds and to the attainment of a high intellectual standard. In church matters he kept aloof from many current controversies, but on occasion (1882) arguing strongly for the maintenance of the national church on a basis of 'mutual understanding, conciliation and peace.' In connection with the

Edinburgh University tercentenary in 1884, in a series of professorial portraits by William Hole, Flint is etched in knightly armour as champion of the common faith. On his retirement in 1903 his portrait, painted by Sir George Reid, was presented to him by his students; it is now in his sister's possession, but is ultimately to belong to the Edinburgh University.

He wrote: 1. 'The Earth is the Lord's,' 1859 (sermon, Ps. xxiv. 1, 2). 2. 'Christ's Kingdom upon Earth,' 1865 (sermons). 3. 'The Philosophy of History in [Europe] France and Germany,' 1874; translated into French by Professor Ludovic Carrau of Besançon. 4. 'Theism,' 1877 (Baird Lecture); 7th edit., 1889. 5. 'Antitheistic Theories,' 1879 (Baird Lecture); 3rd edit. 1885. 6. 'A Sermon,' Edinburgh, 1881 (on Rev. i. 5). 7. 'The Covenant, 1660 to 1690,' Edin. 1881 (lecture). 8. 'Christianity in relation to other Religions,' Edin. 1882 (lecture). 9. 'The Duties of the People of Scotland to the Church of Scotland,' Edin. 1882 (lectures). 10. 'Vico,' 1884 (critical biography of Giovanni Battista Vico). 11. 'The Claims of Divine Wisdom,' Edin. 1885 (sermon to young). 12. 'The Church Question in Scotland,' 1891. 13. 'History of the Philosophy of History,' Edin. 1893 (first section, 'Historical Philosophy in France and French Belgium and Switzerland,' 1893). 14. 'Socialism,' 1894; 2nd edit. 1908. 15. 'Hindu Pantheism,' 1897. 16. 'Sermons and Addresses,' 1899. 17. 'Agnosticism,' 1903 (Croall Lecture). 18. 'Philosophy as *Scientia Scientiarum*,' 1904. 19. 'On Theological, Biblical and other Subjects,' 1905. Besides these, he wrote many articles, especially those on 'Theism' and 'Theology,' in the ninth edition of the 'Encyclopædia Britannica.'

[Scotsman, and The Times, 26 Nov. 1910; Hew Scott's *Fasti Eccles. Scotie*. 1869, ii. 458; 1871, iii. 516; W. Hole, *Quasi Cursores*, 1884, 145, sq. (with portrait); Vapereau, *Dict. des Contemp.* 1893; W. I. Addison, *Roll of Graduates*, Univ. Glasg. 1898, 198; information from Mr. Andrew Clark, S.S.C.; personal recollection.] A. G.

FLOYER, ERNEST AYSCOGHE (1852-1903), explorer, born on 4 July 1852 at Marshchapel, Lincs., was eldest surviving son of the Rev. Ayscoghe Floyer (*d.* 1872) by his wife Louisa Sara (1830-1909), daughter of the Hon. Frederic John Shore of the Bengal Civil Service. His mother, who was granddaughter of John Shore, first Baron Teignmouth [q. v.], and survived her son, was

a pioneer in the movement for the systematic class teaching of plain needlework in English elementary schools, was inspector of needlework under the London school board, founder of the London Institution for Advancement of Plain Needlework, and author of several text-books upon the subject. After education at Charterhouse from 1865 until 1869, Floyer served for seven years in the Indian telegraph service, being stationed on the coast of the Persian Gulf. On receiving his long leave, in January 1876, he started for the unexplored interior of Baluchistan. His journeys there occupied him until May 1877, and his observations and surveys earned him a reputation as a bold and intelligent explorer. His results were published in 'Unexplored Baluchistan' (1882), with illustrations and map. The narrative describes a journey of exploration from Jask to Bampur; a tour in the Persian Gulf, visiting the island of Henjan and other places; and a journey of exploration from Jask to Kirman via Anguhran. There are appendices on dialects of Western Baluchistan and on plants collected. In January 1878 he was appointed inspector-general of Egyptian telegraphs, a post which he held until his death. He so administered the department as to convert an annual loss into a substantial annual surplus. He induced the government to devote a portion of this to experiments in the cultivation of trees and plants upon the soil of the desert. He took charge of these experiments in the capacity of director of plantations, state railways and telegraphs of Egypt. He cultivated successfully cactus for fibre, casuarina for telegraph poles, *Hyoscyamus muticus* yielding the alkaloid hyoscyamine, and other plants. Having discovered nitrate of soda in a clay in Upper Egypt, he was appointed by the government to superintend the process of its extraction. At the same time he engaged in exploration. In 1884 he made a journey from Halfa to Debba, and in 1887 surveyed two routes between the Nile and the Red Sea in about N. lat. 26°. In 1891 he was appointed by the Khedive to the command of an important expedition in a more southern part of the same desert (about N. lat. 24°). In this expedition he rediscovered the abandoned emerald mines of Sikait and Zabbara which had been worked at various epochs from early times. As the result of Floyer's report these mines were reopened. The outcome of this expedition, antiquarian, scientific, and economic, is fully described in his official publication, 'Étude sur la

Nord-Etbai entre le Nil and la Mer Rouge' (Cairo, 1893, 4to, with maps and illustrations). For services to the military authorities Floyer received the British medal 'Egypt, 1882,' with clasp 'The Nile, 1884-5,' and the Khedive's bronze star. Floyer, who was popular with his native employes, had a mastery of Arabic and possessed an ear for minute differences of dialect.

Floyer died at Cairo on 1 Dec. 1903. He married in 1887 Mary Louisa, eldest daughter of the Rev. William Richards Watson, rector of Saltfleetby St. Peter's, Lincolnshire, by whom he left three sons.

Floyer described his Egyptian explorations in 'The Mines of the Northern Etbai' ('Trans. Roy. Asiatic Soc.' Oct. 1892); 'Notes on the Geology of the Northern Etbai' ('Trans. Geol. Soc.' 1892, vol. xlviii.); 'Further Routes in the Eastern Desert of Egypt' ('Geogr. Journ.' May 1893); and 'Journeys in the Eastern Desert of Egypt' ('Proc. Roy. Geogr. Soc.' 1884 and 1887). To the 'Journal' of the 'Institut Egyptien' for 1894-6 he contributed many papers on antiquarian, botanical, and agricultural matters.

[Personal knowledge; Journ. Roy. Asiatic Soc. April 1904.] V. C.

FORBES, JAMES STAATS (1823-1904), railway manager and connoisseur, born at Aberdeen on 7 March 1823, was eldest of the six children of James Staats Forbes, a member of a Scottish family long settled in England, by his wife Ann Walker. A brother, William, became manager of the Midland Great Western railway of Ireland, and was father of William, who is general manager of the London, Brighton and South Coast railway, and of Stanhope Alexander Forbes, R.A. Educated at Woolwich, James was brought up in London as an engineer, and showing skill as a draughtsman, he entered in 1840 the office of Isambard Kingdom Brunel [q. v.], who was then constructing the Great Western line. Joining the Great Western Company's service, he reached by successive steps the post of chief goods manager at Paddington. He next secured an appointment on the staff of the Dutch-Rhenish railway, then under English management, and soon rose to the highest post, bringing the line, then on the verge of bankruptcy, into a state of comparative success. On his retirement the directors retained his partial services as their permanent adviser. In 1861 the directors of the London, Chatham and Dover railway (which, formed by amal-

gamation in 1859, was then in the hands of a receiver) made him their general manager. He had previously been offered, and had twice refused, the post of general manager of the Great Western railway at a salary of 10,000*l*.

Debt, confusion, pressing creditors, and lack of money menaced the Chatham and Dover company, which was fighting for its very existence against two powerful neighbours, the South Eastern and the London and Brighton lines. Under Forbes's skilful and daring leadership the line held its own, and in 1871 he joined the board of directors, succeeding in 1873 to the post of chairman, which he held jointly with that of general manager until 1 Jan. 1899. On the amalgamation, at that date, of the Chatham line with the South Eastern, Forbes declined the chairmanship of the joint boards, but acted as their adviser. In his management of the finances of his own company, his tact in presiding at meetings of shareholders, and the exceptionally good terms which he secured for the Chatham railway in the amalgamation, Forbes proved himself a skilled diplomatist of great ability.

He also restored the fortunes of another bankrupt concern, the Metropolitan District railway; joined its board on 6 Oct. 1870, was chairman from 28 Nov. 1872 to 5 Sept. 1901, and from that date to 17 Feb. 1903 advisory director. For twenty-five years (1870-95) the rivalry between Forbes of the Chatham and the District and Sir Edward Watkin [q. v. Suppl. II] of the South Eastern and the Metropolitan was a source of anxiety to the shareholders and of much profit to lawyers. Forbes was at a great disadvantage, his opponent having control over two concerns which were solvent and successful and being himself a railway strategist of a high order. But for the suavity of temper and charm of manner of his rival, Watkin would probably have succeeded in crushing the two younger and poorer companies.

Forbes was connected with several other railways, most of them needing help to bring them out of difficulties. He was director and at one time deputy-chairman of the Hull and Barnsley line, and financial adviser to a still more unfortunate line, the Didcot, Newbury and Southampton; he was chairman of the Whitechapel and Bow railway, and of the Regent's Canal City and Docks railway. This last line was incorporated in 1882 for the construction of a line along the Regent's Canal from Paddington to the docks, but no progress

has yet been made to carry out the scheme. His financial ability was widely in request. He was chairman of three important electric light companies, a director of the Lion Fire Insurance Company, and president of the National Telephone Company; from many of these boards he retired towards the end of his life.

Though a rigid economist, Forbes was always ready to introduce improvements when convinced that they were worth their cost. He adopted the block system, automatic brakes, and hydraulic stop blocks. To him were due the trials of the twin-ship system as represented by the Calais-Douvres, and he was largely responsible for the fine boats for the cross-Channel service belonging to the railway companies. Forbes excelled as an administrator on broad lines and in boldly taking an initiative, but had no taste for details. He was a frequent witness before Parliamentary Committees, and was a first-rate after-dinner speaker (cf. *Railway News*, 9 April 1904).

In September 1873, at a bye-election, he unsuccessfully contested Dover in the liberal interest, but did not again seek Parliamentary honours.

Forbes was much interested in art and, though his judgment was sometimes at fault, enjoyed a considerable reputation as a collector. His large collection of works of nineteenth-century artists included many examples of the Barbizon and modern Dutch schools. A selection (about one-twelfth) was exhibited at the Grafton Gallery in May 1905 (*Athenæum*, 27 May 1905, p. 664). A smaller exhibition, of which a printed catalogue appeared, was held in July 1908 at the Brighton Library and Art Gallery.

Forbes died on 5 April 1904 at his residence, Garden Corner, Chelsea Embankment, and was buried in the churchyard of West Wickham, Kent, the village where he formerly lived.

He married in 1851 Ann (*d.* 1901), daughter of John Bennett, by whom he had as surviving issue a son, Duncan, in the service of the Great Indian Peninsula railway, and two daughters, of whom Ann Bennett, the elder, married in 1897, as his second wife, Major-gen. Sir Charles Taylor Du Plat, K.C.B. (*d.* 1900).

There is a portrait of Forbes, executed in 1881, by Sir Hubert von Herkomer, and a marble bust (c. 1893) by Trentenior of Florence, both in the possession of his executors. A caricature by 'Spy' appeared in 'Vanity Fair' in 1900 (vol. xxxii. pl. 775).

[Authority above cited; Engineer, 8 April 1904; The Times, 6 April 1904; F. H. McCalmont, Parl. Poll Book, 7th edit. 1910, pt. 1, 87; Debrett; private information.]

C. W.

FORD, EDWARD ONSLOW (1852-1901), sculptor, born in Islington on 27 July 1852, was son of Edward Ford (d. 1864) by his wife Martha Lydia Gardner. His family moved to Blackheath while he was still a child. His father, who was in business in the City, died when he was barely twelve. After he had spent some time at Blackheath proprietary school, his mother determined that he should follow the strong bent towards art which he had already shown. She took him to Antwerp, where she sent him to the Academy as a student of painting. From Antwerp they moved after a time to Munich. There Ford studied under Wagnmüller, who advised him to transfer his attention to modelling, which he did. Before leaving Munich Ford married, in 1873, Anne Gwendoline, the third daughter of Baron Frans von Kreuzer.

On returning to this country about 1874 Ford settled at Blackheath, whence he sent a bust of his wife to the Royal Academy of 1875. This at once attracted attention, and from that time onward the sculptor's career was watched with interest. Beginning with the statue of Rowland Hill at the Royal Exchange (1881), his more important works are: 'Irving as Hamlet' (1883), in the Guildhall Art Gallery; 'Gordon' (1890), the group of the famous general mounted on a camel, of which examples are at Chatham and Khartoum; the Shelley memorial in University College, Oxford (1892); the equestrian statue of Lord Strathnairn at Knightsbridge (1895); and the memorial to Queen Victoria at Manchester (1901). Besides these monumental works Ford executed many busts, invariably marked by taste in conception, delicate modelling, and verisimilitude. The best, perhaps, are the heads of Millais, Huxley, Herbert Spencer, Orchardson, Matthew Ridley Corbett, the duke of Norfolk, Mr. Briton Riviere, Sir Lawrence Alma-Tadema, Sir Walter Armstrong, Sir Hubert von Herkomer, and M. Dagnan-Bouveret. Ford also modelled a series of bronze statuettes. In each of these he endeavoured to embody some playful fancy which was, occasionally, less sculptural than literary. The most successful, perhaps, of these are 'Folly' (bought by the Chantrey trustees and now in the Tate Gallery), 'The Singer,' 'Applause,' 'Peace,' and 'Echo.' He was one of the first English sculptors to publish small replicas

of his statues, which did much to extend his reputation.

Ford was elected A.R.A. in 1888 and R.A. in 1895, and became a corresponding member of the Institute of France. His example had much to do with that awakening of English sculpture in the last quarter of the nineteenth century which had its initial impulse in the teaching of Dalou at South Kensington and was helped by Ford's great personal popularity. Like most sculptors he was physically powerful, although of medium height, but, also like most sculptors, he overworked himself, and probably shortened his life by the energy with which he set about not only his own work but that of other people. On the death of Harry Bates [q. v. Suppl. I] he undertook to complete some of that artist's unfinished work, just at a time when commissions were coming in thick and fast to his own studio. About the middle of 1900 he was attacked by a dangerous form of heart disease, which left him, after a year of more or less precarious health, unable to resist the attack of pneumonia from which he died at 62 Acacia Road, N.W., on 23 Dec. 1901. He was buried at East Finchley. He was survived by his mother, his wife, four sons, and a daughter.

The best portrait of Onslow Ford is a head by John Macallan Swan [q. v. Suppl. II], which is the property of the painter's widow. He was also painted by Mr. Arthur Hacker, R.A., Sir Hubert von Herkomer, R.A., Mr. J. McLure Hamilton, and others. A memorial obelisk, including a medallion portrait in profile by A. C. Lucchesi and a replica of Ford's own figure of Poetry from the Shelley memorial, was set up at the junction of Grove End Road with Abbey Road, in St. John's Wood.

[The Times, 26 Dec. 1901; Men and Women of the Time; personal knowledge.]

W. A.

FORD, WILLIAM JUSTICE (1853-1904), cricketer and writer on cricket, the eldest of seven sons of William Augustus Ford, of Lincoln's Inn Fields, by his wife Katherine Mary Justice, was born in London on 7 Nov. 1853. Of his brothers, Augustus Frank Justice (b. 1858) and Francis Gilbertson Justice (b. 1866) distinguished themselves in Repton, Cambridge University, and Middlesex cricket, while a third, Lionel George Bridges Justice (b. 1865), became headmaster of Harrow in 1910. Educated at Eagle House, Wimbledon, and at Repton, where he played in the cricket eleven (1870-2), William entered

St. John's College, Cambridge, as minor scholar in 1872, became foundation scholar in 1874, and graduated B.A. with second-class classical honours in 1876, proceeding M.A. in 1878. He was a master at Marlborough College from 1877 to 1886, and from that year till 1889 was principal of Nelson College, New Zealand. On his return to England he became in April 1890 headmaster of Leamington college, from which he retired in 1893.

Of splendid physique (he was 6 ft. 3 in. in height and weighed in 1886 over 17 stone), Ford was as a cricketer one of the hardest hitters ever known, surpassed only by Mr. C. I. Thornton. His longest authenticated hit was 144 yards; in August 1885 at Maidstone he scored 44 runs in 17 minutes in the first innings, and 75 runs in 45 minutes in the second innings for Middlesex v. Kent. He was a slow round arm bowler and a good field at point. After retiring from his work as schoolmaster, he wrote much on cricket, publishing 'A Cricketer on Cricket' (1900); 'Middlesex County C.C. 1864-1899' (1900); and 'The Cambridge C.C. 1829-1901' (1902). He compiled the articles on 'Public School Cricket' for Wisden's 'Cricketers' Almanack' (1896-1904) and in Prince Ranjitsinhji's 'Jubilee Book of Cricket' (1897). He also contributed articles to the 'Cyclopædia of Sport' and to the 'Encyclopædia Britannica,' and the chapter on 'Pyramids and Pool' to the Badminton volume on 'Billiards.'

Ford died of pneumonia at Abingdon Mansions on 3 April 1904, and was buried at Kensal Green. He married in 1887 Miss K. M. Browning, of Nelson, New Zealand.

[The Times, 4 and 6 April 1904; Wisden's Cricketers' Almanack, 1905; Haygarth's Cricket Scores and Biographies, 1879, xii. 747; xiv. xcii; Cricket, 17 June 1886 (with portrait); J. Pyeroff's Cricket Chat, 1886 (with portrait).] W. B. O.

FORESTIER-WALKER, SIR FREDERICK WILLIAM EDWARD FORESTIER (1844-1910), general, born at Bushey on 17 April 1844, was eldest of the four sons of General Sir Edward Walter Forestier-Walker, K.C.B. (1812-1881), of the Manor House, Bushey, Hertfordshire, by his first wife, Lady Jane, only daughter of Francis Grant, sixth earl of Seafield. His grand-uncle was Sir George Townshend Walker, first baronet [q. v.]. Educated at the Royal Military College, Sandhurst, he entered the Scots Guards as lieutenant on 5 Sept. 1862, and was promoted captain on 11 July 1865.

In 1866-7 he served as A.D.C. to the major-general at Mauritius, and from 1869 to 1873 he was adjutant of his regiment. On 1 Feb. 1873 he became lieutenant-colonel, and afterwards he made his first acquaintance with South Africa, where he was thenceforth employed for the greater part of his active career. From 1873 to 1879 he was on the staff at the Cape of Good Hope acting as assistant military secretary to the general officer there. In that capacity, or on special service, he was engaged in much active warfare in South Africa. In 1875 he served in the expedition to Grigqualand West. During 1877-8 he was with lieut.-general Sir Arthur Cunynghame [q. v.] through the sixth Kaffir war. He was mentioned in despatches, and was made colonel on 15 Oct. 1878 and C.B. on 11 Nov. following. In the course of 1878 he became military secretary to Sir Bartle Frere, the high commissioner. Throughout the Zulu war of 1879, of which Frederic Augustus Thesiger, second baron Chelmsford [q. v. Suppl. II] was in chief command, Forestier-Walker was employed on special service. In the early stages of the campaign he was principal staff officer to No. 1 column, being present at the action of Inyezane and during the occupation of Ekowe. Subsequently he was on the line of communications and in command of Fort Pearson and the Lower Tugela district. He received the medal with clasp, and was mentioned in despatches (*Lond. Gaz.* 5 March, 18 May 1879). Returning to England, he was from 1 August to 14 Nov. 1882 assistant adjutant and quartermaster-general of the home district; but from 12 Nov. 1884 till Dec. 1885 he was again in South Africa, serving with the Bechuanaland expedition under Sir Charles Warren as assistant adjutant and quartermaster-general. He was nominated C.M.G. on 27 Jan. 1886 and major-general on 31 Dec. 1887. From 1 April 1889 to Dec. 1890 he served as brigadier-general at Aldershot, and from 19 Dec. 1890 to 30 Sept. 1895 he was major-general commanding the troops in Egypt. On 26 May 1894 he was created K.C.B. for his services in Egypt. Subsequently he was lieut.-general commanding the western district of England from 1 Nov. 1895 to 18 Aug. 1899, with headquarters at Devonport. Shortly before the outbreak of the second Boer war it was decided to recall Sir William Butler [q. v. Suppl. II] from the command of the forces at the Cape, and the appointment was offered at very short notice to Forestier-Walker, who accepted it.

He arrived at Cape Town on 6 Sept. 1899, and was there during the chief stages of the Boer war. Placed in command of the lines of communication, he performed his exceedingly important duties with his usual thoroughness. At the outset he had to provide for the defence of a frontier 1000 miles long, and was active in support of Sir Redvers Buller's advance. He was twice mentioned in despatches. On 18 April 1901 he handed over his post to Major-general Wynne, and embarked for England. On 7 July 1902 he attained the rank of general, and on 1 Sept. 1905 he succeeded Sir George White (1835-1912) as governor and commander-in-chief of Gibraltar, having just before, on 31 July of the same year, been nominated colonel of the King's Own Scottish Borderers. He received the reward for distinguished service in 1893, and was nominated G.C.M.G. in 1900.

He died from heart failure at Tenby on 30 Aug. 1910, and was buried at Bushey, Hertfordshire. In 1887 he married Mabel Louisa, daughter of Lieut.-colonel A. E. Ross, late Northumberland fusiliers, and left one son.

A caricature portrait by 'Spy' appeared in 'Vanity Fair' in 1902.

M. V.

FORSTER, HUGH OAKELEY ARNOLD-(1855-1909), secretary of state for war. [See **ARNOLD-FORSTER**.]

FORTESCUE, HUGH, third **EARL FORTESCUE** (1818-1905), eldest son of Hugh, second earl (1783-1861), by his first wife, Lady Susan (*d.* 1827), eldest daughter of Dudley Ryder, first earl of Harrowby, was born in London on 4 April 1818. A younger brother, Dudley Francis Fortescue (1820-1909), was M.P. for Andover (1857-1874) and a commissioner in lunacy (1867-1883). Known till his grandfather's death in 1841 as the Hon. Hugh Fortescue, and thenceforth till 1859 as Viscount Ebrington, he was educated at Harrow school and at Trinity College, Cambridge. He left the university in 1839 to become private secretary to his father, then lord-lieutenant of Ireland, and in 1840-1 he was private secretary to Lord Melbourne, the prime minister. Elected in 1841 M.P. for Plymouth in the whig interest, he held the seat for eleven years, having as his

opponent in 1843 the chartist, Henry Vincent [q. v.]. Declining to stand again for Plymouth, he unsuccessfully contested Barnstaple in 1852, the constituency being disfranchised for bribery two years later. In 1854 he was returned for Marylebone, and he held the seat until 1859, when, owing to ill-health, he resigned, and on 5 December was raised to the peerage in his father's barony of Fortescue. On his father's death on 14 Sept. 1861, he succeeded to the earldom.

Ebrington, who had advocated the repeal of the corn laws, was appointed a lord-in-waiting in the Russell government of 1846, and from 1847 to 1851 was secretary to the poor law board. He was also appointed a member (unpaid) of the Metropolitan Consolidated Commission on Sewers in 1847, and was its chairman (unpaid) in 1849-51. He had no place in the Aberdeen government, but taking great interest in the health of the soldiers during the war with Russia, he visited in 1856 the barracks and military hospitals. Contracting ophthalmia, he lost an eye, and seriously injured his health. His speeches strenuously advocated sanitary improvements in the army, and he spoke frequently on the reform of local government in London. After his elevation to the peerage, Fortescue took little part in parliamentary life. Though a liberal by tradition, he differed from Gladstone on the Eastern crisis of 1878-9, and sat on the cross benches. He declared himself a liberal unionist on the home rule controversy in 1886.

A social reformer of much earnestness, Lord Fortescue was the author of numerous addresses and pamphlets on local government, health in towns, middle-class education, and other subjects. They included 'Unhealthiness of Towns,' a lecture delivered in the Mechanics' Institute at Plymouth (1846); 'Representative Self-Government for the Metropolis,' a letter to Lord Palmerston (1854); 'Public Schools for the Middle Classes' (1864); an address to the section of statistics and economic science, British Association, Plymouth (1877); and an address read at the Sanitary Congress, Exeter (1880). 'Our Next Leap in the Dark,' on the franchise bill, a reprint from the 'Nineteenth Century' (1884), showed the drift of his political ideas. He favoured the extension of the powers given to county authorities under the Local Government Act of 1888, and advocated the establishment of a local university in Devonshire. He supported Frederick Temple, then bishop of Exeter [q. v. Suppl. II], in establishing the diocesan

conference, and spoke at its earlier meetings, besides subscribing liberally to schools and religious institutions. Fortescue, who was a good horseman, was the last man who habitually paid calls in London and made his way to the House of Lords on horseback. He encouraged stag-hunting, purchasing the reversion to the greater part of Exmoor on the death of Mr. F. W. Knight in 1897.

The earl died at Castle-hill, South Molton, on 10 Oct. 1905, having married on 11 March 1847 Georgiana Augusta Charlotte Caroline, eldest daughter of the Right Hon. George Lionel Dawson-Damer; she died on 8 Dec. 1866. Of his thirteen children, the eldest son, Hugh, is the fourth and present earl. Sir Seymour John, formerly captain R.N., served in Egypt in 1882 and at Suakin in 1885, and was an equerry-in-waiting to King Edward VII; Lionel Henry Dudley was killed in action near Pretoria on 11 June 1900, and John William is librarian at Windsor to King George V. A daughter, Lucy Eleanor, married Sir Michael Hicks-Beach, first Viscount St. Aldwyn.

A portrait in oils by Eden Upton Eddis (c. 1850) is in possession of the family at Castle-hill. A cartoon portrait of Earl Fortescue appeared in 'Vanity Fair' in 1881. A part of the chancel of Pilleigh, the church of the parish in which Castle-hill stands, was adorned in his memory.

[The Times, 11 Oct. 1905; private information.] L. C. S.

FOSTER, SIR CLEMENT LE NEVE (1841-1904), inspector of mines and professor of mining at the Royal School of Mines, was second son of Peter Le Neve Foster [q. v.], secretary to the Society of Arts from 1853 to 1879. His mother was Georgiana Elizabeth, daughter of the Rev. Clement Chevallier. Born at Camberwell on 23 March 1841, he was educated first at the collegiate school in Camberwell, and afterwards at the Collège Communal of Boulogne. In 1857 he graduated Bachelier ès Sciences of the empire of France. In the same year he entered the School of Mines in London, where he took many prizes and left a brilliant record. Thence he went to the mining school of Freiberg. In 1860 he was appointed on the geological survey of England, and for five years he was engaged in field work in Kent, Sussex, Derbyshire, and Yorkshire. His first scientific publication was a memoir prepared with William Topley on the valley of the Medway and the denudation of the weald, and was published in the 'Quarterly Journal of the Geological Society' (vol.

xxi). In 1865 he graduated D.Sc. at the University of London, and in the same year he resigned his post on the geological survey and became lecturer to the Miners' Association of Cornwall and Devon and secretary to the Royal Cornwall Polytechnic Society. In 1868 he was employed by the Khedive of Egypt on an exploring expedition to examine the mineral resources of the Sinaitic peninsula. He also reported in the same year on a Venezuelan goldfield, and from 1869 to 1872 he was engineer to a gold-mining company in Northern Italy. In 1872 he was nominated Inspector of Mines under the new Metalliferous Mines Regulation Act, being appointed to Cornwall. Eight years later—in 1880—he was transferred to North Wales, where he remained for twenty-one years. In 1890, on the death of Sir Warrington Smyth [q. v.], he became professor of mining at the Royal School of Mines, an office which he held concurrently with his inspectorship. He proved an excellent teacher. In 1897, as inspector of mines, he investigated the cause of an underground fire in the lead mine of Snaefell in the Isle of Man. The cage in which he had descended with an exploring party was jammed in the shaft, and the party was subjected to a process of slow poisoning by the carbon monoxide generated by the fire. All the contemporary accounts of this accident attest the courage with which, in the face of apparently certain death, Foster noted his own sensations for the benefit of science. Foster never recovered from the cardiac injury sustained during the process of gradual suffocation. For nearly a year he was incapacitated.

Besides his official work, Foster produced numerous reports, and advised on many questions connected with mining and mining legislation. He served on various departmental committees and royal commissions, including those for the Chicago and the St. Louis Exhibitions. He was a juror at the Inventions Exhibition in 1885, at Paris in 1867, 1878, 1889, and 1900, also at Chicago in 1893. He received the legion of honour for services at Paris in 1889; became F.R.S. in 1892, and was knighted in 1903. In 1901 he resigned the inspectorship, but the professorship he retained until his death, which took place on 19 April 1904, at Coleherne Court, Earl's Court. He was serving on the royal commission on coal supplies at the time.

Foster translated from the Dutch of P. Van Diest a work on Banca and its tin stream works, learning the Dutch

language for the purpose (Truro, 1867), and in 1876, with William Galloway, he published a translation from the French of Prof. Callon's treatise on mining. His principal work was a textbook on 'Ore and Stone Mining' (1894; 7th edit. revised by Prof. S. Herbert Cox, 1910), and he wrote the article on Mining in the 9th edition of the 'Encyclopædia Britannica.' He was also author of a textbook on 'Mining and Quarrying' (1903) and of numerous memoirs and papers in the 'Proceedings' of the Geological and other scientific societies and in various scientific periodicals. From 1894 he edited the mineral statistics issued by the home office, and the annual reports on mines and quarries. While he achieved considerable reputation as a geologist and metallurgist, it was as a miner and a mining expert that he was really eminent. Though at the beginning of his inspectorship his energy in imposing novel restrictions and in insisting on the reform and improvement of existing methods was little appreciated by the mining community, he ultimately won in both his districts the esteem alike of miners and mine-owners.

He married in 1872 his cousin, Sophia Chevallier, second daughter of Arthur F. Tompson of Belton, Suffolk, and had one son and two daughters. His widow received a civil list pension of 100*l.* in Aug. 1904.

[Proc. Roy. Soc. lxxv. 371 (by Prof. Judd); Nature, 28 April 1904 (by Hilary Bauerman); Journal of Soc. of Arts, 29 April 1904 (by the present writer); Trans. American Soc. of Mining Engineers, vol. 35 (1904), p. 662; Engineer, 22 April 1904.] H. T. W.

FOSTER, JOSEPH (1844-1905), genealogist, born at Sunnyside, Sunderland, on 9 March 1844, was eldest of five sons and three daughters of Joseph Foster, a woollen draper of Bishop Wearmouth, by his wife Elizabeth, daughter of Emanuel Taylor. Myles Birket Foster, founder of the London bottling firm of M. B. Foster & Sons, was his grandfather, and Myles Birket Foster [q. v. Suppl. I], the water-colour painter, was his uncle. His ancestors were members of the Society of Friends from the earliest times until the resignation of his father a few years before his birth. Educated privately at North Shields, Sunderland and Newcastle, Foster began business in London as a printer, but soon abandoned it for genealogical research, to which he had devoted his leisure from an early age. To that pursuit he henceforth gave up all his time with self-denying enthusiasm and industry.

Foster's genealogical works began with pedigrees of the quaker families of Foster and Forster (1862; 2nd edit. 1871); of Wilson of High Wray and Kendal (1871); and of Fox of Falmouth with the Crokers of Lineham (1872), all of which were printed privately. There followed later pedigrees of the families of Pease, Harris, and Backhouse, as well as of Raikes.

In 1873 he projected his 'Pedigrees of the County Families of England.' The first volume, 'Lancashire Families,' appeared in that year, and it was followed by three volumes of 'Yorkshire Families' (1874). He printed 'Glover's Visitation of Yorkshire' in 1875; in 1877 there appeared his 'Stemmata Britannica,' part only of a collection of pedigrees of untitled gentry, and in 1878 the 'Pedigree of Sir John Pennington, Fifth Lord Muncaster.'

In 1879 he published, in collaboration with Mr. Edward Bellasis, Blue Mantle, his laborious 'Peerage, Baronetage and Knightage.' Foster pursued the main methods of Sir Bernard Burke's work; but aiming at greater accuracy, he exposed mythical ancestries, and placed in a section entitled 'Chaos' baronetcies of doubtful creation. Foster's undertaking was violently attacked by Stephen Tucker, Rouge Croix, in the 'Genealogist,' iv. 64, on account, principally, of its heraldry, and Foster and his colleague Bellasis defended themselves in a pamphlet, 'A Review of a Review of Joseph Foster's Peerage.' 'The Peerage,' which was re-issued in 1881, 1882, and 1883, was ultimately amalgamated with Lodge's, which adopted much of its form.

In 1881 Foster established a periodical entitled 'Collectanea Genealogica et Heraldica,' which appeared at irregular intervals up to 1888. There he printed serially transcriptions of legal and other registers and genealogical researches, some of which (i.e. 'Members of Parliament, Scotland') (1882) were re-issued separately, and others were left uncompleted. In the periodical there also appeared much trenchant criticism and exposure of current genealogical myths, in which Foster had the assistance of Dr. J. Horace Round.

Meanwhile Foster, with heroic labour, transcribed the admission registers of the Inns of Court, and the institutions to livings since the Reformation. Some fruits of this labour were published in 'Men at the Bar: a Biographical Hand-List' (1888); 'Admissions to Gray's Inn, and Marriages in Gray's Inn Chapel' (1889); and 'Index Ecclesiasticus: or Alphabetical Lists of all Ecclesiastical

Dignitaries in England and Wales, 1800-1840' (1890).

In 1885 Foster undertook to edit for publication the transcripts by Joseph Lemuel Chester [q. v.] of the 'Oxford Matriculation Register,' and the 'Bishop of London's Register of Marriage Licences,' which had become the property of Mr. Bernard Quaritch. Foster copiously supplemented Chester's work from his own independent researches. The 'Oxford Matriculation Register,' alphabetically arranged, was published in eight volumes under the title 'Alumni Oxonienses'; four volumes, covering the period 1715-1886, appeared in 1887, and another four volumes, covering the period 1500-1714, in 1891. By way of recognition of this service the university gave him the honorary degree of M.A. in 1892. Next year he carried his work a stage further in 'Oxford Men and their Colleges.' 'London Marriage Licences' (1521-1869) was published from Chester's transcript in 1887.

In later life Foster wrote much on heraldry. There appeared in 1897 his 'Concerning the Beginnings of Heraldry as related to Untitled Persons.' To a series of volumes, issued under the auspices of the eighth Lord Howard de Walden and called the 'De Walden Library,' Foster contributed 'Some Feudal Coats of Arms from Heraldic Rolls' (1902); 'A Tudor Book of Arms,' 'Some Feudal Lords and their Seals,' and 'Banners, Standards and Badges' (1904). Foster's heraldic work was severely censured by Mr. Oswald Barron, editor of the 'Ancestor,' to whose strictures he replied in two pamphlets, 'A Herald Extraordinary' and 'A Comedy of Errors from Ancestor III' (1902-3).

Foster's work met with very little support in his lifetime, though some of his compilations are of great and permanent value. He was not a scholarly archaeologist, but his energy as a transcriber and collector of genealogical data has few parallels in recent times.

He died at his residence, 21 Boundary Road, St. John's Wood, on 29 July 1905, being buried at Kensal Green cemetery. His name is also inscribed on a memorial stone in Bishop Wearmouth cemetery. He married, on 12 Aug. 1869, Catherine Clark, eldest daughter of George Pocock of Burgess Hill, Sussex, and by her had two sons and three daughters.

Foster's library of books and manuscripts, many of them plentifully annotated, was privately dispersed at his death. Four volumes of grants of arms were secured for

the British Museum, Add. MSS. 37147-37150.

Besides the works mentioned, Foster's publications include: 1. 'Our Noble and Gentle Families of Royal Descent,' 2 vols. 4to. 1883; large edit. 1885. 2. 'Noble and Gentle Families entitled to Quarter Royal Arms,' 1895. He also edited 'Visitation Pedigrees' for Durham (1887), for Middlesex (1889), for Northumberland (1891), and for Cumberland and Westmorland (1891).

[Allibone's Dict. Suppl. 1891; Brit. Mus. Cat.; The Times, 1 Aug. 1905; private information.]

P. L.

FOSTER, SIR MICHAEL (1836-1907), professor of physiology in the University of Cambridge, born at Huntingdon on 8 March 1836, was eldest child in a family of three sons and seven daughters of Michael Foster, F.R.C.S., surgeon in Huntingdon, by his wife Mercy Cooper. Sir Michael's grandfather, John Foster, was a yeoman farmer of Holywell, Hertfordshire, with antiquarian tastes, who left to the British Museum a collection of coins found in his neighbourhood. The father was a baptist and his family lived in an atmosphere of fervent nonconformity. Foster was educated first at Huntingdon grammar school and later (1849-1852) at University College School, London. The religious tests demanded by the University of Cambridge stood in the way of his entering for a scholarship there. At the age of sixteen he matriculated at the University of London, and graduated B.A. in 1854 with the university scholarship in classics. Choosing his father's profession, Foster in 1854 began the study of science and medicine at University College. There in 1856 he obtained gold medals in anatomy and physiology, and in chemistry. In 1858 he proceeded M.B., and in 1859 M.D. of London University. The next two years were spent partly in medical study in Paris as well as at home, and partly in original investigation. Owing to threatenings of consumption he went on a sea voyage as surgeon on the steamship 'Union' without beneficial result. In 1861 he joined his father in practice in Huntingdon. His health improved, and in 1867 he accepted an invitation from Prof. Sharpey to become teacher in practical physiology in University College, London. There he rapidly showed his practical gifts as a teacher. Two years later he was appointed professor in the same subject, and he succeeded Huxley as Fullerian professor

of physiology at the Royal Institution. In 1870 he left London for Cambridge, on his appointment, chiefly on Huxley's recommendation, to the new post of praelector of physiology in Trinity College. In 1883 he was appointed professor of physiology in the University. An honorary M.A. degree was conferred on him in 1873 and the complete degree in 1884. In 1872 he was elected F.R.S., and became one of the general secretaries of the British Association, a post which he resigned after four years, though he continued throughout his life to take an active part in the working of the association. In 1881 he succeeded Huxley as biological secretary of the Royal Society, an office which he held for twenty-two years. In 1899 he was president of the British Association, and in the same year was created K.C.B. In 1900 he was elected M.P. for the University of London, and this led him to apply for a deputy to perform the duties of his Cambridge professorship, and three years later to his resignation. In politics Foster was a liberal, but on the introduction of Gladstone's home rule bill he joined the liberal unionists and gave a general support to the conservative government. On entering the House of Commons he sat at first on the government side of the house. He found himself unable to support the government in several of its measures, notably the education bill of 1902, and finally crossed the floor of the house, thenceforth voting with the liberal opposition. At the general election of 1906 he stood for the university as a liberal, and was defeated by 24 votes. On 28 Jan. 1907 he died suddenly from pneumo-thorax in London, and was buried in the cemetery at Huntingdon. For more than thirty years he had lived at Great Shelford near Cambridge, where he engaged with ardour in gardening.

Foster was twice married: (1) in 1863 to Georgina (*d.* 1869), daughter of Cyrus Edmunds, by whom he had two children, a son, Michael George Foster, M.D. (Camb.), practising at San Remo and at Harrogate, and a daughter, Mercy, wife of J. Tetley Rowe, Archdeacon of Rochester; (2) in 1872 to Margaret, daughter of George Rust of Cromwell House, Huntingdon.

Foster left his mark on his generation chiefly as a teacher, a writer of scientific works, and an organiser. As a teacher he had a large share in the development of the present method of making practical work in the laboratory an essential part of the courses in biological science. In his student days, zoology, botany, physi-

ology and histology—the latter two being generally regarded as insignificant parts of human anatomy—were taught by means of lectures and the exhibition of specimens, macroscopic or microscopic. Sharpey no doubt had somewhat extended this simple plan before he invited Foster to join him in London; but the first course of practical physiology given in England appears to have been that given by Foster. In 1870 Huxley instituted a course of practical biology, with Foster as one of his demonstrators. Foster's first care on coming to Cambridge was to introduce practical classes in physiology, physiological chemistry, histology, and biology, and these were soon followed by a class in embryology. In order to facilitate the conduct of these classes he co-operated with Burdon-Sanderson, Lauder Brunton, and Klein in writing a 'Text-Book for the Physiological Laboratory' (1873), with his pupil F. M. Balfour in writing 'The Elements of Embryology' (1874), and obtained the assistance of another of his pupils, John Newport Langley, in writing 'A Course of Elementary Practical Physiology' (1876), in which histology was included. His classes were the forerunners of those conducted in the laboratories of zoology and botany, subsequently established in Cambridge. The plan of teaching developed by Foster and by Huxley rapidly spread throughout Great Britain and America. Foster's belief in the value of direct observation of natural phenomena was accompanied by a belief in the virtue of research; and this he had a faculty of communicating to his pupils. It was through his influence that most of his early pupils devoted themselves to original inquiry. The earliest of these, H. N. Martin, became professor in Johns Hopkins University, U.S.A., and potently helped to develop biological research in America. Foster's many occupations prevented him taking a leading position as an original investigator (*cf.* *Journal of Physiology* xxxv. 233 for an account of his work). The experimental trend of his mind was shown in his main, and almost sole, relaxation—gardening. He hybridised several plants, but chiefly irises, and in these chiefly the oncoecyclus section. Now and again he published a short article in one of the horticultural journals (*cf.* *The Garden*, 15 Nov. 1890, 18 Feb. 1893), but a good many of his hybrids he left undescribed.

Foster's 'Text-Book of Physiology,' published in 1876, gave a critical account of the state of physiology at the time;

FOWLER, THOMAS (1832–1904), president of Corpus Christi College, Oxford, born at Burton-Stather, Lincolnshire, on 1 Sept. 1832, was eldest son of William Henry Fowler, by his wife Mary Anne Welch. His intellectual development owed much in youth to his uncle by marriage, Joseph Fowler of Winterton (son of William Fowler of Winterton [q. v.]), who had married his father's sister. There was no known kinship between the two families of the same name.

After attending the Hull grammar school and the private school of R. Ousby, curate of Kirton-in-Lindsey, he entered as a day-boy, in January 1848, King William's College, Isle of Man, and was promoted to the head-form in August. Among his school-fellows were Dean Farrar [q. v. Suppl. II], Professor Beesly, and the poet Thomas Edward Brown [q. v. Suppl. I], who, although a year and a half Fowler's senior, formed with him a life-long friendship (cf. *Letters of T. E. Brown*, with memoir by S. T. Irwin, i. 20). In half-holiday walks with Brown, Fowler began to cultivate that eye for beauty in nature which always stimulated his zest for travel. On 31 May 1850 he matriculated at Oxford, aged seventeen, as postmaster of Merton College. Brown was already at Christ Church. In 1852 Fowler obtained a first class in mathematical, and a second class in classical, moderations; and in the final examinations of 1854 a first in classics and a first in mathematics. In the same mathematical first classes was his friend Charles Lutwidge Dodgson (Lewis Carroll) [q. v. Suppl. I]; together the two read mathematics privately with Professor Bartholomew Price [q. v.].

As an undergraduate Fowler was in full sympathy with the 'Oxford movement'; but about 1854, when he graduated B.A., he gave up his tractarian opinions and connections, as well as the conservative political views in which he had been brought up, and adopted in permanence liberal, but moderate, opinions in theology and politics. In 1855 he was ordained, and became fellow and tutor, and in 1857 sub-rector of Lincoln College. In 1858 he won the Denyer theological prize for an essay on 'The Doctrine of Predestination according to the Church of England.'

It was during the twenty-six years of his residence in Lincoln College (1855–81) that he made his name as teacher, writer, and man of affairs. As proctor in 1862 he first came into close touch with university business. Thenceforth he took a

leading part in it, either as member of Congregation and of the Hebdomadal Council, or as delegate of the Clarendon Press, the Museum, and the Common University Fund. His common sense, disinterestedness, bonhomie, and breadth and clearness of view account for his influence. His opinions on university reform received early direction from Mark Pattison [q. v.], fellow of his college. Fowler gave evidence before the University of Oxford commissioners on 26 Oct. 1877 (*Minutes of Evidence taken before the University of Oxford Commissioners*, part i. pp. 92–97) on lines which followed Pattison's 'Suggestions on Academic Organisation' (1868). 'I advocate,' he said, 'a transference of the more advanced teaching from the colleges to the university on the grounds that (1) it would tend to create a more learned class of teachers; (2) it would remedy certain gross defects in our present system of education [he refers here to the immaturity of teachers, and the subjection of teachers and taught to examinations]; and (3) it would establish a hierarchy of teachers [cf. his evidence before university commissioners 11 March 1873], the places in which could be determined by literary and educational merit.' In active co-operation with Dean Liddell, J. M. Wilson, Dean Stanley, Jowett, and others, Fowler played an effective part in promoting the important series of reforms which included the establishment of natural science as a subject of serious study in the university, the removal of tests, and the various provisions, financial and other, made by the commissioners of 1877, especially those by which a career at Oxford was opened to men willing to devote themselves to study and teaching.

As a teacher Fowler excelled in the small conversational lecture and especially in the 'private hour,' to which he devoted much time with individual pupils, trying to make them read and think for themselves. One of his earliest pupils at Lincoln was John (afterwards Viscount) Morley. Fowler was public examiner in the final classical school (1864–6, 1869–70, 1873 and 1878–9); and he was select preacher (1872–4). Fowler was professor of logic from 1873 to 1889. He had previously published 'The Elements of Deductive Logic' (1867; 10th edit. 1892) and 'The Elements of Inductive Logic' (1870; 6th edit. 1892), a manual which follows the lines of Mill's 'Logic' with independence and lucidity. While professor, Fowler made his chief contributions to

literature. His edition of Bacon's 'Novum Organum,' which came out in 1878 (2nd edit. 1889), contains a valuable commentary on the text; the introduction clearly presents Bacon's place in the history of thought, and embodies much bibliographical research, for which Fowler had an aptitude. His monograph 'Locke' ('English Men of Letters' series, 1880) is notable for the historical setting of philosophical ideas, a feature already anticipated in his Denyer prize essay. An edition of 'Locke's Conduct of the Understanding, with Introduction,' followed (1881; new edit. 1901); monographs on 'Francis Bacon' (1881) and 'Shaftesbury and Hutcheson' (1882) appeared in the 'English Philosophers' series; the latter contains interesting new matter from the 'Shaftesbury Papers.'

'Progressive Morality' (1884; 2nd edit. 1895) is a short work remarkable for the insight with which moral experience is probed and analysed, always with the practical end in view of discovering principles which may be helpful for the education of character. Of 'The Principles of Morals,' part i. was in print as early as 1875, but was first published in 1886 in the joint names of John Matthias Wilson [q. v.] and Fowler; part ii. (the larger part) came out in Fowler's name alone (see prefaces to the two volumes and art. WILSON, JOHN MATTHIAS). Like 'Progressive Morality,' 'The Principles of Morals' is of permanent value; it expresses, with a difference due to the altered circumstances of the nineteenth century, the philosophical temper and outlook of the great English moralists of the eighteenth century, and retains a flavour of their style. Exactness, and even elegance, of style, very noticeable in the sermons which he preached at St. Mary's, mark all Fowler's writings.

On 23 December 1881 Fowler was elected president of Corpus Christi College, in succession to his friend Wilson. Fowler entered thoroughly into the life of his new college, writing its history, making himself fully acquainted with its educational needs and its finance, piloting it skilfully through the difficulties of the period of transition which followed 1882, when the statutes made by the commissioners of 1877 came into operation, and winning the esteem and affection of seniors and juniors. His exhaustive 'History of Corpus,' published in 1893 (Oxford Historical Society), is of special interest as the history of a 'Renaissance Foundation.' In

1898 he issued a less elaborate account of the college in the 'Oxford College Histories' series, and between 1889 and 1900 he wrote a series of articles for this Dictionary on Corpus men of mark from Fox, the founder, to J. M. Wilson, his predecessor in the presidency. To this Dictionary he also contributed articles on the philosophical work of Bacon and Richard Price.

From 1899 till 1901 Fowler was vice-chancellor of the university. The work of the office was exceptionally heavy. The Boer war was in progress, and he as vice-chancellor, by arrangement with the war office, was charged with the duty of selecting for commissions in the army young university men ready to go to the front. From the strain of inquiry and correspondence involved his health never recovered. Largely through his influence the opposition in Oxford to conferring the honorary degree of D.C.L. at the encaenia of 1899 upon Cecil Rhodes, whose munificent endowment the university a few years after began to enjoy, proved innocuous.

Fowler, who was made F.S.A. in 1873, and hon. LL.D. of Edinburgh in 1882, proceeded to the degree of D.D. in 1886; and was elected hon. fellow of Lincoln in 1900. He died unmarried in his house at Corpus on 20 Nov. 1904, and was buried in the cemetery at Winterton. In the church there a choir-screen, with inscription, was erected to his memory; and there is a tablet in the cloister of Corpus. By his will he was a benefactor of the three colleges, Merton, Lincoln, and Corpus, with which he had been connected. A cartoon portrait by E. T. D. appeared in 'Vanity Fair' in 1889 (xxx. 763).

Irwin, 2 vols. 1900; Correspondence of William Fowler of Winterton in the county of Lincoln, ed. by his grandson Canon Fowler of Durham, 1907; Crockford, 1903; Who's Who, 1903; Minutes of Evidence taken before the University of Oxford Commissioners (of 1877), part i. pp. 92-97 (Fowler's evidence taken 11 March 1873 and 26 Oct. 1877); private information supplied by his cousin, Canon Fowler, and others; personal knowledge.] J. A. S.

FWOLVER, SIR HENRY HARTLEY first VISCOUNT WOLVERHAMPTON (1830-1911), statesman, born in Sunderland on 16 May 1830, was the second son of Joseph Fowler, a Wesleyan minister, who was secretary of the Wesleyan conference in 1848, by

his third wife, Elizabeth McNeill, daughter of Alexander Laing of Glasgow, and step-daughter of John Hartley of Smethwick and Hunslet.

Educated at Woodhouse Grove school, a school for Methodist ministers' sons near Bradford, and at St. Saviour's grammar school, Southwark, he was intended for the university and the bar; but the premature death of his father made other plans necessary. Articled to Messrs. Hussey of London, he was admitted a solicitor in 1852. Meanwhile his mother on his father's death had settled in Wolverhampton, where her step-brother, John Hartley, was then living. There in 1855 Fowler joined her, and his long association with that city began. Next year he was taken into partnership there by Charles Corser, and remained a member of the firm until 1908. In 1876 he also entered into partnership with Sir Robert William Perks, becoming senior partner of the firm of Fowler, Perks & Co., London.

Fowler first showed his capacity for public life in municipal affairs. Owing to his vigour and grasp of business, he quickly made his mark in local administration, becoming mayor of Wolverhampton in 1863, and chairman of the first school board in 1870. Several important municipal schemes were carried largely owing to his zealous advocacy; he was also successful in opposing the introduction of politics into the municipal elections of the town. In 1892 his services to Wolverhampton were acknowledged by his being enrolled as the first freeman of the borough.

In addition to his municipal work Fowler took an active part in politics. A non-conformist liberal, he soon came to be recognised as a powerful representative of the party. At the great meeting which Gladstone addressed on the Eastern question at Birmingham on 31 May 1877 he was chosen to move one of the resolutions. His speech on that occasion deeply impressed Gladstone. It was not till 1880, however, that he entered parliament, when he was returned for Wolverhampton in the liberal interest as colleague of Charles Pelham Villiers [q. v.]. In 1885, when the borough was divided into three divisions, Fowler was re-elected for the eastern division, for which he sat until he was raised to the upper house in 1908.

In addition to his business capacity and masculine commonsense, he had a ready command of well-chosen language and the gift of lucidly presenting a complicated case. These qualities, combined with his straightforwardness and his moderation,

gained for him with exceptional rapidity the ear of the house. It soon became clear that he was marked out for office. A strong party man, yet moderate and cautious in the expression of his views, a good Wesleyan, yet one who, after the custom of the early methodists, always remained in communion with the Church of England, he was respected and trusted by both sides of the house. On 25 July 1881 he seconded the liberal amendment to Sir Michael Hicks-Beach's vote of censure on the government's conduct after Majuba. In 1884 he became under-secretary for home affairs in Gladstone's second administration, and two years later financial secretary to the treasury. On assuming the latter office he was sworn a member of the privy council.

When, in 1886, Gladstone took up the cause of home rule, it was thought that Fowler would follow Lord Hartington and Mr. Chamberlain in their opposition to the measure. In the event, however, possibly with some searchings of heart, he remained faithful to his chief; and in the debates on the second reading (29 May 1886) he made 'an admirably warm and convinced defence of the policy of the bill.' Lord Morley described him at the time as 'one of the best speakers in the house' (*Life of Gladstone*, iii. 336).

During the six years of opposition which followed the rejection of the home rule bill (1886-92), Fowler, by his keen criticism of the financial policy of the unionist government, strengthened his position not only as an authority on finance but as an excellent debater.

When Gladstone returned to office in Aug. 1892, Fowler became president of the local government board with a seat in the cabinet for the first time. To him fell the duty of piloting the parish councils bill through the house. This was his greatest legislative achievement. From the first he determined to secure as far as possible the co-operation of both sides of the house in improving the bill. He knew his subject thoroughly, and was at the same time fair, courteous, and conciliatory; and in the end he carried a most complicated measure without once himself moving the closure.

On the reconstruction of the ministry in 1894 by Lord Rosebery, Fowler received promotion, becoming secretary of state for India. The appointment excited some cavil, but no previous secretary of state was in greater sympathy with her interests and the imperial questions involved. The chief

events of his short tenure of the Indian secretaryship were the Chitral campaign in April 1895 and the revolt of the Lancashire members, led by Sir Henry James, against the reimposition of duties on cotton goods imported into India. In the debate on these duties Fowler made the speech of his life (5 Feb. 1895). He explained that the duties would not be protective because they would be accompanied by a counter-vailing excise, and he pleaded that parliament in adopting the duties would be acting for the people of India who could not act for themselves. The speech, which contained the memorable phrase 'Every member of this house is a member for India,' was one of those rare displays of argument and eloquence which affect votes. The cabinet was tottering when he rose to speak; when he sat down the situation was saved, and the government had a majority of 195. When asked subsequently whether he knew, while speaking, the effect he was producing, he replied 'The best part of that speech was never spoken; I saw that I had the house with me—and I sat down!' In June 1895 the government resigned after being defeated on the cordite vote, and Fowler received the G.C.S.I., in accordance, it is understood, with the wishes of Queen Victoria.

During the ten years of opposition which followed, Fowler was not a frequent speaker in the house. He devoted himself to his private affairs, and interested himself especially in the development of the telephone system. He was appointed director of the National Telephone Company in 1897, becoming president in 1901. Yet when Sir William Harcourt [q. v. Suppl. II] retired from the leadership of the liberal party in the House of Commons in Dec. 1898 Fowler's claims to the succession were seriously urged. The 'Spectator' (17 Dec. 1898) described him as 'a man thoroughly capable of directing the policy of his party, and, what is more, able, if need be, to govern the country with power and discretion.'

In the distracted councils of the liberal party which followed, Sir Henry was a strong supporter of Lord Rosebery, and was one of the vice-presidents of the Liberal League. He refused to join in the strictures of Sir Henry Campbell-Bannerman on the conduct of the Boer war, declaring that the war was 'just and inevitable.' While thus strengthening his position with moderate men on both sides, he incurred the hostility of the extreme radicals. But it was argued by many

of the party that had he been ten years younger and 'inoculated with a dash of audacity' he would have been chosen to supersede Sir Henry Campbell-Bannerman (Lucy's *Balfourian Parliament*, 93). When Mr. Chamberlain startled the country with the tariff reform proposals in 1903, and thereby closed up the ranks of the liberal party, Fowler, as was natural in an old colleague of Villiers, joined heartily in the defence of free trade.

In the liberal administration which was formed in Dec. 1905, Sir Henry, feeling the burden of his seventy-five years, waived his claim to a secretaryship of state, and accepted the comparatively light office of chancellor of the duchy of Lancaster. His inclusion in the cabinet was welcomed by moderate men, who hoped that he would exercise a moderating influence on his younger and less cautious colleagues. But though, in Lord Rosebery's words, he probably gave the cabinet 'the soundest and most sagacious advice,' it is doubtful to what extent it was followed. He took little part in debate. The strain of constant attendance in the House of Commons told on him, but his business-like administration of the affairs of the duchy met with the warm approval of the sovereign. In March 1908, on Sir Henry Campbell-Bannerman's resignation, Mr. Asquith formed a ministry in which Fowler retained his former post. But he took the opportunity of leaving the lower house. On 13 April 1908 he was raised to the peerage as Viscount Wolverhampton, taking his seat in the upper house on the same day as his old friend, John Morley. Later in the same year (14 Oct.) he became lord president of the council. This was the culminating point of his political career, and was a remarkable position to have been won by a man who, aided by no adventitious circumstances, did not enter parliament until he was fifty, and owed everything there to intellect, resolution, and character.

Beyond taking charge of the old age pensions bill during 1908, Lord Wolverhampton took little part in debate in the House of Lords. In Oct. 1909 he received the honorary degree of LL.D. from the University of Birmingham, together with Mr. Balfour and other distinguished men, on the first occasion when the university conferred these degrees. Early in 1910 there were signs that his health was failing; both mind and memory were affected. With much in the advanced policy of the cabinet he was out of sympathy. But he retained

his post until his medical advisers insisted on his taking a prolonged holiday. He resigned on 16 June 1910.

With complete rest his health greatly improved, but the death of his wife at Woodthorne, Wolverhampton, on 6 Jan. 1911 completely prostrated him. He died at Woodthorne on 25 Feb. 1911, and was buried in Tettenhall churchyard.

Fowler married on 6 Oct. 1857 Ellen, youngest daughter of George Benjamin Thorneycroft of Chapel House, Wolverhampton, and Hadley Park, Shropshire. To her devotion and wise counsel he owed much. She was made Lady of the Order of the Crown of India in 1895. Lord Wolverhampton left one son, Henry Ernest, who became second viscount, and two daughters. The elder daughter, Ellen Thorneycroft Fowler (Mrs. Alfred Felkin), has under her maiden name won fame as the author of 'Concerning Isabel Carnaby' and other novels; her sister, Edith Henrietta, wife of the Rev. William Robert Hamilton, is also a novelist of repute, and has written the biography of her father (1912).

There are portraits of Lord Wolverhampton, painted by A. S. Cope, R.A., in the Town Hall, Wolverhampton, and in the hall of the Law Society, London. A replica of the first is in the possession of his son. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1892.

A. L. F.

FOX, SAMSON (1838-1903), inventor and benefactor, born at Bowling, near Bradford, Yorkshire, on 11 July 1838, was one of three sons of James Fox, a Leeds cloth-mill worker, by his wife Sarah Pearson. From the age of ten he worked with his father at the mill; but showing mechanical aptitude, was soon apprenticed to the Leeds firm of Smith, Beacock and Tannett, machine-tool makers, where he became foreman and later traveller. While there Fox designed and patented several tools for the machine cutting of bevelled gear and for the manufacture of trenails. Subsequently he started with his brother and another—Fox, Brother and Refitt—the Silver Cross engineering works for the manufacture of special machine tools. In 1874 he founded the Leeds Forge Company, and he acted as managing director until 1896 and was appointed chairman in May 1903. In 1877 he first patented the Fox corrugated boiler furnaces (by which the resisting

power to external pressure was greatly increased), the plates being hammered by means of swage blocks under a steam hammer. This invention led to the practical application of triple expansion engines to marine boilers. The steamship Pretoria, built in 1878, was the first ocean-going steamer to be fitted with Fox's corrugated flues. Machinery for rolling in place of hammering was undertaken in 1882, and a Siemens steel plant was laid down. In 1886 Fox took out patents for the manufacture of pressed steel underframes for railway wagons instead of the old wrought-iron frames. The demand for the improved form of rolling stock led to great extension of the business in Leeds, and to the establishment of a factory at Joliet, near Chicago. There the first pressed steel cars used in America were made, as well as the 'Fox' pressed steel bogie trucks. The American business grew rapidly and new works were erected at Pittsburg, which were merged in 1889 in the Pressed Steel Car Company. Fox became a member of the Institution of Mechanical Engineers in 1875 and of the Institution of Civil Engineers in 1881. A member of the Society of Arts from 1879, he was awarded in 1885 the society's Howard gold medal for his invention of corrugated iron flues.

By way of facilitating and lessening the cost of his manufacturing processes, Fox first employed in England water-gas on a large scale for metallurgical and lighting purposes. The plant which he set up in September 1887 was capable in six months of producing 40,000 cubic feet per hour of water-gas, which was cheaper than ordinary coal gas, and had a far greater heating and lighting power (*The Times*, 2 Jan. 1889). Of the British Water-Gas Syndicate, formed in 1888, Fox became president, but it went into liquidation in 1893. In 1894 Fox produced the first carbide of calcium for making acetylene gas by the method discovered by T. L. Willson in America in 1888. He was the pioneer of the acetylene industry in Europe, for which works were set up at Foyers, N.B.

An enthusiastic lover of music, Fox gave in 1889 the sum of 45,000*l.* for the new buildings of the Royal College of Music, South Kensington, which were opened by King Edward VII (then Prince of Wales) on 2 July 1894 (*The Times*, 23 May 1889; 17 July 1894; *Strand Musical Mag.* Feb. 1895; *Graves's Life of Sir George Grove*, 1903). Fox's benefaction gave rise in 1897 to a prolonged libel action, in which Fox was plaintiff, against Mr.

Jerome K. Jerome and the publishers of 'To-day' for printing articles in the paper (May-Aug. 1894 and Jan. 1896) which reflected on Fox's conduct of his business and accused Fox of giving large sums to the college in order to give a wrong impression of his commercial prosperity. After sixteen days' trial, verdict was found for plaintiff without costs, the defendants undertaking not to republish the libel (see *The Times*, 1 April-11 May 1897).

Fox took a leading part in the political and municipal life of Leeds, and was thrice in succession (1889-91) mayor of Harrogate, which he represented on the West Riding county council. He was J.P. for Leeds and Harrogate, and was a member of the Legion of Honour of France. On his return from a tour in Canada and America, Fox died of blood poisoning at Walsall on 24 Oct. 1903, and was buried at Woodhouse cemetery, Leeds. There is a marble bust portrait at the Royal College of Music; painted portraits are at Grove House, Harrogate, where Fox resided, and at Leeds Forge, Leeds. Fox married on 18 May 1859 Marie Ann, daughter of Charles and Alice Slinger, and left issue one son and two daughters.

[*The Times*, 26 Oct. 1903; *Proc. Inst. Civil Engineers*, 1903-4, vol. clv.; *Proc. Inst. Mechanical Engineers*, Oct.-Dec. 1903; *Journal, Soc. of Arts*, 13 Nov. 1903; notes from the Leeds Forge Company; private information.] W. B. O.

FOX BOURNE. [See **BOURNE, HENRY RICHARD FOX**, 1837-1909, social reformer and author.]

FOXWELL, ARTHUR (1853-1909), physician, born at Shepton Mallet, Somerset, on 13 July 1853, was a younger son of Thomas Somerton Foxwell of Shepton Mallet and Weston-super-Mare by his second wife Jane, daughter of William Handcock of Jersey. His elder brother, Herbert Somerton Foxwell, is now professor of political economy in the University of London.

From Queen's College, Taunton, Arthur passed to St. John's College, Cambridge, graduating B.A. with honours in natural science in 1877, M.B. with first class in medicine in 1881, and proceeding M.A. and M.D. in 1891. Meanwhile in 1873 he graduated B.A. at London with honours in English and moral science, and pursued his medical education at St. Thomas's Hospital, London. In 1881 he became M.R.C.S. London. He became a licentiate of the Royal College of Physicians, London, in 1881, a member in

1885, and a fellow in 1892. At the college in 1889 he read the Bradshawe lecture, which he published in 1899 under the title 'The Causation of Functional Murmurs,' in which he deduced from clinical and pathological experience of cases and elaborate experiments the conclusion that functional murmurs are caused by dilatation of the pulmonary artery immediately beyond the valve and are not due to change in the viscosity of the blood. This view is now generally accepted. During the winter of 1887-8 he studied at Vienna, chiefly diseases of the throat and ear.

After holding the posts of house physician at St. Thomas's Hospital (1881), clinical assistant at the Brompton Hospital (1882), and junior resident medical officer at the Manchester Children's Hospital, Pendlebury (1882-3), he was elected as resident pathologist at the General Hospital, Birmingham (1884), and was honorary assistant physician there from 1885 to 1889. In 1889 he became honorary physician at the Queen's Hospital, Birmingham, where at his death he was senior honorary physician. At the hospital he was chiefly responsible for the construction of the roof ward, only partially covered in, and otherwise open to the air, in which considerable success was obtained in the treatment of various diseases apart from those of tuberculous nature. He was also for a time pathologist to the Birmingham Hospital for Women and demonstrator in medical pathology in the Queen's Faculty of Medicine (at Mason College), known as the Queen's College. From 1887 to 1901 he was honorary librarian at the Medical Institute, Birmingham, of which he was president at his death, and he edited for a time the 'Birmingham Medical Review' (1886-8). In 1906 he was appointed professor of therapeutics in the new Birmingham University and received the degree of M.Sc.

Of shy and reserved nature and weak health, Foxwell died, from the result of a bicycle accident, in the Warneford Hospital, Leamington, on 1 Aug. 1909, and was buried in the burial ground of the Franciscans at Olton. He married in 1889 Lisette, daughter of Charles Hollins of Torquay and widow of Robert Pollock of Birmingham. He left one daughter. A memorial tablet designed by his stepson, Mr. Courtenay Pollock, was placed in the Queen's Hospital, Birmingham, and an annual prize for a clinical essay, open to qualified residents in the Queen's, General, and Children's Hospitals, Birmingham, endowed in his memory.

Foxwell's chief publication, apart from the Bradshaw lecture, was 'Essays on Heart and Lung Disease' (1895), a collection of miscellaneous contributions to the 'Proceedings' of medical societies and similar pieces; papers on climate are included, as well as the Ingleby lectures on 'The Condition of the Vascular System in Anæmic Debility,' delivered at the Queen's College, Birmingham, 1892. He also published 'The Enlarged Cirrhotic Liver' (1896) and 'The Spas of Mid Wales' (1899).

[Brit. Med. Journal and Lancet, 14 Aug. 1909; Birmingham Med. Rev. Sept. 1909; information from Prof. H. S. Foxwell.]

E. M. B.

FRANKFORT DE MONTMORENCY, third Viscount. [See DE MONTMORENCY, RAYMOND HARVEY, 1835-1902.]

FREAM, WILLIAM (1854-1906), writer on agriculture, born at Gloucester in 1854, was second son in the family of four sons and three daughters of John Fream, builder and contractor, by his wife Mary Grant. As a boy he was a chorister of Gloucester Cathedral, and was always devoted to music. After education in Sir Thomas Rich's Blue Coat Hospital, he entered the employment of a Gloucester corn and seed merchant; but gaining a royal exhibition at the Royal College of Science, Dublin, in May 1872, he studied there for three years, and took prizes in botany, practical chemistry, and geology, with special distinction in geology. While in Ireland he made long botanical walking tours to the wild district of Connemara and other distant parts of the country. He became an associate of the Royal College by diploma. He also matriculated in the University of London, and graduated in science with honours in chemistry at the first B.Sc. examination in 1877. From 1877 to 1879 he was professor of natural history at the Royal Agricultural College, Cirencester. In 1879 he filled a temporary vacancy as lecturer and demonstrator in botany at Guy's Hospital Medical School. The following winter he devoted to biological—more especially zoological—study at the Royal School of Mines in London and in writing for the agricultural press.

Early in 1880 he joined Professor John Wrightson in establishing and developing the College of Agriculture at Downton. He taught natural history there and instituted a series of field classes and laboratory demonstrations.

Fream paid visits to Canada in 1884, 1888 and 1891, to examine the agricultural

conditions, which he described in a series of papers. These include a charming pamphlet 'The Gates of the West' (1892); 'Across Canada: a Report on Canada and its Agricultural Resources,' written for and published by the government of Canada (Ottawa, 1885); 'Canadian Agriculture' (parts i. and ii.), 'Journal of the Royal Agricultural Society' (1885); 'The Farms and Forests of Canada, as illustrated in the Colonial and Indian Exhibition of 1886' (Toronto, 1886); 'The Provincial Agriculture of Canada' (London, 1887). In 1888 he received from the McGill University of Montreal the hon. degree of LL.D.

In 1890 Eleanor Anne Ormerod [q. v. Suppl. II] chose Fream to be the first Steven lecturer in Edinburgh University on agricultural entomology; he had included the first course on the subject in Great Britain in his curriculum at Downton. He remained Steven lecturer till death. Fream, who was an unsuccessful candidate in March 1887 for the office of secretary and editor of the Royal Agricultural Society of England, was appointed in 1890 editor of the 'Journal' of the society, when it became a quarterly, relinquishing the office in 1900, when it was reduced to an annual publication.

For twelve years, from January 1894 till his death, Fream was agricultural correspondent of 'The Times,' writing very efficient weekly articles on agriculture and special annual reports on crop returns. His articles showed an intense love of country life and an intimate knowledge of wild flowers. He was a chief examiner in the principles of agriculture under the science and art department, South Kensington. In 1890 he was employed by the board of agriculture to report on agricultural education in Scotland.

Apart from his writings on Canada, and his journalistic work, Fream edited exhaustively the 13th and 14th editions of 'Youatt's Complete Grazier' (1893 and 1900). His most widely read book was 'The Elements of Agriculture' (British agriculture and live stock), published for the Royal Agricultural Society of England, in 1891 (7th edit. 1902); before his death some 36,000 copies were sold. 'The Rothamsted Experiments on the Growth of Wheat, Barley, and the Mixed Herbage of Grass-land' (1888) was a valuable textbook.

Fream resided chiefly at Downton, but he had working quarters in London, and was very popular in congenial society there. He died, unmarried, at Downton on 29 May

1906, and was buried in Gloucester cemetery.

A Fream memorial fund, subscribed by leading agriculturalists, was entrusted to the board of agriculture, the income to be awarded annually as prizes under special regulations.

[The Times, 31 May 1906.]

R. W.

FRÉCHETTE, LOUIS HONORÉ (1839–1908), Canadian poet and journalist, born at Lévis, opposite Quebec, on 16 Nov. 1839, was eldest son of Louis Fréchette, a contractor, whose family was originally established in Ile de Ré, Saintonge. His mother was Marguerite Martineau de Lormière. After education at the Quebec Seminary and Nicolet College, young Fréchette passed to Laval University (Quebec), McGill University, and Queen's University. Becoming a law-student in Quebec in 1861 he published a first volume of (French) poetry 'Mes Loisirs' in 1863, and next year was called to the bar, but did not practise seriously, although he only retired from the profession in 1879. In 1865 he went to Chicago and there devoted himself for six years to journalism. He then edited 'L'Amérique,' and was for a time corresponding secretary of the Illinois Central railway in succession to Thomas Dickens, a brother of the novelist. His poetic reputation was enhanced by a second volume of verse 'La Voix d'un Exilé' (pt. i. 1866; pt. ii. 1868), in which he showed the strength both of his French patriotism and of his clerical antipathies. In 1871 he moved to New Orleans. There, while the siege of Paris was in progress, he showed his devotion to France by fighting a duel with a retired German officer, whom he had offended in a theatre by avowing his French sympathies; he had never used a sword before. In the same year he returned to Quebec.

Turning to politics, he unsuccessfully contested his native place, Lévis, at the general election of 1871 in the liberal interest; but in 1874, when Alexander Mackenzie [q. v.] came into power, he won the seat. He was a consistent supporter of the Mackenzie liberal government. He failed to retain the seat in 1878 and 1882, and thenceforward devoted to journalism all the energies that he spared from poetry. He edited his 'Journal de Québec,' contributed largely to 'L'Opinion Publique,' and during 1884–5 was editor of 'La Patrie.' He wrote frequently, too, for the American magazines the 'Forum,' 'Harper's,' and the 'Arena.' In 1889 the Mercier government appointed him clerk of the legislative

council in Quebec, and he held the post till death.

Meanwhile Fréchette was publishing further volumes in verse: 'Pêle-Mêle' (Montreal, 1877), 'Les Oiseaux de Neige' (Quebec, 1880), 'Les Fleurs Boréales' (Dijon, 1881), 'Les Oubliés,' and 'Voix d'Outre Mer' (1886), 'La Légende d'un Peuple' (1887), and 'Les Feuilles Volantes' (1891). 'Les Fleurs Boréales' and 'Les Oiseaux de Neige' were crowned by the French Academy in 1880, and Fréchette was the recipient of the first Montyon prize for the year. He was also made an officer d'Académie lauréat of the Institute of France. The leading universities of Canada conferred honorary degrees upon him (LL.D. McGill University, Montreal, and Queen's University, Kingston, in 1881, and Toronto University in 1900; D.Lit. at Laval University in 1888), and in 1897, the year of the diamond jubilee, he was created C.M.G. He was furthermore president of the Royal Society of Canada. Besides poetry, Fréchette published prose works, including 'Lettres à Basile' (1872), 'Histoire Critique des Rois de France' (1881), and 'Originaux et Détraqués' (Montreal, 1892), the most lively and original of his prose compositions. A collection of tales, 'La Noël au Canada,' appeared in both English and French versions (1899–1900). Fréchette also attempted drama in 'Félix Poutré' (Montreal, 1871), 'Papineau,' and 'Véronica' (in five acts), but these, although vigorously written, lack dramatic instinct. At his death he had in preparation an authoritative edition of his poems. It appeared posthumously at Montreal in 1908 (three series), and it contains all the poems by which Fréchette desired to be remembered. Age softened his ardours against the church, and consequently the unclerical verses of 'La Voix d'un Exilé' find no place in this final edition. He died at Montreal on 31 May 1908.

As a poet Fréchette owes much to Victor Hugo, both in the mechanism of his lines and in the logical method of developing his themes. His poetry is held in high esteem by French-Canadians, who rank only Crémazie beside him. His friend Senator David said 'Fréchette n'avait pas le souffle, la puissance d'invention et de conception de Crémazie, mais il avait plus d'abondance, de souplesse, de forme, il était plus complet, plus émotif, plus chaud.' If Fréchette lack Hugo's vibrant lyrical quality, he is by no means his unsuccessful imitator in patriotic verse. The best measure of his talent will be found in 'La Légende d'un Peuple,'

in which he commemorates with skill, vigour, and variety the history of the French race. In contrast to William Henry Drummond [q. v. Suppl. II], whose French types show no resentment against English rule, Fréchette presents the rarer French-Canadian sentiment which failed to reconcile itself to the events which brought 'perfidie Albion' upon the scene in 1759. For purposes of poetry this attitude of mind may pass, but Drummond's is the truer picture.

Fréchette married in 1876 Emma, second daughter of Jean Baptiste Beaudry, banker, Montreal. She survived her husband with three daughters.

[The Times, 2 and 25 June 1908; Who's Who, 1908; Sir J. G. Bourinot, Story of Canada, 1896, p. 441 (portrait).] P. E.

FREEMAN, GAGE EARLE (1820-1903), writer on falconry, born on 3 June 1820 at Tamworth, Staffordshire, was son of Capt. Charles Earle Freeman of the 69th regiment by his wife Mary Parsons. After private education he was admitted a pensioner at St. John's College, Cambridge, on 8 July 1840, and graduated B.A. in 1845, proceeding M.A. in 1850. In later life he won at Cambridge four Scatonian prize poems on sacred subjects, 'The Transfiguration' (1882), 'Jericho' (1888), 'Damascus' (1893), and 'The Broad and the Narrow Way' (1894).

Ordained deacon in 1846 and priest in 1847, Freeman held a curacy at Geddington, Northants, from 1846 to 1854, and the perpetual cure of Emmanuel Church, Bolton-le-Moors, from 1854 to 1856. He was afterwards incumbent of Macclesfield Forest with Clough, Cheshire, till 1889, when he became vicar of Askham, near Penrith, and private chaplain to the earl of Lonsdale. This living he held until his death.

Through life he devoted his leisure to hawking, being introduced to the sport by William Brodrick of Belford, Northumberland, afterwards of Chudleigh, Devon [see SALVIN, FRANCIS HENRY, Suppl. II]. In Northamptonshire he enjoyed his first experience with a kestrel-hawk, equipped with a hood of home manufacture, and he afterwards flew sparrowhawks, merlins and peregrines on pigeons and larks. But he had his best sport later whilst in his lonely Cheshire parish, hawking grouse with peregrines on Buxton Moor and Swythamley, the property of his friend, Philip Brocklehurst of Swythamley Park, Staffordshire. Next to peregrines, Freeman preferred goshawks, with which he

killed hares and rabbits, with or without ferrets. Lord Lilford affirmed that Freeman did more to keep English falconers in the right way than any man living (preface to *Lord Lilford on Birds*, 1903). To the 'Field' newspaper Freeman contributed articles on falconry for a quarter of a century over the signature 'Peregrine,' and on these articles he based two treatises of standard value. He had the chief share in 'Falconry; its Claims, History, and Practice' (1859), written in collaboration with Francis Henry Salvin [q. v. Suppl. II]. This is a handbook for beginners, with plates by Wolf, now long out of print. Freeman's 'Practical Falconry; and how I became a Falconer' (1869), is slightly more discursive and is now much sought after. Freeman's essay, 'On the Desirability of attempting to revive the Sport of Falconry by its Practice at Alexandra Park' (1871), won the second prize (the first being taken by Capt. C. Hawkins Fisher of Stroud) in a competition held by the Barnet committee for promoting the opening of Alexandra Park. Freeman contributed the section on Falcons and Falconry to 'Lord Lilford on Birds' (ed. A. Trevor-Battye, 1903). He also published 'Five Christmas Poems' (1860, reprinted from the 'Field,' with additions), and 'Mount Carmel, a Story of English Life' (1867).

He died at the vicarage, Askham, on 15 Dec. 1903, and was buried at Macclesfield Forest Chapel. Freeman was twice married: (1) on 5 Jan. 1848 to Christiana (d. 1886), daughter of John Slade of Little Lever, Bolton-le-Moors, by whom he had issue eight sons and two daughters; (2) in April 1891 to Mary, daughter of Francis William Ashton, cotton-spinner and calico printer, of Hyde, Cheshire, who survived him.

FRERE, MARY ELIZA ISABELLA (1845-1911), author, born at Bitton rectory, Gloucestershire, on 11 Aug. 1845, was eldest of the five children of Sir (Henry)

Bartle (Edward) Frere, first baronet [q. v.], by his wife Catherine, second daughter of Lieut.-general Sir George Arthur [q. v.].

Privately educated at Wimbledon, she went out at the age of eighteen to Bombay, where her father was governor, and in the following year (1864), in her mother's absence in England, she was the hostess at government house. Profoundly interested in the Indian peoples, she accompanied her father on his tours, and gathered a large number of folk-lore tales from her ayah (Indian ladies' maid), to whom they had been handed down by a centenarian grandmother.

With an instructive introduction and notes by her father and illustrations by her sister Catherine, Miss Frere published twenty-four of these tales, in March 1868, under the title of 'Old Deccan Days.' The work was deservedly successful, and was four times reprinted (fifth impression 1898). Max Müller [q. v. Suppl. I] pointed out that Miss Frere's tales had been preserved by oral tradition so accurately that some of them were nearly word for word translations of the Sanskrit in which they were originally told. To Anglo-Indians the book 'opened up an entirely new field of scientific research . . . of inexhaustible wealth; and it gave a fresh impetus to the study of folk-lore in the United Kingdom, and throughout Europe and the Americas' (Sir G. BIRDWOOD). 'Old Deccan Days' has been translated into German and Marathi, and recently selections have been included in Stead's 'Books for the Bairns' and in Sarah C. Bryant's 'Stories to tell the Children' (New York and London, 1911).

Miss Frere also wrote a pastoral play, 'Love's Triumph,' published anonymously in 1869, containing sonnets of poetic power and tenderness. One or two of her short poems subsequently appeared anonymously in the 'Spectator,' but most of her verse is unpublished.

Accompanying her father to South Africa when he was appointed high commissioner (March 1877), Miss Frere there, as in India, delighted in the country folk, and was a welcome guest at the old Dutch and English farmhouses. Here, too, she helped to dissipate racial prejudices. When she and a sister returned to England in 1880, shortly before the recall of their father by the Gladstone government, they were received with most gracious interest at Windsor by Queen Victoria.

In later years Miss Frere travelled extensively on the continent and in Egypt, and

was in the Holy Land from the end of 1906 to August 1908. Living mainly at Cambridge, she studied Hebrew, and closely followed the results of biblical criticism. After some years of failing health, she died at St. Leonards-on-Sea on 26 March 1911, being buried at Brookwood cemetery.

[Miss Frere's books; Athenæum, 15 April 1911, memoir by Sir George Birdwood; Cambridge Daily News, 6 April 1911; South Africa, 8 April 1911; information kindly supplied by the family.] F. H. B.

FRITH, WILLIAM POWELL (1819-1909), painter, born on 9 Jan. 1819, at Aldfield, near Ripon, Yorkshire, was son of William Frith, by his wife Jane Powell, a member of the ancient but decayed family of Fitz, Shropshire. Both parents were in the domestic employment of Mrs. Lawrence of Studley Royal. When the boy was seven years old his family moved to Harrogate, where the father became the landlord of the Dragon Hotel. He sent his son to a school at Knaresborough which appears to have been a 'Dotheboys Hall.' The boy next passed to a large school at St. Margaret's, near Dover, his master being instructed to encourage a gift for art which Frith senior thought he could discern in his son. Young Frith was allowed to spend most of his time in various grotesque performances with pencil and chalk. On leaving school he had a narrow escape from becoming an auctioneer. He finally entered Sass's Academy in Charlotte Street, Bloomsbury. After two years under Sass he won admission to the schools of the Royal Academy. While still an academy student he commenced portrait painting. Through an uncle, Scaife, who kept an hotel in Brook Street, he obtained a practice chiefly among well-to-do farmers in Lincolnshire, who paid five, ten, and fifteen guineas for heads, kit-cats, and half-lengths respectively.

In 1837 Frith's father died, and his mother set up house with her son in London, at 11 Osnaburgh Street. In 1839 he exhibited a portrait of a child at the British Institution. In 1840 he painted his first subject pictures, exhibiting at the Academy that year 'Malvolio before the Countess Olivia' and 'Othello and Desdemona.' From that time for many years he was faithful to subjects from Scott, Sterne, Goldsmith, Molière, Cervantes, Shakespeare, Dickens, and the 'Spectator,' all of which gave him the opportunity of dressing up his models in picturesque clothes, and of incurring the odium of those young men who, as the Pre-Raphaelite

Brotherhood, were presently to vilify his ideals. In 1845 'The Village Pastor' secured his election as A.R.A. Among other well-known pictures which he contributed to the Academy during this middle period of his activity are: 'English Merry-making a Hundred Years Ago' (1847); 'Coming of Age in the Olden Time' (1849); 'Witchcraft'; 'Sir Roger de Coverley at the Saracen's Head' and a scene from 'The Good-Natured Man' (commissioned by John Sheepshanks [q. v.], now in the Victoria and Albert Museum. In 1853 Frith was promoted to fill the vacancy left among the academicians by the death of Turner. Into his diploma picture, 'The Sleepy Model,' the artist introduced a good portrait of himself.

Frith visited Belgium, Holland, and the Rhine in 1850. A year later he spent the summer at Ramsgate, a visit which led to an abrupt change in his subjects. His diary for 30 Sept. 1851 contains the following entry (*Autobiography*): 'Began to make a sketch from Ramsgate sands which, if successful, will considerably alter my practice.' The result of this sketch was the large picture 'Ramsgate Sands,' sometimes called 'Life at the Seaside,' painted in 1853, exhibited in 1854, and now in the royal collection. It had a great popular success. There followed, in 1858, 'The Derby Day,' now in the national collection at the Tate Gallery, and, in 1862, 'The Railway Station,' now owned by Holloway College, both of which eclipsed even the 'Ramsgate Sands' in popularity. These three famous paintings enjoyed, like most of Frith's work, an immense circulation in engravings. Frith's success led to invitations from Queen Victoria to paint the marriage of the Princess Royal, and the marriage of Edward VII, as Prince of Wales. The first offer was declined; the second was accepted. The last pictures in which Frith showed his own peculiar talent in marshalling a crowd were 'Charles II's Last Whitehall Sunday' (1867) and 'The Salon d'Or, Homburg' (1871). Another crowd, painted twelve years later, 'The Private View of the Royal Academy' (1883), was far inferior to its predecessors. Frith made two ill-advised attempts to rival Hogarth. The first of these moralities, 'The Road to Ruin,' in five scenes, was at Burlington House in 1878; the second, 'The Race for Wealth,' in five pictures, was shown at a private gallery in King Street in 1880.

Besides those already named, Frith's better pictures include 'Dolly Varden'

and the portrait of her creator, Charles Dickens (painted in 1859), in the Forster collection at South Kensington; 'Claude Duval' (1860); 'Uncle Toby and the Widow Wadman' (1866, now in the Tate Gallery); 'Pope and Lady Mary Wortley-Montagu'; and 'Swift and Vanessa.' 'The Dinner at Boswell's Rooms in Bond Street,' which was exhibited in 1869 at the Academy, was sold at Christie's in 1875 for 4567*l.*, the highest sum then reached for a work by a living painter. Frith also painted many anecdotic pictures during his later career; of these 'John Knox at Holyrood,' exhibited in 1886, is a familiar example. But here his gift for marshalling a crowd and for painting it with some vivacity had little or no scope.

Frith visited Italy in 1875, and made a second tour in the Low Countries in 1880. In 1890 he joined the ranks of the retired Royal Academicians, but he survived for nearly twenty years, painting to the end. He was a member of the Royal Belgian Academy and of those of Antwerp, Stockholm, and Vienna. He was a chevalier of the Legion of Honour, and personally received the badge of C.V.O. from Edward VII at Buckingham Palace on 9 Jan. 1908, his eighty-ninth birthday (cf. *Cornhill Mag.* 1909). He died at his residence in St. John's Wood, London, on 2 Nov. 1909, and was buried at Kensal Green after cremation at Golder's Green. A small collection of his better works was exhibited at Burlington House in the winter of 1911. It was then recognised that the 'Derby Day' and the 'Railway Station' possessed pictorial qualities, which it had become the fashion to deny.

Frith married on 22 June 1845 Isabelle, daughter of George Baker of York. She died on 28 Jan. 1880. Of twelve children, five daughters and five sons survived their father. His son, Mr. Walter Frith, is a dramatist and novelist.

Frith's friends included not only the chief artists of the day but many men of letters, including Dickens. He published: 'John Leech, his Life and Work' (1891), which is a description of Leech's work rather than a biography; 'My Autobiography and Reminiscences' (1887); and 'Further Reminiscences' (1888).

Portraits by himself at the ages respectively of eighteen and seventy belong to the family. A third portrait was painted in 1854 by Augustus Egg, R.A. Another good early portrait painted by an academy student friend, Cowper, who died young, was sold after Frith's death. His own head

figures in the right-hand corner of 'Rams-gate Sands' (1853) and he introduced himself as paterfamilias with all his family into 'The Railway Station' (1861). A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1873.

[The Times, 4 Nov. 1909; Academy Catalogues; A. Graves's Royal Academy Exhibitors; private information; Mrs. J. E. Pantom, Leaves from a Life, 1911; Mrs. E. M. Ward, Reminiscences, 1911; Frith's Autobiography 1887, and Reminiscences, 1888.] W. A.

FRY, DANBY PALMER (1818-1903), legal writer, born in Great Ormond Street, London, on 1 Dec. 1818, was second son in the family of four sons and four daughters of Alfred Augustus Fry, a good scholar and linguist, who was accountant and for some years a partner in the firm of Thomas de la Rue & Co., wholesale stationers. His mother was Jane Sarah Susannah Westcott. He was named after his father's friend, Danby Palmer of Norwich [cf. PALMER, CHARLES JOHN]. The eldest son, Alfred Augustus Fry, was the first English barrister to practise in Constantinople.

Danby was educated at Hunter Street Academy, Brunswick Square, London, a well-known grammar school conducted by Jonathan Dawson, whose sons, George Dawson [q. v.] of Birmingham and Benjamin Dawson (subsequently proprietor of the school and long treasurer of the Philological Society), were Fry's school-fellows. In 1836 he became a clerk in the poor law board, first at Somerset House and afterwards at Gwydyr House, Whitehall. On 1 April 1848, during the Chartist riots, he was officially deputed to report to headquarters the proceedings of the agitators on Kennington Common. Each hour he received messengers to whom he delivered his hastily written reports. Called to the bar at Lincoln's Inn on 30 Jan. 1851, he became in October 1871 inspector of audits, and on 15 Oct. 1873 assistant secretary to the local government board. From 1878 until his retirement in 1882 he was legal adviser to the board.

Fry made some reputation as author of legal handbooks. As early as 1846 he produced 'Local Taxes of the United Kingdom' (published officially). His 'Union Assessment Committee Act' (1862; 8th edit. 1897); his 'Lunacy Acts' (1864; 3rd edit. 1890); 'The Law Relating to Vaccination' (1869; 7th edit. 1890), and 'The Valuation [Metropolis] Act' (1869; 2nd edit. 1872) became standard works.

Through his father, whose circle of

acquaintances included Lord Brougham, Leigh Hunt, and others interested in social and political reforms, Fry was friendly from an early age with Charles Knight and with Sir Rowland Hill's family. Economic and philanthropic problems occupied much of his attention, but his leisure was devoted to philology, and he became an expert student of both old English and old French. He helped his father in compiling in MS. an English dictionary with the words arranged according to roots. He was an original member of the Philological Society, founded in 1842, and its treasurer for many years, and was a contributor of well-informed papers on linguistic subjects to its 'Transactions.' He was one of the original committee of the Early English Text Society, founded by Dr. Furnivall [q. v. Suppl. II] in 1864. He was joint author with Benjamin Dawson of a small book 'On the Genders of French Substantives' (1876). His philological studies were pursued till his death. He died unmarried, on 16 Feb. 1903, at his house, 166 Haverstock Hill, and was buried at Highgate cemetery.

[Personal knowledge.] H. B. W-y.

FULLER, SIR THOMAS EKINS (1831-1910), agent-general for Cape Colony, born at West Drayton on 24 Aug. 1831, was son of Andrew Gunton Fuller, baptist minister, who was a popular preacher and an amateur artist of some distinction. Andrew Fuller [q. v.], the baptist theologian, was his grandfather. His mother was Esther Hobson. Mr. Robert Fuller, author of 'South Africa at Home,' is his brother.

Educated at a private school, and then at the Bristol Baptist College, Fuller became baptist minister at Melksham, and afterwards served baptist chapels at Lewes and Luton. He subsequently turned his attention to literature and contributed freely to the press. In 1864 he went to South Africa to become editor of the 'Cape Argus.' He rapidly became a leader in the social and political life in Cape Colony. He won distinction for brilliant articles on social and educational work in the 'Argus,' and was one of the promoters of the Cape University. While editor of the 'Cape Argus' Fuller ardently advocated responsible government for the Cape Colony, which was granted by the imperial government in 1872. He was one of those chiefly instrumental in educating colonial opinion on the subject. In 1873 Fuller was appointed emigration agent to the Cape Colony in London, but in 1875

he returned to Cape Town to take up the post of general manager there of the Union Steamship Company. He held this office for twenty-three years.

Meanwhile he engaged actively in politics. In 1878 he was returned as one of the members for Cape Town in the House of Assembly, and retained the seat till his resignation in 1902. He was an eloquent and impressive speaker in parliament and advocated every progressive measure. He refused office, believing that he could serve the colony better as a private member. In his last years in parliament he was a steady and a prominent supporter of Cecil Rhodes's policy, and became his intimate friend. In 1898 he was made a director of De Beers Consolidated Mines Company, and thereupon he resigned his post with the Union Co. from a fear that the prominent part he took in party politics might react prejudicially on the welfare of the company. At the same time he found time for municipal work and was a member of the town council, a trustee of the public library, chairman of the harbour board, and a leading spirit in the chamber of commerce.

At the end of 1901 he returned to England, and on 1 Jan. 1902 assumed the office of agent-general to the Cape, resigning the De Beers directorship at the same time; he remained agent-general till 1907. In 1903 he was made C.M.G. and next year K.C.M.G. He died at Tunbridge Wells on 5 Sept. 1910. Fuller married (1) in 1855 Mary Playne, daughter of Isaac Hillier of Nailsworth, and by her had three sons and a daughter; (2) in 1875 Elizabeth, daughter of the Rev. Thomas Mann of Cowes. His eldest son, Mr. William Henry Fuller, commanded the East London town guard during the Boer war of 1899-1902.

Fuller was a man of high intellectual culture, and a profound student of philosophy. To the end of his life he reviewed literary works in the press and contributed a notable article to the 'Westminster Review' on 'Man's Relation to the Universe through Cosmic Emotion' (reprinted 1902). His last publication was 'Cecil Rhodes, a Monograph and Reminiscence' (1910), a valuable contribution to the biography of his friend.

[Anglo-African Who's Who, 1905; personal knowledge.] A. P. H.

FULLEYLOVE, JOHN (1845-1908), landscape painter, born at Leicester on 18 Aug. 1845, was son of John and Elizabeth Fulleylove. He was educated at

day-schools in that town, and when about sixteen was articled as a clerk to Flint, Shenton and Baker, a local firm of architects. He developed a strong natural bent for the picturesque side of architecture by sketching from nature in his free hours, and received some instruction in painting from Harry Ward, a drawing-master of the school of Harding.

Fulleylove's earliest drawings were views of his native town and its neighbourhood. Taking up art professionally he began to exhibit English subjects in London in 1871. Subsequently he travelled widely at home and abroad in search of themes. In 1875 and again in 1880 he made tours in Italy. He spent the summer of 1878 in sketching at Tabley Old Hall, that of 1879 at Hampton Court, and that of 1882 at Versailles.

He was elected an associate of the Royal Institute of Painters in Water Colours in the spring of 1878, and became a member next year. Fulleylove moved from Leicester to London in 1883 and established himself at first in a house in Mecklenburgh Square, later moving (1893) to Great Russell Street, and ultimately (1894) to Church Row, Hampstead. Besides exhibiting an ever-widening range of subjects at the Institute, he held many exhibitions of his work at the Fine Art Society's galleries in Bond Street. Of these individual exhibitions, the first consisted of drawings of south-eastern France, 'Petrarch's Country' (1886); this was followed by views of Oxford (1888); views of Cambridge (1890); Parisian subjects and studies of Versailles (1894). In 1892 he exhibited a collection of local sketches at Leicester. In the summer of 1895 he visited Greece in company with his friends Alfred Higgins and Somers Clarke. Ninety drawings made during this tour, exhibited at the Fine Art Society's gallery in the following spring, mark the highest level of his achievement.

He occasionally practised painting in oil, was a member of the Institute of Painters in Oil, and contributed oil-paintings to the Academy and other exhibitions. In the summer of 1898 he executed a number of small panel pictures of Oxford which were exhibited at the Fine Art Society's Gallery in 1899. They were painted direct from nature, whereas the large oil pictures by which he was occasionally represented in later years at the Academy were worked up from water-colour sketches.

Fulleylove's next exhibition in Bond Street (1902) consisted of drawings of the

Holy Land, but Palestine did not inspire him so happily as Greece. In 1904 many excellent pencil sketches were exhibited at the Goupil Gallery in London, and at Edinburgh a series of local views, which like most of his latest work, such as the drawings of Westminster Abbey, the Tower of London, and some Middlesex subjects (1907), were executed for reproduction in colour as illustrations to books. Some of his Oxford oil sketches and of his drawings of Greece and Palestine were reproduced in similar form. He himself preferred the black-and-white reproductions of his earlier (1888) Oxford sketches by lithography, and of the Greek drawings in photogravure.

His health failed suddenly, and he died at Hampstead on 22 May 1908. He was buried in Highgate cemetery. Fulleylove married, in 1878, Elizabeth Sara, daughter of Samuel Elgood of Leicester; she with one son and two daughters survived him.

Fulleylove was an admirable architectural draughtsman. His early training had given him a thorough comprehension of construction and detail. His water-colour was always laid over a solid and carefully completed pencil sketch. In colour his earlier works are silvery, sometimes a little weak, but always harmonious. Greater breadth of tone and force of colour are noticeable in the Versailles drawings of 1893 and in the Greek series, which are not only his best productions but some of the most brilliant and accomplished water-colour work of his generation. A few of his drawings are in the Victoria and Albert Museum, and he is well represented in the Municipal Gallery at Leicester.

[Graves's Dictionary of Artists, 1760-1893; Catalogues of the Exhibitions of the Royal Institute of Painters in Water Colours and of the Fine Art Society; private information.]

FURNIVALL, FREDERICK JAMES (1825-1910), scholar and editor, born at Egham, Surrey, on 4 Feb. 1825, was second child and eldest son, in a family of five sons and four daughters, of George Frederick Furnivall by his wife Sophia Barwell. The father, a medical practitioner, who had been educated at St. Bartholomew's Hospital and was in 1805 assistant surgeon of the 14th foot, maintained a prosperous practice at Egham, and also kept a private lunatic asylum at his house, Great Fosters, out of which he made a fortune of 200,000*l*. He attended Shelley's wife, Mary, in her confinement at Marlow in 1817, and the son was fond of quoting his father's reminis-

cences of Shelley and his household. He died on 7 June 1865.

After attending private schools at Englefield Green, Turnham Green, and Hanwell, Furnivall in 1841 entered University College, London, and in July 1842 passed the London University matriculation in the first division. On 9 Oct. he matriculated from Trinity Hall, Cambridge. As a boy he hunted at Egham, and before entering the university he was a skilled oarsman. He quickly won a place in the college eight. During the long vacation of 1845 he built, with the aid of John Beesley, a Thames waterman, two sculling boats on a new plan. By narrowing the beam and extending the outriggers he gave an unprecedented leverage to the oar. A wager boat on Furnivall's lines was soon built for the champion sculler, Newell, who in it gave Henry Clasper, on the Tyne, one of his rare defeats (18 Jan. 1846). To sculling Furnivall remained faithful till death, and he always ardently advocated its superiority to rowing. Despite his lifelong devotion to the water he never learnt to swim. As an undergraduate he showed a characteristic impatience of convention and an undisciplined moral earnestness. He became a vegetarian, and remained one for a quarter of a century. To tobacco and alcohol he was a stranger through life. He read mathematics, and was admitted scholar of Trinity Hall on 1 June 1843. He graduated B.A. in 1847, taking a low place among the junior optimes in 1846. He proceeded M.A. in 1850.

On leaving Cambridge, Furnivall entered as a student at Lincoln's Inn (26 Jan. 1846). He read in the chambers of Charles Henry Bellenden Ker [q. v.], a friend of his father, a man of wide and enlightened interests. He was called to the bar at Gray's Inn (30 Jan. 1849), and set up as a conveyancer at 11 New Square. He rented various sets of rooms in Lincoln's Inn till 1873, but the law had small attraction for him, and his attention was soon diverted from it. Through Bellenden Ker he came to know many men and women who championed social reform and democratic principles. Of these John Malcolm Ludlow [q. v. Suppl. II] exerted a predominant influence on him. Through Ludlow he was drawn into the Christian Socialist movement, and accepted at first all its tenets. He heard Maurice preach at Lincoln's Inn, and attended his Bible readings. The doctrine of industrial co-operation appealed to him, and he joined the central co-operative committee. He supported trades

unionism and identified himself with labour agitation, selling his books to give 100% to the woodcutters who engaged in a strike in 1851. Meanwhile he wrote for the 'Christian Socialist,' and published in 1850 his first literary work, a pamphlet entitled 'Association a Necessary Part of Christianity.'

Philological study and music also engaged Furnivall's youthful attention. He joined the Philological Society in 1847, and heard Chopin play (26 July 1848) and Jenny Lind sing. The current literature which he chiefly admired was the early work of Ruskin, with whose outlook on life he avowed an eager sympathy. In 1849 a chance meeting with Mrs. Ruskin at a friend's house led to an invitation to Ruskin's London home. 'Thus began,' Furnivall wrote, 'a friendship (with Ruskin) which was for many years the chief joy of my life.' Of Ruskin, Furnivall was through life a wholehearted worshipper, and the habit of egotistic reflection which characterised his own writing is often a halting echo of Ruskin's style and temperament.

At the beginning of the intercourse Furnivall sought with youthful ardour to bring Ruskin into relation with Maurice. In 1851 he invited Maurice's opinion of Ruskin's theological argument in his 'Notes on the Construction of Sheepfolds.' Furnivall forwarded Maurice's criticisms to Ruskin, and an interesting correspondence passed through Furnivall between the two; but they had little in common. Furnivall, who inclined to Ruskin's rather than to Maurice's views, printed this correspondence for private circulation in 1890 (NICOLL AND WISE, *Anecdotes of the Nineteenth Century*, ii. 1-46).

In the spirit of Christian Socialism Furnivall at the same time devoted his best energies to endeavours to improve the social and educational opportunities of the working classes. With Ludlow and others he opened as early as 1849 a school for poor men and boys at Little Ormond Yard, Bloomsbury. In 1852 he joined the same friends in forming a working men's association for the purpose of giving lectures and holding classes at a house in Castle Street East, off Oxford Street. These efforts developed into the foundation on 26 Oct. 1854 of the Working Men's College in Red Lion Square, with Maurice as principal. Furnivall vigorously helped in the organisation of the new college. He spent there five nights a week, and actively identified himself with its social, athletic, and educational life. Furnivall taught English grammar

and lectured on English poetry from Chaucer to Tennyson. He induced Ruskin to teach drawing to the students with profitable results. But it was in the development of the social side that he worked hardest. He accompanied the students in botanical walks and on rowing excursions. He arranged Sunday rambles, and organised concerts and dances. In 1858, on the advice of Ruskin, he took a party of working men on a tour abroad. It was Furnivall's only experience of foreign travel. He left London with his companions for Havre on 6 Sept., and spent three weeks walking in Normandy and visiting Paris. In 1859 he eagerly helped to organise a volunteer corps of college students, and became company commander, retaining the post for twelve years. Subsequently he inaugurated a college rowing club, which was named after Maurice. He induced the members to engage, under his leadership, in sculling four and eight races, which he introduced to the Thames in 1866; he was long the rowing club's guiding spirit.

Furnivall's devotion to the recreative aims of the college, and his emphatic advocacy of Sunday as a day of solely secular amusement, caused difficulties between him and Maurice and other members of the college council. His religious views had undergone a change. He had been brought up in conventional orthodoxy. This he abandoned in early manhood for an outspoken agnosticism and uncompromising hostility to the received faiths. Joining the Sunday League which combated Sabatarianism, he described, during 1858, the Sunday amusements of the college in the League's organ, 'The People's Friend.' His somewhat insolent references to Maurice led the latter to tender his resignation of the principalship, and he was with difficulty persuaded to remain in office. Although a reconciliation was patched up, Maurice's relations with Furnivall lost all show of cordiality. Furnivall deemed Maurice and the college council to be not only unduly conservative in their religious views but undemocratic in refusing working men admission to the council. Furnivall's activity in the affairs of the college ceased only with his life. He never lost his early tone of impatience with those colleagues whose religious or political views differed from his own. But he retained to the last the ardent devotion of the students, and the social development of the institution stood deeply indebted to him.

Furnivall's zeal for literary study rapidly developed, and he tried to adapt to its

pursuit the principles of association and co-operation which he advocated in other relations of life. Of the Philological Society he became one of two honorary secretaries in 1853, and was sole secretary from 1862 till his death. He supported with enthusiasm the society's proposals for spelling reform, which Alexander John Ellis [q. v. Suppl. I] devised, and always took an active part in promoting such reform, adopting in his own writings a modified phonetic scheme. In another direction his energetic participation in the Philological Society's work bore more valuable fruit. At the end of 1858 the society, at Archbishop Trench's suggestion, resolved to undertake a supplement to Johnson's and Richardson's Dictionaries. But Furnivall urged a wholly new dictionary, and his proposal was adopted. On the death in 1861 of the first editor of the suggested dictionary, Herbert Coleridge [q. v.], Furnivall took his place, and he worked at the scheme intermittently for many years. At the same time he planned a 'concise' dictionary which should be an abstract of the larger undertaking. Although he accumulated much material for the double scheme he made little headway owing to his varied engagements. In 1876 the Oxford University Press took over the enterprise, appointing Dr. (afterwards Sir) James A. H. Murray editor. The 'New English Dictionary' was the result. To that great work Furnivall continued to contribute to the end of his life.

Meanwhile Furnivall was concentrating his attention on early and middle English literature. He deemed it a patriotic duty to reprint from manuscript works which were either unprinted or imperfectly printed. He valued old literature both for its own sake and for the light it shed on social history. His literary endeavours at first centred in the literature of the Arthurian romances, and he inaugurated his editorial labours with an edition of *Lonelich's* fifteenth-century epic '*Seynt Graal*,' which he prepared for the Roxburghe Club (1861, 2 vols.; re-edited for the Early English Text Society, 1874-8). Two prominent bibliophile members of the Roxburghe Club, Henry Huth [q. v. Suppl. II] and Henry Hucks Gibbs, afterwards Baron Aldenham [q. v. Suppl. II], enlisted his services. In 1862, for the Roxburghe club, he undertook one of his most valuable pieces of textual labour, the '*Handlyng Synne*' of Robert of Brunne, to which he added the '*Manuel des Pechiez*' of William of Waddington, unhappily from

a MS. of inferior textual value. In 1862 he also printed a collection of early English poems from MSS. for the Philological Society, and in 1865 he published with Macmillan the more attractive '*Morte d'Arthur*,' from an Harleian MS.

In 1864, with a view to more effectual pursuit of his literary aims, Furnivall founded the Early English Text Society. It began with 75 subscribers, Ruskin and Tennyson amongst them. Its first publication was Furnivall's edition of a short metrical '*Life of King Arthur*.' The society flourished under Furnivall's energetic guidance, and he worked hard for it both as director and editor for more than forty years. He enlisted the co-operation of scholars all over the world, who edited texts for the society. At first the society's sole aim was to print mediæval MSS. But in 1867 a second or extra series was instituted to include reprints of the work of the earliest English printers. At his death the society had issued 140 volumes in the original series and 107 in the extra series. The vastness of the material with which Furnivall sought to deal led him to found other societies on similar lines for separate treatment of voluminous mediæval writers. Chaucer, Wiclif, and Lydgate each in his view needed a society exclusively devoted to his interests. It was chiefly at the suggestion of Henry Bradshaw [q. v. Suppl. I] that Furnivall started in 1868 the Chaucer Society. His hope was to form an accurate text of the poems by collation of all known manuscripts and to ascertain from both internal and external evidence the date at which each of Chaucer's known works was composed. His labour began in 1868 with the issue of his six-text edition of the '*Canterbury Tales*,' which provides the best possible material for textual study. There followed parallel text editions of Chaucer's '*Minor Poems*' (1871-9), and of his '*Troilus and Criseyde*' (1881-2). Although he had collaborators, the most important of the Chaucer Society's publications are the fruit of Furnivall's own industry. He thus set Chaucerian study on a new and sure footing. Another enterprise diverted Furnivall's attention to English literature of a later period. In 1868 he and Prof. J. W. Hales edited and printed by subscription in three volumes the folio MS. of the '*Percy Ballads*' [see PERCY, THOMAS]. With a view to continuing Percy's labours in rescuing old ballads from oblivion, Furnivall thereupon founded the Ballad Society, which was designed to make accessible the large store of ballad

collections which was not accessible in modern reprints. The Roxburghe and Bagford collections of ballads in the British Museum were published (1868-99) by the society, together with illustrative pieces of popular literature of the sixteenth century.

Now that Furnivall's researches had reached the sixteenth century he proceeded to apply to Shakespeare's work the methods which had already served the study of Chaucer. In 1873 he founded the New Shakspeare Society, with the object of determining 'the succession of his plays' and of illustrating his work and times. Many distinguished scholars became vice-presidents, and Robert Browning was induced to act as president. Furnivall organised reprints of early texts and of contemporary illustrative literature. To a translation of Gervinus's Commentaries on Shakespeare (1874) he prefixed an essay entitled 'The Succession of Shakspeare's Work, and the Use of Metrical Tests in settling it.' There he laid a stress on the metrical tests, which became characteristic of the society's labours and evoked the ridicule of æsthetic critics (cf. [JOHN JEREMIAH] *Furnivallos Furioso*, 1874). Much controversy ensued. Swinburne, who at first treated Furnivall's learning with respect, was moved by the society's mechanical methods of criticism to satirise its proceedings in a skit called 'The Newest Shakspeare Society' which appeared in 'The Examiner' in April 1876. Subsequently Swinburne denounced Furnivall and his friends as 'sham Shakspeareans.' Furnivall replied with heat (*Spectator*, 6 and 13 Sept. 1879). When Halliwell-Phillipps accepted in 1880 Swinburne's dedication of his 'Study of Shakespeare' Furnivall brought Halliwell-Phillipps as well as Swinburne within the range of his attack. In 'Forewords' to the facsimile of the second quarto of Hamlet, dedicated to Gladstone (1880), he dubbed Swinburne 'Pigsbrook,' and Halliwell-Phillipps 'H-II-P.' In Jan. 1881 Halliwell complained to Browning of this 'coarse and impertinent language'; but Browning declined to intervene, and Halliwell-Phillipps privately printed the correspondence. Furnivall retorted in even worse taste in 'The "Co." of Pigsbrook & Co.' (1881). Furnivall's conduct had little to justify it. Many of the distinguished vice-presidents of the society resigned, and the society was thenceforth heavily handicapped. Nevertheless, it continued its work until 1890. Many of its publications were useful, notably its editions

of Harrison's 'Description of England' (1877-8) and Stubbes's 'Anatomie of Abuses' (1879), which Furnivall himself prepared. By independent work outside the society, Furnivall also, despite his imprudences, stimulated Shakspearean study. In 1876 he wrote an elaborate preface to 'The Leopold Shaksperet,' a reprint of Delius's text, which the publishers, Messrs. Cassell, dedicated to Prince Leopold, duke of Albany. The preface was re-issued separately in 1908 as 'Shakspeare—Life and Work,' the preliminary volume of the 'Century' edition of Shakespeare. With a view to facilitating accurate textual criticism Furnivall supervised, too, the issue between 1880 and 1889 of photographic facsimiles, prepared by William Griggs [q. v. Suppl. II] and Charles Prætorius, of the Shakespeare quartos in 43 volumes, to eight of which he prefixed critical introductions by himself. One of the offshoots of the New Shakspeare Society was the Sunday Shakspeare Society, which was founded 18 Oct. 1874 as the outcome of an address given by Furnivall to members of the National Sunday League when on an excursion to Stratford-upon-Avon.

Three other literary societies were due to Furnivall's initiative. In 1881 he founded the Wiclif Society for the printing of the reformer's Latin MSS., and in the same year, at the suggestion of Miss E. H. Hickey, a devoted admirer of Browning, he inaugurated the Browning Society for the study and interpretation of Browning's poetry. Furnivall had read Browning's poetry with appreciation, and had come to know the poet, whose personality attracted him (cf. FURNIVALL, *How the Browning Society came into being*, 1884). The first meeting of the new society was held on 28 Oct. 1881, and excited much ridicule. But Furnivall and his fellow-members were undismayed, and their efforts greatly extended Browning's vogue. The poet was always grateful to Furnivall for his aid in popularising his work. Furnivall compiled an exhaustive 'Browning Bibliography' in 1881, and arranged for the production on the stage of several of Browning's plays, among them 'In a Balcony' (6 Dec. 1884), 'The Blot in the 'Scutcheon' (30 April and 2 May 1885), 'Return of the Druses' (26 Nov. 1891), and 'Colombe's Birthday' (19 Nov. 1893). In 1887 Furnivall became president of the society, which lasted till 1892. The final society which Furnivall founded was the Shelley Society, which lasted from 1886 to 1892. Besides reprinting many original editions of Shelley's

poems, the society gave a private performance of the 'Cenci' at the Grand Theatre, Islington, on 7 May 1886.

Furnivall's work for his societies was unpaid, and though he found time for some external labour, including an edition of Robert de Brunne's 'Chronicle of England' for the Rolls Series in 1887, his literary activity was never really remunerative. His pecuniary resources were, during the last half of his life, very small. On his father's death on 7 June 1865 he received a substantial share of his large estate, but he invested all his fortune in Overend and Gurney's Bank, which stopped payment in 1867. Furnivall, left well-nigh penniless, was forced to dispose of his personal property, but this his rich friends, Henry Hucks Gibbs (afterwards Lord Aldenham) and Henry Huth, purchased and restored to him. In 1873 he was an unsuccessful candidate for the post of secretary to the Royal Academy. Among others who testified to his fitness were Tennyson, William Morris, Charles Kingsley, J. R. Seeley, M. Taine, and Delius. Thenceforth he lived on his occasional and small literary earnings and on an annual payment as trustee of a relative's property until 1884 when he was granted in addition a civil list pension of 150*l*.

In 1884 Furnivall, whose reputation as a scholar stood high in Germany, received the honorary degree of Ph.D. from Berlin University. In 1901, in honour of his 75th birthday, a volume entitled 'An English Miscellany,' to which scholars of all countries contributed, was printed at the Clarendon Press. At the same time the sum of 450*l*. was presented to the Early English Text Society, and an eight-scuttling boat was given to Furnivall. His portrait was painted for Trinity Hall, of which he was made an hon. fellow on 21 April 1902. He received the hon. D.Litt. of Oxford University in 1901, and he was chosen an original fellow of the British Academy next year.

Till his death he advocated with characteristic warmth the value of sculling as a popular recreation. In 1891 he fiercely attacked the Amateur Rowing Association for excluding working men from the class of amateurs. By way of retaliation he founded on 15 Sept. 1891 the National Amateur Rowing Association on thoroughly democratic lines. In 1903 he became president in succession to the duke of Fife, the first president. In 1896 he formed, in accordance with his lifelong principles, the Hammersmith Sculling Club

for girls and men, which was re-named the Furnivall Club in 1900. Until the year of his death he sculled each Sunday with members of the club from Hammersmith to Richmond and back, and took a foremost part in the social activities of the club.

Furnivall died at his London residence of cancer of the intestines on 2 July 1910, and his remains were cremated at Golder's Green. Until his fatal illness prostrated him, he carried on his varied work with little diminution of energy.

Furnivall's disinterested devotion to many good causes entitles him to honourable remembrance. The enthusiasm with which he organised societies for the purpose of printing inedited MSS. and of elucidating English literature of many periods stimulated the development of English literary study at home and abroad. His taste as a critic was, like his style, often crude and faulty. But he was indefatigable in research, and spared no pains in his efforts after completeness and accuracy. In his literary labour he was moved by a sincere patriotism. But there was no insularity about his sympathies. Powerful democratic sentiments and broad views dominated his life. He believed in the virtue of athletics no less than of learning, and he sought to give all classes of both sexes opportunities of becoming scholars as well as athletes.

Devoid of tact or discretion in almost every relation of life, he cherished throughout his career a boyish frankness of speech which offended many and led him into unedifying controversies. He cannot be absolved of a tendency to make mischief and stir up strife. His declarations of hostility to religion and to class distinctions were often unseasonable, and gave pain. But his defects of temper and manner were substantially atoned for not merely by his self-denying services to scholarship but by his practical sympathy with poverty and suffering, and by his readiness to encourage sound youthful endeavour in every sphere of work.

In 1862 Furnivall married at the registrar's office, Hampstead, Eleanor Nickel, daughter of George Alexander Dalziel. Separation followed in 1883. Of two children of the marriage, a daughter, Ena, died in infancy in 1866. The son, Percy, is a well-known surgeon.

Of portraits of Furnivall, one by Mr. William Rothenstein is at Trinity Hall, Cambridge; another by A. A. Wolmark was presented to the Working Men's College in 1908; a life-size head, drawn in crayons

by C. H. Shannon in 1900, was offered after his death to the National Portrait Gallery; a fourth portrait, by Miss A. D. Staveley, is in the English Library at University College. In 1912 a small memorial fund was applied to the purposes of the Working Men's College.

[Frederick James Furnivall: a volume of personal record, with a biography by John Munro, Oxford University Press, 1911; The Working Men's College, 1854-1904, ed. J. Llewelyn Davies, 1904; Proc. Brit. Acad. (memoir by Prof. W. P. Ker), 1909-10, pp. 374-8; An English Miscellany, 1901, bibliography to date, by Henry Littlehales; personal knowledge.] S. L.

FURSE, CHARLES WELLINGTON (1868-1904), painter, born at Staines on 13 Jan. 1868, was fourth son of Charles Wellington Furse (1821-1900), vicar of Staines, principal of Cuddesdon (1873-83), rector of St. John the Evangelist, Westminster, and canon of Westminster (1883-94), and from 1894 to his death in 1900 canon and archdeacon of Westminster. The father was eldest son of Charles William Johnson (d. 1854) by his wife Theresa, daughter of the Rev. Peter Wellington Furse of Halsdon, Devonshire, and he assumed the surname of Furse in 1854 on succeeding to the Halsdon property. William Johnson, afterwards Cory [q. v. Suppl. I], was Archdeacon Furse's only brother. The artist's mother, Jane Diana, second daughter of John S. B. Monsell, vicar of Egham and granddaughter of Thomas Bewley Monsell of Dunbar, archdeacon of Derry, was his father's first wife, and died in 1877, when he was nine years old. Of her ten children, the eldest, John Henry Monsell Furse (b. 1860), became a well-known sculptor; and Michael Bolton Furse, fifth son, became bishop of Pretoria in 1909.

At an early age Charles showed a talent for drawing. During a long illness in childhood he read Scott's novels, and drew illustrations of the scenes which appealed to him. Later, he went to Haileybury, where he remained till he was sixteen. In the ordinary work of the school he displayed no special capacity, but continued to draw pictures of hunting scenes for his amusement. On leaving Haileybury he joined the Slade school, then under Alphonse Legros [q. v. Suppl. II], and speedily made his mark. He won the Slade scholarship within a year of entrance, and became a favourite pupil of his masters. Unfortunately, at this early stage, symptoms of consumption which was

ultimately to prove fatal showed themselves, and he was forced to spend a winter at St. Moritz. His most intimate friend at this time was a fellow-pupil, now Sir Charles Holroyd, with whom he spent his holidays on the borders of the Lake district or near Maidstone, sketching and reading. From the Slade school he went to Paris, where he studied for some months in Julian's *atelier*, among not very congenial company. On returning from Paris he studied for a short time under Mr. (now Prof.) F. Brown at the Westminster School of Art; but at the age of twenty-one he set up for himself.

He had already exhibited at the Royal Academy (1888) a large figure entitled 'Cain'; but his first real success was a portrait of Canon Burrows (Royal Academy, 1889). This, and a head of his uncle, William Cory, shown at the Portrait Painters in 1891, secured his recognition as an artist of distinction. His father was now a canon of Westminster; and Furse lived at his house in Abbey Garden, renting a studio close by. Success appeared certain, but in the pursuit of his art he was hindered by frequent attacks of illness. He thought much about the principles of his art, and constantly discussed them, as well as literary questions, with his friends, among whom were prominent W. E. Henley [q. v. Suppl. II] and the group of men connected with the 'National Observer.' He read widely, but by predilection in the older literature, especially that of the sixteenth and seventeenth centuries. He occasionally wrote on artistic matters, gave lectures on great artists at Oxford University extension meetings in 1894 and subsequent years, and took part in debates at the Art Workers' Guild.

Although really independent and original, he was during early life unconsciously attracted by the merits of other painters. Thus he passed through several phases, at one time being influenced by Frank Holl, at another by Whistler, again by the Japanese artists, and above all by Mr. J. S. Sargent. The study of Tintoretto and Velasquez is also evident in many of his works. It is true that he assimilated rather than copied other styles; but it was not till near the end of his short life that he worked himself free of all these influences, and developed a noble and spontaneous manner of his own. Delighting in country life and in every variety of sport, he seldom painted landscape pure and simple, but introduced it habitually as a background or a setting for his figures.

Horses were his special study; and in his equestrian portraits the animal is, from the artistic point of view, as important as the man. A whole group of portraits of masters of hounds attests his peculiar skill in this direction. His excellence as a portrait-painter naturally led to his talent being employed chiefly in this line; but in the treatment of his subject he was always anxious to place it among suitable surroundings. In such pictures as the large portrait of Lord Roberts, that of 'Sir Charles Nairne,' and the 'Return from the Ride,' the accessories, studied with great care, form an essential part of the work.

In 1894 he became engaged to Eleanor, sister of Samuel Henry Butcher [q. v. Suppl. II], and her sudden death shortly afterwards was a blow from which it needed all his elasticity to recover. In the following year he was advised to winter in South Africa, and arrived at Johannesburg shortly after the Jameson Raid. He painted a picture of 'Doornkop,' choosing the moment when the British column was approaching the Boers in ambush. This picture was shown by the artist to President Kruger, but has since disappeared. He had some thoughts of volunteering for the Matabele war, but gave up the idea, and returned to England (1896). Two years later he accepted a commission, obtained for him by his friend, Prof. F. M. Simpson, to execute decorative paintings to fill four pendentives under the dome over the staircase in the Liverpool Town Hall. The remuneration was inadequate, but Furse undertook the task for the sake of the opportunity which it afforded of work on a grand scale and of a kind different from anything he had hitherto done. In making his designs he deliberately adopted the manner of Tintoretto, and, while eschewing the realistic reproduction of modern industrial and commercial conditions, adapted them to a treatment at once poetic and vigorous. These paintings, which were his chief occupation for nearly three years, are perhaps the most notable, though not the most popular, of all his works.

Meanwhile the state of his health had compelled him to pass a winter at Davos, where (in Feb. 1900) he became engaged to Katharine, the youngest daughter of John Addington Symonds. He married in October of the same year, and with his wife passed the following winter also at Davos. In 1901 they removed to a new house which he had had built for him on the high ground near Camberley. Here he

took the greatest interest in laying out a small plot of land in formal eighteenth-century fashion, and speedily turned a sandy waste into a beautiful garden. Intensely happy in his marriage and a settled life in congenial surroundings, he worked harder than ever, and in these last three years produced some of his most successful pictures—the 'Return from the Ride,' 'Lord Charles Beresford,' 'Diana of the Uplands,' 'Cubbing with the York and Ainsty.' These works showed that he had at length found himself. But all the time the disease from which he suffered—tuberculosis—was making progress. He passed the winter of 1902-3 at Davos, spent the spring of 1903 in northern Italy and Spain, and took a studio, for the sake of his portrait-painting, in London. In the same year he was elected an associate of the Royal Academy. Never sparing himself, and still full of hope and enthusiasm, he gradually grew weaker, and died on 16 Oct. 1904. He was buried in Frimley churchyard. He left two sons, Peter and Paul, the second of whom was born three days before his death. In person Furse was tall and somewhat stout in later life, but muscular and vigorous. His features were rounded, the face oval, the eyes small but very keen, the complexion pale. He was a keen sportsman, a good shot and whip, and played most games well. His movements were quick, and he painted rapidly, with a fierce concentration, never hesitating to rub out his work over and over again if it did not satisfy him. His untiring energy, width of interest, and intellectual vitality showed themselves in his conversation. He liked nothing better than a good argument, but could listen as well as talk; and his criticism, though keen, was entirely free from jealousy and malice.

Many of his most notable pictures were exhibited in the gallery of the New English Art Club, of which he was an active member from 1891 to his death. He joined in the foundation of the International Society, and was a member of its council. He exhibited also at the Portrait Painters and the New Gallery. A collection of his works, 53 in number, was shown at the Burlington Fine Arts Club in 1906. The 'Return from the Ride' was bought after his death under the Chantry Bequest; 'Diana of the Uplands' was purchased by the trustees of the National Gallery. Both these pictures are now at the Tate Gallery. The larger 'Lord Roberts

(unfinished) has been lent by Mrs. Furse to the same institution. The best likeness of Furse extant is a photograph reproduced in the illustrated catalogue of the Burlington Fine Arts Club exhibition (1908). The same volume contains a selection from his writings (two articles were previously published in the 'Albemarle Magazine,'

Aug. 1892, and the 'Studio,' i. 33), with a number of letters and the reports of some of his lectures.

[Mémorial by Mr. D. S. MacColl, prefixed to the catalogue above mentioned (1908); private information.] (G. W. P.)

FUST, HERBERT JENNER- (1806-1904), cricketer. [See JENNER-FUST.]

G

GADSBY, HENRY ROBERT (1842-1907), musician, born at Hackney on 15 Dec. 1842, was son of William Gadsby. From 1849 to 1858 he was a chorister boy at St. Paul's at the same time as Sir John Stainer (*Mus. Times*, May 1901). He learnt rudimentary harmony under Mr. W. Bayley, the choir-master, but was otherwise self-taught. In 1863 he became a teacher of the piano, the writer being one of his first pupils. Having also taught himself the organ, he became organist of St. Peter's, Brockley, holding this appointment till 1884. He succeeded John Hullah [q. v.] as professor of harmony at Queen's College, London, and Sir William Cousins [q. v. Suppl. I] as professor of piano-forte there. In 1880 he was appointed one of the original professors (of harmony) at the Guildhall School of Music, where he taught till his death. A member of the Philharmonic and other musical societies and fellow of the College of Organists, he was a well-known figure in the musical world. His published works include the following choral and orchestral cantatas: 'Psalm 130' (1862); 'Alice Brand' (1870); 'The Lord of the Isles' (Brighton Festival, 1879); 'Columbus' (male voices, 1881); 'The Cyclops' (male voices, 1883); music to 'Alceste' (1876) and to Tasso's 'Aminta' (for Queen's College, 1898). Other instrumental works were a concert overture, 'Andromeda' (1873), an organ concerto in F, and a string quartet. Unpublished works include three other orchestral preludes, which have been performed: 'The Golden Legend,' 'The Witches' Frolic,' and 'The Forest of Arden.' Numerous part-songs, services, and anthems were printed, as well as 'A Treatise on Harmony' (1883) and 'A Technical Method of Sight-singing' (1897), which are useful text-books. Gadsby was a typical Victorian composer, whose works were always well received and never heard a second time. An earnest musician, whose mission in life was to teach others to be like himself, he died on 11 Nov. 1907 at 53 Clarendon Road, Putney, and was

buried in Putney Vale cemetery. His widow died shortly after him, leaving two daughters.

[Grove's Dict. of Music; Brit. Mus. Cat.; *Mus. Times*, Dec. 1907 (a good obit. notice with portrait); Baker's Biog. Dict. Mus. 1900 (with portrait); personal knowledge.]

F. C.

GAIRDNER, SIR WILLIAM TENNANT (1824-1907), professor of medicine at Glasgow, born in Edinburgh on 8 Nov. 1824, was eldest son of John Gairdner [q. v.], president of the Royal College of Surgeons, Edinburgh, by his wife Susanna, daughter of William Tennant. Educated at the Edinburgh Institution, Gairdner entered as a medical student in 1840 Edinburgh University, where he had a brilliant career. Immediately after graduation as M.D. in 1845, he went with Lord and Lady Beverley as their medical attendant to the Continent, spending the ensuing winter in Rome. On his return to Edinburgh in 1846 he acted for the customary two years' term as house physician and house surgeon to the Royal Infirmary, and then settled down to practice in Edinburgh in 1848. He was soon appointed pathologist to the Royal Infirmary, and immediately entered upon a career of great scientific energy, not only throwing himself into the teaching of his subject to large classes of undergraduates, but making numerous original observations. In 1853 he became physician to the Royal Infirmary. He at once lectured on the 'Principles and Practice of Medicine,' and continued his original observations, but restricted himself more and more to the clinical investigation of disease, at the same time paying close attention to the subject of public health, then in its infancy. In 1862 he brought out at Edinburgh both his classical work on 'Clinical Medicine' (12mo) and his notable volume, 'Public Health in relation to Air and Water.'

In the same year, 1862, Gairdner was appointed professor of medicine in the

University of Glasgow. From 1863 to 1872 he was also medical officer of health to the city, and during that period he remodelled the sanitary arrangements (cf. *Public Health Administration in Glasgow*, a memorial volume of the writings of Dr. J. B. Russell, Glasgow, 1905, with a preface by Gairdner; chaps. i. and ii. detail Gairdner's labours).

Gairdner was an exceptionally attractive lecturer, teaching the diagnosis of disease with singular thoroughness, and illuminating the subject in hand by means of a wide literary culture. Despite his activity as both teacher and consultant, he continued throughout his career his contributions to professional literature. In scarcely any department in medicine did he fail to add something new, in regard either to pathological changes or to clinical appearances. A series of early papers, 'Contributions to the Pathology of the Kidney' (Edinburgh, 1848), supplied an early description of waxy disease, and there was originality of view in 'The Pathological Anatomy of Bronchitis and the Diseases of the Lung connected with Bronchial Obstruction' (Edinburgh, 1850). Later he produced 'Insanity: Modern Views as to its Nature and Treatment' (Glasgow, 1885), and lectures upon 'Tabes Mesenterica' (Glasgow, 1888).

Among the matters on which he threw original light of great value were the intimate connection between arterial supply and myocardial changes; the reciprocal influence of the heart and lungs; hypertrophy and dilatation; the system of representing the sounds and murmurs of the heart by means of diagrams; the recognition of tricuspid obstruction, aneurism, and angina pectoris; and with Stokes, Balfour and Fagge he helped to make certain the diagnosis of mitral obstruction. His last contribution to circulatory disease was the article on aneurism in Clifford Allbutt's 'System of Medicine' (vol. vi. 1889).

Gairdner gave many public addresses on general topics. The chief of these were collected under the titles of 'The Physician as Naturalist' (Glasgow, 1889), and 'The Three Things that Abide' (1903).

Gairdner retired from the chair of medicine in Glasgow in 1890, when he returned to his native city. Many distinctions were granted him. He was made hon. LL.D. of Edinburgh in 1883, and hon. M.D. of Dublin in 1887; was F.R.S. in 1892; hon. F.R.C.P. Ireland in 1887; physician-in-ordinary to Queen Victoria in

1881; honorary physician to King Edward VII in 1901; member of the general council of medical education and registration, as representative of the University of Glasgow, 1894; president of the Royal College of Physicians of Edinburgh in 1893-4; and president of the British Medical Association when it met in Glasgow in 1888. He was created K.C.B. in 1898.

During the last seven years of his life, while his intellectual interests and energies were unimpaired, Gairdner suffered from an obscure affection of the heart, the symptoms of which he carefully recorded. He died suddenly at Edinburgh on 28 June 1907. In accordance with his wish, a complete account of the clinical and pathological conditions of his disease was published by the present writer, in association with Dr. W. T. Ritchie. His portrait, painted by Sir George Reid, is in the University of Glasgow.

Gairdner married, in 1870, Helen Bridget, daughter of Mr. Wright of Norwich; she survived him with four sons and three daughters.

[Proc. Roy. Soc. 80 B, 1908; Life, by G. A. Gibson, in preparation; Lancet and Brit. Med. Journal, 6 July 1907; Edinburgh Med. Journal, Scottish Med. and Surg. Journal, and Glasgow Med. Journal, Aug. 1907.] G.A.G.

GALE, FREDERICK (1823-1904), cricketer and writer on cricket under the pseudonym of 'The Old Buffer,' born at Woodborough, Pewseyvale, near Devizes, on 16 July 1823, was son of Thomas Hinxman Gale, rector of Woodborough and afterwards vicar of Godmersham, near Canterbury, by his wife Elizabeth, daughter of Dr. Poore of Andover. After attending Dr. Buckland's preparatory school at Laleham, Gale was from 1836 to 1841 at Winchester College, of which a great-uncle, Dr. W. S. Goddard [q. v.], was a former headmaster. While at Winchester he played in the cricket eleven against Eton and Harrow in 1841, and in 1845 he played once both for Kent and for the Gentlemen of Kent against the Gentlemen of England. He was a hard hitter and a good fieldsman, but after leaving Winchester gave little time to the practice of the game.

Articled to a member of the London firm of Messrs. Bircham & Co., solicitors, Gale long worked with them as parliamentary clerk, and afterwards as parliamentary agent on his own account. But, deeply interested in cricket and other games, he devoted much time to writing about them, and he gradually abandoned legal business

for the work of an author and journalist. Usually employing the pseudonym of 'The Old Buffer,' he contributed to the 'Globe' and 'Punch,' to the 'Cornhill' and 'Baily's Magazine.' He lectured occasionally also and he wrote many books, the best known of which are 'Public School Matches and those we meet there' (1853), 'Ups and Downs of a Public School' (1859), 'Echoes from Old Cricket Fields' (1871), 'Memoir of the Hon. Robert Grimston' (1885); 'Modern English Sports: their use and abuse' (1885); 'The Game of Cricket' (with portrait of Gale) (1887); and 'Sports and Recreations' (1888). Through his brother-in-law, Arthur Severn, Gale became a close friend of Ruskin, to whom he dedicated his 'Modern English Sports.' Ruskin, who wrote a preface to the book, professed complete agreement with Gale's 'views of life, its duties and pleasures' (RUSKIN'S Works, ed. Cook & Wedderburn, Index vol.). From 1865 till 1882 Gale resided at Mitcham. Interesting himself in Surrey cricket, he helped to discover and bring out four Surrey professional cricketers of distinction—H. Jupp, Thomas and Richard Humphrey, and G. G. Jones. In later life Gale, after some years spent with a son in Canada, became in 1899 a brother of the Charterhouse, London. He died in the Charterhouse on 24 April 1904, and was buried beside his wife at Mitcham. Gale married in 1852 Claudia Fitzroy (*d.* 1874), daughter of Joseph Severn [q. v.]; two sons and four daughters survived her.

[Personal knowledge; private information; Wisden's Cricketers' Almanack, 1905; Hist. of Kent County Cricket, 1907.] P. N.

GALLWEY, PETER (1820–1906), Jesuit preacher and writer, born on 13 Nov. 1820, at Killarney, was son of an agent to the Earl of Kenmare. At the age of six he was placed at school in Boulogne. Thence he passed to Stonyhurst, where he entered the Society of Jesus in 1836. Having completed his studies in literature and philosophy, he was appointed in 1843 to teach in the College of St. Francis Xavier, Liverpool, then at 36 Soho Street. In 1846 he returned to Stonyhurst to take charge of the higher forms. Three years later he began his theological studies at St. Beuno's College, near St. Asaph, and here he was ordained priest in 1852. By 1855 his course of training was completed, and in that year he was appointed prefect of studies at Stonyhurst. He was an excellent school organiser, with a rare power of exciting enthusiasm among his pupils, but his

peculiar gifts fitted him still better for the spiritual ministry. In 1857 he was transferred to London, and placed in charge of the community which served the Farm Street church. Here he remained till 1869, when he was appointed master of novices at Manresa House, Rochampton. In 1873 he was appointed provincial of the Jesuit body in England. At the beginning of his term of office the question of opening a Jesuit school in Manchester involved him in a controversy with the bishop of Salford, Herbert (afterwards Cardinal) Vaughan [q. v. Suppl. II] (see SNEAD-COX'S *Life of Cardinal Vaughan*, vol. i. chap. xii.). Despite episcopal opposition the Jesuits persisted in opening their school, and Vaughan then appealed to the Pope. The issue was decided in Rome in June 1875, when the Jesuit school in Manchester was closed by order of the Holy See. At the end of his period of office as provincial Gallwey was named rector of the College of St. Beuno, but he held the post for only a year. In 1877 he returned to the Farm Street church, and there continued his labours till his death on 23 Sept. 1906.

Gallwey was an effective preacher, but the effect was due not so much to any devices of oratory as to the note of intense personal sincerity and profound religious conviction which characterised his sermons. The same may be said of his longer published works. Possessed of a considerable fund of Irish humour, he made good use of it in controversy. 'The Committee on Convents' and other pamphlets issued in 1870 on the occasion of Mr. Newdegate's demand for the inspection of convents are noteworthy in this respect. Many of his funeral discourses on persons of note have been published. Of these may be mentioned that on Sir Charles Tempest (1865); on Hon. C. Langdale (1868); on Marcia Lady Herries (1883); on Lady Georgiana Fullerton (1885); on Mr. C. Weld (1885). Of his sermons on other subjects many have been issued in pamphlet form. The more important of his longer works are 'The Angelus Bell,' five lectures (1869); 'Lectures on Ritualism' (2 vols. 1879); 'Apostolic Succession' (1889); 'The Watches of the Sacred Passion' (3 vols. 1894).

[Father Gallwey, a Sketch, by Percy Fitzgerald, 1906; Discourse at the Requiem Mass for Fr. Gallwey, by Rev. M. Gavin, S.J., 1906; The Times, 25 Sept. 1906.] T. A. F.

GALTON, SIR FRANCIS (1822–1911), founder of the school of 'eugenics,' born at Birmingham on 16 Feb. 1822, was youngest

of a family of four daughters and three sons born to Samuel Tertius Galton (1783-1844), banker, and his wife Frances Anne Violetta (1783-1874), daughter by a second marriage of Dr. Erasmus Darwin (1731-1802) [q. v.], the philosophical poet and man of science. The Galtons were members of the Society of Friends, and many of them were men of ability, amassing considerable fortunes as gunsmiths and bankers. Through his mother he was also related to men and women of mark.

After education at several small schools he was sent for two years (1836-8) to King Edward's School at Birmingham, but did not profit much from the classical curriculum in use there. Being intended for the medical profession, after preliminary apprenticeships to medical men at Birmingham, he studied for a year (1839-40) at the medical school of King's College, London. In 1840 he made a rapid tour to Vienna, Constantinople, and Smyrna; and at Michaelmas 1840 entered at Trinity College, Cambridge. He there made friendships with many notable men and read mathematics under William Hopkins (1793-1866) [q. v.], but illness prevented him from pursuing his course, and he took a 'poll' degree in 1844.

In 1844 his father died, and he found himself with means sufficiently ample to allow him to abandon the proposed medical career. He accordingly made a somewhat adventurous journey up the Nile to Khartum and afterwards in Syria. On his return he devoted himself from 1845 to 1850 to sport, but as this did not satisfy his ambition he determined to make a voyage of exploration at his own expense. Damaraland in south-west equatorial Africa (now German territory), then quite unknown to the civilised world, was fixed on as the scene of his exploration. Landing at Walfish Bay, he penetrated far into the interior amid many dangers and hardships, and on his return he published an interesting account of his journey entitled '*Tropical South Africa*' (1853; 2nd edit. 1889).

This journey made him well known as an explorer, and from this time he played an important part on the council of the Royal Geographical Society, only retiring when deafness impeded his usefulness at their deliberations. In 1856 he was elected F.R.S., and frequently served on the council of the Royal Society.

As a result of his African journey he wrote a useful book, '*The Art of Travel*' (1855; latest edit. 1872, and latest reprint 1893), describing artifices of use to travel-

lers—a valuable *vade-mecum* for explorers. After his return from Africa, although he travelled extensively in Europe and became a member of the Alpine Club, he undertook no further exploration, because his health had suffered much from the hardships he had endured.

Galton took an active part in the administration of science. From 1863 to 1867 he was general secretary of the British Association; he was four times a sectional president, and twice declined the presidency. In 1863 he published '*Meteorographica, or Methods of Mapping the Weather*.' In this work he pointed out the importance of 'anticyclones' (a word introduced by him), in which the air circulates clockwise (in the northern hemisphere) round a centre of high barometric pressure. This completed the basis of the system of weather forecasting now in operation throughout the civilised world. He also made other considerable contributions to meteorology. This work led to his membership from 1868 to 1900 of the meteorological committee and of the subsequent council, the governing body of the Meteorological Office. He had also previously been connected with Kew Observatory, an institution initiated by General Sir Edward Sabine (1788-1883) [q. v.] for magnetic and meteorological observations. He was a member of the Kew committee of the Royal Society from soon after its foundation, and was chairman from 1889 to 1901.

Meteorology did not nearly suffice to occupy Galton's active mind; already in 1865 he was occupied with those researches into the laws of heredity with which his name will always be associated. In the course of these investigations he was led to perceive the deficiency of tabulated data as to human attributes. He therefore initiated an anthropometric laboratory in connection with the International Health Exhibition of 1884-5, for the purpose of collecting statistics as to the acuteness of the senses, the strength, height, and dimensions of large numbers of people. He devised the apparatus and organised the laboratory himself. When the exhibition was closed the laboratory was moved elsewhere, and it was the forerunner of the biometric laboratory at University College, London.

Among the data collected in this way were impressions of fingers, and Galton thought they might be used for identification. Sir William Herschel had previously wished to use the method in India, and Dr. Faulds had made a similar suggestion in England.

Galton then confirmed earlier investigations which proved the permanence of fingerprints from youth to old age, and devised a dictionary of prints whereby an individual leaving a mark may surely be identified. The method is now in use in the criminal departments of every civilised country. An account of Galton's work is contained in his 'Finger Prints' (1893); 'Blurred Finger Prints' (1893); and 'Finger Print Directory' (1895).

It is due to Galton more than to any other man that many attributes generally regarded as only susceptible of qualitative estimate have been reduced to measurement. For example, he showed how to obtain a numerical measure of the degree of resemblance between two persons, and he made a map to show the geographical distribution of beauty in Great Britain. He devised the method of composite photographs in which each member of a group of persons makes an equal impress on the resulting portrait. Another attempt to annul the resemblance and to register only the individuality was not very successful.

To psychology Galton also made contributions which were important and very original. He showed that different minds work in different ways, and, for example, that visual images play a large part with some but not with others. He investigated visual memory as to illumination, definition, colouring, and the like, and the visions seen not very infrequently by the sane. Akin to this was an inquiry into the patterns or pictures associated in many minds with numbers. He also experimented on taste, on smell, on the muscular sense of weight, on the judgment of experts in guessing the weight of cattle, and on many cognate points. His investigations gave him a high rank amongst experimental psychologists, and yet they were merely collateral to the main stream of his work.

On the publication in 1859 of the 'Origin of Species' by his cousin, Charles Robert Darwin (1809-1882) [q. v.], Galton at once became a convert to the views there enounced and began reflecting on the influence of heredity on the human race. He had been impressed by his own observation with the fact that distinction of any kind is apt to run in families. He therefore made a series of statistical inquiries whereby he proved the heritability of genius of all kinds. These investigations extended over forty years, and the results are set forth in his works: 'Hereditary Genius' (1869); 'English Men of Science' (1874); 'Human Faculty' (1883);

'Natural Inheritance' (1889); and 'Noteworthy Families' (1906).

Such investigations necessarily brought him to face the fundamental principles of statistics, and although his mathematical equipment was inadequate he obtained a remarkably clear insight into the subject. In the hands of Karl Pearson and of others his work led to the formulation of new statistical methods. The leading point is that he showed how the degree of relationship between any pair of attributes or any pair of individuals may be estimated by a numerical factor termed the correlation. He also gave a numerical estimate of the average contribution to each individual from his two parents and his remoter ancestry.

Collateral to these researches were experiments on Darwin's theory of pan-genesis by transfusion of the blood of rabbits *inter se*; the results were however negative.

The study of heredity led Galton to the conviction that the human race might gain an indefinite improvement by breeding from the best and restricting the offspring of the worst. To this study he gave the name of 'eugenics,' and it is probably by this that he will be best known in the future. But he was under no illusion as to the rapidity with which favourable results may be attained, and he foresaw ^{well} that it would need a prolonged education before an adequate knowledge of the power of heredity shall permeate the community. With the object of promoting this education he co-operated in the formation of 'eugenic societies,' and established in 1904 a eugenics laboratory to be worked in connection with the biometric laboratory mentioned above. He further founded in 1904 a research fellowship and in 1907 a scholarship in eugenic researches at University College. A quarterly journal entitled 'Biometrika' had already been initiated in 1901, and he was 'consulting editor.'

Galton received many honours, including medals from the English and French Geographical Societies in 1853 and 1854; a royal medal of the Royal Society in 1876; Huxley medal of the Anthropological Institute in 1901; Darwin medal of the Royal Society in 1902; Darwin-Wallace medal of the Linnæan Society in 1908; and the Copley medal of the Royal Society in 1910. He was made Officier de l'Instruction publique de France in 1891; hon. D.C.L. Oxford in 1894; hon. D.Sc. Cambridge in 1895; hon. fellow of Trinity College, Cambridge, in 1902; and was knighted by patent on 26 June 1909.

Galton lived chiefly in London, and for the latter part of his life at Rutland Gate, going much into society, principally in literary and scientific circles. He was universally popular and an excellent conversationalist, with a very keen sense of humour. During the last four or five years of his life he became very infirm in body, although his intellect remained as clear as ever. He died on 17 Jan. 1911 of acute bronchitis at Grayshott House, Haslemere, a house he had taken for the winter months. He was buried in the family vault at Claverdon near Warwick.

On 1 Aug. 1853 Galton married Louisa Jane, daughter of George Butler (1774-1853) [q. v.], dean of Peterborough and previously headmaster of Harrow School. Mrs. Galton died on 13 Aug. 1897 at Royat after a long period of ill health; she had no children.

He left by will his residual estate, amounting to about 45,000*l.*, for the foundation of a chair of eugenics in the University of London, and he wished Karl Pearson to be the first professor. The capital was to remain as far as possible untouched, and a laboratory was to be built from other sources. For the latter object a subscription has been started since his death.

Portraits of Galton by O. Oakley (ætat. 22, water-colour) and by Charles Wellington Furze in oils (1903) are in the possession of his nephew, Edward Galton Wheeler, at Claverdon Leys, Warwick, and a copy of the latter by Francis William Carter hangs in the hall at Trinity College, Cambridge. There is a bronze bust of Galton by Sir George Frampton at University College, Gower Street, London. In 1908 he wrote an amusing work entitled 'Memories of my Life,' containing a complete list of his papers and books.

[Memories of my Life; personal knowledge and private information. A Life of Galton is being prepared by Professor Karl Pearson, F.R.S.] G. H. D.

GALVIN, GEORGE. [See **LENO, DAN**, 1860-1904.]

GAMGEE, ARTHUR (1841-1909), physiologist, born at Florence on 10 Oct. 1841, was youngest of the eight children of Joseph Gamgee (1801-1894) and Mary West. His father was a veterinary surgeon and pathologist whose researches, particularly on rinderpest, brought him recognition both in this country and abroad. Joseph Sampson Gamgee (1828-1896) [q. v.] was an elder brother.

Gamgee spent his early boyhood in Florence, and there imbibed a lifelong love of art and literature. When he was fourteen his family returned to England and he entered University College school, London. Afterwards he proceeded to the University of Edinburgh, where he studied physics under Peter Guthrie Tait [q. v. Suppl. II]. On taking his medical degree there he was appointed house-physician to the Royal Infirmary. Physiology, especially on its chemical side, early interested him; his inaugural thesis for the degree of M.D. was on the 'Contributions to the Chemistry and Physiology of Foetal Nutrition'; it obtained the gold medal in 1862.

From 1863 to 1869 Gamgee was assistant to Dr. Douglas MacLagan, professor of medical jurisprudence at Edinburgh, and was at the same time lecturer on physiology at the Royal College of Surgeons and physician to the Edinburgh hospital for children. But his interests were centred in research, and then and later he published various papers elucidating problems of physiological chemistry and of the pharmacological action of chemical bodies. The most interesting of these were on 'The Action of the Nitrites on Blood' in 1868, and on 'The Constitution and Relations of Cystine,' issued jointly with Professor James Dewar in 1871.

In 1871 Gamgee worked with Kühne at Heidelberg and with Ludwig at Leipzig, and in the same year he was admitted M.R.C.P. Edinburgh, becoming F.R.C.P. in 1872. In the latter year he was also elected F.R.S. at the early age of thirty. In 1873 he was appointed the first Brackenbury professor of physiology in the Owens College, Manchester, now the Victoria University. He filled this post for twelve years, having Henry Roscoe, Balfour Stewart [q. v.], and Stanley Jevons [q. v.] among his colleagues, and he took his part with these men in making Owens College one of the most conspicuous scientific schools in the country. He worked with tireless enthusiasm as dean of the medical school, and sought with success to establish a working arrangement between the purely scientific and the applied aspects of medicine. A brilliant teacher, he left his impress on many men who have since distinguished themselves. In 1882 he was president of the biological section of the British Association which met at Southampton, and from 1882 to 1885 he was Fullerian professor of physiology at the Royal Institution, London. While in London he was admitted M.R.C.P. in 1885, and F.R.C.P. in 1896.

Gamgee resigned his chair in Manchester in 1885, and practised for a time as a consulting physician at St. Leonards. He was appointed assistant physician to St. George's Hospital, London, in 1887, where he was also lecturer on pharmacology and materia medica in the medical school. On resigning these appointments in 1889 he resumed his scientific work at Cambridge for a year, and then left England for Switzerland, residing first at Berne, then at Lausanne, and finally at Montreux, where he engaged in active practice as a consulting physician, devoting all his spare time to research in his own laboratory. In 1902 he visited the United States by invitation to inspect certain physiological laboratories where the work was chiefly directed towards the study of nutrition in health and disease. In the same year he delivered the Croonian lecture before the Royal Society on 'Certain Chemical and Physical Properties of Hæmoglobin.' He re-visited America in 1903, and at the celebration of Haller's bicentenary at Berne he represented the Royal Society.

He died of pneumonia while on a short visit to Paris on 29 March 1909, and was buried in the family vault in Arno's Vale cemetery, Bristol. He married in 1875 Mary Louisa, daughter of J. Proctor Clark. His widow was granted a civil list pension of 70*l.* in 1910. A son predeceased him and two daughters survived him.

Research was Gamgee's main interest through life. His intimate knowledge of physics and chemistry was linked with experience of German methods which he had gained more especially in the laboratories of his life-long friend, W. Kühne, the professor of physiology at Heidelberg. Whilst lecturing at Manchester Gamgee prepared a translation of Ludimar Hermann's 'Grundriss der Physiologie des Menschen' from the fifth German edition. This book, which appeared in 1875 (2nd edit. 1878), together with the publication of (Sir) Michael Foster's textbook of physiology in 1876, powerfully influenced the development of physiological research in England. In 1880 Gamgee published the first volume of 'A Textbook of the Physiological Chemistry of the Animal Body.' The second volume appeared in 1893. The publication of this book marked an epoch in the progress of English physiological study.

Certain parts of physiology possessed a peculiar fascination for Gamgee. Knowledge of the physical and chemical properties of hæmoglobin is largely due to

him. He was engaged for many years on an elaborate research upon the diurnal variations of the temperature of the human body with specially devised apparatus for obtaining a continuous record throughout the twenty-four hours. The subject had always been in his mind since he had worked at Edinburgh under Tait. The paper recording his method and results appeared in the 'Philosophical Transactions of the Royal Society,' 1908, series B. vol. cc., but his death cut short the investigation. Gamgee believed that physiology stood in an intimate relation to the practice of medicine and that scientific training in a laboratory was essential to the advance of medicine. An excellent linguist, he could lecture fluently in French, German, and Italian. His conscientious modes of work relegated nothing of it to others; he did everything with his own hands.

Apart from the publications already mentioned, numerous contributions to the Proceedings of scientific societies and to scientific journals, Gamgee issued in 1884 'Physiology of Digestion and the Digestive Organs.'

[Lancet, 1909, i. 1144 (with portrait and bibliography); Brit. Med. Journal, 1909, i. 933; private information; personal knowledge.]

D'A. P.

GARCIA, MANUEL [**PATRICIO RODRIGUEZ**] (1805-1906), singer and teacher of singing, born at Zafra in Catalonia on 17 March 1805, belonged to a family of Spanish musicians. His father, Manuel del Popolo Vicente Garcia (1775-1832), made a reputation as singer, impresario, composer and teacher of singing. His mother, Joaquina Sitohès, was an accomplished actress. Manuel was the only son. Both his sisters, Maria Felicita (Madame Malibran) (1803-36) and Michelle Ferdinande Pauline (Madame Viardot-Garcia) (1821-1910), achieved the highest eminence as operatic singers. All three children were educated by their parents. At fifteen Manuel was studying harmony with Fétis in Paris and singing in opera with his father at Madrid. In 1825 the family migrated to America, and at New York the father founded an opera house. After eighteen months of brilliant success the company toured to Mexico, where they were robbed of their earnings—some 6000*l.*, it is said, in gold. They then returned to Paris, where the father pursued his career, but young Manuel, having no taste for the stage, became a teacher. In 1830 he temporarily interrupted his musical work to accept an appointment in the commissariat of the French army at Algiers,

and on his return studied medicine in the military hospitals of Paris (art. in *Musical Times*, April 1905). In 1840 he presented to the French Institut his 'Mémoire sur la voix humaine,' which was accepted as the best authority on the subject. Appointed to a professorship at the Paris Conservatoire, he attracted many distinguished pupils, including Jenny Lind, whom he instructed in Paris from 26 Aug. 1841 to July 1842 (cf. HOLLAND and ROCKSTRO's *Jenny Lind Goldschmidt*, 1891, i. 109 seq.). In 1847 he published his world-famous 'Traité complet de l'art du chant,' of which a simplified abstract appeared as 'Hints on Singing' in 1894. In both the literary and artistic society of Paris Garcia filled a prominent place. Early in 1848 he resigned his position at the Conservatoire, and came to London in June. On 10 Nov. he was appointed a professor of singing at the Royal Academy of Music. He had long closely studied the physiology of the voice, and in 1854, for the purpose of examining his own larynx and that of some of his pupils, he invented the instrument since known as the laryngoscope. On 24 May 1855 he communicated to the Royal Society, through Dr. William Sharpey [q. v.], a paper called 'Observations on the Human Voice.' There he explained his invention, which proved of enormous value in the diagnosis of disease and in surgery (*Proc. Roy. Soc.* vol. 7, p. 399). After undergoing some improvement in 1857 by Johann Czermak of Pesth (1828-1873), the laryngoscope came into universal use as a medical and surgical appliance. Garcia held his professorship at the Royal Academy of Music for forty-seven years, only retiring in September 1895, at the age of ninety. But his bodily and mental activity seemed even then unimpaired, and he continued to teach privately and to maintain an interest in musical affairs until his death at Mon Abri, his house at Cricklewood, on 1 July 1906, at the age of 101 years and four months. He was buried in the private Roman catholic burying-ground of St. Edward's, Sutton Place, near Woking. On 17 March 1905, his hundredth birthday, he was received at Buckingham Palace by King Edward VII, who made him a C.V.O.; the German Emperor William II conferred on him the gold medal for science; the King of Spain admitted him to the order of Alphonso XII; the King of Sweden created him chevalier de l'ordre de mérite; a banquet which was attended by many distinguished persons was held in his honour; and his portrait, painted

by John S. Sargent, R.A., was presented to him.

For more than half a century Garcia held, by general consent, the position of premier singing-teacher in the world. In person he was, from youth to old age, extremely handsome, with all his father's fiery and impetuous disposition. His chief recreation was chess. Mr. C. E. Hallé owns a sketch by Richard Doyle of Garcia and his friend, Sir Charles Hallé, at a game, which is reproduced in MacKinlay's 'Life,' p. 222. There is also a crayon sketch of Garcia, made by his sister Pauline soon after the invention of the laryngoscope. A portrait by Rudolf Lehmann was exhibited at the Royal Academy in 1869. Sargent's portrait Garcia left to the Laryngological Society.

Garcia married at Paris on 22 Nov. 1832 Cécile Eugénie Mayer (b. 8 April 1814; d. 18 Aug. 1880), by whom he had two sons—Manuel (1836-1885) and Gustav, a well-known singing teacher (b. 1837)—and two daughters—Maria (1842-1867) and Eugénie (b. 1844).

GARDINER, SAMUEL RAWSON (1829-1902), historian, born at Ropley, near Alresford, in Hampshire, on 4 March 1829, was eldest son of Rawson Boddam Gardiner by his wife Margaret, daughter of William Baring Gould. His grandfather, Samuel Gardiner of Coombe Lodge, Whitchurch, was high sheriff of Oxfordshire in 1794; his paternal grandmother, Mary Boddam, was descended from Bridget, eldest daughter of the Protector Cromwell, by her marriage with Henry Ireton. This pedigree, which has not been published, was carefully worked out by Colonel J. L. Chester. Gardiner was educated at Winchester College, which he entered about Michaelmas 1841, and matriculated at Christ Church, Oxford, in October 1847 (J. B. WAINWRIGHT, *Winchester College*, 1830-1906; FOSTER, *Alumni Oxonienses*). In 1850 he was given a studentship, and in 1851 he obtained a first class in the school of literæ humaniores. He graduated B.A. in 1851, but did not proceed M.A. till 1884, and was for theological reasons unable to retain his studentship. His parents were Irvingites; he married in 1856 the youngest

daughter of Edward Irving, and was from 1851 to 1866 a deacon in the Irvingite church. His name was removed from the church register before 1872.

After his marriage Gardiner settled in London, and while maintaining himself largely by teaching began to study English history. He was admitted to read in the British Museum on 8 Nov. 1856, and to the Record Office on 1 July 1858. His desire from the first was to write the history of the Puritan revolution, but he thought it necessary to begin by studying the reign of James I. 'It seemed to me,' he afterwards wrote, 'that it was the duty of a serious inquirer to search into the original causes of great events rather than, for the sake of catching at an audience, to rush unprepared upon the great events themselves.' The first-fruits of these researches were some articles published in 'Notes and Queries' during 1860, which explained the causes of the quarrel between James and his parliament and threw fresh light on his policy towards the Roman catholics. Next, at the instigation of John Bruce (1802-1869) [q. v.], then director of the Camden Society, Gardiner edited for that body in 1862 a volume of reports and documents, entitled 'Parliamentary Debates in 1610.' In 1863 the first instalment of his history appeared, 'A History of England from the Accession of James I to the Disgrace of Chief Justice Coke, 1603-1616' (2 vols.). This was followed in 1869 by 'Prince Charles and the Spanish Marriage' (2 vols.). The reception of these books would have discouraged most men. About a hundred copies of the first work were sold, but most of the edition went for waste paper; the second had a circulation of about 500, but did not bring the author anything. Gardiner persevered, and his third instalment, published in 1875, 'A History of England under the Duke of Buckingham and Charles I, 1624-1628' (2 vols.), paid its expenses. The fourth instalment, 'The Personal Government of Charles I' (2 vols. 1877), and the fifth, 'The Fall of the Monarchy of Charles I' (2 vols. 1882), produced some small profit. This portion of his history was reissued under the title of 'History of England, 1603-1640' (10 vols. 1883-4). The next portion of his history consisted of three volumes issued separately in 1886, 1889, and 1891, under the title of 'The Great Civil War,' followed finally by three other volumes, called 'The History of the Commonwealth and Protectorate,' in 1895, 1897, and 1901.

The regular production of these sixteen volumes was made possible by Gardiner's

methodical and strenuous industry. He examined systematically every source of information. He studied in the archives of different European capitals papers illustrating the diplomatic history of the Stuart period, and he presented to the British Museum two volumes of transcripts which he had made at Simancas, besides other documents copied elsewhere (*Add. MSS.* 31111-2). For many years he lived in Gordon Street, within easy reach of the British Museum and the Record Office; subsequently, while residing in succession at Bromley, Bedford, and Sevenoaks, he came up to London nearly every day to work in those two storehouses of historical materials. His chief recreation was cycling, and in his holidays he familiarised himself with the battle-fields of the English civil war and followed the campaigns of Montrose in Scotland and of Cromwell in Ireland. During the greater part of the period in which the history was produced Gardiner was actively engaged in teaching. From 1872 to 1877 he was a lecturer at King's College, London, and in 1877 he succeeded John Sherren Brewer [q. v.] there as professor of modern history. Between 1877 and 1894 he lectured regularly for the Society for the Extension of University Teaching in London. He also taught at Bedford College (1863-81) and in private schools near London, and lectured at Toynbee Hall.

Gardiner liked teaching and was an admirable popular lecturer. He used no notes and spoke in a simple, conversational manner, arranging his facts very clearly, and weaving the different threads of the subject into a connected whole with remarkable skill. His elevation of tone and his breadth of view made his verdicts on statesmen and his exposition of principles impressive as well as convincing. The six lectures on 'Cromwell's Place in History,' given at Oxford in 1896, are a good example of his style, though they are not printed exactly as they were delivered, because they were not written till he was asked by his audience to publish them.

Besides teaching, Gardiner found time to write a number of historical text-books. To the 'Epochs of English History,' published by Longmans, he contributed in 1874 'The Thirty Years' War,' and in 1876 'The Puritan Revolution' (15th impression 1902). He was the author of an 'Outline of English History for Children' (1881; new edit. 1901) and of a 'Student's History of England' for the

higher classes in schools (3 vols. 1890). He also selected and edited, for use in the Modern History School at Oxford, a volume of 'Constitutional Documents of the Puritan Revolution' (1889; 3rd edit. 1906). These and other excellent textbooks enjoyed a wide circulation. 'The Puritan Revolution' was translated into Russian, and portions of the 'Outline' were edited as a reading book for German schools.

In spite of the claims of his history and of his educational work, Gardiner contrived to take a leading part in all enterprises for the promotion of learning. From 1873 to 1878 he edited the historical department of the 'Academy.' To the 'Revue Historique' between 1876 and 1881 he supplied a series of 'bulletins' on the progress of historical literature in England. From the foundation of the 'English Historical Review' in 1886 he was one of its chief contributors, and from 1891 to 1901 its editor. He was director of the Camden Society from 1869 to 1897, editing for it no fewer than twelve volumes besides numerous contributions to its miscellanies. He edited two volumes of documents for the Navy Records Society and one for the Scottish History Society, and was a member of the council of each of these bodies. To this Dictionary he contributed twenty-one lives, and he wrote numerous articles for the ninth edition of the 'Encyclopædia Britannica.' Nor was it only by his writings that he forwarded scholarship. He could always find time to help other historians, and no one was more quick to recognise the merits of a beginner or so ready to give him advice and encouragement.

Recognition came slowly to Gardiner, who, in spite of his eminence as an historian, long maintained himself mainly by teaching and literary work, neither holding any post worthy of his powers nor receiving any aid from the endowments designed to promote learning. In 1878 Lord Acton unsuccessfully pressed Sir George Jessel, the master of the rolls, to appoint Gardiner deputy keeper in succession to Sir T. D. Hardy. In 1882, at Acton's instigation, Gladstone conferred upon Gardiner a civil list pension of 150*l.* a year (PAUL, *Letters of Lord Acton to Mary Gladstone*, 1904, pp. 129, 149). In 1884 All Souls College, Oxford, elected Gardiner to a research fellowship of the value of 200*l.* a year, in order to help him to continue his investigations. In 1892, when his tenure of that fellowship ended, he was elected by Merton College to a similar position, which he retained till his death.

Many honorary distinctions were also conferred upon him at home and abroad. The academies or historical societies of various foreign countries elected him a member, as a recognition of the light his researches had thrown upon parts of their national history, viz. Bohemia (1870 ?), Massachusetts (1874), Copenhagen (1891), Upsala (1893), and Utrecht (1900). In 1887 the University of Göttingen gave him the degree of doctor of philosophy; Edinburgh that of LL.D. in 1881, Oxford that of D.C.L. in 1895, and Cambridge that of Litt.D. in 1899.

In 1894, on the death of Froude, Lord Rosebery offered Gardiner the regius professorship of modern history. He refused it, because he wished to reserve his time and strength for the completion of his book, and was reluctant to leave London, which was the most convenient place for his work. He consented, however, to fill in 1896 the newly created post of Ford lecturer at Oxford, and delivered the single course of lectures which was required, on 'Cromwell's Place in History' (3rd edit. 1897). During the later years of his life he published only two works of importance apart from the continuation of his history—a monograph on Cromwell for Goupil's series of illustrated biographies (1899; translated into German in 1903, with a preface by Professor Alfred Stern of Zurich) and a critical examination of the history of the gunpowder plot (1897) in answer to Father Gerard's endeavour to prove that the plot was devised by the government for its own ends.

By this time Gardiner's health was beginning to fail. He had intended to carry his history down to the restoration of Charles II, but he finally resolved to end it with the death of Cromwell. The third volume of the 'Commonwealth and Protectorate,' which brought the story down to the summer of 1656, was published in January 1901 (new edit. 4 vols. 1903). In March Gardiner was stricken by partial paralysis, and though he rallied for a time was never able to work again. A chapter of the history, which he left in manuscript, was published in 1903, and in accordance with his desires the book was completed by the present writer in his 'Last Years of the Protectorate' (2 vols. 1909).

Gardiner died at Sevenoaks on 23 Feb. 1902, a few days before the conclusion of his seventy-third year. He married (1) in 1856 Isabella, youngest daughter of Edward

Irving: she died in 1878; (2) in 1882 Bertha Meriton Cordery, who survived him and was granted a civil list pension of 75*l.* in 1903. He left six sons and two daughters.

Gardiner was buried at Sevenoaks, and tablets in memory of him were placed in the cloisters of Christ Church and in Winchester Cathedral. His best memorial is his history. Its pages reveal the thoroughness of his workmanship and his single-minded devotion to truth. The book was based on a mass of materials hitherto unknown or imperfectly utilised, and those materials were weighed and sifted with scientific skill. Each new edition was corrected with conscientious care as fresh evidence came to light. In his narrative minute accuracy and wide research were combined with sound judgment, keen insight, and a certain power of imagination. Earlier historians of the period, and some of Gardiner's own contemporaries, had written as partisans. Gardiner succeeded in stating fairly and sympathetically the position and the aims of both parties. He did not confine himself to relating facts, but traced the growth of the religious and constitutional ideas which underlay the conflict. No side of the national life was neglected. He won the praise of experts by his accounts of military and naval operations, elucidated continually the economic and social history of the time, and was the first to show the interaction of English and continental politics. The result of his labours was to make the period he treated better known and better understood than any other portion of English history. A narrative which fills eighteen volumes and took forty years to write is necessarily somewhat unequal as a literary composition. Many critics complained that Gardiner's style lacked the picturesqueness and vivacity of Macaulay or Froude; others that his method was too chronological. There was truth in both criticisms; but the chronological method was chosen because it enabled the historian to show the development of events far better than a more artificial arrangement would have done. He sought to interest his readers by his lucid exposition of facts and the justice of his reflections rather than by giving history the charms of fiction, and was content with the distinction of being the most trustworthy of nineteenth-century historians.

C. H. F.

GARGAN, DENIS (1819-1903), president of Maynooth College, born at Duleek, co. Meath, in June 1819, was second son of Patrick Gargan and Jane Branagan.

Destined by his parents for the priesthood, he was sent at an early age to St. Finian's seminary, Navan. On 25 Aug. 1836 he entered St. Patrick's College, Maynooth, where he showed much promise, especially in physics and astronomy. He was ready for ordination before the canonical age. Ordained by Archbishop Daniel Murray on 10 June 1843, Gargan was sent to the Irish College, Paris, where he taught physics and astronomy till 1845. In that year he was appointed professor of humanity in Maynooth, and in 1859 he succeeded Matthew Kelly [q. v.] as professor of ecclesiastical history at the college. After many years of notable success in this position, he was in 1885 made vice-president of the college, and in 1894 became its president. Two historic events happened during his presidency, namely, the centenary celebration of the college foundation in 1895, and the visit of King Edward VII and Queen Alexandra in 1903. His management of both ceremonies was dignified and impressive. He died at Maynooth on 26 Aug. 1903, after sixty years' association with the college.

Though a man of wide and accurate scholarship, Gargan published only two books, 'The Charity of the Church a Proof of its Divinity,' a translation from the Italian of Cardinal Balluffi (1885), and 'The Ancient Church of Ireland, a Few Remarks on Dr. Todd's "Memoirs of the Life and Times of St. Patrick"' (Dublin, 1864).

[*Irish Ecclesiastical Record*, 1903, pp. 481-492; *Freeman's Journal*, 27 Aug. 1903; *The Times*, 28 Aug. 1903; *Centenary History of Maynooth College*, by Archbishop Healy.]

D. J. O'D.

GARNER, THOMAS (1839-1906), architect, son of Thomas Garner by his wife Louisa Savage, was born at Wasperton Hill, Warwickshire, on 12 Aug. 1839. Brought up in country surroundings, he acquired as a boy a love of riding and

a knowledge of horsemanship which he retained through life. At the age of seventeen (1856) he entered as a pupil the office of (Sir) George Gilbert Scott [q. v.], where he was a fellow student with Mr. Thomas Graham Jackson, R.A., Mr. Somers Clarke, and John Thomas Micklethwaite [q. v. Suppl. II]. He had already made the acquaintance of George Frederick Bodley, R.A. [q. v. Suppl. II], who had served articles in the same office. After completion of his pupillage Garner returned to Warwickshire, and there began architectural practice, partly on his own account, partly as an assistant to Scott.

In 1868 Bodley sought his collaboration, and in 1869 they became partners, without any legal deed of association. A series of beautiful works in ecclesiastical, domestic and collegiate architecture was the result of this combination [see for description BODLEY, GEORGE FREDERICK, Suppl. II]. The fine churches of the Holy Angels, Hoar Cross, St. Augustine, Pendlebury, and St. German, Roath, are the chief buildings of definitely united authorship. During the partnership it was the practice of the two to give separate attention to separate works, and among the buildings which under this system fell mainly if not entirely to Garner's share the chief were St. Swithun's Quadrangle at Magdalen College, Oxford; the small tower in the S.E. angle of 'Tom' Quad, Christ Church; St. Michael's Church, Camden Town; Hewell Grange, a house for Lord Windsor; the reredos in St. Paul's Cathedral; the monuments of the bishops of Ely, Lincoln, and Chichester in their respective cathedrals, and that of Canon Liddon in St. Paul's. Other designs in which it appears that Garner's authorship was either sole or predominant were: churches at Bedworth, Peasdown, and Camerton; additions to Bosworth Hall, a house at Godden Green, Kent; the reconstruction of the chapel at St. Catharine's College, Cambridge; class-rooms, chapel, &c., at Marlborough College; the altar of King's College, Cambridge; and the restoration of Garner's own Jacobean home, Fritwell Manor House, Oxfordshire. After the perfectly friendly dissolution of partnership in 1897 Garner carried out as his own work exclusively Yarnton Manor, Oxfordshire; the Slipper Chapel, Houghton-le-dale; Moreton House, Hampstead; and the Empire Hotel, Buxton.

With his partner Bodley, Garner was regarded for many years as an authoritative ecclesiastical artist. Together they were responsible not only for many new

buildings but also for the decoration, often the transformation, of buildings of earlier date. In 1902 Garner designed the cope worn by the dean of Westminster at the coronation of Edward VII. In his later years Garner joined the Church of Rome, and after the death of Edward Hansom he was appointed architect to Downside Priory, Bath, where he designed the choir in which his own interment was to take place. It is said that when John Francis Bentley [q. v. Suppl. II], the architect of the cathedral at Westminster, became aware of his own fatal illness, he suggested in answer to the question who should be his successor, 'Garner, for he is a man of genius.'

Garner died on 30 April 1906 at Fritwell Manor. He married in 1866 Rose Emily, daughter of the Rev. J. N. Smith of Milverton, Leamington Spa; she survived him without issue.

His residence was for a time at 20 Church Row, Hampstead, and his office was in Gray's Inn. His art collection was sold in January 1907.

'The Domestic Architecture of England during the Tudor Period,' a joint work by Garner and Mr. A. Stratton, was published in 1908, after Garner's death, under Mr. Stratton's editorship.

[Builder, xc. 523, 531 (1906); information from Mrs. Garner and from Mr. Edward Warren.] P. W.

GARNETT, RICHARD (1835-1906), man of letters and keeper of printed books at the British Museum, born in Beacon Street, Lichfield, on 27 Feb. 1835, was elder son of Richard Garnett [q. v.] by his wife Rayne, daughter of John Wreaks of Sheffield. His uncles Jeremiah Garnett and Thomas Garnett (1799-1878) are, like his father, noticed separately. Three years after his birth his father removed with his family to London on becoming assistant keeper of printed books at the British Museum. Richard was chiefly educated at home, but he spent some time at the Rev. C. M. Marcus's small private school in Caroline Street, Bedford Square, where his companions included Sir John Everett Millais [q. v. Suppl. I], Edward Hayes Plumptre [q. v.], and William Jackson Brodribb [q. v. Suppl. II]. He was also for a term at the end of 1850 at Whalley grammar school. Garnett showed exceptional intellectual precocity as a boy. He inherited his father's faculty for acquiring languages, and before he was fourteen he had read for his own amuse-

ment the whole of the 'Poetæ Scenici Græci,' Diodorus Siculus's History, the works of Boiardo, Ariosto, and Tasso, and the stories of Tieck and Hoffmann. All his life he studied not only the classics but the literature of France, Germany, Italy, and Spain. His interest in current affairs was at the same time singularly active in youth, and he assimilated with avidity details of home and foreign politics and records of sport.

After his father's death in Sept. 1850 he declined, from a confirmed if somewhat precocious distrust of the educational efficiency of both Oxford and Cambridge, his kinsfolks' proposal that he should prepare for one of the universities. In the autumn of 1851, through the good offices of Anthony Panizzi [q. v.], his father's colleague at the British Museum, he became an assistant in the library there. With the British Museum he was closely identified for the greater part of his career. His first employment was in copying titles for the catalogue, but he was soon engaged in the more responsible task of revising the titles. Panizzi quickly recognised his ability, and entrusted him with the duty of classifying fresh acquisitions and placing them on the shelves. Panizzi won his wholehearted admiration, and he set himself to carry on the traditions which Panizzi initiated at the museum. After devoting twenty years to subordinate labour at the museum, he was made in 1875 assistant keeper of printed books and superintendent of the reading-room. In spite of his shy and nervous manner he at once won golden opinions by the courteous readiness with which he placed his multifarious stores of knowledge at the disposal of readers. He was soon engaged on a heavy piece of work which added materially to the usefulness of the library to the public. In 1881 the printing of the general catalogue of books which had been suspended since 1841 was resumed. The superintendence of the enterprise fell to Garnett. He devoted immense energy to this great undertaking. In order to concentrate his energies upon it, he in 1884 retired from the reading-room, and was mainly occupied in editing the catalogue until 1890. In that year he was appointed keeper of printed books, and the catalogue was completed by other hands.

In 1882 Garnett was an unsuccessful candidate for the librarianship of the Bodleian library, Oxford, but his promotion to the headship of his department at the British Museum fully satisfied his ambitions. Many important additions were made to

the library under his rule. 'A Description of Three Hundred Notable Books' (which he purchased for the museum during his term of office) was privately printed in 1899 in honour of his services on his retirement, and proves the catholicity and soundness of his judgment. He was keenly alive to the need of providing room for future accessions to the library, and in 1887 introduced 'the sliding press,' which greatly economised the space at his disposal. In 1899, a year before he attained the regulation age for retirement, he resigned his post, owing to his wife's failing health, after forty-eight years' service at the museum. Bishop Creighton called him 'the ideal librarian'—a title which was well justified by his width of literary knowledge and his zealous desire to adapt the national library to all reasonable public requirements. Although he was not a scientific bibliographer, he was interested in the purely professional side of his work, and won the regard of his fellow-librarians. In 1892-3 he was president of the Library Association of the United Kingdom, to whose 'Transactions' he frequently contributed. He edited a series of 'Library Manuals' and was president of the Bibliographical Society in 1895-7.

From early days Garnett devoted his leisure to literature, and during his career at the museum steadily won a general reputation as a man of letters. After his retirement from the museum his pen was exceptionally busy, and his literary work was in unceasing demand until his death.

In letters addressed between 1851 and 1864 to his younger brother, W. J. Garnett, who was then in Australia, he described his first literary endeavours as well as the varied experiences of his bachelor days in London. These letters, which have not been published, are now in the British Museum (*Add. MS.* 37489). Setting out with poetic ambitions which he never wholly abandoned, he published anonymously in 1858 his first volume, 'Primula; a Book of Lyrics.' This reappeared under his own name with additions next year as 'Io in Egypt, and other Poems,' and was thoroughly revised for a third issue in 1893. There followed 'Poems from the German' (1862); 'Idylls and Epigrams, chiefly from the Greek Anthology' (1869; republished as 'A Chaplet from the Greek Anthology,' 1892); 'Iphigenia in Delphi' (1891); 'One Hundred and Twenty-four Sonnets from Dante, Petrarch, and Camoens' (1896); 'The Queen and other Poems' (1901); a dramatic jeu d'esprit in blank verse called

'William Shakespeare, Pedagogue and Poacher' (1904); and finally 'De flagello myrteo' (1905; new edit. 1906), a collection (in prose form but of poetic temper) of three hundred and sixty rather subtle 'thoughts and fancies on love.' Garnett's verse displays a cultured, even fastidious, taste and much metrical facility, but much of it is a graceful and melodious echo of wide reading rather than original imaginative effort. The thought at times strikes a cynical note. Probably his most valuable poetic work was done in translation.

In prose Garnett's labours were extensive and unusually versatile. He was from early manhood a voluminous contributor to periodicals. At the outset he wrote for the 'Literary Gazette' when owned by Lovell Reeve, and for the 'Examiner.' Subsequently he regularly wrote on German literature for the 'Saturday Review.' Articles from his pen appeared from time to time in 'Macmillan's Magazine,' in 'Temple Bar,' and 'Fraser's Magazine.' At a later period he wrote critical introductions to innumerable popular reprints of standard books, and he diversified literary criticisms with many excursions into biography. In the 'Great Writers' series he published monographs on 'Milton' (1887), on 'Carlyle,' which was drastically reduced before publication (1887), and on 'Emerson' (1888). To this Dictionary and to the 'Encyclopædia Britannica,' he supplied very many memoirs. He had no great powers of research and was prone to rely for his facts on his retentive memory, but his biographical work was invariably that of a tasteful, discriminating, and well-informed compiler. His range of biographical interest extended far beyond men of letters, and his biographies include those of Edward Gibbon Wakefield, the colonial pioneer (1898), and of William Johnson Fox, the social reformer (published posthumously and completed by Garnett's son Edward in 1910).

Garnett's most important publications were the volumes entitled 'Relics of Shelley' (1862) and 'The Twilight of the Gods' (1903). The former was a small collection of unpublished verse by the poet, which Garnett discovered among the poet's MSS. and notebooks, which had belonged to Shelley's widow, and passed on her death in 1851 to his son, Sir Percy Shelley. With Shelley he had many affinities. His good fortune in discovering the poet's unknown work gave great satisfaction to Sir Percy and to his wife, Lady Shelley. Garnett became their intimate friend, and

they attested their regard for him by presenting him with Shelley's notebooks. These fetched 3000*l.* at the sale of Garnett's library after his death. Lady Shelley pressed on Garnett the task of preparing the full life of her father-in-law, but other engagements compelled him to yield the labour to Prof. Edward Dowden. Garnett's 'The Twilight of the Gods' is a series of semi-classical or oriental apologues of pleasantly cynical flavour in the vein of Lucian. The book came out in 1888, and attracted no attention, though the earl of Lytton, then English ambassador at Paris, promptly recognised in a long letter to the author the fascination of its imaginative power and dry humour. A reprint in 1903 was welcomed by a large audience and established Garnett's reputation as a resourceful worker in fiction and a shrewd observer of human nature.

Among Garnett's later works were a useful 'History of Italian Literature' (1897), and he joined Mr. Edmund Gosse in compiling an 'Illustrated Record of English Literature' (in 4 vols.); vols. i. and ii. were from Garnett's pen (1903).

Garnett cherished a genuine and somewhat mystical sense of religion which combined hostility to priestcraft and dogma with a modified belief in astrology. He explained his position in an article in the 'University Magazine' (1880), published under the pseudonym of A. G. Trent, which was re-issued independently in 1893 as 'The Soul and the Stars'; it was translated into German in 1894. Garnett maintained that astrology was 'a physical science just as much as geology,' but he gave no credit to its alleged potency as a fortune-telling agent.

In 1883 the University of Edinburgh conferred on Garnett the honorary degree of LL.D., and he was made C.B. in 1895. He died at his house, 27 Tanza Road, Hampstead, on 13 April 1906, and was buried in Highgate cemetery. The chief part of his library was sold at Sotheby's on 6 Dec. 1906.

Garnett married in 1863 Olivia Narney (d. 1903), daughter of Edward Singleton, co. Clare, and had issue three sons and three daughters. His second son, Edward (b. 1868), is well known as an author and dramatist.

On his retiring from the museum in 1899 Garnett's friends presented him with his portrait by the Hon. John Collier. The portrait belongs to Garnett's eldest son, Robert. A photograph of it is prefixed to 'Three Hundred Notable Books' (1899). A better painting by Miss E. M. Heath is

in the possession of Garnett's son Edward. A bust by (Sir) George Frampton, R.A., was exhibited at the Royal Academy in 1899. A caricature by 'Spy' appeared in 'Vanity Fair' in 1895.

Besides the works enumerated, Garnett was author of 'Shelley and Lord Beaconsfield' (privately printed, 1887); 'The Age of Dryden,' a literary handbook (1895); 'William Blake, Painter and Poet' ('Portfolio' monograph, 1895); 'Essays in Librarianship and Bibliography' (1899); 'Essays of an ex-Librarian' (1901). He also laboriously compiled from the voluminous MS. collections, chiefly dealing with Shropshire, of John Wood Warter [q. v.] 'An Old Shropshire Oak' (vols. i. and ii. 1886; vols. iii. and iv. 1891), and he lent his name as editor to 'The International Library of Famous Literature,' a popular anthology on a large scale, which an American publishing syndicate circulated in England in 1901.

[Notes kindly supplied by Garnett's brother, Mr. W. J. Garnett; H. Cordier, *Le docteur Richard Garnett*, 1906; *The Times*, 14 April 1906; *Athenæum*, 21 April 1906; personal knowledge.] S. L.

GARRAN (formerly GAMMAN), ANDREW (1825-1901), Australian journalist and politician, born at Bethnal Green, London, on 19 Nov. 1825, was third of the thirteen children of Robert Gamman, merchant, of London, by his wife Mary Ann, daughter of Henry Matthews, architect and engineer of the home department of the East India Company. Educated at Hackney grammar school, London, and at Spring Hill College, Birmingham, he matriculated in 1843 at London University, where he graduated B.A. in 1845 and M.A. in 1848. On the conclusion of his university career he visited Madeira for his health, and on the same ground finally emigrated to Australia.

On Garran's arrival at Adelaide in Jan. 1851 the controversy respecting state aid to religion was at its height, and of a paper called the 'Austral Examiner,' which was started to oppose the grant of state aid, Garran acted as editor for two years. The discovery of gold in Victoria, however, nearly depopulated Adelaide for the time, and brought the career of the paper to an abrupt conclusion. After serving as private tutor for a year in the family of Mr. C. E. Labillière on a station near Ballan, Victoria, he returned to Adelaide, and in 1854-5 edited the 'South Australian Register.'

In 1856 he became assistant editor under

John West of the 'Sydney Morning Herald,' and his association with that newspaper lasted nearly thirty years. On West's death in 1873 he became editor-in-chief, and he held the post till the end of 1885, when his health compelled him to resign.

At the advanced age of sixty-two, Garran entered the political arena. In 1887 he was made a member of the legislative council of New South Wales by Sir Henry Parkes, and in that capacity his wide knowledge of affairs was always placed at the disposal of the house. In 1890 he suggested, and was made president of, a royal commission on strikes, and the report which he submitted resulted in the passing of the Trades Disputes Conciliation and Arbitration Act in 1892. Of the council of arbitration which this Act established Garran was made president (1 Oct. 1892), and he thereupon resigned his seat in the legislative council to avoid all suspicion of political bias. In his 'Fifty Years of Australian History' (ii. 294) Sir Henry Parkes bears testimony to Garran's 'care, patient labour and ability in conducting the inquiry.'

In December 1894 Garran withdrew from the arbitration council, and on 19 March 1895 was appointed vice-president of the executive council and representative of Mr. (now Sir George) Reid's government in the legislative council. Owing to failing health he resigned the vice-presidency in Nov. 1898, but remained a member until death. He was a member of the parliamentary standing committee on public works, a commissioner of the Sydney International Exhibition (1879), a member of the royal commission on noxious trades (1888), and of the Bay View lunatic inquiry commission (1894).

Garran took much interest in the University of Sydney, where in earlier years he attended the law lectures and took the degree of LL.D. in 1870. He was twice president of the Australian Economic Association. He edited in 1886 the 'Picturesque Atlas of Australasia,' the most comprehensive descriptive work on Australia hitherto published.

He died on 6 June 1901 at his residence, Elizabeth Bay, Sydney, and was buried in Rookwood cemetery. He married at Adelaide in 1854 Mary Isham, daughter of John Sabine, formerly of Bury St. Edmunds, and had one son and seven daughters. His son, Robert Randolph Garran, C.M.G. (b. 10 Feb. 1867), has

made a reputation in the commonwealth as a constitutional lawyer.

A full-length panel portrait in oils, by Tom Roberts, an Australian artist, is in the possession of his widow.

C. A.

GARRETT, FYDELL EDMUND (1865-1907), publicist, born on 20 July 1865, was fourth son of John Fisher Garrett, rector of Elton, Derbyshire, by his wife, Mary, daughter of Godfrey Gray. He was educated at Rossall school and Trinity College, Cambridge, where he graduated B.A. in the summer term of 1887 with a third class in classics. At the university he was more distinguished at the Union Debating Society, of which he was president in 1887, than in the schools. But though not taking a high degree, he gave in other ways early evidence of exceptional literary ability. Some of his translations from the classical poets, as well as his original pieces, contained in a small volume of undergraduate verse, 'Rhymes and Renderings,' published at Cambridge in 1887, are remarkable not only for their grace and ease of expression but for a real poetic feeling. On leaving the university Garrett joined the staff of the 'Pall Mall Gazette,' and rapidly made his mark as a journalist by the force of his convictions—he was at this time a very ardent radical—the freshness of his style, and a happy gift of humour. But he had always been delicate, and after two years of work in London his health broke down. The first symptoms of the disease to which he ultimately succumbed, phthisis, became apparent, and he was sent for cure to South Africa. The remedy was for the moment apparently successful, and in any case this visit to South Africa in the winter of 1889-90 led to other consequences most important to his career. South Africa was at that time entering the critical period of her history which terminated in the war of 1899-1902. Garrett, an ardent young man of exceptionally keen intelligence, not lacking in audacity, and of most winning manners and appearance, was quick to seize the salient points in an interesting situation and to make the acquaintance of the leading actors in the drama. He won the confidence of Sir Hercules Robinson [q. v. Suppl. I], then high commissioner for South Africa, and

made great friends with Cecil Rhodes [q. v. Suppl. II], besides establishing more or less intimate relations with the leading Dutch politicians, including Jan Hofmeyr [q. v. Suppl. II] and President Kruger. The result was a series of articles in the 'Pall Mall Gazette,' subsequently published as a book, 'In Afrikanerland and the Land of Ophir' (1891, 2 edits.), which is still the best description of South Africa in that momentous phase of its development. The next four years were again devoted, as far as recurrent attacks of ill-health permitted, to journalistic work in London, first for the 'Pall Mall Gazette,' then, from 1893, for the 'Westminster Gazette,' in the opening years of its career, in either case under the editorship of Garrett's friend, (Sir) E. T. Cook. In 1894 he also produced a translation of Ibsen's 'Brand' into English verse in the original metres, which, if not perfect as a translation, for Garrett was not a great Norwegian scholar, is singularly successful in reproducing the spirit and poetry of the original.

In April 1895 Garrett returned to South Africa to become editor of the 'Cape Times,' the leading English newspaper in the sub-continent, and far the most important work of Garrett's life was done during his four and a half years' active tenure of that office (April 1895-August 1899). He was not only editor of the paper but the principal writer in it, and being a man of strong character and convictions, gifted moreover with extraordinary quickness of political insight, he on more than one occasion exercised by his trenchant pen a decisive influence on the course of affairs. In the rapid series of stirring events of these four years, the raid, the abortive rebellion in Johannesburg, the struggle between Rhodes and the Bond at the Cape, and between Kruger and the Uitlanders in the Transvaal, the Bloemfontein conference, and the growing tension between Great Britain and the South African republic, Garrett played a leading part. His position in South African politics became one of such importance that he was practically compelled to add to his arduous duties as editor of the 'Cape Times' those of a member of parliament. Returned at the Cape general election of 1898 as member for Victoria East, he immediately took a foremost place in the house of assembly, and in the two heated sessions preceding the war he was perhaps the most eloquent, and he was certainly the most persuasive, speaker on the 'progressive'

(i.e. British) side, for, while warmly supporting Rhodes and the policy of Lord (then Sir Alfred) Milner, he showed great tact in dealing with the susceptibilities of his Dutch opponents. Indeed the policy which he always advocated, that of a United South Africa, absolutely autonomous in its own affairs, but remaining part of the British empire, is now an established fact, readily accepted by men of all parties. Garrett's important contribution to that result constitutes his chief title to remembrance. But the enormous physical strain was too much for his frail constitution. In the summer of 1899 his health broke down permanently. Obligated to leave South Africa, in an advanced stage of consumption, just before the outbreak of the war, he spent the next two or three years in sanatoria, first on the Continent and then in England, still hoping against hope that he might be able to return to an active political career. He had already in January 1900 resigned the editorship of the 'Cape Times,' and in 1902 he also gave up his seat in the house of assembly. He still from time to time, when his health permitted the exertion, wrote short articles and poems of exceptional merit, which are of permanent value, notably his brilliant 'Character Sketch' of Cecil Rhodes, published directly after Rhodes's death in the 'Contemporary Review' of June 1902, which is by far the most lifelike and best balanced picture of that great personality. Of much interest likewise are some of his memorial verses: 'The Last Trek,' written on the occasion of President Kruger's funeral progress from Cape Town to Pretoria (*Spectator*, 10 Dec. 1904), 'In Memoriam F. W. R.' (Frank Rhodes), (*Westminster Gazette*, 27 Oct. 1905), and 'A Millionaire's Epitaph' [Alfred Beit, q. v. Suppl. II], (*ibid.* 20 July 1906). In March 1903 Garrett, then a hopeless invalid, was married to Miss Ellen Marriage, whose acquaintance he had made, as a fellow patient, at the sanatorium at Nayland, Suffolk. Miss Marriage had been completely restored to health, and it was doubtless due to her care and devotion that Garrett's life was prolonged for another four years—years of great happiness, despite his complete physical prostration. In June 1904 Mr. and Mrs. Garrett settled in a cottage, Wiverton Acre, near Plympton, Devonshire. Garrett died there on 10 May 1907, and was buried at Brixton, Devonshire. To the last he occasionally wrote, chiefly on South Africa. Within a month of his death he contributed to the 'Standard' (12 April) an article on 'The Boer in the

Saddle,' which showed no loss of his old brilliancy and force, although the effort involved in writing it was nearly fatal.

Besides the works mentioned Garrett published 'The Story of an African Crisis' (1897), and he contributed a chapter, 'Rhodes and Milner,' to 'The Empire and the Century' (1905). The Garrett Colonial Library, which was founded by colonial admirers in his memory, was opened at the Cambridge Union Society on 23 May 1911. A pencil portrait by Sir Edward Poynter is in the possession of his widow.

[An excellent Life by (Sir) E. T. Cook (1909) contains many extracts from his letters, a good photographic portrait, and, in the Appendix, some of his best fugitive pieces in prose and verse.] M.

GARROD, SIR ALFRED BARING (1819-1907), physician, born at Ipswich on 13 May 1819, was second child and only son of the five children of Robert Garrod of that town, by his wife, Sarah Enew Clamp. He was educated at the Ipswich grammar school, and after being apprenticed to Mr. Charles Hammond, surgeon to the East Suffolk Hospital, pursued his medical course at University College Hospital, where he graduated M.B. in 1842, and M.D. London in 1843, gaining the gold medal in medicine at both examinations. In 1847 Garrod was appointed assistant physician to University College Hospital, where he became physician and professor of therapeutics and clinical medicine in 1851. In the latter year he became a licentiate (corresponding to the present member), and in 1856 a fellow of the Royal College of Physicians, where he was Gulstonian lecturer in 1857, and lecturer on materia medica in 1864. He was elected F.R.S. in 1858. Having resigned his posts at University College Hospital he was in 1863 elected physician to King's College Hospital and professor of materia medica and therapeutics in King's College; on his retirement in 1874 he was elected consulting physician. At the Royal College of Physicians he was Lumleian lecturer in 1883, the first recipient of the Moxon medal in 1891, censor (1874-5, 1887), and vice-president in 1888. Knighted in 1887, he in 1890 became physician extraordinary to Queen Victoria, and was an honorary member of the Verein für innere Medizin in Berlin.

Garrod, a follower of Prout and Bence Jones, devoted himself to chemical investigation of the problems of disease. His name will always be known in con-

nection with the discovery that in gout the blood contains an increased quantity of uric acid, and recent work has tended, in the main, to confirm his views. He announced this discovery in 1848 to the Royal Medical and Chirurgical Society (of which he was vice-president in 1880-1). He also separated rheumatoid arthritis from gout, with which it had previously been confused.

At the Medical Society of London, of which he was orator in 1858 and president in 1860, Garrod gave in 1857 the Lettsomian lectures 'On the Pathology and Treatment of Gout.' He long enjoyed an extensive practice, but when old age diminished his work as a consultant he returned with ardour to his chemical investigations.

Garrod died in London on 28 Dec. 1907, and was buried in the Great Northern cemetery, Southgate.

He married in 1845 Elizabeth Ann (*d.* 1891), daughter of Henry Colchester and Elizabeth Sparrow, of the Ancient or Sparrow House in Ipswich. Charles Keene of 'Punch' [q.v.] and Meredith Townsend [q.v. Suppl. II] of the 'Spectator' were Lady Garrod's first cousins. He had issue four sons and two daughters. The eldest son, Alfred Henry [q.v.], and the fourth son, Archibald Edward, were, like their father, elected fellows of the Royal Society. The third son, Herbert Baring, was general secretary of the Teachers' Guild of Great Britain and Ireland (1886-1909).

Garrod was author of: 1. 'Treatise on Gout and Rheumatic Gout,' 1859; 3rd edit. 1876, translated into French and German. 2. 'Essentials of Materia Medica and Therapeutics,' 1855; 13th edit. 1890, edited by Nestor Tirard, M.D. He also contributed articles on gout and rheumatism to Reynolds's 'System of Medicine,' 1866, vol. i.

[Brit. Med. Journ., 1908, i. 58; information from his son, A. E. Garrod, M.D., F.R.S.]

H. D. R.

GARTH, Sir RICHARD (1820-1903), chief justice of Bengal, born at Morden, Surrey, on 11 March 1820, was eldest son of the six children of Richard Lowndes (afterwards Garth), rector of Farnham, Surrey, by his wife Mary, daughter of Robert Douglas, rector of Salwarpe, Worcestershire. His father was the second son of William Lowndes of Baldwin Brightwell, Oxfordshire, by his wife Elizabeth, daughter and heiress of Richard Garth of Morden, and assumed the name and arms of Garth on succeeding to his mother's property in 1837. In due

course Richard became lord of the manor of Morden.

He was educated at Eton, where he played in the cricket elevens of 1837-8, and at Christ Church, Oxford, where he graduated B.A. in 1842 and M.A. in 1845. He was a member of the university cricket eleven from 1839 to 1842, and its captain in 1840 and 1841. Admitted a student of Lincoln's Inn on 9 July 1842, he was called to the bar there on 19 Nov. 1847. Joining the home circuit, he gained great popularity in the profession, and especial repute in commercial cases heard at the Guildhall. For many years he was counsel to the Incorporated Law Society. He took silk on 24 July 1866, and was two days later elected a bencher of his inn. In the 1866-8 parliament he represented Guildford in the conservative interest, but was defeated at the next general election.

In 1875 he was appointed chief justice of Bengal and was knighted (13 May). A bluff, genial, fresh-complexioned man, he looked more like a country squire or a naval officer than a judge. Popular with all classes of society in Calcutta, he did much to bring the European and Indian communities into closer social touch. His judicial decisions were marked by learning, patience, and practical good sense, and were rarely reversed by the judicial committee of the privy council.

Garth came into frequent conflict with the Bengal government. The views of the high court were then systematically sought on legislative proposals, and Garth framed confidential minutes. But at the same time he often gave subsequent public utterance to pronounced opinions about the proposed legislation. The most notable example of such practice was his vigorous propaganda against the Bengal tenancy bill, designed to give the cultivators in the permanently settled areas clearly defined and transferable occupancy rights, and passed into law after much controversy in 1885. In a published 'Minute' (Calcutta, 1882, 18 pp. folio) he declared the measure to be ruinous for the zamindars and to embody a policy of confiscation. His sincerity was unquestioned, but it was improper for the chief justice to engage in partisan controversy over legislation which he would probably have to interpret judicially. He showed sympathy with Indian aspirations. He promoted the Legal Practitioners Act of 1879, and he insisted that one of the three additional judges appointed to the Bengal high court in 1885 should be an Indian.

Ill-health led to his retirement in March 1886, shortly before he had qualified for

full pension. He was named of the privy council in February 1888, but was not appointed to the judicial committee. A strong supporter of the Indian National Congress, he wrote 'A Few Plain Truths about India' (1888), largely in advocacy of its views. His vigorous reply (1895) to some criticisms of the movement by General Sir George T. Chesney [q. v. Suppl. I] has been constantly quoted by the congress authorities (see *Ind. Nat. Congress*, Madras, 1909, pt. ii. p. 24). Garth promoted in July 1899 a memorial to the India office from retired high court judges for the separation of executive and judicial functions in the administrative organisation of districts.

He died at his house in Cheniston Gardens, London, on 23 March 1903, and was buried at Morden. He married on 27 June 1847 Clara (d. 15 Jan. 1903), second daughter of William Loftus Lowndes, Q.C., by whom he had six sons and three daughters. A portrait of Garth by the Hon. John Collier is in the Calcutta high court.

Richard Garth, the eldest son; personal knowledge.] F. H. B.

GATACRE, SIR WILLIAM FORBES (1843-1906), major-general, born near Stirling on 3 Dec. 1843, was third son of Edward Lloyd Gatacre (1806-91) by his wife Jessie, second daughter of William Forbes of Callendar House, Falkirk, Stirlingshire. The second son is Major-general Sir John Gatacre, K.C.B. The father was squire of Gatacre in the parish of Claverley, Shropshire, a manor held by his ancestors from the time of Henry II or earlier, and was high sheriff of Shropshire in 1856. He taught his sons to be good horsemen, and it was to home life and parentage that Gatacre owed what was most characteristic of him—a mind and body which delighted in exercise and seemed incapable of fatigue.

Educated at Hopkirk's school, Eltham, and at Sandhurst, Gatacre was commissioned on 18 Feb. 1862 as ensign in the 77th foot, then stationed in Bengal. He was promoted lieutenant on 23 Dec. 1864. He went to Peshawar with the regiment in November 1866, and in 1867 he spent six months' leave alone in the upper valleys of the Indus, shooting and exploring. He was invalided home soon afterwards. The 77th returned to England in March

1870, and he was promoted captain on 7 Dec.

In February 1873 he entered the Staff College, and after spending two years there he was employed four years at Sandhurst as instructor in surveying. In August 1880, after a year's service on the staff at Aldershot, he went back to India with his regiment. He was promoted major on 23 March 1881, and lieutenant-colonel on 29 April 1882. He was then serving on the staff of Sir Harry Prendergast at Rangoon; but he returned to regimental duty in 1883, and succeeded to the command of the regiment at Secunderabad on 24 June 1884.

From 17 Dec. 1885 to 30 Sept. 1889 Gatacre was deputy quartermaster-general of the Bengal army. In the Hazara expedition of 1888 he gave striking proof of his activity and endurance. He was mentioned in despatches, and received the D.S.O. and the India medal with clasp. After being in temporary command of the Mandalay brigade for twelve months, and gaining a clasp for the Tonhon expedition, he was made adjutant-general of the Bombay army, with the substantive rank of colonel and temporary rank of brigadier-general (25 Nov. 1890). He had been made brevet-colonel on 29 April 1886. He was in command of the Bombay district from January 1894 to July 1897, but from March to September of 1895 he was engaged in the Chitral expedition. He commanded the 3rd brigade of the relief force under Sir Robert Low [q. v. Suppl. II], and on 20 April his brigade was sent forward as a flying column, as the Chitral garrison were in straits. It reached Chitral on 15 May, after a most arduous passage of the Lowari pass; but the garrison had already been relieved by Colonel Kelly's force from Gilgit. Gatacre received the medal and was made C.B.

On his return from Chitral Gatacre went to England for three months in the winter of 1895-6. During the summer of 1896 he was in temporary command at Quetta, and during the first half of 1897 he was fighting the plague at Bombay. The deaths there in January from this cause rose to more than 300 a day. Gatacre not only took care of his own troops but served as chairman of a committee to deal with the problem generally. Thanks to his energy and tact, the outbreak was well under control by July, when he left India to take command of a brigade at Aldershot. Five testimonials expressed the gratitude of the citizens of Bombay—Christian, Mussulman,

and Hindu—for what he had done. In 1900 the gold medal of the Kaiser-i-Hind order was awarded him on this account.

In January 1898 he went to Egypt, with the local rank of major-general, to command the British brigade in the advance up the Nile for the recovery of Khartoum. He brought it into such condition that it was able to march 140 miles in a week. On 8 April the Anglo-Egyptian army under Sir Herbert Kitchener attacked the Mahdist forces under Mahmoud in their entrenched camp on the Atbara. The British brigade was on the left. Gatacre was one of the first men to reach the zariba, and would have been speared if his orderly had not bayoneted his assailant. Kitchener's despatch spoke of his untiring energy and devotion to duty, his gallant leading of his men, and his hearty co-operation throughout (*Lond. Gaz.* 24 May 1898). Some said that he drove his officers and men too hard, but he was unsparing of himself. 'In the ranks they call him "General Backacher" and love him' (STEEVENS, p. 61). He was promoted major-general on 25 June. In the further operations, which ended with the capture of Omdurman (2 Sept.), he commanded a division of two British brigades. He was again mentioned in despatches, received the thanks of parliament, and was made K.C.B. (15 Nov.). He received the British and Egyptian medals with two clasps and the Medjidie (2nd class). On 15 Dec. he was made a freeman of Shrewsbury, and in February 1899 he received a reward for distinguished service.

On 8 Dec. 1898 he took over command of the eastern district. On 21 Oct. 1899 he embarked for South Africa, to command the third division of the army corps sent out under Sir Redvers Buller [q. v. Suppl. II]. With one exception all the battalions of his division went to Natal to save Ladysmith, while Gatacre himself remained in Cape Colony, charged with the defence of the railway from East London to Bethulie and the country on each side of it. On 2 Dec. Buller asked Gatacre if he could not close with the enemy, or otherwise hinder their advance southward. On the night of 9 Dec. Gatacre made an attempt to seize the railway junction at Stormberg. He had by this time three battalions (Northumberland fusiliers, royal Irish rifles, and royal Scots), some mounted infantry, and two batteries of field artillery. Without good maps and led astray by the guides, his force, instead of surprising the enemy, was itself surprised on the march. A confused fight followed,

in which some mischances occurred, and retreat became necessary. Many men were left behind, worn out with fatigue, and out of a total of 3035 there was a loss of 696. 'I think you were quite right to try the night attack, and hope better luck next time,' was Buller's reply to Gatacre's report of his failure. Lord Roberts on his arrival investigated the facts, and came to the conclusion that Gatacre had shown want of judgment and of ordinary precaution (*Lond. Gaz.* 16 March 1900).

By his orders Gatacre acted on the defensive for the next three months, barring reconnaissances on 23 Feb. and 5 March 1900. On 15 March he crossed the Orange river at Bethulie with his division, now numbering 5000 men, and came in touch with the main army, which was at Bloemfontein. He was placed in charge of the lines of communication. On the 19th he was told 'it is very desirable British troops should be seen all over the country,' and was asked if he could send a force to Smithfield, which he did. On the 28th Lord Roberts telegraphed, 'If you have enough troops at your disposal, I should like you to occupy Dewetsdorp,' and he sent there three companies of the Irish rifles and two of mounted infantry. On the 31st, in consequence of De Wet's successful stroke at Sannah's Post, there came orders to draw in outlying parties, especially the Dewetsdorp detachment. These were passed on without delay, and the detachment reached Reddersburg on 3 April. There it was surrounded, and surrendered after twenty-four hours' fighting, when Gatacre with a small relieving force was within a few miles of it. It is not easy to see where he was in fault; but he was held responsible for what had occurred, was relieved of his command on 10 April, and returned to England (MAURICE, ii. 300-11 and 614). He was informed that there was no slur upon his honour, his personal courage, his energy and zeal, 'which are beyond all question.' He received the Queen's medal for South Africa with two clasps.

He resumed command of the eastern district at Colchester, and remained there till 8 Dec. 1903. He was placed on the retired list on 19 March 1904, but was employed for some months in connection with remounts and the registration of horses. Having joined the board of the Kordofan trading company, he went out to explore rubber forests in Abyssinia towards the end of 1905. He caught fever from camping in a swamp, died at Iddeni on 18 Jan. 1906,

and was buried at Gambela. A tablet was put up to his memory in Claverley church, Shropshire.

Gatacre married (1) in 1876 Alice Susan Louisa, third daughter of Anthony La Touche Kerwen, D.D., dean of Limerick, by whom he had three sons, and whom he divorced in 1892; (2) on 10 Nov. 1895 Beatrix, daughter of Horace, Lord Davey [q. v. Suppl. II], who survived him without issue.

[An admirable life of him, by Lady Gatacre, 1910; *The Times*, 6 March 1906; Captains G. J. and F. E. Younghusband, *The Relief of Chitral*, 1895; G. W. Steevens, *With Kitchener to Khartum*, 1898; Sir F. Maurice, *Official History of the War in South Africa*; S.A. War Commission, *Evidence*, ii. 272-8.] E. M. L.

GATHORNE-HARDY, GATHORNE, first **EARL OF CRANBROOK** (1814-1906), statesman, born on 1 Oct. 1814 at the Manor House, Bradford, was third son of John Hardy (d. 1855), of Dunstall Hall, Staffordshire, the chief proprietor of Low Moor ironworks, judge of the duchy of Lancaster court at Pontefract and member of parliament for Bradford, by his wife Isabel, the eldest daughter of Richard Gathorne of Kirkby Lonsdale, Westmoreland. After attending preparatory schools at Bishopton near Studley, at Hammersmith, and at Haslewood near Birmingham, Gathorne was admitted in 1827 to Shrewsbury school, and in January 1833 he entered Oriel College, Oxford. He graduated B.A. in 1836 with a second class in classics, and proceeded M.A. in 1861 in order to vote against Gladstone. On 2 May 1840 Hardy was called to the bar at the Inner Temple, and joined the northern circuit. Shrewd business qualities combined with family interest and Yorkshire clannishness soon attracted clients. He rapidly attained prominence in his profession, and by 1855 he had acquired a complete lead on sessions and at the parliamentary bar. In the same year he applied for silk, but to his disappointment promotion was refused him. His father's death, however, in 1855 left him ample means, and allowed him to devote himself to politics.

Henceforth political interests became all-absorbing. In 1847 Hardy had unsuccessfully contested Bradford in the conservative interest, and in 1856 he entered the House of Commons as conservative member for Leominster, which he continued to represent till 1865. He rapidly won the esteem and confidence of Spencer Walpole [q. v.], and on his recommendation he was appointed under-secretary for the

home department on 25 Feb. 1858, in Lord Derby's second administration. Like other members of the tory party, Hardy began by distrusting Benjamin Disraeli, then chancellor of the exchequer and leader of the House of Commons, as 'a shifty and unsafe tactician.' When a circular from the chief whip, Sir William Jolliffe [q. v.], requested closer attention to his parliamentary duties, Hardy impulsively tendered his resignation, which he withdrew on the interposition of Spencer Walpole. He remained in office till the fall of the Derby ministry on 14 June 1859.

In opposition Hardy found more scope for initiative and independence. His dashing attacks on John Bright and Lord John Russell contributed to the withdrawal of the abortive reform bill of 1860; and at the end of the session he declined an offer of the post of chief whip. Active in championing the rights and privileges of the Church of England, he helped in 1862 to reject a bill relieving nonconformists from the payment of church rates. Devotion to the established church recommended Hardy to the electors of the University of Oxford when they were bent, in 1865, on opposing Gladstone's re-election. Hardy somewhat reluctantly accepted the nomination of the conservatives. His victory by a majority of 180 on 18 July gave him a foremost place in the affairs of his party.

On the formation of Lord Derby's third administration Hardy was appointed on 2 July 1866 president of the poor law board, and was sworn of the privy council. After an exhaustive inquiry he introduced a poor law amendment bill on 8 Feb. 1867, and carried it through all its stages without any substantial alteration. This measure for the relief of the London poor established a metropolitan asylum for sick and insane paupers, provided separate accommodation for fever and smallpox patients, and gave some relief to poor parishes by a more equitable re-apportionment of the metropolitan poor rate and by charging the salaries of medical officers upon the common fund.

Hardy remained in the cabinet amid the dissensions over the reform bill of 1867, to which, despite misgivings, he gave a full support. Disraeli's personality told upon him and he had become an enthusiastic disciple.

In May 1867, on the resignation of Spencer Walpole after the Hyde Park riots, Hardy accepted the difficult post of home secretary. The liberal opposition compelled him to withdraw a bill declaring it to be illegal to

use the parks for the purposes of political discussion. But he faced the Fenian conspiracy with courage. He refused to commute the capital sentence passed on the Fenian murderers at Manchester, although a disorderly mob forced its way into the home office. His life was repeatedly threatened, and warnings which he received compelled him to impose special restrictions on Queen Victoria's movements. The intimate relations which he established with Queen Victoria [q. v. Suppl. I] at this critical period were maintained throughout her reign.

After the resignation of the Disraeli ministry in 1868 Hardy rendered telling service to his party in debate, especially in conflict with Gladstone. His impassioned speech on the second reading of the Irish church disestablishment bill on 25 March 1869 proved a formidable, if 'an uncompromising, defence of laws and institutions as they are' (MORLEY, *Life of Gladstone*, 1903, ii. 265). As occasional leader of the opposition in Disraeli's absence he lost few opportunities of provoking collision with the prime minister. The appointment of Sir Robert Collier (afterwards Lord Monkswell) [q. v.] to the judicial committee of the privy council and the Ewelme rectory presentation in 1872 prompted him to scathing criticism, which damaged the government.

On the formation of Disraeli's second administration Hardy was appointed secretary of state for war on 21 Feb. 1874. Soon after assuming office he had a passing difference with his chief on church matters. A moderate although sincere churchman, he opposed on 9 July 1874 the public worship regulation bill, despite the protection given it by Disraeli, and he supported Gladstone in a speech which was listened to with some disapproval by his own side (LUCY, *Diary of the Disraeli Parliament*, 1885, p. 34). Hardy remained at the war office more than four years. The army reforms which Viscount Cardwell [q. v.] had inaugurated were still incomplete, and it fell to his successor to supplement and carry on his work. His regimental exchanges bill, which was passed in 1875, legalised the payment of money by officers to those desirous of exchanging regiments with them, and was denounced by the opposition as restoring the purchase system under another name. In the debates on the Eastern question (1876-8) Hardy took a prominent part, cordially supporting Disraeli's philo-Turkish policy, and busily occupying himself during 1878 in

making preparations for the despatch of an expeditionary force to the Mediterranean in the event of war. In the debate on 4 Feb. 1878, when Gladstone urged the House of Commons to reject the vote of credit of 6,000,000*l.* which was demanded by the government, Hardy impressively denounced Gladstone's active agitation in the country (*ibid.* p. 385).

When Disraeli was forced by ill-health to leave the House of Commons in August 1876 Hardy expected to fill the place of leader, and he was disappointed by the selection of Sir Stafford Northcote [q. v.], but his strong instinct of party loyalty led him quickly to resign himself to the situation.

In the rearrangement of the cabinet which followed the resignation of the foreign minister, Edward Henry Stanley, fifteenth earl of Derby [q. v.], in March 1878, Hardy became secretary for India in succession to Lord Salisbury, who went to the foreign office. Reluctance to come into competition with Sir Stafford Northcote, the new leader of the House of Commons, mainly accounted for Hardy's retirement to the House of Lords on 11 May 1878, when he was raised to the peerage as Viscount Cranbrook of Hemsted. He took his title from his country seat in Kent, and at the desire of his family he assumed the additional surname of Gathorne.

Lord Cranbrook's first official duty at the India office was to sanction the Vernacular Press Act of 1878, which empowered the government to silence Indian newspapers that promoted disaffection, but he struck out the clause exempting from the act editors who submitted their articles to an official censor. He expressed doubt of the general principle of the act, declaring that the vernacular press was a valuable and one of the few available means of ascertaining facts of the Indian people's social condition and political sentiment (PAUL, *History of Modern England*, 1905, iv. 78). His relations with the viceroy, Lord Lytton, were invariably cordial. When Lytton exercised his prerogative of overruling his council on the question of reducing the cotton duties, Cranbrook in the council at home confirmed Lytton's action by his casting vote (*East India Cotton Duties, White Paper*, 1879). Lord Cranbrook fully shared the viceroy's apprehensions of Russian expansion in central Asia, and supported Lytton's forward policy on the north-west frontier, which aimed at restoring British influence in Afghanistan. When Ameer Shere Ali refused to receive the

British envoy, he was at one with Beaconsfield in regarding war as inevitable. In a powerful despatch dated 18 Nov. 1878 he justified the coercion of the Ameer, assigning the responsibility for Shere Ali's estrangement to the action of Gladstone's government in 1873 (H. B. HANNA, *The Second Afghan War*, 1899, ii. 135). On 5 Dec. 1878 he reaffirmed this conviction in the House of Lords, despite the attacks of Lord Northbrook [q. v. Suppl. II] and other liberals (*Hansard*, 3 S. ccxlii. 40). After the conclusion of the peace of Gandamak on 26 May 1879 Lord Cranbrook enthusiastically supported the appointment of a British resident to Cabul. But the murder of the resident, Sir Louis Cavagnari [q. v.], on 3 Sept. 1879 reopened the war. As soon as Lord Roberts' victories had once more restored Anglo-Indian supremacy he approved of Lytton's scheme for the separation of Kandahar from Kabul as the best means of counteracting Russian influence. But the practical difficulties of a partition proved stronger than he realised, for Abdurrahman, the new ameer, claimed the whole territory of his predecessor. The situation was still precarious when the ministers resigned on 22 April 1880.

After the fall of the Beaconsfield government Lord Cranbrook confined himself in opposition to occasional criticism of the government in the House of Lords. As an advocate of ecclesiastical reform on conservative lines he sat on the royal commission on cathedral churches from 1879 to 1885. His colleagues continued to place unbounded confidence in his integrity and shrewd judgment, but he played a less prominent part in public affairs. With Lord Salisbury he was in complete sympathy and on terms of close friendship. For Lord Randolph Churchill [q. v. Suppl. I] and the forward wing of the conservative party he had small regard. On 25 June 1885 he joined the conservative 'government of caretakers' as lord president of the council, a post which he again held in Lord Salisbury's second administration from 1886 to 1892. Owing to his inability to speak foreign languages he declined the foreign secretaryship in 1886, and likewise had the refusal of the Irish viceroyalty. As lord president of the council Cranbrook was mainly concerned with education. His churchmanship made him anxious to protect the voluntary schools. He cherished doubts of the prudence of the education bill of 1891, which established free education in elementary schools, but as a government measure he felt bound to give it official support.

Lord Cranbrook resigned with Lord Salisbury's ministry on 12 August 1892, and was created earl of Cranbrook on 22 August. After Gladstone was again in power Cranbrook denounced with unusual vigour and fluency the government's home rule bill in the second reading debate in the House of Lords on 7 Sept. 1893, when the government was heavily defeated; in 1886 and again in 1895 he refused the offer of the chairmanship of the house of laymen in convocation. After the general election of 1895 he retired from public life. He retained his clearness of mind to the end. He died at Hemsted Park on 30 Oct. 1906, and was buried at Benenden, Kent.

Lord Cranbrook, who was elected to the Literary Society in 1860, was the recipient of many honours. In 1865 Oxford conferred on him the hon. degree of D.C.L. In 1868 he was made a bencher of the Inner Temple; and in 1880, on his resignation of the India office, he became G.C.S.I. In 1892 he received the hon. degree of LL.D. from Cambridge, and in 1894 he was elected an hon. fellow of Oriel College, Oxford. A good portrait, painted by Frank Holl [q. v.], belongs to the family: a copy was presented to the Carlton Club by his eldest son. A drawing, made by George Richmond [q. v.] in 1857, hangs in the National Portrait Gallery. A caricature appeared in 'Vanity Fair' in 1872.

Cranbrook was a competent and strenuous administrator, an admirable 'House of Commons man,' a good debater and platform speaker. His speeches were straightforward, dashing party attacks; they excited the enthusiasm of his own side but reached no high intellectual level. Although combative by nature, he bore his political opponents no illwill. He had plenty of ambition, but was capable of suppressing it at the call of party and public interests. He was an ardent sportsman and a man of varied culture. Although he held strong views in church matters, he was free from prejudice. He disliked the opposition to the appointment of Frederick Temple [q. v. Suppl. II] to the bishopric of Exeter in 1869, and disapproved the attempt of the clerical party to oust Dean Stanley [q. v.] from the select preacher'ship at Oxford in 1872. He regarded a broad and reasonable churchmanship as the foundation of conservatism.

Hardy married on 29 March 1838 Jane, third daughter of James Orr of Ballygowan and afterwards of Hollywood House, co. Down. She was made a Lady of the

imperial order of the crown of India in 1878, and died on 13 Nov. 1897. By her he had issue four sons and five daughters, of whom one son and two daughters predeceased him. His eldest son, John Stewart, second earl (b. 1839), died on 13 July 1911, and was succeeded in the title by his eldest son, Gathorne, third earl of Cranbrook. The third son, Alfred Erskine (b. 1845), M.P. for Canterbury from 1878 to 1880 and for East Grinstead from 1886 to 1895, became a railway commissioner in 1905 and published a memoir of his father in 1910.

[A. E. Gathorne Hardy, Gathorne Hardy, 1st Earl of Cranbrook, a memoir, 1910; *The Times*, 31 Oct., 5 Nov. 1906, and *Lit. Suppl.* 24 March 1910; *Athenæum* and *Spectator*, 9 April 1910; *Saturday Review*, 19 March 1910; Paul, *History of Modern England*, 1905, vols. iii. and iv.; Clayden, *England under Lord Beaconsfield*, 1880; Lucy, *Diary of the Home Rule Parliament*, 1896; Lady Betty Balfour, *Lord Lytton's Indian Administration*, 1899; Sir John Mowbray, *Seventy Years at Westminster*, 1900; *Annual Register*, 1860-80; Grant Duff, *Notes from a Diary*.]

G. S. W.

GATTY, ALFRED (1813-1903), vicar of Ecclesfield and author, born in London on 18 April 1813, was second surviving son of Robert Gatty, solicitor, of Angel Court and Finsbury Square, London, by his wife Mary, daughter of Edward Jones of Arnold, Nottinghamshire. The family originally came from Cornwall, where it had been settled since the fifteenth century. Gatty entered Charterhouse in 1825, and was removed to Eton in 1829. For a time he prepared for the legal profession, but on 28 April 1831 he matriculated from Exeter College, Oxford, and graduated B.A. in 1836, proceeding M.A. in 1839 and D.D. in 1860. Gatty was ordained deacon in 1837 and priest in the following year. From 1837 to 1839 he was curate of Bellerby, Yorkshire. In the latter year he married, and was thereupon nominated by his wife's maternal grandfather, Thomas Ryder of Hendon, Middlesex, to the vicarage of Ecclesfield, near Sheffield, which he held for sixty-four years. Under his care the church was completely restored in 1861. In the same year he was appointed rural dean. He became sub-dean of York minster in 1862, and in the course of his career served under six archbishops of York. He died at Ecclesfield on 20 Jan. 1903. Gatty was twice married: (1) on 8 July 1839 to Margaret 1809-1873) [q. v.], youngest daughter of Alexander John Scott [q. v.], by whom he had six sons and four daughters; and (2) on 1 Oct. 1884

to Mary Helen, daughter of Edward Newman of Barnsley, Yorkshire, who survived him without issue. The third son of the first marriage, Sir Alfred Scott-Gatty, has been Garter King-of-arms since 1904, and the second daughter, Mrs. Juliana Horatia Ewing [q. v.], made a reputation as a writer for the young. A portrait of Gatty by Mrs. S. E. Waller, which was presented to him by his parishioners on the fiftieth anniversary of his incumbency, belongs to his second son, Reginald Gatty, rector of Hooton Roberts, Yorkshire.

Gatty's literary labours were prolonged and various. While still an undergraduate he published a slight volume of verse, 'The Fancies of a Rhymers' (1833). Later he collaborated with his wife, Margaret Gatty, in 'Recollections of the Life of the Rev. A. J. Scott, D.D., Lord Nelson's chaplain' (1842), in an edition of the 'Autobiography of Joseph Wolff' (1860), in a descriptive account of a tour in Ireland, entitled 'The old Folks from Home' (1861), and in the compilation of 'A Book of Sundials' (1872; 4th edit. 1900). Gatty repeatedly lectured before the Sheffield Literary and Philosophical Society, and published a useful 'Key to Tennyson's "In Memoriam"' (1881; 5th edit. 1894). But his name was best known as a writer on local topography and archæology. In 1847 appeared his learned essay on 'The Bell; its Origin, History, and Uses' (2nd edit. 1848). This was followed in 1869 by an enlarged folio edition of Joseph Hunter's 'Hallamshire' and in 1873 by a popular history of 'Sheffield, Past and Present.' Between 1846 and 1858 Gatty also issued four volumes of sermons.

[*The Times*, 21 Jan. 1903; A. Gatty, *A Life at One Living*, 1884; *Men of the Time*, 1899; private information from Sir Alfred Scott-Gatty.]

G. S. W.

GEE, SAMUEL JONES (1839-1911), physician, son of William Gee by his wife Lydia Sutton, was born in London on 13 Sept. 1839. His father had a position of trust in a business house and his mother was a person of remarkable ability. In 1847 he was sent to a private school at Enfield and then to University College school in London from 1852 till 1854. He matriculated at the University of London in May 1857, studied medicine at University College, graduated M.B. in 1861 and M.D. in 1865. He was elected a fellow of the Royal College of Physicians in 1870. He was appointed a resident house surgeon at the Hospital for Sick Children in Great Ormond Street, London, in 1865, and there

became known to (Sir) Thomas Smith [q.v. Suppl. II], the surgeon, through whose influence he was elected assistant physician at St. Bartholomew's Hospital on 5 March 1868. On 24 Oct. 1878 he was elected physician and on 22 Sept. 1904 consulting physician, so continuing till his death. In the school of St. Bartholomew's he was demonstrator of morbid anatomy (1870-4), lecturer on pathological anatomy (1872-8), and lecturer on medicine (1878-93). He was also assistant physician and physician to the Hospital for Sick Children and became one of the chief authorities of his time on the diseases of children. At the Royal College of Physicians he delivered the Gulstonian lectures 'On the heat of the body' in 1871, the Bradshaw lecture 'On the signs of acute peritoneal diseases' in 1892, and the Lumleian lectures 'On the causes and forms of bronchitis and the nature of pulmonary emphysema and asthma' in 1899. He was a censor in the college in 1893-4 and senior censor in 1897. He attained a large practice and was consulted in all branches of medicine. He was appointed physician to George, Prince of Wales, in 1901. His observation was acute and systematic and his treatment always judicious. He deserved the reputation which he attained of being one of the first physicians of his time. He wrote many papers on medical subjects, nearly all of which have permanent value. The earliest were on chicken-pox, scarlet fever, and tubercular meningitis, and appeared in Reynolds's 'System of Medicine,' vols. i. and ii. (1866 and 1868), and forty-six others appeared in the 'St. Bartholomew's Hospital Reports.' He published in 1870 'Auscultation and Percussion, together with other Methods of Physical Examination of the Chest' (5th edit. 1906), which is at once the most exact and the most literary account of its subject in English. Robert Bridges in his 'Carmen Elegiacum' of 1877 has described Gee's appearance and methods of demonstration at the period of his work upon this book:

'Teque auscultantem palpatem et percussantem

Pectora, sic morbi ducere signa vident.'

Gee's only other book was 'Medical Lectures and Aphorisms,' which appeared in 1902 and has had three editions. It contains fourteen lectures or essays and 272 aphorisms collected by Dr. T. J. Horder, once his house physician. The aphorisms represent very well the form of Gee's teaching at the bedside. Its dogmatic method he had learned from Sir William

Jenner [q. v. Suppl. I], but his own reading of seventeenth-century literature coloured his expressions both in speaking and writing. His description of the child's head in hydrocephalus as distinguished from the enlarged skull of rickets and his observations on enlarged spleen in children are the passages of his writings which may most justly be considered as scientific discoveries. He wrote a short essay on Sydenham (*St. Bartholomew's Hospital Reports*, vol. xix.), one on Abraham Cowley (*St. Bartholomew's Hospital Journal*, 1903), and an article on the death of Andrew Marvell (*Athenæum*, 5 Sept. 1874).

He was librarian of the Royal Medical and Chirurgical Society from 1887 to 1899, and had a wide knowledge of books on medicine, his favourite English medical writers being Sydenham, Morton, and Heberden. He read Montaigne often, and had studied Milton, Phineas Fletcher, and Hobbes.

During the period of his active practice in London he lived first at 54 Harley Street, and then at 31 Upper Brook Street, Grosvenor Square. He died suddenly of heart disease at Keswick on 3 Aug. 1911. His remains were cremated, and his ashes deposited in the columbarium of Kensal Green cemetery, London. He married, on 7 Dec. 1875, Sarah, daughter of Emanuel Cooper, Mr. Robert Bridges, the poet, being his best man. His wife died before him, and they had two daughters, of whom one survived her father.

[Personal knowledge; *St. Bart. Hosp. Reports*, vol. xlvii.; *St. Bart. Hosp. Journal*, Oct. and Nov. 1911, obit. notices by Norman Moore, Howard Marsh, and T. J. Horder; works.] N. M.

GEIKIE, JOHN CUNNINGHAM (1824-1906), religious writer, born in Edinburgh on 26 Oct. 1824, was second son of Archibald Geikie, presbyterian minister in Toronto and subsequently at Canaan, Connecticut. Geikie received his early education in Edinburgh, and afterwards studied divinity for four years at Queen's College, Kingston, Ontario. Ordained a presbyterian minister in 1848, he first engaged in missionary work in Canada. From 1851 to 1854 he was presbyterian minister at Halifax, Nova Scotia. In 1860 he returned to Great Britain and held a presbyterian charge at Sunderland till 1867, and at Islington Chapel from 1867 to 1873. In 1876 he was ordained deacon in the Church of England and priest next year. He was curate of St. Peter's, Dulwich (1876-9), rector of Christ

Church, Neuilly, Paris (1879-81), vicar of St. Mary's, Barnstaple (1883-5), and vicar of St. Martin-at-Palace, Norwich (1885-90). In 1871 he was made hon. D.D. of Queen's College, Kingston, Ontario, and in 1891 hon. LL.D. of Edinburgh University. In 1890 he retired, owing to ill-health, to Bournemouth, where he died on 1 April 1906. He was buried at Barnstaple. He had been awarded a civil list pension of 50*l.* in 1898. He married in 1849 Margaret, daughter of David Taylor of Dublin. She survived him with two sons.

Geikie enjoyed a wide reputation as a writer of popular books on biblical and religious subjects. Spurgeon described him as 'one of the best religious writers of the age.' Scholarly, imaginative, and lucid, his chief writings dealt on orthodox lines with historical and practical rather than with theological themes. His most ambitious work was 'Hours with the Bible, or, the Scriptures in the Light of Modern Discovery and Knowledge' (10 vols. 1881-4; new edit. largely re-written, 12 vols. 1896-7). His 'Life and Words of Christ' (2 vols. 1877; new edit. 1 vol. 1891) reached a circulation of nearly 100,000 copies, and Delitzsch placed the book in 'the highest rank.' He was deeply interested in the exploration of Palestine under the direction of Claude R  gnier Conder [q. v. Suppl. II], and several visits to the country supplied him with material for 'The Holy Land and the Bible: A Book of Scripture Illustrations gathered in Palestine' (2 vols. 1887; abridged edit. 1903). Among Geikie's other works were: 1. 'George Stanley, or Life in the Woods,' 1864; 2nd edit. 1874. 2. 'Entering on Life,' 1870. 3. 'Old Testament Portraits,' 1878; new edit. entitled 'Old Testament Characters,' 1880; enlarged edit. 1884. 4. 'The English Reformation,' 1879, a popular history from the ultra-Protestant standpoint which ran through numerous editions. 5. 'The Precious Promises, or Light from Beyond,' 1882. 6. 'Landmarks of Old Testament History,' 1894. 7. 'The Vicar and his Friends,' 1901.. Geikie was also a voluminous contributor to religious magazines.

[Scotsman, 3 April 1906; Allibone's Dict.; Crockford's Clerical Directory.] W. F. G.

GELL, SIR JAMES (1823-1905), Manx lawyer and judge, born at Kennaa on 13 Jan. 1823, was second son of John Gell of Kennaa, Isle of Man. The family of Gell held land there for more than four centuries. After education at Castletown grammar school and King William's College, Gell

at sixteen was articled to the clerk of the rolls, John McHutchin, in Castletown, and was admitted to the Manx bar on 16 Jan. 1845. He enjoyed a large and important practice, and became known as the chief authority on Manx law and custom. In 1854 he was appointed high bailiff of Castletown, and in May 1866, the year of the Manx Reform Act, became attorney-general. That office he filled with distinction for over thirty-two years. He drafted with much skill nearly all the Acts which came into operation during the period. From 1898 to 1900 he was first deemster, and from 1900 till death clerk of the rolls.

Gell temporarily filled the post of deputy governor in 1897, acting governor in July 1902, and deputy governor in November 1902. He was a member of the legislative council and of the Tynwald court for thirty-nine years. An intensely patriotic Manxman, he championed all the rights and privileges of the island. He took an active part in educational and religious work. He was chairman of the insular justices from 1879, a trustee of King William's College, and chairman of the council of education from 1872 to 1881. For many years he was chairman of the Manx Society for the Publication of National Documents, and he edited in 1867 vol. xii. of Parr's 'Abstract of Laws of the Isle of Man.' He was also editor for the insular government of the statute laws of the Isle from 1836 to 1848, and he supervised and annotated a revised edition of the statutes dating from 1417 to 1895.

An earnest churchman, he was for the greater part of his life a Sunday-school teacher, and was one of the church commissioners, the trustees of Manx church property. He was knighted in 1877. He was acting governor when King Edward VII and Queen Alexandra paid their surprise visit to the isle in 1902, and he received the honour of C.V.O. He died at Castletown on 12 March 1905. He married on 17 Dec. 1850 Amelia Marcia (d. 1899), daughter of William Gill, vicar of Malew, a well-known Manx scholar and representative of an ancient local family. Of four sons and three daughters, two sons, Mr. James Stowell Gell, high bailiff of Douglas and Castletown, and William Gell, vicar of Pontefract, Yorkshire, with one daughter, survive.

[The Times, 13 March 1905; Men of the Time, 1899; official Debates of the Legislature, vols. 1 to 22.] W. C.

GEORGE WILLIAM FREDERICK CHARLES, second DUKE OF CAMBRIDGE, EARL OF TIFFERARY and BARON CULLODEN (1819-1904), field-marshal and commander-in-chief of the army, was only son of Adolphus Frederick, first duke [q. v.], the youngest son of George III. His mother was Augusta Wilhelmina Louisa, daughter of Frederick, landgrave of Hesse Cassel. He was born at Cambridge House, Hanover, on 26 March 1819, and being at that time the only grandchild of George III, his birth was formally attested by three witnesses—the duke of Clarence (later William IV), the earl of Mayo, and George Henry Rose, P.C. His father was governor-general of Hanover, and Prince George lived there till 1830, when he was sent to England to be under the care of William IV and Queen Adelaide. His tutor was John Ryle Wood, afterwards canon of Worcester, who had great influence over him and won his lasting attachment. At Wood's instance he began a diary, as a boy of fourteen, a singularly naive confession of his shortcomings, and he kept it up to within a few months of his death. In 1825 he was made G.C.H., and in Aug. 1835 K.G. In 1836 he rejoined his parents in Hanover, his tutor being replaced by a military governor, lieutenant-colonel William Henry Cornwall of the Coldstream guards. He had been colonel in the Jäger battalion of the Hanoverian guards since he was nine years old; he now began to learn regimental duty both as a private and an officer.

On the accession of his first cousin, Queen Victoria, in June 1837, Hanover passed to the duke of Cumberland, and the duke of Cambridge returned with his family to England. On 3 Nov. Prince George was made brevet colonel in the British army, and in Sept. 1838 he went to Gibraltar to learn garrison duties. He was attached to the 33rd foot for drill. After spending six months there and six months in travel in the south of Europe, he came home, and was attached to the 12th lancers, with which he served for two years in England and Ireland. On 15 April 1842 he was gazetted to the 8th light dragoons as lieutenant-colonel, but ten days afterwards he was transferred to the 17th lancers as colonel. He commanded this regiment at Leeds, and helped the magistrates to preserve the peace of the town during the industrial disturbances in August.

On 20 April 1843 he was appointed colonel on the staff, to command the troops in Corfu. He spent two years there, and

on Lord Seaton's recommendation he received the G.C.M.G. He was promoted major-general on 7 May 1845. After commanding the troops at Limerick for six months, he was appointed to the Dublin district on 1 April 1847, and held that command five years. He had a large force under him, and worked hard at the training of the troops. In 1848 political disturbances made his post no sinecure. By the death of his father on 8 July 1850 Prince George became duke of Cambridge, and an income of 12,000*l.* a year was voted him by Parliament. He was made K.P. on 18 Nov. 1851. For nearly two years from 1 April 1852 he was inspecting general of cavalry at headquarters, and the memoranda on the state of the army which he then drew up (VERNER, i. 39-59) show how much he concerned himself with questions of organisation. He was in command of the troops at the funeral of the duke of Wellington. On 28 Sept. 1852 he was transferred as colonel from the 17th lancers to the Scots fusilier guards.

In February 1854 the duke was chosen to command a division in the army to be sent to the Crimea. He accompanied lord Raglan to Paris on 10 April, and went thence to Vienna, bearing a letter from the Queen to the Emperor Francis Joseph. Leaving Vienna on 1 May, he reached Constantinople on the 10th. He was promoted lieutenant-general on 19 June, went with his division (guards and highlanders) to Varna, and thence to the Crimea. At the Alma (20 Sept.) he and his men were in second line, behind the light division; but when the latter fell back before the Russian counter attack, the guards and highlanders came to the front and won the battle. At Inkerman (5 Nov.) the duke with the brigade of guards (the highlanders were at Balaclava) came to the help of the 2nd division very early in the day, and retook the Sandbag battery. His horse was shot under him, and he found himself left with about 100 men, while the rest pushed on down the slope. Kinglake describes him 'with an immense energy of voice and gesture . . . commanding, entreating, adjuring' the men to keep on the high ground. By the advance of another Russian column he was nearly cut off from the main position, and he and his aide-de-camp 'had regularly to ride for it in order to get back' (VERNER, i. 79). The guards lost 622 officers and men out of 1361 engaged.

The duke's courage was high, but he had not the imperturbability needed for war, and his health had suffered at Varna.

Of the Alma he notes, 'When all was over I could not help crying like a child' (VERNER, i. 73). Three days before Inkerman he had written to Queen Victoria gloomily about the situation of the army. He was 'dreadfully knocked up and quite worn out' by the battle, and was persuaded to go to Balaclava for rest. He was on board the frigate *Retribution*, when it narrowly escaped wreck in the great storm of 14 November. On the 25th he left the Crimea for Constantinople, and on 27 Dec. a medical board invalidated him to England. He was mentioned in despatches (*Lond. Gaz.* 8 Oct., 12 and 22 Nov. 1854) and received the thanks of parliament, the medal with 4 clasps, the Turkish medal, and the G.C.B. (5 July 1855). He declined the governorship of Gibraltar, and was anxious to return to the Crimea. When general Sir James Simpson [q. v.] resigned command of the army there in November, the duke tried in vain to succeed him. In January 1856 he was sent to Paris, to take part in the conference on the further conduct of the war, but the conclusion of peace in March made its plans of no effect.

On 15 July Lord Hardinge [q. v.] resigned, and the duke succeeded him as general commanding in chief. He was promoted general, and on 28 July was sworn of the privy council. The breakdown in the Crimea had led to great changes in army administration. The secretary of state for war (separated in 1854 from the colonies) took over the powers of the secretary at war, and of the board of ordnance, which was abolished. He also took over the militia and yeomanry from the home office and the commissariat from the treasury. He became responsible to parliament for the whole military administration; but the general commanding in chief, as representing the crown, enjoyed some independence in matters of discipline and command, appointments and promotions. The abolition of the board of ordnance brought the artillery and engineers under his authority, and the duke was made colonel of these two corps on 10 May 1861. The amalgamation (of which he was a strong advocate) of the European troops of the East India Company with the army of the crown in 1862 gave him general control of troops serving in India.

The volunteer movement of 1859 brought a new force into existence. He was not unfriendly to it, but had no great faith in it, and was opposed to a capitation grant. He became colonel of the 1st City of London

brigade on 24 Feb. 1860. He was president of the National Rifle Association, which was founded in 1859 and had till 1887 its ranges at Wimbledon, on land of which he was principal owner; then he found it necessary to call upon it to go elsewhere, and the ranges were transferred to Bisley. He took an active part in military education, and helped to found the Staff College. He had been appointed a commissioner for Sandhurst and for the Duke of York's school in 1850, and was made governor of the Military Academy at Woolwich in 1862. On the death of the Prince Consort he exchanged the colonelcy of the Scots fusilier guards for that of the Grenadier guards. On 9 Nov. 1862 he was made field-marshal.

During the first thirteen years of his command the duke was in accord with successive war ministers, though he was continually remonstrating against reductions or urging increase of the army. But in December 1868 Edward (afterwards Viscount) Cardwell [q. v.] became secretary of state, with Gladstone as premier, and they took in hand a series of reforms which were most distasteful to him. First of all, the so-called dual government of the army, which divided responsibility and was a hindrance to reform, was abolished. By the War Office Act of 1870 the commander-in-chief was definitely subordinated to the war minister, and became one of three departmental chiefs charged respectively with combatant personnel, supply, and finance. To mark the change, the duke was required in Sept. 1871 to remove from the Horse Guards to Pall Mall. He regarded this as a blow not only to his own dignity but to the rights of the crown, and the Queen intervened on his behalf; but he had to give way.

The reconstruction of the war office was followed by the adoption of short service, the formation of an army reserve, the linking of battalions, and their localisation. The purchase of commissions was abolished, and seniority tempered by selection became the principle of promotion. The duke was opposed to all these innovations. His watchwords were discipline, *esprit de corps*, and the regimental system, all of which seemed to him to be threatened. But holding it to be for the interest of the crown and the army that he should remain at his post, he accepted a system of which he disapproved. The system held its ground notwithstanding party changes, and in 1881 it was carried a stage further by H. C. E. Childers [q. v. Suppl. I], the

linked battalions being welded into territorial regiments in spite of the duke's efforts to unlink them.

On 24 Nov. 1882 he was made personal aide-de-camp to Queen Victoria, to commemorate the campaign in Egypt; and on 26 Nov. 1887, when he had completed fifty years' service in the army, he was made commander-in-chief by patent. At the end of that year his functions were much enlarged, the whole business of supply being handed over to him. Cardwell had assigned it to a surveyor-general of the ordnance, who was meant to be an experienced soldier; but the office had become political, and the complaints about stores during the Nile campaign led to its abolition. Everything except finance now came under the control of the commander-in-chief, with the adjutant-general as his deputy. During the next few years much was done to fit the army for war: supply and transport were organised and barracks improved; but the secretary of state found that the military hierarchy hindered his personal consultation of experts.

In June 1888 a very strong commission was appointed, with Lord Hartington (afterwards duke of Devonshire) [q. v. Suppl. II] as chairman, to inquire into naval and military administration; and in May 1890 they recommended that the office of commander-in-chief should be abolished when the duke ceased to hold it, and that there should be a chief of the staff. Sir Henry Campbell-Bannerman [q. v. Suppl. II], who became war minister in 1892, dissented from this recommendation; but he thought the powers of the commander-in-chief ought to be diminished, and the duke's retirement was a necessary preliminary. The call for this step grew louder, and in the spring of 1895 the duke consulted the Queen. Though 76 years of age, he felt himself physically and mentally fit for his office. The Queen replied, reluctantly, that he had better resign (VERNER, ii. 395), and on 31 October he issued his farewell order, handing over the command of the army to Lord Wolseley. To soften the blow, the Queen appointed him her chief personal aide-de-camp and colonel-in-chief to the forces, with the right of holding the parade on her birthday.

In announcing to the House of Commons the duke's approaching retirement, on the eve of his own fall (21 June) Campbell-Bannerman touched on his attractive personality, his industry and activity, his devotion to the interests of the army, and

his familiarity with its traditions and requirements; but dwelt especially on his common sense and knowledge of the world, his respect for constitutional proprieties and for public opinion. The army was attached to him because of his fairness. He bore no ill-will to officers who differed from him, but could discuss points of difference with good temper (VERNER, ii. 272, seq.). Though in the training of the troops, as in other things, he was conservative, his thorough knowledge of close-order drill, and his outspoken, not to say emphatic, comments made him a formidable inspecting officer and kept up a high standard.

Devoted as the duke was to the army, it by no means absorbed all his energies. He undertook with alacrity the duties that fell to him as a member of the royal family, which were especially heavy after the death of the Prince Consort. For instance, in 1862 he was called upon to open the international exhibition, to entertain the foreign commissioners, and distribute the prizes. He was connected with a large number of charitable institutions, and took real interest in them; but two were pre-eminent—the London Hospital and Christ's Hospital—over both of which he presided for fifty years. He was elected president of Christ's Hospital on 23 March 1854, and was the first president who was not an alderman of the City. From that time onward he worked unsparingly for it, though latterly his efforts were mainly in opposition to the removal of the school to Horsham, 'the most wanton thing that ever was undertaken' (SHEPPARD, ii. 322). He was in great request as a chairman at dinners and meetings for benevolent purposes, for though not eloquent he was fluent, and had the art of getting on good terms with his audience.

In private life he was the most affectionate of men. His mother lived long enough to send her blessing to 'the best son that ever lived,' while he was being entertained at the United Service Club to celebrate his military jubilee. She died on 6 April 1889, and within a year he had another heavy blow in the death of his wife. Disregarding the Royal Marriage Act, he had marriedmorganatically on 8 Jan. 1840 Miss Louisa Fairbrother, an actress, then 24 years of age. She lived in Queen Street, Mayfair, as Mrs. Fitzgeorge till her death on 12 Jan. 1890. She was buried at Kensal Green, the duke being chief mourner.

The duke had rooms at St. James's Palace from 1840 to 1859, when he removed to Gloucester House, Park Lane, left to him by his aunt, the duchess of Gloucester. On the death of the duchess of Cambridge the Queen granted him Kew Cottage for his life. He had been made ranger of Hyde Park and St. James's Park in 1852, and of Richmond Park in 1857. In addition to the orders already mentioned, he was made K.T. on 17 Sept. 1881, grandmaster and principal grand cross of St. Michael and St. George on 23 May 1869, G.C.S.I. in 1877, G.C.I.E. in 1887, and G.C.V.O. in 1897. Of foreign orders he received the black eagle of Prussia in 1852, the grand cordon of the legion of honour in 1855, St. Andrew of Russia in 1874, and the order of merit of Savoy in 1895. He was made colonel-in-chief of the king's royal rifle corps on 6 March 1869, of the 17th lancers on 21 June 1876, and of the Middlesex regiment on 9 Aug. 1898. He was also colonel of two Indian regiments—the 10th Bengal lancers, and the 20th Punjabis; of the Malta artillery, the Middlesex yeomanry, and the 4th battalion Suffolk regiment; of the Cambridge dragoons in the Hanoverian army (1852–66), and of the 28th foot in the Prussian army (Aug. 1889). He received the honorary degree of D.C.L. Oxford on 1 June 1853; of LL.D. Cambridge on 3 June 1864; and of LL.D. Dublin on 21 April 1868; and became one of the elder brethren of the Trinity house on 11 March 1885. He received the freedom of the City of London, with a sword, on 4 Nov. 1857, and on 19 Oct. 1896 he was presented with an address from the corporation and his bust (by Francis Williamson) was unveiled at the Guildhall. He was made a freeman of York in 1897, of Bath and of Kingston in 1898.

A series of banquets at the military clubs and messes marked the duke's retirement, but he continued for several years to preside at regimental dinners and to keep in close touch with the army. He was very vigorous for his age, rode in Queen Victoria's diamond jubilee procession of 1897, and at her funeral in 1901. He paid his last visit to Germany in August 1903, but his strength was then giving way. He died at Gloucester House on 17 March 1904 of hæmorrhage of the stomach, having outlived by a few weeks the commandership-in-chief which he held so long. On the 22nd he was buried, in accordance with his wish, beside his wife at Kensal Green. The first part of the service was at

Westminster Abbey with King Edward VII as chief mourner. Five field-marshal and thirteen generals were pall-bearers. Tributes were paid to his memory in both houses of parliament. He had three sons: Colonel George William Adolphus Fitzgeorge; Rear-admiral Sir Adolphus Augustus Frederick Fitzgeorge, K.C.V.O., who became equerry to his father in 1897; and Colonel Sir Augustus Charles Frederick Fitzgeorge, K.C.V.O., C.B., who was his father's private secretary and equerry from 1886 to 1895.

In June 1907 a bronze equestrian statue of him by Captain Adrian Jones was placed in front of the new war office in Whitehall, and there is also a statue at Christ's Hospital, Horsham. There is a memorial window in the chapel of St. Michael and St. George in St. Paul's Cathedral. Of the many portraits of him the chief are one, at the age of 18, by John Lucas (at Windsor), and three as a field-marshal, by Frank Holl (at Buckingham Palace), Arthur S. Cope (at the United Service Club), and Sir Hubert von Herkomer (at the R.E. mess, Chatham). A caricature portrait appeared in 'Vanity Fair' in 1870.

M. L.

GEORGE, HEREFORD BROOKE (1838–1910), historical writer, born at Bath on 1 Jan. 1838, was eldest of the three children (two sons and a daughter) of Richard Francis George, surgeon, by his wife Elizabeth Brooke. He entered Winchester as a scholar in 1849, and succeeded in 1856 to a fellowship at New College, Oxford. He obtained first classes in both classical and mathematical moderations in 1858, a second class in the final classical school in 1859, and a second class in the final mathematical school in 1860. He graduated B.A. in 1860, proceeding M.A. in 1862.

George was called to the bar at the Inner Temple on 6 June 1864, and followed the western circuit till 1867, when he returned to New College as tutor in the combined school of law and history. He was ordained in 1868, but undertook no parochial work. After the separation of the law and history schools in 1872 he became history tutor of New College, and filled that office till 1891. He played a prominent part in the establishment of the inter-collegiate system of lecturing at Oxford. He remained a fellow of New College till his death. His historical writing and teaching were chiefly concerned with military history (in which he was a pioneer at Oxford) and with the correlation of history and geography. His chief publications, 'Battles of English History' (1895), 'Napoleon's Invasion of Russia' (1899), 'Relations of Geography and History' (1901; 4th edit. 1910), and 'Historical Evidence' (1909), all show critical acumen and fertility of illustration, if no recondite research. His 'Genealogical Tables illustrative of Modern History' (1874; 4th edit. 1904) and 'Historical Geography of the British Empire' (1904; 4th edit. 1909) are useful compilations.

George took a large part in the work of the university as well as in the re-organisation of his own college, which he described in his 'New College, 1856-1906' (1906). He was one of the first members of the Oxford University volunteer corps, and for many years he took an important share in the work of the local examinations delegacy. George's interests received a new direction from his first visit to Switzerland in 1860, when he met Leslie Stephen at Zermatt and accompanied him up to the Riffel by the Gorner glacier. In 1862 he accompanied Stephen on the first passage by the Jungfrau Joch (MAITLAND's *Life of Stephen*, chap. vi.), and achieved a first ascent of the Gross Vischerhorn (*Alpine Journal*, i. 97). In 1863 he made a passage of the Col du Tour Noir with Christian Almer as guide, and 'finally settled the long-debated question about the relative positions of the heads of the Argentière, Tour, and Salène glaciers, which every successive map had professed to explain in a different way' (*ibid.* pp. 125, 286). Though he enjoyed the physical exercise, his interest in climbing was chiefly geographical and scientific. He was one of the first Alpine climbers to employ photography. He joined the Alpine Club in 1861, and the establishment of the 'Alpine Journal' was suggested at a meet-

ing in his rooms at New College; he edited its first three volumes (1863-7). In 1866 he published 'The Oberland and its Glaciers,' written 'to popularise the glacier theory of Tyndall' (*Alpine Journal*, xxv.). George was the founder of the Oxford Alpine Club.

George, who inherited a moderate fortune from his father, was director of the West of England and South Wales Bank at Bristol, although he took no active part in the management of its affairs. The failure of the bank in 1880 not only injured George financially but involved him with his fellow-directors in an abortive trial for irregularities in keeping the accounts (*Annual Reg.* 3 May 1880, p. 38). George died at Holywell Lodge, Oxford, on 15 Dec. 1910. In 1870 he married Alice Bourdillon (*d.* 1893), youngest daughter of William Cole Cole of Exmouth, by whom he had two sons.

[Personal information; College and University Records; *Alpine Journal*, vol. xxv. May 1911.] R. S. R.

GERARD, [JANE] EMILY, MADAME DE LASZOWSKA (1849-1905), novelist, born on 7 May 1849 at Chesters, Jedburgh, near Airdrie, Roxburghshire, was eldest sister of General Sir Montagu Gilbert Gerard [q. v. Suppl. II for parentage]. Her great-grandfather was Gilbert Gerard [q. v.], formerly a Scottish Episcopalian. Her mother became a Roman catholic in 1848, and Emily belonged to that faith. Until the age of fifteen she was educated at home; for eighteen months of a long residence with her family in Venice (1863-6) she took lessons at the house of the Comte de Chambord with his niece, Princess Marguerite, afterwards wife of Don Carlos, and with her formed a life-long intimacy; the princess died in 1893. After three years at the convent of the Sacré Cœur at Riedenburg near Bregenz in Tyrol, Emily married on 14 Oct. 1869 Chevalier Miecislav de Laszowski, member of an old Polish noble family, and an officer in the Austrian army, whose acquaintance she made in Venice. She lived first at Brzezum, Galicia, and after the death of her mother in 1870 her sisters joined her there. From 1880 onwards she devoted much time to recording her foreign experience in the form of fiction. In 1883 her husband was appointed to the command of the cavalry brigade in Transylvania, and she spent two years in the province, at Hermannstadt and Kronstadt. She embodied her observations in 'The Land beyond the Forest: Facts, Figures and Fancies from Transylvania' (1888), an

excellent description of the country and its inhabitants. In 1885 her husband retired from active service with the rank of lieutenant-general, and they then made their permanent home in Vienna, where she died on 11 Jan. 1905. Her husband predeceased her by five weeks (December 1904). There were two sons of the marriage.

In 1880 Emily Gerard collaborated in a novel, 'Reata' (new edit. 1881), with her sister Dorothea, who in 1886 married Julius Longard de Longgarde, also an officer in the Austrian army. A like partnership produced 'Beggar my Neighbour' (1882), 'The Waters of Hercules' (1885), and 'A Sensitive Plant' (1891). She contributed without aid several short tales to Blackwood's and Longman's 'Magazines,' reprinted in the volumes 'Bis' (1890), and 'An Electric Shock and other Stories' (1897), and published six novels, of which the best is 'The Voice of a Flower' (1893). She wrote gracefully, and made the foreign setting effective, but lacked power of characterisation. She was a competent critic; for nearly two years she furnished monthly reviews of German literature to 'The Times,' and occasional articles on new German books to 'Blackwood's Magazine.'

Other works by Emily Gerard are: 1. 'A Secret Mission,' 1891. 2. 'A Foreigner,' 1896 (inspired by her own marriage). 3. 'The Tragedy of a Nose,' 1898. 4. 'The Extermination of Love, a Study in Erotics,' 1901. 5. 'The Heron's Tower,' 1904. 6. 'Honour's Glassy Bubble,' 1906; and a preface to S. Kneipp's 'My Water Cure,' 1893.

[Burke's Landed Gentry, 1906; The Times, 12-13 Jan. 1905; Athenæum, 21 Jan. 1905; Who's Who, 1904; Helen C. Black, Pen, Pencil, Baton and Mask: Biographical Sketches, 1896; William Blackwood and his Sons, vol. iii. (by Mrs. Gerald Potter), 1898, pp. 356-8.] E. L.

GERARD, SIR MONTAGU GILBERT (1842-1905), general, born at Edinburgh on 29 June 1842, was second son in a family of three sons and four daughters of Archibald Gerard (1812-1880) of Rochsoles, near Airdrie, Lanarkshire, by his wife Euphemia Erskine (d. 1870), eldest daughter of Sir John Robison [q. v.]. He was a great-grandson of Alexander Gerard [q. v.], philosophical writer, and of Archibald Alison [q. v.], father of the historian. The family was originally Scottish episcopalian, but the mother joined the church of Rome in 1848, the father a little later, and the children were brought up as Roman catholics. Montagu's eldest brother became Father

John Gerard, S.J., and his eldest sister was Jane Emily, Madame de Laszowska [q. v. Suppl. II]. He was admitted to Stonyhurst in 1850, and subsequently passed four years at Ushaw (1855-9).

After spending some time on the Continent, Gerard went through the usual course at Woolwich. He was gazetted lieutenant in the royal artillery on 19 April 1864, and undertook garrison duty at Gibraltar. In 1866, on being transferred to the field artillery, he was stationed in the central provinces, India. In 1867-8 he was employed on the transport train during the Abyssinian expedition; he was mentioned in despatches and received the war medal. In 1870 he joined the Bengal staff corps, and was attached to the Central India horse. Promoted captain on 19 April 1876, he acted as brigade major throughout the second Afghan war (1878-80), and had his horse wounded at the action of Deh Sarak while escorting a convoy from Chara. He took part in the second Bazar valley expedition and in the defence of Jagdallak. He accompanied General (Sir) Charles Gough's brigade to Sherpur in December 1879, and Lord Roberts's march from Kabul to Kandahar, and was engaged at the battle of 1 Sept. 1880. He was twice mentioned in despatches, and received the medal with two clasps, the bronze star, and the brevets of major (22 Nov. 1879) and of lieutenant-colonel (2 March 1881). Gerard served in the Egyptian campaign of 1882, and at Alexandria fought in all the actions that followed the bombardment. He was appointed deputy assistant adjutant and quartermaster general of the cavalry division, and was present at the reconnaissance of 5 Aug. 1882, the battles of Kassassin and Tel-el-Kebir, and the surrender of Arabi Pasha. In addition to being mentioned in despatches he was given the medal with clasp, the bronze star, the C.B., and the third class of the order of the Medjidie. He became major on 19 April 1884 and brevet-colonel on 2 March 1885.

Gerard had other qualities besides those of the successful soldier. In 1881 and again in 1885 he was despatched on secret missions to Persia. After serving as district staff officer of the first class in Bengal, he was selected to take charge of the tour which the Tsarevitch (afterwards Nicholas II) made in India (Dec. 1890-Feb. 1891), and the skill with which he discharged his duties resulted in his appointment in 1892 as British military attaché at St. Petersburg. In the negotiations concerning the Pamirs boundary dispute he played a

conspicuous part, and when in March 1895 an agreement was signed between Great Britain and Russia for the delimitation of their spheres of influence in central Asia, Gerard was sent out to the Pamirs at the head of a British commission. He met the Russian mission under general Shveikovsky in June at Lake Victoria, and from that point eastwards to the Chinese frontier demarcated the line which henceforth divided Russian from British interests.

In 1896 he was nominated to the command of the Hyderabad contingent, and in 1899 was promoted to the command of a first-class district in Bengal. He was created C.S.I. in 1896, K.C.S.I. in 1897, and K.C.B. in 1902. He was promoted major-general on 1 April 1897, lieutenant-general on 12 Sept. 1900, and general on 29 Feb. 1904. On the outbreak of the Russo-Japanese war in 1904 he went out to Manchuria as chief British attaché in General Kuropatkin's army; but his health succumbed to the rigours of the campaign, and he died of pneumonia at Irkutsk on 26 July 1905 on his way home from Kharbin. A requiem mass was sung at the catholic church of St. Catherine's, St. Petersburg, at which both the Tsar and King Edward VII were represented. The body was subsequently conveyed to Scotland, and buried at Airdrie on 8 September. He married on 19 Sept. 1888 Helen Adelaide, third daughter of Edward Richard Meade, a grandson of John Meade, first earl of Clanwilliam; she survived him with one son. Gerard was devoted to all forms of sport, especially big-game shooting, and recorded his experiences in 'Leaves from the Diaries of a Soldier and a Sportsman, 1865-1885' (1903).

[The Times, 28 July, 22 Aug., 9 Sept. 1905; Tablet, 12 Aug. 1905; Army List, 1905; Stonyhurst Magazine, October 1905; H. B. Hanna, The Second Afghan War, 1910, iii. 257, 511; private information from Father John Gerard, S.J.] G. S. W.

GIBB, ELIAS JOHN WILKINSON (1857-1901), orientalist, born on 3 June 1857 at 25 Newton Place, Glasgow, was only son of Elias John Gibb, wine merchant, and Jane Gilman. Both parents survived their son. He was educated first at Park School, Glasgow, under Dr. Collier, author of the 'History of England,' and afterwards at Glasgow University, where he matriculated in 1873, and pursued his studies until 1875, but took no degree. Prompted on the one hand by a strong linguistic taste, and on the other by an early delight in the book of the

'Thousand and One Nights' (Alf Layla wa Layla), and other Eastern tales, Gibb, who was well provided for, devoted himself at an early period to the Arabic, Persian, and more especially Turkish languages and literatures. Gavin Gibb, D.D., a cousin of his grandfather, who was professor of oriental languages in the University of Glasgow from 1817 to 1831, seems to be the only connection in Gibb's family history with oriental scholarship. It was apparently without external help or suggestion that Gibb published in 1879, when only twenty-two, an English translation of the account of the capture of Constantinople by the Turks, given by Sa'du'd-Din in the 'Tūju't-Tevārikh' or 'Crown of Histories.' In 1882 there followed his 'Ottoman Poems translated into English Verse in the Original Forms,' which was the forerunner of his detailed and ambitious 'History of Ottoman Poetry,' on which he gradually concentrated his energies. In 1884 he translated from the Turkish of Ali Aziz the 'Story of Jewad.'

Moving to London on his marriage in 1889, and collecting a fine oriental library, Gibb lived the life of a studious recluse, rarely going further from London than Glasgow to stay with his parents. He travelled in France and Italy in 1889, but never visited Turkey or any Eastern country, although he spoke and wrote the Turkish language correctly, and acquired through his reading a profound sympathy with Mohammedan thought. He joined the Royal Asiatic Society about 1881. The first volume of his work on Ottoman poetry, containing an introduction (pp. 1-136) to the whole subject, not less useful to students of Arabic and Persian than to those of Turkish literature, and an account of the earlier period of Ottoman poetry (A.D. 1300-1450), was published in 1900, but in November next year, while he was putting the final touches to the second volume, he was attacked by scarlet fever, of which he died on 5 Dec. 1901. He was buried at Kensal Green cemetery, his funeral being attended by the Turkish poet 'Abdu'l Haqq Hāmid Bey and other Mohammedan friends and admirers.

In 1889 Gibb married Ida W. E. Rodriguez (afterwards Mrs. Ogilvie Gregory). On his death his library was, with small reservations, divided among the libraries of the British Museum (which received his manuscripts), the Cambridge University (which received his Arabic, Persian and Turkish books), and the British Embassy at Constantinople (which received many valuable works on the East). A summary

list of the Gibb MSS. is given in his 'History of Ottoman Poetry' (vol. ii. pp. xvi—xxxi, 1902). A list of the printed oriental books, 422 in number, in the Cambridge University Library was compiled by the present writer and published by the Cambridge University Press in 1906.

By desire of Gibb's widow and parents, the present writer edited, after Gibb's death, the remainder of his 'History of Ottoman Poetry,' which, though not complete, was in an advanced stage of preparation; vol. ii. was published in 1902; vol. iii. in 1904; vol. iv. in 1905; vol. v. (containing three chapters on the 'Rise of the New School' and indexes to the whole book) in 1907; and vol. vi. (containing the Turkish originals of the poems translated in the whole work) in 1909. A seventh supplementary volume, dealing with the most recent development of Turkish poetry, from Kemál Bey to the present time, has been written in French by Dr. Rizá Tevfik Bey, deputy for Adrianople in the Turkish parliament (1911), and is being translated into English by the present writer.

[Personal knowledge and information supplied by Gibb's sister, Mrs. Watson; notices by present writer in *Athenæum*, 14 Dec. 1901, and *Royal Asiatic Soc.'s Journal*, 1902, p. 486.] E. G. B.

GIBBINS, HENRY DE BELTGENS (1865–1907), writer on economic history, born at Port Elizabeth, Cape Colony, on 23 May 1865, was eldest son of Joseph Henry Gibbins of Port Elizabeth, South Africa, by his wife Eleanor, daughter of the Hon. J. de Beltgens of Stanford, Dominica. Educated at Bradford grammar school, he won a scholarship at Wadham College, Oxford, in 1883, and obtained a second class in classical moderations in 1885, and a second class also in the final classical schools in 1887. He graduated B.A. in the following year. In 1890 he won the Cobden prize for an economic essay in the University of Oxford, and in 1896 received the degree of D.Litt. at Dublin.

From 1889 to 1895 he worked as assistant master at the Nottingham high school. In 1891 he was ordained deacon and in 1892 priest, serving the curacy of St. Matthew's, Nottingham, from 1891 to 1893. From 1895 to 1899 he was vice-principal of Liverpool College; from 1899 to 1906 headmaster of King Charles I school at Kidderminster; in 1906 he was made principal of Lennoxville University in Canada. Ill-health obliged him to leave Canada after a short stay. On 13 Aug. 1907 he

was killed by a fall from the train in the Thackley tunnel between Leeds and Bradford. He married Emily, third daughter of Dr. J. H. Bell of Bradford, by whom he had one daughter.

Gibbins devoted himself to economic study from his Oxford days and published: 1. 'Industrial History of England,' 1890. 2. 'The History of Commerce in Europe,' 1891, 2nd edit. 1897. 3. 'English Social Reformers,' 1892, 2nd edit. 1902. 4. 'British Commerce and Colonies,' 1893, 4th edit. 1909. 5. 'Economics of Commerce,' 1894, Spanish trans. 1903. 6. 'Industry in England,' 1896. 7. 'The English People in the Nineteenth Century,' 1898; 2nd edit. 1900; Russian trans. 1901. 8. 'Economic and Industrial Progress of the Century,' 1901. He was a contributor to Palgrave's 'Dictionary of Political Economy' and edited for Messrs. Methuen their 'Social Questions of the Day' series (1891) and also their 'Commercial' series (1893). His economic work popularly illustrated the historical methods of economic study.

[The Times, 14 Aug. 1907; Foster's Alumni Oxon.; private information.] M. E.

GIBBS, HENRY HUCKS, first BARON ALDENHAM (1819–1907), merchant and scholar, born in Powis Place, Queen Square Bloomsbury, on 31 August 1819, was eldest son of George Henry Gibbs (1785–1842) of Aldenham, Hertfordshire, and Clifton Hampden, Oxfordshire, by his wife Caroline (d. 1850), daughter of Charles Crawley, rector of Stowe-nine-churches, Northamptonshire. His family came from Clyst St. George, and had been settled in Devonshire from the time of Richard II. Sir Vicary Gibbs [q. v.], the judge, was his great-uncle.

After education at Redland near Bristol and at Rugby, Gibbs entered Exeter College, Oxford, in 1838, and graduated B.A. with third-class classical honours in 1841, proceeding M.A. in 1844. On leaving the university he joined on 17 April 1843 the London house of Antony Gibbs & Sons, merchants and foreign bankers. His grandfather, Antony Gibbs (1756–1815), initiated the business in 1789 in Spain, and opened the London house in September 1808. In 1808 Gibbs's father, and in 1813 his uncle William (1790–1875), became partners. In 1821 a branch firm was opened in Peru. In 1875 Gibbs succeeded his uncle as head of the firm. In 1881 an older firm, Gibbs, Bright & Co., of Liverpool and Bristol, sometime under the headship of Gibbs's great-uncle George (1753–1818), elder

brother of Antony Gibbs, was, with its Australian branches, taken over by Antony Gibbs & Sons.

Henry Hucks Gibbs took a leading part in London commercial affairs, serving as a director of the Bank of England (1853-1901) and governor (1875-7). He was specially interested in currency questions, was a strong advocate of bimetallism, and an active president of the Bimetallic League. In 1876 he published 'A Letter to the Marquess of Salisbury on the Depreciation of Silver'; in 1879 'Bimetallism in England and Abroad,' and in 1879 'Silver and Gold, a letter to M. Cazalet' (republished, with additions, in 1881 as 'The Double Standard'). In 1886 he issued, with Henry Riversdale Grenfell, 'The Bimetallic Controversy,' a collection of pamphlets, nine of which were from his pen; and in 1893 he wrote 'A Colloquy on Currency' (3rd edit. 1894).

Gibbs was a prominent member of the conservative party in the City of London, and was chairman of the Conservative Association there. He was returned to parliament as a member for the City at a bye-election on 18 April 1891, but retired at the general election in July 1892. In May 1880 Gibbs with other members of his family founded, in the conservative interest, the 'St. James's Gazette,' with Frederick Greenwood [q. v. Suppl. II] as editor, and the paper remained their property until 1888. He served in 1877-8 on the royal commission on the Stock Exchange, on the City parochial charities commission in 1880, and on the commission of 1885-6 upon the depression of trade. Gibbs, who was a J.P. for Hertfordshire and Middlesex, and high sheriff of Hertfordshire in 1884, was created Baron Aldenham, of Aldenham, on 31 Jan. 1896.

A strong churchman, Gibbs was a munificent benefactor to the church. With Lord John Manners, seventh duke of Rutland [q. v. Suppl. II], he liberally supported the Anglican sisterhood connected with Christ Church, Albany Street, one of the earliest established in London. He was a member of the council of Keble College, Oxford, which owes its chapel hall and library to his uncle William Gibbs and to the latter's sons, Antony and Martin. In conjunction with his mother he restored the church and endowed the living of Clifton Hampden on his Oxfordshire estate, and contributed to the support of St. Andrew's, Wells Street, and other churches. A member of the house of laymen of the province of Canterbury, and treasurer of

the Church House, he joined the English Church Union in May 1862, became trustee in 1876, and was a member of its council until his death. One of his last public acts was to join in the appeal of prominent churchmen for the support of religious instruction in schools (*The Times*, 28 Jan. 1907).

Inheriting Aldenham House near Elstree in 1850 from his mother, he bought the rectory and advowson of Aldenham from Lord Rendlesham in 1877, and in 1882 thoroughly restored and resealed the church at a cost of 11,000*l.*, adding in 1902 an oak choir screen. He took an active part in the affairs of the diocese of St. Albans (founded in 1877), supporting the scheme for a new Essex bishopric and the Bishop of St. Albans Fund (of which he was a vice-president) for the extension of church work in East London. To the restoration of the Abbey of St. Albans as well as the support of the new diocese he devoted both time and money. A long and costly suit with Sir Edmund Beckett, Lord Grimthorpe [q. v. Suppl. II], deprived him of the honour of restoring the Lady chapel of the cathedral, but he obtained in spite of Grimthorpe's opposition two faculties (on 13 Jan. and 15 July 1890) to restore at his own cost the altar-screen, and to legalise the work which he had already carried out. He published in 1890 a full 'Account of the High Altar Screen in the Cathedral Church of St. Albans.' The reredos representing the Resurrection was executed in Carrara marble by Alfred Gilbert, R.A. The latest of his many benefactions to St. Albans Cathedral was the division and reconstruction of the great organ, by which a complete view of the building from east to west was obtained.

Aldenham, although staunch and outspoken both as tory and churchman, maintained the friendliest relations with those who differed from him. He cherished versatile interests outside commerce, politics, and ecclesiastical affairs. He was fond of shooting, and on 1 Sept. 1864 had the misfortune to lose his right hand in a gun accident, while he was shooting at Mannhead, Devonshire. Despite the disability, he continued to shoot, and also to play billiards. Endowed with a remarkable memory, he had a special gift for philology and lexicography. A prominent member of the Philological Society from 1859, he took great interest in the English Dictionary which was projected by the Philological Society in 1854, and he sub-edited letters C and K. When the project was taken up by the Oxford

University Press in 1880 with (Sir) James Murray as editor, Aldenham helped to settle the final form of the 'New English Dictionary,' and read and annotated every proof down to a few weeks before his death. He wrote many of the articles on words connected with banking, currency, and commerce, one of the last being 'pound.' For the Early English Text Society he edited in 1868 the 'Romance of the Chevelere Assigne.' For the Roxburghe Club, of which he was a member, he prepared in 1873 the 'Hystorie of the moste noble knight Placidus,' and in 1884 the 'Life and Martyrdom of St. Katharine of Alexandria.' He was a good Spanish scholar, and wrote a booklet for private circulation (printed in 1874) on the game of cards called ombre. Aldenham was deeply versed in liturgical studies and a collector of old Bibles. An enthusiastic bibliophile, he described in 1888 the chief rarities in his library in 'A Catalogue of some Printed Books and Manuscripts at St. Dunstan's, Regent's Park, and Aldenham House, Herts.' His residence, St. Dunstan's, Regent's Park, he took on lease from the crown in 1856; it was formerly tenanted by the Marquis of Hertford, who bought and installed there the clock and automaton strikers of St. Dunstan's Church, Fleet Street, when the church was rebuilt in 1830.

Aldenham was appointed a trustee of the National Portrait Gallery on 18 Nov. 1890, was elected F.R.G.S. on 28 Nov. 1889, and F.S.A. on 4 June 1885, serving also on the council of the former society. He was president of Guy's Hospital from 1880 to 1896.

Aldenham died at Aldenham on 13 Sept. 1907; his youngest son, Henry Lloyd Gibbs, died on the following day, aged forty-six; both were buried at Aldenham. His will, dated 19 March (codicil 28 Aug.) 1906, was proved in December 1907; the gross estate was over 703,700*l.*, much of his property having been distributed during his lifetime. He married on 6 May 1845 at Thorpe, Surrey, Louisa Anne, third daughter of William Adams, LL.D., and Mary Anne Cokayne. His wife's brother, George Edward Cokayne [q. v. Suppl. II], married Lord Aldenham's sister, Mary Dorothea, on 2 Dec. 1856. Lady Aldenham died at St. Dunstan's, Regent's Park, on 17 April 1897, and was buried in Aldenham churchyard. Of their surviving children—four sons and a daughter—Alban George Henry succeeded to the peerage, having been previously M.P. for the City of London (1892–1906); Vicary, M.P. for St.

Albans division, Hertfordshire (1892–1904), has re-edited the 'Complete Peerage' of his uncle, George Edward Cokayne; and Kenneth Francis is archdeacon of St. Albans and vicar of Aldenham.

A miniature portrait (æt. 20) by Sir William Ross, R.A.; a chalk drawing (with his eldest son) by E. U. Eddis (1859); a half-length portrait by Watts (1878), and a full-length by Oules (1879), belong to the present Lord Aldenham. The Hon. Vicary Gibbs possesses a half-length by T. Gotch (1888) and a marble bas-relief of the head after death by J. Kerr Lawson. The Hon. Herbert Gibbs possesses a second portrait by Watts (1896).

W.

GIFFEN, SIR ROBERT (1837–1910), economist and statistician, born at Strathaven, Lanarkshire, on 22 July 1837, was younger son of Robert Giffen, a small merchant and an elder of the presbyterian church, by his wife Janet Wiseman. Robert was educated at the village school and was put in charge of the Sunday-school library with an elder brother, John, who, destined for the ministry, died prematurely of consumption. The boys read all the books they could find, and wrote anonymously short articles and poems for a Hamilton newspaper. In 1850 Robert was apprenticed to a lawyer in Strathaven. Three years later he removed to a lawyer's office in Glasgow, and remained there seven years, attending lectures occasionally at the university. William Black [q. v. Suppl. I], the novelist, was one of his closest Glasgow friends (REID, *William Black*, p. 18). In 1860 he definitely adopted journalism as a profession, becoming a reporter and sub-editor of the 'Stirling Journal.' In 1862 he came to London as sub-editor of the 'Globe' (1862–6). After serving for a time with Mr. John (afterwards Viscount) Morley on the 'Fortnightly Review' he joined the staff of the 'Economist,' under

Walter Bagehot [q. v.], as assistant-editor (1868-76), writing the City article from 1870 to 1876. He was also, from 1873 to 1876, City editor of the 'Daily News,' contributed to 'The Times' and the 'Spectator,' and was one of the founders of the 'Statist' in 1878. Goschen, in his classical 'Report on Local Taxation' (1871), acknowledged indebtedness to Giffen for assistance in the collection of historical material and in the compilation of the tables in the appendices. In 1876 Giffen was appointed to the board of trade as chief of the statistical department and controller of corn returns. In 1882 the commercial department of the board of trade, the main work of which had since 1876 been entrusted to the foreign office, was restored and united to the statistical department under Giffen, who became an assistant-secretary to the board. In 1892 a third department, the labour department, was added, and Giffen became controller of the commercial, labour, and statistical departments. He retired from the board in 1897 and removed to Chancetonbury, Haywards Heath. His varied services proved of great value to the board. Mr. Joseph Chamberlain, when president, in a minute written after the passing of the Bankruptcy Act of 1882, described Giffen as 'to a great extent the real author of the measure, to whose exhaustive memoranda on the subject I owe the best part of my own knowledge.' He served on various departmental committees, was a member of the royal commissions on the depression of agriculture in Great Britain (1893-7), and on the port of London (1900-2), and gave important statistical and economic evidence before numerous royal commissions, notably the depreciation of silver (1876), the London Stock Exchange (1878), gold and silver (1886-8), and local taxation (1898-9).

When accepting office in the civil service, Giffen obtained permission to continue to publish his views upon matters of economic interest. From 1876 to 1891 he edited the 'Journal of the Royal Statistical Society' (of which he was president, 1882-4), and wrote numerous articles and a regular contribution of City notes till his death for the 'Economic Journal,' the organ of the Royal Economic Society, of which he was one of the founders in 1890. Twice president of the section of economics and statistics of the British Association (1887 and 1901), he gave on the first occasion an address on 'The Recent Rate of Material Progress in England' and on the second an

address on 'The Importance of General Statistical Ideas' (both afterwards published). Weighty and sagacious in debate, he was a pillar of the Political Economy Club from 1877 to 1910. Though he endeavoured to avoid political partisanship he presented on occasion the unusual spectacle of a civil servant criticising in public the policy of ministers of the crown. His examination of the finance of Gladstone's home rule proposals in 1893 was considered a 'most powerful and damaging indictment,' and led to the appointment of the royal commission on the financial relations between Great Britain and Ireland (1895-6) before which he was a witness. He regarded Ireland as overtaxed in comparison with Great Britain. Starting as a liberal, he became successively a liberal unionist in 1886, a unionist free-trader, abstaining from support of either of the great parties, in 1903, and finally 'on balance' a supporter of the unionist party owing to his dislike of the budget of 1909-10 as trenching too heavily upon capital and direct taxation, a view which he recorded in the 'Quarterly Review' for July 1909. Giffen was made an honorary LL.D. of Glasgow in 1884, and was created C.B. in 1891 and K.C.B. in 1895. He died of heart failure at Fort Augustus on 12 April 1910, while on a visit to Scotland, and is buried at Strathaven.

He married (1) in 1864, Isabella (*d.* 1896), daughter of D. McEwen of Stirling; (2) on 25 Nov. 1896, Margaret Anne, daughter of George Wood of Aberdeen. He had no children.

Giffen, a prolific writer on economic, financial, and statistical subjects, possessed a luminous and penetrating mind, great stores of information, an intimate acquaintance with business matters and methods, and shrewd judgment. His instructive handling of statistics and his keen eye for pitfalls contributed greatly to raise the reputation and encourage the study of statistics in this country, though he did not develop its technique by the higher mathematical treatment.

A sturdy individualist, Giffen viewed with suspicion any infraction of the maxim *laissez-faire*. He believed in the 'patience cure' for many social and financial evils. Though a strong free trader, he conceded that a slight customs' preference to colonial imports might be justified by political considerations. His frame of mind is reflected in his opinion that investors should inform themselves and judge for themselves, and not be guided by the advice

of their bankers, brokers, or friends. He was in favour of 'free-banking,' under which a cheque might be drawn upon any person whether a banker or not. He advocated the reduction of the representation of Ireland in the imperial parliament, and the boring of a tunnel under the Irish Sea with a view to closer union.

His principal published writings, apart from separate addresses and pamphlets, are: 1. 'American Railways as Investments,' in Cracroft's Investment Tracts (1872; 2nd and 3rd edits. 1873), written at the suggestion of Mr. Bernard Cracroft of the Stock Exchange, who provided him with materials. This work served to dispel some of the indiscriminate mistrust of American railways by the British public. A French translation by E. de Laveleye was published at Liège, 1873. 2. 'The Production and Movement of Gold since 1848,' 1873. 3. 'Stock Exchange Securities; an Essay on the General Course of Fluctuations in their Prices,' 1877. 4. 'Essays in Finance' (contributions to periodicals), 1st series, 2 editions, 1880; 5th edit. 1890; 2nd series, 1886; 3rd edit. 1890. 5. The 'Statist' on Ireland; reprint of 'Economist's' [R. G.'s] letters to the 'Statist' on the Irish land and home rule questions, and of editorial comments thereon, 1886. 6. 'The Growth of Capital,' 1889. 7. 'The Case against Bimetallism,' 1892; 2nd edit. 1892. 8. 'Economic Enquiries and Studies' (contributions to periodicals), 2 vols. 1904. Giffen contributed 'Growth and Distribution of Wealth, 1837-1887,' to vol. ii. of T. H. Ward's 'Reign of Queen Victoria' (1887), and added a chapter to Lord Farrer's 'The State in its Relation to Trade' (1902). He left completed in manuscript a 'Hand-book of Statistics,' not yet published.

[Personal knowledge; information from Lady Giffen; Statistical Soc. Journal, May 1909 (with excellent engraved portrait); Economic Journal, June 1909.] H. H.

GIFFORD, EDWIN HAMILTON (1820-1905), archdeacon of London and theologian, born at Bristol on 18 Dec. 1820, was sixth son of Richard Ireland Gifford by his wife Helen, daughter of William Davie of Stonehouse, Devonshire. After education at Elizabeth's Grammar School, Plymouth, he was admitted to Shrewsbury School in 1837, under Benjamin Hall Kennedy [q. v.], and in 1839 he proceeded to Cambridge, winning a scholarship at St. John's College. He had a distinguished university career. In 1842 he won the Pitt University scholarship. In 1843 he gradu-

ated B.A. both as senior classic and fifteenth wrangler in the mathematical tripos. In the same year he won the chancellor's medal, and was a fellow of his college from 4 April 1843 till 20 March 1844. He proceeded M.A. in 1846, and D.D. in 1861. In 1843 he returned to Shrewsbury as second master, and in 1848 he was appointed headmaster of King Edward's School, Birmingham. He proved a worthy successor of James Prince Lee [q. v.], and resigned in 1862 owing to ill-health. Gifford, who had been ordained in 1844, was honorary canon of Worcester (1853-77). In 1865 he became chaplain to Francis Jeune [q. v.], bishop of Peterborough, who presented him to the rectory of Walgrave, Northamptonshire. He subsequently held the post of examining chaplain to two successive bishops of London, Jackson and Temple. In 1875 he accepted the benefice of Much Hadham, Hertfordshire, and in 1877 was made an honorary canon of St. Albans. [In 1883 he was nominated to the prebend of Islington in St. Paul's Cathedral, and the following year he succeeded Piers Calverley Claughton [q. v.] as archdeacon of London and canon of St. Paul's.]

Though Gifford was select preacher at Cambridge (1864, 1869) and at Oxford (1879, 1890-1) he was not an effective preacher. He was better known as a scholar than as an ecclesiastic. On 24 April 1889 Gifford resigned his archdeaconry, and retired to Arlington House, Oxford, where he continued his studies to the last. In 1903 he was elected an honorary fellow of St. John's College, Cambridge. He died in London on 5 May 1905.

Gifford married (1) in 1844, Anne, daughter of John Yolland of Plymouth; (2) in 1873, Margaret Symons, daughter of Francis Jeune, bishop of Peterborough and sister of Francis Henry Jeune, baron St. Helier [q. v. Suppl. II]. He had issue one daughter.

Gifford's contributions to biblical and patristic learning, which were marked by insight and accuracy, included: 1. 'Voices of the Past' (1874), the Warburtonian lectures delivered at Lincoln's Inn 1870-4. 2. 'The Epistle to the Romans' (1881) in the 'Speaker's Commentary.' 3. 'Baruch and the Epistle of Jeremy' (1888) in the same series. 4. 'Authorship of Psalm cx.' (1892; 3rd edit. 1895). 5. 'The Catechetical Lectures of St. Cyril of Jerusalem' (1894), revised translation in vol. vii. of Nicene and Post-Nicene Library. 6. Eusebius's 'Præparatio Evangelica' (1903), 5 vols., text and translation.

GIGLIUCCI, COUNTESS. [See NOVELLO, CLARA ANASTASIA, 1818-1908.]

GILBERT, SIR JOSEPH HENRY (1817-1901), agricultural chemist, born at Hull on 1 Aug. 1817, was one of four sons of Joseph Gilbert [q. v.], a congregational minister, by his wife Ann Taylor [see GILBERT, Mrs. ANN]. The family removed in 1825 to Nottingham, where Gilbert spent his boyhood. He was educated at a school at Mansfield, and in 1838 entered the University of Glasgow, specialising in analytical chemistry under Professor Thomas Thomson [q. v.]. A gun-shot accident in 1832, which caused the loss of one eye, impaired his general health for some time. He next worked at University College, London, in the laboratory of Professor Anthony Todd Thomson [q. v.], where he had as a fellow-student John Bennet Lawes [q. v. Suppl. I], with whom he was afterwards closely connected. In 1840 he went to Giessen, where he met Lyon Playfair [q. v. Suppl. I] and Augustus Voelcker [q. v.], worked in the laboratory of Liebig, and took the degree of doctor of philosophy. On his return from Giessen he acted in 1840-1 as assistant to Anthony Thomson at University College, and then devoted some time at Manchester to the chemistry of calico printing and dyeing.

On 1 June 1843 he joined as technical adviser John Bennet Lawes, who had shortly before started the first organised agricultural experiment station in the world at his ancestral home at Rothamsted; Gilbert lived at Harpenden close to the laboratory. From June 1843 to August 1900, when Lawes died, the two investigators lived in unbroken friendship and collaboration. 'What was Lawes' work was Gilbert's work; the two are indissolubly connected. . . . Lawes was essentially the practical agriculturist. . . . Gilbert on the other hand was possessed of indomitable perseverance, combined with extreme patience and careful watching of results. With the determination to carry out an experiment to the very close, he united scrupulous accuracy and attention to detail. Each of the partners had his own sphere, and the influence of the two minds, in themselves essentially different, materially contributed

to the success which attended their joint efforts, and made the Rothamsted experiments a standard for reference, and an example wherever agricultural research is attempted' (Dr. J. A. VOELCKER in *Journal Royal Agricult. Soc.* 1901, lxii. 348, 350).

Gilbert took an active part in the proceedings of various learned societies. He joined the Chemical Society in 1841, a few weeks after its formation, and became its president in 1882-3. He was admitted into the Royal Society in 1860, and received with Lawes its royal medal in 1867. He was elected in 1883 an honorary member of the Royal Agricultural Society, in the 'Journal' of which many of the results of the Rothamsted researches were published. In 1884 he was appointed Sibthorpean professor of rural economy at the University of Oxford, and held the professorship for six years, the full term allowed by the statute. In 1893 he went to the Chicago exhibition, and delivered in the United States seven lectures on the Rothamsted experiments. In 1894 Lawes and he were presented by the Prince of Wales at Marlborough House with the Albert gold medal of the Royal Society of Arts. He received honorary degrees from the universities of Glasgow (LL.D. 1883), Oxford (M.A. 1884), Edinburgh (LL.D. 1890), and Cambridge (Sc.D. 1894).

On the completion of fifty years of the joint labours of Lawes and Gilbert, a granite memorial of the event was dedicated at Rothamsted on 29 June 1893, and Gilbert was presented with an address and a piece of plate. On 11 Aug. 1893 he received the honour of knighthood. His activity of mind and body continued almost to the last, but the death of Lawes in 1900 was a great blow to him. He died at Harpenden on 23 Dec. 1901, in his eighty-fifth year, and was buried in the churchyard there close to the grave of Lawes.

Gilbert married twice: (1) in 1850, Eliza Laurie (d. 1853); (2) in 1855, Maria Smith, who survived him and was granted a civil list pension of 100*l.* in 1904. He had no family by either marriage. His portrait in oils, painted by Frank O. Salisbury in 1900, hangs in the directors' room at the laboratory at Rothamsted.

[Memoir (with portrait) by Dr. J. A. Voelcker in vol. 62 (1901) of the *Journal Royal Agricult. Soc. of England*; obit. notice by Robert Warington, F.R.S., in *Proc. Roy. Soc.* lxxv. 236-242; *Trans. Chemical Soc.*, 1902, p. 625; *Nature*, 2 Jan. 1902; personal knowledge.] E. C.

GILBERT, SIR WILLIAM SCHWENCK (1836-1911), dramatist, born at 17 Southampton Street, Strand, the house of his mother's father, Dr. Thomas Morris, on 18 Nov. 1836, was only son in a family of four children of William Gilbert (1804-1890) [q. v. Suppl. I] by his wife Anne Morris. His second christian name was the surname of his godmother. As an infant he travelled in Germany and Italy with his parents. When two years old he was stolen by brigands at Naples and ransomed for 25*l*. In later days when visiting Naples he recognised in the Via Posilippo the scene of the occurrence. His pet name as a child was 'Bab,' which he afterwards used as a pseudonym. He is said to have been a child of great beauty, and Sir David Wilkie [q. v.] was so attracted by his face that he asked leave to paint his picture. At the age of seven he went to school at Boulogne. From ten to thirteen he was at the Western Grammar School, Brompton, and from thirteen to sixteen at the Great Ealing School, where he rose to be head boy. He spent much time in drawing, and wrote plays for performance by his schoolfellows, painting his own scenery and acting himself.

In Oct. 1855 he entered the department of general literature and science at King's College, London (*King's Coll. Calendar*, 1855-6, p. 89). Alfred Ainger [q. v. Suppl. II] and Walter Besant [q. v. Suppl. II] were fellow students. Some of his earliest literary efforts were verses contributed to the college magazine. He remained a student during 1856-7, intending to go to Oxford, but in 1855, when he was nineteen years old, the Crimean war was at its height, and commissions in the Royal Artillery were thrown open to competitive examination. Giving up all idea of Oxford, he read for the army examination announced for Christmas 1856 ('An Autobiography' in *The Theatre*, 2 April 1883, p. 217). But the war came to an abrupt end, and no more officers being required, the examination was indefinitely postponed. Gilbert then graduated B.A. at the London University in 1857, and obtained a commission in the militia in the 3rd battalion Gordon highlanders.

In 1857 he was a successful competitor in an examination for a clerkship in the education department of the privy council office, in which 'ill-organised and ill-governed office' he tells us he spent four uncomfortable years. Coming unexpectedly in 1861 into 300*l*., 'on the happiest day of my life I sent in my resignation.' He had already, on 11 October 1855, entered the Inner Temple as a student (FOSTER'S

Men at the Bar). With 100*l*. of his capital he paid for his call to the bar, which took place on 17 Nov. 1863 (cf. 'My Maiden Brief,' *Cornhill*, Dec. 1863). With another 100*l*. he obtained access to the chambers of (Sir) Charles James Watkin Williams [q. v.], then a well-known barrister in the home circuit, and with the third 100*l*. he furnished a set of rooms of his own in Clement's Inn, but he does not appear to have had any professional chambers or address in the 'Law List.' He joined the northern circuit on 15 March 1866, one of his sponsors being (Sir) John Holker [q. v.] (*MS. Circuit Records*). He attended the Westminster courts, the Old Bailey, the Manchester and Liverpool assizes, the Liverpool sessions and Passage Court, but 'only earned 75*l*. in two years.'

During the same period he was earning a 'decent income' by contributions to current literature. He appeared for the first time in print in 1858, when he prepared a translation of the laughing-song from Auber's 'Manon Lescaut' for the playbill of Alfred Mellon's promenade concerts; Mdle. Parepa, afterwards Madame Parepa-Rosa [q. v.], whom he had known from babyhood, had made a singular success there with the song in its original French. In 1861 Gilbert commenced both as author and artist, contributing an article, three-quarters of a column long with a half-page drawing on wood, for 'Fun,' then under the editorship of Henry James Byron [q. v.]. A day or two later he was requested 'to contribute a column of "copy" and a half-page drawing every week' (*Theatre*, 1883, p. 218). He remained a regular contributor to 'Fun' during the editorship of Byron and that of Byron's successor, Tom Hood the younger [q. v.] (from 1865).

There is no evidence that he studied drawing in any school, but he was an illustrator of talent. In 1865 he made 84 illustrations for his father's novel, 'The Magic Mirror,' and in 1869 he illustrated another of his father's books, 'King George's Middy.' His illustrations of his own 'Bab Ballads' have much direct and quaint humour. In 1874 'The Piccadilly Annual' was described as 'profusely illustrated by W. S. Gilbert and other artists.' One of the 'other artists' was John Leech.

Having already both written and drawn occasionally for 'Punch,' Gilbert offered that periodical in 1866 his ballad called 'The Yarn of the Nancy Bell,' but it was refused by the editor, Mark Lemon [q. v.], on

the ground that it was 'too cannibalistic for his readers' tastes' (*Fifty Bab Ballads*, pref., 1884). Gilbert's connection with 'Punch' thereupon ceased. 'The Nancy Bell' appeared, without illustrations, in 'Fun' on 3 March 1866. Gilbert's other work in 'Fun' may be traced by single figure drawings signed 'Bab.' A series of dramatic notices commencing 15 Sept. 1866 and 'Men we Meet, by the Comic Physiognomist' (2 Feb. to 18 May 1867) are thus illustrated. The first illustrated ballad was 'General John' (1 June 1867). From this date they became a regular feature of the paper. But not until 23 Jan. 1869, in connection with 'The Two Ogres,' was the title 'The Bab Ballads' used. They were first collected in volume form in the same year. Further 'Bab Ballads' continued to appear in 'Fun,' at varying intervals until 1871. A collected volume of 'More Bab Ballads' followed in 1873. The Bab Ballads established Gilbert's reputation as a whimsical humorist in verse.

At the same time Gilbert contributed articles or stories to the magazines—the 'Cornhill' (1863-4), 'London Society,' 'Tinsley's Magazine,' and 'Temple Bar'; he furnished the London correspondence to the 'Invalide Russe,' and, becoming dramatic critic to Vizetelly's 'Illustrated Times,' interested himself in the stage. In spite of these activities Gilbert found time to continue his military duties, and became captain of his militia regiment in 1867. He retired with the rank of major in 1883.

At the end of 1866 Gilbert commenced work as a playwright. To Thomas William Robertson [q. v.], the dramatist, he owed the needful introduction. Miss Herbert, the lessee of St. James's Theatre, wanted a Christmas piece in a fortnight, and Robertson recommended Gilbert for the work, which was written in ten days, rehearsed in a week, and produced at Christmas 1866. The piece was a burlesque on 'L'Elixir d'Amore,' called 'Dulcamara, or the Little Duck and the Great Quack.' Frank Matthews made a success in the title rôle, and it ran for several months and was twice revived. No terms had been arranged, and when Mr. Emden, the manager, paid Gilbert the 30*l.* that he asked, Emden advised him never again to sell so good a piece for so small a sum. Thenceforward Gilbert was a successful playwright, at first in the lighter branches of the drama. Another burlesque on 'La Figlia del Reggimento,' called 'La Vivandière, or True to the Corps,' was produced at the Queen's Theatre on 22 Jan.

1868, and in it John Lawrence Toole [q. v. Suppl. II] and Lionel Brough [q. v. Suppl. II] played. It ran for 120 nights. A third burlesque, on the 'Bohemian Girl,' entitled 'The Merry Zingara, or the Topsy Gipsy and the Popsy Wopsy,' was produced at the Royal Theatre on 21 March 1868 by Miss Patty Oliver. On 21 Dec. 1868 the new Gaiety Theatre was opened by John Hollingshead [q. v. Suppl. II] with a new operatic extravaganza by Gilbert called 'Robert the Devil,' in which Nellie Farren [q. v. Suppl. II] played the leading part. Next year, at the opening of the Charing Cross (afterwards Toole's) Theatre, on 19 June 1869, the performance concluded with a musical extravaganza by Gilbert, 'The Pretty Druides, or the Mother, the Maid, and the Mistletoe Bough, a travestie of Norma.' Gilbert was much attached to second titles. Between 1869 and 1872 he also wrote many dramatic sketches, usually with music, for the German Reeds' 'entertainment' at the Gallery of Illustration, 14 Regent Street. His musical collaborator was Frederick Clay [q. v. Suppl. I]. On 22 Nov. 1869 they produced together 'Ages Ago,' which was afterwards expanded into the opera 'Ruddigore'; on 30 Jan. 1871 'A Sensation Novel'; and on 28 Oct. 1872 'Happy Arcadia.' Arthur Cecil, Corney Grain, and Fanny Holland were the chief performers.

It was under the auspices of the German Reeds that Gilbert and (Sir) Arthur Sullivan [q. v. Suppl. I] first made each other's acquaintance. Sullivan was one of the composers of music for German Reed plays, and at the Gallery of Illustration in 1871 Clay introduced Sullivan to Gilbert (*LAWRENCE'S Life of Sullivan*, p. 84, and *E. A. BROWNE'S Gilbert*, p. 35). They soon were at work together on a burlesque, 'Thespis, or the Gods Grown Old,' which was produced at the Gaiety Theatre on 26 Dec. 1871 (*JOHN HOLLINGSHEAD'S Gaiety Chronicles*, 202-7). They often met at Tom Taylor's, and engaged together in amateur theatricals (*ELLEN TERRY'S Story of My Life*, 1908), but for the present no further dramatic collaboration followed.

Meanwhile Gilbert was assiduously seeking fame in more serious branches of the drama. On 8 Jan. 1870 'The Princess,' a respectful parody on Tennyson's poem, was produced at the Olympic with great success. This was afterwards the basis of the opera 'Princess Ida.' John Baldwin Buckstone [q. v.] now commissioned Gilbert to write a blank verse fairy comedy on

Madame de Genlis's story of 'Le Palais de la Vérité.' This was produced on 19 Nov. 1870 at the Haymarket under the title of 'The Palace of Truth,' with Buckstone, Madge Robertson (Mrs. Kendal), and W. H. Kendal in the cast. It ran for 230 nights. 'Pygmalion and Galatea,' a rather artificial classical romance, was produced also at the Haymarket on 9 Dec. 1871. It proved a remarkable success. The play was revived at the Lyceum with Miss Mary Anderson in 1884 and later in 1888, at the same theatre, with Miss Julia Neilson in the part. Gilbert is said to have made 40,000*l.* out of this play alone (*Daily Telegraph*, 30 May 1911). 'The Wicked World,' a fairy comedy, followed at the Haymarket on 4 Jan. 1873 and was not quite so successful as its forerunners.

In the meantime Gilbert wrote an extended series of comedies for Miss Marie Litton's management of the new Court Theatre in Sloane Square, London. This playhouse was opened by Miss Litton with Gilbert's 'Randall's Thumb' on 25 Jan. 1871; there followed during Miss Litton's tenancy 'Creatures of Impulse' (15 April 1871); 'Great Expectations' (28 May), an adaptation of Dickens's novel; 'On Guard' (28 Oct.); and 'The Wedding March' (under the pseudonym of F. Latour Tomline) (15 Nov. 1873). One of Gilbert's plays written for the Court Theatre, 'The Happy Land,' which Miss Litton produced on 17 March 1873, caused much public excitement. It was a burlesque version of Gilbert's 'Wicked World,' designed by himself, but mainly worked out by Gilbert Arthur à Beckett [q. v. Suppl. I]. Gilbert received 700*l.* for his share of the libretto (*W. S. Gilbert*, by KATE FIELD, *Scribner's Monthly*, xviii. (1879), 754). His name did not appear on the bill, where the piece was assigned to F. L. Tomline (i.e. Gilbert) and à Beckett. 'The Happy Land' was received with enthusiasm. But three of the actors, Walter Fisher, W. J. Hill, and Edward Righton (manager of the theatre), were made up to resemble respectively Gladstone, Robert Lowe (Lord Sherbrooke), and A. S. Ayrton, members of the liberal administration then in office. The lord chamberlain insisted on the removal of this feature of the performance.

Of more serious plays 'Charity,' produced on 3 Jan. 1874 at the Haymarket, was the story of a woman redeeming her one mistake in life by an after career of self-sacrifice. It was denounced as immoral by the general public, and was withdrawn after a run of eighty nights. There followed a series of successful comedies in which sentiment

predominated over Gilbert's habitually cynical humour. 'Sweethearts' was produced at the Prince of Wales's on 7 Nov. 1874 under Mrs. Bancroft's management; 'Tom Cobb' at the St. James's, on 24 April 1875; 'Broken Hearts' on 17 Dec. 1875 at the Court Theatre under (Sir) John Hare's direction. 'Dan'l Druce,' a play of very serious tone, and 'Engaged' both came out at the Haymarket, on 11 Sept. 1876 and 3 Oct. 1877 respectively. 'Gretchen,' a four-act drama in verse on the Faust legend, was produced on 24 March 1879 at the Olympic. In 1884 Gilbert wrote an ambitious sketch, 'Comedy and Tragedy,' for Miss Mary Anderson to perform at the Lyceum Theatre (26 Jan. 1884).

Meanwhile Gilbert acquired a more conspicuous triumph in another dramatic field. The memorable series of operas in which he and Sullivan collaborated began with 'Trial by Jury,' which was produced at the Royalty Theatre by Madame Selina Dolaro on 25 March 1875. A sketch of an operetta under this title had appeared in 'Fun' on 11 April 1868. The words now took a new shape, Sullivan supplied the music, and the rehearsals were completed within three weeks. Gilbert's libretto betrayed the whimsical humour of his early 'Bab Ballads,' as well as the facility of his earlier extravaganzas and burlesques. Richard D'Oyly Carte [q. v. Suppl. II] was the manager of the Royalty. In view of the piece's success Carte formed a Comedy Opera Company, and gave Gilbert and Sullivan a commission to write a larger work together. The result was 'The Sorcerer,' which was first played at the Opera Comique on 17 Nov. 1877, and introduced George Grossmith and Rutland Barrington to the professional stage. This opera proved the forerunner of a long series of like successes. 'The Sorcerer' was followed by 'H.M.S. Pinafore, or the Lass that loved a Sailor,' under the same management on 25 May 1878. This ran for 700 nights and enjoyed an enormous popularity throughout the country. It was at once received in America with an 'enthusiasm bordering upon insanity' (KATE FIELD in *Scribner's Monthly*, xviii. 754), and after its first production in America Gilbert, with Sullivan, D'Oyly Carte, and Alfred Cellier, the musical conductor, went to New York (Nov. 1879) to give it the fresh advantage of Gilbert's personal stage management and Sullivan's own orchestral interpretation. While in New York they produced for the first time a new opera, 'The Pirates of Penzance, or the Slave of Duty,' which

was brought out at the Fifth Avenue Theatre on New Year's Eve, 31 Dec. 1879. The party returned to England in time to produce 'The Pirates of Penzance' at the Opera Comique on 3 April 1880. This ran for a year. 'Patience, or Bunthorne's Bride' came out at the Opera Comique on 23 April 1881, and at the height of its triumph, on 10 Oct. 1881, it was transferred to the 'Savoy'—the new opera house built by D'Oyly Carte for the Gilbert and Sullivan operas. 'Patience' was a satire on the current 'aesthetic movement' and enjoyed great popularity.

The succeeding 'Savoy operas' were 'Iolanthe, or the Peer and the Peri' (25 Nov. 1882); 'Princess Ida, or Castle Adamant,' based on Gilbert's comedy 'The Princess' (5 Jan. 1884); and 'The Mikado, or the Town of Titipu' (14 March 1885). The last piece ran for two years, was played over 5000 times in America, and found favour on the Continent. It was the most popular of all Gilbert and Sullivan's joint works. It is said Gilbert, Sullivan, and Carte each made 30,000*l.* out of it. 'Ruddigore, or the Witch's Curse,' an elaboration of the German Reed piece 'Ages Ago,' followed on 22 Jan. 1887; 'The Yeoman of the Guard, or The Merryman and His Maid' on 3 Oct. 1888, and 'The Gondoliers, or The King of Barataria' on 7 Dec. 1889. The partnership was shortly afterwards interrupted. A disagreement on financial matters arose between Gilbert and Carte, and Gilbert thought that Sullivan sided with Carte. Separating for the time from both Sullivan and Carte, Gilbert wrote his next libretto, 'The Mountebanks,' for music by Alfred Cellier. It was produced at the Lyric Theatre on 4 Jan. 1892.

In writing these operas Gilbert first wrote out the plot as though it were an anecdote, and this he expanded to the length of a magazine article with summaries of conversations. This was overhauled and corrected and cut down to a skeleton, and then broken up into scenes with entrances and exits arranged. Not until the fifth MS. was the play illustrated by actual dialogue. Sometimes a piece would after a fortnight's rest be re-written entirely afresh without reference to the first draft. In arranging the scenes, too, no trouble was too great. In 'H.M.S. Pinafore' Gilbert went down to Portsmouth and was rowed round about the harbour and visited various ships, and finally pitched upon the quarter-deck of the Victory for his scene, which he obtained permission to sketch and model in every detail.

Gilbert's partnership with Sullivan and Carte was resumed in 1893, when he and Sullivan wrote 'Utopia Limited, or the Flowers of Progress.' It was produced at the Savoy on 7 Oct. 1893, but was not so popular as its predecessors, although it ran till 9 June 1894. Gilbert's next opera, 'His Excellency,' had music by Dr. Osmond Carr (Lyric, 27 Oct. 1894); it was followed by revivals of older pieces. In 'The Grand Duke,' which came out on 7 March 1896 at the Savoy, Gilbert and Sullivan worked together for the last time. Thenceforth Gilbert pursued his career as a playwright spasmodically and with declining success. A fanciful drama, 'Harlequin and the Fairy's Dilemma,' was produced without much acceptance by Mr. Arthur Boucher at the Garrick Theatre (3 May–22 July 1904). On 11 Dec. 1909 his opera 'Fallen Fairies,' with music by Edward German, came out at the Savoy. His final production was 'The Hooligan,' a grim sketch of the last moments of a convicted murderer, played by Mr James Welch at the Coliseum in 1911.

Gilbert's successes as a dramatist brought him wealth, which he put to good purpose. He built and owned the Garrick Theatre in Charing Cross Road, which was opened in 1889. In 1890 he purchased of Frederick Goodall, R.A. [q. v. Suppl. II], the house and estate of Grims Dyke, Harrow Weald, Middlesex. The estate covered 100 acres and the house had been built for Goodall by Norman Shaw. Gilbert added an observatory and an open-air swimming lake. He was something of an astronomer as well as a dairy farmer, bee-keeper, and horticulturist. He was made J.P. in 1891 and D.L. for Middlesex, and devoted much time to his magisterial duties. In 1907 he was knighted. He was a well-known member of the Beefsteak, Junior Carlton, and Royal Automobile Clubs, and was elected by the committee to the Garrick Club on 22 Feb. 1906.

Gilbert died from heart failure brought on by over-exertion while saving a young lady from drowning in his swimming lake at Grims Dyke on 29 May 1911. The body was cremated at Golder's Green and the ashes buried at Great Stanmore church, Middlesex.

Gilbert was, perhaps, the most outstanding figure among Victorian playwrights. Few if any contemporary writers for the stage made so much money from that source alone, none acquired so wide a fame. In all his writing there is an effort after literary grace and finish which was in his early days absent from contemporary drama. His humour consists mainly in

logical topsy-turveydom in a vein so peculiar to Gilbert as to justify the bestowal on it of the epithet 'Gilbertian.' He himself disclaimed any knowledge of Gilbertian humour, stating that 'all humour properly so called is based upon a grave and quasi-respectful treatment of the ludicrous.' His satire hits current foibles with unvarying urbanity and with no Aristophanic coarseness. The success of his operas was largely due to their freedom from vulgarity and to the excellence of the lyrics, which not only were musical and perfect in form but applied mastery of metre to the expression of the most whimsical and fanciful ideas. He had little or no ear for tune, but a wonderful ear for rhythm. Gilbert's words and metre underwent no change in the process of musical setting.

Gilbert believed that the playwright should dominate the theatre. He was a master of stage management. In a privately printed preface to 'Pygmalion and Galatea' he pointed out that 'the supreme importance of careful rehearsing is not sufficiently recognised in England.' His experience, for which he vouched by statistics, taught him that when his pieces were carefully rehearsed they succeeded, and when they were insufficiently rehearsed they failed. A sufficient rehearsal for a play he then considered to be three weeks or a month. His conduct at the rehearsals of his adaptation of 'Ought we to visit her' (a comedy in three acts by Messrs. Edwardes and Gilbert), produced at the Royalty on 17 Jan. 1874, led to a quarrel with Miss Henrietta Hodson [q. v. Suppl. II], which was renewed over the production of 'Pygmalion and Galatea' in January 1877. Miss Hodson published 'A Letter' in the same year complaining of Gilbert's dictatorial action, to which Gilbert replied in 'A Letter addressed to the Members of the Dramatic Profession.' Gilbert developed the practice of Tom Robertson, who was perhaps the first English playwright to impress his personal views at rehearsal on the actor. Gilbert rehearsed his pieces in his study by means of a model stage and figures, and every group and movement were settled in the author's mind before the stage rehearsals began. Until Gilbert took the matter in hand choruses were practically nothing more than a part of the stage setting. It was in 'Thespis' that Gilbert began to carry out his expressed determination to get the chorus to play its proper part in the performance.

Gilbert had in ordinary society a ready,

subtle, and incisive wit. He was aggressive and combative and rarely let the discomfort of a victim deprive him and his companions of a brilliant epigram or a ready repartee. Nevertheless he had a kind heart, and was only a cynic after the manner of Thackeray. Many of the artists who worked under him bore testimony to his personal kindness. He was not interested in sport. He had a constitutional objection to taking life in any form. 'I don't think I ever wittingly killed a blackbeetle,' he said, and added 'The time will come when the sport of the present day will be regarded very much as we regard the Spanish bull-fight or the bear-baiting of our ancestors' (WILLIAM ARCHER, *Real Conversations*).

He married in 1867 Lucy Agnes, daughter of Captain Thomas Metcalf Blois Turner, Bombay engineers. His wife survived him without issue. A portrait painted by Frank Holl, R.A., in 1887 is destined for the National Portrait Gallery. He also owned a portrait of himself by Herman Gustave Herkomer and a bronze statuette by Andrea Lucchesi.

Besides the plays already mentioned, Gilbert wrote the following dramatic pieces: 'Harlequin Cock Robin and Jenny Wren, or Fortunatus, the Three Bears, the Three Wishes, and the Little Man who wooed the Little Maid,' pantomime (26 Dec. 1866) 'Allow Me to Explain,' farce, altered from the French (Prince of Wales's Theatre, 4 Nov. 1867); 'Highly Improbable,' farce (New Royalty, 5 Dec. 1867); 'No Cards' (German Reeds, 29 March 1869); 'An Old Score,' comedy-drama in three acts (Gaiety Theatre, 19 July 1869); 'The Gentleman in Black,' opera bouffe in two acts, music by Frederick Clay (Charing Cross Theatre, 26 May 1870); 'Our Island Home' (Gallery of Illustration, 20 June 1870); 'A Medical Man,' a comedietta (Drawing Room Plays, 1870); 'The Realms of Joy,' farce by F. Latour Tomline, i.e. Gilbert (Royalty Theatre, 18 Oct. 1873); 'Committed for Trial,' a piece of absurdity in two acts, founded on 'Le Réveillon' of H. Meilhac and L. Halévy (Globe Theatre, 24 Jan. 1874, revived at the Criterion, 12 Feb. 1877, as 'On Bail'); 'Topsy-turveydom,' extravaganza (Criterion Theatre, 21 Mar. 1873); 'King Candaules' (1875); 'Eyes and No Eyes, or the Art of Seeing,' a vaudeville, music by T. German Reed, founded on Hans Andersen's 'The Emperor's New Clothes' (St. George's Hall, 5 July 1875); 'Princess Toto,' comic opera in three acts, music

by Frederick Clay (Strand Theatre, 2 Oct. 1876); 'The Ne'er-do-Weel,' drama (Olympic Theatre, 25 Feb. 1878); 'Fogerty's Fairy,' a fairy comedy (Criterion, 15 Dec. 1881); 'Brantingham Hall,' drama (St. James's Theatre, 29 Nov. 1888); 'The Brigands,' opera bouffe in three acts, music by Offenbach, adapted from 'Les Brigands' of Meilhac and Halévy (Avenue Theatre, 16 Sept. 1889); 'Rosencrantz and Guildenstern,' a travesty on 'Hamlet,' in three tableaux (Vaudeville Theatre, 3 June 1891); 'Haste to the Wedding,' comic opera, music by George Grossmith (Criterion Theatre, 27 July 1892), a version of E. M. Labiche's 'Un Chapeau de Paille d'Italie,' played at the Court Theatre as 'The Wedding March' on 15 Nov. 1873; 'The Fortune Hunter,' drama (Theatre Royal, Birmingham, 27 Sept. 1897).

Collected editions of Gilbert's dramatic work appeared as 'Original Plays' (4 series, 1876-1911) and 'Original Comic Operas' (8 parts, containing 'Sorcerer,' 'H.M.S. Pinafore,' 'Pirates of Penzance,' 'Iolanthe,' 'Patience,' 'Princess Ida,' 'Mikado,' and 'Trial by Jury,' 1890). He also published 'Songs of a Savoyard,' a collection of songs from the Savoy operas, illustrated by Gilbert (1890), and 'Fogerty's Fairy and other Tales' (1890).

E. A. P.

GILLIES, DUNCAN (1834-1903), premier of Victoria, Australia, born in January 1834 at Over-Newton, a suburb of Glasgow, was second son of Duncan Gillies, a market gardener of that place, by Margaret his wife. After education at Glasgow High School he began a business career in a counting-house in his native city. He read much in his leisure, chiefly in history.

In 1852 he emigrated to Australia, and landing at Port Phillip, Victoria, proceeded to the Ballarat gold-fields, where for some

time he worked as a digger. In 1853-4 he was one of the leaders of the miners in their resistance to the demands of the government, though from the outset he was strongly opposed to the use of violence and took no part in the affair of the Eureka stockade. Becoming known among his fellows as a ready speaker, he was elected a member of the local mining court, and in February 1858 he became a member of the Ballarat mining board, which then superseded that court.

Gillies, who had become a working partner in the Great Republic (mining) Company, was returned to the Legislative Assembly in 1859 as the miners' representative for Ballarat West, being re-elected in 1861, 1864, 1866, and 1868. He soon became one of the foremost debaters. On 11 May 1868 he took office as president of the board of land and works and commissioner of crown lands and surveys in the unpopular Sladen ministry, and was sworn a member of the executive council. Promptly rejected on seeking re-election, he sought a constituency where his growing antipathy to democracy might find favour. At the next general election, in March 1870, he was returned unopposed for Maryborough.

On 10 June 1872 he joined the Francis ministry as commissioner of railways and roads, and he retained the office when the cabinet was reconstructed under George Briscoe Kerferd in July 1874. He retired on 2 Aug. 1875, but was commissioner of lands and survey and president of the board of land and works and minister of agriculture in the last McCulloch government (25 Oct. 1875-21 May 1877). At the general election of May 1877 Gillies was returned for Rodney, but he was unseated on petition on the ground that undue influence had been exercised by the land department during the contest. He was exonerated from any personal knowledge of this abuse, and was re-elected for the same constituency on 2 Nov. 1877. He was prominent in the opposition to the party led by (Sir) Graham Berry [q. v. Suppl. II].

From 5 March to 3 Aug. 1880 he was commissioner of railways in the Service government, and although a strong conservative and free-trader he took office as commissioner of railways and minister of public instruction in the Service-Berry coalition which ruled the colony from 8 March 1883 to 18 Feb. 1886. When Service and Berry retired on the last date, and the ministry was reconstructed, again on a coalition basis, Gillies became premier and treasurer and Deakin chief

secretary, each representing his own party in the cabinet and the Assembly.

The period of the Gillies-Deakin ministry was marked by great social and political activity. The revenue and expenditure of the colony increased to an unprecedented degree, whilst railways were extended in all directions. Useful legislation was promoted, of which the most important was the Irrigation Act of 1886 with its numerous off-shoots, but the government before its term of office ended had to contend with acute labour troubles, culminating in disastrous strikes. In 1887 Gillies declined the honour of K.C.M.G.

At the general election of March 1889 Gillies was returned for the Eastern Suburbs of Melbourne, and the government's power seemed unimpaired, though there were signs of coming difficulty. The first session passed without disaster, but in the second session a direct vote of want of confidence was carried on 30 Oct. 1890, by 55 votes to 35. Gillies resigned on 5 Nov. and led the opposition to the Munro and Shiels governments. Gillies was a consistent supporter of the cause of Australasian federation. He represented Victoria at several intercolonial conferences as well as in the second and third sessions of the federal council of Australasia. He presided at the federal conference held in Melbourne in Feb. 1890, and was one of the representatives of Victoria at the national Australasian convention which met in Sydney in March and April 1891.

From 6 Jan. 1894 to 5 Jan. 1897 Gillies was agent-general for the colony in London. Returning to Melbourne, he again entered Parliament (14 Oct. 1897) as member for Toorak, and was re-elected in 1900. On 14 Oct. 1902 he was unanimously chosen as speaker of the House of Assembly. But failing health hampered the performance of his duties. He died of heart failure on 12 Sept. 1903 in the Speaker's apartments at the State Parliament House, and was buried in Melbourne general cemetery.

Gillies lacked many of the qualities of a popular leader. Even among his political supporters his general demeanour was somewhat cold and unsympathetic, but he gained respect by his conspicuous fairness and magnanimity. His speeches were models of clearness and force. He proved himself a powerful leader of the house, and in that capacity displayed tact and resource.

A portrait of Gillies in oils, three-quarter

length, by Tennyson Cole, is in the National Gallery of Victoria at Melbourne.

GIROUARD, DÉSIRÉ (1836-1911), Canadian judge, born at St. Timothy, co. Beauharnois, Province of Quebec, on 7 July 1836, was son of Jérémie Girouard by his wife Hippolite Piccard. He was descended on the father's side from Antoine Girouard, private secretary to De Ramezay, governor of Montreal in 1720. After attending the Montreal College he took the law course at McGill University, obtaining the first prize three years consecutively, and graduating B.C.L. in 1860, D.C.L. in 1874; he was also LL.D. of Ottawa University. He was called to the bar of Lower Canada in October 1860, and was appointed Q.C. in October 1880. He attained great distinction at the bar, especially in commercial cases, and was a well-known writer on legal and international questions. In 1860, before he was called, he published a useful treatise in French on bills of exchange. He also wrote on the civil laws of marriage and on the Insolvent Act. He was one of the chief collaborators in 'La Revue Critique,' which in 1873-4 gave expression to the dissatisfaction of the Montreal bar with the then existing Quebec court of appeals and led to the reconstitution of that court in 1874. He first stood for the Canadian Parliament in 1872, but was not successful till 1878, when he became conservative member for the constituency of Jacques Cartier, and held the seat for seventeen years, until the close of his political career. In Parliament, where he proved a good debater, he carried in 1882 a bill legalising marriage with a deceased wife's sister. Later, in 1885, with some other conservative French-Canadian members, he opposed the government on the subject of the execution of Louis Riel [q. v.]. He was chairman of the standing committee on privileges and elections, presiding in one well-known case—the Langevin-McGreevy case—over 104 sittings. He was offered a seat in the dominion cabinet, but preferred a judgeship, and was appointed in September 1895 to the bench of the supreme court of Canada. He was senior puisne judge when he died at Ottawa from a carriage accident on 22 March 1911.

Girouard was not only eminent as a lawyer and judge, but he was also an authority on the early history of the settlement of Montreal. In recognition of his historical researches he was presented by the governor-general with the Confederation medal in 1895. He began publishing the results of his studies in 1889, and in 1893 his papers, translated by his son, D. H. Girouard, were collected at Montreal under the title 'Lake St. Louis, Old and New, and Cavalier de la Salle.'

He was three times married: (1) in 1862 to Marie Mathilde, daughter of John Pratt of Montreal; she died in 1863; (2) in 1865 to Essie, daughter of Dr. Joseph Cranwill of Ballynamona, Ireland; she died in 1879; (3) on 6 Oct. 1881 to Edith Bertha, youngest daughter of Dr. John Beatty of Cobourg, Ontario. He left four daughters and six sons, one of his sons by his second wife being Sir Percy Girouard, at one time governor of the East Africa Protectorate.

C. P. L.

GISSING, GEORGE ROBERT (1857-1903), novelist, born in the Market Place, Wakefield, on 22 Nov. 1857, was eldest child in a family of three sons and two daughters of Thomas Waller Gissing (1829-1870), a Suffolk man of literary and scientific attainments, who settled at Wakefield as a pharmaceutical chemist, was author of a 'Wakefield Flora,' and corresponded on botanical subjects with Hooker, Bentham, and other botanists. The novelist's mother (still living) was Margaret, daughter of George Bedford of Dodderhill, a well-known solicitor in Droitwich. A younger brother, Algernon, enjoys some reputation as a novelist. George, who was profoundly influenced by his father, passed from private day schools in Wakefield to Lindow Grove, a Quaker boarding-school at Alderley Edge, where his unsociability and intellectual arrogance asserted itself at times unpleasantly, but where he shone on speech-days (see *Born in Exile*, chap. i.). In 1872 he came out first in the kingdom in the Oxford local examination, and obtained an exhibition at Owens College, Manchester. At the end of his first session he won Dr. Ward's English poem prize; he also gained a special prize for classics and the Shakespeare scholarship, and took a high place with honours in the London intermediate arts (see *Owens Coll. Union Mag.* Jan. 1904, p. 80). Unhappily, at this

critical period, as at other times of his life, amorous propensities led him into serious trouble. His career at Owens broke off in disgrace, and his pride cut him adrift and made a temporary pariah of him; his health, too, was temporarily impaired by 'insane' overwork at college.

For eight or nine years after his disappearance from Manchester his resources were extremely precarious, and he was dogged by many hardships. After a brief period of clerkship at Liverpool he crossed as a steerage passenger to America, and was for a short time a classical tutor and then a gas-fitter at Boston. At Niagara he contemplated suicide; in Chicago he came near to absolute starvation. His experiences as a penniless rover in American cities are described with little deviation in 'New Grub Street' and elsewhere. Although he was neither morose nor eccentric in motive or bearing, he showed a curious inability to do the sane, secure thing in the ordinary affairs of life. An ill-considered marriage increased his embarrassment. He lacked social nerve, and the everyday conflicts of social intercourse bewildered and confounded him. Early attempts to obtain remunerative employment in the American press failed. In 1877, however, he managed to return to Europe, and then in the quiet atmosphere of Jena studied Goethe, Haackel, and Schopenhauer, to be followed by Comte and Shelley. He became an adept in religious and metaphysical discussion, and boxed the compass of opinion like his own Godfrey Peak (in *Born in Exile*). His correspondence at this time with a friend in Berlin, Herr Edward Bertz, author of 'Philosophie des Fahrrads' (1900) and other works, forms an autobiographical document of extraordinary impressiveness and candour.

On his return to England about the close of 1878 he illustrated his debt to Germany in a crude but powerful novel entitled 'Workers in the Dawn' (*Athenæum*, 12 June 1880), in which the Wertherian hero is, of course, the author, while Casti is his Teutonic confidante. Gissing, who risked the greater part of his ready money upon this book, confidently anticipated large profits. But the book was read by few save the critics, who denounced its 'dangerous' tendencies, and Gissing was once more faced by hunger and destitution. Copies, however, were sent to Mr. John Morley and to Mr. Frederic Harrison, both of whom recognised its power and interest. In 1882 the author became tutor to Mr. Harrison's sons; he

obtained other pupils and an opening for occasional articles (such as a sketch 'On Battersea Bridge') in the 'Pall Mall Gazette.' His means were still small, but he was no longer destitute; yet his impractical contempt for journalism, his idealism as an artist, no less than the necessity of providing an allowance, however small, for the wife from whom he was separated, involved him often in pecuniary difficulties. Devoted to classical literature, he read assiduously in the British Museum, neglecting the chance of obtaining further pupils and of contributing to the 'Fortnightly,' and cultivating the conception of himself as a social outlaw. His next books, 'The Unclassed' (1884; new edit. 1895), dedicated to his lifelong friend, Mr. Morley Roberts, 'Isabel Clarendon' (1886), 'Demos' (1886), and 'Thyrza' (1887), were all written from this point of view, and illustrated the degrading effects of poverty on character.

'Demos,' which was the first of his books to attract any popular attention, brought him 100*l.*, and with this sum he carried out a long cherished ambition of visiting the classic sites upon which he lived in imagination. He sailed on a collier to Naples, where he began 'The Emancipated' (published in 1890), described his first sight of Vesuvius as 'the proudest moment of his life,' and proceeded thence to Rome and Athens. On his return he put 'The Emancipated' for a time aside and wrote for serial publication in the 'Cornhill' 'A Life's Morning' (1888), the most vernal in atmosphere of any of his novels; but it was followed by the gloomy 'The Nether World' (1889), a full-length study of the animal conditions of semi-starvation, which goes far to justify Gissing's title as the 'spokesman of despair.' This and 'New Grub Street' (1891), a realistic study of the ruin by pecuniary care and overwork of an author's powers of imagination, for which he received 150*l.*, are the most closely observed and vigorously characterised of all his fuller developed novels.

Gissing's first wife was now dead, and in 1890 he married again, with unfortunate results. Comparative success enabled him to live away from London. At Exeter he wrote the disquieting and introspective 'Born in Exile' (1892) and began 'Denzil Quarrier' (1892; new edit. 1907), which he completed at Dorking, where he met George Meredith, one of his earliest appreciators. In 1892-3 he wrote at Clevedon 'The Odd Women' (new edit. 1907), an artistic study of three luckless and moneyless

women. His novels henceforth, with the partial exception of 'In the Year of Jubilee' (1894), 'Eve's Ransom' (1895), and 'The Whirlpool' (1897), in which there is a recurrence of his old semi-autobiographical manner, show an inferior artistic sincerity. His critical study of 'Charles Dickens' (1898; illustr. edit. 1902) is a masterly vindication of Dickens, whom he had worshipped from youth.

During the last ten years of his life he re-visited Wakefield several times, and spent much time in southern England, at Budleigh, and at Epsom. His love of the countryside, of English living, and English manners he described in papers in the 'Fortnightly Review' under the title of 'An Author at Grass'; they were reprinted as 'Private Papers of Henry Ryecroft' in 1903. The autobiographical value with which they were credited is a testimony to their artistic success, but they faithfully reflect his lonely temper and his impatience of control. In the autumn of 1897 he revisited Italy with Mr. H. G. Wells, and his experiences in the Calabrian portion of his tour were recorded in the graphic pages of 'By the Ionian Sea' (1901). At Rome, too, fresh material was accumulated for 'Veranilda,' the most deliberate of his works, an historical romance of the city in the fifth century—the time of Theodoric the Goth. When in England again he contributed short stories to the weekly illustrated papers and wrote 'The Town Traveller' (1898) and 'Our Friend the Charlatan' (1901), inferior novels, refashioning some old material. The state of his lungs rendered it desirable for him to go south at the close of 1901. Moving from Paris to Arcachon, and thence to St. Jean Pied-du-Port, he there completed for bread and butter an easy-going romance of real life, 'Will Warburton' (1905), and in June began for fame his historical romance 'Veranilda.' He was not destined to finish the romance. In Nov. he moved to St. Jean de Luz, contracted a slight chill, and died of pneumonia on 28 Dec. 1903, at the age of forty-six. By his second wife, from whom he was long separated, he left issue two sons, Walter Leonard and Alfred Charles Gissing, to whom a joint pension of 74*l.* was in 1904 allotted during their minority from the civil list. The unfinished 'Veranilda' was published in 1904 (with a foreword by Mr. Frederic Harrison). Gissing carried his classical learning easily and lightly, but his classical romance will not rank with the novels of his early manhood.

The intellectual beauty and sincere friendliness of Gissing's nature were obscured by a peculiar pride or sensitiveness. His idiosyncrasies wore down as he grew older, but he lost also his extraordinary power of intensifying the misery of the world's finer spirits who are thrown among 'the herd that feed and breed' and are stupidly contented. His prose style is scholarly, suave, subtle, and plastic. Critics have deemed him a classicist who missed his vocation, but few classicists have written so much or so well. His imperfect understanding of the *joie de vivre* reduced his public while he lived; but there are signs that his work is obtaining a better co-ordinated appreciation since his death.

In addition to the works already enumerated Gissing wrote: 1. 'The Paying Guest,' 1895. 2. 'Sleeping Fires,' 1895. 3. 'Human Odds and Ends' (stories), 1898. 4. 'The Crown of Life' (early chapters semi-autobiog.), 1899. 5. 'The House of Cobwebs, and other Stories' (with an introductory survey of Gissing's books by the present writer), 1906.

A portrait appears in William Rothenstein's 'English Portraits' (1898), reduced in later (pocket) editions of the popular 'Ryecroft Papers.' A drawing by Mr. H. G. Wells is reproduced in the 'New York Critic.' The MSS. of Gissing's novels passed to his brother Algernon.

G. Wells, originally written as introduction to Veranilda; private information.] T. S.

GLADSTONE, JOHN HALL (1827-1902), chemist, born at 7 Chatham Place West, Hackney, London, on 7 March 1827, was the eldest son of John Gladstone by his wife Ali on Hall. The second son, George

(1828-1909), a prominent educationalist, was for many years chairman of the School Board of Hove, Sussex. The father came from Kelso, where the family had been established since 1645, and after a successful career as a wholesale draper and warehouseman retired from business in 1842. John, after being privately educated, entered in 1844 University College, London, and attended the chemistry lectures of Professor Thomas Graham [q. v.], gaining a gold medal for original research, and publishing a paper on guncotton and xyloidine. In 1847 he went to Giessen University, where he was a pupil of Liebig, and after graduating Ph.D. there he returned to London in 1848. From 1850 to 1852 he was lecturer on chemistry at St. Thomas's Hospital, and in 1853 he was elected F.R.S. He sat on the royal commission which inquired into lighthouses, buoys and beacons from 1859 to 1862, and on the committee which the war office appointed in 1864 to investigate questions regarding guncotton. He succeeded Michael Faraday [q. v.] as Fullerian professor of chemistry at the Royal Institution in 1874, but resigned in 1877. Amongst the other important offices he held in scientific societies were president of the Physical Society (1874), of which he was a founder, and of the Chemical Society (1877-9); in 1892 he was made an honorary D.Sc. of Trinity College, Dublin, on the occasion of its tercentenary celebrations, and in 1897 he received the Davy medal from the Royal Society.

Gladstone was one of the founders of the new science of physical chemistry. A long series of papers—Professor Tilden estimates them at 140 by himself alone, and seventy-eight in collaboration—contributed to various learned societies through life contains the record of his researches. In his earlier years his chief discoveries concerned chemistry in relation to optics, and the refraction and the dispersion of liquids. He was one of the earliest students in spectroscopy, and published several papers, one written with Sir David Brewster, on the 'Solar Spectrum.' In 1872, with his assistant Alfred Tribe, he discovered that zinc covered with spongy copper would decompose water, and from that time the copper-zinc couple has become one of the most familiar pieces of chemico-electrical apparatus. The discovery was immediately followed by experiments as to the value of the copper-zinc union as a reducing agent for both organic and inorganic compounds. The results

were published in the 'Journal of the Chemical Society' between 1872 and 1875. Papers on a similar subject, 'The Chemistry of the Secondary Batteries of Planté and Faure,' which were communicated to 'Nature' (1882-3), appeared in 1883 in volume form.

As reformer and promoter of education, Gladstone holds high rank. He was a pioneer of technical education and manual instruction, and one of the earliest advocates of the introduction of science into elementary schools. From 1873 to 1894 he sat on the London School Board, being vice-chairman from 1888 to 1891. In 1868 he contested the parliamentary representation of York as a liberal, but was unsuccessful, and though he was frequently asked to stand for other constituencies (cf. *Life of Lord Kelvin*, p. 761), his membership of the school board remained his only public office. To this he gave time and thought liberally, and as chairman of the school management and the books and apparatus committees he was responsible for many of the changes in the curriculum and improvements in the methods of education, which he described in the memorandum he contributed to the 'Life and Letters of Professor Huxley' (i. 350). He was an ardent advocate of spelling reform, and succeeded in 1876 in getting the school board to pass a resolution in its favour. The Spelling Reform Association was started in 1879 after a meeting in his house.

Gladstone was active in philanthropic and charitable work, and keenly interested in Christian endeavour, organising devotional meetings and bible classes among educated men and women. He was a vice-president of the Christian Evidence Society, and wrote and lectured frequently for it on Christian apologetics. He published 'The Antiquity of Man and the Word of God' (anonymously) (1864); 'Theology and Natural Science' (1867); 'Points of Supposed Collision between the Scriptures and Natural Science' (1880) (in Christian evidence lectures, 2nd ser.); and 'Miracles' (1880) (*ib.* 4th ser.). He was one of the earliest collaborators with Sir George Williams [q. v. Suppl. II] in the work of the Young Men's Christian Association, with which he was connected from 1850; he was specially active in its international relationships.

Gladstone died at 17 Pembridge Square, Notting Hill, London, on 6 Oct. 1902, and is buried in Kensal Green cemetery. He was twice married: (1) in 1852, to Jane May

(d. 1864), only child of Charles Tilt, the publisher, by whom he had one son and six daughters; (2) in 1869, to Margaret, daughter of David King, LL.D. [q. v.]; she died in 1870, leaving a daughter. A cartoon portrait of Gladstone by 'Spy' appeared in 'Vanity Fair' in 1891.

Besides the works mentioned Gladstone was author of: 1. A memorial volume on his first wife (privately printed), 1865. 2. 'Michael Faraday,' 1872 (often reprinted), a work inspired by intimate personal knowledge and friendship. 3. 'Spelling Reform from an Educational Point of View,' 1878 (2nd edit. 1879). 4. 'Object Teaching,' 1882. He contributed to the 'Memoirs' issued by the Egypt Exploration Fund papers on the composition of the metals found in the course of the explorations (cf. the volume on 'Dendereh,' 1900). He also wrote a few hymns, which have been included in collections like 'Hymns for Christian Associations.'

[Proc. Roy. Soc., vol. 75, 1905; Trans. Chemical Soc., April 1905; Nature, 16 Oct. 1902; Phonetic Journal, 2 Jan. 1897; private information.] J. R. M.

GLAISHER, JAMES (1809-1903), astronomer and meteorologist, born at Rotherhithe on 7 April 1809, was son of James Glaisher, who soon removed with his family to Greenwich. There the boy, whose opportunities of education were slender, made the acquaintance of William Richardson, an assistant at the Royal Observatory, then under the direction of John Pond [q. v.], astronomer royal. Glaisher visited the observatory and was deeply impressed by Pond's delicate manipulation of the scientific instruments. A younger brother John became a computer in the observatory. From 1829 to 1830 James worked on the ordnance survey of Ireland under Lieut.-col. James. The occupation was thoroughly congenial, but serious illness brought on by exposure terminated the engagement. In 1833 Prof. (afterwards Sir George) Airy [q. v. Suppl. I], then director of the Cambridge University observatory, appointed Glaisher an assistant there, and with the equatorial he made a series of observations of the position of Halley's comet at its return in 1835. On 18 June 1835 Airy became astronomer-royal at Greenwich, and Glaisher followed him to the Royal Observatory on 4 Dec. He was succeeded at Cambridge by his brother John, who ten years later was assistant to Dr. John Lee (1783-1866) [q. v.] at Hartwell House, Aylesbury, and died in 1846.

In 1838 Airy put Glaisher in charge at Greenwich of the new magnetic and meteorological department, which was at first designed to last for a period of three years. But the term was afterwards extended to five, and the department was finally made permanent. As its chief till 1874 Glaisher organised the science of meteorology, and earned for himself the title 'Nestor of Meteorologists.'

Scientific meteorology was in its infancy when Glaisher began his work in it, and his first efforts were devoted to improving the instruments and organising observations. In February 1847 he communicated to the Royal Society his first important research—the result of three years' experiments—on 'The amount of the radiation of heat at night from the earth and from various bodies placed on or near the surface of the earth.' In 1847 he published his useful 'Hygrometrical Tables adapted to the Use of the Dry and Wet Bulb Thermometer,' which passed through very many editions. From 1848 to 1876 he regularly communicated to the Royal Society or the Meteorological Society tabulations and discussions of meteorological observations made at Greenwich. An error which Glaisher detected in 1847 in one of the registrar-general's quarterly meteorological reports led him to organise a system of precise meteorological observation which succeeded where all previous attempts had failed. He induced sixty volunteers (mostly medical men and clergymen) in different parts of the country to take daily weather notes with the accurate standard thermometer invented by Richard Sheepshanks [q. v.]. Filling up vacancies as they occurred among these volunteer observers, Glaisher succeeded in maintaining his voluntary service till his death. From 1847 to 1902 he prepared the meteorological reports for the registrar-general's returns of births, deaths and marriages. During 1849 he helped the 'Daily News,' by inspecting apparatus and offering various suggestions, to establish a daily weather report, which was first tried on 31 Aug. 1848, and being then soon abandoned, was revived in permanence with Glaisher's co-operation in the following year.

Glaisher joined the Royal Astronomical Society in 1841, and was elected F.R.S. in 1849. Other societies in whose affairs he was active were the Royal Microscopical, of which he was president in 1865–8, and the Photographic, of which he was president from 1869 to 1892. The British Meteorological Society, now the Royal Meteorolo-

gical Society, was formed with Glaisher as secretary on 3 April 1850 at a meeting summoned by John Lee [q. v.] at Hartwell House. Glaisher remained secretary until 1872, but during 1867–8 retired from this office to serve as president. Through the Society's early years, Glaisher was its mainstay.

Glaisher endeavoured with energy to illustrate the practical value of meteorological research. He sought to define the relations between the weather and the cholera epidemics in London in 1832, 1849, and 1853–4 in a meteorological report for the general board of health in 1854. Glaisher often gave evidence before parliamentary committees on bills dealing with water supply, and in 1863 he prepared an official report on the meteorology of India. He studied the meteorological conditions affecting water supply and joined the board of directors of gas and water companies at Harrow and Barnet.

Glaisher was brought prominently into public notice by his active association with aeronautics. In 1861 the British Association reappointed a committee which had made some unsuccessful efforts in 1852 to pursue meteorological observation from balloons. A large balloon was constructed for the purpose by Henry Coxwell [q. v. Suppl. I], and in it he and Glaisher made with necessary instruments eight ascents in 1862. In four of these ascents from the Crystal Palace, and in one from Mill Hill, Hendon, Glaisher accompanied Coxwell as an ordinary passenger on ascents for public exhibition. The greatest height attained on these occasions was between six and seven thousand feet. Three ascents from Wolverhampton were arranged solely in the interest of the British Association's committee, and immense altitudes were scaled. On 17 July 1862, the first ascent from Wolverhampton, a height of 26,000 feet was reached, and on 18 August, 23,000 feet. The most remarkable feat was the third ascent from Wolverhampton on 5 September, when the height was reckoned at nearly seven miles (cf. *British Association Report*, 1862, pp. 384, 385). At an elevation of 29,000 feet Glaisher became unconscious. Coxwell temporarily lost the use of his limbs, but seized with his teeth the cord which opened the valve, and by this means caused the balloon to descend from an altitude of 37,000 feet. Neither Glaisher nor Coxwell suffered permanent injury. Glaisher made many later ascents: eight in 1863, eight in 1864, and four in

1865 and 1866. He published in full detail his meteorological observations in the 'British Association Reports' (1862-6). Subsequently he ascended in a captive balloon at Chelsea, at the invitation of its owner, Mr. Giffard, and made observations at low altitudes (cf. *British Association Report*, 1869). In 1869 Glaisher contributed an account of his ascents to 'Voyages Aériens,' in which C. Flammarion, W. D. Fonville, and G. Tissandier were his coadjutors. He afterwards superintended the production of the English edition of that book under the title 'Travels in the Air' (1871; new edit. 1880). The Aeronautical Society was founded in 1866, and Glaisher was its first treasurer. But his interest in aeronautics was always subsidiary to the scientific results to be obtained by their means.

In spite of his devotion to meteorology, Glaisher always maintained his interest in astronomy and mathematical science. In 1875 he joined the committee of the British Association on mathematical tables of which his son, Dr. J. W. L. Glaisher, was reporter. With help supplied by a grant from the association he completed for this committee the 'Factor Tables' begun by Burckhardt in 1814 and continued by Dase in 1862-5. Glaisher computed the smallest factor of every number not divisible by 2, 3, or 5 of the fourth, fifth, and sixth millions, those of the first, second, third, seventh, eighth, and ninth millions having been dealt with by his predecessors. Glaisher published his enumerations in 3 vols. 4to, 1879-83.

After retiring from the Royal Observatory at Greenwich, in 1874, Glaisher continued to supply his quarterly report to the registrar-general until the last year of his life. He took great interest in the Palestine Exploration Fund, being chairman of the executive committee from 1880; he contributed to the publications fifteen papers on meteorological observations made in Palestine.

Glaisher retained his vigour of mind and body until near his death at The Shola, Croydon, on 7 Feb. 1903, in the ninety-fourth year of his age. A bust presented by the fellows of the Royal Photographic Society in 1887 belongs to the Royal Meteorological Society.

Glaisher married in 1843 Cecilia Louisa, youngest daughter of Henry Belville, first assistant at the Royal Observatory. He had two sons and a daughter. Dr. James Whitbread Lee Glaisher, F.R.S., is his surviving son.

Besides the works cited and papers

communicated to the Royal Society, the Royal Astronomical Society, the Meteorological Society, and the British Association, Glaisher translated Flammarion's 'Atmosphère' and Guillemin's 'World of Comets' (1876).

GLENESK, first BARON. [See BORTHWICK, SIR ALGERNON, 1830-1908.]

GLOAG, PATON JAMES (1823-1906), theological writer, born at Perth on 17 May 1823, was eldest son in the family of six children of William Gloag, banker, by his wife Jessie Burn. William Ellis Gloag, Lord Kincairney [q. v. Suppl. II], was a younger brother. His eldest sister, Jessie Burn Gloag, established in Perth one of the first ragged schools in Scotland. After finishing his school training at Perth Academy in 1839, Gloag studied at Edinburgh University (1840-3). Owing mainly to the disruption of 1843 he left Edinburgh and completed at St. Andrews (1843-6) the curriculum preparatory for the ministry of the Church of Scotland.

Licensed a preacher by Perth presbytery on 10 June 1846, Gloag, from 1848 to 1857, was first assistant, and then successor, to Dr. Russell at Dunning, Perthshire, and from 1860 to 1870 was parish minister of Blantyre, Lanarkshire, where he provided a new parish church, and established a savings bank. Meanwhile he published 'A Treatise on Assurance of Salvation' (1853), 'A Treatise on Justification' (1856), 'Primeval World, or Relation of Geology to Theology' (1859), 'The Resurrection' (1862), and 'Practical Christianity' (1866). In 1857, 1862, and 1867 he visited Germany, where he made friends with Tholuck and other divines, and familiarised himself with German theological literature.

In 1871 he became parish minister of Gala-shiels, and while there greatly extended his reputation as preacher and author. In 1879 he was Baird lecturer, taking for his subject 'The Messianic Prophecies.' A new church was completed in 1881 to meet the needs of his growing congregation. Although no ardent ecclesiastic, he moved in the general assembly of the Church of Scotland of 1887 for the relaxation of the eldership test. In 1889 he was moderator

of the general assembly, and in his closing address he urged the importance of the highest possible culture for the Christian minister. In June 1892 he resigned his parochial charge, devoting himself in Edinburgh to theological research, and finding recreation in the study of numismatics. In 1896-9 he was interim professor of biblical criticism in Aberdeen University. In March 1867 Gloag had received the honorary degree of D.D. from St. Andrews, and he was made LL.D. of Aberdeen in April 1899. In 1897 his ministerial jubilee was celebrated by students and friends. After 1898 his health gradually failed. He died at Edinburgh on 9 Jan. 1906, and was interred in the family burying-ground in Dunning churchyard. The Galashiels parishioners placed a memorial window in St. Paul's Church, Galashiels. On 23 Jan. 1867 Gloag married Elizabeth S. Lang, third daughter of the Rev. Gavin Lang of Glasgow. She survived him without issue. While Gloag was moderator the members of his congregation presented him with his portrait in oils, by Sir George Reid, P.R.S.A., which remains in Mrs. Gloag's possession.

Gloag's later theological publications show the influence of German scholarship of the liberal orthodox school. Chiefly valuable for their analytical criticism and exegesis of the New Testament, they give no support to the new higher criticism. The chief of them are: 1. 'Commentary on the Acts of the Apostles,' 2 vols. 1870. 2. 'Introduction to the Pauline Epistles,' 1874. 3. 'Commentary on the Epistle of St. James,' 1883. 4. 'Exegetical Studies,' 1884. 5. 'Introduction to the Catholic Epistles,' 1887. 6. 'Commentary on the Thessalonians,' 1887. 7. 'Introduction to the Johannine Writings,' 1891. 8. 'Introduction to the Synoptic Gospels,' 1895.

Gloag translated into English Lechler and Gerok's 'Apostelgeschichte' in 1865, Meyer's 'Apostelgeschichte' in 1887, Lünemann's 'Thessaloniker' in 1880, and Huther's 'St. James and St. Jude' in 1881. In 1880 he edited, with memoir, a volume of sermons by Dr. Veitch, Edinburgh. He issued as 'Bible Primers' a 'Life of St. Paul' (1881), and a 'Life of St. John' (1892). In 1891 he published 'Subjects and Mode of Baptism.'

[Mrs. Gloag's Paton J. Gloag, D.D., LL.D., 1908; information from Mrs. Gloag; *Life and Work Magazine*, July 1889 and February 1906; *Scotsman* and *Glasgow Herald*, 10 Jan. 1906; *Border Standard*, 6 July 1907.]

T. B.

GLOAG, WILLIAM ELLIS, Lord KINCAIRNEY (1828-1909), Scottish judge, born at Perth on 7 Feb. 1828, was son of William Gloag, banker in Perth, by his wife Jessie, daughter of John Burn, writer to the Signet, Edinburgh. Educated at Perth grammar school and Edinburgh University, he passed on 25 Dec. 1853 to the Scottish bar, where he enjoyed a fair practice. A conservative in politics, he was not offered promotion till 1874, when he was appointed advocate depute on the formation of Disraeli's second ministry. In 1877 he became sheriff of Stirling and Dumbarton, and in 1885 of Perthshire. In 1889 he was raised to the bench, when he took the title of Lord Kincairney. His career as a judge proved eminently successful. He died at Kincairney on 8 Oct. 1909, and was buried at Caputh. In 1864 Gloag married Helen, daughter of James Burn, writer to the Signet, Edinburgh, by whom he had one son, William Murray Gloag, professor of law at Glasgow University, and three daughters. There is a portrait of him, by Sir George Reid, at Kincairney.

GODFREY, DANIEL (1831-1903), bandmaster and composer, eldest of four sons of Charles Godfrey, bandmaster of the Coldstream guards for fifty years, was born at Westminster on 4 Sept. 1831. His eldest brother, George William Godfrey, was well known as a playwright. Daniel was educated at the Royal Academy of Music, where he subsequently became professor of military music and was elected a fellow. In his early days he was a flute player in Jullien's orchestra and at the Royal Italian Opera. In 1856, on the recommendation of Sir Michael Costa, he was, through the influence of the Prince Consort, appointed bandmaster of the Grenadier guards, and one of his first duties was to play into London the brigade of guards returning from the Crimea. In 1863 he composed his famous 'Guards' waltz for the ball given by the officers of the guards to King Edward VII and Queen Alexandra, then Prince and Princess of Wales, on their marriage. This was followed by the 'Mabel' and 'Hilda' waltzes, which enjoyed universal popularity. During one of the visits of the guards band to Paris, Bizet, the composer of 'Carmen,' unconsciously caught the theme of one of them, and it figures in the finale to

the first act of Bizet's 'Les Pêcheurs des Perles.' Godfrey made a tour with his band in the United States in 1876 in celebration of the centenary of American Independence. It was the first visit of an English military band since the creation of the republic, and a special Act of Parliament had to be passed to authorise it. At Queen Victoria's jubilee (1887) he was promoted second-lieutenant—the first bandmaster who received a commission in the army. He was also decorated with the jubilee medal and clasp. In 1891 he reached the age limit of sixty, but his period of service was extended for five years. He retired from the army on 4 Sept. 1896, with the reputation of England's leading bandmaster. Subsequently he formed a private military band which played at the chief exhibitions in England and with which he twice toured America and Canada. He rendered splendid service to the cause of military music, and was very successful as an 'arranger' of compositions for military bands. He died at Beeston, Nottinghamshire, on 30 June 1903. Godfrey married in 1856 Joyce Boyles, by whom he had two sons and three daughters. His eldest son, Dan Godfrey (b. 1868), a well-known conductor, is musical director to the corporation of Bournemouth. A cartoon of Godfrey by 'Spy' appeared in 'Vanity Fair' on 10 March 1888.

GODKIN, EDWIN LAWRENCE (1831–1902), editor and author, born on 2 Oct. 1831 at his maternal grandmother's house at Moyne, co. Wicklow, was eldest child of James Godkin [q. v.], presbyterian clergyman and journalist with strong nationalist sympathies. His mother, Sarah Lawrence, was of Cromwellian ancestry. Of delicate health, he spent his early childhood mainly in Wicklow, and when seven years old was sent to a preparatory school in Armagh, where his father was then living. For over four years, from 1841 to 1846, he was at Silcoates school for the children of congregational ministers, near Wakefield in Yorkshire. In 1846 he entered Queen's College, Belfast, Sir Robert Hart [q. v. Suppl. II] being a younger contemporary. He was first president of the Undergraduates' Literary and Scientific Society; at the time (he wrote later) 'John Stuart Mill was our prophet, but America was our Promised Land' (*Life and Letters*, i. p. 12). In 1851 he graduated B.A. and went to London

to read for the bar at Lincoln's Inn, taking rooms in the Temple. He soon turned to authorship and journalism. Godkin undertook some literary work for Cassell's publishing house, with which his father was connected. In 1853 that firm published his first book, 'The History of Hungary and the Magyars from the Earliest Period to the Close of the Late War.' In October 1853 the 'Daily News' sent him out as special correspondent to Turkey on the eve of the Crimean war. He joined Omar Pasha's army, and was in the Crimea until the end of the war, returning home in September 1855. This experience gave him a lifelong hatred of war; he held that the most important result of the Crimean war was 'the creation and development of the special correspondents of newspapers' (*Life and Letters*, i. 100).

After writing for a short time for the 'Northern Whig' at Belfast, he went out in November 1856 to the United States, and almost immediately made a tour in the southern states, noting the effects of the slave system. He corresponded with the London 'Daily News,' and was admitted to the bar of the state of New York in Feb. 1858. In 1860 he made a tour in Europe for his health. While he was in Europe the American civil war broke out, and he strongly supported the North, writing to the 'Daily News' in condemnation of the British attitude with regard to the Trent incident. On returning to the United States in September 1862, while continuing his letters to the 'Daily News,' he wrote for the 'New York Times,' the 'North American Review,' and 'Atlantic Monthly.' He also took charge for a short time of the 'Sanitary Commission Bulletin.' In 1864 he wrote of himself 'I am by nature rather fitted for an outdoor than an indoor life. I have not got the literary temperament' (*Life and Letters*, i. 229). In July 1865 he established in New York a weekly journal 'The Nation,' to represent independent thought in the United States. The paper was started by subscription, but it did not pay in its early stages, and after the first year he took it over almost entirely as his private venture. He edited and wrote most of it till 1881, when he sold it to the 'Evening Post,' of which it became a kind of weekly edition. In 1883 he became editor in chief of both papers, retiring on account of ill-health in 1899. During most of this time his sub-editor was his friend, W. P. Garrison, son of William Lloyd Garrison.

The first prospectus of the 'Nation' stated

that it 'will not be the organ of any party, sect, or body' (*Life and Letters*, i. 238). It thus inaugurated a new departure in American journalism, and it influenced public opinion in the United States, not by the extent of its circulation, which was comparatively small, but by its literary power and transparent honesty. Its contributors included the most accomplished men of letters on both sides of the Atlantic. (Sir) Leslie Stephen [q. v. Suppl. II], who stayed with Godkin in New York in 1868 and formed a high opinion of his character and capacity, was English correspondent of the paper from that year till 1873 (MAITLAND'S *Life*, i. 207-237). The 'Nation' 'was read by the two classes which in America have most to do with forming political and economic opinion, editors and university teachers' (BRYCE, p. 378). Its superiority was 'due to one man, Mr. E. L. Godkin, with whom,' wrote J. R. Lowell, 'I do not always agree, but whose ability, information, and unflinching integrity have made the "Nation" what it is' (*Life and Letters*, i. 251). He was a determined opponent of corruption in political and municipal life in America. Though his political sympathies had lain with the republican as against the democratic party, yet on public grounds, as a civil service reformer and as a freetrader, in 1884, he supported Cleveland's candidature for the presidency as against Blaine. His paper was the recognised organ of the independents or 'Mugwumps' between 1884 and 1894. On the other hand he strongly opposed Cleveland when in 1895 he attacked England in his Venezuelan message. He was especially outspoken against Tammany Hall and its system, and was subjected in consequence to virulent attacks and constant libel actions by the leaders of Tammany. In December 1894, after the temporary defeat of Tammany, largely or mainly owing to his efforts, he was presented with a loving cup 'in grateful recognition of fearless and unflinching service to the city of New York' (*Life and Letters*, ii. 181). He was opposed to the Spanish-American war, as well as to the South African war of Great Britain, and to the American annexation of Hawaii and the Philippines. He was also opposed, on economic grounds, to high tariffs, to the silver policy, and to bimetallism.

In 1870 he declined an offer of the professorship of history at Harvard University. In 1875 he removed to Cambridge, Massachusetts, but went back to New York in 1877. In 1875 he became a member of a

commission appointed to devise a 'Plan for the government of cities in the State of New York,' which reported to the New York Legislature in 1877. In 1895 he was made an unpaid civil service commissioner. In 1889 he paid a visit to England, after an interval of twenty-seven years. Thereafter he kept in close touch with men and events in the United Kingdom, among the closest of his English friends being Mr. James Bryce and Professor A. V. Dicey. He was, like his father before him, a lifelong advocate of home rule for Ireland, and contributed two articles to the liberal 'Handbook of Home Rule' (1887) edited by Mr. Bryce. As home ruler, free trader, opponent of war and annexation, and advocate of honest and economical administration, he was in line with the advanced section of the liberal party in the United Kingdom, before socialism had come to the front, and he criticised with some bitterness the leaders on the tory side. His views are fully expounded in his 'Reflections and Comments' (New York, 1895); 'Problems of Modern Democracy' (New York, 1896); and 'Unforeseen Tendencies of Democracy' (Boston, 1898). In 1897 he was made, to his great pleasure, an hon. D.C.L. of Oxford. After serious illness in 1900 he sailed for England in May 1901, spent some time in the New Forest, died at Greenway on the Dart in Devonshire on 21 May 1902, and was buried in Hazelbeach churchyard in Northamptonshire. An inscription on his grave by Mr. Bryce describes him as 'Publicist, economist and moralist.' In his memory the 'Godkin Lectures,' on 'The Essentials of Free Government and the Duties of the Citizen,' were established at Harvard University.

Godkin was married twice: (1) in 1859, at Newhaven, Connecticut, to Frances Elizabeth (*d.* 1875), elder daughter of Samuel Edmund Foote, by whom he had three children, one of whom, a son, survived him; (2) in 1884 to Katherine, daughter of Abraham Sands. Both wives were of American birth.

Godkin was a man of marked talent. He combined with wide reading and knowledge of many countries a personal attraction which made him the 'faithful friend and charming companion' of the leaders of thought in both England and America. He gave his life's work to his adopted country, the United States, but he was never completely assimilated. Matthew Arnold considered him 'a typical specimen of the Irishman of culture' (*Life and Letters*, ii. 1). His Irish blood gave him singular frankness

and buoyancy of spirits, especially in his earlier years, together with a trenchant style, powers of sarcasm and humour, and keen sympathies. His political views, which were deemed by many Englishmen the 'soundest' and 'sanest' in America, were those of a philosophic radical, though in later and more pessimistic years 'a disillusioned radical' (*Life and Letters*, ii. 238). He belonged to the school, without sharing the pedantry, of the early Benthamites, and he remained to the end of his life an advanced liberal in the sense which would have been given to that term between 1848 and 1870. He was not so much a man of original ideas as original in the strength and constancy with which he held by his principles and beliefs. By the mere force of his convictions and the ability with which he illustrated them he evoked a fervent enthusiasm for the commonplaces of good government and honest administration.

C. P. L.

GODWIN, GEORGE NELSON (1846-1907), Hampshire antiquary, only surviving son of Edward Godwin, a draper of Winchester, and afterwards a farmer of Melksham, by his wife Mary Tugwell, was born at Winchester on 4 July 1846. With an only sister, Sarah Louisa, he was brought up at Winchester, and was educated there at a private school. After engaging in private tuition, and qualifying in 1868 at the London College of Divinity, he was ordained deacon in 1869 and priest in 1870. He subsequently proceeded to Trinity College, Dublin, where he gained the Cluff memorial prize in 1882, and graduated B.A. in 1884 and B.D. in 1887. After filling curacies at Heanor (1869-72), East Bergholt (1873-6), and Capel St. Mary (1876-7), he was appointed chaplain of the forces in 1877, and continued in the army until 1890, serving at Malta, Cairo, Dublin, the Curragh, and Netley Hospital. From 1890 to 1893 he was vicar of East Boldre, and after holding other parochial appointments, became curate in charge of Stokesby, Great Yarmouth, in 1904.

Godwin was best known as an antiquary and local historian. He was one of the founders of the Hampshire Field Club and Archæological Society, and was a leading authority on the history of Hampshire

and neighbouring counties. His 'Civil War in Hampshire, 1642-45, and the Story of Basing House' (1882; new edit. 1904) embodies exhaustive researches into original authorities. He also wrote, amongst other topographical works, 'The Green Lanes of Hampshire, Surrey, and Sussex' (1882), and (with H. M. Gilbert) 'Bibliotheca Hantoniensis' (1891). He was editor of 'Hampshire Notes and Queries' 1896-9. His special knowledge was freely placed at the service of antiquarian and scientific societies. He died suddenly of heart failure while staying for the night at an inn in Little Walsingham on 10 Jan. 1907, and was buried in the churchyard of that village. Godwin was twice married: (1) on 13 Feb. 1870 to Mary Godwin (of a different family), by whom he had one daughter; (2) on 8 Aug. 1899 to Rose Elizabeth, daughter of George Jay of Camden Town, who survived him without issue.

In addition to the works mentioned, Godwin published: 1. 'A Guide to the Maltese Islands,' 1880. 2. 'Materials for English Church History, 1625-49,' 1895. He left unpublished 'French Prisoners of War at Rye and Winchester.'

[Hampshire Observer and Hampshire Chronicle, 19 Jan. 1907; Crockford's Clerical Directory; Brit. Mus. Cat.; private information.]

C. W.

GOLDSCHMIDT, OTTO (1829-1907), pianist and composer, was born of Jewish parents on 21 Aug. 1829 in the 'free city' of Hamburg, where Mendelssohn was born in 1809. His grandfather and father were Hamburg merchants, with an English connection, their firm having branches in Glasgow and Manchester. In early youth Otto was given pianoforte lessons by Jakob Schmitt (younger brother of Aloys), and harmony lessons by Fried. W. Grund. Mendelssohn opened the Leipzig Conservatorium on 3 April 1843, and Goldschmidt entered it in the following autumn. He studied there assiduously for three years, attending Mendelssohn's select class for pianoforte phrasing, and learning pianoforte technique from Plaidy and counterpoint from Hauptmann. He came to know Joachim, while W. S. Rockstro [q. v.] was a fellow-student. Jenny Lind [q. v.] appeared at the Gewandhaus at Leipzig on 4 Dec. 1845. From 1846 to 1848 Goldschmidt taught and played in Hamburg. In 1848 he was sent to Paris to study under Chopin, but the revolution drove him to England before he could fulfil his

purpose. On 31 July 1848 he played in London at a concert given for charity by Jenny Lind (who was by this time abandoning the stage) in the concert-room of Her Majesty's Theatre; he also appeared in London on 27 March 1849 at Ella's Musical Union. In January 1850 he met Jenny Lind at Lübeck. In the same year she began a long American tour under Phineas T. Barnum. In May 1851, when her musical director, pianist, and accompanist, Benedict, was leaving for England, she sent for Goldschmidt to take his place. They were married at Boston according to the rites of the Episcopal Church on 5 Jan. 1852. Her age was then thirty-two, his twenty-three. From 1852 to 1855 they lived in Dresden, making frequent concert-tours. In 1856 they came to England, and shortly settled there. In 1859 Goldschmidt became naturalised in this country. In 1862 he began to edit with Sir William Sterndale Bennett [q. v.] the 'Chorale Book for England,' in which German stock-tunes were set to hymn-translations already made by Catherine Winkworth in her 'Lyra Germanica.' In 1863 and 1866 Goldschmidt conducted the choral portions of the festival when Jenny Lind appeared at Düsseldorf at the Whitsuntide Niederrheinisches Musikfest, where she had already sung in 1846 and 1855. In 1863 he joined the Royal Academy of Music as pianoforte professor, under Charles Lucas as principal. In 1866 Sterndale Bennett became principal, and Goldschmidt was from 1866 to 1868 vice-principal. From 1864 to 1869 he advised Dr. Temple about music at Rugby. In 1867 Jenny Lind sang at Hereford musical festival, and Goldschmidt produced there his 'Ruth, a Biblical Idyll'; this was heard again in 1869 at Exeter Hall, and in Düsseldorf on 20 Jan. 1870, when Jenny Lind made her last public appearance except for charity. In 1876 A. D. Coleridge, an enthusiastic amateur, got together an amateur choir for the first performance in England of Bach's B minor Mass (26 April 1876, St. James's Hall). The 'Bach Choir' thereupon came into being and Goldschmidt was appointed conductor. He held that office till 1885. His wife helped in the chorus. He edited many masterpieces for the collection called the 'Bach Choir Magazine.' In 1876 he was elected a member of the Athenæum Club under Rule II. His wife died on 2 Nov. 1887. In February 1891 he published a valuable collection of her cadenzas and fioriture. He died on 24 Feb. 1907 at his house, 1 Moreton Gardens, South Kensington, and

was buried by his wife's side at Wynds Point on the Malvern Hills. He left two sons and a daughter.

Although Goldschmidt's opportunities came through his wife's celebrity, he used them wisely, and his German thoroughness, his sincerity of disposition, and his courtly manner made him a welcome factor in numberless musical activities. He was a knight of the Swedish order of the Vasa (1876), and was given the Swedish gold medal 'litteris et artibus,' with the commander ribbon of the polar star (1893). He was a chief officer or honorary member of the majority of London musical institutions. He owned the original autograph of Beethoven's 1802 letter to his brothers, called 'Beethoven's Will,' and presented this in 1888 to the Hamburg Stadtbibliothek. As a performer he was a surviving link with the Mendelssohn period, and his direct testimony to Mendelssohn's style as a pianist (clear and expressive, but almost pedalless) was important. He said that Mendelssohn stood always throughout his two-hour class. As a composer, Goldschmidt belonged to Mendelssohn's era; besides 'Ruth,' his published works were, 'Music, an Ode' (Leeds, 1898), a pianoforte concerto, a pianoforte trio, and various studies and pieces for the pianoforte. His publications are numbered down to op. 27.

[The Times, 26 Feb., 1 March, 13 May 1907 (will); Holland and Rockstro's Life of Jenny Lind; Musical Herald, May 1896; private information.] C. M.-N.

GOLDSMID, SIR FREDERICK JOHN (1818-1908), major-general, born on 19 May 1818 at Milan, was only son of Lionel Prager Goldsmid, an officer of the 19th dragoon guards, and grandson of Benjamin Goldsmid [q. v.], Jewish financier. He early showed an aptitude for foreign languages, and after education at an English school in Paris he passed through King's College school to King's College, London. In January 1839 he received a commission in the East India Company's army, and in April joined the 37th Madras native infantry. In August 1840 his regiment was ordered to China, and there Goldsmid served as adjutant in the actions at Canton and along the coast, for which he received the Chinese war medal. In the course of the campaign he first turned his attention to the study of Oriental languages, for which he showed a marked faculty. Returning to India in 1845 he qualified as interpreter in Hindustani; he was appointed interpreter

for Persian in 1849 and for Arabic in 1851. In the last year he obtained his company, and was promoted assistant-adjutant-general of the Nagpur subsidiary field force. Shortly after, thanks to the influence of General John Jacob [q. v.], Goldsmid entered the civil service, first as deputy collector and then as assistant-commissioner for the settlement of alienated lands in the newly acquired province of Sind.

On his return to England in 1855 he volunteered for active service in the Crimea, and was attached to the Turkish contingent at Kertch under General Sir Robert Vivian [q. v.]. Here he soon acquired a knowledge of Turkish. In recognition of his services he received the Turkish war medal, the order of the Medjidie (4th class), and a brevet majority in the army. He returned to India in 1856, and took up judicial work at Shikarpur. Subsequently he served on the staff of Sir Bartle Frere [q. v.], then chief commissioner of Sind, and during the Mutiny he distinguished himself in various dangerous missions.

In 1861 Goldsmid first became connected with the great scheme for linking up East and West by telegraph. In that year he arranged with the chiefs of Baluchistan and Makran for telegraph construction along the coast of Gwadar; his success in the negotiations was acknowledged by the Bombay government. In 1863 he was promoted brevet lieutenant-colonel. In 1864 he was selected to superintend the gigantic task of carrying the wires from Europe across Persia and Baluchistan to India. He accompanied Col. Patrick Stewart when laying the Persian Gulf cable, and later proceeded by way of Bagdad and Mosul to Constantinople. There, after protracted negotiations, he carried through the Indo-Ottoman telegraph treaty. In 1865, on the death of Col. Patrick Stewart, he was appointed director-general of the Indo-European telegraph, and at once started for Teheran to assist in negotiating a telegraph treaty with the Persian government. For his services in securing the Anglo-Persian convention he was made a C.B. in 1866, and received the thanks of the government of India. From Teheran he travelled overland to India and back again to Europe to settle the terms of admission of the Indo-European telegraph to the European system. Subsequently Goldsmid personally superintended the construction of the telegraph line across the whole extent of Persia. Of that arduous work he gave an interesting and characteristically

modest account in 'Travel and Telegraph' (1874).

After resigning the directorship of the Indo-European telegraph in 1870, Goldsmid was appointed in the following year a commissioner for the delimitation of the boundary between Persia and Baluchistan, and his award was eventually accepted by the Shah's government. In the same year Goldsmid was entrusted with the even more delicate task of investigating the claims of Persia and Afghanistan to the province of Seistan. A full account of the proceedings of the commission is contained in the voluminous collection of papers, entitled 'Eastern Persia' (1870-72), which was edited with an introduction by Goldsmid, and published under the authority of the India office in two volumes in 1876. It was a singular testimony to Goldsmid's tact and ability that despite the determined procrastination of the Persian commissioners a temporary settlement of this thorny question was reached, but not till the British commissioners had twice visited the disputed territory. The arbitral award was published at Teheran on 19 Aug. 1872; Persia was confirmed in the possession of Seistan, while a section of the Helmund was left in Afghan territory. The strict impartiality of the award satisfied neither party, but it had the desired effect of keeping the peace. For his services Goldsmid was created a K.C.S.I. in 1871, and received the thanks of the government of India. He retired from the army on 1 Jan. 1875 with a special pension and the rank of major-general.

Goldsmid's public career was not ended. In 1877 he was appointed British representative on the international commission to inquire into Indian immigration in Réunion. A joint report was issued in February 1878, and a separate report in the following April. In 1880 Goldsmid accepted the post of controller of crown lands (Daira Sanieh) in Egypt, and witnessed the outbreak there in September 1881. In June 1882 he was despatched by Lord Granville [q. v.] on a diplomatic mission to Constantinople; and on his return to Alexandria he rendered useful service in the campaign of 1882 by organising the intelligence department, for which he received the thanks of Viscount Wolsley and the war office. On his resigning the control of the crown lands on 1 May 1883 the Khedive bestowed on him the Osmanie decoration of the second class and the bronze star.

On leaving Egypt, Goldsmid accepted

from Leopold II, King of the Belgians, the post of 'administrateur délégué de l'association internationale' in the Congo, and he undertook the organisation of the administrative system in the new state. But soon after reaching the Congo Goldsmid's health broke down, and he returned to England on 31 Dec. 1883. Thenceforth he resided mainly in London, devoting himself to literary work connected with his Oriental studies, and taking an active interest in various religious and philanthropic institutions. He died at Brook Green, Hammersmith, on 12 Jan. 1908, and was buried at Hollingbourne, Kent. On 2 Jan. 1849 he married Mary (*d.* 1900), eldest daughter of Lieut.-general George Mackenzie Stuart, by whom he had issue two sons and four daughters.

In addition to the works already mentioned, and to many pamphlets and reviews, Goldsmid published 'Sáswi and Punhú,' a poem in the original Sindi, with a metrical translation (1863), and an authoritative life of 'Sir James Outram' (2 vols. 1880; 2nd edit. 1881). His knowledge of Eastern languages placed him in the forefront of Oriental critics. He joined the Royal Asiatic Society in 1864, and was an ordinary member of the council for brief periods between 1875 and 1889. He held the post of secretary from November 1885 to June 1887, and that of vice-president from 1890 to 1905. He was also a vice-president of the Royal Geographical Society, and presided over the geographical section of the British Association at the Birmingham meeting of 1886.

Holdich; Sir Frederick Goldsmid, Travel and Telegraph, 1874; Sir Frederick Maurice, Campaign of 1882 in Egypt, 1908, p. 21; L. Fraser, India under Lord Curzon and After, 1911, p. 117.]

G. S. W.

GOODALL, FREDERICK (1822-1904), artist, born in St. John's Wood, London, on 17 Sept. 1822, was son of Edward Goodall [q. v.], the line engraver, by his wife Alice Le Petit, granddaughter of a Frenchman who was a printer of coloured engravings. Goodall's two brothers, Edward Goodall and Walter Goodall [q. v.], also made a reputation as artists.

Frederick, who as a child was fascinated by Turner's drawings, was educated at the Wellington Road Academy, a private school which Charles Dickens had attended. From thirteen to twenty-one he was a pupil

of his father, who taught him oil painting; he also joined at sixteen a life class in St. Martin's Lane, where Etty had received instruction. In 1838 he went on a sketching tour through Normandy, and soon afterwards extended his travels to Brittany and Ireland.

As early as 1836 Goodall exhibited water-colour paintings of Willesden Church and Lambeth Palace at the Society of Arts; the second picture was awarded the Isis medal of the society. At the same place he exhibited in 1838 an oil painting, 'Finding the Dead Body of a Miner in the Thames Tunnel,' which was awarded the large silver medal of the society. In 1839, when only seventeen, he showed at the Royal Academy his 'French Soldiers in a Cabaret.' Thenceforth he was a regular exhibitor at the Academy until 1902, only omitting the three years 1858, 1871, and 1874. Two of his early works, 'The Tired Soldier' (1842) and 'The Village Holiday' (1847), are now in the Vernon collection at the Tate Gallery and show the influence of Wilkie, a good copy of whose 'Penny Wedding' belonged to Goodall's father. A picture, 'Raising the Maypole,' at the Academy in 1851, proved very popular, and an engraving widely extended its vogue. In 1852 Goodall was elected A.R.A. His 'Cranmer at the Traitor's Gate' (1856) was engraved in line by his father. His promise attracted the notice of Samuel Rogers and Sir Robert Peel, and he early enjoyed the patronage of picture buyers. In 1857 Goodall visited Venice and Chioggia.

The winter of 1858 and the spring of 1859 were spent in Egypt, which Goodall revisited in 1870. From the date of his first Egyptian sojourn to the end of his career Goodall largely devoted himself to Eastern subjects, and thus vastly extended his popularity. The first of his Eastern paintings was 'Early Morning in the Wilderness of Shur' (Royal Academy in 1860). There followed 'The First Born' (1861) and 'The Return of a Pilgrim from Mecca' (1862). Elected R.A. in 1863, Goodall exhibited in 1864, as his diploma work, 'The Nubian Slave.' Among paintings of like theme which followed were: 'The Rising of the Nile' (1865), 'Hagar and Ishmael' (1866), 'Rebekah at the Well' (1867), 'Jochebed' (1870), 'Head of the House at Prayer' (1872), 'Subsiding of the Nile' (1873), 'Rachel and her Flock' (1875), 'The Return from Mecca' (1881), 'The Flight into Egypt' (1884), 'Gordon's Last Messenger' (1885), and 'By the Sea of Galilee' (1888), now at the People's Palace, Mile End. In 1889 he painted English

landscapes such as 'A Distant View of Harrow on the Hill' (1889) and 'Beachy Head' (1896). Meanwhile he pursued his Eastern themes in 'Sheep-Shearing in Egypt' (1892) and 'Laban's Pasture' (1895). In 1897 'The Ploughman and the Shepherdess' was acquired for the Tate Gallery by public subscription. Goodall from time to time in later life painted portraits. Among his sitters were Sir Moses Montefiore (1890), William Beatty-Kingston, his wife (1890), his daughter, Rica (1894), and (Sir) Anderson Critchett (1898). Goodall's portrait by himself was exhibited at the Royal Academy in 1881.

In 1876 Goodall purchased the estate of Grims Dyke, Harrow, and on it his friend Norman Shaw built an imposing residence. But after some twelve years Goodall returned to London, and his Harrow house passed in 1890 to Sir William Schwenck Gilbert [q. v. Suppl. II]. At the end of his life he published a volume of gossiping 'Reminiscences' (1902). He died on 29 July 1904 at 62 Avenue Road, St. John's Wood, where he had resided since his removal from Harrow, and was buried in Highgate cemetery.

He married in 1872 Alice, daughter of John Tarry, a lawyer, and by her had a large family, including Frederick Trevelyan Goodall [q. v.] and Howard Goodall [q. v.], both artists, who predeceased him.

Goodall fully satisfied the public taste, which liked a story told in paint clearly, correct in detail, and with a certain simple kind of sentiment. His painting throughout his career showed much technical ability but very little inspiration.

[Goodall's *Reminiscences*, 1902, with list of pictures and drawings; *Graves's Royal Acad. Exhibitors*, 1905-6; *The Times*, 31 July 1904.]
F. W. G.-N.

GOODMAN, MRS. JULIA, whose maiden name was SALAMAN (1812-1906), portrait painter, born in London on 9 Nov. 1812, was eldest of the family of twelve sons and two daughters of Simeon Kensington Salaman by his wife Alice Cowen. Charles Kensington Salaman [q. v. Suppl. II] was her eldest brother. After attending a private school in Islington, Julia developed a taste for art, receiving lessons from Robert Falkner, a pupil of Sir Joshua Reynolds. At first she successfully copied old masters but soon devoted herself to portrait painting, and obtained many commissions. In 1838 she exhibited for the first time at the Royal Academy, her last picture appearing there in 1901. Among her sitters were many

persons prominent in society, including the Earl of Westmorland, Sir John Erichsen, Sir Francis Goldsmid, Sir G. A. Macfarren, Prof. David Marks [q. v. Suppl. II], and Gilbert Abbott à Beckett. Her portraits in oils or pastels numbered more than a thousand. She died at Brighton on 30 Dec. 1906, and was buried in the Golder's Green cemetery of the West London Synagogue of British Jews.

In 1836 she married Louis Goodman, a City merchant, who died in 1876. Among her seven children were Edward John Goodman, at one time sub-editor of the 'Daily Telegraph,' and Walter Goodman, a portrait painter, who painted a good portrait of his mother.

[*Jewish Chronicle*, 4 Jan. 1907.] M. E.

GORDON, JAMES FREDERICK SKINNER (1821-1904), Scottish antiquary, born at Keith, Banffshire, in 1821, claimed descent from the Gordons of Glenbucket, in Strathdon. Educated at Keith School and then at Madras College, St. Andrews, he gained, when fifteen years of age, the Grant bursary at St. Andrews University, and graduated there with distinction in 1840, proceeding M.A. in 1842. Appointed organising master in the (episcopal) national schools at Edinburgh, he was ordained deacon in the Scottish Episcopal Church in 1843 and priest the next year. After a first curacy to the bishop of Moray (Dr. Low) at Pittenweem, Fifeshire, he removed in 1843 to Forres as curate to Alexander Ewing, afterwards bishop of Argyll and the Isles at Forres (1843-4). His experiences at Pittenweem are narrated in his 'Scotichronicon.' In 1844 he was translated to the charge of St. Andrew's Episcopal Church, Glasgow, the oldest post-Reformation church in Scotland, and there he remained till 1890, when he retired owing to advancing years. At Glasgow he devoted much energy to the development of episcopacy, and raised funds wherewith to remodel and endow his church. He was a pioneer in effecting the removal of ruinous tenements and slums in the neighbourhood, thus initiating the movement which resulted in the Glasgow Improvement Act of 1866. His 'High Church' tendencies sometimes led to friction in his own denomination; but his earnest philanthropic work brought him general admiration.

Gordon led at the same time a strenuous literary life, closely studying the history of the catholic and the episcopal churches in Scotland, and the antiquities of Glasgow.

His chief publication was 'The Ecclesiastical Chronicle for Scotland' (4 vols. Glasgow, 1867), an elaborate and erudite work, which displayed much research; the first two volumes, entitled 'Scotichronicon,' contain a sketch of the pre-Reformation church, and an extended version of Keith's 'Catalogue of Scottish Bishops'; the third and fourth volumes, entitled 'Monasticon,' give the history of the Scottish monasteries, and biographies of the Roman catholic bishops of the post-Reformation mission. Gordon also published (all at Glasgow): 1. 'Glasghu Facies' (a history of Glasgow, written in a lively style), 1872. 2. 'The Book of the Chronicles of Keith, Grange, Ruthven, Cairney, and Botriphnie,' 1880. 3. New edition of Lachlan Shaw's 'History of the Province of Moray,' 1882. 4. 'Iona, a Description of the Island,' 1885. 5. 'Vade Mecum to and through the Cathedral of St. Kentigern of Glasgow,' 1894. Gordon also contributed an article on the 'Scottish Episcopal Church' to the 'Cyclopædia of Religious Denominations' (London, 1853), and wrote on 'Meteorology' to several encyclopædias and journals. In 1857 he received the degree of D.D. from Hobart College, U.S.A. He was an enthusiastic Freemason, having been initiated as a student at St. Andrews in 1841, and he was the oldest member of the craft at his death. After resigning the charge of St. Andrew's Church in 1890 he lived in retirement at Beith, Ayrshire, and died there on 23 Jan. 1904. He was interred with masonic honours in Beith cemetery.

[Glasgow Herald, 25 Jan. 1904; Scottish Guardian, 5 Feb. 1904; Clergy List, 1904; private information.] A. H. M.

GORDON, SIR JOHN JAMES HOOD (1832-1908), general, born on 12 Jan. 1832 at Aberdeen, was twin son of Captain William Gordon (1788-1834), 2nd Queen's royal regiment. The father served through the Peninsular war, and married at Santarem in 1818 Marianna Carlotta Loi, daughter of Luiz Gonçalves de Mello, a government official in the province of Estremadura. His twin brother is General Sir Thomas Edward Gordon, K.C.B. The twins were the youngest children in a family of four sons and a daughter. John was educated at Dalmeny and at the Scottish Naval and Military Academy, Edinburgh, and with his twin brother entered the army, joining the 29th foot on 21 Aug. 1849, and becoming lieutenant on 9 Jan. 1854. He served in the Indian

Mutiny campaign of 1857-8 with the Jaunpur field force, attached to 97th regiment. He was at the actions of Nasrutpur, Chanda (31 Oct.), Ameerpur, and Sultanpur, at the siege and capture of Lucknow, and storming of the Kaiser Bagh. The medal with clasp was awarded him. From September 1858 to April 1859 he acted as field-adjutant to Colonel (Sir) William Turner, commanding the troops on the Grand Trunk Road, near Benares, and the field force during operations in Shahabad. He was engaged in the final attack on Jugdespur, and in the action of Nowadi, and the subsequent pursuit. Mentioned in despatches, he was promoted captain on 2 Dec. 1859, and was made brevet-major on 30 Nov. 1860 (*Lond. Gaz.* 22 Feb. 1859). Gordon performed regimental duty in India for the next eighteen years; he was promoted major in 1860 and exchanged into the 46th regiment. Subsequently he was given the command of the 29th Punjab infantry, becoming lieutenant-colonel on 21 Aug. 1875, and brevet colonel on 23 Feb. 1877. He served with the Jowaki Afridi expedition in 1877-8, and was thrice mentioned in despatches, receiving the medal and clasp.

In the Afghan war of 1878-9 he played a prominent part, commanding the 29th Punjab infantry, which was attached to the Kurram Valley column. He led a reconnaissance in force at Habib Kila on 28 Nov. 1878, and discovered that the Afghans, so far from abandoning their guns as had been reported, had taken up a strong position on the top of the pass. Gordon's report made Sir Frederick (afterwards Lord) Roberts abandon all idea of a frontal attack on the Peiwar Kotal (*LORD ROBERTS, Forty-one Years in India*, 1898, p. 354). Gordon's regiment formed the advance guard in the turning movement on the Spingawi Kotal on 2 Dec. During the night march some Pathans of the 29th Punjab infantry fired signal shots to warn the enemy of the British advance. The regiment was immediately displaced from its leading position. An inquiry instituted by Gordon resulted in the discovery of some of the culprits. Subsequently he was engaged in the Zaimukht expedition, including the assault of Zava, where he commanded the right column of General Tytler's force. For his services in the Afghan war he received the medal with clasp and was made C.B. in 1879. In expeditions to Karmana and against the Malikshahi Waziris in 1880 he was brigadier-general in command of the troops (*Lond. Gaz.* 4 Feb. and 7 Nov. 1879). He also

served in the Mahsud Waziris expedition in 1881, when he commanded the second column; he was mentioned in despatches and was thanked by the government of India. From 1882 to 1887 he commanded a brigade of the Bengal army, and was made major-general on 20 Dec. 1886. In the Burmese expedition he commanded his brigade (1886-7), and he conducted the operations which succeeded in opening up the country between Manipur and Kendat. Once more he received the thanks of the government of India (*Lond. Gaz.* 2 Sept. 1887). Returning to England, he was made assistant military secretary at headquarters in 1890, and retained the office till 1896. He was promoted lieutenant-general in 1891 and general in 1894. On 1 Jan. 1897 he was nominated member of the council of India, and held the post for ten years. He was advanced to K.C.B. in 1898, and to G.C.B. in 1908, and became colonel of 29th Punjab infantry in 1904. He resided in his last years at 35 Onslow Square, London, S.W. He died at Edinburgh on 2 Nov. 1908, and was buried in the Dean cemetery there. He married in 1871 Ella (d. 1903), daughter of Edward Strathearn, Lord Gordon of Drumearn [q. v.], lord of appeal in ordinary, and had issue two surviving sons, both captains in the army.

In 1904 Gordon published a history of the Sikhs, illustrated by himself.

GORDON-LENNOX, CHARLES HENRY, sixth DUKE OF RICHMOND and first DUKE OF GORDON (1818-1903), lord president of the council, born on 27 Feb. 1818 at Richmond house, Whitehall (replaced by Richmond terrace after 1819; WHEATLEY and CUNNINGHAM's *London*, iii. 162), was the eldest son of Charles Gordon-Lennox, fifth duke of Richmond [q. v.]. Known until his succession to the dukedom as the Earl of March, he was educated at Westminster School and Christ Church, Oxford, graduating B.A. in 1839. He entered as a cornet the royal regiment of horse guards, retiring as captain in 1844,

but never saw active service. March was an aide-de-camp to the Duke of Wellington (1842-52), as was his father before him, and to Lord Hill, the duke's successor as commander-in-chief (1852-4). Meanwhile he was returned for West Sussex in the conservative interest at the general election of 1841, and held the seat until the death of his father on 21 Oct. 1860. He spoke with some frequency, and became a recognised authority on agricultural questions. In March 1859 he was appointed president of the poor law board in Lord Derby's second ministry, and was sworn of the privy council; but his tenure of office was brief, as the ministry fell in June. After the return of the conservatives to office in July 1866 Richmond was made knight of the garter on 15 Jan. 1867. He followed his leaders on parliamentary reform, and at the reconstruction of the government after the resignations of Lords Cranborne and Carnarvon and General Jonathan Peel [q. v.], he became president of the board of trade on 6 March 1867. In 1869, when the liberals had returned to office, he was 'sorely against opposing the second reading (of the Irish church bill), but went with his party' (GATHORNE HARDY's *First Earl of Cranbrook*, i. 272). Next year he accepted the leadership of the conservative party in the House of Lords, which had been in abeyance since the retirement of Derby from public life in 1868 [see STANLEY, EDWARD GEORGE GEOFFREY SMITH]. The relations between Richmond and Disraeli were at first not altogether cordial. In parliament, though he never attempted high oratory, Richmond proved a vigorous upholder of conservative principles. In 1872, while permitting the ballot bill to pass its second reading without a division, he carried an amendment making secret voting optional by eighty-three votes to sixty-seven. On a subsequent amendment he retorted on Granville with so much warmth that the clerk had to read the standing order against 'sharp and taxing speeches' (FITZMAURICE's *Granville*, ii. 108, 110; *Hansard*, ccxi., col. 1841). The commons having rejected his amendment, he pressed it to a division, and was defeated by 157 votes to 138.

On the formation of Disraeli's government in February 1874, Richmond became lord president of the council, though he would have preferred the secretaryship for war. He accepted his disappointment 'like a true man, professing himself ready to act for the best of the party' (*Gathorne-Hardy*, i. 335). On 18 May he introduced in a

conciliatory speech the Scotch church patronage bill, substituting appointment by election for lay patronage in the Church of Scotland, and the measure became law. He also carried the Endowed Schools Act amendment bill, which had been hotly debated in the commons. Richmond's agricultural holdings bill of the following session, introduced on 12 March 1875, established presumption in favour of the tenant with compensation for various classes of improvements; it passed the lords without a division. During the debates he expressed himself strongly against any interference with liberty of contract between landlord and tenant (*Hansard*, cccxii. col. 963). In 1876 he took charge of the elementary schools bill, a measure supplementary to the Act of 1870, and designed to enforce attendance; but his burials bill of 1877 was withdrawn after an amendment allowing nonconformist services in churchyards had been carried against him in the lords by 127 votes to 111. On 13 Jan. 1876 Richmond had been created Duke of Gordon and Earl of Kinrara in the peerage of the United Kingdom; the title of Duke of Gordon in the peerage of Scotland had expired in 1836 with his great-uncle, George, fifth Duke of Gordon [q. v.]. In August 1876, on Disraeli's promotion to the peerage, Richmond ceased to be leader in the lords. His efforts for the agricultural interest continued; in 1878, on the outbreak of cattle disease, he carried the contagious diseases (animals) bill, which dealt stringently with infection in the homesteads and made slaughter of imported beasts compulsory, except when the privy council was satisfied that the laws of the exporting country afforded reasonable security against disease. The measure did not go as far as Richmond wished, but he administered it drastically, reorganising the veterinary department of the privy council, which was afterwards replaced by the board of agriculture. The farming industry being grievously depressed, a royal commission on agriculture was appointed (4 Aug. 1879), and Richmond accepted the chairmanship. Admirably suited for the position, he conducted a wide inquiry lasting until July 1882, when his colleagues presented him with a token of esteem in silver. A preliminary report, dated 14 July 1881, dealt with Irish land tenure and cautiously admitted defects in the Ulster custom and 'Griffith's valuation.' The final report, signed unanimously, though with supplementary memoranda expressing dissidence on various points, recommended reforms connected

with local administration, tithe rent-charge, the law of distress, and compulsory compensation for unexhausted improvements (*Preliminary Report, Parl. Papers*, 1881 [c. 2778], xv. 1; *Final Report, Parl. Papers*, 1882 [c. 3309], xiv. 1). Its chief outcomes were the Agricultural Holdings Act, passed by the liberal government in 1883, and the creation of the board of agriculture.

After the death of Lord Beaconsfield (19 April 1881), Richmond in a speech of 'excellent taste and judgment' proposed Salisbury for the leadership of the opposition in the lords, though privately 'giving indications that he would fain have kept it' (*Gathorne-Hardy*, ii. 163). The health of the duchess decided him not to advance his claims. He continued to take an active part in debate, while acting occasionally as a drag on the impetuosity of his new leader. He spoke incisively on the agricultural holdings bill of 1883, which went too far for his taste, and on the fall of Khartoum. Of his amendments, one making general the condition that in estimating compensation no account should be taken of the improved value which was due to the inherent qualities in the soil was accepted, after some demur, by the government. He declined, however, to do anything which, by risking the success of the bill, would be 'repugnant to the feelings of the whole of the tenant farmers of the country' (*Hansard*, cclxxxiii. col. 1828). During the crisis of 1884, produced by the refusal of the peers to pass a franchise bill unaccompanied by a redistribution of seats, Richmond's influence was on the side of peace. Summoned by Queen Victoria, who held him in high regard, he visited Balmoral on 13 Sept., and though Gladstone characterised what passed in the direction of compromise as 'waste of breath,' the ensuing correspondence with Sir Henry Ponsonby [q. v.] 'set up a salutary ferment' (*MORLEY'S Gladstone*, iii. 130, 131). The duke opened communications with Lord Granville, making clear that the opposition was acting in good faith (*Gathorne-Hardy*, ii. 203). Northcote declared that the duke's action led 'to little more than a conference between the duke, Lord Salisbury, and Lord Cairns, and to a substantial agreement as to the course to be taken over the House of Lords' (*A. LANG'S Stafford Northcote, First Earl of Iddesleigh*, ii. 205); it is clear that his mediation was of value. Richmond's part was nearly played. In the short-lived conservative ministry of 1885-6 he acted as secretary for Scotland,

but when the second Salisbury government was formed in 1886 he 'went down to Scotland deliberately, and so put himself out of the way' (*Gathorne-Hardy*, ii. 254). Gradually ceasing to take part in public life, he died at Gordon castle after a short illness on 27 Sept. 1903, and was buried in the family vault in Chichester Cathedral.

Richmond, who was a conscientious and large-hearted man, by no means confined his public duties to politics. He was chancellor of the University of Aberdeen in 1861, receiving an hon. LL.D. in 1895; was appointed lord-lieutenant of the county of Banff in 1879, and ecclesiastical commissioner in 1885. In Sussex he succeeded his father as chairman of the county bench and was chairman of the West Sussex county council. He joined the Royal Agricultural Society in 1838, six months after its establishment, was member of the council from 1852 to 1857, and from 1866 to his death, was elected trustee in 1869, and was president both in 1868, when the show was held at Leicester, and in 1883, when it was held at York. At the general meeting of that year King Edward VII, then Prince of Wales, addressed him as 'the farmers' friend,' a title acknowledged by the duke to be the proudest he could bear. In 1894, when the show was held at Cambridge, he received the degree of hon. LL.D., having become hon. D.C.L. of Oxford in 1870. The duke was elected vice-president of the Smithfield Club in 1860, and was president in 1866 and 1875. He inherited and improved the famous flock of Southdown sheep at Goodwood and the herd of shorthorns at Gordon castle. He was a generous landlord; many of the crofters and small farmers on Speyside held on a merely nominal rent, and he built a concrete stone harbour for Port Gordon in 1878 at the cost of 15,000*l*.

Richmond was elected member of the Jockey Club in 1839, but took no active part in racing. Though the importance of the Goodwood meeting declined, owing to the rise of richer organisations elsewhere, he maintained its hospitality. The Tsar Alexander II and the Tsarina were his guests in 1873; the Crown Prince and Princess of Germany (afterwards the Emperor and Empress Frederick), King Edward VII, and Queen Alexandra visited him on many occasions. At his Scottish hunting seat, Glenfiddich Lodge, he shot grouse and stalked, and was a skilled salmon-fisher in the Gordon castle waters (*The Times*, 29 Sept. 1903, where a charge of undue exercise of proprietorial rights is refuted by

Henry Ffennell). He revived the old hunt at Charlton, but eventually sold the hounds.

The duke married on 28 Nov. 1843 Frances Harriett, daughter of Algernon Frederick Greville, Bath king-at-arms and private secretary to the Duke of Wellington; she died on 8 March 1887. Of his four sons, the eldest, Charles Henry (b. 27 Dec. 1845), is the seventh and present duke. Of his two daughters, Caroline was his constant companion in later life; Florence died in 1895.

The duke's portrait, painted in 1886 by Sir George Reid, was presented to him by his Scotch tenantry, and is now at Gordon castle. Another portrait by Sir Francis Grant, P.R.A., presented by the Sussex tenantry, is at Goodwood. A cartoon portrait appeared in 'Vanity Fair' in 1870.

[Article by Sir Ernest Clarke in *Journal Royal Agricultural Soc.*, vol. lxiv. 1903; *The Times*, 28 Sept. 1903; Paul, *Modern England*, 1905, iii. and iv.] L. C. S.

GORE, ALBERT AUGUSTUS (1840-1901), surgeon-general, born at Limerick in 1840, was eldest son of William Ringrose Gore, M.D., by his wife, Mary Jeners Wilson. He was educated in London, Paris, and Dublin, taking honours in science and medicine at Queen's College, Cork, in 1858, graduating M.D. at the Queen's University, Ireland, and being admitted L.R.C.S., Ireland, in 1860. He joined the army medical staff in 1861, and was appointed assistant surgeon to the 16th lancers. When the regimental service was reduced he volunteered for service in West Africa, and took part in the bombardment and destruction of the Timni town of Massougha, on the Sierra Leone river, on 10 Dec. 1861, the attack on Madoukia on 27 Dec., and the storming and capture of the stockaded fetish town of Rohea on 28 Dec. He was mentioned in general orders for his services and for bravery in bringing in a wounded officer. In 1868 he was recommended for promotion on account of services rendered during an epidemic of yellow fever at Sierra Leone. He acted as sanitary officer to the quartermaster-general's staff during the Ashanti war in 1873, and was severely wounded in the action of 3 Nov. near Dunquah, and again at Quarman on 17 Nov. After six years' service at various base hospitals and as principal medical officer of the army of occupation in Egypt (1882) Gore was appointed principal medical officer north-west district, Mhow division, central India, and afterwards in a similar position to the forces in India. In this capacity he was responsible for the medical arrangements of the Chitral and

North-West Frontier campaigns of 1896 and 1897. He retired from the army in 1898, was made C.B. in 1899, and was granted a distinguished service pension.

He died at his residence, Dodington Lodge, Whitchurch, Shropshire, on 10 March 1901. He married in 1866 Rebecca, daughter of John White, by whom he had two sons and two daughters.

Gore was author of: 1. 'A Medical History of our West African Campaigns,' 1876. 2. 'The Story of our Service under the Crown,' 1879.

[Brit. Med. Journal, 1901, i. 679; information from Dr. W. R. Gore, his son.]

D'A. P.

GORE, GEORGE (1826-1908), electro-chemist, born at Blackfriars, Bristol, on 22 Jan. 1826, was son of George Gore, a cooper in a small way of business in that city. He was educated at a small private school, from which he was removed at twelve to become an errand boy. At seventeen he was apprenticed to a cooper, following the trade for four years and supplementing his scanty education in his leisure hours. In 1851 he migrated to Birmingham, which was thenceforth his home.

He first found employment at Birmingham as timekeeper at the Soho works, next as a practitioner in medical galvanism; he subsequently became a chemist to a phosphorus factory, afterwards (1870-80) was lecturer in physics and chemistry in King Edward's School, and finally, from 1880 onwards, was head of the Institute of Scientific Research, Easy Row, Birmingham, which Gore conducted privately, and where he resided for the remainder of his life.

Gore possessed an intuition for research, and passed triumphantly from one field of physical inquiry to another. Between 1853 and 1865 he published in the 'Philosophical Magazine,' 'Pharmaceutical Journal,' 'Journal of the Chemical Society,' and elsewhere thirty papers embodying researches in chemistry and electro-metallurgy. Three dealing with the properties of electro-deposited antimony were published in the 'Philosophical Transactions of the Royal Society.' Other important researches related to the properties of liquid carbonic acid and hydrofluoric acid. In 1865 he was elected F.R.S. (with the support, among others, of Faraday, Tyndall, and Joule) on the ground of being the discoverer of amorphous antimony and electrolytic sounds, and for researches in electro-chemistry.

Gore's discoveries in electro-metallurgy gave him a high reputation in Birmingham, where manufacturers eagerly availed themselves of new methods which he suggested for improving the art of electroplating. He was author of three valuable technical treatises: 'The Art of Electro-metallurgy' (1877; 5th edit. 1891); 'The Art of Scientific Discovery' (1878); 'The Electrolytic Separation and Refining of Metals' (1890). To wider fields of speculation Gore contributed 'The Scientific Basis of National Progress' (1882) and 'The Scientific Basis of Morality' (1899), where he gave expression to strong materialistic views. The University of Edinburgh made him hon. LL.D. in 1877, and in 1891 he was allotted a civil list pension of 150*l*. Of frugal habits, apparently denoting restricted means, he secretly amassed a moderate competence. He died at Birmingham on 20 Dec. 1908, and was buried there at Warstone Lane cemetery. He married in 1849 Hannah, daughter of Thomas Owen, baptist minister, and had issue one son and one daughter. His wife predeceased him in 1907. By his will he directed that his residuary estate (about 5000*l*.) should be divided equally between the Royal Society of London and the Royal Institution of Great Britain, to be applied in 'assisting original scientific discovery.' In view of the public disposal of his property, his daughter, Mrs. Alice Augusta Gore Fysh, was granted in 1911 a civil list pension of 50*l*.

[Roy. Soc. Proc. vol. lxxxiv. A.; Roy. Soc. Catal. Sci. Papers; Nature, vol. lxxxix.; The Times, 24 Dec. 1908 (will); Birmingham Daily Post, 24 Dec. 1908; Men of the Time, 1899; private information. For list of Gore's electrical researches, see Electrician's Directory, 1892.]

GORE, JOHN ELLARD (1845-1910), astronomical writer, born at Athlone in Ireland on 1 June 1845, was son of John Ribton Gore, archdeacon of Achonry. After being educated privately he entered Trinity College, Dublin, where he obtained his engineering diploma with high distinction in 1865. Three years later, passing second in the open competition, he joined the Indian government works department and worked as assistant engineer on the construction of the Sirhind canal in the Punjab. There he began his observation of the stars, which had for first result the publication in 1877 of a small book entitled 'Southern Objects for Small Telescopes.' Gore retired from the Indian service in

1879 with a pension. Thenceforth he lived first at Ballisodare, co. Sligo, with his father until the latter's death, and afterwards in Dublin. He devoted himself to observations of the stars, principally with a binocular, for he never had a large telescope, and to writing on astronomy. Variable stars were chiefly the subject of his observations. In 1884 he presented to the Royal Irish Academy a 'Catalogue of Known Variable Stars' (enlarged and revised edit. 1888). A similar compilation by him, giving a list of the then computed orbits of binary stars, was published by the Irish Academy in 1890. At the same time Gore wrote much on astronomy for general reading. In some of his popular books he discussed with much judgment the theories of structure of the universe. 'Planetary and Stellar Studies' appeared in 1888; 'The Scenery of the Heavens' in 1890 (2nd edit. 1893); 'Astronomical Lessons' in 1890; 'Star Groups' in 1891; 'An Astronomical Glossary' in 1893; 'The Visible Universe' in 1893; 'The Worlds of Space' in 1894; and 'The Stellar Heavens' in 1903. In 'Studies in Astronomy' (1904) and in 'Astronomical Essays' (1907) he collected articles and essays that had appeared in magazines. His latest work, 'Astronomical Facts and Fallacies,' came out in 1909. Gore published many papers in the monthly notices of the Royal Astronomical Society. He was elected a fellow of the Royal Astronomical Society on 8 March 1878, was a member of council of the Royal Dublin Society, and a member of the Royal Irish Academy. He was at one time a leading member of the Liverpool Astronomical Society, and was chosen a vice-president of the British Astronomical Association on its foundation, and director of the variable star section. He died unmarried in Dublin from the effects of a street accident on 18 July 1910.

[Who's Who, 1910; Monthly Notices, Roy. Astr. Soc., Feb. 1911.] H. P. H.

GORST, SIR [JOHN] ELDON (1861-1911), consul-general in Egypt, born at Auckland, New Zealand, on 25 June 1861, was eldest son of the Right Hon. Sir John Eldon Gorst, who had gone out to New Zealand in 1860, by his wife Mary Elizabeth, daughter of the Rev. Lorenzo Moore of Christchurch. For a time he assumed the additional christian name of Lowndes to distinguish him from his father. Educated at Eton, he went to Trinity College, Cambridge, in 1880, graduating B.A. in 1883 as 21st wrangler, and proceeding M.A. in 1903.

He was called to the bar at the Inner Temple in 1885, and in the same year was appointed, after a competitive examination, an attaché in the diplomatic service. In September 1886 he was sent as an attaché to the British agency at Cairo, and thus began his connection with Egypt. In May 1887 he was granted an allowance for knowledge of Arabic, and in October was promoted to be a third secretary in the diplomatic service; on 1 April 1892 he became a second secretary, and in May 1901 a secretary of legation. Meanwhile he had taken service under the Egyptian government, and had in November 1890 been appointed controller of direct revenues, serving in that capacity under Alfred (afterwards Viscount) Milner. In 1892 he succeeded Milner as under-secretary of state for finance, and in 1894 he was appointed to a newly created post, that of adviser to the ministry of the interior. This appointment was created with the object of decentralising the police, and combining an increase in the number of Egyptian as compared with European officers with efficient European control at headquarters, viz. at the ministry of the interior (CROMER, *Modern Egypt*, 1908, ii. 488). The selection of Gorst for the new appointment was evidence of the confidence which was felt in his ability and his tact, and was justified by the results (cf. COLVIN, *The Making of Modern Egypt*, 1906, p. 339). In 1898 he succeeded Sir Elwin Palmer [q. v. Suppl. II] as financial adviser. The holder of the office is in effect 'the most important British official in Egypt' (CROMER, *Modern Egypt*, ii. 286; MILNER, *England in Egypt*, 3rd edit., 1893, p. 105), and Gorst, who was made C.B. in 1900 and K.C.B. in 1902, filled it until 1904 with uniform success. After assisting at Paris in the negotiation of the Anglo-French agreement which settled outstanding questions with regard to Egypt, Gorst was transferred in May 1904 to the foreign office in London as an assistant under-secretary of state. Three years later, in 1907, he succeeded Lord Cromer as agent and consul-general in Egypt, ranking as minister plenipotentiary in the diplomatic service. He arrived at Cairo in April 1907, and Lord Cromer left on 4 May. In the House of Commons, on 11 April 1907, the foreign secretary, Sir Edward Grey, stated that the appointment had been made after consultation with Lord Cromer, who had full confidence in Gorst's ability to continue his work. Gorst was, in Lord Cromer's opinion, 'endowed with a singular

degree of tact and intelligence' (*Modern Egypt*, ii. 292). He had proved himself a broad-minded administrator, hard-working, with great aptitude for finance and a good knowledge of the Arabic language. Gorst himself defined the aim of British policy in Egypt as 'not merely to give Egypt the blessings of good administration, but to train the Egyptians to take a gradually increasing share in their own government' (*Reports on Egypt and the Sudan in 1910*, Cd. 5633, May 1911, p. 1). The necessary qualifications were knowledge of the vernacular, sympathy with the feelings, the way, and the thought of the people, and even with their prejudices, and tact, power of effacement, and unlimited patience (*Reports for 1909*, Cd. 5121, April 1910, p. 50).

Gorst entered on his difficult duties at a very difficult time. The year 1907 was marked by financial depression due to overtrading and excessive credit, and by one of the worst Nile floods on record. Next year, 1908, he reported progress in satisfying the reasonable aspirations of the Egyptian people, but noted that Egyptian feeling had been affected by the unrest in other Mohammedan countries. The virulence of the extreme nationalist party made it necessary in 1909 to revive the press law and to pass a special 'Loi soumettant certains individus à la surveillance de la Police'; in February 1910 the Egyptian prime minister, Boutros Pasha, was murdered. In his report for 1910, the last which he wrote, Gorst recorded the comparative failure of representative institutions in Egypt in the form of the legislative council and general assembly, and he emphasised the necessity of caution in countenancing principles of self-government.

Like Lord Durham in his celebrated report on Canada; like Lord Dufferin in his report on Egypt; and like his own immediate predecessor, Lord Cromer, Gorst insisted on the wisdom of promoting municipal and local self-government, and one of the chief measures passed during his tenure of office was a law for enlarging the powers of the provincial councils, which came into force on 1 Jan. 1910. His administrative policy was subjected to criticism by politicians of both the advanced and the reactionary schools, but he was uniformly supported by the British government. He died prematurely, after a painful illness, on 12 July 1911, at his father's house, The Manor House, Castle Combe, Wiltshire, and was buried in the family vault at Castle Combe. He was

succeeded as consul-general in Egypt by Lord Kitchener.

Gorst was made a G.C.M.G. in 1911 on the coronation of King George V, and held the first class of the Medjidie (1897) and the first class (grand cordon) of the order of Osmanie (1903). He was a keen sportsman. He married on 25 June 1903 Evelyn, daughter of Charles Rudd, of Ardnamurchan, Argyllshire, and had one daughter.

[The Times, 13 July 1911; Foreign Office List; Who's Who; Blue Books; Milner, England in Egypt, 3rd edit., 1893; Sir Auckland Colvin, The Making of Modern Egypt, 1906; Cromer, Modern Egypt, 1908.]
C. P. L.

GOSCHEN, GEORGE JOACHIM, first Viscount Goschen (1831-1907), statesman, born on 10 Aug. 1831 at his father's house in the parish of Stoke Newington, was eldest son and second child in the family of two sons and five daughters of William Henry Göschen, a leading merchant of the City of London, by his wife Henrietta, daughter of William Alexander Ohmann. His youngest brother, Sir William Edward Goschen, became British ambassador at Berlin in 1908. The father was son of Georg Joachim Göschen, an eminent publisher and man of letters at Leipzig, the intimate friend of Schiller, Goethe, Wieland and other 'heroes of the golden age of German literature' (see LORD GOSCHEN, *Life and Times of Georg Joachim Göschen*, 1903). In 1814 young William Henry Göschen came to London, where, with his friend Henry Frühling from Bremen, he founded the financial firm of Frühling & Göschen. A man of strong character, great industry, and deep religious convictions, he found time throughout an exceedingly busy life to indulge his love of literature and his taste for music.

From nine to eleven (1840-2) Goschen attended daily the 'Proprietary School' at Blackheath. Thence his father sent him for three years to Dr. Bernhard's school at Saxe Meiningen. During this period he only once visited England, usually spending his holidays with his German relations. His father, who intended his son for a business career, now thought he perceived in him qualities which would ensure success in public life in England. For this end it was desirable that young George should mix more than he had yet done with English boys; and it was with the view of making an Englishman of him that he was sent in August 1845 to Rugby entering the house of Bonamy Price [q. v.], afterwards professor of political economy at Oxford. After his first year, Goschen grew to like

his surroundings and to be popular with his schoolfellows. He rose to be head of the school, and in that capacity he made his first reported speech, on the occasion of the resignation of the headmaster, A. C. Tait (afterwards archbishop of Canterbury). Amongst the boys he had been already recognised as the best debater in the school, especially in reply. Though his rise in the school had been rapid, it was not till June 1848 that he achieved positive distinction by winning the prize for the English essay; and shortly afterwards the English prize poem for the year. In 1849 he won the Queen's medal for the English historical essay; and in 1850, the prize for the Latin essay, 'Marcus Tullius Cicero.' In the autumn of 1850, after a couple of months of travel on the continent, Goschen entered Oxford as a commoner of Oriel. He failed to win scholarships at University and Trinity, but in 1852 his college awarded him an exhibition. Though in the technical Oxford sense his 'scholarship' was not considered pre-eminent, he obtained a double first in classical honours, with the general reputation in 1853 of having been 'the best first in.' At the Union he won great fame by his speeches on political and literary subjects; and in his last year was president of that society. In the previous year he had founded the 'Essay Club,' of which the original members were Arthur Butler, first headmaster of Haileybury, Charles Stuart Parker of University, H. N. Oxenham, the Hon. George Brodrick, W. H. Fremantle of Balliol, and Charles Henry Pearson (cf. *Memorials of Charles Henry Pearson*, 1900). Having graduated B.A. in 1853, Goschen entered actively into the business of his father's firm, by whom in October 1854 he was sent to superintend affairs in New Granada, now part of the United States of Colombia. After two years in South America he returned home, and on 22 Sept. 1857 married Lucy, daughter of John Dalley, a marriage which greatly conduced to the happiness of his future life. He now energetically devoted himself to business in London, rapidly making a reputation with commercial men, amongst whom he was known as the 'Fortunate Youth.' When only twenty-seven he was made a director of the Bank of England. In 1861 he achieved wider fame by publishing his 'Theory of the Foreign Exchanges' (5th edit. 1864), a treatise which won the attention of financial authorities and business men all over the world, and which has been translated into the principal languages of

Europe. In 1863, a vacancy having occurred in the representation of the City of London, Goschen was returned unopposed as a supporter of Lord Palmerston's government. His views were those of a strong liberal, as liberalism was understood in those days; and he pledged himself to the ballot, abolition of church rates, and the removal of religious disabilities. On the latter subject, the abolition of tests in the universities, he took a leading position in the House of Commons, fiercely contending with Lord Robert Cecil (afterwards Lord Salisbury) [q. v. Suppl. II], who struggled hard to maintain the old close connection between the universities and the Church of England. At the opening of the session of 1864 Goschen achieved a marked success in seconding the address to the speech from the throne. But the pains which he took to distinguish his position in the liberal party, especially as regards foreign policy, from that taken up by Richard Cobden and John Bright, called forth, not unnaturally, vigorous remonstrance from the former (*Life*, i. 71). Before parliament was dissolved (July 1865), Goschen's knowledge of commercial matters, his brilliant speech on the address, and his ability in fighting the battle against tests, had given him a good standing in the House of Commons; and when the new parliament met, Lord Russell, who had succeeded Lord Palmerston as prime minister, invited him to join his ministry as vice-president of the board of trade (November 1865); and two months later to enter his cabinet as chancellor of the Duchy of Lancaster (January 1866). On the same day Lord Hartington (afterwards Duke of Devonshire) [q. v. Suppl. II], with whom in after years Goschen was to be closely associated, entered the cabinet for the first time.

Goschen now retired finally from business and from the firm of Fröhling & Göschen, and henceforward devoted himself wholly to a political career. In the short-lived ministry of Lord Russell, and on the front bench of opposition during the Derby-Disraeli government which succeeded it, Goschen took an active part with Gladstone and other leading liberals in the reform struggles of the day. At the dissolution of 1868, standing as a strenuous advocate of Irish disestablishment, he was returned again for the City, this time at the head of the poll; and on Gladstone's forming his first administration, Goschen entered his cabinet as president of the poor law board. There he showed great zeal as a reformer of local

government (see his remarkable *Report of the Select Committee of 1870*), and in substituting methodical administration for the chaotic system, or want of system, which had grown up. On the health of H. C. E. Childers breaking down, Goschen was appointed in March 1871 to succeed him as first lord of the admiralty, a department which at that time was subjected to much public censure. Here his administration proved extraordinarily successful in restoring the general confidence and in winning the enthusiastic admiration of the naval service. In 1874 the unwillingness of Goschen and Cardwell to reduce the estimates for 1874-5 below what they considered the needs of the country required was an important element in determining Gladstone's sudden dissolution (January 1874). This resulted in the advent to power for six years of Disraeli, and accordingly Goschen, who was again re-elected for the City, found himself for the first time in the House of Commons one of a minority, which on Gladstone's withdrawal was led by Lord Hartington. Until 1880 the interest of the public and parliament was mainly occupied with foreign affairs, and Goschen as a leading member of the liberal party was in continual consultation with Lord Hartington and Lord Granville on the serious condition of things in eastern Europe. His great position as a financier and a man of business, and his more than ordinary acquaintance with foreign politics, had led to his being chosen by the council of foreign bondholders, with the approval of the foreign office, and at the invitation of the viceroy of Egypt to proceed to that country, which was in a state bordering on bankruptcy, to investigate and report upon the financial position. With M. Joubert, representing the French bondholders, Goschen proceeded to Cairo, their joint efforts resulting in the promulgation of the Khedivial decree of 16 Nov. 1876, the Goschen decree, as it came to be called (CROMER, *Modern Egypt*, i. 13-15).

When Goschen returned to England, Gladstone's anti-Turkish agitation was at its height. In 1877, when Lord Hartington accepted on behalf of the liberal party the policy pressed upon parliament by Sir George Trevelyan, of equalising the county and borough franchise, Goschen's strong sense of duty compelled him to protest against what he believed must lead to the complete monopolising of political power by a single class of the community. This difference with his political friends as to a

main 'plank' of the party 'platform' proved to be a turning-point in his career. At the general election in April 1880 Goschen, who had retired from the representation of the City of London, was returned for Ripon. The electorate repudiated Lord Beaconsfield, and Gladstone at the head of a large majority again became prime minister. Goschen felt it incumbent upon him to hold aloof from the new administration. Gladstone offered him the vice-royalty of India, which he declined. He consented, however, to go in May 1880 on a special and temporary mission to Constantinople as ambassador to the Sultan, without emolument; retaining, with the approval of his constituents, his seat in the House of Commons. The object of the British government was to compel the Turks, by means of the concert of Europe, to carry out the stipulations of the treaty of Berlin as regards Greece, Montenegro and Armenia, and to get established a strong defensive frontier between Turkey and Greece. Goschen has recounted at length the difficulties he encountered, and has described his interviews with Prince Bismarck at Berlin, and the negotiations at Constantinople with the representatives of the great powers (*Life of Lord Goschen*, vol. i. chap. vii.). His mission lasted for a year, and in June 1881 he was again back in London, receiving the congratulations of Gladstone and Granville upon the successful accomplishment of a most difficult task.

In the political situation at home he found much that he disliked. The fight over the Irish land bill was virtually at an end. A fierce struggle was raging between the government and the followers of Parnell, and Goschen felt it right at such a time to do what he could to strengthen the executive against the forces of disorder. In June 1882 he declined Gladstone's invitation to join his cabinet as secretary of state for war. In November 1883 Gladstone pressed him strongly to accept the speakership of the House of Commons, which he also declined, partly because he felt that his short sight would prove a disqualification for the successful performance of the duties of the chair. In truth Goschen was becoming more and more dissatisfied with the position of the liberal party, in which he feared the rapid growth of the influence of the advanced section led by Mr. Chamberlain and Sir Charles Dilke. He set himself to strengthen Gladstone against radical influences, and to secure for the present and future that due weight

within the party should be given to moderate liberalism. But though disapproving much in Gladstone's conduct of affairs—foreign policy, Ireland, Egypt, South Africa—he was by no means disposed to place unlimited confidence in the conservative leader, Lord Salisbury. The ambition and influence of Lord Randolph Churchill in Goschen's eyes still further weakened the claims of party conservatism to the public confidence. He had, moreover, been disappointed that his own stand against a democratic franchise had found no conservative support. In January 1885 Goschen withdrew from the Reform and Devonshire Clubs; and his speeches to great meetings in the country gave further evidence of the independent standpoint he had now assumed. By moderate men of all parties those speeches were welcomed and admired.

The last session of the parliament elected in 1880 was momentous. In February 1885 came the news of the fall of Khartoum. A motion of censure on the Gladstone government was defeated only by fourteen votes, and Goschen voted in the minority. In June a combination between conservatives and Parnellites defeated the government on a clause of the budget. Goschen voted with the government. Lord Salisbury at once became prime minister, and Lord Randolph Churchill leader of the House of Commons.

The city of Ripon, which Goschen represented, was to lose its separate representation under the Reform Act of 1885, and an influential committee in Edinburgh invited Goschen to become a candidate for one of the divisions of that city at the coming general election. During the following autumn Goschen's speeches in Scotland and elsewhere made a great impression on the public (*Goschen's Political Speeches*, Edinburgh, 1886). Their high tone, their clear reasoning, the independent and disinterested character of the speaker, and the absence of claptrap or appeal to unworthy motives, were a refreshing contrast to much of the platform oratory of the day. At the same time the late ministers were freely disclosing their individual views to the public. Mr. Chamberlain was the spokesman of extreme radicalism, and found in Goschen his chief antagonist. Lord Hartington, whose allegiance to the liberal party had never wavered, spoke out as essentially a leader of moderate liberals, whilst Gladstone by studied indefiniteness endeavoured to keep all sections of liberals united under his

'umbrella.' Parnell threw the whole voting power of Irish nationalists on to the side of the conservatives. And though little was said about it at the general election, Goschen clearly saw that Parnell's policy of home rule, and Gladstone's line with reference to it, were the questions of the future. In vain he sought (July 1885) from Gladstone some explanation of his views (*Life of Lord Goschen*, vol. i. chap. ix.).

In November 1885 Goschen, supported by moderate liberals and conservatives, won an easy triumph in East Edinburgh over an advanced radical candidate. The effect, however, of the general election as a whole was to make it impossible for either of the great parties to hold power without the assistance of the Irish nationalists. Hence a remarkable development of the party position occurred. The majority of the liberal party coalesced with Parnell and his followers; and Gladstone was placed in power to carry out the policy of home rule. Goschen threw himself into the struggle for the union with conspicuous ability and zeal. With Lord Hartington he formed and inspired the liberal unionist party, and brought about that alliance with Lord Salisbury which was essential if the union was to be saved. At the great meeting at the Opera House on 14 April 1886, the first outward sign of this new alliance, Goschen's speech was the one that most deeply stirred the enthusiasm of his audience. In the House of Commons and all over the country he did battle for his cause with a fiery impetuosity which hitherto had hardly been recognised as part of his character. His hope that Lord Hartington should be the centre and leader of a strong body of moderate opinion was now realised. But the division in the liberal party was not so much between those who were known as whigs and radicals, as between unionists and home rulers; and thus many of the strongest radicals, such as Mr. Chamberlain and John Bright, were amongst Lord Hartington's most vigorous supporters. The union triumphed in the House of Commons, where Gladstone's home rule bill was defeated on 7 June 1886, and when the unionists secured a majority at the general election in July, Lord Salisbury formed a conservative administration. In East Edinburgh, however, Goschen was defeated by the home rule candidate, Dr. Wallace; but he did not relax his efforts outside the House of Commons in the unionist cause. On Lord Randolph Churchill's sudden resignation

(20 Dec. 1886) of the chancellorship of the exchequer in Lord Salisbury's government, and the lead of the House of Commons, Goschen, with the approval of Lord Hartington, accepted the offer made to him by Lord Salisbury to enter his cabinet as Lord Randolph's successor, W. H. Smith [q. v.] at the same time undertaking to lead the House of Commons.

Goschen's accession to the ministry at this crisis was of the greatest importance in keeping the unionist government on its feet. He met, nevertheless, one more personal reverse, in his failure to win back from the liberal home rulers the Exchange division of Liverpool (26 Jan. 1887). A fortnight later he was elected by a majority of 4000 for St. George's, Hanover Square, a seat which he retained till he went to the House of Lords. Henceforward, as a member of the Salisbury government, sharing the responsibility of his colleagues, Goschen necessarily played a less individual part than heretofore in the public eye, though he took a prominent share in the fierce conflicts inside and outside parliament against the powerful home rule alliance between liberals and Irish nationalists. For six years in succession he brought forward the budget, meeting with much skill the steadily growing expenditure of the country, whilst boasting with truth that at the same time he was gradually reducing its debt. His most memorable achievement whilst chancellor of the exchequer was his successful conversion of the national debt in March 1888 from a 3 per cent. to a 2½, and ultimately a 2¼ per cent. stock. The great courage and ability required to carry through this operation received the recognition of political opponents, including Gladstone, not less than of his own friends. During the 'Baring crisis' in November 1890 his courage and firmness as finance minister were again demonstrated. The situation was saved; whilst he absolutely refused to yield to pressure to employ the funds or credit of the state to buttress up the solvency of a private institution (*Life*, vol. ii. chap. vii., and note in Appendix III. by LORD WELBY). In the same year a good deal of unpopularity fell to Goschen's share, resulting from the 'licensing clauses' (ultimately abandoned) which it was proposed to introduce into the local taxation bill, for providing out of taxes on beer and spirits a compensation fund to facilitate the reduction in the number of public-houses.

At the end of 1891 Mr. Arthur Balfour succeeded to the leadership of the House

of Commons (*Life*, ii. 186 seq.); but the days of the unionist ministry were already numbered, and the general election of the following June placed Gladstone once more in power. Over the home rule bill of 1893 the old controversy of 1886 was revived in all its bitterness, and Goschen was again in the front rank of the combatants. In opposition, he formally joined the conservative party, became a member of the Carlton Club, and repeated with undiminished power the efforts he had made nine years before to sustain the cause of the union. This time, however, Gladstone's policy was accepted by the House of Commons; but only to be rejected by the House of Lords, who were supported by the country at the general election of 1895.

Lord Salisbury's new administration was joined by Lord Hartington, Mr. Chamberlain, and other liberal unionists, whilst Goschen to his great satisfaction went to the admiralty (June 1895), where twenty years before he had won well-earned fame. His last period at the admiralty, which lasted till the autumn of 1900, was eventful; for though the country remained at peace with the great powers of the world, our foreign relations at times became severely strained. Difficulties connected with Venezuela, Crete, Nigeria, Port Arthur, Fashoda, and German sympathy with President Krüger, brought the possibility of rupture before the eyes of all men. Goschen felt that a very powerful British navy was the best security for the peace of the world, as well as for our own protection, and the vast increases of our naval establishments and the consequent growth of naval estimates were generally approved. The strain of these five years told upon his strength. The death of Mrs. Goschen in the spring of 1898 had been a heavy trial; and the weight of advancing years determined him to retire from office before the approaching general election. Accordingly on 12 Oct. 1900, to the regret of the public and the naval service, he resigned, and in December was raised to the House of Lords as Viscount Goschen of Hawkhurst, Kent.

The remainder of his life Lord Goschen hoped to spend mainly at Seacox Heath, his home in Kent, with more leisure than he had found in the past for seeing his family and friends, for indulging his strong taste for reading, and for attending to the interests of his estate. In 1903 he published the life and times of his grandfather, on which he had long been engaged; and in 1905 a volume of 'Essays

and Addresses on Economic Questions.' This last consisted of contributions to the 'Edinburgh Review' and of addresses read to various bodies and institutions at different times, and of valuable comments by the author on the further light that the lapse of years had thrown upon the subjects treated. On the death of Lord Salisbury, Goschen was chosen chancellor of Oxford University (31 Oct. 1903), and devoted himself with energy to the interests of the university. He had been made hon. D.C.L. of Oxford in 1881, and hon. LL.D. of Aberdeen and Cambridge in 1888, and of Edinburgh in 1890.

Goschen's political life was by no means over. When in 1903 Mr. Chamberlain's fiscal policy was announced, causing rupture in the ministry and the unionist party, Goschen again came to the front as one of the foremost champions of free trade. He had, as he said, worked out these financial and commercial problems for himself; and accordingly he joined the Duke of Devonshire and other free-trade unionists in a vigorous effort to defeat a policy certain, in his opinion, to bring disaster on the nation. In the House of Lords and in the country, till the general election of January 1906 had made free trade safe, he threw himself into the conflict with much of his old energy and fire; and in the new parliament he once more solemnly warned conservative statesmen against the danger of identifying their party with the fiscal policy of Mr. Chamberlain. During the remainder of the session, he took part occasionally in the proceedings of the House of Lords, showing none of the infirmities of age excepting that his eyesight, never good, had deteriorated. On 7 Feb. 1907 he died suddenly in his home at Seacox, and was buried at Flimwell. Goschen left two sons and four daughters. His elder son, George Joachim, succeeded to the viscountcy.

Goschen showed throughout the whole of his career a remarkable consistency of character as a statesman, notwithstanding the fact that part of his official life was passed under Gladstone's, part under Lord Salisbury's leadership. Always moderate in his opinions, which were the outcome of honest and deep investigation, he disliked the exaggerations of party protagonists, and was as vehement in support of moderation as were the extremists on either side in fighting for victory. At the head of great departments, his industry, his grasp of principles, his mastery of details, and his determination to secure efficiency were conspicuous.

But in the pressure of administrative work he remembered that his responsibilities as cabinet minister were not limited to his own department, and in all matters of general policy, especially as regards foreign affairs, of which he had exceptional knowledge, his counsels carried great weight. His courage and independence won him in a high degree the respect and confidence of his countrymen; and Queen Victoria placed much reliance on his judgment and his patriotism. Nature had not endowed him with the qualities that make an orator of the first rank. His voice was not good, nor his gestures and bearing graceful. Yet he proved again and again on public platforms that he possessed the power not only of interesting and leading men's minds but also of stirring their enthusiasm to a very high pitch. He never spoke down to his audience, or appealed to prejudice, but exerted himself to lead them to think and to feel as he himself thought and felt. His speeches very frequently contained some turn of expression or phrase which caught the public ear and for the time was in everyone's mouth. In 1885, 'He would not give a blank cheque to Lord Salisbury.' In his great fight against Irish nationalism, 'We would never surrender to crime or time.' In the fiscal controversy, 'He would be no party to a gamble with the food of the people.'

Goschen throughout his life did much useful public work outside the region of active politics. He had become an ecclesiastical commissioner in 1882. From its initiation in 1879 Goschen was a vigorous supporter of the movement for the extension of university teaching in London, and for many years he gave great assistance to the movement. With him the loss of office never meant the cessation of employment. In his private life his personal qualities and sympathetic nature won for him a large circle of real friends, whilst in society at large a strong sense of humour, his wide general knowledge of men and books, his power of conversation and of promoting good talk in others, made him highly valued. In his own house in the country and in London, where he delighted to gather round him friends and acquaintances, he carried the intenseness of interest characteristic of his working hours into the amusements of the day. It was not for the purposes of breadwinning alone that he set a high value on education. 'Livelihood is not a life,' he said to the Liverpool Institute (29 Nov. 1877, on *Imagination*). 'Education must deal with your lives as well as qualify you for your

livelihoods.' He knew from his own experience how much education had done for his life outside those regions of business and politics where his chief energies had been spent.

A portrait in oils by Rudolf Lehmann (1880) is in the possession of the present viscount and is now at Seacox Heath; a second, by Mr. Hugh A. T. Glazebrook, is at Plaxtol, Kent, in the possession of his daughters. A cartoon portrait of Goschen by 'Ape' appeared in 'Vanity Fair' in 1869.

Elliot, *Life of Lord Goschen*, 2 vols. 1911, compiled from private papers and correspondence; see also Bernard Holland, *Life of the Eighth Duke of Devonshire*, 2 vols. 1911, and Morley's *Life of Gladstone*, 1903; Hansard's *Debates*; *Annual Register*; *Times* reports of speeches.] A. R. D. E.

GOSSELIN, SIR MARTIN LE MARCHANT HADSLEY (1847-1905), diplomatist, born at Walford, near Hertford, on 2 Nov. 1847, was grandson of Admiral Thomas Le Marchant Gosselin [q. v.] and eldest son of Martin Hadsley Gosselin of Ware Priory and Blakesware, Hertfordshire, by his wife Frances Orris, eldest daughter of Admiral Sir John Marshall of Gillingham House, Kent. Educated at Eton College and at Christ Church, Oxford, he entered the diplomatic service in 1868, and after working in the foreign office was appointed attaché at Lisbon in 1869. He was transferred to Berlin in 1872, where he remained till promoted to be second secretary at St. Petersburg in 1874. During the congress at Berlin in 1878 he was attached to the special mission of the British plenipotentiaries, Lord Beaconsfield and Lord Salisbury. He was transferred from St. Petersburg to Rome in 1879, returned to St. Petersburg in the following year, and to Berlin in 1882. In 1885 he was promoted to be secretary of legation, and was appointed to Brussels, where he served till 1892, taking charge of the legation at intervals during the absence of the minister, and being employed on occasions on special service. In November 1887 he was appointed secretary to the duke of Norfolk's special mission to Pope Leo XIII on the occasion of the pontiff's jubilee. In 1889 and 1890 he and Mr. (afterwards Sir Alfred) Bateman of the board of trade served as joint British delegates in the conferences held at Brussels to arrange for the mutual publication of customs tariffs, and in July of the latter year he signed the convention for the establishment of an inter-

national bureau for that purpose. He was also employed as one of the secretaries to the international conference for the suppression of the African slave trade, which sat at Brussels in 1889 and the following year and resulted in the General Act of 2 July 1890. In recognition of his services he was in 1890 made C.B. Later in that year he was one of the British delegates at the conference held by representatives of Great Britain, Germany, and Italy to discuss and fix the duties to be imposed on imports in the conventional basin of the Congo, and he signed the agreement which was arrived at in December 1890. In April 1892 he was promoted to be secretary of embassy at Madrid, was transferred to Berlin in the following year, and to Paris in 1896, receiving at the latter post the titular rank of minister plenipotentiary. In 1897 he was selected to discuss with French commissioners the question of coolie emigration from British India to Réunion, and in that and the following year he served as one of the British members of the Anglo-French commission for the delimitation of the possessions and spheres of influence of the two countries to the east and west of the Niger river. The arrangement arrived at by the commission was embodied in a convention signed at Paris on 14 June 1898, and provided a solution of questions which had gravely threatened the good relations between the two countries. At the close of these negotiations he was created K.C.M.G. From July 1898 to August 1902 he held the home appointment of assistant under-secretary of state for foreign affairs, and was then sent to Lisbon as British envoy, a post which he held till his death there on 26 Feb. 1905 from the effects of a motor-car accident. The relations of Great Britain with Portugal during Gosselin's residence were uneventful, but King Edward VII's sense of his services was marked by his preferment as K.C.V.O. in 1903 and as G.C.V.O. in 1904.

Gosselin possessed in a high degree fair judgment, good temper, and charm of manner. He was an accomplished musician, and possessed a delicacy of touch and a power of artistic interpretation on the pianoforte almost unrivalled even among professional artists.

Gosselin joined the communion of the Church of Rome in 1878. He married in 1880 Katherine Frances, daughter of the first Lord Gerard, and left one son, Alwyn Bertram Robert Raphael, captain in the Grenadier guards, and three daughters.

[The Times, 27 Feb. 1905; Oscar Browning's Memoirs, 1911; Foreign Office List, 1906, p. 397.] S.

GOTT, JOHN (1830-1906), bishop of Truro, born on 25 Dec. 1830, was third son of William Gott of Wyther Grange, Leeds, by Margaret, daughter of William Ewart of Mossley Hill, Liverpool. His grandfather was Benjamin Gott of Armley House, who introduced the factory system into the woollen trade of Leeds, and contributed greatly to the prosperity of the town. Educated first at Winchester, he matriculated at Brasenose College, Oxford, on 7 June 1849, and graduated B.A. in 1853, proceeding M.A. in 1854, B.D. and D.D. in 1873. After a year at Wells Theological College and some time spent in travel, he was ordained deacon in 1857 and priest in 1858. From 1857 to 1861 he was curate of Great Yarmouth, and from 1861 to 1863 had charge of St. Andrew's Church. In 1863 the vicar of Leeds gave him the perpetual curacy of Bramley, Leeds; and in 1873, on the appointment of J. R. Woodford [q. v.] to the see of Ely, Gott was chosen by the crown his successor as vicar of Leeds. The appointment gave satisfaction from the intimate association of the Gott family with the commercial life of the city, and was amply justified by Gott's work. He started a church extension movement, with the result that, during his twelve years at Leeds, eight new churches were consecrated and the building of four others begun; he founded in 1875 Leeds clergys school; took a leading part in 1880 in the establishment of Victoria University, of the court of which the crown made him a member; promoted the university extension movement in the West Riding; and was the generous friend of all good works. In 1886 Gott was made dean of Worcester, a post which he filled till 1891. He extended the usefulness of the cathedral as a diocesan centre, and entered fully into the life of the diocese.

In 1891 Gott succeeded to the see of Truro on the resignation of George Howard Wilkinson [q. v. Suppl. II]. Consecrated at St. Paul's on 29 Sept. 1891, he saw in 1903 the completion of Truro Cathedral; founded a bishop's clergy fund for the aid of clergy in time of ill-health or other necessity; and diligently visited all parts of his diocese. A high churchman, but not a strong partisan, he signed in January 1901 the bishops' letter inviting clergy to accept the positions defined in the Lambeth 'Opinions.' He died suddenly at his residence, Trenythron, near Par, on 21 July 1906 and was buried at Tywardreath.

Gott married in 1858 Harriet Mary, daughter of W. Whitaker Maitland of Loughton Hall, Essex; she died in London on 19 April 1906; by her he had one son and three daughters. A portrait by W. W. Ouless was exhibited at the Royal Academy in 1899. Another, painted in 1903, is in the dining-hall of Leeds clergy school.

Apart from his charge delivered in 1896 on 'Ideals of a Parish,' Gott wrote only one book, 'The Parish Priest of the Town' (1887), which had a wide circulation. He inherited a fine library, which was dispersed by sale at Messrs. Sotheby's in March 1908 and July 1910. It included a set of the four folio editions of Shakespeare, of which the first folio realised 1800*l.*, 22 July 1910.

[Yorkshire Post, 23 July 1906; Yorkshire Weekly Post, 6 May 1911; Guardian, 21 April and 28 July 1906; Record, 27 July 1906; The Times, 23 and 26 July 1910; and Foster, Alumni Oxonienses.] A. R. B.

GOUGH, SIR HUGH HENRY (1833-1909), general, born at Calcutta on 14 Nov. 1833, was third son in a family of four sons and four daughters of George Gough, Bengal civil service, of Rathronan House, Clonmel, co. Tipperary, by Charlotte Margaret, daughter of Charles Becher, Chancellor House, Tonbridge, Kent. His elder brother, Sir Charles John Stanley Gough, V.C. (b. 1832), still survives (1912). Field-marshal Viscount Gough [q. v.] was his grand-uncle. After education privately and at Haileybury College (1851-2) he joined the Bengal army on 4 Sept. 1853, becoming lieutenant on 9 Aug. 1855 and captain on 4 Jan. 1861.

On his arrival in India he perceived the likelihood of a sepoy revolt, but his warnings were disregarded by the authorities (LORD ROBERTS, *Forty-one Years in India*, 1898, p. 48). He was at Meerut on the outbreak of the Indian Mutiny, and served throughout the subsequent war. On 24 Aug. 1857 he was wounded in attempting to seize some mutineers at Khurkowdeh, and was rescued by his elder brother, Charles, who won in the campaign the Victoria cross. He served as adjutant of Hodson's horse throughout the siege of Delhi, and was at the action of Rohtuck (18 Aug.), where by a feigned retreat Hodson drew the enemy into the open and then completely routed them. Gough was wounded and his horse was shot under him. He accompanied the column under Colonel Greathed which was despatched to the relief of Cawnpore, and commanded a wing of the regiment in the actions at Bulandshahr (27 Sept.), Aligarh

(5 Oct.), and Agra (10 Oct. 1857), where he executed a dashing flank charge. On 12 Nov. 1857, when in command of a party of Hodson's horse near Alambagh, he charged across a swamp and captured two guns, which were defended by a vastly superior body of the enemy (LORD ROBERTS, *Forty-one Years in India*, p. 170). His horse was wounded in two places and his turban cut through by sword thrusts whilst he was in combat with three sepoy. He was mentioned in Sir Colin Campbell's despatches of 18 and 30 Nov. 1857 (*Selections from State Papers in Military Department*, 1857-8, ii. 339), and for his gallantry on this occasion he was awarded the Victoria cross, like his elder brother. Gough also distinguished himself in the operations round Lucknow on 25 Feb. 1858, when he set a brilliant example to his regiment on its being ordered to charge the enemy's guns. He engaged in a series of single combats, but was at length disabled by a musket ball through the leg while charging two sepoys with fixed bayonets. On this day Gough had two horses killed under him, a shot through his helmet and another through his scabbard. After the capture of Lucknow on 25 March 1858 he retired to the hills to recover from his wounds. Gough was mentioned in despatches on several occasions for 'distinguished bravery,' and was twice thanked by the governor-general of India, besides receiving the brevet of major and a medal with three clasps (*Lond. Gaz.* Dec. 1857, 16 and 29 Jan. 1858, and 15 Jan. 1859).

Gough subsequently took part in the Abyssinia campaign in 1868. He commanded the 12th Bengal cavalry, and was present at the capture of Magdala, being mentioned in despatches and receiving the medal and being made C.B. on 14 Aug. 1868 (*Lond. Gaz.* 16 and 30 June 1868). He was promoted lieutenant-colonel in 1869, and received the brevet of colonel in 1877. Gough, who served throughout the Afghan war, was in command of the cavalry of the Kuram field force in 1878-9. At the forcing of the Peiwar Kotal on 2 Dec. 1878 he was the first to reach the crest, and pursued with his cavalry the flying enemy along the Alikhel road. At the action of Matun, by dismounted fire and several bold charges, he succeeded notwithstanding the difficult nature of the ground in driving the tribesmen to the highest ridges, from which they were dislodged by the artillery (7 Jan. 1879). In September 1879, on the renewal of the war after the massacre of the Cavagnari mission, he served with the

Kabul field force as brigadier-general of communications, and was present at the engagement of Charasiab on 6 Oct. and in the various operations round Kabul in December 1879 (wounded). On Sir Frederick (afterwards Lord) Roberts's march to Kandahar Gough was in command of the cavalry brigade, and took part in the reconnaissance of 31 August at Pir Paintal (HANNA, *Second Afghan War*, iii. 498). He was in command of the troops engaged in the cavalry pursuit after the battle of Mazra on 1 Sept. 1880. For his services he was mentioned six times in despatches (*Lond. Gaz.* 4 Feb., 21 March, 7 Nov. 1879; 4 May, 3 and 31 Dec. 1880). He was awarded the medal with four clasps, the bronze decoration, and was created K.C.B. on 22 Feb. 1881.

Gough attained the rank of major-general in 1887 and of lieutenant-general in 1891, and commanded the Lahore division of the Indian army (1887-92). He became general in 1894 and retired from the army in 1897. On 20 May 1896 he was nominated a G.C.B., and two years later was appointed keeper of the crown jewels at the Tower of London. There he died in St. Thomas's Tower on 12 May 1909, and was buried at Kensal Green cemetery. On 8 Sept. 1863 he married Annie Margaret, daughter of Edward Eustace Hill and his wife, Lady Georgiana Keppel; he had issue four sons and four daughters.

He published in 1897 his reminiscences of the Indian Mutiny, entitled 'Old Memories.'

[Sir Hugh Gough's *Old Memories*, 1897; G. W. Forrest, *History of the Indian Mutiny*, vol. ii. 1904; Burke's *Peerage*; L. J. Trotter, *Hodson of Hodson's Horse*, 1901; *Men of the Time*, 1899; Hart's and *Official Army Lists*; *The Times*, 14 and 19 May 1909; *Indian Mutiny*, selections from *State Papers in Military Department*, 1857-8, ed. H. M. V.

GOUGH-CALTHORPE, AUGUSTUS CHOLMONDELEY, sixth BARON CALTHORPE (1829-1910), agriculturist, born at Elvetham, Hampshire, on 8 Nov. 1829, was third son in the family of four sons and six daughters of Frederick Gough Calthorpe, fourth Baron Calthorpe (1790-1868), by his wife Lady Charlotte Sophia, eldest daughter of Henry Charles Somerset, sixth duke of Beaufort. The family descended from Sir Henry Gough (d. 1774), first baronet, of

Edgbaston, whose heir Henry, by his second wife, Barbara, heiress of Reynolds Calthorpe of Elvetham, succeeded in 1788 to the Elvetham estates, and taking the surname of Calthorpe, was created Baron Calthorpe on 15 June 1796 [see CALTHORPE, SIR HENRY]. Augustus was educated at Harrow from 1845 to 1847 and matriculated at Merton College, Oxford, on 23 Feb. 1848, graduating B.A. in 1851, and proceeding M.A. in 1855. In adult life he devoted himself to sport, agriculture, and the duties of a county magistrate. He lived on family property at Perry Hall, Staffordshire, serving as high sheriff of that county in 1881. At the general election of 1880 he stood with Major Fred Burnaby [q. v.] as conservative candidate for the undivided borough of Birmingham, near which a part of the family estates lay, but was defeated, P. H. Muntz, John Bright, and Mr. Joseph Chamberlain being returned. On the death on 26 June 1893 of his eldest brother, Frederick, fifth baron (1826–1893), who was unmarried (his second brother, George, had died unmarried in 1843), he succeeded to the peerage as sixth baron. On the family estates at Elvetham he started in 1900 what has become a noted herd of shorthorn cattle, and his Southdown sheep and Berkshire pigs were also famous. He showed generosity in devoting to public purposes much of his property about Birmingham. He made over to the corporation in 1894 the freehold of Calthorpe Park near that city, which his father had created in 1857, and took much interest in the development of the new Birmingham University. In 1900 he and his only son, Walter (1873–1906), presented 27½ acres of land, valued at 20,000*l.*, for the site of the university buildings, and in 1907 he gave another site, immediately adjacent, of nearly 20 acres, of the estimated value of 15,000*l.*, for a private recreation ground for the students. He died after a short illness at his London residence at Grosvenor Square on 22 July 1910, and was buried at Elvetham, after cremation at Golder's Green. He was succeeded in the title by his next brother, Lieut.-general Sir Somerset John Gough-Calthorpe (b. 23 Jan. 1831). He married on 22 July 1869 Maud Augusta Louisa, youngest daughter of the Hon. Octavius Duncombe, seventh son of Charles Duncombe, first Lord Feversham, by whom he had one son, Walter (who predeceased him), and four daughters.

[The Times, 23 and 28 July 1910; Harrow School Reg.; Foster's Alumni Oxon.; Burke's Peerage.] E. C.

GOULDING, FREDERICK (1842–1909), master printer of copper plates, was born at Holloway Road, Islington, on 7 Oct. 1842. His father, John Fry Goulding, foreman printer to Messrs. Day & Son, was married in 1833 to Elizabeth Rogers, who belonged to an old stock of Spitalfields weavers, and his grandfather, John Golding, also a copper-plate printer, was apprenticed in 1779 to a still earlier William Golding, a copper-plate printer of St. Botolph, Bishopsgate. In 1854 Frederick Goulding was sent to a day school conducted at the National Hall, Holborn, by William Lovett [q. v.], a well-known Chartist. On 24 Jan. 1857 he was apprenticed to Messrs. Day & Son, 6 Gate Street, Lincoln's Inn Fields, originally a firm of lithographic printers, but then concerned largely with the printing of engravings, to which branch of their business Goulding was attached. In his spare time through 1858 and 1859 he studied at the schools of art in Wilmington Square, Clerkenwell, and Castle Street, Long Acre, also attending lectures at the Royal Academy Schools. In 1859 he acted as 'devil' to James MacNeill Whistler [q. v. Suppl. II] in the printing of some of his etchings, and in the same year assisted his father in printing a series of etchings by Queen Victoria and the Prince Consort. At the Great Exhibition of 1862 he gave a daily demonstration of copper-plate printing for Messrs. Day & Son, from May till November, and began there the personal friendship with Sir Francis Seymour Haden [q. v. Suppl. II] which lasted till the end of his life.

By this time Goulding was a master of the 'art and mystery' of his craft, and began to use his spare time in the evenings and on Saturdays by working for private clients at his own residence, Kingston House, 53 Shepherd's Bush Road. Among those for whom he printed were Seymour Haden, Legros, Whistler, and Samuel Palmer. In 1881 he felt justified in embarking upon a printing business of his own, and built a studio, largely extended later, in the garden at the back of Kingston House. Among artists whose etchings he printed were Frank Short, Strang, Pennell, Rodin, Holroyd, Rajon and R. W. Macbeth; in fact few etchers or engravers did not claim Goulding's assistance. In 'About Etching' (1879) Haden described Goulding as 'the best printer of etchings in England just now.' From 1876 till 1882 he acted as assistant to Alphonse Legros [q. v. Suppl. II] in an etching class held weekly at the National Art Training School, now the

Royal College of Art, and from 1882 to 1891, when he was succeeded by Sir Frank Short, was entirely responsible for the conduct of the class. From 1876 to 1879 he also assisted Legros in an etching class held at the Slade School. On 7 Feb. 1890, at a full meeting of the council of the Royal Society of Painter-Etchers, he was unanimously elected the first master printer to the society.

In Goulding's case the craft of plate printing depended on something more than mere handicraft. He combined with remarkable dexterity of workmanship a singular understanding of each artist's aim, and so played no small part in the revival of etching in the nineteenth century. For his amusement and instruction he produced a few etchings of his own; their organic weakness of line is concealed by masterly printing.

He died, after five years' continuous ill-health, on 5 March 1909, and was buried in Kensal Green cemetery. On 16 Dec. 1865 he married Melanie Marie Alexandrine Piednue, and had three sons and a daughter (now Mrs. Pickford). A portrait in oils by Mr. Alfred Hartley, R.E., belongs to his daughter; there is also a dry-point etching by Mr. W. Strang, A.R.A., and a photo-engraving by Mr. Emery Walker from a photograph taken by Sir Frank Short.

[Frederick Goulding, Master Printer of Copper Plates, by the present writer, 1910, based on private information and on memoranda left by Goulding. The volume contains the full text of a lecture on the theory and practice of his craft delivered by Goulding to the Art Workers' Guild in 1904.] M. H.

GOWER, EDWARD FREDERICK LEVESON- (1819-1907). [See LEVESON-GOWER.]

GRACE, EDWARD MILLS (1841-1911), cricketer, born at Downend, near Bristol, on 28 Nov. 1841, was third of five sons of Henry Mills Grace (1808-1871) of Long Ashton, Somerset, medical practitioner and cricketing enthusiast, who had settled in 1831 at Downend. His mother was Martha, daughter of George Pocock, proprietor of a boarding school at St. Michael's Mill, Bristol. His brothers, Henry (1833-1895), Alfred (b. 1840), William Gilbert (b. 1848), and George Frederick (1850-1880), who all studied medicine, devoted themselves to cricket, the two youngest obtaining world-wide reputations for their all-round play. After education at Long Ashton, where he showed the family zeal for cricket, Grace studied medicine at the Bristol Medical

School; he became M.R.C.S. England and L.R.C.P. Edinburgh in 1865, and L.S.A. in 1866. At first residing at Marshfield, he settled in 1869 at Thornbury, where he practised till his death, and took a prominent part in the life of the town. He was coroner for West Gloucestershire from 1875 till 1909, and held the office of district officer for the Thornbury board of guardians, was chairman of the Thornbury school board, and a member of the parish council. He died of cerebral hæmorrhage at his residence, Park House, Thornbury, on 20 May 1911. He was married four times, and left a widow, five sons and four daughters.

Grace, who was in youth a good athlete and fast runner, inherited from his father an aptitude for cricket, and was the first of the family to become famous at the game. On 7 August 1855, at the age of thirteen, he was chosen for his long-stopping to represent 22 of West Gloucestershire v. the All England eleven. William Clarke, the secretary and manager of the All England eleven, acknowledged his promise by presenting him with a bat (W. G. GRACE's *Reminiscences*, pp. 5-6). He first appeared at Lord's in July 1861, playing for South Wales v. M.C.C., and next year he established his position as one of the finest batsmen in England. He first represented the Gentlemen v. Players in July 1862, and played on twelve occasions between 1863 and 1869, and after an interval of seventeen years played for the last time in 1886. He was the only amateur member of George Parr's team to Australia in 1863, but he met with small success. In August 1862, playing as a substitute for the M.C.C. v. the Gentlemen of Kent, at Canterbury, Grace carried his bat through the innings, scoring 192 not out, and captured all ten wickets in the second innings—a double feat only equalled by his brother William in 1886 and by Vye and Edward Walker [q. v. Suppl. II] in 1859. Grace's most notable seasons were those of 1863, of 1864, and of 1865. In 1863, when he made during the season 3000 runs, he, when playing for twenty of the Lansdown Club, Bath, scored 73 against a team which included Tinley, Jackson, and Tarrant, leading bowlers of England. In June 1865, when playing for eighteen of the Lansdown Club at Sydenham Field, Bath, he scored 121 against the United All England XI, 'an epoch-making event, as such achievements against the All England team were almost unheard of' (W. G. GRACE's *Reminiscences*, p. 28). Although after 1865 Grace's fame was overshadowed by that of his younger

brothers, William Gilbert and George Fredrick, he long had a share in most of their triumphs in the matches between the Gentlemen and Players; from 1867 to 1874 the amateurs lost only a single match. The three Graces played for England against the Australians (6-8 Sept. 1880), an incident unparalleled in international cricket history. In August of the same year, at Clifton, Grace scored 65 and 43 (of 191 and 97 respectively) for Gloucestershire v. the Australians. The brilliant play of the Graces raised Gloucestershire to a first-class county in 1869, and champion county in 1876 and 1877. Grace was secretary of the Gloucestershire club from 1871 until 1909.

Quick of eye and limb, Grace was a rapid scorer and forcible hitter. Of unorthodox style, he was one of the first to employ the 'pull' stroke, hitting well-pitched off-balls to the on-boundary with consummate ease. His nerve, judgment, and speed made him 'the best point' ever known, taking the ball almost off the bat (DAFT, *Kings of Cricket*, p. 107). Grace ceased to play in county cricket in 1896, but played almost until his death for the Thornbury team, which he managed and captained for 35 years. In 1910, at the age of seventy, he played for them in some forty matches, meeting with much success as a lob bowler. During his cricketing career he scored over 76,000 runs and took over 12,000 wickets; he had an inexhaustible supply of cricketing recollections, which he would relate with much vivacity. He was a bold rider to hounds.

[W. G. Grace's *Cricketing Reminiscences*, 1899; Daft, *Kings of Cricket*, pp. 106-7 (with portrait, p. 13); K. S. Ranjitsinhji's *Jubilee Book of Cricket*, 1897, pp. 378-80; Haygarth's *Scores and Biographies*, vii. 114-5; *Wisden's Cricketers' Almanack*, 1911, p. 201 (for Thornbury performances); 1912 (for memoir); *Lancet*, 27 May 1911.] W. B. O.

GRAHAM, HENRY GREY (1842-1906), writer on Scottish history, born in the manse of North Berwick, on 3 Oct. 1842, was youngest of eleven children of Robert Balfour Graham, D.D., minister of the established church of North Berwick, by his wife Christina, daughter of Archibald Lawrie, D.D., minister of Loudon. At an early age he showed a great love of reading and spent most of his pocket-money on books. On the death of his father in 1855, his mother took him and her youngest daughter to Edinburgh, where, two years afterwards, he entered the university.

Although showing no absorbing interest in the work of the classes and acquiring no university distinctions, he was a prominent and clever speaker in the debating societies. After being licensed as a probationer of the Church of Scotland in 1865, he was assistant at Bonhill, Dumbartonshire, until he was appointed in March 1868 to the charge of Nenthorn, Berwickshire. Here he made the acquaintance of Alexander Russel [q. v.], editor of the 'Scotsman,' who was accustomed to come to Nenthorn in summer; and he became a frequent contributor to the 'Scotsman' of reviews and leading articles. Of non-theological tendencies and widely tolerant in his opinions, he was, after the death of Dr. Robert Lee [q. v.], of Old Greyfriars church, Edinburgh, asked to become a candidate for the vacancy, but declined. In 1884 he was translated to Hyndland parish church, Glasgow, where he remained till his death on 7 May 1906. In 1878 he married Alice, daughter of Thomas Carlyle of Shawhill, advocate, and left a son, who died in Egypt, and a daughter.

Graham's principal work is 'Social Life of Scotland in the Eighteenth Century' (1899, 2 vols.; 3rd edit. 1906), graphically descriptive as well as learned. His 'Scottish Men of Letters of the Eighteenth Century' (1901; 2nd edit. 1908) is also very readable. For Blackwood's series of 'Foreign Classics' he wrote a monograph on 'Rousseau' (1882); and his 'Literary and Historical Essays' (published posthumously in 1908) include 'Society in France before the Revolution' (lectures at the Royal Institution, Feb. 1901) and a paper on 'Russel of the "Scotsman".'

[*Scotsman*, and *Glasgow Herald*, 8 May 1906; *Graham's Essays*, 1908, pref.] T. F. H.

GRAHAM, THOMAS ALEXANDER FERGUSON (1840-1906), artist, born at Kirkwall on 27 Oct. 1840, was only son of Alexander Spears Graham, writer to the signet and crown chamberlain of Orkney (like his father before him), by his wife Eliza Stirling. About 1850, some time after their father's death, Thomas and an only sister went to Edinburgh to live with their grandmother.

The boy's artistic instincts asserted themselves early. When little more than fourteen he was on the recommendation of the painter James Drummond [q. v.] enrolled (9 Jan. 1855) a student of the Trustees Academy. He proved an apt pupil in the talented group of McTaggart, Orchardson, Pettie, Chalmers, and the

rest, who gathered round the recently appointed master, Robert Scott Lauder [q. v.]. Although he was the youngest of the coterie, Graham's talent and personal charm gave him a prominent place in it. He began to exhibit at the Royal Scottish Academy in 1859, but in 1863 he joined his friends Orchardson and Pettie in London. With Mr. C. E. Johnston, another Edinburgh-trained artist, the three shared a house in Fitzroy Square. Subsequently he occupied studios in Gloucester Road and Delancy Street, settling for good in 1886 at 96 Fellows Road, South Hampstead.

Save John MacWhirter, Graham spent more time abroad than any of his associates. As early as 1860 he went to Paris with McTaggart and Pettie, and two years later he paid, with Pettie and George Paul Chalmers, the first of several visits to Brittany, which supplied many pleasing and congenial subjects. In 1864 he was in Venice, where he did some charming sketches, and about 1885 he paid a prolonged visit to Morocco, then little exploited by artists, where he penetrated to Fez, and painted 'Kismet' (now in the Dundee Gallery) and other oriental subjects. But the picturesque Fifeshire fishing villages, the little seaports on the Moray Firth, and the wild west coast of Scotland were perhaps his favourite sketching grounds.

Graham's earlier pictures engagingly combine quaint naturalism and imaginative insight. 'A Young Bohemian' (1864), in the National Gallery of Scotland, is a delightful example of his work at that time. Later his handling broadened and his feeling for light and movement increased, and in pictures such as 'The Clang of the Wooden Schoon,' 'The Passing Salute,' or 'The Siren' he attained much rhythmic beauty of design, great charm of high-pitched and opalescent colour, and a fine sense of atmosphere. And, if lower in tone and more sombre in colour, 'The Last of the Boats' and a few other dramatic pictures of the sea are, in their different mood, equally successful. His art, however, was too sensitive and refined to command wide attention, and, owing to extreme fastidiousness, he was a somewhat uncertain executant. The only distinction conferred upon him was honorary membership of the Royal Scottish Academy, which he received in 1883. Latterly he gave much of his time to portraiture, in which his finest gifts had little scope. His most successful pictures rank with the best achievements of his school.

He died unmarried while on a visit to

Edinburgh on 24 Dec. 1906. 'Tom' Graham, whose winning manners and brilliant conversational powers made him a great favourite with his friends, was exceptionally handsome. Excellent portraits of him by himself and by Orchardson and Pettie belong to his sister, and he served as model for these two artists on several occasions, notably in 'The First Cloud' by the former, and in 'The Jacobites' by the latter.

[Private information; personal knowledge; exhibition catalogues; Report of R.S.A. for 1907; Scotsman, 25 Dec. 1906; Sir W. Armstrong's Scottish Painters, 1887; J. L. Caw's Scottish Painting, 1908.] J. L. C.

GRAHAM, WILLIAM (1839-1911), philosopher and political economist, born at Saintfield, co. Down, in 1839, was a younger son of Alexander Graham, farmer and horse-dealer, by his wife Maria Crawford, a descendant of a Scottish presbyterian family which came to Ireland in Charles II's time to escape religious persecution. The father died poor while his son was very young, and it fell to the mother, a woman of spirit and intelligence, to bring up the children—four sons and a daughter—amid many hardships. William obtained a foundation scholarship at the Educational Institute, Dundalk, and being well grounded there in mathematics and English was soon engaged as a teacher in the royal school at Banagher, where he remained till he entered Trinity College, Dublin, in July 1860.

At Trinity College Graham won distinction in mathematics, philosophy, and English prose composition. During most of his college course he worked outside the university as headmaster successively of two important schools in or near Dublin. But a foundation scholarship in mathematics which he won in 1865 gave him an annual stipend together with free rooms and commons. He graduated B.A. in 1867, and thereupon engaged in coaching students in mathematics and especially philosophy. His success as private tutor enabled him to give up his school work. He devoted much time to the study of philosophy, and in 1872 he published his first book, 'Idealism, an Essay Metaphysical and Critical,' a vindication of Berkeley against Hamilton and the Scottish school.

Graham, who had proceeded M.A. in 1870, left Dublin in 1873 to become private secretary to Mitchell Henry, M.P. [q. v. Suppl. II], but resigned the post in 1874 and settled in London. In 1875 he was appointed lecturer on mathematics

at St. Bartholomew's Hospital, and he engaged at the same time in literary and tutorial work; but the best part of his time for some years was given to the preparation of the most important of his books, 'The Creed of Science,' which appeared in 1881. This is a work of great freshness and power, discussing how far the new scientific doctrines of the conservation of energy, evolution, and natural selection necessitated a revision of the accepted theories in philosophy, theology, and ethics. It was well received, running to a second edition in 1884, and it evoked the admiration of Darwin, Gladstone, and Archbishop Trench. In bigoted circles Graham's argument was foolishly credited with atheistic tendencies. This wholly unfounded suspicion caused the Irish chief secretary, Sir Michael Hicks Beach, to withdraw an offer which he made to Graham of an assistant commissionership of intermediate education in Oct. 1886. In London Graham was soon a welcome figure in the best intellectual society. His many friends there included men of the eminence of Carlyle, Lecky, and Froude. Carlyle wrote of finding in him 'a force of insight and a loyalty to what is true, which greatly distinguish him from common, even from highly educated and what are called ingenious and clever men.' One of his strong points was his conversational gift. Professor Mahaffy wrote of him at the time of his death, 'His highest genius was undoubtedly for intellectual recreation. In this he had few equals' (*Athenæum*, 25 Nov. 1911).

Meanwhile his increasing reputation had led to his election in 1882 to the chair of jurisprudence and political economy in Queen's College, Belfast. This post he held till 1909, when ill-health compelled his retirement. At Belfast he enjoyed the enthusiastic regard of a long succession of pupils. He was professor of law for ten years before he joined the legal profession. In 1892 he was called to the bar at the Inner Temple without any intention of practising. His duties at Belfast allowed him still to reside most of the year in London, and in his leisure he produced a succession of works on political or economic subjects. 'Social Problems' came out in 1886, 'Socialism New and Old' in 1890, 'English Political Philosophy from Hobbes to Maine' in 1899, and 'Free Trade and the Empire' in 1904. He also read a paper on trusts to the British Association at Belfast in 1902, and was a frequent

contributor to the 'Nineteenth Century,' 'Contemporary Review,' and 'Economic Journal.' He was for many years examiner in political economy and also in philosophy for the Indian civil service and the Royal University of Ireland, and in English for the Irish intermediate education department.

He received the honorary degree of Litt.D. from Trinity College, Dublin, in 1905. His health began to fail in 1907, and he died unmarried in a nursing home in Dublin on 19 Nov. 1911, being buried in Mount Jerome cemetery there.

[Graham's Autobiographical MS. notes; Irish Times, 20 Nov. 1911; personal knowledge.] J. R.

GRANT, GEORGE MONRO (1835-1902), principal of Queen's University, Kingston, Canada, born on 22 Dec. 1835 at Albion Mines, Pictou County, Nova Scotia, was third child of James Grant, who, springing from a long line of Scottish farmers, emigrated from Banffshire in 1826, and married five years later Mary Monro of Inverness.

Owing to the accident of losing his right hand at the age of seven, the boy was brought up to be a scholar. At Pictou Academy he gained in 1853 a bursary tenable at either Glasgow or Edinburgh University. He chose Glasgow, and seven years later, on the completion of a distinguished course, he received his testamur in theology, and was ordained (Dec. 1860) by the presbytery of Glasgow as a missionary for Nova Scotia. He declined an invitation from Norman Macleod [q. v.] to remain in Glasgow as his assistant.

After occupying various mission-fields in his native province and in Prince Edward Island, he accepted a call in 1863 to the pulpit of St. Matthew's Church, the leading Church of Scotland church in Halifax. Grant, who saw the need of a native trained ministry for the established presbyterian church in Nova Scotia, struggled without success to establish a theological hall at Halifax, by way of supplement to Dalhousie College, which largely through his efforts was reorganised as a non-sectarian institution in 1863. Meanwhile he directed his efforts to the union of the presbyterian church throughout Canada. The federation of the provinces in 1867, which Grant eagerly supported, gave an impulse to the spirit of union, and 15 June 1875 saw the first General Assembly of the united church.

In 1877 Grant, who had for some years identified himself with educational reform,

became principal of Queen's University, Kingston, Ontario, a presbyterian foundation. He received the honorary degree of D.D. from Glasgow University in the same year. Queen's University was at the time in financial difficulties, and he undertook two strenuous campaigns in 1878 and 1887 to obtain increased endowment from private sources. The immediate financial situation saved, Grant concentrated his energies upon securing adequate recognition and aid from the provincial legislature; but he was faced by a prejudice against state-aided denominational colleges, which was encouraged by the claim of the University of Toronto to be the only properly constituted provincial university. In 1887 Queen's University rejected federation with Toronto. But Grant's political influence steadily grew, and he secured for his university in 1893 a state-endowed school of mines, which subsequently became the faculty of practical science in the university. In 1898 Grant sought to sever the tie between the presbyterian church and the arts faculty of Queen's. In 1900 he forced his views upon the church assembly, but he died two years later, and the assembly of 1903 reversed his policy, which was not enforced till June 1911. Grant's preponderating influence in education led to an invitation (which was refused) from Sir Oliver Mowat [q. v. Suppl. II] in 1883 to resign his principalship and accept the portfolio of education in his cabinet. Grant held that the education administration in the province should be wholly withdrawn from politics.

Grant acquired an intimate knowledge of the country, having twice traversed the continent. In 1872 he accompanied Mr. (afterwards Sir) Sandford Fleming on his preliminary survey of a route for the Canadian Pacific Railway, and in 1883, again with Mr. Fleming, he examined a route through the mountains. The first journey Grant recorded in 'Ocean to Ocean' (1873), and the impressions of both journeys are merged in four articles contributed to 'Scribner's Magazine' in 1880, and in 'Picturesque Canada,' a publication which he edited in 1884.

To the press and to periodicals Grant frequently communicated his views on public questions. His political comments in the 'Queen's University Quarterly' were widely read. He powerfully supported the new imperialism, and urged on Canada her imperial responsibilities. He became president of the Imperial Federation

League, Ontario, in 1889. To religious literature Grant contributed one book of importance, 'Religions of the World' (Edinburgh 1894; 2nd edit., revised and enlarged, 1895). This has been translated into many European languages and into Japanese.

Grant showed his courage and independence at the close of his life in his trenchant criticism of the temperance party, which aimed at the total prohibition of the liquor traffic. To restore his health, which was impaired by his endowment campaign of 1887, Grant made a tour of the world in 1888. In 1889 he was elected moderator of the general assembly of the presbyterian church in Canada, and became LL.D. of Dalhousie University in 1892. In 1891 he was elected president of the Royal Society of Canada. He was president of the St. Andrew's Society, Kingston, from 1894 to 1896. In 1901 he was created C.M.G. He died at Kingston on 10 May 1902. He was buried in Cataraqui cemetery in the same town.

On 7 May 1867 Grant married Jessie, eldest daughter of William Lawson of Halifax, Nova Scotia. His only surviving child, William Lawson Grant, is professor of history in Queen's University, Kingston. A portrait of Grant by Robert Harris (1889) is in the Convocation Hall of Queen's University, Kingston; a bust by Hamilton McCarthy (1891) is in the library and senate room there.

[Life by W. L. Grant and Frederick Hamilton, Toronto, 1904, and Edinburgh and London 1905.] P. E.

GRANT, SIR ROBERT (1837-1904), lieutenant-general, royal engineers, born at Malabar Hill, Bombay, on 10 Aug. 1837, was younger son of Sir Robert Grant [q. v.], governor of Bombay, and was nephew of Lord Glenelg [q. v.]. His mother was Margaret (d. 1885), only daughter of Sir David Davidson of Cantray, Nairnshire, N.B., who married as her second husband Lord Josceline William Percy, M.P., second son of George fifth duke of Northumberland.

Robert was educated at Harrow with his elder brother Charles [see below]. When he was seventeen he passed first in a public competitive examination for vacancies in the royal artillery and the royal engineers caused by the Crimean war, and was gazetted second lieutenant in the royal engineers on 23 Oct. 1854, becoming first lieutenant on 13 Dec. of the same year.

After six months' training at Chatham Grant was sent to Scotland. In February

1857 he was transferred to the Jamaica command in the West Indies, and at the end of 1858 he served on the staff as fort adjutant at Belise in British Honduras. He passed first in the examination for the Staff College, just established; but after a few months there (Jan.-May 1859) he was aide-de-camp to Lieut.-general Sir William Fenwick Williams [q. v.], the commander of the forces in North America for six years. On 8 Aug. 1860 he was promoted second captain. He was at home for the final examination at the Staff College, in which he again easily passed first, despite his absence from the classes, and from January to June 1861 he was attached to the cavalry and artillery at Aldershot.

Finally returning from Canada in June 1865, Grant did duty at Chatham, Dover, and Portsmouth, and was promoted first captain on 10 July 1867 and major on 5 July 1872. From 1 Jan. 1871 to 1877 he was deputy assistant adjutant-general for royal engineers at the war office, and from 1877 was in command of the royal engineers troops, consisting of the pontoon, telegraph, equipment and depot units at Aldershot. He was promoted lieut.-colonel on 1 July 1878. In May 1880 he was appointed commanding royal engineer of the Plymouth subdistrict, and on 31 Dec. 1881 commanding royal engineer of the Woolwich district. He was promoted colonel in the army on 1 July 1882, and a year later was placed on half pay. He remained unemployed until 5 May 1884, when he was given the R.E. command in Scotland, with the rank of colonel on the staff.

On 20 March 1885 he left Edinburgh suddenly for Egypt to join Lord Wolseley, who had telegraphed for his services, as colonel on the staff and commanding royal engineer with the Nile expeditionary force. He served with the headquarters staff and afterwards in command of the Abu Fatmeh district during the evacuation, but he was taken seriously ill with fever and was invalided home in August. For his services he was mentioned in despatches of 13 June 1885 (*Lond. Gazette*, 25 Aug. 1885). Not anticipating so speedy a termination to the campaign, the authorities had filled up his appointment in Scotland and he had to wait nearly a year on half pay.

On 1 July 1886 Grant was appointed deputy adjutant-general for royal engineers at the war office. On 25 May 1889 he was created C.B., military division, and on 23 Oct. made a temporary major-general.

Before he had quite completed his five years as deputy adjutant-general Grant was appointed to the important post of inspector-general of fortifications (18 April 1891), with the temporary rank of lieut.-general, dated 29 April 1891. He succeeded to the establishment of major-generals on 9 May 1891, and became lieut.-general on 4 June 1897. As inspector-general of fortifications Grant was an *ex-officio* member of the joint naval and military committee on defence, and president of the colonial defence committee. During his term of office important works of defence and of barrack construction were carried out, under the loan for defences and military works loan. His services were so highly valued that they were retained for two years beyond the usual term. He was promoted K.C.B. on 20 May 1896. On leaving the war office (17 April 1898) Grant's work was highly commended by the secretaries of state for war and the colonies, and he was awarded a distinguished service pension of 100*l.* a year. He was given the G.C.B. on 26 June 1902, and retired from the service on 28 March 1903. His health was failing, and he died on 8 Jan. 1904 at his residence, 14 Granville Place, Portman Square, London, and was buried in Kensal Green cemetery.

Always cool and self-contained, Grant was gifted with a sure judgment and a retentive memory. A portrait in oils by C. Lutyens, painted in 1897, hangs in the R.E. officers' mess at Aldershot, and a replica is in Lady Grant's possession. She has also a portrait in oils of Sir Robert Grant by Henty, painted in 1887. He married in London, on 24 Nov. 1875, Victoria Alexandrina, daughter of John Cotes of Woodcote Hall, Shropshire, and widow of T. Owen of Condoval Hall in the same county. There were three children of the marriage, a daughter who died young, and twin sons, both in the army, of whom the younger, Robert Josceline, was killed at Spion Kop on 24 Jan. 1900.

SIR CHARLES GRANT (1836-1903), elder brother of Sir Robert Grant, was born in 1836, and educated at Harrow, Trinity College, Cambridge, and at Haileybury. He entered the Bengal civil service in 1858, was appointed a commissioner of the central provinces in 1870, and acting chief commissioner in 1879, when he became an additional member of the governor-general's council. In 1880 he was acting secretary to the government of India for the home, revenue, and agricultural departments, and in 1881 was appointed foreign secretary to the government of India. He

was created C.S.I. in 1881, and in 1885 K.C.S.I. on retirement. He died suddenly in London on 10 April 1903. He married: (1) in 1872 Ellen (*d.* 1885), daughter of the Rt. Hon. Henry Baillie of Redcastle, N.B.; and (2) in 1890 Lady Florence Lucia, daughter of Admiral Sir Edward Alfred John Harris, and sister of the fourth earl of Malmesbury. She was raised to the rank of an earl's daughter in 1890. Sir Charles Grant edited the 'Central Provinces Gazetteer' (2nd edit. 1870).

[War Office Records; Royal Engineers Records; The Times, 13 April 1903 and 9 and 10 Jan. 1904; Royal Engineers Journals, February 1904.] R. H. V.

GRANT DUFF, SIR MOUNTSTUART ELPHINSTONE (1829-1906), statesman and author, elder son of James Grant Duff [q. v.] by his wife Jane Catherine, daughter of Sir Whitelaw Ainslie [q. v.], was born at Eden, Aberdeenshire, on 21 Feb. 1829. He was educated at Edinburgh Academy, the Grange School, and at Balliol College, Oxford (1847-50). Among his contemporary friends at Oxford were Henry Smith, Henry Oxenham, Charles Pearson, Goldwin Smith, Charles Parker, and John Coleridge Patteson. He graduated B.A. in 1850 with a second class in the final classical school, and proceeded M.A. in 1853. On leaving Oxford he settled in London and read for the bar, and in 1854 passed with honours, second to James Fitzjames (afterwards Mr. Justice) Stephen, who later became one of his most intimate friends for life, in the LL.B. examination of London University. In the same year (17 Nov.) he was called to the bar by the Inner Temple, and while a pupil in the chambers of William Ventris (afterwards Lord) Field [q. v. Suppl. II] joined the Midland circuit, and obtained his first brief because he was the only person present who could speak German. He was one of the earliest contributors to the 'Saturday Review,' and lectured at the Working Men's College, of which Frederick Denison Maurice was first principal.

In December 1857 Grant Duff was returned as the liberal member for the Elgin Burghs, and held this seat without intermission until he was appointed governor of Madras in 1881. In 1860 and in each subsequent year he addressed to his constituents an elaborate speech, mainly on foreign policy, and he came to speak on this topic with recognised authority. His knowledge of the subject, largely derived from intimate conversation with foreigners

of distinction in their own languages, was singularly wide and accurate, and his treatment of it entirely free from political acerbity. These speeches, which were from time to time re-published collectively, possess historical interest.

When Gladstone formed his first ministry in 1868, Grant Duff was appointed (8 Dec.) under-secretary of state for India, and he retained the office until the ministry finally resigned in 1874. In that year he paid a first visit to India. In 1880 he joined the second Gladstone ministry as under-secretary for the colonies, being sworn a member of the privy council on 8 May. It is probable that neither the domestic nor the colonial policy of the government during the next twelve months was supported by Grant Duff with unreserved enthusiasm, and on 26 June 1881 he accepted without hesitation the offer of the governorship of Madras, which brought to an end his twenty-four years' unbroken representation of his constituency in the House of Commons.

The presidency of Madras during the period of Grant Duff's government was free from critical events, but he devoted himself strenuously and successfully to his administrative duties, and the minutes in which from time to time he recorded and commented on the course of public affairs were models alike of assiduity and of style. Sir Louis Mallet [q. v.], under-secretary for India, commented upon the receipt of the last he wrote, 'I doubt whether any previous governor has left behind so able and complete a record.' Grant Duff left Madras in November 1886, and after making some stay in Syria returned to England in the spring of 1887. In March he was invested at Windsor with the G.C.S.I. He had been made C.I.E. in 1881.

On settling again in England Grant Duff made no effort to re-enter political life. The home rule controversy had embittered politics in his absence, and he had neither the requisite physical robustness nor any relish for violent conflict. A scholar, a calmly rational politician, and a man of almost dainty refinement both physically and morally, he devoted himself thenceforward to study, to authorship, and to the cultivation of the social amenities in which his experience was probably as wide and as remarkable as that of any one of his contemporaries. He was in the habit of meeting or corresponding with almost everyone of any eminence in social life in England, and with many similar persons abroad. He was a member of almost every small

social club of the highest class. In February 1858, the month that he first took his seat in parliament, he was elected a member of the 'Cosmopolitan' and of the Athenæum. In 1889 he joined 'The Club,' and for some years before his death was its treasurer—'the only permanent official, and the guardian of its records.' He also belonged to the Literary Society (from 1872) and Grillion's (from 1889), and was in 1866 the founder of the Breakfast Club, and the most assiduous attendant at its meetings.

Grant Duff published numerous articles, essays, and memoirs, a volume of original verse (printed privately), and an anthology of the Victorian poets. All of them show learning, cultivation, and style; but the principal literary work he left behind him is his 'Notes from a Diary.' He began a diary in 1851, and from 1873 kept it with the intention that the bulk of it should be published. He published the first two volumes (1851-72) in 1897; further sets of two volumes each followed in 1898, 1899, 1900, 1901, 1904, and 1905. The fourteen volumes bring the record down to 23 Jan. 1901, when Grant Duff kissed hands as a privy councillor on the accession of King Edward VII. He declares in his preface to the first two volumes that his object has been to make it 'the lightest of light reading,' and the most 'good-natured' of books. The 'Notes' contain practically no politics, but are a purely personal record of the people he met, and the things they said. The result is a collection of excellent stories and memorable sayings, which form a valuable contribution to social history.

Grant Duff travelled much. He visited at different times Coburg, Dresden, Russia, Spain, Darmstadt (during the war of 1870), Athens, the Troad, India (seven years before his appointment to Madras), Syria (where he spent a winter at Haifa in a house lent to him by Laurence Oliphant), and Bucharest. In all these places he frequented the society of rulers, ambassadors, authors, and other remarkable people. He received from M. Ollivier a full and confidential account of the political events immediately preceding the Franco-Prussian war. He met Garibaldi in the height of his fame, and was for many years on terms of friendship with the Empress Frederick of Germany. From 1866 to 1872 he filled for two consecutive terms the office of lord rector of Aberdeen University. From 1889 to 1893 he was president of the Royal Geographical Society, and from 1892 to 1899 was president of the Royal Historical Society. He was

elected F.R.S. in 1901, and was nominated a Crown trustee of the British Museum in 1903.

In person Grant Duff was slight, delicately made, and habitually gentle in speech and manner, though he would upon occasion express himself with great animation. He suffered through life from indifferent health, and in particular from astigmatic vision to such an extent that it was extremely difficult for him to read or write for himself.

He was the tenant for considerable periods of Hampden House, Berkshire, York House, Twickenham, and Knebworth House. Finally he bought Lexden Park, near Colchester, and in each of these houses he practised a wide hospitality. He died at his London house on Chelsea Embankment on 12 Jan. 1906, and was buried at Elgin cathedral.

Grant Duff married on 13 April 1859 Anna Julia, only daughter of Edward Webster of North Lodge, Ealing. By her he had four sons and four daughters. His elder sons, Arthur and Evelyn, are respectively minister at Dresden and consul-general, with the rank of minister, at Buda-Pest. Grant Duff's portrait in crayons by Henry T. Wells, drawn for reproduction for Grillion's Club, is in the possession of Lady Grant Duff at Earl Soham Grange, Framlingham.

Grant Duff published, besides 'Notes from a Diary': 1. 'Studies of European Politics,' 1866. 2. 'A Political Survey,' 1868. 3. 'Elgin Speeches,' Edinburgh, 1871. 4. 'Notes on an Indian Journey,' 1876. 5. 'Miscellanies, Political and Literary,' 1878. 6. 'Memoir of Sir Henry Maine,' 1892. 7. 'Ernest Renan,' 1893-8. 8. 'Memoir of Lord De Tabley,' 1899. 9. 'A Victorian Anthology,' 1902. 10. 'Out of the Past: some Biographical Essays,' 2 vols. 1903. 11. 'Gems from a Victorian Anthology,' 1904.

[Notes from a Diary; Banffshire Herald, 16 Jan. 1906; The Times, 13 Jan. 1906; Burke's Landed Gentry; private information; personal knowledge.] H. S.

GRANTHAM, SIR WILLIAM (1835-1911), judge, born at Lewes on 23 Oct. 1835, was second son of George Grantham of Barcombe Place, Sussex, by his wife Sarah, daughter of William Verrall of Southower Manor, Lewes. He was educated at King's College School, London, and was entered a student of the Inner Temple on 30 April 1860. A pupil in the chambers of James (afterwards Lord) Hannen [q. v. Suppl. I],

he obtained in January 1863 the studentship given by the council of legal education, and was called to the bar on the 26th of the same month. Choosing the south-eastern circuit, a good local connection in Sussex aided him at the start, and his pleasant manner, combined with courage, pertinacity, and great industry, soon secured him a steady practice. He obtained the reputation of being 'a very useful junior in an action on a builder's account, in a running-down case, in a compensation case, and especially in disputes in which a combined knowledge of law and horseflesh was desirable.' He took silk on 13 Feb. 1877, and was made a bencher of his Inn on 30 April 1880, serving the office of treasurer in 1904.

As a leader Grantham achieved considerable success on circuit, but in London he failed to make any conspicuous mark. His real and absorbing interest was in politics; a conservative of the most orthodox school, gifted with an excellent platform manner and considerable rhetorical power, Grantham took a prominent part in the conversion to tory democracy of the working-men of London and the home counties. At the general election of February 1874 he was returned together with James Watney for East Surrey by a large majority, which he substantially increased in April 1880. After the redistribution of seats in 1885 he was selected to contest the borough of Croydon, carved out of his old constituency, and although the seat was regarded by the local conservatives as a forlorn hope, he defeated his liberal opponent, Mr. Jabez Balfour, by over 1000 votes. There was no more accomplished or successful electioneer in the south of England, and his services were widely in request as a platform speaker. By the death of his elder brother George in 1880 he had become squire of Barcombe and lord of the manor of Camois Court, a position which gave him additional prestige in 'the country party.' He became deputy chairman and eventually chairman of the East Sussex quarter sessions. In parliament he was a fairly frequent speaker, with a special mission to unmask and defeat the machinations of Gladstone; he was conspicuous among the militant spirits on the conservative benches. In January 1886, before he had the opportunity of taking his seat on his re-election for Croydon, he was made a judge of the Queen's Bench Division, in succession to Sir Henry Lopes [q. v. Suppl. I], and was knighted. It was Lord Halsbury's first

judicial appointment, and there were many conflicting claims among conservative lawyers. In 'Whitaker's Almanack' for 1886 the name of Sir John Gorst, then solicitor-general, was printed among the judges instead of that of Grantham.

On the bench he showed himself indefatigable and painstaking, and he never failed to clear his list on circuit. He was shrewd in his judgment of character, had a varied assortment of general knowledge, and his manly, downright ways made a favourable impression on juries. He had a competent knowledge of law for the ordinary work of *nisi prius*, and his industry and energy made a strong contrast to the methods of some of his colleagues. But he lacked the breadth of mind and the grasp of intellect necessary for trying great and complicated issues, and he was a very unsatisfactory judge in commercial cases. Among his failings was an inability to refrain from perpetual comment; his 'obiter dicta' brought him into collision at one time or another with nearly every class of the community—deans, publicans, chairmen of quarter sessions, the council of the bar, the Durham pitmen, his brother judges. His love of talking was not conducive to the dignity of the bench, and towards the close of his career he was given strong hints in the press that the public interest would be best served by his retirement.

In the spring of 1906 Grantham found himself on the rota of judges appointed to try election petitions, a task for which his strong and somewhat intemperate political views rendered him peculiarly unfit. His decisions at Bodmin, at Maidstone, and at Great Yarmouth, all of which favoured the conservative claims to the seats, caused much dissatisfaction. On 6 July 1906 a motion to take into consideration his proceedings at Yarmouth was introduced into the House of Commons by Mr. Swift MacNeill, nationalist M.P. for South Donegal. Grantham was severely criticised and as strongly defended. At the suggestion of the prime minister, Sir Henry Campbell-Bannerman, the house declined 'to take the first step in a course which must lead to nothing less than the removal of the judge from the bench.' Grantham felt the stigma deeply, but was unwise enough to revive the memory of the debate, some five years later (7 Feb. 1911), by an indiscreet speech to the grand jury at Liverpool, which brought upon him in the House of Commons from Mr. Asquith, the prime minister, the severest rebuke which has

ever been dealt to an English judge by a minister of the crown. Yet Grantham was perfectly sincere in his belief that in the discharge of his office he was uninfluenced by political partiality, nor was Mr. Arthur Balfour exceeding the truth when he declared in the course of the 1906 debate that 'a more transparently natural candid man than Mr. Justice Grantham never exercised judicial functions.'

A fine model of the English country gentleman, a liberal landlord, always ready to champion the cause of his poorer neighbours against local boards and the red tape of officialdom, Grantham was devoted to all out-of-door sports; he was a notable critic of horseflesh, was one of the founders of the Pegasus Club, and used to act as judge at the bar point to point races. An enthusiastic volunteer, he would sometimes appear at the 'Inns of Court' dinners in the scarlet coat, which had descended to him from an ancestor, of the old Bloomsbury Association or 'Devil's Own.' In the long vacation of 1910 he paid a visit to Canada, and won all hearts by his picturesque personality and outspoken opinions. Though he had sat on the bench for upwards of a quarter of a century, and had been for some years the senior puisne, his physical powers showed no sign of decay when he succumbed to a sharp attack of pneumonia, dying at his house in Eaton Square on 30 Nov. 1911. He was buried at Barcombe.

He married on 16 Feb. 1865 Emma, eldest daughter of Richard Wilson of Chiddingfold, Sussex, who survived him; there was issue of the marriage two sons and five daughters. A portrait of Grantham by A. Stuart-Wortley is at Barcombe; an earlier oil painting by Bernard Lucas is in the possession of his younger son, Mr. F. W. Grantham.

[The Times, 1 Dec. 1911: Burke's Landed Gentry; Foster's Men at the Bar; Hansard, 4th series, clx. 370, 5th series, xxii. 366; personal knowledge.] J. B. A.

GRAY, BENJAMIN KIRKMAN (1862-1907), economist, son of Benjamin Gray, congregational minister, by his wife Emma Jane Kirkman, was born on 11 Aug. 1862 at Blandford, Dorset. He was educated privately by his father, and read omnivorously on his own account. In 1876 he entered a London warehouse, but found the work distasteful. His father vetoed, in 1882, a plan which he had formed of emigrating, and from 1883 to 1886 he taught in private schools, at the same time

eagerly pursuing his own studies. Of sensitive and self-centred temperament, he interested himself early in social questions.

In September 1886 Gray entered New College, London, to prepare for the congregational ministry. He paid much attention to economics and won the Ricardo economic scholarship at University College. In 1892 he went to Leeds to work under the Rev. R. Westrope at Belgrave (congregational) Chapel. But congregational orthodoxy dissatisfied him, and in 1894 he joined the Unitarians. He served as unitarian minister at Warwick from that year till 1897. From 1898 to 1902 he was in London, engaged in social work at the Bell Street Mission, Edgware Road, and studying at first hand the economic problem of philanthropy. His views took a strong socialistic bent, and he joined the Independent Labour Party. But a breakdown in health soon compelled his retirement from active work. Removing to Hampstead he devoted himself to research into the history of philanthropic movements in England. In 1905 he lectured at the London School of Economics on the philanthropy of the eighteenth century. He died of angina pectoris on 23 June 1907, at Letchworth, whither he had been drawn by his interest in the social experiment of the newly established Garden City. His ashes were buried there after cremation. In 1898 Gray married Miss Eleanor Stone, who edited his literary remains.

'The History of English Philanthropy from the Dissolution of the Monasteries to the First Census' (1905) and 'Philanthropy and the State' (published posthumously, 1910) are substantial embodiments of much original research and thought. Gray traces through the social history of the nineteenth century a uniform tendency, whereby the effort of the individual is replaced by that of the State. In spite of his strong socialist convictions he writes with scholarly restraint and fairness, and throws light on tangled conditions of contemporary life.

[A Modern Humanist: miscellaneous papers by B. Kirkman Gray, with a memoir by H. B. Binns and Clementina Black, 1910.]

G. S. W.

GREEN, SAMUEL GOSNELL (1822-1905), baptist minister and bibliophile, born at Falmouth on 20 Dec. 1822, was eldest son of the family of five sons and four daughters of Samuel Green, baptist minister, of Falmouth and afterwards of Thrapston and London, by his wife Eliza, daughter of Benjamin Lepard, of cultured Huguenot descent. From 1824 to 1834 Green was with his

family at Thrapston, and when they moved to Walworth in 1834 he was sent to a private school at Camberwell, where his literary tastes were encouraged. After leaving school, and until the age of nineteen, he worked in the printing-office of John Haddon in Finsbury, and then acted as tutor in private schools at Cambridge and Saffron Walden.

In 1840 he entered Stepney College (now Regent's Park College) to prepare for the baptist ministry, and graduated B.A. in the University of London in 1843. After ministerial posts at High Wycombe in 1844 and at Taunton in 1847, he became, in 1851, classical and mathematical tutor at Horton (now Rawdon) College, Bradford, and was from 1863 to 1876 president there. He impressed his students as a scholar of broad sympathies and a stimulating teacher (PROF. MEDLEY in *Centenary of Rawdon College*, 1904; REV. JAMES STUART in *Watford Observer*, Sept. 1905).

As a preacher Green proved a special favourite with children. Long connected with the Sunday School Union, where he succeeded his father as editor of the monthly 'Notes on Lessons,' he was elected in 1894 a vice-president of the union. His addresses and lectures to children on the Bible and his contributions to the 'Union Magazine' were afterwards separately published under various titles. He also wrote for children 'The Written Word' (12mo. 1871), a book of merit; 'The Apostle Peter' (1873; 3rd edit. 1883), and 'The Kingdoms of Israel and Judah' (2 vols. 1876-7). As the first Ridley lecturer at Regent's Park College in 1883, Green delivered the substance of his excellent 'Christian Ministry to the Young.'

In 1876 Green came to London to serve as editor, and in 1881 as editorial secretary, of the Religious Tract Society. Thenceforth his main energies were devoted to literary work, in which towards the end of his long life he was aided by his elder son, Prof. S. W. Green. His most important work was his 'Handbook to the Grammar of the Greek Testament,' published in 1870 (revised editions in 1880, 1885, 1892, and 1904), which was followed in 1894 by a primer which had also a wide circulation. A companion volume on the Hebrew of the Old Testament appeared in 1901. In 1898 he published his Angus lecture on 'The Christian Creed and the Creeds of Christendom'; in 1903 'A Handbook of Church History,' a compact and comprehensive manual; in 1904 a revised edition of Dr. Angus's 'Bible Handbook' (new and posthumous edition 1907), bringing

that useful work up to date. In a revised edition of the English Bible (1877), designed by Joseph Gurney (1804-1879) [q. v.], Green, with Dr. George Andrew Jacob, headmaster of Christ's Hospital (1853-68), was responsible for the New Testament. For the Religious Tract Society's series of 'Pen and Pencil Sketches' he wrote wholly or in part 'Pictures from England' (1879 and 1889), 'France' (1878), 'Bible Lands' (1879), 'Germany' (1880), 'Scotland' (1883; new edit. 1886), and 'Italy' (1885).

Green was president of the Baptist Union at Portsmouth in 1895, and delivered from the chair two addresses, which were published. He also read a paper on 'Hymnody in our Churches,' a subject in which he was deeply interested. For John Rylands (1801-1888) [q. v.] of Manchester he printed for private circulation an admirable anthology, 'Hymns of the Church Universal' (1885), and was chairman of the editorial committee of the 'Baptist Hymnal.'

An appreciative and widely read critic of secular literature, he was the adviser of John Rylands's widow, of Stretford near Manchester, in various literary and benevolent schemes from the time of her husband's death in 1888. He and his third son, J. Arnold Green, assisted Mrs. Rylands in the collection of the John Rylands Library, Manchester, which was opened in 1899.

In 1900 Green received the honorary degree of D.D. from the University of St. Andrews. Retaining his vitality to the last, he died at Streatham on 15 Sept. 1905, and was buried in Norwood cemetery. He married in October 1848, at Abingdon, Berkshire, Elizabeth Leader, eldest daughter of James Collier; she died on 23 May 1905, having issue three sons and one daughter. His third son, J. Arnold Green, born on 23 Aug. 1860, died on 13 Sept. 1907.

A presentation portrait in oils by H. A. Olivier, subscribed for in 1900 by students of Rawdon and other friends, was handed by Green to the college at its annual meeting in June 1905.

Besides the works mentioned and other smaller religious and educational works, Green published: 1. 'Religious Hindrances to Religious Revival,' 1845. 2. 'The Working-Classes of Great Britain, their Present Condition, &c.,' 1850. 3. 'Clerical Subscription and National Morality' (Bicentenary Lectures), 1862. 4. 'What do I believe?' 12mo. 1880; Welsh translation, 1882. 5. 'The Psalms of David and Modern Criticism,' 1893. 6. 'The Story of the Religious Tract Society,' 1899.

[Memoir by Rev. James Stuart in the *Watford Observer*, Sept. 1905, reprinted and extended in the *Baptist Handbook*, 1906; *Christian World*, 21 Sept. 1905; *Athenæum*, 23 Sept. 1905, p. 403; personal information kindly supplied by Professor S. W. Green.] C. W.

GREENAWAY, CATHERINE or KATE (1846-1901), artist, was born at Cavendish Street, Hoxton, on 17 March 1846, being the second daughter of John Greenaway, a draughtsman and engraver on wood, long connected with the earlier days of the 'Illustrated London News' and 'Punch.' Her mother's maiden name was Elizabeth Jones. Early residence at a farmhouse at Rolleston, a Nottinghamshire village, served to nourish and confirm her inborn love of art; and she early developed that taste for childhood and cherry blossoms which became, as it were, her fitting pictorial environment. As a girl she studied drawing in various places, eventually joining the art school at South Kensington, where the headmaster, Richard Burchett [q. v.], thought highly of her abilities. One of her contemporaries was Elizabeth Thompson (afterwards Lady Butler); another was Helen Paterson, afterwards Mrs. William Allingham. She later 'took the life' at Heatherley's, and studied under Alphonse Legros [q. v. Suppl. II] in the Slade School at University College. In 1868, being then twenty-two, she exhibited at the Old Dudley Gallery a water-colour drawing entitled 'Kilmeny.' This was followed by other works, e.g. the 'Spring Idyll' ('Apple Blossom') of 1870, in which year she also sent to Suffolk Street for the first time 'A Peeper' (children playing), which foreshadowed her later successes in the domain of little people. In 1877 she sent to the Royal Academy (and sold for twenty guineas) her first contribution, 'Musing'; and in 1889 she was elected a lady member of the Institute of Painters in Water Colours, to which she frequently contributed portraits, studies, and designs. But long ere this date she had achieved a wide and well-earned reputation as an inimitable exponent of child-life, and an inventor of children's books of a specific and very original kind. Her country experiences had stored her imagination with quaint costumes and unhackneyed accessories, and her quiet habit of mind and fondness for the subject enabled her to create a particularly engaging gallery of small folk. She was also fortunate enough to find in William John Loftie [q. v. Suppl. II] and Henry Stacy Marks, R.A. [q. v. Suppl. I], friends judicious enough to persuade her to cultivate her own

bent of invention. After prelude for Messrs. Marcus Ward of Belfast and for others in valentines and Christmas cards, and drawing for minor magazines, she made a first success in 1879 with 'Under the Window,' the precursor of a long line of popular works, which brought her both fame and money, and a list of which is given hereafter. She was occasionally tempted from her predestined walk by demands for book illustrations (e.g. Bret Harte's 'Queen of the Pirate Isle'), or by efforts on a larger and more ambitious scale; but in the main she went her own way, and confined herself generally to the field in which, though she had many imitators, she had no formidable rivals. Now and then, as in 'Under the Window' and 'Marigold Garden,' she was her own rhymester; but although she possessed a true poetic impulse, her executive power was hardly on a level with it. As an artist she had, however, not only popularity but many genuine admirers, who fully appreciated the individuality of her charm. Ruskin, of whom she was long a favoured correspondent, wrote enthusiastically of her work in 'Præterita' and elsewhere; and both in Germany and France she was highly estimated. Three exhibitions of her works took place at the Fine Arts Society during her lifetime, namely, in 1880, 1891, and 1898; and these were followed in January 1902 by a fourth after her death. She died in her fifty-fifth year, on 6 Nov. 1901, at No. 39 Frognal, Hampstead, the house which had been built for her by Mr. Norman Shaw, and where she resided with her parents. She was cremated at Woking, and her remains were interred at Hampstead cemetery.

Much of Miss Greenaway's preliminary work was done for the old 'People's Magazine,' 'Little Folks,' 'Cassell's Magazine,' and the pictorial issues of Messrs. Marcus Ward and Co. She illustrated nine of Madame D'Aulnoy's 'Fairy Tales' (1871); Miss Kathleen Knox's 'Fairy Gifts' (1874); the 'Quiver of Love' (with Walter Crane), a collection of valentines (1876); Mrs. Bonavia Hunt's 'Poor Nelly' (1878); the 'Topo' of Lady Colin Campbell (1878), further described as 'A Tale about English Children in Italy'; and the 'Heir of Redclyffe' and 'Heartsease' (1879). Of her first real success, 'Under the Window, Pictures and Rhymes for Children' (1879), nearly 70,000 copies were sold in England, in addition to 30,000 French and German issues. Then came 'Kate Greenaway's

Birthday Book for Children' (1880), with verses by Mrs. Sale Barker; 'Mother Goose; or, the Old Nursery Rhymes' (1881); 'A Day in a Child's Life,' with music by Myles B. Foster, the organist of the Foundling Hospital (1881); and 'Little Ann and other Poems,' by Jane and Ann Taylor (1883). By the first three and the last of these five books she is said to have made a clear profit of 8000*l*. Next came a 'Painting Book of Kate Greenaway' (1884); the 'Language of Flowers' (1884); 'Mavor's English Spelling Book' (1884); 'Marigold Garden' (1885); 'Kate Greenaway's Alphabet' (1885); 'Kate Greenaway's Album' (1885); 'A Apple Pie' (1886); 'The Queen of the Pirate Isle,' by Bret Harte (1886); 'The Pied Piper of Hamelin,' by Robert Browning (1889); Kate Greenaway's 'Book of Games,' (1889); 'The Royal Progress of King Pepito,' by Beatrice F. Cresswell (1889); and the 'April Baby's Book of Tunes,' by the author of 'Elizabeth and her German Garden' (the Countess von Arnim) (1900). From 1883 (two issues) to 1895 she produced an annual 'Almanack.' In 1896 this was discontinued; but a final number appeared in 1897. She designed many very beautiful book-plates, that of Frederick Locker-Lampson [q. v. Suppl. I] being a fair example; and she also illustrated for Ruskin in 1885 (2nd edit. 1897) an old book of nursery rhymes for which he had a great admiration, 'Dame Wiggins of Lee and her Seven Wonderful Cats.'

[The chief authority for Kate Greenaway's life is the exhaustive volume published in 1905 by M. H. Spielmann and G. S. Layard. This, amply illustrated by reproductions of drawings and water-colours, and enriched by copious extracts from the artist's correspondence with Ruskin, is also written with much critical insight, and genuine sympathy for Miss Greenaway's aims and achievement. To a subsequent volume, Kate Greenaway: Sixteen Examples in Colour of the Artist's Work (Black's British Artists), 1910, Mr. Spielmann prefixed a short study. See also Ruskin's *Fors Clavigera*, and *Præterita*; Chesneau's *La Peinture Anglaise*, 1882; Alexandre's *L'Art du Rire et de la Caricature*, 1893; *Recollections of Lady Dorothy Nevill*, 1906; and the *De Libris* of the present writer, 1908, pp. 93-104. There is an attractive article in the *Century Magazine*, vol. 75, p. 183, by Mr. Oliver Locker-Lampson, M.P., with whose family Miss Greenaway was on terms of friendship.] A. D.

GREENIDGE, ABEL HENDY JONES (1865-1906), writer on ancient history and law, second son of Nathaniel Heath

Greenidge by his wife Elizabeth Cragg Kellman, was born on 22 Dec. 1865 at Belle Farm Estate, Barbados, in which island his father's family had been settled since 1635. His father, for many years vicar of Boscobel parish, was afterwards headmaster of various schools, and enjoyed a high reputation as a teacher. The eldest son, Samuel Wilberforce, of St. John's College, Cambridge, was 25th wrangler in the Cambridge mathematical tripos of 1886, and died in 1890.

Greenidge was educated at Harrison College, Barbados, winning in 1884 the Barbados scholarship, and in the same year (15 Oct.) matriculating at Balliol College, Oxford. Elected to an exhibition in the following year, he was placed in the first class both in classical moderations in 1886 and in the final classical school in 1888. He graduated B.A. in the same year, and proceeded M.A. in 1891 and D.Litt. in 1904. On 5 Dec. 1889 he was elected, after examination, fellow of Hertford College. There he became lecturer in 1892 and tutor in 1902, and he retained these offices until his death. He was also lecturer in ancient history at Brasenose College from 1892 to 1905. He vacated his fellowship at Hertford on his marriage in 1895, and on 29 June 1905 was elected to an official fellowship at St. John's. He examined in the final classical school in 1895-6-7-8. He died suddenly at his residence in Oxford of an affection of the heart on 11 March 1906, and was buried in Holywell churchyard.

Greenidge married on 29 June 1895 Edith Elizabeth, youngest daughter of William Lucy of Oxford, and had issue by her two sons. On 28 March 1907 a civil list pension of 75*l*. was granted to his widow 'in consideration of his services to the study of Roman law and history,' but she died on 9 July 1907.

In spite of his early death, and constant employment in academic teaching, Greenidge's literary work is notable for its quality and quantity. Shortly after graduating he contributed numerous articles to a new edition of 'Smith's Dictionary of Antiquities' (1890-1). His first book, 'Infamia, its Place in Roman Public and Private Law,' was published at Oxford in 1894. There followed 'A Handbook of Greek Constitutional History' (1896); 'Roman Public Life' (1901), and 'The Legal Procedure of Cicero's Time' (Oxford, 1901), which was the most important of Greenidge's completed works. He also revised Sir William Smith's 'History of Rome' (1897), and the first part (down to the death

of Justinian) of the 'Student's Gibbon' (1899). In 1903, in co-operation with Miss A. M. Clay, he produced 'Sources for Roman History, B.C. 133-70' (Oxford) designed to prepare the way for a new 'History of Rome.' In 1904 he contributed an historical introduction to the fourth edition of Poste's 'Gaius.' In the same year appeared the first volume of 'A History of Rome during the Later Republic and Early Principate,' covering the years 133 to 104 B.C. This work was designed to extend to the accession of Vespasian and to fill six volumes, but no second volume was issued. Much of Greenwood's most interesting work is to be found in scattered articles, more particularly in the 'Classical Review.' His merit as an historian lies in his accurate accumulation of detail, combined with critical insight and power of exposition, which were not unmingled with occasional paradox.

A portrait in oils, subscribed for by the boys of the school, hangs in the hall of Harrison College, Barbados.

[Oxford Magazine, vol. xxiv. nos. 16 and 17; Journal of Comp. Legislation, new series, vol. vii. pt. i. p. 282; private information.]

R. W. L.

GREENWOOD, FREDERICK (1830-1909), journalist, born in London on 25 March 1830, was eldest child in the family of eleven children of James Caer Greenwood, a coach-builder in Kensington, by his wife Mary Fish. His brother, James Greenwood, made a reputation as a voluminous story writer and journalist. Charles Greenwood (*d.* 1905), a popular sporting writer, best known as 'Hotspur' of the 'Daily Telegraph,' was no relation. Frederick, after being privately educated in Kensington, was apprenticed at about the age of fifteen to a firm of publishers and printers, but his indentures were voluntarily cancelled by the head of the firm in a year, and he was engaged as a reader. In 1851 Messrs. Clarke, Beeton & Co. consulted him as to the publication of the first English reprint of 'Uncle Tom's Cabin' (*Tatler*, 4 Dec. 1901). From the age of sixteen he supported himself, and at twenty he married (1850).

Greenwood was soon writing for papers and magazines. In 1853 he contributed a 'Life of Louis Napoleon Bonaparte' to a general account of 'The Napoleon Dynasty,' described as written 'by the Berkeley men and another.' It was republished under his own name with the title 'Life of Napoleon III, Emperor of the French,' in 1855; in a brief introduction

Greenwood 'confesses to little knowledge of "politics" and less care.' The book shows a real comprehension of politics, and gives promise of the writer's mature style and method. For a time his chief ambition was to make a reputation as a novelist and story writer. In 1854 appeared 'The Loves of an Apothecary.' To 'Tait's Magazine' he contributed a story, 'The Path of Roses,' republished with numerous illustrations in 1859. A three-volume novel, 'Under a Cloud,' written in collaboration with his brother James, appeared first in 'The Welcome Guest,' and then as a separate publication in 1860. He was a constant contributor to the 'Illustrated Times,' a paper started by Henry Vizetelly [q. v.] in 1855, just before the repeal of the Stamp Act (cf. *VIZETELLY'S Glances Back*, 1893).

In September 1861 Greenwood became first editor of the 'Queen,' at the outset a profusely illustrated paper, which gave a certain prominence to fashions but was largely literary and political. In July 1863 the 'Queen' was combined with the 'Lady's Newspaper,' and Greenwood's connection with it ceased. Meanwhile he had established close relations with George Smith, chief proprietor of the publishing firm of Smith, Elder & Co. He contributed (Feb. 1860) 'An Essay without an End' to the second number of the 'Cornhill Magazine,' which Smith inaugurated under Thackeray's editorship. Greenwood's strongest story, 'Margaret Denzil's History,' which contains powerful drawing of character, appeared in the magazine in 1863, and separately in November 1864 (2 vols.). When Thackeray resigned the editorship in 1862, Greenwood and George Henry Lewes [q. v.] directed the 'Cornhill' under George Smith's superintendence. Lewes withdrew in 1864, and Greenwood was sole editor till 1868. But his bent was to journalism of the highest kind. A scheme for an independent daily paper, to be largely modelled both in form and tone on Canning's 'Anti-Jacobin,' had been for some time in his mind, and he had proposed it to Mr. Parker, owner and publisher of 'Fraser's Magazine,' who declined immediate action. Greenwood did not contemplate acting as editor, and consulted Carlyle on the choice of one. Meanwhile George Smith was considering a like design, and when Greenwood brought his scheme to him in 1864, he at once resolved to give it effect. Greenwood, to his surprise, was appointed editor. Smith's partner, Henry Samuel King, declined

responsibility, and the venture was Smith's personal concern. A brilliant band of contributors, most of whom were already in personal relations with Smith as a publisher, was collected. The paper was named the 'Pall Mall Gazette,' after the journal described in Thackeray's 'Pendennis.' The first number appeared on 7 Feb. 1865 [see SMITH, GEORGE, Suppl. I]. The 'Pall Mall' struggled with difficulty into financial success, but its triumph was secured early in 1866, by the publication in it of 'A Night in a Casual Ward, by an Amateur Casual,' three papers written by James Greenwood at the suggestion of his brother. In Greenwood's words they served 'to cut the rope of the balloon.' After 1868 Greenwood became entirely absorbed in the paper.

As editor he acquired an exceptional personal influence. Able writers covered under his guidance a wide field of interests, social, literary, and political. But the marked character of the 'Pall Mall' was given by Greenwood's individuality. (Sir) Leslie Stephen [q. v. Suppl. II], long a contributor, called the paper 'the incarnation of Greenwood.' His dominance was especially great on the political side. He had shared the liberal opinions of his generation, and he never became a conservative in the strict party sense. Thoroughly patriotic, he was no blind follower of any party leader. A vigilant observer of foreign affairs, and a profound admirer of Bismarck, he came to distrust Gladstone's domestic and foreign policy. The foreign policy of the conservative government of 1874-80 found in him an ardent champion. The keen watch he kept on events abroad enabled him in 1875 to acquire early information of the intention of the Khedive Ismail Pasha to sell his Suez Canal shares, and of the serious risk that they would pass into the possession of a French syndicate. He at once communicated first with the foreign secretary, Lord Derby, who was not inclined to move in the matter, and then with the prime minister, Lord Beaconsfield, who acted on his advice. There is no doubt that the purchase of the shares was first suggested by Greenwood, although his claim to that credit has been questioned (letters by Greenwood and others in *The Times*, 15 April, 11 May, 27 Dec. 1905; 13, 26 Jan., 10 Feb. 1906). Through the Russo-Turkish war of 1876-8 he vehemently attacked in the 'Pall Mall' Gladstone's sentimental crusade against Turkey, the maintenance of whose integrity was in his opinion a primary English interest.

In April 1880 the 'Pall Mall Gazette,' then (in Leslie Stephen's phrase) 'the most thorough-going of Jingo newspapers,' was presented by its proprietor, George Smith, to his son-in-law, Mr. Henry Yates Thompson, who avowed his intention to convert the paper into a radical political organ. Greenwood and all the members of the staff left. At the beginning of May the 'St. James's Gazette' was founded by some members of the firm of Antony Gibbs & Co., in order to give Greenwood the opportunity of continuing his advocacy of the old policy of the 'Pall Mall' [see GIBBS, HENRY HUCKS, LORD ALDENHAM, Suppl. II]. In the new paper Greenwood fought for the same cause with the same spirit and capacity as in the old. He powerfully advocated the occupation of Egypt in 1882, and was the whole-hearted opponent of the Irish nationalists. No newspaper helped more effectively to destroy Gladstone's power and to prepare the way for the long predominance of the unionist party. But various causes, of which the strongest was the decline of a taste for serious journalism in the public, rendered it impossible for the 'St. James's' to attain to the prosperity of the 'Pall Mall.' After the death of one of the proprietors, George Gibbs, on 26 Nov. 1886 the financial control passed to his cousin Henry, who was not equally in harmony with Greenwood's views. In 1888 Greenwood persuaded Edward Steinkopff to buy the paper. But the new proprietor refused his editor the freedom he had so far enjoyed, and Greenwood retired suddenly and in anger within the year. In January 1891 he founded in pursuit of an early design the 'Anti-Jacobin,' at first as a threepenny and then as a sixpenny weekly paper. But the taste of the public was against him here also, and the 'Anti-Jacobin' was discontinued in January 1892.

Meanwhile Greenwood became a contributor to the 'Saturday Review' and other papers, and to 'Blackwood's' and the chief magazines, and he engaged anew in literature, publishing 'The Lover's Lexicon' in 1893 and 'Imagination in Dreams' in 1894. A series of papers which appeared in 'Blackwood's' under the general title of the 'Looker On' in 1898-9 ceased owing to the support given by the magazine to the war in South Africa. On that subject Greenwood shared the views of the pro-Boers. He always distrusted Mr. Chamberlain and the radical unionists, and had a scornful dislike of the South African financiers.

Greenwood, who was quick to detect

literary merit, was the private adviser of many literary men who achieved eminence. George Meredith was among his friends, and drew him as Richard Rockney in 'Celt and Saxon' (1910) (cf. W. T. STEAD in *Review of Reviews*, July 1910, p. 57). At a dinner given in his honour in London on 9 April 1905, Mr. J. M. Barrie spoke warmly of his debt to Greenwood's early encouragement. His editorial skill and instinct were only equalled by the perfect sincerity of his opinions, and his absolute disinterestedness. Greenwood died at his house in Sydenham on 14 Dec. 1909.

Greenwood's wife, Katherine Darby, whom he married in 1850, belonged to a landed family of Quaker connections in Hampshire. She died in 1900. Of Greenwood's five children, a son and two daughters survived him. His daughters were granted a civil list pension of 100*l.* in 1910.

[Information from the family; personal knowledge; Leslie Stephen's *Life of Fitzjames Stephen*, 1895; Herbert Paul's *History of Modern England*, 1905, vols. iii. and iv.; Tinsley, *Random Recollections*, i. 303. Maitland's *Life of Leslie Stephen* (1905) and Hyndman's *Record of an Adventurous Career* (1911) give estimates of Greenwood as editor from contributors' points of view.]

GREENWOOD, THOMAS (1851-1908), promoter of public libraries, son of William and Nanny Greenwood, was born at Woodley, near Stockport, Cheshire, on 9 May 1851, and educated at the village school. Benefiting by membership of a mutual improvement society conducted by William Urwick [q. v. Suppl. II.], then congregational minister of Hatherlow, Cheshire, he made excellent use of the Manchester public library and similar institutions. After serving as clerk in a local hat works he was for a short time a traveller with a Sheffield firm, and then for about three years assistant in a branch library at Sheffield. About 1871 he removed to London to join the staff of the 'Ironmonger.' In 1875 with W. Hoseason Smith he founded the firm of Smith, Greenwood & Co., afterwards Scott, Greenwood & Co., printers and publishers of trade journals and technical books. The firm at once founded the 'Hatters' Gazette,' and the 'Pottery Gazette,' an organ of the glass and china industries, and in 1879 the 'Oil and Colour Trades Journal.' Greenwood himself was the chief editor of these journals. He superintended all the publications of the firm, which included many important technical works.

His early acquaintance with public libraries and his personal gratitude to them convinced him of the need of increasing their number and improving their organisation. Thanks to his advocacy many rate-supported libraries were opened in London and elsewhere in commemoration of the jubilee of Queen Victoria. His manual on 'Public Libraries, their Organisation, Uses and Management,' appeared in 1886 and at once took standard rank. The work reached a fifth edition in 1894.

A warm admirer of Edward Edwards (1812-1886) [q. v.], a pioneer of municipal public libraries, Greenwood collected his personal relics and part of his library, and these he presented, with a handsome bookcase, to the Manchester public library, of which Edwards was the first librarian. In 1902 he wrote an interesting biography of Edwards, embodying the early history of the library movement, and he placed a granite monument over Edwards's grave at Niton, Isle of Wight.

Greenwood formed a large bibliographical library, illustrating all phases of bibliographical work and research, which he presented to the Manchester public library in 1906, making additions to it afterwards, and leaving at his death sufficient money for its maintenance. 'The Thomas Greenwood Library for Librarians' contains about 12,000 volumes. He also founded a small library at Hatherlow in honour of his old pastor William Urwick.

Formerly a fellow of the Royal Geographical Society, Greenwood travelled extensively, and in Japan in 1907 contracted an illness of which he died at Frith Knowl, Elstree, Hertfordshire, on 9 Nov. 1908. His remains after cremation at Golder's Green were interred at Hatherlow congregational church. He married Marianne, daughter of William Pettet, and had a son and two daughters.

In addition to the works named he wrote: 1. 'A Tour in the United States and Canada,' 1883. 2. 'Eminent Naturalists,' 1886. 3. 'Grace Montrose, an unfashionable novel,' 1886. 4. 'Museums and Art Galleries,' 1888. 5. 'Sunday School and Village Libraries,' 1892; 6. 'Greenwood's Library Year Book,' 1897, 1900, 1901.

[The Times, and Manchester Guardian, 11 Nov. 1908; Oil and Colour Trades Journal, 14 Nov. 1908 (with portrait); Who's Who, 1908; W. E. A. Axon in Library Association Record, June 1907 (description of the library for librarians); personal knowledge.]

C. W. S.

GREGO, JOSEPH (1843-1908), writer on art, born on 23 Sept. 1843 at 23 Granville Square, Clerkenwell, was elder son of Joseph Grego (1817-1881), a looking-glass manufacturer, by his wife Louisa Emelia Dawley. His grandfather, Antonio Grego, a native of Como, settled in London before 1821 as a looking-glass manufacturer, the firm becoming Susan Grego & Sons in 1839, and Charles & Joseph Grego in 1845. After education at private schools Grego was for a time with Lloyds, the underwriters. Inheriting the spirit of collecting from his father, he drifted into that pursuit, combining it with dealing, art journalism, and authorship. He specialised as writer and collector in the work of Gillray, Rowlandson, Morland, and Cruikshank, and was an acknowledged authority on all of them. He was chiefly responsible for the edition of James Gillray's 'Works' in 1873, although the name of Thomas Wright (1810-77) [q. v.] alone appears in the title-page, and he edited 'Rowlandson the Caricaturist' (2 vols. 4to, 1880). Both books, which illustrate Grego's comprehensive and thorough method of work, became standard books of reference. He collected much material for a life of Morland, which he did not complete. In 1904 he published 'Cruikshank's Water Colours,' with an introduction and reproductions in colours. In 1874 he compiled a volume of 'Thackerayana' (dated 1875), based upon books with marginal and other sketches, from Thackeray's sale; owing to copyright difficulties the volume was immediately suppressed, but was reissued in 1898 (cf. *Athenæum*, 9 May 1908). A frequent writer on art in periodicals and the press, and editor of 'Pears' Pictorial,' 1893-6, he wrote 'History of Parliamentary Elections in the Old Days, from the Time of the Stuarts to Victoria' (1886; new edit. 1892), and edited R. H. Gronow's 'Reminiscences' with illustrations 'made up' from contemporary prints (1889); Vuillier's 'History of Dancing,' to which he contributed a sketch of dancing in England (1898); 'Pictorial Pickwickiana: Charles Dickens and his Illustrators' (2 vols. 1899); and Goldsmith's 'Vicar of Wakefield,' including Forster's essay on the story (1903).

Grego, who was always ready to lend prints and drawings for public exhibitions, occupied much of his time in organising exhibitions, chiefly of 'English Humorists in Art.' He was himself facile with his pencil, doing much work as a designer of theatrical costumes, and etching the designs

of others. He invented a system of reproducing eighteenth-century colour prints in such exact facsimile that they have often been mistaken for originals. He was a director of Carl Hentschel, Ltd., photo-engravers, 1899-1908, and a substantial shareholder in the firm of Kegan Paul & Co. (of which company he was a director from Jan. 1903 till his death) and of the 'Graphic' Company.

He died unmarried on 24 Jan. 1908 at 23 Granville Square, where he was born and which he occupied all his life. His vast accumulations of prints, drawings, and books were dispersed on his death (at Christie's 28 April and 4 June 1908, and at Puttick and Simpson's April, June, and July 1908).

Jules Bastien-Lepage drew a small head of Grego in pen and ink on a visit to London, about 1880-1.

[The Times, 28 Jan. 1908; *Athenæum*, 2 Feb. 1908; *Graphic*, 1 Feb. 1908 (with portrait from a photo); information kindly supplied by his only sister, Mrs. Bruce-Johnston, by Mr. Thomas J. Barratt, and by Mr. H. Thornber.] W. R.

GREGORY, SIR AUGUSTUS CHARLES (1819-1905), Australian explorer and politician, born on 1 Aug. 1819 at Farnsfield, Nottinghamshire, was second son of Lieutenant Joshua Gregory, of an old Nottinghamshire family, by his wife Frances, sister of Charles Blissett Churchman of London. His father, a lieutenant in the 78th regiment (Ross-shire Buffs), was wounded at El Hamed in Egypt, and compelled to retire from the service, receiving in lieu of pension a grant of land in the new settlement on the Swan River (now Western Australia), whither he went with his wife and family in June 1829.

After being privately educated in England and in his new home, young Gregory in 1841 obtained employment in the survey department of Western Australia, and in August 1842 he was appointed assistant surveyor, holding the office till November 1854. In 1846, having obtained leave of absence, he began exploring work in the interior of the continent, starting on 7 August from Bolgart Spring, accompanied by his brothers Francis Thomas and Henry. He was soon stopped, however, in his progress eastward by an immense salt lake which compelled him to turn north-west, where he discovered some excellent seams of coal at the headwaters of the river Irwin. In September 1848 he led a party (sometimes known as the 'Settlers' Expedition') to the northward, and succeeded in reaching a point 350 miles north of Perth. The

results of the expedition were to reveal the pastoral wealth of the Murchison and Champion Bay districts and the discovery of a lode of galena in the bed of the Murchison river. Later in the same year Gregory accompanied the governor, Capt. Charles Fitzgerald, R.N., on a visit to the mineral discovery, which proved to be of more importance than was at first supposed.

In 1855-6 Gregory undertook an expedition under the auspices of the Royal Geographical Society with the dual purpose of exploring the previously unknown interior of the northern territory of Australia and searching for traces of the lost explorer Friedrich Wilhelm Ludwig Leichhardt [q. v.]. Starting from the mouth of the Victoria river, the party ascended that river to its source, crossed the watershed to the southward-flowing Sturt creek, and then made its way to the gulf of Carpentaria and thence to the Dawson and across the northern peninsula to the east coast. The result was the shedding of much light on the rivers of this region, the discovery of the water parting formed by the Newcastle ranges, and the charting in sixteen months of 5000 miles of hitherto unknown wilds, but no certain traces of Leichhardt were found. For his achievements on this expedition Gregory was in 1857 awarded the founder's medal of the Royal Geographical Society.

In 1858 he undertook his last exploring expedition, when he was despatched by the New South Wales government to renew the search for Leichhardt. He started from Sydney on 12 Jan. and reached the Barcoo in April. In latitude 24° 25' and longitude 145° S. he found a tree marked L and some stumps of others which had been felled with an axe. In May he reached the Thompson river, and followed it till it ran out in plains of baked clay. He then pushed down Cooper and Strzelecki Creek, and arrived at Adelaide after a seven months' exploration, which left the fate of Leichhardt as much in doubt as ever.

On his return from his last expedition he was employed in defining the southern boundary of Queensland, and became surveyor-general for the new colony, a post which he held from 23 Dec. 1859 to 11 March 1875. Thenceforward until 1 Sept. 1879 he was geological surveyor of the southern district of the colony. On 10 Nov. 1882 he was nominated a member of the legislative council, but did not take his seat till 26 June 1883. He played a prominent part in the debates, his intimate knowledge of the country and its resources and his

fund of scientific and other information securing him an attentive hearing even from those who differed from him. It was his custom to sit always on the opposition benches, in order that he might be more free to criticise the various government measures.

Gregory took an active interest in municipal affairs. He was one of the first members of the Toowoong shire council, and when the shire was gazetted a town in 1902 he was chosen first mayor. He was a trustee of the Queensland Museum from 1876 to 1899, and from 1876 to 1883 sat on the commission to inquire into the condition of the aborigines.

He took a keen interest in scientific work of all kinds, and in 1895 was president at Brisbane of the Australian Association for the Advancement of Science, devoting his opening address to a sketch of the geological and geographical history of Australia.

He was created C.M.G. on 27 Feb. 1875, and K.C.M.G. on 9 Nov. 1903. He died unmarried on 25 June 1905 at his residence, Rainworth, Brisbane, and was buried in Toowoong cemetery.

Gregory, according to Sir Hugh Nelson, 'contributed more to the exact physical, geological, and geographical knowledge of Australia than any other man, for his explorations have extended to west, north, east, south, and central Australia.' He was joint author of 'Journals of Australian Exploration' (Brisbane, 1884) with his brother, Francis Thomas Gregory (1821-1888), who was in the survey office of Western Australia from 1842 to 1860; Francis accompanied his brother Augustus in his first exploring expedition in 1846, and led two expeditions himself in 1858 and 1861, being awarded the gold medal of the Royal Geographical Society in 1863; going to Queensland in 1862, he was nominated to the legislative council in 1874, and was for a short time postmaster-general in the first McIlwraith Ministry.

[The Times, and Brisbane Courier, 26 June 1905; West Australian, 27 June 1905; Geographical Journal, vol. 26, 1905; Western Australian Year Book for 1902-4; Mennell's Dict. of Australas. Biog., 1892; Burke's Colonial Gentry, 1891; Favence's History of Australian Exploration, 1888; Blain's Cyclopædia of Australasia, 1881; Heaton's Australian Dictionary of Dates, 1879; Howitt's History of Discovery in Australia, vol. ii. 1865; Tenison Woods's History of the Discovery and Exploration of Australia, vol. ii. 1865.] C. A.

GREGORY, EDWARD JOHN (1850-1909), painter, born in Southampton on 19 April 1850, was grandson of John Gregory, engineer-in-chief of the auxiliary engines in Sir John Franklin's last Arctic expedition, and was eldest child (in a family of three sons and five daughters) of Edward Gregory, a ship's engineer, by his wife Mary Ann Taylor. On leaving Dr. Cruikshank's private school at fifteen he entered the drawing-office, in his native town, of the Peninsular and Oriental steamship company, in whose employ his father sailed; but though always keenly interested in all kinds of mechanism, he had set his mind upon being a painter. Making the acquaintance at Southampton of Hubert Herkomer (now Sir Hubert von Herkomer, R.A.), whose family had settled there, he started a life-class with him. In 1869 Gregory went to London, and with Herkomer joined the South Kensington Art School. Subsequently he studied for a short time at the Royal Academy. He was soon employed in the decorations of the Victoria and Albert Museum, and in 1871, with his friends Herkomer and Robert Walker Macbeth [q. v. Suppl. II], began working for the 'Graphic,' which had just been started by William Luson Thomas [q. v. Suppl. I]. Gregory at first contributed sketches from the theatres, but soon freely transcribed sketches sent home from the French army at the front by Mr. Sydney P. Hall. Gregory's illustrations, which were sometimes signed by both himself and Hall, discovered the variety and ingenuity of his draughtsmanship. He ceased to work regularly for the 'Graphic' about 1875.

Gregory was not a frequent exhibitor at Burlington House. His mark as a painter was first made by an oil-painting, 'Dawn' (now in the possession of Mr. John Sargent, R.A.), originally shown at Deschamps' gallery in 1879. Much of his best work appeared at the exhibitions of the Royal Institute of Painters in Water Colours, of which he was elected associate in 1871 and member in 1876. He succeeded Sir James Linton as president in 1898. From 1875 to 1882 his contributions to the Academy were mainly portraits, including that of Duncan McLaren, M.P., a replica of which is in the Scottish National Portrait Gallery. As early as 1883 he was elected with Macbeth to the associateship, and he became academician in 1898, after the completion and exhibition of his 'Boulter's Lock: Sunday Afternoon,' a work which hardly justified the years of elaboration spent upon it.

Gregory's art was honoured abroad,

both his oils and his water-colours being awarded gold medals at the international exhibitions of Paris (1889 and 1900) and Brussels (1898), and at the Munich Jahresausstellung (1891). Probably his water-colours and some of his drawings on wood will have a more enduring fame than his oils. In all mediums he showed cleverness and resource as a draughtsman, and a technical skill that was especially remarkable in his water-colours. His art suffered in the end through a fastidious preoccupation with the technical problems of his craft. For many years his paintings, which were not numerous, were acquired as soon as they were finished by Charles J. Galloway of Manchester, at whose death they were dispersed with the rest of his collection at Christie's on 24 June 1905, Gregory's water-colours bringing large prices.

Besides 'Dawn' and 'Boulter's Lock,' Gregory's principal oil pictures were 'Piccadilly: Drawing-room Day' (R.A. 1883); 'Last Touches,' 'St. George' (which was etched by Paul Rajon), 'Miss Galloway,' 'The Intruders' (R.A. 1884); 'Marooning' (now in the Tate Gallery) (R.A. 1887); 'Fanny Bunter' and 'Après,' his diploma picture (R.A. 1890); and 'Spoils of Opportunity' (R.A. 1893). His chief contributions to the Royal Institute were: 'The Inception of a Song,' 'The Honeymoon,' 'Sir Galahad,' 'The Sanctum Invaded,' 'A Look at the Model,' 'Souvenir of the Institute,' 'The Fugitive,' 'Master Newall.'

Gregory, despite a bad stammer, showed unusual aptitude for affairs as president of the Institute and was a conscientious and popular visitor at the schools of the Academy, in the counsels of which he exerted much weight. He died at his residence, Brompton House, Great Marlow, on 22 June 1909, and was buried in Great Marlow churchyard. He married in 1876 Mary, daughter of Joseph Joyner, who survived him without issue.

'A Look at the Model' (the property of Mr. H. W. Henderson) and the 'Souvenir of the Institute' are self-portraits. Two other portraits of himself, painted by him in 1875 and 1883, are in the possession of Mrs. Alfred Henry, London. A portrait by John Parker, R.W.S., belongs to his widow. Early in his career Gregory was invited to contribute his portrait to the Uffizi Gallery at Florence, but never finished one to his satisfaction.

[Private information; Graves's Royal Academy Exhibitors, 1905-6.] D. S. M.

GREGORY, ROBERT (1819-1911), dean of St. Paul's, born at Nottingham on 9 Feb. 1819, was the eldest son of Robert Gregory, merchant, of Nottingham by his wife Anne Sophia, daughter of Alderman Oldknow, grocer, Nottingham. His parents were methodists; both died in 1824. Educated privately, Gregory entered a Liverpool shipping-office in 1835. At the age of twenty-one, influenced by the 'Tracts for the Times,' he resolved to be ordained. He was admitted a gentleman commoner of Corpus Christi College, Oxford, on 2 April 1840; graduated B.A. in 1843, proceeding M.A. in 1846, and D.D. in 1891; was Denyer theological prizeman in 1850; and was ordained deacon in 1843, priest in 1844, by the bishop of Gloucester and Bristol. After serving the curacies of Bisley, Gloucestershire (1843-7), Pantton and Wragby, Lincolnshire (1847-51), and Lambeth parish church (1851-3), Gregory was from 1853 to 1873 vicar of St. Mary-the-Less, Lambeth. A zealous incumbent, he improved the church, built schools, founded a school of art, and closely identified himself with church work in elementary education. In 1867 he was select preacher at Oxford, and served on the royal commission on ritual.

In 1868 Gregory was appointed canon of St. Paul's, but for five years still held his Lambeth living. In 1870 H. P. Liddon [q. v.] became canon, and in 1871 R. W. Church [q. v. Suppl. I] was made dean. With them Gregory worked in fullest harmony for the attainment of Church's purpose, 'to set St. Paul's in order, as the great English cathedral, before the eyes of the country' (*Life and Letters of Dean Church*, p. 200). As treasurer of the cathedral he negotiated with the ecclesiastical commission the arrangement of the cathedral finances which helped to make reform possible. The changes made were not universally welcomed, but Gregory was unmoved by criticism. Church described him as 'of cast iron' (*Life and Letters*, p. 235). Four lectures contrasting the social conditions of England in 1688 and 1871, delivered by Gregory in St. Paul's in Nov. 1871, drew on him the charge of misusing the cathedral. The advance in the cathedral ritual and the decoration of the fabric led to hostility, which reached its height in the litigation of 1888-9 over the reredos, during which Gregory zealously supported the policy of Frederick Temple [q. v. Suppl. II], bishop of London.

For forty-three years Gregory was a member of the lower house of Canterbury convocation. He entered it as proctor

for the archdeaconry of Surrey in 1868, and became proctor for the dean and chapter in 1874. His influence was immediately felt, more especially on educational questions and in defence of higher Anglican policy. W. C. Magee in 1881 wrote of him as 'the Cleon of the lower house' (*Life*, ii. 154); and J. W. Burgon, in a published letter of the same year, said 'In the lower house of convocation you . . . obtain very much your own way.' On the delivery of the Purchas judgment, Gregory joined Liddon in telling John Jackson [q. v.], bishop of London (2 March 1871), that the judgment would not be obeyed by them [see PURCHAS, JOHN]. In 1873 he was forward in defence of the Athanasian Creed; in 1874 he presented to convocation a petition in favour of retaining the impugned 'ornaments' of the church; in 1880, during the burials bill controversy, he favoured the abandonment by churchmen of the graveside service, if nonconformists could also be silenced. In 1881 he supported the memorial for the toleration of ritual, and in convocation presented a gravamen and reformandum to the same effect. An ardent supporter of church schools and long treasurer of the National Society, Gregory was elected a member of the London school board in 1873, but did not seek re-election when his three years' term ended. He was also a member of the education commission in 1886, and of the City parochial charities commission in 1888.

Appointed dean of St. Paul's on the death of Church in 1890, and installed on 5 Feb. 1891, Gregory continued his predecessor's policy, carried out in the face of some criticism the decoration of the cathedral with mosaics, and retained to advanced age the closest interest in the cathedral work. He resigned on 1 May, died at the deanery on 2 Aug. 1911, and was buried in the crypt of St. Paul's. He combined a simple faith and clear convictions, firmly held and boldly defended, with much administrative ability and singular devotion to the life and work of his cathedral. He was twice married: (1) in 1844 to Mary Frances, daughter of William Stewart of Dublin (d. 1851), by whom he had two sons who survived him; and (2) in 1861 to Charlotte Anne, daughter of Admiral the Hon. Sir Robert Stopford, by whom he had four daughters, of whom three survived him. A portrait by Sir William Richmond, exhibited at the Royal Academy in 1899, now hangs in the dining-room of the St. Paul's deanery.

In addition to some sermons, Gregory

published: 1. 'Are we better than our Fathers?' 1872. 2. 'The Position of the Priest ordered by the Rubrics in the Communion Service interpreted by themselves,' 1876. 3. 'Elementary Education: Some Account of its Rise and Progress in England,' 1895.

GRENFELL, GEORGE (1849-1906), baptist missionary and explorer of the Congo, born at Ennis Cottage, Trannack Mill, Sancreed, near Penzance, on 21 Aug. 1849, was son of George Grenfell of Trannack Mill, afterwards of Birmingham, by his wife Joanna, daughter of Michael and Catherine Rowe of Botree, Sancreed. Grenfell shared with Francis Wallace Grenfell, first baron Grenfell, and William Henry Grenfell, first baron Desborough, a common ancestor in Paskow Greinfield (1658). Educated at a branch of King Edward's school, Birmingham, Grenfell was apprenticed to Messrs. Scholefield & Goodman, a hardware and machinery firm in Birmingham. The loss of an eye in early life in no way impaired his energy. Though his parents were anglicans he soon joined Heneage Street baptist chapel, where he was admitted to membership by baptism on 7 Nov. 1864. Influenced by the lives of David Livingstone [q. v.] and Alfred Saker (1814-1880), the 'Apostle of the Cameroons,' Grenfell, in September 1873, entered the Baptist College, Stokes Croft, Bristol, and on 10 Nov. 1874 the Baptist Missionary Society accepted him for work in the Cameroons under Alfred Saker. The two arrived there in January 1875. Grenfell's earliest work consisted in following the Yabiang river up to Abo and in discovering the lower course of the Sanaga river as far as Edea.

Grenfell, who moved to Victoria, Cameroons, in 1877, continued to explore the

ivers inland, especially the Wuri, and in 1878 made an ascent of the Mongo ma Loba mountain. On 5 Jan. 1878 he was instructed to undertake pioneer work with the Rev. T. J. Comber up the Lower Congo. After the discoveries in 1877 of Sir Henry Morton Stanley [q. v. Suppl. II], Mr. Robert Arthington of Leeds had offered 1000*l.* to the Baptist Missionary Society for such work. A preliminary expedition, with the help of the (Dutch) Afrikaansche Handels-Vereeniging, preceded Grenfell and Comber's arrival at San Salvador on 8 Aug. 1878. Received there by the King of Kongo, Dom Pedro V or Ntolela, they pushed on to the Makuta country, but at Tungwa the chief forbade their proceeding towards the Upper Congo. Soon Grenfell co-operated with Comber and others in starting mission stations at Musuko, Vivi, Isangila, and Manyanga in July 1881, and so to Stanley Pool. On 28 Jan. 1884, in a small steel 'tender,' twenty-six feet long, Grenfell set out to survey the Congo up to the Equator at a point 18° long. E., passing the mouth of the Kwa river and visiting Bolobo, Lukolela, and Irebu, and inspecting the confluence of the Mubangi and the Congo. He now made his headquarters at Arthington, near Leopoldville, and on 13 June 1884 he successfully launched at Stanley Pool the Peace, a river steamer, with seven water-tight compartments of Bessemer steel, which was built by Messrs. Thornycroft, at Chiswick, at Mr. Arthington's cost, and under Grenfell's supervision, in 1882. It was constructed to draw only eighteen inches when carrying six tons of cargo, and to take to pieces at the cataracts.

On 7 July 1884 the Peace started on her first voyage of discovery, taking Grenfell and Comber along the Kwa, Kwango, and Kasai rivers. On the second Peace expedition (13 Oct. 1884) 'he was unquestionably the first to prove the independent status of the Mubangi'; discovered the Ruki or Black river; navigated the Ikelemba; found himself in contact with actual cannibals in the Bangala region; ascended the Itimbiri or Rubi river up to 2° 50' N. lat.; visited Tippoo Tib (Tipu-Tipu) at Stanley Falls on 24 Dec. 1884; and followed the Mubangi for 200 miles up to what have since been called Grenfell Falls, 4° 40' N. lat., 'by far the most northerly point yet reached in the exploration of the Congo basin' (Sir H. H. JOHNSTON, *G. Grenfell and the Congo*, pp. 116, 127).

On the third voyage of the Peace (2 Aug. 1885) Grenfell was accompanied by his wife,

his little daughter, von François, a German explorer, and eight native children from the mission schools. This time his object was to explore the affluents of the Congo from the east and the south—the Lulongo, the Maringa, and the Busira or Juapa, on which he found dwarf tribes (the Batwa).

His fourth journey (24 Feb. 1886), in company with Baron von Nimptsch, of the Congo Free State, and Wissmann, the German explorer, took him up the main stream of the Kasai, thence up the Sankuru, the Luebo, and the Lulua (careful notes being taken of the Bakuba and Bakete tribes), and so back to the Congo and on to Stanley Falls. On the fifth voyage (30 Sept. 1886) he passed up the Kwa and the Mfimi to Lake Leopold II, and on the sixth (December 1886), with Holman Bentley, he explored the Kwango up to the Kingunji rapids. In all these journeys he made exact observations, which were published in 1886 by the Royal Geographical Society, and together with his chart of the Congo Basin gained for him the founder's medal of the society in 1887.

During his furlough he was received by King Leopold at Brussels in July 1887. Hearing (9 Aug.) of the death of Comber, he returned at once to the Congo and was busily occupied on the Peace in supplying the needs of the mission stations. But in September 1890 the Congo Free State, in spite of protest, impounded the vessel for operations against the Arabs. Grenfell came home and after long negotiations the Peace was restored, an indemnity being declined. A second steamer, the Goodwill, also made by Messrs. Thornycroft, was launched on the Upper Congo, December 1893.

On 13 Aug. 1891, Grenfell, who had received the Belgian order of Leopold (chevalier), was invited to be Belgian plenipotentiary for the settlement with Portugal of the frontier of the Lunda, and was allowed by the Baptist Missionary Society to accept the offer. On 17 Nov. 1892 Grenfell and his wife reached Mwene Puto Kasongo, the headquarters on the Kwango of the brutal Kiamvo, with whom they had a peaceful interview. Below the Tungila he met Senhor Sarmiento, the Portuguese plenipotentiary, and after inspecting the rivers of the Lunda district the party reached St. Paul de Loanda (partly by railway) on 16 June 1893, the delimitation being agreed upon during July. He was made commander of the Belgian order of the Lion and received the order of Christ from the king of Portugal.

From 1893 to 1900 Grenfell remained chiefly at Bolobo on the Congo, where a strong mission station was established. After a visit to England in 1900, he started for a systematic exploration of the Aruwimi river, and by November 1902 had reached Mawambi, about eighty miles from the western extreme of the Uganda protectorate. Between 1903 and 1906 he was busy with a new station at Yalamba, fifteen miles east of the confluence of the Aruwimi with the Congo. Meanwhile he found difficulty in obtaining building sites from the Congo Free State, which accorded them freely to Roman Catholics. He grew convinced of the evil character of Belgian administration, in which he had previously trusted. In 1903 King Leopold despatched at Grenfell's entreaty a commission of inquiry, before which he gave evidence, but its report gave him little satisfaction. Grenfell died after a bad attack of blackwater fever at Basoko on 1 July 1906. His salary never exceeded 180*l.* a year. Grenfell was twice married: (1) On 11 Feb. 1876, at Heneage Street Baptist chapel, Birmingham, to Mary Hawkes, who died, after a premature confinement, at Akwa town on the Cameroon river on 10 Jan. 1877; (2) in 1878, at Victoria, Cameroons, to Rose Patience Edgerley, a West Indian. His eldest daughter, Patience, who, after being educated in England and at Brussels, returned to the Congo as a teacher, died of hæmaturic fever at Bolobo on 18 March 1899.

A memorial tablet was unveiled in Heneage Street Baptist chapel, Birmingham, on 24 September 1907.

Grenfell was an observant explorer (cf. BENTLEY, *Pioneering on the Congo*, ii. 127–128) and an efficient student of native languages. He promoted industrial training, and gave every proof of missionary zeal.

Holman Bentley, *Life on the Congo* (introduction by G. Grenfell), 1887; Shirley J. Dickins, *Grenfell of the Congo*, 1910; Lord Mountmorres, *The Congo Independent State*, 1906, pp. 110 ff.]

E. H. P.

GRENFELL, HUBERT HERBERT (1845–1906), expert in naval gunnery, born at Rugby on 12 June 1845, was son of Algernon Grenfell, a clerk, by his wife Maria Guerin Price.

Joining the navy as a cadet on 13 Dec. 1859, when fourteen, Grenfell passed out first from the Britannia, and gained as sub-lieutenant the Beaumont Testimonial in

1865. He qualified as gunnery lieutenant in 1867, and was appointed first lieutenant on H.M.S. *Excellent* on 22 Sept. 1869. While holding this appointment he worked out with Naval Engineer Newman what are claimed to have been the first designs of hydraulic mountings for heavy naval ordnance. He also engaged in literary work of a technical character, contributing to 'Engineering' and service journals. On 31 Dec. 1876 he was made commander, and on 1 May 1877 was appointed, on account of his linguistic attainments, second naval attaché to the maritime courts of Europe. He also acted as naval adviser to the British representatives at the Berlin Congress of 1878. On 22 Sept. 1882 the sloop *Phoenix*, under his command, foundered off Prince Edward Island. No lives, however, were lost. Grenfell retired with the rank of captain on 2 Dec. 1887.

Grenfell was afterwards for many years associated with the experimental work of Armstrong, Whitworth & Co. He was the first to direct the Admiralty's attention to the night-sighting of guns; and about 1891, on the introduction of the incandescent electric lamp, he invented his 'self-illuminating night sights for naval ordnance.' The invention was for fifteen years attached to all heavy guns in the British navy, and was adopted by some foreign navies. Grenfell was also one of the first to suggest the use of sight-scales marked in large plain figures for naval guns, and advocated, though without success, the adoption of a telescopic light for day use. He also worked out the arrangement subsequently adopted for quick-firing field artillery, by which the changes of angle between the line of sight and the axis of the bore which are required when firing at a moving target can be effected without altering the line of sight.

In April 1877 Grenfell read before the Institution of Naval Architects an able paper advocating the trial of Gruson's chilled cast-iron armour in England, and in 1887 he published 'Gruson's Chilled Cast-Iron Armour' (translated from the German of Julius von Schutz). He helped to form the Navy League, and served at one time on its executive committee. He died at Alverstoke, Hampshire, on 13 Sept. 1906.

GREY, Mrs. MARIA GEORGINA, whose maiden name was SHIRREFF (1816-1906), promoter of women's education, born on 7 March 1816, was younger daughter of Admiral William Henry Shirreff by his wife Elizabeth Anne, daughter of the Hon. David Murray; Emily Shirreff [q. v.] was her elder sister. In youth Maria was constantly abroad, and became an accomplished linguist. In later years, until she was prevented by ill-health, she went every winter to Rome. She early interested herself in the condition of women's education and position. On 7 Jan. 1841 she married her first cousin, William Thomas Grey (1807-1864), nephew of the second Earl Grey [q. v.]. Her husband, who was a wine merchant in London, died on 13 March 1864. There were no children of the marriage.

Mrs. Grey collaborated with her sister, Miss Shirreff, in 'Passion and Principle' (1841), and in 'Thoughts on Self-Culture' (1850), but after her husband's death in 1864 concentrated her attention on women's education.

When the Report of the Schools Inquiry Commission of 1870 revealed the unsatisfactory condition of the education of girls in this country, Mrs. Grey read a paper at the Social Science Congress at Leeds, October 1871, advocating the establishment throughout England of large day schools for girls with boarding-houses in connection. For that purpose she formed in 1872 the 'National Union for the Higher Education of Women.' A mercantile company was created under the style of 'The Girls' Public Day School Company,' which provided the funds needed to give practical effect to the purposes of the union. Until 1879 Mrs. Grey was organising secretary of the union, which was dissolved in 1884. In 1906 the company was converted into a trust, which now (1912) has thirty-three schools and over 7000 pupils.

In order to ensure a supply of competent teachers for these new girls' schools, Mrs. Grey founded a training college for women teachers in secondary schools, of which again she acted as honorary organising secretary. The college was opened in 1878, with four students, in premises lent by William Rogers [q. v.], rector of Bishopsgate. After a removal in 1885, the college was installed in 1892 in its present quarters at Brondesbury, and became known as the Maria Grey Training College. Mrs. Grey throughout helped the college by donations of money and by unceasing effort to interest others in the work.

Mrs. Grey, who was an admirably persuasive speaker, was at the same time

a strong advocate of the parliamentary enfranchisement of women. She was a member of the central society of the women's suffrage movement. In 1877 she wrote the pamphlet 'The Physical Force Objection to Woman's Suffrage.'

For the last fifteen years of her life Mrs. Grey was an invalid, but she maintained to the end her interest in women's education and progress. She died on 19 Sept. 1906 at 41 Stanhope Gardens, Kensington.

Many of her speeches were published as pamphlets. Besides the books in which she collaborated with Miss Shirreff, she published in 1858 a novel, 'Love's Sacrifice'; in 1887 a translation of Rosmini Serbatì's 'The Ruling Principle of Method applied to Education'; and in 1889 'Last Words to Girls on Life in School and after School.'

[The Times, 21 and 24 Sept. 1906; Journal of Education, Oct. 1906; Burke's Peerage; cf. Hare's Story of My Life, vol. iv.; private information.] E. L.

GRIFFIN, SIR LEPEL HENRY (1838-1908), Anglo-Indian administrator, born at Watford, Hertfordshire, where his father was serving as locum tenens, on 20 July 1838, was only son of the three children of Henry Griffin, incumbent of Stoke-by-Claire, Suffolk, by his wife Frances Sophia, who had a family of four sons and six daughters by a first husband, Mr. Welsh.

Griffin was educated at Malden's preparatory school, Brighton, and then at Harrow, which he soon left, on account of illness. After tuition by Mr. Whitehead of Chatham House, Ramsgate, he passed the Indian civil service examination in 1859, and was posted to the Punjab as an assistant commissioner on 17 Nov. 1860. 'His conversational powers and ready wit made him popular in society; but he soon proved himself in addition an effective writer, a fluent speaker, and, despite a somewhat easy-going manner, a man of untiring industry' (*Journ. East India Assoc.* April 1908). He is the original of the brilliant civilian portrayed in Sir Henry Cunningham's novel 'Chronicles of Dustypore' (1875), and was credited with the authorship of Aberigh Mackey's 'Twenty-one Days in India' (1880), satiric sketches of Anglo-Indian life, which first appeared anonymously in 'Vanity Fair' (1878-9). Sir Robert Montgomery [q. v.], lieutenant-governor of the Punjab, turned Griffin's literary abilities to good purpose by selecting him to prepare historical accounts of the principal Punjab families and of the rulers of the native principalities. The work, which involved immense research, was

based both on official documents and on records and information gathered from the chiefs and nobles themselves. His 'Punjab Chiefs,' historical and biographical notices of the principal families of the Punjab (Lahore, 1865); 'The Law of Inheritance to Sikh Chiefships previous to the Annexation' (Lahore, 1869); and 'The Rajas of the Punjab' (Lahore, 1870; 2nd edit. London, 1873), at once took rank as standard works.

Griffin served as under-secretary to the local government from April 1870; officiating secretary from March 1871; on special duty to frame track rules between the Punjab and Rajputana from February 1873; and as superintendent of the Kapurthala state from April 1875. He was on special duty at the Paris Exhibition of 1878, and was appointed permanent chief secretary of the Punjab in November of that year. His official minutes, rapidly dictated to shorthand writers, were models of style.

Griffin's great opportunity came in the later phases of the Afghan war. 'After lengthened consideration,' wrote Lord Lytton semi-officially in Feb. 1880, 'I have come to the conclusion that there is only one man in India who is in all respects completely qualified by personal ability, special official experience, intellectual quickness and tact, general commonsense and literary skill, to do for the government of India what I want done as quickly as possible at Kabul, and that man is Mr. Lepel Griffin.' Accordingly in March 1880 the viceroy furnished Griffin with an elaborate minute on the policy to be adopted in Afghanistan, and gave him superintendence of negotiations at Kabul, in subordination only to the military commander, Sir Frederick (now Earl) Roberts. Griffin reached Kabul on 20 March, and at once entered into communication with Abdur Rahman, who had returned to the country after ten years' exile in Russian territory, and was beginning to establish himself in Afghan Turkestan. Griffin by his masterly tact overcame Abdur Rahman's suspicions of English policy and finally, in circumstances which seemed most unpromising, helped to establish him on the Afghan throne and to inspire him permanently with a friendly feeling for England.

Before Griffin's labour was completed Lytton resigned; but the new viceroy, Lord Ripon [q. v. Suppl. II], offered Griffin sympathetic support. At a durbar at Kabul on 22 July the wishes and intentions of the government were explained to the Afghans by Griffin in a Persian speech, and Abdur Rahman was

formally acknowledged as Ameer of Kabul, Griffin meeting him at Zimma, sixteen miles north of Kabul, a few days later, and discussing the conditions of British recognition and questions of future relationship. Griffin's official minute, dated 4 Aug., gave impressions of the new ruler which subsequent events proved singularly correct. 'The interview had the happiest results,' writes Lord Roberts in his 'Forty-one Years in India,' 'and must have been extremely gratifying to Mr. Griffin, whom we all heartily congratulated on the successful ending to the very delicate and difficult negotiations, which he had carried on with so much skill and patience.' The British defeat at the hands of Ayub Khan at Maiwand on 27 July slightly postponed the settlement, and Griffin remained at Kabul until the withdrawal of the British troops after the rout of Ayub Khan's army by General Roberts on 1 Sept. He was made C.S.I. in July 1879, and K.C.S.I. in May 1881. He also received the Afghan medal. The Ameer admired Griffin's skilful diplomacy, and wrote that 'he deserved the title of "Lord of Kabul" just as much as Roberts did that of "Lord of Kandahar"' (ABDUR RAHMAN's *Life*, 1900, ii. 115).

After this triumph Griffin became agent to the governor-general in central India in February 1881. He was instrumental in effecting valuable reforms in Gwalior, Indore, Bhopal, and some smaller states, and he won the regard of the chiefs. His action in securing in 1884 the degradation of Sidik Hasan Khan, second consort of Shah Jehan, Begam of Bhopal from 1868 to 1901, for his usurpation of power and his covert disloyalty is warmly commended by her daughter, the present Begam Sultan Jahan, in 'An Account of My Life' (1912). When home on leave in 1886 Griffin was a royal commissioner for the Indian and Colonial Exhibition, and at the Queen Victoria jubilee in the following year he was on special duty with the Maharaja Shivaji Rao Holkar of Indore. Refusing Lord Dufferin's invitation to supervise the reorganisation of Burma, after the annexation of the upper province in 1886, Griffin remained in central India until his retirement from the service in January 1889. He had hoped for the lieutenant-governorship of his old province in 1887, when Sir Charles Aitchison [q. v. Suppl. I] retired, but his unconventional frankness seems to have made the government shy of giving adequate recognition to his exceptional abilities.

On educational policy in India Griffin held original views. His constant inter-

course with the Indian aristocracy bred in him distrust of the system of making the English language the sole instrument of the higher native education. With Dr. G. W. Leitner (1840-1899), principal of the Government College, Lahore, he early in his career urged the employment in teaching of the Indian vernaculars, and the award of honours for proficiency in Eastern literature and learning, as well as for English. Ultimately at his instigation a university college was established in 1870 at Lahore to give effect to these principles, and when the Punjab University was created there in Oct. 1882, one of the five faculties was for Oriental learning. Yet the Oriental faculty which alone sought to employ in tuition other languages than English never flourished and is now practically defunct (*Quinquennial Report on Indian Education*, 1902-7). The Inayat Ali-Griffin prize is annually given in his memory for the highest marks in Mahomedan law in the first law examination. Griffin further helped Leitner to establish without much success the Oriental Institute at Woking, to enable Indian students in England to adhere to their caste and communal customs. Griffin also founded in 1885, with Leitner and Mr. Demetrius Boulger, the first editor, the 'Asiatic Quarterly Review,' which long enjoyed a prosperous career.

On settling in England Griffin interested himself in literature, finance, and politics. As chairman of the Imperial Bank of Persia he did much for British prestige in Persia, and in 1903 the Shah conferred upon him the imperial order of the lion and the sun. He was also chairman of the Burma ruby mines, and was on the boards of other companies. From 1894 to his death he was chairman of the East India Association, which disinterestedly advocated the interests of India. He took an active part in its proceedings, which were fully reported in the 'Asiatic Quarterly Review.'

He constantly wrote in the magazines and spoke in public on Indian questions, and while upholding the conservative view of Indian administration, showed a warm regard for the Indian people as well as for the native princes. He vigorously espoused the cause of Indians in the Transvaal and elsewhere in South Africa, heading deputations to the secretaries of state for India and the colonies on the subject in 1907. He was a supporter of the liberal unionist cause in home politics, and in 1900 he contested unsuccessfully West Nottingham in their interest.

Griffin died of pneumonia at his residence, Cadogan Gardens, London, on 9 March 1908. The body was cremated at Golder's Green and his ashes were deposited in the private chapel of Colonel Dudley Sampson, Buxshalls, Lindfield, Sussex.

He married on 9 Nov. 1889 Marie Elizabeth, elder daughter of Ludwig Leupold of La Coronata, Genoa, Italy, agent to the North German Lloyd S.N. Co. at Genoa; she survived him with two sons, born in 1898 and 1900 respectively. His widow afterwards married Mr. Charles Hoare. A drawing of Griffin by C. W. Walton is reproduced in the Begam's 'Account of My Life' (1912), p. 128.

In addition to the books already mentioned Griffin wrote: 1. 'The Great Republic,' a hostile criticism of the United States of America, 1884, reproducing articles in the 'Fortnightly Review.' 2. 'Famous Monuments of Central India,' fol. 1886. 3. 'Ranjit Singh' in 'Rulers of India' series, 1892.

GRIFFITH, RALPH THOMAS HOTCHKIN (1826-1906), Sanskrit scholar, born at Corsley, Wiltshire, on 25 May 1826, was son of Robert Clavey Griffith (1792-1844), rector of Corsley (1815-44) and of Fifield Bavant, also in Wiltshire (1825-44), by his wife Mary Elizabeth Adderly, daughter of Ralph Hotchkinn of Uppingham Hall. Educated first at Westminster school and then at Uppingham, Ralph proceeded with an exhibition from Uppingham to Queen's College, Oxford, which he entered as a commoner on 16 March 1843. Obtaining an honorary fourth class in classics, he graduated B.A. on 29 Oct. 1846, and proceeded M.A. on 22 June 1849. At Oxford he became a pupil of Professor Horace Hayman Wilson [q. v.], and gaining the Boden Sanskrit scholarship in 1849, continued the study of Sanskrit to the end of his life. From 1850 to 1853 he was assistant master of Marlborough College, of which he was also librarian. In 1853 he joined the Indian educational service, and on 17 December became professor of English literature at the Benares Government College. His promotion was rapid: on 1 June 1854 he became headmaster of the college. He encouraged

sport, and showed thorough sympathy with Indian students. In the following year he was entrusted, in addition to his other duties, with the charge of the Anglo-Sanskrit department; and in 1856 he was appointed inspector of schools in the Benares circle.

During his first eight years in India (1853-61) Griffith devoted himself not only to the study of Sanskrit but to that of Hindi, the most widely spoken vernacular of northern India, under Pandit Rām Jason, the head Sanskrit teacher of the college, to whom he was much attached. Throughout the Mutiny Griffith worked quietly in his bungalow amid the surrounding disorder and tumult.

On the retirement of James Robert Ballantyne [q. v.] in 1861 Griffith succeeded to the principalship of the Benares College. He held the post for seventeen years, in the course of which he acted three times for short periods as director of public instruction. On 15 March 1878 he left the Benares College after a quarter of a century's service, and from that date till 1885 was director of public instruction in the North-west Provinces and Oudh. His success in official life, both as an administrator and a teacher, was uninterrupted. On his retirement he received a special pension, the honour of C.I.E., and the thanks of the government. Calcutta University made him a fellow.

Unmarried and without close family ties in England, Griffith, after reaching India in 1853, never saw his native country again. On his retirement he withdrew to Kotagiri, a beautiful hill station, some 7000 feet high, in the Nilgiri district, Madras, residing with his brother Frank, an engineer in the public works department of the Bombay presidency, who had settled there in 1879. At Kotagiri he tranquilly engaged in the study and translation of the Vedas. He died (7 Nov. 1906) and was buried there.

An enthusiastic lover of flowers and of poetry, he was sensitive and reserved, but genial in sympathetic society. His pupils and admirers at Benares perpetuated his memory on his retirement in scholarships and prizes at the Sanskrit college. In the college library hangs a photograph of his portrait painted by F. M. Wood.

Griffith was attracted by the literary rather than by the linguistic side of Sanskrit. But he rendered a great service to the direct study of the language by founding in 1866 the 'Pandit,' a monthly journal of the Benares College, devoted to Sanskrit literature. This he edited for eight years. More than forty annual volumes have already appeared.

To the translation of Sanskrit poetry Griffith devoted himself for nearly half a century. He began at Marlborough College with his 'Specimens of Old Indian Poetry' (1852), containing selections tastefully translated in various rhyming metres from the two great epics, the 'Mahābhārata' and the 'Rāmāyana,' and from the works of India's greatest poet, Kālidāsa. An extract from the drama 'Śakuntalā' is in blank verse. At Marlborough also he made a translation in heroic couplets of Kālidāsa's court epic, the 'Kumāra-sambhava,' under the title of 'The Birth of the War-god' (1853; 2nd edit. 1879). There followed 'Idylls from the Sanskrit' (1866), selections similar to those in his first book, and 'Scenes from the Rāmāyan' (1868). His translation of the whole epic, the 'Rāmāyan of Vālmiki,' in rhyming octosyllabic couplets, occasionally varied by other metres, was completed in five volumes (1870-5). Having paid some attention to the study of Persian, he published in 1882 a version of 'Yuzuf and Zuleika,' which was his only excursion in translation outside Sanskrit.

After his retirement to the Nilgiri Hills, Griffith turned from classical Sanskrit to the sacred scriptures of the Hindus, the Vedas. The 'Rigveda' or Veda of hymns, which represent the higher religion of the ancient Indo-Aryans, appeared in a verse translation entitled 'Hymns of the Rigveda, with a Popular Commentary,' in four volumes (Benares, 1889-92; 2nd edit. 2 vols. 1896-7). There followed the 'Hymns of the Sāmaveda,' or Veda of chants concerned with the Soma ritual (Benares, 1893); the 'Hymns of the Atharvaveda,' or Veda mainly consisting of magical spells (2 vols. Benares, 1895-6), and finally 'The Texts of the White Yajurveda,' or sacrificial Veda (Benares, 1899). In these translations Griffith abandoned rhyme and rendered each verse by one syllabically harmonising with the original and generally divided into corresponding hemistichs. Griffith's command of poetical diction enabled him to reproduce the form and spirit of the ancient hymns better than by means of prose or of rhyming verse. His method of interpretation is eclectic; it follows partly the mediæval commentators, partly the researches of Western scholars, supplemented by investigations of his own. His renderings cannot be reckoned authoritative, but they are the only versions that present the general spirit of the ancient hymns to the English reader in an attractive form. Thus Griffith was not only the most

voluminous, but also the best translator of ancient Indian poetry that Great Britain has yet produced.

[Griffith's published works; Foster's Alumni Oxonienses; Who's Who, 1904; information furnished by the Provost of Queen's College, Oxford; letter from Mrs. H. L. Griffith (sister-in-law); note supplied by Pandit Rama Krishna (formerly professor of mathematics at Benares and at Agra, retired collector of Ghazipur).] A. A. M.

GRIFFITHS, ARTHUR GEORGE FREDERICK (1838-1908), inspector of prisons and author, born on 9 Dec. 1838, at Poona, India, was second son of Lieut.-colonel John Griffiths of the 6th Royal Warwickshire regiment. After education at King William's College, Isle of Man, he entered the army as ensign in the 63rd (now Manchester) regiment on 13 Feb. 1855. He was present at the siege and fall of Sevastopol, and took part in the expedition to Kinburn, for which he received the Crimean medal. He was promoted lieutenant on 27 July 1855. In 1856 his regiment was stationed at Halifax, Nova Scotia, but on being nominated aide-de-camp to Sir William Eyre [q. v.], commanding the troops in British North America, Griffiths was transferred to Toronto. The appointment, however, was not confirmed by the war office, and he returned home on leave. He pursued his military studies at the Hythe school of musketry, and in 1860 he passed fifth into the Staff College. In Nov. 1861, owing to the threatened war with the United States over the 'Trent' affair, Griffiths was ordered to rejoin his regiment at Halifax. He was promoted captain on 12 Feb. 1862.

From 1864 to 1870 he was brigade major at Gibraltar. His administrative capacity was recognised by his appointment to the temporary charge of the convict establishment at Gibraltar; and his success in enforcing discipline led him to enter the prisons service at home. Griffiths was deputy-governor of Chatham (1870-2), of Millbank (1872-4), and of Wormwood Scrubbs prisons (1874-81). From 1878 to 1896 he was inspector of prisons, and undertook the task of unifying the methods of administration throughout the country. He became an acknowledged authority on European prison systems and on the history of London gaols. His 'Memorials of Millbank' (1875; 2nd edit. 1884) and 'Chronicles of Newgate' (1884) were serious works of research; and he added to his reputation in 1890 by winning the Tsar's gold medal for a monograph on John

Howard [q. v.]. In 1896 he represented England at the international congress of criminal anthropologists at Geneva.

Griffiths retired from the army with the rank of major on 13 May 1875, and devoted his leisure to literature and journalism. He had already some experience as editor of the 'Gibraltar Chronicle' in 1864; and he became a frequent contributor to many journals. He edited papers and magazines so widely different as 'Home News' (1883-88), the 'Fortnightly Review' (1884), and the 'World' (1895). From 1901 to 1904 he was editor of the 'Army and Navy Gazette' in succession to Sir William Howard Russell [q. v. Suppl. II].

But it was as a writer of sensational tales of prison life that Griffiths was best known to the public, and in such stories as 'Secrets of the Prison House' (1893), 'A Prison Princess' (1893), 'Criminals I have known' (1895), 'Mysteries of Police and Crime' (1898; 3rd edit. 1904), 'The Brand of the Broad Arrow' (1900), and 'Tales of a Government Official' (1902), he revealed his extensive experience of the habits and characteristics of the criminal classes. His detective stories, like 'Fast and Loose' (1885), 'No. 99' (1885), 'The Rome Express' (1896), and 'A Passenger from Calais' (1905), were modelled on those of Gaboriau, and were inspired by his intimate acquaintance with French police methods. In his earlier novels, 'The Queen's Shilling' (1873), 'A Son of Mars' (1880; 2nd edit. 1902), and 'The Thin Red Line' (1886; 2nd edit. 1900), he drew mainly on his Crimean experiences, while 'Lola' (1878) was a faithful transcript of garrison life at Gibraltar. Altogether he published thirty novels.

He also contributed to the official 'History of the War in South Africa, 1889-1902' (1906-10; 4 vols.); and was author of several popular historical works.

Griffiths was a genial companion, a keen sportsman, and an amusing raconteur. He died at Victoria Hotel, Beaulieu, in the South of France, on 24 March 1908. He married on 18 Jan. 1881 Harriet, daughter of Richard Reily, who survived him.

G. S. W.

GRIGGS, WILLIAM (1832-1911), inventor of photo-chromo-lithography, son of a lodge-keeper to the duke of Bedford at Woburn, Bedfordshire, was born there on 4 Oct. 1832. Losing his father in childhood,

he was apprenticed at the age of twelve to the carpentering trade, and coming to London when eighteen, he was employed as an artisan in the Indian Court of the Great Exhibition of 1851. He improved his scanty education at night classes at King's College and elsewhere, and in 1855 was selected to be technical assistant to the reporter on Indian products and director of the Indian Museum, then in the India House, Leadenhall Street.

His artistic tastes and keen interest in photography were encouraged by Dr. John Forbes Watson [q. v.], who became his chief in 1858, and at his instance Griggs was installed at Fife House, Whitehall, pending completion of the India office, in a studio and workshops for photo-lithographic work. He had familiarised himself with the processes of photo-zincography discovered by the director-general of the Ordnance Survey, General Sir Henry James [q. v.]. By careful experiment he found that the use of cold, instead of hot, water in developing the transfer left the gelatine in the whites of the transfer, thus giving firmer adhesion to the stone and serving as a support to the fine lines. He also invented photo-chromo-lithography by first printing from a photo-lithographic transfer a faint impression on the paper to serve as a 'key,' separating the colours on duplicate negatives by varnishes, then photo-lithographing the dissected portions on stones, finally registering and printing each in its position and particular colour, with the texture, light and shade of the original.

He greatly cheapened the production of colour work by a simplified form of this discovery, viz. by a photo-lithographic transfer from a negative of the original to stone, printed as a 'key' in a suitable colour, superimposing thereon, in exact register, transparent tints in harmony with the original. Opaque colours, when necessary, were printed first. So far from keeping secret or patenting these improvements, Griggs described and gave practical demonstrations of them to the London Photographic Society (14 April 1868). He was thus a pioneer in the wide diffusion of colour work and half-tone block-making, and helped to bring about rapid cylindrical printing. But for his 'brilliant and painstaking work, chromo-lithography as a means of illustrating books would be almost a lost art, like that of coloured aquatint' (MARTIN HARDIE's *English Coloured Books*, 1906, pp. 255-6).

Griggs established photo-lithographic works at his Peckham residence in 1868,

soon after the publication of his first notable achievement—the beautiful plates illustrating Dr. Forbes Watson's 'Textile Manufactures and Customs of the People of India' (1866), which was followed by those illustrating 'Tree and Serpent Worship in India' (1868), by James Fergusson [q. v.]. He also reproduced some of the Prince Consort's drawings for Queen Victoria, and was thereafter chromo-lithographer to her Majesty and subsequently to King Edward VII. Though the contents of the India Museum were dispersed between South Kensington and elsewhere in 1878, he continued to serve the India office till Sept. 1885, thenceforth devoting himself exclusively to his own business.

In reproductions of old manuscripts and letterpress texts Griggs was as successful as in chromo-lithography. His production of fifty copies of the 'Mahābhāṣya' (the standard authority on Sanskrit grammar), consisting of 4674 pages (1871), was carried out for 6000*l.* less than the estimate for a tracing of the original MS. by hand. More widely known, however, are his Shakespeare quartos, with critical introductions by Frederick James Furnivall [q. v. Suppl. II] and others, in 43 vols. (1881–91), which were sold at 6*s.* each, while the hand-traced facsimiles by E. W. Ashbee, superintended by James Orchard Halliwell-Phillipps [q. v.], had been sold at five guineas each.

On the initiative of Sir George Birdwood, who gave him constant encouragement, Griggs secured in 1881 the patronage of the committee of council on education for a series of shilling 'Portfolios of Industrial Art,' 200 of which have been issued, chiefly selected from the Chinese, Persian, Arabian, Sicilian, Italian, Russian, and Spanish specimens at South Kensington. Under an arrangement with the government of India, also negotiated at Sir George's instance, he issued from Jan. 1884 the quarterly 'Journal of Indian Art and Industry,' in imperial quarto (2*s.*), which is still carried on by his successors in business. A notable work in the same field, edited by Colonel T. H. Hendley, was his 'Asian Carpet Designs' (1905) of 150 coloured plates, sold at 18*s.* a copy. Nor was he less successful in illustrating such works as Dr. James Burgess's reports on the archæology of Western India through a long series of years, and his 'Ancient Monuments of India' (1897 to 1911); Colonel T. H. Hendley's many works on the art and history of Rajputana; facsimiles of illuminated MSS. at the British Museum (1889–1903), and other works for the

trustees; Sir Richard Temple's 'Thirty-Seven Nats' in Burma (1906); and many scientific works, such as Dr. M. C. Cooke's 'Illustrations of British Fungi' (2nd edit. 6 vols. 1884–8) and his 'Handbook' thereof (2nd edit. 1887). The fullest, though by no means a complete, list of Griggs's works is given in the 'Journal of Indian Art,' Jan. 1912.

Griggs married in 1851 Elizabeth Jane Gill (*d.* 1903), and in his later years was assisted in business by his two sons. The firm of W. Griggs & Sons was formed into a public company on 20 Dec. 1906. He was for a time managing director, but owing to ill-health resigned all connection with the company in January 1910.

He died at Worthing on 7 Dec. 1911, being buried in the Forest Hill cemetery. His second son, Walter, carries on an independent business on his father's lines.

[Sir George Birdwood's introd. to Relics of Hon.E.I.Co., 1909; Martin Hardie's English Coloured Books, 1906; Journ. of Photographic Soc. of London, No. 192, 18 April 1868; Photo-Chromo-Lithography, pamphlet by Griggs, 1882; Journ. of Indian Art, Jan. 1912, obit. by Col. Hendley; The Times, 8 Dec. 1911; Printers' Register, 8 Jan. 1912; information supplied by Mr. Walter Griggs; personal knowledge.] F. H. B.

GRIMTHORPE, first BARON. [See BECKETT, SIR EDMUND, 1816–1905.]

GROOME, FRANCIS HINDES (1851–1902), Romany scholar and miscellaneous writer, second son of Robert Hinds Groome [q. v.], archdeacon of Suffolk, was born at his father's rectory of Monk Soham on 30 Aug. 1851. Through his father's mother there was a family connection with East Dereham, and, there is some ground for believing, blood-relationship with George Borrow [q. v.]. In 1861 he was at school at Wyke Regis, near Weymouth. From 1865 to 1869 he was at Ipswich grammar school under Dr. H. A. Holden [q. v. Suppl. I], where he distinguished himself both in Latin prose and in Latin verse. There too he won several cups for rowing, and helped to found and edit a school magazine. He read for a year with Francis de Winton at Boughrood on the Wye, and went up to Corpus Christi College, Oxford, matriculating in October 1870; in 1871 he was elected postmaster of Merton College. Even in early boyhood gypsy life seen in glimpses had exercised a singular fascination over him; an assistant master at Ipswich had given him some real knowledge of Romany and of gypsy lore; and

at Oxford he came to know gypsies intimately, a fact which gave a new turn to his life. He left Oxford without taking a degree, spent some time at Göttingen, and for years lived much with gypsies at home and abroad; he travelled on the Puszta with Hungarian gypsies, and elsewhere with Roumanian and Roumelian companies, and he married in 1876 a wife of English gypsy blood, Esmeralda Locke, from whom he afterwards separated.

In 1876 Groome settled down to regular literary work in Edinburgh. He was soon one of the most valued workers on the staff of the 'Globe Encyclopædia' (6 vols. 1876-9). In 1877 he began to edit 'Suffolk Notes and Queries' in the 'Ipswich Journal.' He edited the 'Ordnance Gazetteer of Scotland' (6 vols. 1882-5; 2nd edit. 1893-5), which took rank as a standard work of reference. In 1885 he joined the literary staff of Messrs. W. & R. Chambers, and as sub-editor and copious contributor gave invaluable assistance in preparing the new edition of 'Chambers's Encyclopædia' (10 vols. 1888-92). He had a large share in a gazetteer (1 vol. 1895), and was joint-editor of a biographical dictionary, both published by the same house. Meanwhile he was an occasional contributor to 'Blackwood's Magazine,' the 'Bookman,' and other periodicals, wrote many articles for this Dictionary, and did much systematic reviewing for the 'Athenæum.' 'A Short Border History' was issued in 1887. The delightful sketches of his father and his father's friend, Edward FitzGerald, published as 'Two Suffolk Friends' in 1895, were expanded from two articles in 'Blackwood's Magazine' in 1889 and 1891.

At the same time Groome wrote much on gypsies. His article on 'Gipsies,' contributed to the ninth edition of the 'Encyclopædia Britannica,' made him known to the world as a gypsyologist. 'In Gypsy Tents' (1880; 2nd edit. 1881) recorded much of his own experience. He was joint-editor of the 'Journal of the Gypsy Lore Society' (1888-92; revived in 1907), and a paper by him on 'The Influence of the Gypsies on the Superstitions of the English Folk' was printed in 1891, in the 'Transactions of the International Folk-Lore Congress.' Mr. Watts-Dunton has said that in Groome's remarkable Romany novel with the oddly irrelevant name of 'Kriegspiel' (1896) 'there was more substance than in five ordinary stories,' the gypsy chapters, with autobiographical elements, being 'absolutely perfect.' 'Gypsy Folk Tales'

(1899) contains over seventy tales with variants from many lands, and the elaborate introduction is a monument of erudition and ripe scholarship. He produced also an edition of Borrow's 'Lavengro' (1901), with notes and a valuable introduction. When his working powers failed him, Groome was assisting in the preparation of a new edition of 'Chambers's Cyclopædia of English Literature' (3 vols. 1901-1903); and for more than a year he was a confirmed invalid. He died in London on 24 January 1902, and was buried beside his father and mother in Monk Soham churchyard.

Nothing in Groome's life is more remarkable than that he should have passed so swiftly and cheerfully from a veritable Bohemia of romance into the bondage of systematic labour, and have worked in the new conditions with a rare efficiency. A singularly alert, swift, and eager intellect, he was unwearied in research, impatient of anything less than precision, a frank and fearless critic; thoroughly at home in wide fields of historical and philological research, and in some of them a master. A man of strong convictions and not a few prepossessions, he had a knowledge of the romantic side of Scottish history such as few Scotsmen possess, notably of Jacobite literature in all its ramifications native and foreign. His vivacious style showed a marked individuality. Men like Swinburne and Mr. Watts-Dunton cherished his friendship, and he maintained a correspondence with eminent scholars all over Europe (e.g. August Friedrich Pott and Franz von Miklosich); some of his many letters to C. G. Leland are quoted in Mrs. Pennell's 'Life of Leland' (1906).

[Who's Who, 1900; Scotsman, 25 Jan. 1902; Mr. Watts-Dunton's memoir in Athenæum, 22 Feb. 1902; information from brothers; personal knowledge.] D. P.

GROSE, THOMAS HODGE (1845-1906), registrar of Oxford University, born at Redruth in Cornwall on 9 Nov. 1845, was fourth son of James Grose. An elder brother, James, went to India in 1860 in the civil service, and died as member of council at Madras on 7 June 1898. Educated at Manchester grammar school, under the strenuous high-mastership of Frederick William Walker [q. v. Suppl. II], Grose was elected to a scholarship at Balliol College, Oxford, in 1864. He was one of the few to obtain four first classes, two in moderations and two again in the final schools (classics and mathematics),

He graduated B.A. in 1868, proceeding M.A. in 1871. He entered as a student at Lincoln's Inn, but his plans changed and he did not go to the bar. In 1870 he was elected to a fellowship at Queen's College, being appointed tutor in the following year, and there the rest of his life was spent. In 1872 he was ordained deacon, but his clerical work was confined to the duties of college chaplain and sermons in the chapel. In 1887 he was elected to the hebdomadal council, and in 1897 to the office of university registrar, which he held till his death. In 1871 he had been president of the Union; and in 1887, when the finances of the society were in low water, he was appointed to the new office of senior treasurer, which likewise he continued to hold till his death. Between 1876 and 1898 he served as examiner in the school of literæ humaniores no less than a dozen times. He was also president of the Association for the Education of Women and of the Women's Suffrage Society, and latterly a member of the education committee of the Nottinghamshire county council. His only contribution to literature was to assist Thomas Hill Green [q. v.] in editing 'The Philosophical Works of David Hume' (1874-5).

Grose's best work was done in his rooms at Queen's. Shy and reserved in manner, with gestures that were awkward and a voice that was gruff, he won the respect and affection of many generations of undergraduates. Himself unmarried, he devoted his time and his money to fatherly relations among an ever expanding circle of those who were to him in the place of sons. He followed closely every stage of his pupils' future life, however far removed they might be from Oxford. In his early years he had been a keen fives-player and an Alpine climber. He was a member of the Alpine Club from 1900 till death. Latterly his chief outdoor pursuit was field botany. Almost to the last he travelled much abroad, his interest being divided between natural scenery and art museums. In 1894 he paid a nine months' visit to India. His rooms ultimately became a storehouse of artistic objects and photographs brought back from foreign lands. He died in college, after a long and painful illness, on 11 Feb. 1906, and was buried at Holywell cemetery. The Union Society, who had two years before presented him with a service of silver plate inscribed 'Viro strenuo, suis carissimo, optime de societate merito,' adjourned their debate out of respect to his memory. His portrait

by R. E. Morrison was presented by members of the college in 1903 and was hung in the college hall. After his death a memorial fund was formed for the assistance of undergraduates in need of aid.

[Personal knowledge; two pamphlets on the occasion of his death, printed at Oxford for private circulation, 1906.] J. S. C.

GUBBINS, JOHN (1838-1906), breeder and owner of race-horses, born on 16 Dec. 1838 at the family home, Kilfrush, co. Limerick, was fourth son of Joseph Gubbins by his wife Maria, daughter of Thomas Wise of Cork. Of three surviving brothers and five sisters, the third brother, Stamer, who was 6 feet 6 inches tall and of proportionate build, joined the army, and, attaining the rank of captain, distinguished himself in the Crimean war, where, discarding his sword, he carried a heavy blackthorn stick; subsequently he bred horses at Knockany, where he died on 7 Aug. 1879, aged forty-six, owing to the fall upon him of a horse which he had been 'schooling' over fences.

John Gubbins, after being educated privately, inherited the Knockany property from his brother Stamer, and purchased the estate of Bruree, co. Limerick. A fortune was also left him by an uncle, Francis Wise of Cork. Settling at Bruree in 1868, he spent about 40,000*l.* in building kennels and stables, and buying horses and hounds. He hunted the Limerick country with both stag and fox hounds, and was no mean angler, until forced to stop by the operations of the Land League in 1882.

From youth he took a keen interest in horse-racing. At first his attention was mainly confined to steeplechasers, and he rode many winners at PuncHESTOWN and elsewhere in Ireland. He was the owner of Seaman when that horse won the grand hurdle race at Auteuil, but had sold him to Lord Manners before he won the Grand National at Liverpool in 1882. Usna was another fine chaser in his possession. Buying the stallions Kendal and St. Florian, he bred, from the mare Morganette, Galtee More by the former and Ard Patrick by the latter. Galtee More won the Two Thousand Guineas and the St. Leger as well as the Derby in 1897, and was afterwards sold to the Russian government for 21,000*l.*, who later passed him on to the Prussian government for 14,000*l.* The latter government also bought Ard Patrick for 21,000*l.* a day or two before he won the Eclipse stakes of 10,000*l.* in 1903, when he defeated

Sceptre and Rock Sand after an exceptionally exciting contest. Other notable horses bred by John Gubbins were Blairfinde (winner of the Irish Derby) and Revenue. In 1897 he headed the list of winning owners with a total of 22,739*l.*, and was third in the list in 1903. His horses were at various times trained by H. E. Linde (in Ireland), Joussiffe (at Lambourn), and S. Darling (at Beckhampton.) After 1903 John Gubbins was rarely seen on a racecourse owing to failing health, and in 1904 he sold his horses in training. In 1905, however, his health having apparently improved, he sent some yearlings to Cranborne, Dorset, to be trained by Sir Charles Nugent, but before these horses could run he died at Bruree on 20 March 1906, and was buried in the private burial ground at Kilfrush. He was high sheriff of co. Limerick in 1886, as well as J.P. and D.L. A warm-hearted, genial personality, he was a kind and indulgent landlord and employer, and a sportsman of the best type.

In 1889 he married Edith, daughter of Charles Legh, of Addington Hall, Cheshire; she predeceased him without issue. His estates passed to his nephew, John Norris Browning, a retired naval surgeon.

[Notes supplied by Mr. D. R. Browning, of Bruree, co. Limerick; Burke's Landed Gentry; Sportsman, 21 March 1906; Baily's Magazine, May 1906; Ruff's Guide to the Turf.] E. M.

GUINNESS, HENRY GRATTAN (1835–1910), divine and author, born on 11 Aug. 1835 at Montpelier House, near Kingstown, Ireland, was eldest son in the family of one daughter and three sons of John Grattan Guinness (1783–1850), captain in the army, who saw service in India. His mother was Jane Lucretia, daughter of William Cramer (an accomplished violinist and composer, who was son of Johann Baptist Cramer [q. v.], musical composer), and was widow of Captain J. N. D'Esterre, who was killed by Daniel O'Connell [q. v.] in a duel in Feb. 1815. His grandfather, Arthur Guinness of Beaumont, co. Dublin, established the first Sunday school in Ireland in Dublin in 1786. During their father's lifetime the family lived variously at Dublin, Liverpool, Clifton, and Cheltenham. After education at private schools at Clevedon and Exeter, Guinness at the age of seventeen went to sea, and travelled through Mexico and the West Indies. On his return to England in March 1853 he experienced religious 'conversion.' In Jan. 1856 he entered New College, St. John's Wood, London, was

ordained as an undenominational evangelist in July 1857, and entered on evangelistic work, to which he thenceforth devoted his life at home and abroad. He met with great success as a preacher in London, rivalling Charles Haddon Spurgeon [q. v.] in popularity, and preaching often at the Moorfields Tabernacle, the charge of which he was offered but declined. There followed preaching tours on the Continent in Jan. 1858, in Ireland in Feb. 1858 and in 1859, and in America from Nov. 1859 to May 1860. After his first marriage on 2 Oct. 1860 he and his wife spent twelve years in incessant travelling. He visited Canada in 1861 and Egypt and Palestine in 1862. He then held a short pastorate at Liverpool, and afterwards worked in Ireland. Towards the close of 1865 Guinness took a house at 31 Bagot Street, Dublin, with a view to forming a training home for evangelists and missionaries. In 1866 he also conducted in Dublin the Merriion Hall Mission, and there he helped to bring Thomas John Barnardo [q. v. Suppl. II.] under religious influence. In 1867 he left Dublin for Bath. Work in France occupied much of his time from 1868 to 1872. Next year he founded in London, and directed till his death, the East London Institute for Home and Foreign Missions, for the training of young men and women for home and foreign missionary work. The Institute was first located at 29 Stepney Green, and subsequently at Harley House, Bow. Barnardo was a co-director. During the first year the students numbered 32. At the end of three years branches were formed in London, and one was installed at Hulme Cliff College, Curbar, Derbyshire. Accommodation was provided for 100 men and women; over 1100 men and women have since been trained.

With the opening up of the Congo and the publication of H. M. Stanley's letters at the end of 1877, Guinness and his wife resolved to concentrate on foreign missions. A monthly magazine, 'The Regions Beyond,' was started in 1878. The Livingstone Inland Mission was formed in the Congo in 1878, and in 1880 became a branch of the institute, with Guinness as director and Mrs. Guinness as secretary. It was transferred to the control of the American Baptist Missionary Union in 1884 (see MRS. GUINNESS's *The New World of Central Africa*, 1890). A new mission to the interior of Africa, the Congo Balolo Mission, was founded in 1889, and others followed in South America—in Peru in 1897, and the Argentine in 1899. The organisations were combined

in 1899 to form 'The Regions Beyond Missionary Union,' an unsectarian body whose activities were further extended to India by the formation of the Behar mission in the Bengal presidency in 1901.

Although Guinness did not himself visit the interior of Africa, he went in the interest of his societies to Algeria in 1879, to America in 1889 (where he inspired the creation in Boston and Minneapolis of training institutions similar to his own), to India and Burmah in November 1896, and to China and Japan in 1897. A second visit to Egypt in 1900 bore good fruit among the Sudanese. In 1903 Guinness went with his second wife on a five years' missionary tour round the world, visiting Switzerland (1903), America and Canada (1904), Japan and China (1905), Australia and New Zealand (1906), and South Africa (1907). He received the degree of D.D. from Brown University, Providence, U.S.A., in 1899.

Guinness died after four months' illness on 21 June 1910 at Bath, where he spent his last two years, and was buried in the Abbey cemetery there. He was twice married. His first wife, Fanny (1831-1898), daughter of Edward Marlborough Fitzgerald (*d.* 1839), and grand-daughter of Maurice Fitzgerald of Dublin, whom he married at Bath on 20 Oct. 1860, was one of the first women evangelists. She joined in all her husband's work, was secretary of the East London Institute and of the Livingstone Inland Mission, was editor of 'The Regions Beyond' from 1878, and, besides collaborating with her husband, independently published 'The Life of Mrs. Henry Denning' (Bristol, 1872) and 'The New World of Central Africa' (1890). She died at Cliff House, Curbar, Derbyshire, on 3 Nov. 1898, and was buried in Baslow churchyard. She had six daughters, of whom two only survived childhood, and two sons. All the children engaged in their parents' missionary efforts. The eldest son, Dr. Harry Grattan Guinness (*b.* 1861), is a director of the mission at Harley House. The younger daughter, Lucy Evangeline (Mrs. Karl Kumm, 1865-1906), edited 'The Regions Beyond' for some nine years after her mother's death, published books on South America and India, and was a writer of verse. Her father published a memoir of her in 1907. Guinness married secondly, on 7 July 1903, Grace, daughter of Russell Hurditch, by whom he had two sons.

In collaboration with his first wife Guinness published several works on prophecy. The most important, 'The Approaching End of the Age in the Light of History, Prophecy, and Science,' published

in 1878 (8th edit. 1882), went through fourteen editions. Other joint publications were 'Light for the Last Days' (1886) and 'The Divine Programme of the World's History' (1888). Guinness published also in 1882 a translation of Brusciotto's grammar of the Congo language, and 'A Grammar of the Congo Language as spoken in the Cataract Region below Stanley Pool,' containing specimen translations from the Bible, which were printed separately as 'Mosaic History and Gospel Story.' His many other volumes included 'The City of the Seven Hills,' a poem (1891), and 'Creation centred in Christ' (2 vols. 1896).

GULLY, WILLIAM COURT, first Viscount SELBY (1835-1909), Speaker of the House of Commons, born in London on 29 Aug. 1835, was second son of Dr. James Manby Gully [q. v.], the well-known physician of Great Malvern, by Frances, daughter of Thomas Court. He was educated privately, and at the early age of sixteen went to Trinity College, Cambridge. He was popular at the university and was chosen president of the Cambridge Union. In 1856 he graduated B.A. with a first class in the moral sciences tripos, then recently established, and proceeded M.A. in 1859. On 26 Jan. 1860 he was called to the bar at the Inner Temple, and joined the northern circuit. He shared the usual struggles of a junior barrister, and there is a well-authenticated story of a meeting between three members of the circuit who, despairing of their prospects at home, agreed to try their fortunes in India or the colonies. But they reconsidered their determination, and all of them rose to eminence in their own country. The three were Charles Russell [q. v. Suppl. I], afterwards lord chief justice of England, Farrer Herschell [q. v. Suppl. I], afterwards lord chancellor of Great Britain, and Gully, who gradually established a good practice at the bar, especially in commercial cases at Liverpool. He had a sound knowledge of law, and a fine presence and attractive personality.

According to a contemporary, who spoke with intimate knowledge, he 'was one of the straightest advocates a circuit ever saw.' He 'took silk' in 1877, was elected a bencher in 1879, and eventually became leader of the northern circuit.

In 1880 he felt that his position at the bar justified him in entering political life, and at the general election of that year he stood as a liberal candidate for Whitehaven, where the Lowther influence was strong against him. His opponent was George Cavendish Bentinck, and he was defeated by 182 votes. Nor was he more successful in 1885, when he tried again and was again defeated by the same opponent. It was not until 1892 that he obtained a seat in the House of Commons. Robert Ferguson, the liberal member for Carlisle, dissented from Gladstone's home rule policy, and at the general election of 1892 Gully was selected as a liberal candidate in his place. He was opposed by F. Cavendish Bentinck, but was returned by a majority of 143, and retained the seat until he left the House of Commons. In the same year he was appointed recorder of Wigan.

In the House of Commons Gully did not take a very active part in debates, but was known, and liked, as a quiet member, apparently more interested in his professional than in his political work. His opportunity came in 1895. In the April of that year Mr. Speaker Peel resigned his post. The liberal majority was small, dwindling and precarious, and the unionists resolved to nominate a member of their own party as his successor. The candidate whom they selected was Matthew White Ridley [q. v. Suppl. II], afterwards home secretary and first Viscount Ridley. On the liberal side Mr. Leonard Courtney (now Lord Courtney of Penwith), who had been chairman of ways and means, was suggested by the cabinet. But his attitude on the Irish question and his somewhat brusque individualism were certain to alienate liberal and nationalist votes. Sir Henry Campbell Bannerman [q. v. Suppl. II] avowed his willingness to take the post, and he would apparently have been accepted by the unionists. But Sir William Harcourt was unwilling to lose so valuable a colleague. Then Gully was suggested, as a 'safe' man, whom all the sections of the liberal party would support. The suggestion is said to have come from Henry Labouchere. Gully was adopted as the liberal candidate, and on 10 April he was elected against Sir Matthew White Ridley by a majority of eleven votes. The

opposition resented their defeat, and it was intimated that in the event of an early change of government the unionist party, if returned to power at a general election, would not feel bound to continue Gully as speaker in a new parliament. On 25 June, after Lord Rosebery's retirement, Lord Salisbury became prime minister, parliament was dissolved on 8 July, and at the general election the unionist party obtained a large majority. Gully's seat at Carlisle was contested, but he succeeded in retaining it by an increased majority. During the short interval which elapsed between Gully's election to the office of speaker and the dissolution of parliament he had firmly established his reputation as an excellent occupant of the chair, and when the new parliament met in August the notion of opposing his re-election was abandoned, the tradition of continuing in office an efficient speaker was maintained, and on the motion of Sir John Mowbray, the father of the house, he was unanimously re-elected. He retained his office, after another re-election in 1900, until his retirement in March 1905.

Gully had a difficult task to perform in succeeding the majestic and awe-inspiring Peel, but he proved himself equal to the task. Handsome, dignified, courteous, impartial, he sustained the judicial traditions of many parliamentary generations. His professional training enabled him to master quickly the rules and practice of the house, and his judicial temperament secured their impartial application. There were some who criticised his interpretation of them as too technical, to others it sometimes appeared that, as is natural to men of sensitive conscience, he inclined too much, in cases of doubt, to the side to which he was politically opposed; but no one ever questioned his fairness of mind. One regrettable incident lost him the confidence of the Irish nationalist party. On 5 March 1901, at a sitting of the committee of supply, the chairman, Mr. Lowther (afterwards speaker), had granted the closure, and a division was called; but when the order was given to clear the house, about a dozen Irish members refused to leave their seats. The speaker was sent for, and repeated the order; but the members refused to leave the house, and were forcibly removed by the police. The rule thus enforced was not embodied in any standing order and has since been expressly repealed. But there is no doubt that it represented the then existing practice of the House. Whether its enforcement could have been avoided is a

question about which anyone acquainted with the difficulties of such situations would hesitate to express a confident opinion.

In March 1905, after nearly ten years' service, Gully found himself compelled, on the ground of health, to resign the office of speaker. The strain of his work was much increased by the serious illness of his wife, to whom he was devotedly attached. In accordance with custom, he received a peerage and a pension, and a vote of thanks from the House of Commons. He took as his title (Viscount Selby) the family name of his wife. Release from his official duties restored his health, and during the remaining years of his life he was a regular attendant at debates of the House of Lords, and served the public in many ways. He was chairman of the royal commission on motor cars, and also of the commission on vaccination; chairman of the board of trade arbitration committee in 1908, and a member of the permanent arbitration court at the Hague. He was also chairman of the executive committee of the Franco-British Exhibition of 1908. Gully was made an hon. LL.D. of Cambridge in 1900, and an hon. D.C.L. of Oxford in 1904, and received the freedom of the City of London on his resignation of the office of speaker. His health greatly suffered from his wife's death on 15 Nov. 1906. He was taken seriously ill whilst staying at Menaggio, on the lake of Como, in September 1909, and being brought home made a temporary recovery. He died on 6 November in that year at his country seat, Sutton Place, Seaford, and was buried at Brookwood. He married on 15 April 1865 Elizabeth Anne Walford (*d.* 1906), eldest daughter of Thomas Selby of Whitley and Wimbush in Essex. He had issue four daughters and two sons. His elder son, James William Herschell, succeeded to the peerage. His younger son, Edward Walford Karslake, was for many years private secretary both to his father and to his father's successor as speaker, and is now examiner of private bills for the two houses of parliament. The best portrait of Gully is that by Sir George Reid in the speaker's official house. Another portrait, painted by the Hon. John Collier in 1898, is in the hall of the Inner Temple. A cartoon portrait by 'Spy' appeared in 'Vanity Fair' in 1896.

C. P. I.

GURNEY, HENRY PALIN (1847-1904), man of science, eldest son of Henry Gurney by his wife Eleanor Palin, was born in London on 7 Sept. 1847. He entered the City of London School in 1856, under the headmastership of Dr. Mortimer, and remained there until 1866; at the school he gained the Beufof mathematical medal, and was head of the school in science in 1865. In 1866 he proceeded to Clare College, Cambridge, where he specialised in science and mathematics. He rowed in his college boat, and ran for the university in the inter-university sports of 1868 and 1869. He graduated B.A. in 1870 as fourteenth wrangler, and was fourth in the first class of the natural science tripos. At the university Gurney studied mineralogy and crystallography under Professor William Hallowes Miller [q. v.], and acted for a while as Miller's deputy. Gurney was also the senior lecturer at Clare College in mathematics and natural sciences. Elected to a college fellowship in April 1870, he held it until 1883, when he was senior fellow of his college. In 1871 he took holy orders, and was appointed curate to Canon Beck, rector of the college living of Rotherhithe, and subsequently officiated for many years as curate at St. Peter's Church, Bayswater. Shortly after his marriage in 1872 he became lecturer for Walter Wren at Wren's tutorial establishment in Powis Square, Bayswater. Gurney's sound mathematical knowledge, clear method of teaching, and powers of organisation were found of such value that he became in 1877 managing partner of the firm of Wren & Gurney, which rapidly acquired celebrity as a preparatory establishment for young men wishing to enter the army, the Indian civil service, and other home or foreign office departments.

Meanwhile he had kept up his interest in mineralogy, and in 1875 he published his only book, a small but clear and useful work on crystallography, one of the manuals of elementary science issued by the Society for Promoting Christian Knowledge. In 1876 Gurney helped to found the Crystallogical Society, and was a member of its first council. In 1894 he was appointed to the post of principal of the Durham College of Science, Newcastle-upon-Tyne, in succession to Dr. William Garnett. At a critical period in the history of the College of Science Gurney showed tact, ability, and powers of conciliation and administration. Next year Gurney added the duties of professor of

mathematics to the burden of the principalship, retaining the chair until 1904. In 1895 he took a prominent part in founding a department of mineralogy and crystallography at the college, and was himself the first lecturer, giving his services gratuitously. In 1896 the honorary degree of D.C.L. was conferred upon him by the University of Durham.

To meet the additional accommodation which the growth of the college made imperative, Gurney arranged an influential public meeting at Newcastle in 1899, where a strong committee was formed to collect subscriptions. In 1901, at Gurney's suggestion, the Armstrong Memorial Fund was devoted to the completion of the college, as a memorial of Lord Armstrong. The college thereupon took the name of Armstrong College. The new buildings were duly commenced in 1904.

Gurney died through a mountain accident in Switzerland on 13 Aug. 1904, having apparently lost his footing whilst out alone on La Roussette near Arolla. He was buried at Ganerew in Herefordshire. In 1872 he married at Whitchurch, Herefordshire, Louisa, daughter of the Rev. H. Selby Hele of Grays, Essex. He left a family of nine daughters; the eldest, Mary, is head mistress of the Newcastle high school for girls.

Gurney was essentially a teacher and an organiser of teaching, who combined great abilities as an administrator with a sound knowledge of scientific principles and marked powers of clear exposition. He acted as chaplain to the bishop of Newcastle, and warden and chaplain of the Newcastle diocesan house of mercy. For the first supplement of this Dictionary he wrote the memoir of Lord Armstrong. He also privately printed 'The Continuity of Life' (1876) and 'A Sermon on Words' (1882), and contributed notes on geology to the 'Transactions' of the Institute of Mining Engineers.

There is a bust of Gurney by Mr. C. Neuper in Armstrong College library, and an oil painting by A. H. Marsh in the hall.
